Geology: the ore is gold, occurring in the Bunker Hill vein, strike N. 25° W., dip 58° E., with average width of 6'. From surface to 200' level the vein occurs on the contact between Mariposa slate on the west and metadiabase on the east; from the 200' to the 1,400' level, the vein is in slate; from the 1,500' to the 2,400' level the vein has a greenstone footwall and slate hanging-wall. On the 1,400' level an orebody has been opened 40' west of the Bunker Hill vein, and running parallel with it. This orebody is 860' long, average width 30', and at a point 860' north of the shaft joins the Bunker Hill vein; at points it forms the footwall of the Bunker Hill vein. Ore occurs in the form of lenses, the schist being cut by numerous stringers of quartz; the rock is highly impregnated with pyrite, as high as 4 to 5%. The gray orebody has been developed on the 1,400', 1,500', 1,750' and 1,950' levels. Three ore-shoots have been developed on the property; the north and south shoots on the Bunker Hill vein have an average length of 500', average width of 6', while the gray orebody is 600' long, average width of 15'.

Development: by shafts: main shaft is double-compartment, 2,587' deep, and sunk on an incline of 58°. From the 1,950' to 2,400' level it is sunk in metadiabase. On the 2,400' level the distance from the shaft to the Bunker Hill vein is 280'.

Equipment: includes a double-drum hoist, driven by a 300-h. p. motor, Ingersoll-Rand compressor, driven by 100-h. p. motor, pumps, a 40-stamp mill and a cyanide plant. Ore is hoisted in 2½-ton skips, and is crushed by a Knight crusher, before being trammed 550' to the mill. Stamps, weighing 1,150 lbs. each, drop 6½", 96 drops per min., crush 5 tons per stamp daily through No. 4 punched screen. Pulp flows over double-compartment amalgamating plates to 24 6' Frue vanners; tailings from the vanners go to the cyanide plant, where sands are treated in eight 100-ton leaching vats, treatment taking 8 days. Concentrates are first agitated with lime in Pachuca tanks, 50 lbs. lime for 11 tons ore, then agitated 8 hours with strong KCN solution; treatment lasting 3 to 4 days.

Mill tailing runs 99c per ton; a 45% extraction is made. Tailing is treated on a royalty basis. W. E. Darrow, V. R. Fitzsimmons et al., Sutter Creek, owners. The Bunker Hill Company employs 155 men. See U. S. G. S. Folio 63; and M. & M. Res. of Amador Co., p. 20, Cal. State Mng. Bureau.

In Sept., 1917, company built a flume to carry tailing from the mill to the concrete dam on Rancheria creek.

In the first six months of 1915, 42,087 tons of ore was mined and milled, producing \$151,591, an average value of \$3.60 per ton; aggregate total expenses, \$109,792.

CENTRAL EUREKA MINING CO.

CALIFORNIA

Successor to the King William Mining Co.

Office: 254 Russ Bldg., San Francisco and Sutter creek, Amador Co., Cal.

Officers: V. S. Walsh, pres.; I. N. Rosekrans, v. p.; J. B. Toplitz, J. R. Tregloan, W. P. Henry, directors; Wm. A. Van Bokkelen, sec.-treas.; F. Jost, supt.

Inc. in California. Cap., 1,500,000 shares; 1c par; changed from \$400,000. \$1 par; of this 1,000,000 shares were for exchange with old stockholders share for share on payment of $\frac{1}{2}$ c per share. Annual meeting 4th Thursday in April. Results of operations were a disappointment for many years, but a dividend of 2c per share was paid in Feb., 1915.

Receipts and expenditures up to April, 1917, include total receipts, \$146,132, which included \$43,789 for assessment Nos. 38, 39 and 40; and \$5,199. Cash on hand and accounts receivable are: \$14,822 with bills payable of \$12,394.

Property: adjoining the South Eureka on the north, $\frac{1}{2}$ mile south of Sutter Creek, shows 3 parallel veins which have been developed. The veins are in the form of stringers, with strike N. 20° W., dip 55° to 70° E., and an average width of 6'. The east vein is 20' from the west vein, while the hanging-wall vein is 200' east of the west vein. East and west veins have slate walls; hanging-wall vein has a slate footwall and greenstone hanging-wall. Two series of ore shoots have been developed, the north shoots being 60', the south shoots 200' long.

Development: 3-compartment shaft 3,430' deep, sunk on 57° incline. Shaft cuts the hanging-wall vein on the 500' level and is sunk on the hanging-wall to the 1,900' level, at which point it is deflected to the west and passes into a slate formation. Three crosscuts have been made to the west. A new fissure has been developed at the 3,425' level. On the 2,100', 2,850', 3,000' and 3,300' levels, favorable orebodies have been opened up. New development was 196' of shaft sinking and 1,605' of other work.

Equipment: includes an Ingersoll compressor driven by 150-h. p. motor and two 60-h. p. oil-fired boilers. Ore is hoisted in 2-ton skips and run through a Blake crusher before being trammed to the mill.

Mill: 40 stamps of 1,150 lbs. each, making 100 drops per minute and crushing $4\frac{1}{4}$ tons per stamp through a 24-mesh screen. Mill ran continuously during the year except for the months of Sept. and Oct., on an average ore of \$3.50 per ton and gave tailings of 30c to 40c per ton. Mill is driven by a 75-h. p. motor.

Ore of mine was thought to be exhausted but Mr. C. E. Julihn who was employed to report on the property recommended further development which is being done.

CONSOLIDATED AMADOR MINING CO.

CALIFORNIA

See Old Eureka Mining Co.

DEFENDER MINE

CALIFORNIA

F. B. Joyce, owner, 1023 Mills Bldg., San Francisco, Cal. Mine office: Defender, via Volcano, Amador Co., Cal.

Property: 3 claims, unpatented, 5 miles S. E. of Volcano, Cal.

Ore: free milling by fine grinding, carries gold and some silver (parting value) in an ore with chalcoppyrite, galena and sphalerite, in a vein in granodiorite. The lode has strike of N. 15° W., dip 85° W., and an average width of 3' 6".

Development: 360' vertical shaft, with 1,500' underground workings. At 130' south shaft on 200' level the vein is cut by a diorite dike 22' thick;

other smaller diorite dikes cut the main shoot and seem to be associated with the ore occurrence.

Equipment: includes steam hoist, compressor and a 10-stamp mill. Eight men are employed.

Production: to date said to be 12,000 tons, yielding \$140,000. Work in 1915 and 1916 consisted of development work only.

FREMONT CONSOLIDATED MINING CO. CALIFORNIA

Offices: 24 Market St., San Francisco, and Dry Town, Amador Co., Cal. Arthur Goodall, gen. mgr.; A. L. Palmer, supt.

Property: 4 claims, 4,200' on the lode, 1½ miles north of Amador City, shows gold ore occurring on contact of black slate on the west, and metadiabase on the east. Vein strikes N. 25° W., dip 50° E., and has an average width of 6'. West of the main vein ore has been developed in schist. Orebodies occur as lenses, the ore being in the form of quartz stringers, cutting the schist. The rock is highly mineralized with pyrite.

Development: by the Fremont shaft, 2,750' deep, sunk on a 51° incline, and a 1,500' incline shaft north of the Fremont shaft. There are several miles of underground workings.

Equipment: includes a steam hoist at each shaft and a 40-stamp mill. Oil is used as fuel.

HARDENBERG MINING SYNDICATE CALIFORNIA

Office: 1018 Crocker Bldg., San Francisco, Cal. W. J. Loring, mgr.; James F. Parks, supt.

Operates the Hardenberg gold mine at Jackson, Amador Co., Cal. Developed by 1,500' shaft and equipped with 20 stamp amalgamation-concentration mill. Has compressor and electric power. Employs 26 men.

Syndicate suspended operations in October, 1917, owing to unsatisfactory results.

KENNEDY MINING & MILLING CO. CALIFORNIA

Office: 409 Montgomery St., San Francisco, Cal. Webb Smith, supt. Cap., \$100,000; shares \$100 par.

Property: 9 claims, covering 3,100' on the Mother Lode, includes the Kennedy mine adjoining the Argonaut, 1 mile north of Jackson, Amador Co., Cal. The Kennedy vein, one of three veins in the Lode, outcrops in andesite passing downward into Mariposa slate, following roughly the contact between the two rocks. The vein dips 57° E. and the payshoots rake to the north. The best ore occurs near the footwall over a black gouge 1 to 2' thick.

Development: by 3 shafts; the vertical south shaft, 2,300' deep, north shaft, 2,500' deep and the 3-compartment east shaft sunk to vertical depth of 4,050' with crosscuts and drifts, run N. and S. on the veins. Shaft being sunk with the object of reaching junction of two orebodies. Ore in the lower levels is generally of better grade than above.

Equipment: includes air-drills, 15"x30" Murry compressor, 25"x30" Fulton compressor, nine 80-h. p. boilers, oil fired steam power, 800-h. p. double-drum hoist and 100-stamp mill, making an extraction of 83%. Monthly capacity is 15,000 tons. Concentrates assay \$100 per ton and tailings run about 60c per ton. Concentrates are treated at the mine in a 10-ton chlorination plant with 2 roasting furnaces. Employs 300 men. Company purchased the Zeila mine and 40-stamp mill at Jackson, about 1½ miles S. of the Kennedy, in 1915, for \$35,000. The Zeila is worked out down to the 450' level, but new orebodies averaging \$4 per ton are said to have been disclosed below the old workings.

Property has a hopeful future, but management is unduly conservative, rarely giving information, in marked contrast to the frank, open policy of the Plymouth Consolidated in the same district.

KEYSTONE MINING CO. CALIFORNIA

Carlton R. Downs, Amador City, Cal., mgr.

Property: the Keystone mine at Amador City, Amador Co., covering 4,000' along the Mother Lode.

The Keystone is a quartz vein, 12-200' wide, occurring on the contact between black clay slate footwall and meta-andesite hanging-wall. Two other veins, the Spring Hill and east veins, have been developed; the latter is now furnishing the ore. The contact vein was mined above the 900' level. See M. & M. Res. of Amador Co., State Mineralogist's Report, p. 34-36.

Development: by 3-compartment Patton shaft, 2,680' deep and 1,118' south shaft on 60° incline, with crosscuts and drifts E. and N. on the 100', 900', 1,000', 1,200' and 1,400' levels. Development work now being done on the 1,800'. Most of the 1916 output come from the 900', 1,000', 1,200' and 1,400' levels.

Equipment: includes 40-stamp amalgamation and concentration mill, making an extraction of 90%; electric hoist, 300-h. p. motor, air compressor and drills. Concentrates run \$50 per ton; the tailings 30c per ton. About 80 men employed.

Production: for year ended Jan. 1, 1917, was 61,348 tons of \$2.52 gold ore, a total of \$151,134.

LINCOLN CONSOLIDATED

CALIFORNIA

Address: Sutter Creek.

Reported sold its property Oct. 1917, to Jas. Hoatson, et al., of Houghton, Michigan, and 10% dividends paid shareholders from proceeds.

OLD EUREKA MINING CO.

CALIFORNIA

Office: 42 Broadway, New York City. Mine at Sutter Creek, Amador Co., Cal.

Officers: Wm. D. Thornton, New York, pres.; G. E. Tener, Pittsburgh, v. p.; C. D. Fraser, treas.; J. D. Clarke, sec.; T. Walter Beam, gen. mgr. Inc. 1916, in Delaware. **Cap.**, \$3,000,000; shares \$10 par.; 100,000 issued.

Property: originally owned by Hetty Green, was purchased in 1916 from the Amador Cons. Mng. Co. Is credited with past production of \$20,000,000. Main shaft has a depth of 2,063'. In Feb., 1916, large trees were growing out of the shaft, and water was flowing from the collar.

For history of the property see Mining and Scientific Press, Vol. 112, No. 26. The vein runs N. W., dips 71° E. and has a 700' ore shoot.

Property was unwatered in 1917, after a shut-down of over 40 years. By Nov. 22, 1917, the shaft had been unwatered and repaired to 2,063'. Four drifts are being cleaned out, where considerable pay ore is exposed.

Equipment: modern sinking pumps, 300-h. p. electric hoist, Ingersoll compressor, and necessary buildings.

This is a genuine and expensive project to reopen an old gold producer, the owners betting on the continuity of the Mother Lode ore channels, and the economical conditions afforded by power, water and climate in handling them. The old Plymouth proved highly profitable, so probably will the Old Eureka.

ORIGINAL AMADOR CONSOLIDATED MINES CO. CALIFORNIA

Office: 1225 Broadway, Oakland, Cal. T. S. O'Brien, supt., Amador City, Amador Co., Cal.

Property: 6 claims, covering 4,400' on the lode at Amador City, is said to carry a system of parallel quartz veins, from 12' by 50' wide, with diabase hanging and Mariposa slate footwall.

Development: by incline shaft to depth of 780'. The ore is mined by the shrinkage stope method.

Equipment: includes Ingersoll-Rand ocmpressor driven by 100-h. p. motor, double-drum hoist, drills and 20-stamp mill for amalgamation and concentration of the ore, making an extraction of 90%.

The concentrates average \$80 per ton. The mill was remodeled in 1915 and is equipped with 4 trommels, 2 Dorr classifiers, two 8 by 3' Hardinge conical mills, 2 hydraulic classifiers with 3 spigots each, Deister double-decked sand and slime tables and a cyanide plant. Capacity has been increased from 90 tons daily in 1914 to about 300 tons in 1916. Operating costs reported at \$2.56 per ton. Employs 32 men.

Mine was closed down early in 1917 owing to farmers protesting that their lands were damaged by overflow of tailings. Reopened June, 1917.

PLYMOUTH CONS. GOLD MINES LTD.

CALIFORNIA

Offices: 20 Copthall Ave., London, E. C., Eng. Mine office: Plymouth, Amador Co., Cal. Gen. mgrs.; Bewick, Moreing & Co., 62 London Wall, London, E. C., Eng. San Francisco office: Crocker Bldg.

Officers: C. Wanklyn, chairman; C. A. Moreing, W. J. Loring, John Barry, J. P. and David Richards, directors. T. E. Smith, sec.; J. F. Parks, supt.

Inc. Jan. 15, 1914, in England. Cap., £240,000: shares £1 par; all issued.

Gross earnings for 1916 were \$681,150; operating expenses \$462,290 and net earnings, after writing off depreciation, \$218,860; dividends absorbed \$174,600, leaving balance of \$53,331.

Dividends: in 1915, were 3s. per share, of \$173,000, in 1916, 3s. per share.

Property: the Plymouth Consolidated group of 13 patented claims and a tract of agricultural land, about 500 acres, at Plymouth, Amador Co., Cal. The holdings cover 4,800' along the Mother Lode, showing 3 fissure veins in Mariposa slate. The veins run N. S., with dip 60° E. Ore is partly sulphide, occurring in shoots 6' to 30' wide and 150' by 300' long, said to average 0.30 oz. gold and 0.14 oz. silver, per ton.

Development: by several incline and one vertical shaft to depth of 2,600'. Workings total about 4 miles. The main or Pacific shaft is a vertical 3-compartment shaft to 1,600' level where it turns into a 55° incline, sunk in the footwall of the Empire-Pacific veins to the 2,600' level. Work in 1916 amounted to 5,009', mainly drifts and raises.

Equipment: includes 500-h. p. electric hoist, 1,800 cu. ft. compressor, a 30-stamp 360-ton mill for amalgamation and concentration of ores which makes a 90.32% extraction. The mill is equipped with No. 5 Gates gyratory crusher, Hardinge mills, Richard classifier, tables and vanners. The concentrates average \$115 per ton, and the tailings run about 50 to 80c per ton. Total cost per ton was \$3.20. Management estimated ore reserves at 170,220 tons of \$6.64 ore, Jan., 1917.

Production: 44,775 tons of ore in 1914, yielding 11,132 oz. gold; 129,500 tons in 1915, yielding 31,193 oz. gold and 8,652 oz. silver, gross value \$846,491; 125,000 tons in 1916, yielding 32,693 oz. gold and 8,016 oz. silver, gross value, \$681,150.

The property is an old mine, for a long time dormant, but made into a successful producer through the able judgment and operating ability shown by Bewick, Moreing & Co.

SOUTH EUREKA MINING & MILLING CO.

CALIFORNIA

Office: First National Bank Bldg., San Francisco, Cal. Edward Fox, sec.-treas.; W. H. Schmal, supt.

Earnings in 1915 reported, \$582,762; with operating expense, \$448,013; construction and equipment, \$8,825; supplies \$570; dividends 38c per share, or \$125,354. Stock is listed in San Francisco.

Property: South Eureka mine and the Oneida, lying between South Eureka on the north, and the Kennedy mine on the south, one mile south of Sutter Creek, Amador Co.

Ore: is gold bearing quartz occurring in the Mother Lode, and is on a northern extension of the Kennedy and Argonaut lead. The enclosing rocks are Mariposa slate and greenstone schists. At the South Eureka mine three distinct veins have been developed; the hanging-wall, footwall and middle veins, with the two latter joining below the 2,000' level; most of the pay ore developed on lower levels is in this vein.

Development: by shafts. The north shaft, 2 compartments, on the South Eureka, is down 2,785' on a 67° incline; it cut the hanging-wall vein at 1,700' level, remained in the vein to the 2,000' level and is in the footwall below this. The south shaft, 880' S. E. of the main shaft, has a vertical depth of 600'. The Oneida has a 2,280' vertical shaft sunk in the hanging-wall; it cut the vein on the 1,900' level. Workings of Oneida are connected

with South Eureka on the 1,800' level. The lower level of the Oneida were flooded, but early in 1916 the mine was drained and work resumed.

Equipment: at South Eureka includes 2-ton skips, double-drum hoist driven by two 400-h. p. motors with 24-rope transmission drive and 2 Ingersoll-Rand compressors, each driven by 100-h. p. motor.

Mill: 80 stamps, weighing 1,150 lbs., dropping 6½", 100 drops per minute, crush 5 tons through 24-mesh screen. Each battery of 20 stamps is driven by a 50-h. p. motor. Pulp from amalgamating plates is treated on Frue vanners. Company employs 250 men.

Production: in 1915 totaled 145,124 tons of \$4.34 ore, with a recovered value of \$3.96 per ton, extraction 91%. Cost per ton of ore milled, \$3.09; average value of concentrate, \$68.99 per ton.

See Cal. State Mineralogist's Report Mines and Min. Res. of Amador Co., pp. 39, 45.

SOUTH KEYSTONE CONS. MINING CO.

CALIFORNIA

Address: C. H. Colper, mgr., Amador City, Cal.

Officers: W. Virges, pres.; C. H. Colper, v. p.; F. F. Wood, sec.-treas., with J. A. McIntire and C. Huth, directors.

Cap., \$1,000,000; shares \$1 par.

Property: several well known gold claims between Amador City and Sutter Creek, Cal.

Development: ground was unwatered in March, 1917 and exploration is under way at 600' and 1,000' depth in North Star claim. A 10' vein was cut at 600' in August.

This is another of the old California mines being reopened under modern conditions.

SUTTER CREEK MINING CO.

CALIFORNIA

Letters sent to Alex. Rennie, supt., Sutter Creek, Amador Co., Cal., returned in May, 1917. **Cap.,** \$300,000.

Property: the East Eureka mine, also called the Rose, or Poundstone, a mile east of Sutter Creek. Shaft was reopened 1916 and 10-stamp mill repaired.

TREASURE MINING CO.

CALIFORNIA

Office: 576 Mills Bldg., San Francisco. Mine office, Amador City, Cal.

Officers: W. Rothchild, pres.; E. J. McCutcheon, v. p.; E. S. McCurdy, sec.-treas., with H. G. Stevenson, G. W. McEnerney, directors. J. H. Bell, supt.

Property: one claim, near Amador City, Amador Co., said to show a gold quartz vein in schist with dip 45° to 55° and N. W. strike.

Development: winze 700' deep; 50° incline shaft, with levels at 1,800', 2,000', 2,160' and 2,300'.

Mill containing ball and Hardinge mills at work, 1917.

WESTERN MINES CORPORATION

CALIFORNIA

Office: Gwin Mine, via Jackson, Amador Co., Cal.

Officers: Major H. S. Howland, pres.; John Landers, v. p.; San Francisco, Cal.; D. C. Demarest, v. p.; A. F. Hughes, chief engineer, with A. J. Harwood, directors. W. D. Wright, treas.; Jos. D. Fackenthal, sec.

Cap., \$2,000,000; shares \$5 par. **Bonds:** authorized, \$600,000, debentures 6%, convertible into stock on basis of \$200 in stock for every \$100 in bonds. Issued in denominations of \$100 and \$1,000 dated Aug. 1, 1916, due Aug. 1, 1926. Semi-annual interest, payable Feb. 1 and Aug. 1. Empire Trust Co., New York, trustee.

Property: the company was formed in 1916 to operate the Gwin mine on the Mother Lode, in Calaveras Co., Cal., 7 miles S. of Jackson, Amador Co.; also the Sierra Mines, under option, 4½ miles from Downieville, Sierra Co., and the Inyo County mine. The Gwin mine, acquired in 1867 by Wm. N. Gwin, and said to have produced \$2,000,000 to the 1,500' level, has been idle since 1908.

Geology: the Gwin vein occurs in Mariposa slate, with strike N. 12° W., dip 68° E. The ore shoots vary in width from a few inches to 20'. For geology see U. S. G. S. Folio 63.

Development: by shaft; main shaft sunk 2,400' vertical, cuts the vein at 1,200' level. A winze on the 2,400' level and 450' south of main shaft is 450' deep.

Ore reserves: management claims 240,000 tons averaging \$4.25 gold per ton, between the 1,400' and 2,400' levels and 800,000 tons of milling ore above the 1,400' level; also that "it is an exorable law applicable to Mother Lode mines that enrichment takes place with depth."

Equipment: includes two compressors, 118' steel head-frame, double drum hoist, three 80-h. p. boilers, two 10' Pelton wheels. Waste water from hoist and mill is stored in 75,000 gal. tank, before passing to compressor plant on the river, giving a 400' head.

Mill: with 100 stamps, weight 950 lbs.; includes 2 Blake crushers and Frue vanners.

Sierra mines: 11 claims, 200 acres, with 2,150' of tunnel workings, claimed to have 216,000 tons ore in sight, assaying \$3 to \$8 per ton. Further development work planned.

Inyo County mine: 3 claims, 60 acres, is a prospect said to cover 4,500' of a quartz vein 100' in width. Development merely by a 200' tunnel. Further development planned for 1917.

Management estimates gross earnings of \$4 per ton, with net returns of \$280,000 per year and "when the Sierra mines have been equipped with a new plant, the earnings should be (\$894,000 gross, \$415,000 net) in excess of 20% on the capital stock."

No information available as to whether or not this estimate has been confirmed by 1916-1917 operations.

WHITE KNOB COPPER & DEVEL. CO., LTD. CALIFORNIA

Address: E. H. Kelly, treas., 43 Cedar St., New York. Mining property was the White Knob mine, at Mackay, Custer Co., Idaho, now owned by the Empire Copper Co. For further details of this company and its predecessors, see Vols. IX and X, Copper Handbook.

Cap., \$6,000,000; \$4,000,000 common and \$2,000,000 7% cumulative preferred stock. Company is a holding company controlling through ownership of \$1,200,000 of the capital stock, the Argonaut Consolidated Mining Co., a dividend payer, which controls the Argonaut Mining Co., at Jackson, Amador Co., Cal., which see.

Dividends: were resumed in 1914, with payments of 25c per share on preferred stock, Nov., 1914; 10c in Feb., May, Aug., and Nov., 1915; 10c Feb., May, Aug. and Nov., 1916, and 10c Feb., 1917.

BUTTE COUNTY

AMERICAN DREDGING CO.

CALIFORNIA

Address: C. G. Leeson, mgr., Oroville, Cal.

Inc. 1916, in California, to take over the dredging interests of the Oro Water, Light & Power Co., whose power plants were acquired by the Pacific Gas & Electric Co.

Property: placer claims along the Feather river in Butte county and along the Mokelumne river in Calaveras Co., Cal. On the former are three dredges and on the latter two, with from 5 to 9 cu. ft. buckets. Annual gold production is over \$500,000. The newer boats on the Mokelumne dig up to 225,000 yards per month each. Gravel carries about 10c gold per yard.

OROVILLE DREDGING, LTD.

CALIFORNIA

Controlled by Oroville Dredging Co., Ltd., of England.

Office: Alaska Commercial Bldg., San Francisco, Calif.

Inc. June 19, 1905, in Maine. **Cap.,** \$3,500,000; shares \$5 par; 686,531 issued.

Dividends: 2½% in 1905, 10% in 1906, 7½% in 1907, 10% in 1908, 7½% in 1909, none from 1910 to 1913, on account of expenditure on English company's property in Colombia, 5% in 1913-14, 7½% in 1914-15, 10% in 1915-16, and 2½% in 1916-17.

Property: 2,500 acres of placer ground along the Feather river, near Oroville, Butte county, Cal.

Equipment: at present includes 2 dredges. Company maintains repair shops at Oroville.

Production: during year ended July 31, 1915, 2,569,643 cu. yd. yielded 8.89c per yard, at cost of 4.45 cents.

Like the other dredging companies at Oroville this one is nearing its end.

STEIFER MINING CO., P. B.

CALIFORNIA

Coutolenc, Butte Co., Cal. P. B. Steifer, pres.

Inc. Dec. 6, 1901, in Cal. Is a gold mine. Company was sued by Henry T. James and W. C. Pershbaker, alleging illegal issuance of stock, issuance of notes, and that company is a stock selling proposition.

CALAVERAS COUNTY

ALLISON MINING CO.

CALIFORNIA

Address: Melones, Cal.

Inc. 1917, by A. W. Capps and John T. Murphy, at San Francisco, and Frank B. Pattee of Oakdale.

Property: quartz claims on Carson Creek, adjoins the Jones, on both sides and ends; west of the Melones mine; vein shown on bodies of \$5 quartz and some high grade.

Two 5' Huntington mills to be installed in 1918.

BLAZING STAR MINE

CALIFORNIA

Owned by Union Development Co., 713 Iowa Loan & Trust Bldg., Des Moines, Iowa. Mine, 1½ miles east of West Point, Calaveras Co., Cal., has a 2' quartz vein, strike N. 30° W., dip 80° W.; developed by 400' shaft. Was being reopened at last accounts.

CALAVERAS CONSOLIDATED SYNDICATE

CALIFORNIA

Address: W. J. Loring, gen. mgr., 1018 Crocker Bldg., San Francisco. Mine address: A. D. Stewart, supt., Melones, Calaveras Co., Cal.

Is a close corporation.

Owens and operates the Calaveras, Morgan and other mines. The Calaveras has a 1,200' tunnel and 275' winze, 600' below surface.

Ore: gold quartz said to average \$5 per ton, for width of 18' and length of 500'. The Morgan shaft is 250' deep below tunnel.

Has a stamp mill, with concentrators. Uses electric power, has 3 motors, 3 drill Sullivan air compressors and employs 25 men.

CALAVERAS COPPER CO.

CALIFORNIA

Office: Ames Bldg., Boston, Mass. Mine office: Copperopolis, Calaveras Co., Cal.

Officers: Chas. M. Hayden, pres.; Herbert Goff, sec.-treas.; preceding with Oliver Ames, F. Lothrop Ames, Samuel Carr, Gilmer Clapp, Wm. J. Maloney, John S. Ames, Ross F. Robertson, directors. S. M. Levy, mgr.

Inc. Aug. 31, 1909, in Del. **Cap.**, \$5,000,000; shares \$5 par; reduced Aug. 24, 1910 to \$2,500,000, common shares \$5 par; issued \$1,868,750; \$300,000 preferred, shares \$5 par, none issued. Bonds (first mortgage, 6%) principal amount \$450,000; interest accrued to Dec. 31, 1915, \$147,510; under refinancing plan adopted by stockholders in January, 1916, the principal of said bonds and said accrued interest to Dec. 31, 1915, were extended so as to fall due in nine equal annual installments, beginning Jan. 1, 1920, viz., \$50,000 of principal and \$16,390 of said accrued interest each year; each of said payments bearing interest at 6% from Jan. 1, 1916. Under the same plan \$99,000 face value of debenture notes were issued, payable at the rate of \$5,000 per month, beginning April 1, 1917. Of these notes \$50,000 have already been paid. \$75,000 of two year 6% convertible notes which were due March 1, 1917, were either converted before, or paid on that date. All the bonds are held by the Ames Estate of Boston, which formerly owned the property. State Street Trust Co., Boston, registrar;

Federal Trust Co., transfer agent. Stock is listed on the Boston Curb. Annual meeting, 2nd Monday in February.

Property: 2,833 acres, including the Union, Keystone and Empire mines, and also including ranch and water power lands, bought Aug. 31, 1909, of Union Copper Mining, Co., 16 miles from Milton, the nearest rail point on the Southern Pacific. Mines opened 1861, were considerable producers and were worked intermittently until 1907.

Experts employed by the Calaveras company report substantially as follows:

Geology: the country rock is a basic igneous rock schistose in character. The general strike of the schistosity is N. 30° W. The dip is 65° North-easterly. This formation is traversed by a shear zone about 125' wide, the strike and dip of which conform with the strike and dip of the general schistosity. The holdings of the Calaveras Copper Co. cover approximately 19,000' along the strike of this shear zone. For the most part, the shear zone in which the orebodies occur is a distributive fault, in which the ore occurs as lenticular bodies within the crushed material (half fissile schist) resulting from movements parallel with the schistosity.

In several new places a cross break cuts across that portion of the shear zone containing one of these lenticular orebodies. From this cross fault the ore makes out on either side for 20 or 30', but within the fissile material of the shear zone. Thus, there is a lenticular orebody parallel with the schistosity and another orebody which really runs across the schistosity. The ore averages about 3% copper.

Development: the strike of the vein is proven for about 8,000'. The principal development is at the Union and Keystone mines.

Equipment: includes a 1,000-h. p. steam plant at the Union mine, with 3 hoists, 15-drill Nordberg and 5-drill Leyner air compressors; company also reports 500 electric h. p. at the mill and same at the smelter.

The company owns about 60 buildings, including office building, boarding houses, bunk houses, 3 warehouses, machine shop, smithy, 3 barns, and about 40 dwellings. The 600-ton mill equipped with three ball mills is operating with oil flotation, and is connected with the mines by a 4,000' electric tram. A dam, impounding water for the mill has 90,000 gals. storage capacity.

At the southerly end of the property a dam has been built. This arrangement to impound the tailings and a pump installed gives an additional water for the concentrator.

The 300-ton smelter, now inoperative, has 2 McDougall calciners, a 150-blast furnace and a 150-ton reverberatory furnace. The converter has 2 Allis-Chalmers stands. Smelter fuel was petroleum and coke.

While the property was closed it was investigated by several engineers on behalf of various persons, contemplating the purchase of the property or its operation under a lease. As a result it was determined, October, 1914, to operate the property, with Mr. S. M. Levy, as manager. Under Mr. Frank W. Royer, as consulting engineer, the mine has since been operated and careful experiments were made for the purpose of treating the ore by the oil flotation process. It has been determined that the average grade of the ore is approximately 3% and that under oil flotation a concentrate of at least 16% can be made, the recovery averaging approximately 92%. Ore now in sight ready to mine amounts to 300,000 tons.

In March, 1916, new milling machinery was installed capable of treating about 250 tons of ore a day by oil flotation process; subsequently another milling unit was installed and the mill is now treating about 500 tons a day. A still further unit was installed, 1917, making total milling capacity 700 tons a day. From March 1, 1916 to March 31, 1917, the mill treated over 90,000 tons of ore. The concentrates are being shipped to Tacoma for treatment.

CAMPO SECO MINES

CALIFORNIA

Owned by Penn Mining Co., at Campo Seco, Calaveras Co., Cal.

COLUMBIA MINES CO.**CALIFORNIA**

Mine at Angels Camp, Calaveras Co., Cal.

Officers: J. S. Rear, pres.; N. N. Merriman, v. p.; A. Caminetti, treas.; preceding with W. C. Tupper, W. P. Smith, F. M. Woods and J. G. Ferraris, directors

Inc. Jan., 1915, in California. **Cap.**, 750,000 shares, \$1 par value, all issued; no bonds.

Property: 2 claims of low-grade gold ore. Shaft reported to be down 250' with some drifting. Has 100 ton stamp mill. Stock listed on New York Curb.

GOLD BAR MINING CO.**CALIFORNIA**

Office: 255 California St., San Francisco, Cal.

Officers: J. J. McIntire, pres. and gen. mgr.; W. N. Lamb, v. p.; H. Eason, sec.; J. W. Marshall, asst.-sec.; with Wm. Osborn, directors.

Inc. Aug., 1915, in California. **Cap.**, 75,000 shares, \$1 par; authorized to sell 35,000 shares for development purposes August, 1917.

Property: 30 miles from Valley Springs, Calaveras Co., Cal. Proposed to develop a lava-capped drift-gravel channel, and wash gravel by improved method, the drop system. A sketch in prospectus indicates great opunism.

LIGHTNER GOLD MINING CO.**CALIFORNIA**

Office: 301 N. Eldorado St., Stockton, Cal.

Officers C. M. Jackson, pres.; Alex. Chalmers, v. p.-mgr.; B. F. Williams, Jr., sec.-treas., with A. D. Schindler and L. J. Wagner, directors.

Inc. Oct. 26, 1896, in California. **Cap.**, \$125,000; shares \$1 par; assessable; 62,287 shares outstanding. Dividends paid to date, \$550,000. Gross earnings in 1914 were \$46,012 and operating expenses totaled \$38,245. Mine was not operated during 1915. Assets, Feb., 1916, amounted to \$224,281 and liabilities to \$85,186. Annual meeting last Thursday in Oct.

Property: 1 patented claim, $4\frac{1}{3}$ acres, in Angels Camp, Calaveras Co., between the Utica and Angels quartz mines, shows a quartz fissure vein said to be 80' wide, running N. W.-S. E., with dip of 70° and assaying \$5 per ton. The mine is credited with a total production to date of \$2,000,000. Property was closed down in 1910, owing to caving of the old shaft sunk on the orebody.

Development: the mine was worked out from the 600' to the 350' level through this shaft, a 30' bed of talc cutting off the orebody between the 500' and 600' levels. Work was continued through 1911-1912 and a new 2-compartment shaft sunk. In 1914 work was again resumed and a winze sunk to the 900' level, where a crosscut run N. is said to have found the orebody in place under the talc, 30' wide and with the same dip as on the 300' level. This vein was drifted on for 120' and appears to be the top of a new orebody of same age and character as was found above the talc. Production ceased after 9 months' operations in 1914 and the shaft was being sunk to below the 1,000' level.

Equipment: includes hoist, drills, electric power, compressor and 60-stamp amalgamation and concentration mill, making an extraction of 90%. Employs about 70 men and maintains an average daily output of 150 tons when working. Management estimated ore reserves at 200,000 tons above the 300' level, Feb., 1916.

After several years of idleness, mine was examined with view of re-opening, 1917. In May, there was nothing being done. The mill, built on hanging wall of lode, is considerably out of alignment due to collapse of workings.

MELONES MINING CO.**CALIFORNIA**

Office: 131 State St., Boston, Mass. Mine office: John A. Fulton, act. mgr., Melones, Cal.

Officers: W. E. C. Eustis, pres., Boston; A. H. Eustis, sec.-treas.; C. Minat Weld, James Parker, Frank Lyman, W. B. Devereux, T. H. Watkins and W. C. Ralston, directors.

Inc. in West Virginia. **Cap.**, \$400,000; shares \$1 par; nonassessable; 275,000 issued. Bonds authorized \$500,000, \$400,000 outstanding. State St. Trust Co., Boston, Mass., transfer agent. Annual meeting, 3rd Wednesday in March.

Property: 16 claims, 152 acres, on Carson Hill, has been steadily operated since 1898.

Ore: gold, occurs in a quartz vein in schist with N. W.-S. E. strike and a dip of 70° N. E.

Development: by tunnel 5,000' long on 1,100' level. At this point a 3-compartment shaft has been sunk in the footwall to 2,550' level. Ore above 1,100' has mostly been extracted. Shrinkage stoping is in vogue where the vein is not too flat. Ore is trammed from mine to mill in 8-ton cars hauled by a d. c. 500-volt locomotive.

Equipment: includes double-drum electric hoist, driven by 250-h. p., 2,000-volt induction motor, hoisting at 1,000' per minute; 600-cu. ft. Imperial compressor driven by 100-h. p. motor; 1,200-cu. ft. Laidlaw-Dunn-Gordon compressor; and a 100-h. p. trolley generator in power-house at river. Two Knight water-wheels partly drive these helped by a 250-h. p. G. E. 2,000-volt motor. Mill and other plant driven by water-power, 1,200 h. p. being available. Flume and ditch line is 4 miles long.

Mill: 100 stamps, weight 1,050 lbs. each, dropping 7", 102 drops per minute, crushing 5 tons ore per stamp through 20-mesh screen; outside amalgamation is used; battery pulp concentrated on Wilfley tables; middlings elevated, reclassified and reconcentrated; concentrates to cyanide plant, capacity 600 to 700 tons per month. Concentrates assay \$30 to \$50 per ton. All tailings on tables are treated by cyanide. Classification takes place on the tables. Sand is treated by percolation (cyanide), and slime in a Dorr counter-current (C. C. D.) plant. Total recovery averages 85%. Costs have risen so lately that they cannot be given without confusion but probably range from \$2 to \$2.50 per ton for mining, milling, and cyaniding.

See Mines & Mining Resources of Calaveras Co., Cal. State Mineralogist's Report, 1915, pp. 93-96.

NASSAU COPPER CO.

CALIFORNIA

Office: 339 Bush St., San Francisco.

Property: 2 patented claims, 40 acres, and 1,560 acres of agricultural lands, 4 miles north of Copperopolis, Calaveras Co., Cal., covering a length of 15,840' on the lode. Ore occurs in lenses and streaks as copper sulphides, pyrite, gold, silver and zinc in a 10' vein running N. 35° W. and dipping 65° N. E.

Development: by 280' shaft with 1,000' of drifting N. and S. on the 95' level and 1,100' of drifting N. and S. on the 200' level. Ore was shipped to the Selby smelter from Angels, 9 miles distant. Shipments averaged 17.90% zinc, 5.22% copper, 4.60 oz. silver, 0.20 oz. gold, 11.90% iron, 39% silica.

The complex character of the ore and consequent low returns, coupled with litigation have led to a shut-down, and the mine is closed, save for keeping water down. The mine-water is run through troughs containing scrap iron to recover copper-content. Property is reported to have good possibilities.

PENN MINING CO.

CALIFORNIA

Office: 727 Foster Bldg., Denver, Colo. Mine office: Campo Seco, Calaveras Co., Cal.

Officers: Chas. Loughridge, pres.; Wm. D. McIlvaine, sec.-treas.; Alfred P. Busey, Jr., gen. mgr.; D. C. Smith, metallurgist.

Inc. June 1, 1910, in Wyoming, as successor of Penn Chemical Works. **Cap.**, \$250,000; shares \$1 par. Is operated as a close corporation.

Property: the Campo Seco, Hecla, Little Satellite and Satellite, patented claims, near Campo Seco, in the Foothill copper belt, 80 acres, with a 20-acre smelter-site and 2,305 acres of timber and miscellaneous lands, giving total holdings of 2,405 acres.

Ore: the ore deposit, having a maximum width of 30' at depth of 400', lies between amphibolite schist and talcose shale, and north of the Campo Seco shaft splits into veins known as the East and West, which continue parallel. Ore is mainly chalcopryrite, associated with sphalerite, sometimes occurring in considerable quantities, and pyrite, and also includes occasional chalcocite and bornite. The average assay of ore smelted in 1916 was 5.15% copper, 2.39 oz. silver, 7.9% zinc, 0.073 oz. gold. The gangue ranges from talcose schist, through clay, to quartz. Faulting considerably displaced the vein below 700' depth.

Development: includes the 2,900' working shaft, No. 3, and a tunnel, also 4 other shafts, 2 on the East vein at the Campo Seco and Hecla mines and 2 on the West vein at the Satellite mine. No. 1 shaft, 300' deep, is useful only for ventilation; No. 2 shaft, 750' deep, at the Satellite mine, is the main working shaft on the West vein, with a compressed air hoist; No. 3 shaft, at the Campo Seco mine, about 1,300' from No. 2, is 2,900' deep, with levels at 150' intervals, and has a steam hoist; No. 4 shaft, at the Campo Seco mine, 200' deep, is used as an air shaft and manway; No. 5 shaft, at the Hecla mine, 400' deep, is used as an air shaft.

Ore reserves: estimated sufficient for two years.

Equipment: includes 2 Wellman-Seaver-Morgan electric hoists with 1,500' and 2,500' capacity drums. The smelter has a 400-h. p. steam and electric plant, ice plant, pumping plant and a Nordberg air compressor, capacity 1,400 cu. ft., to supply the mine and smelter. Fuel is crude petroleum, which also is burned in the locomotives. The Southern Pacific Railway is 5 miles distant, at Valley Springs, and transportation between that point and the mine is by wagons, making one round trip daily. A short private railway connects the mines and works.

Smelter: the 300-ton smelter, a quarter of a mile from the mine, has an Allis-Chalmers converter, one Herreshoff roaster, two 150-ton reverberatory furnaces, and eight 16-ton McDougall calciners. The smelter railway, for charging and slags, has electric locomotives. Some cement copper is produced from mine water.

Blister copper is shipped to the American Metal Co. for refining.

The company has experimented on the Thiogen process for elimination of sulphur, mainly on account of fume litigation. The smelter has been in continuous operation for over 16 years.

	Production:	Tons Ore Treated	Lbs. Refined Copper
1916	43,210	3,973,111
1915	42,365	3,152,071
1914	42,928	4,007,149
1913	50,427	4,467,982
1912	51,163	5,175,875

PIONEER CHIEF GOLD MINING CO.

CALIFORNIA

Office: 923 Monadnock Bldg., San Francisco, Cal. **Mine office:** San Andreas, Cal.

Officers: N. J. Martin, pres.-mgr.; B. F. Marshall, v. p.; Judge W. F. Crist, sec.-treas.; with M. V. Van Fleet and G. G. Damon, directors; J. E. King, supt.

Inc. Aug. 26, 1915, in California. **Cap.**, \$300,000; shares \$10 par; assessable; 23,603 shares outstanding. **Transfer office:** 923 Monadnock Bldg., San Francisco, Cal.

Property: 15 patented claims, 200 acres, on the footwall belt of the Mother Lode, near San Andreas, Calaveras Co., said to show gold ore occurring in veins with slate hanging and diabase footwall. Veins have N. 30° W. strike and dip 65° E. Management reports pay ore in shoots 7' wide and 200' long, containing quartz, sulphides, chalcopryrite, pyrite and galena, with average assay of \$9 in gold.

Development: by 2-compartment, 500' shaft.

Equipment: includes electric power, 40-h. p. single-drum hoist and 600-cu. ft. compressor. Management plans erecting 100-ton mill.

ROYAL GOLD MINES CO.

CALIFORNIA

Acquired by Stockholders' Mining Co., which see.

STANDARD AMALGAMATED EXPLOR'N CORP.

CALIFORNIA

Office: Gahm Bldg., Boston, Mass. Mine near Esmeralda, Calaveras Co., Calif.

Officers: Frank E. Bramhall, pres.; W. F. Dwyer, v. p.; A. F. Riedel, sec.; H. H. Brown, treas.; with Alfred Grover, E. Koessler, E. F. Curtis, Geo. Clark and J. L. Whitten, directors. Louis Robin, mgr.; Chas. Cuneo, supt., Esmeralda, Cal.

Inc. Jan. 2, 1909, in Nevada. **Cap.**, \$1,500,000; shares, \$1 par; non-assessable; outstanding April 23, 1916, 1,264,223 shares.

Bonds: authorized and outstanding, \$40,000. Company is successor of the Standard Amal. Exploration Corp. **Cap.**, \$2,500,000.

Property: the Economic mine, 2 patented claims, 36 acres, near Esmeralda, is said to have a steeply dipping 6' quartz vein in slate.

Development: by a 700' tunnel, with total workings of 5,000'. Management claims ore blocked out sufficient to run the mill 4 years; assay \$18 to \$46, while "actual mill returns on try-outs to Selby smelter show better than \$60.20 per ton."

Equipment: includes a 20-stamp mill, 100-h. p. compressor and electric power. Company has completed its own power line and operates its own lighting plant. Will add 20 stamps to the mill and build a cyanide plant.

STOCKHOLDERS MINING CO.

CALIFORNIA

Main office: 77 Franklin St., Boston, Mass. Mine office: Hodson, Calaveras Co., Cal.

Officers: H. P. Brett, pres.; J. M. Whitcomb, treas.; E. F. Baxter, sec.; with W. A. Perry, T. L. Wiles, E. S. Hilton, and W. A. Mosman, directors. W. B. Farmer, business mgr.; Haines Gridley, mine mgr.

Inc. Jan. 10, 1917, in Maine, successor to the Royal Gold Mines Co., and the adjacent Mountain King Co. **Cap.**, \$2,000,000; shares \$1 par, \$1,500,000 issued for property and financing. Transfer agent: Commonwealth Trust Co., Boston. Annual meeting 1st Monday in May.

Property: 17 claims, 14 patented, 180 acres on the Mother Lode, Calaveras Co., Cal., containing low-grade gold ore. The ore-zone is said to be 5,000' long and 500' wide.

Geology: quartz veins in slates, which are traversed by dikes of diabase or greenstone, that often form one of the vein walls.

Development: 3 shafts, one 1,000' deep, and 5,000' of workings. Proposed work should give the mills 600 tons daily. Original company has been shipping since June, 1915.

Equipment: hoist, crusher, tramway, 2 mills with 130 stamps, cottages, school, and hotel.

Property examined by W. E. Farish, W. P. Miller, J. H. Finlay, William Forstner, E. P. Jennings, and William Foster, who all reported favorably.

UNION DEVELOPMENT CO.

CALIFORNIA

Owens Blazing Star mine (which see), Calaveras Co., Cal.

UTICA GOLD MINING CO.

CALIFORNIA

Office: care of Hobart & Lane Estates, Merchants Ex. Bldg., San Francisco, Cal. Fred J. Martin, supt., Angels Camp, Calaveras Co., Cal.

Property: 9 claims, covering Dead Horse lead, a N. W.-S. E. vein dipping 70° N. E. Vein has ore 60' thick, averaging \$3.60 per ton. Also Gold Cliff mine on westerly split of the main Mother Lode.

Geology: the Gold Cliff and Utica veins are about 3,000' apart on the surface, converging somewhat in their southern trend, and also in depth. Development tends to show that within a short distance from the bottom of the present workings, these two veins will unite as one large one. On the 2,750' level the pitch of the Utica vein, at or near the surface, is 60° to

the east, while at the 2,400' level it has a pitch of 70°. The Gold Cliff, on the other hand, at or near the surface, has a pitch of 55° to the east, and at the 1,900' level has changed to 40°. The present lower workings of the Utica show the vein at that point to be about vertical.

Development: on the Utica vein to depth of 2,400' by vertical shafts; the 1,470' cross shaft being main working with 700' winze below 1,400' level and a 1,600' connection on 1,500' level, to 2,400' level of Gold Cliff shaft.

Equipment: includes the Utica 60-stamp mill, 20 stamps operating on Utica ore proper, with 85% extraction and the 40-stamp Gold Crown mill making a 90% extraction. Total costs, \$2.15 per ton.

A new strike on the 1,600' level made in June, 1916, disclosed 18" to 20" of bonanza, or specimen ore, showing coarse free gold, the vein averaging \$1,200 per ton. New work on the 1,800' level is expected to disclose the downward extension.

See Cal. State Mining Bureau report 1913-14, M. & M. Res. of Calaveras Co., pp. 81 and 110.

No recent information available.

VICTOR LAND & MINERAL CO.

CALIFORNIA

Address: Angels Camp, Calaveras Co., Cal.

Property: the Reiner mine, bought for 50,000 shares stock, issued at 32c by permit of California State Corporation Commission, Oct., 1917.

COLUSA COUNTY

CERISE GOLD MINING CO.

CALIFORNIA

Offices: Willows, Glenn Co., Cal. **Incorporators:** Z. E. Simpson, F. Freeman, sec., H. E. Simpson, C. L. Austin and J. Schribner.

Property: in Sulphur Creek, Colusa Co., Cal. Company organized to carry on a general mining and milling business.

RUBY KING COPPER CO.

CALIFORNIA

Mine near Ladoga, Colusa Co., Cal. Although generally known as a copper mine, no copper ore has as yet been discovered and property is operated as a mineral paint mine, by the Ruby King Mineral Paint Co., 1027 Eighth St., Sacramento, Cal.

Property: 6 patented claims, developed by 1,200' shaft and 1,000' tunnel. Ore is iron oxide containing a small percentage of cinnabar.

Production: 500 tons in 1914. No recent returns.

CONTRA COSTA COUNTY

SELBY SMELTING & LEAD CO.

CALIFORNIA

Office: Merchants Exchange Bldg., San Francisco, Cal. **Works office:** Selby, Contra costa Co., Cal.

Officers: H. B. Underhill, Jr., pres.; Eugene B. Braden, v. p.; Chas. J. Durbrow, sec.

Inc. 1875, in Nevada and controlled; through stock ownership, by American Smelters Securities Co., a subsidiary corporation of the American Smelting & Refining Co. The works represent an investment of about \$4,000,000.

The smelter at Vallejo Junction, near Carquinez Strait, receives ore by rail and water, from all of the Pacific states, but principally from Nevada. The works include a 400-ton smelter having lead stacks, a 200-ton lead reverberatory, a refinery for parting gold and silver, and a plant for the manufacture of bluestone.

Equipment: includes steam, electric and air power. The plant includes a bag house, and also a special chamber having the Cottrell process for precipitating solids from fumes, before passing to the main stacks.

The Selby is perhaps the largest smelter producer of gold in the United States, or possibly in the world. The plant and improvements were described in 1916 by T. A. Rickard in the Mining and Scientific Press.

DEL NORTE COUNTY

SALT LAKE-CALIFORNIA COPPER CO.**CALIFORNIA**

Office: 302 Hooper Blk., Salt Lake City, Utah. Mine office: Smith River, Del Norte Co., Cal.

Officers: W. Mont Ferry, pres.; Isaac Sparey, v. p.; J. H. Turner, sec.-treas. and gen. mgr.; preceded with C. W. Hoover, Jas. Ivers and L. A. Mehse, directors.

Inc. Nov. 29, 1907, in Utah. **Cap.**, \$1,000,000; shares \$1 par; nonassessable; issued, \$841,615.

Property: 10 claims, unpatented, near Smith river, in the Low Divide district, 120 miles S. W. of Grants Pass, on the S. P. R. R. and 12 miles from the coast. The mine, which was one of the first copper properties on the Pacific coast, was operated 1837-67, when closed by the low price of copper. Claims show 4 parallel shear zones, with prominent gossans, traceable about 3 miles, ore occurring in lenticular masses and shoots, in serpentine or altered peridotite. The zone has a N.-S. strike, and average dip of about 70°, the orebodies. 3' in width carrying chalcocite and chalcopyrite, estimated to average 2½% copper, \$4.50 in gold and 75c in silver.

Development: by 180' shaft and several tunnels, with about 3,500' of workings. Old workings extend down to the 500' level, but none of the main veins were located.

Equipment: includes 3 buildings. Company has been inactive several years.

ELDORADO COUNTY

CHRISTINA COPPER CO.**CALIFORNIA**

Address: F. C. Fox, supt., Placerville, Cal.

Owns Seven Bells mine, an old copper producer, now reopened.

ELDORADO EXPLORATION CO.**CALIFORNIA**

John W. Cover, supt.; **Burr Evans**, cons. engr., Placerville, Cal.

Property: the Teddy Bear claims on the Mother Lode, about 8 miles south of Placerville, is said to show 2 veins. Some \$60 ore reported found in 150' adit, at 160' depth, 1917. Plans building 50-ton mill and sinking 500' shaft.

GEORGIA SLIDE MINING CO.**CALIFORNIA**

Property at Georgetown, Eldorado Co., Cal., **Robert Cranston**, mgr. The Beebe, Mulby Point, and Eureka mines were taken over. Considerable exploration done on the Georgia Slide. Possibilities fair.

SACRAMENTO VALLEY COPPER CO.**CALIFORNIA**

Offices: **S. W. Winn**, fiscal agent, 149 Broadway, New York; **A. B. Wilkins**, mgr., 625 Singer Bldg., New York; **T. G. Patton**, sec., Placerville, Cal.; **J. E. Lawyer**, supt., Greenwood, Cal.

Officers: **L. H. Wilkins**, pres. and treas.; **A. B. Wilkins**, v. p.; with **W. Sheriff**, **E. C. Voorhies** and **Donald Woodrum**, directors; **A. B. Wilkins**, mgr.

Inc. Oct. 3, 1911, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; fully paid; non-assessable; all issued.

Property: Shamrock group of 24 claims, about 492 acres, in Sec. 26, T. 12 N., R. 9 E., in Eldorado Co., Cal., 2 miles south and 1 mile west of Greenwood. Does not embrace 12 claims adjacent N. E. in section 23, held by a partnership of similar name to this company.

Geology: Property shows an extensive series of sedimentary rocks with igneous rocks of various ages, intercalated with the sedimentaries, or more commonly occurring as intrusives. Ores occur as sulphide deposits in contact and shear zones, the latter flat-lying, with chalcopyrite disseminated in pyrite, and almost invariably containing gold and silver, but low in copper tenor.

Development: by 10 tunnels varying from 50' to 380' in length. Latest estimates of reserves is the "whole mountain," assaying 5 to 12½% copper.

\$2.50 to \$25 gold, and \$2 to \$15 per ton silver. Shipping ore is estimated to be 50,000 tons. There is no power equipment.

In Sept., 1917, the main Lipton tunnel was being retimbered and a motor truck road constructed to rail at Cool or Auburn, the latter 12 miles from the mine; ore shipments are then to commence from the tunnel. At 1917 prices the value of the ore reserves above the tunnel are figured by company at \$3,000,000.

Literature describing company's holdings and possibilities is in our opinion quite optimistic.

SHENANDOAH MINES CO.

CALIFORNIA

Letters returned in 1917 from former address, Clunie Bldg., 519 California St., San Francisco. A. Tisher, mgr.

Property: 3 claims and 2 mill sites, 63 acres, on Jesus Maria Creek, 5 miles N. W. of Eldorado, has a quartz vein 2' to 5' wide in mica schist and quartzite.

Development: by tunnels. The mine is operated through the lower, No. 1, tunnel, which is about 1,700' long and gives a 900' back on the vein. Five other tunnels ranging in length up to 800' have been driven higher up on the vein.

Equipment: 10-stamp mill, 1,000 lbs. per stamp, dropping 6", 100 drops per minute, crushing 3 tons per stamp. Mill is run by 50-h. p. gasoline engine during the dry season and by water obtained from Jesus Maria Creek; water wheel is a 3' Knight, running under a 90' head. At last account a cyanide plant was being built. Twenty-two men employed.

THREE BUTTES & CONSUMNES COPPER MINES

CALIFORNIA

Address: S. L. Watkins and associates, owners, Pleasant Valley, Cal.

Property: 30 sq. miles in Eldorado Co., Cal., said to be heavily mineralized, carrying gold, silver, copper, molybdenum, etc.

Over 2,500 assays are said to show from 1 to 24% copper, with 50c to \$2 per ton in gold for a large part of the deposit.

FRESNO COUNTY

CONTACT MINING & MILLING CO.

CALIFORNIA

Trimmer, Fresno Co., Cal.

Officers: J. K. Apperson, pres.; C. C. Overstreet, sec. Present owners have operated the property since 1894, incorporating in 1914.

Property: 3 claims, unpatented, 9 miles from Trimmer, shows ore containing free gold, galena and pyrite, in a flat pitching deposit in granite, said to average \$21.25 per ton, including a little silver. The gold occurs mostly in the ochre on the footwall; pay shoot varies from 4" to 2' in width. Another vein on the property, 3' wide, is said to assay \$11.60 gold per ton. Partly developed by a 90' tunnel.

Development: 110' adit and two 60' drifts on the vein. Ore is sledged ½ mile to the mill.

Equipment: includes a Straub patent stamp-mill which has ten 175-lb stamps operating in a circular mortar, 115 drops per minute, 5½" drop, driven by a 6-h. p. distillate engine; capacity 4 tons per day. Five men are employed. See M. & M. Res. of Fresno Co., p. 15, California State Mineralogist's Rept., 1915.

COPPER KING MINING CO.

CALIFORNIA

General offices: Union National Bank Bldg., Houston, Tex. Mine office: Academy, Fresno Co., Cal.

Officers: B. N. Garrett, pres.; J. R. Sims, v. p.; H. C. Bocchio, sec.; C. A. Lewis, treas.; D. C. Demorest, eng.; Wm. Stewart, trustee.

Joint stock association. **Cap.**, 100,000 shares, \$10 par, fully paid and non-assessable, 50,000 shares issued.

Property: 11 claims, 220 acres, 10 of these claims are owned in fee and the other is under lease and option to purchase, 5 miles northeast of Letcher and 16 miles to shipping point at Clovis.

Development: by 3 shafts, one working and two for ventilation, sunk on the dip of the vein. Main shaft has been sunk to the 8th level about 800' and has about 3,000' of drifts.

History: owned originally by the Copper King, Ltd., a London company, of which W. H. Daily was gen. mgr. Company is said to have spent \$1,250,000 on mine, palatial residences and surface equipment, and to have produced 4,159,672 lbs. of copper. Company went into hands of receiver in 1903, said to be caused by mismanagement. In 1907 property was sold for \$44,000 to the Hart Mining Co., who produced an amount equal to the purchase price and was forced to close because of the low price of copper at that time. No attempt had been made to operate the property since that time till operations of the present company.

Geology: (extracted from "Copper Resources of California" published by the California State Mining Bureau in 1908). The vein courses N. E.-S. W. and appears to have a width of over 100'. It is schistose and metabasite in composition, all mineralized containing lenses of carbonates, oxides and sulphides of iron and copper with the sulphides more pronounced in the lower levels. Granodiorite bounds the belt to the east and diorite to the west.

Production: to date is reported to be 50,000 tons of 8% copper.

It is too early to say what this company will do, as the only reports available are those of investment brokers, but its directors are well known, and the property promising. Stock offered at \$7.50 in newspaper advertisement, 1917.

HUMBOLDT COUNTY

HORSE MOUNTAIN COPPER CO.

CALIFORNIA

Eureka, Humboldt Co., Cal. David Wilson, pres.; George Wilson, mgr., Eureka, Cal.; D. W. Stapp, supt.

Inc. Nov., 1910. Cap., \$1,000,000.

Property: 70 claims, unpatented, in vicinity of the Humboldt Copper Co., with which this corporation apparently is connected in ownership and management. Owns the Ruby copper mine on Horse mountain, in the Hoopa range, Horse River district, on the watershed between Redwood creek and Trinity river, in T. 6 N., R. 1 E. For miles copper occurs along a serpentine-gabbro contact; claims show native copper in a vein 30' thick having 2' of high-grade ore.

Development: by 6 tunnels, No. 6 of 900', another of 450', 3,000' in all.

Equipment: includes engines, boilers, 35 buildings and a \$12,000, 50-ton concentrator with Huntington mill, installed in 1912. Concentrates sacked and shipped by pack train to Korb, on Arcata and Mad River railroad, thence by steamer from Eureka to the Tacoma smelter. Small shipment made in 1914. Concentrates average 20% copper and \$4 gold per ton.

No recent returns. Probably idle.

HUMBOLDT COPPER MINING CO.

CALIFORNIA

Eureka, Humboldt Co., Cal. T. L. Loofbourrow, pres.; W. L. Perrott, sec.

Property: 24 claims, unpatented, well watered and timbered, in Secs. 28-29, 32-33, T. 6 N., R. 4 E., said to show strong veins with a good showing of copper ore, also some gold values.

Development: by 1,750' of drifts, 210' raise, 30' winze, and 700' of diamond drilling.

Equipment: consists of 3 surface buildings only. Doing development work, 1917.

RUBY COPPER MINING CO.

CALIFORNIA

Address: E. A. Walters, Eureka, Cal. F. W. Belcher, sec. Mine near Korb, Humboldt Co., Cal.

Property: the Blind Lead and Ruby groups, 38 claims, 760 acres, unpatented, in Horse Mountain mining district said to show a copper deposit developed by a 1,000' tunnel, and other short openings. Ores are chalco-

pyrite, cuprite, chalcocite and bornite, with some black oxides and occasional gold values. Formation is serpentine with porphyritic diorite dikes and quartzite.

Company planned installation of concentrator. Mine in development stage.

SUNNYSIDE MINE

CALIFORNIA

U. S. Smelting, Refining & Mining Co. own this and the Gold Prince property, and is constructing a new mill at Eureka. Gold Prince mill being

INYO COUNTY

BISHOP CREEK GOLD MINE

CALIFORNIA

Owned by Rocky Point Cons. Mines Co., which see.

CERRO GORDO MINES CO.

CALIFORNIA

Office: 1011 First Nat'l Bank Bldg., San Francisco, Cal. Mine address: Keeler, Cal.

Officers: Frank J. Hambly, pres.; L. D. Gordon, v. p. and gen. mgr.; A. L. Dornberger, sec.; F. J. Hagenbarth, treas.; preceding officers and J. E. Richards, directors; J. Wilson Reno, asst. treas.-purch. agt.; J. C. Climo, supt.

Inc. July 16, 1914, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; 975,000 issued.

The first annual report covering a period of 15 months ending Dec. 31, 1916, showed a balance of \$112,377 after paying dividend No. 1 amounting to \$24,375. Statement showed receipts of \$459,789, of which \$310,764 was from sale of ore. Disbursement were \$146,057 for improvement; labor and supplies \$175,718. A second dividend was declared Dec. 22, 1916, of \$50,000. Report ending March 31, 1917, showed for first three months net profit of \$160,000; cash on hand, \$209,780; ore in transit, \$54,229 and supplies, \$32,582.

Property: the Cerro Gordo mines, 35 claims, 8 miles from Keeler, including the Union mine on Cerro Gordo hill and a water power on Lone Pine creek; formerly belonged to the Four Metals Sm. & Mng. Co. The Aries Consolidated group of 8 patented and 33 unpatented claims was purchased, 1916.

The Union mine is an antigua worked by Mexicans in early days and opened to a depth of 1,200'. The principal ores produced are silver-lead mostly carbonates, with some galena and lead sulphide; also zinc carbonate. The zinc ore occurs from the surface to the 900' level, and the silver-lead ore from the surface to the 1,150' level. Ores also contain gold and copper values. See U. S. G. S. Bull. 540, pp. 97-105.

Development: by the 900' Belshaw shaft, with a winze to the 1,150' level, and tunnels. The Troeger tunnel is now in over 6,000' and cuts the vein system 1,200' below the workings of the Union mine. Underground workings are said to aggregate 20 miles. Production came from the 400' and 700' levels containing the downward extension of the Buena Vista ore-body.

Equipment: includes a Joshua Hendy 100 h. p. electric hoist; an Imperial type 10 Ingersoll-Rand compressor, capacity 600 cu. ft. free air per min., driven by a 75-h. p. constant speed motor. The former steam plant is intact and consists of 70-h. p. steam hoist, 350 cu. ft. Ingersoll-Rand air compressor and 130-h. p. boiler. Electric power, voltage 400, is obtained from the Southern Sierras Power Co.

The Swansea smelter has a 50-ton furnace that was operated for a few months in 1909.

Production:	Tons	Oz.	Oz.	Lbs.	Lbs.	Lbs.
	Ore	Gold	Silver	Lead	Copper	Zinc
1915.....	8,926	126	112,541	748,952	121,510	4,544,666
1914.....	4,367	312	303,085	1,195,006	283,086	58,736

Ore produced in 1916 reported as 1,497 tons lead-silver ore, net value, \$44,723 per ton; 11,265 of zinc ore, \$23,759; 27 tons of copper ore, \$17,722 per ton and 9,431 tons slag valued at \$40,383. Net cost of all ore mined was given as \$11.08, giving a net profit of \$17.64 per ton. No effort has been made to estimate ore reserves. Production is, however, steadily maintained as the production of first three months of 1917 indicates: 2,506 tons silver-lead, 2,271 tons zinc ores and 2,939 tons of slag. Ore is shipped to the United States Smelting Co. at Salt Lake City. Company employs 70 men.

Management plans erecting a concentrator.

CORONA MINING & MILLING CO.

CALIFORNIA

Office: 770 E. 4th St., Salt Lake City, Utah.

Officers: J. A. Headlund, pres.; J. S. Ryan, v. p.; J. A. Stanley, sec.; W. G. Romney, treas.; with Thos. W. Bell, J. P. Moss, J. H. Hurd, directors. Thos. W. Bell, supt.; C. E. Merwin, Spokane, Wash., and Moscow, Utah, fiscal agt.

Inc. 1915, in Arizona. **Cap.**, \$3,000,000; shares \$1 par; issued \$1,600,000, non-assessable. Farmers & Stockgrowers Bank, Salt Lake City, registrar. Annual meeting in June.

Property: the Confidence mine, known also as the Mormon Gold mine, 12 claims, 2 patented, 240 acres, in Funeral Range, Death Valley, Inyo Co., Cal., 12 miles from Shoshone, a station on the Tonopah & Tidewater R. R. The mine was worked in early days by a small syndicate of Mormons.

Ore: free milling gold and a little silver in fissure vein in granite; said to assay \$20 per ton. Outcrop of vein said to be 1,200' long and from 4' to 70' wide.

Development: tunnels and several shafts, deepest 140'. Present management claims there are 117,000 tons of \$20 ore in place, which can be mined for less than \$1 per ton. This cost figure is too low.

Company planning to erect a 100-ton stamp mill in 1917.

DARWIN DEVELOPMENT CO.

CALIFORNIA

Address: Darwin, Cal. J. E. Rea, mine supt.; H. Stone, mill supt.

Property: a group of mines at Darwin, Inyo Co., 20 miles south of Keeler, includes the Lane, Lucky Jim, Promontory, Columbia and De-fiance mines, all silver-lead properties. The company is developing and securing options on new properties. Frederick R. Weeks, of 71 Broadway, New York, is interested.

ESTELLE MINING CO.

CALIFORNIA

Office: Keeler, Inyo Co., Cal.

Officers: R. C. Troeger, pres.,-gen. mgr.; Roy C. Troeger, sec.-supt.; Adolph Ramish, treas.

Inc. 1902, in California. **Cap.**, \$100,000; shares \$1 par; 90,592 issued.

Property: 30 claims, 520 acres, including the Morning Star group, in the Cerro Gordo mining district, shows complex lead-copper ore with gold-silver values.

Ore: occurs in fissure veins and replacements in lime-porphyry.

Development: by a 520' shaft and a 7,100' tunnel. Seven veins are reported to have been cut carrying both shipping and concentrating ore. Veins will have stoping backs of from 2,000' to 3,100'. Company spent \$25,488 for development work in 1916-17. Plans to extend tunnel and drift on veins, blocking out tonnage.

Installed electric power, 1916 and is preparing property for erection of a reduction plant.

INYO COPPER MINES CORPORATION

CALIFORNIA

Office: 215 Balboa Bldg., San Francisco, Cal. Mine address: Keeler, Inyo Co., Cal. R. G. Paddock, pres. and gen. mgr.; F. J. O'Dea, sec.

Inc. Nov. 19, 1910, in California. **Cap.**, \$1,000,000, shares \$1 par, assessable; issued, \$550,000.

Company is a reorganization of the Inyo Copper Mines & Smelters Co. The president stated that it is free of debt but waiting for better financial conditions before attempting to raise money and only a small amount of work was being done.

Property: 19 claims in Ubehebe district, covering a contact zone between limestone and granite porphyry. For a mile this contact is said to show places where there is 1' to 20' of ore carrying 8% to 40% copper. The steep mountain side permits development by tunnel and future work will be of this character.

Development: amounting to 650', includes 6 shallow prospect shafts and as many short tunnels, the longest 120', together with 100' of trenching. Ores carry appreciable values in gold and silver, as well as copper.

INYO GOLD MINING CO.

CALIFORNIA

Cap., \$1,000,000; shares \$1 par; assessable. Stock listed on Salt Lake Exchange.

Property: 17 claims, patented, at Elko, Inyo Co., Cal., developed by 350' of shafts, 700' of tunnels and 75' of crosscuts. Company officials estimate \$650,000 worth of gold-silver ore in sight.

Letters returned from Elko, Cal., in May, 1917.

LORETTO COPPER MINING CO.

CALIFORNIA

Main office: Tonopah, Nev. **Mine office:** Big Pine, Inyo Co., Cal. John G. Kirchen, mgr.; John Cole, supt. Is controlled through stock ownership by Chas. M. Schwab and the Gail Borden estate.

Property: about 750 acres, east of Bishop, has a 40' vein, carrying ore said to average 4% copper and about \$3 gold per ton.

Development: by 1,700' main shaft, said to be in commercial ore, and 2 crosscut tunnels to the N. E., 1 of 90' length said to have cut a 74' vein. Improvements include a smithy and several small mine buildings. Developing and planning to install a 100-h. p. electric hoist and build a railroad to Coaldale, the nearest R. R. point.

Reported early in 1917, that mine was to be reopened and that a process had been found to handle the highly silicious ore.

REWARD GOLD MINES SYNDICATE

CALIFORNIA

Address: Owenyo, Inyo Co., Cal.

Officers: S. W. Cohen, 601 Dominion Express Bldg., Montreal, Canada. H. W. Darling, res. mgr.

Property: Reward, Brown Monster, Hirsch, Telescope, and 2 other claims in Inyo Co., Cal. Controlled by Crown Reserve Mining Co., Cobalt, Ont. First opened in 1853, and produced several million dollars.

Geology: quartz vein, 4' thick, in dark, silicious limestone. (See p. 116, Bul. 540, U. S. Geol. Survey, 1914. Ore carries gold, silver, lead, and a little copper.

Development: operated from main adit, exploration done through 8 levels. Reserves blocked out worth \$250,000.

Equipment: 20 stamps, ball mill, concentrators, and flotation.

According to Crown Reserve company, which holds 90% of this mine, there is enough ore opened to ensure the purchase price, all other expenditure, and a good profit on its investment.

ROCKY POINT CONS. MINES CO.

CALIFORNIA

Bishop, Inyo Co., Calif.

Officers: Gaylord Wilshire, pres., 422 Hollingsworth Bldg., Los Angeles; Mrs. Mary Wilshire, v. p.; H. R. Kearns, sec-treas. E. W. Walter, supt.

Inc. in Ariz. Cap., 1,000,000 shares; \$5 par; in treasury, \$500,000.

Property: referred to under various names, Bishop Creek Gold Mine, Bishop Creek Milling Co., and Wilshire Bishop Creek Gold mine, consists of 99 claims, 12 patented, located on headwaters of Bishop Creek, 16 miles from Bishop, Cal. Reported in June, 1917, that another company, the Consolidated Wilshire Mining, had acquired assets of the Rocky Point; but nothing definite is available.

Geology: claims are said to show a silicified shear zone 800' wide in granite: strike N. 50° W., dip 60° S. The vein is in the center of this zone, running N. 76° W., with no definite walls. It contains dense, banded quartz carrying very fine gold with some arsenopyrite and pyrrhotite.

Development: the mine, idle for several years, was unwatered in April, 1915, and operations resumed. 300' shaft with 2 levels, 1,000' of workings

in all, claimed to disclose an orebody 20' wide and opened up for over 100' with face still in ore. Ore reserves estimated at 13,138 tons.

Equipment: includes a 70-h. p. electric hoist; Sullivan 12-drill compressor, pumps, Bleichert tramway and a 50-ton 10-stamp cyanide mill. Recovery is 85% on \$11.40 ore, \$5.76 as concentrate, \$4 as cyanide recovery and a loss on tails of \$1.70.

Production: for 1915 reported as 6,196 tons of \$11.34 ore. The ore carries 86.3% insol., 4.67% iron, 1.80% alumina, 2.60% lime, 1.70% sulphur, and 1% arsenic. Recovery was 85%. Closed down in Oct. for the winter.

In a suit recently brought by a stockholder to get access to the company books, and secure the names and addresses of 6,000 stockholders, it is claimed that Wilshire holds control of the stock; that there has been no stockholders' meeting since 1913 in London, when no quorum was present; that no financial statement has been furnished or has been accessible to the stockholders since Nov., 1913, and that an assessment of 5c was levied in order to pay indebtedness less than the amount secured by assessment. Wilshire is reported to have answered that the books were available for examination, and that the actual purpose of the investigation is to secure a list of stockholders for the purpose of inducing them to pay to the investigators a fee of 2cts. per share for adjusting the affairs of the company and winding up the corporation.

It was reported that Wilshire proposes to reorganize as the Cons. Wilshire Mining Co., raising funds for enlargement of the mill by an assessment of 6 cts. per share, which was evidently done.

Both the company and its president frequently appear in print, and the stockholders appear to have a long wait before their officers get down to actual mining and an attempt to pay dividends.

SKIDOO MINES CO.

CALIFORNIA

Address: E. A. Montgomery, pres., L. A. Investment Bldg., Los Angeles. Mine at Skidoo, Inyo Co., Calif., J. H. Cooper, supt. **Cap.**, \$1,000,000; shares \$5 par. Reported to have paid dividends of \$385,000 up to April, 1915.

Property: the Skidoo gold mine, is developed by adits and equipped with 15-stamp mill.

Production: in 1914, 9,406 tons ore, gross returns \$14.54 per ton. Costs total \$6 per ton. Reported closed down Sept., 1917, and supplies being sold. One of the company's troubles was lack of water; it laid a 20-mile pipe line that gave much trouble in winter.

STANDARD TUNGSTEN CO.

CALIFORNIA

Address: Bishop, Inyo Co., Cal.

Officers: A. J. Clark, pres.; L. E. Porter, sec-treas., with W. P. Yaney, directors.

Inc. in Nev. Filed in Calif., Aug. 3, 1910. **Cap.**, \$200,000; shares \$1 par.

Property: 10 claims at head of Deep Canyon, 8 miles W. of Bishop, shows large bold croppings of scheelite-bearing garnet rock, close to granite contact. Part of company's holdings were sold 1915, to the Tungsten Mines Co.

Two ore shoots, 6' to 20' wide, shown in an opencut and in a crosscut tunnel, have been mined. Reserves are figured at 25,000 tons, opened on 3 sides and about 100,000 tons probable, which will carry 1% tungstic acid. The ore in the tunnel will run 1½% tungstic acid.

Development: by tunnels and an open quarry. Tunnel in two new claims 200 long. Ore is quarried and carried to the mill over a 1,600' incline surface tramway. Company operates 200-ton mill, equipped with Dodge crusher, Marcy mill, Davis rolls and Isbell tables. In August, 1917, mill was being remodeled, adding a Marcy mill, etc.

Production: in 1917 to Aug. first, 50 tons of concentrate valued at \$75,000.

TUNGSTEN MINES CO.

CALIFORNIA

General office: 1032 Higgins Bldg., Los Angeles, Calif. **Mine office:** H. W. Moore, supt., Bishop, Inyo county, Cal.

Officers: F. M. Townsend, pres., Leo Kaufmann, sec.; with G. L. Cooper, A. J. Clark, L. L. Stevens, F. W. Griffin and J. C. McKinstry, directors.

Cap., \$3,000,000; shares \$10 par.

Property: a group of claims, purchased 1915 from A. J. Clark, situated in a narrow gulch known as Deep Canyon, 7 miles west of Bishop. The scheelite bearing garnet rock occurs in granite. (U. S. Geological Survey Bulletin 640-L, by Adolph Knopf, describes the district.) Company also owns hubnerite claims near Kingman, Ariz.

Development: by 2 tunnels, one on each side of the new mill and connected therewith by 700' tram line.

The 300-ton mill, built 1916, is equipped with Allis-Chalmers rolls, trommels and tables.

No record of production is available.

UBEHEBE COPPER MINES & SMELTER CO. CALIFORNIA

Idle. Office: 956 Rockefeller Bldg., Cleveland, Ohio., **Operating Office:** Tonopah, Nev. **Mine Office:** Lone Pine, Inyo Co., Calif.

Officers: John Salisberry, pres., St. Francis Hotel, San Francisco, Calif.; Henry G. Merry, v. p. and cons, engr.; J. J. Griffith, sec-treas.

Inc. 1907 in Nevada. **Cap.,** \$3,000,000; shares \$1 par.

Property: 50 claims, 1,000 acres in the Butte range, 48 miles from Thorpe on the Bullfrog & Goldfield railway, said to show vein of 8 to 50' width, in granite and limestone, carrying copper ore with gold-silver values. Property advertised 1907 as a mountain of gold-silver-copper ore nearly 2,000' high.

Development: by an 80' shaft and 145' tunnel, with some work on other holdings. The company has done annual assessment work but contemplates no further extensive development until the financial situation improves, and means of transportation are devised. Was a promotion in 1907 of Pearce Hill & Co. of Baltimore, Md. Property has merit and systematic development is needed.

KERN COUNTY

BARBAROSSA MINING CO. CALIFORNIA

W. E. Wessinger, Duluth, Minn., mgr.

Inc. Oct., 1917. **Cap.,** \$1,000,000; shares \$1 par; \$650,000 in treasury.

Property: 11 claims, 140 acres, including the Barbarossa mine, near Loraine, 15 miles N. E. of Caliente, Kern Co., Calif., shows 7 veins; of which the Barbarossa alone has been worked. It has a N. W.-S. E. strike, with dip 40° E., average width 4', granite footwall, and quartz-porphyry hanging-wall.

Ore: free milling gold. **Development:** by 140' shaft, 60' winze and about 400' of drifts.

Equipment: 5-stamp mill, 1½ miles from the mine, gasoline power.

Mine credited with past production of 2,000 tons of \$23 ore.

BIG FIFTY MINE (ANTIMONY) CALIFORNIA

Owned by Fifty Associates Securities Co., Los Angeles. F. W. Remy, mng. engr. and geologist.

Mine, 15 miles from Caliente, Kern Co., Calif., is reported to show a 50' vein, in porphyry, carrying 30% stibnite. Shipping 4-5 tons antimony daily, late in 1916.

BLACK HAWK MINE CALIFORNIA

Owned and operated by D. A. Blue, Randsburg, Calif.

Property: 7 claims, in the Stringer district, near Randsburg, Kern Co., Calif. **Ore:** quartz in 6" vein shows coarse gold veins, assaying \$20 per per ton. Mill test of 50 tons of gravel from the placer claims said to have assayed \$6 gold and 3 oz. of 60% tungsten per yd. Developed by 125' shaft. Equipped with 5-stamp mill and water power. Developing at last accounts.

BLUE MOUNTAIN MINING CO CALIFORNIA

Office: 431 Security Bldg., Los Angeles, Calif.

Officers: Chas. K. Barnes, pres., mgr., White River, Calif.; H. H. Koons, v. p.; R. B. Chapman, sec.; J. F. Kent, treas.; preceding with S. E. Yount, directors.

Inc. in Calif. Cap., \$30,000; shares \$1 par; assessable; 29,038 issued. Annual meeting in July.

Gross earnings, 1916, \$37,539; operating expenses, \$15,233. Dividends paid to date, \$14,519.

Property: 9 claims, 170 acres, unpatented, in the White River Mining district, Kern Co., Calif.

Ore: quartz carrying gold and silver values occurs in shoots in a fissure vein in granite. Ore said to be 2' wide and over 800' long, carries 2% iron and some lead and zinc. Average assay \$13.60.

Development: by 300' incline shaft with 3,000' of workings. Company claims ore reserves of 20,000 tons with 5,000 blocked out.

Equipment: includes gas hoist, compressor, pump, etc., and a 5-stamp mill treating 12 tons daily.

BUTTE MINE

CALIFORNIA

F. K. Seaman, mill supt., Randsburg, Kern Co. Mine has 250' shaft, with steady production by leases for 3 years past. New ore body, necessitated enlargement of new 10-stamp mill and 3 shift operation.

CACTUS CONSOLIDATED MINING CO.

CALIFORNIA

Office: 808 Lonsdale Bldg., Duluth, Minn. A. F. Becker, pres.; R. B. Harrington, sec. W. E. Wessinger, supt.

Inc. 1914, in Delaware. Cap., \$1,000,000; shares \$1 par. Is a reorganization of the Cactus Copper Co., which was a reconstruction of the Cactus Development Co. Both companies fully described in former volumes.

Stockholders in the old company were given until June 10, 1915, to exchange their holdings for shares in the Cactus Cons. at the rate of 2½ for 1 and a payment of 6 cts. per share. In March, 1915, the Mammoth group, consisting of 22 quartz claims, 440 acres, in Kern Co., Calif., was acquired.

Development: by several tunnels, said to show 32' of ore, assaying \$10.40 per ton in silver, and a vein on claim No. 8 is claimed to assay 64-74% pure antimony and to be the richest ore in the district. Company also owns and is operating the Leona gold mine, developed to depth of 150' and said to have several veins, 3-4' wide, averaging from \$12-\$30 per ton.

CONSOLIDATED MINES CO.

CALIFORNIA

Office: 710 H. W. Hellman Bldg., Los Angeles, and Randsburg, Kern Co., Cal. Seth J. Tyler supt.

Property: at Randsburg, carries a vein containing gold and tungsten ore, developed by a 350' and by a 500' shaft.

Equipment: includes 5-stamp mill, pumps, compressor and air-drills. Listed in Los Angeles.

GREENBACK COPPER CO.

CALIFORNIA

Mine at Woody, Kern Co., Cal. Joseph Weringer, owner.

Lands: 1,520 acres, 18 miles east of Jasmin, on the Porterville branch of the Southern Pacific railroad. Country rock is granodiorite, showing an ore zone carrying lenses of 20' maximum width, with granite walls irregularly impregnated with chalcopyrite.

Development: by a 185' incline shaft, with 3 levels opened. Carbonate ores stoped from the upper levels have averaged 19.4% copper and 5.7 oz. silver per ton. Work resumed, 1913, after several years.

KING SOLOMON LEASING CO.

CALIFORNIA

Nosser Illingsworth, mgr., Randsburg, Calif. Operating a lease on the King Solomon mine near Johannesburg, Kern Co., Calif., developed to 250' level by shafts and crosscuts. **Shipments:** in 1915-16 to the Red Dog mill said to have yielded from \$60-\$130 per ton.

MAMMOTH CONS. MINING CO.

CALIFORNIA

Mine near Bakersfield, Kern Co., Calif.

Inc. June 9, 1910, in Minn. Cap., \$800,000; shares \$1 par; non-assessable; 465,000 issued. Annual meeting, 2nd Tuesday in January.

Property: 22 claims, 100 acres, 20 miles from the railroad, is said to show silver-gold ore in quartz.

The former president, Mr. R. P. Burgan advises, October, 1917; that the mine is not running, but that a deal is under consideration. Mr. Jas. W. Norton of Duluth, who fathered the company is dead.

RAND MINERALS CO.

CALIFORNIA

F. R. Heineck, mgr., Glenville, Calif.

Property: the June-Ione tungsten mine, 8 miles N. E. of Glenville, Kern county. The ore carries pyrrhotite and scheelite in a silicious gangue.

Property slightly developed and equipped with 100-ton concentrating mill, installed in 1916.

SHIPSEY MINING CO.

CALIFORNIA

Address: John Shipsey, Randsburg, Kern Co., Cal.

Property: King Solomon group of 7 claims near Randsburg, Cal., said to have yielded gold worth about \$2,000,000 in past 20 years, from depth of 500'. Five stamp mill reported to be crushing \$35 ore, July, 1917.

WERINGER MINES CO.

CALIFORNIA

Officers: Jos. Weringer, pres. and mgr., Woody, Kern Calif. F. J. Weringer v. p.; Erwin W. Owens, sec., Nat'l Bank Bldg., Bakersfield, Calif.; Otto Kamproth, treas., with E. H. Woody, Paul Fox and Amasa P. Peak, directors.

Inc. Dec. 17, 1914, in Calif. **Cap.**, \$500,000; \$1 par; 293,543 issued. Secretary is transfer agent. California Corporation Commission granted authority to sell 100,000 shares at 50c in 1915.

Property: the Greenback mines, 68 claims on R. R. land, with 2,200 acres mineral and water rights in sections 1, 2, 3, 10, T. 28 S., R. 29 E., situated 22 miles from R. R. at Oil Center. Mine said to show contact metamorphic deposit a mile long in granite and porphyry, running N. S. and S. W. and dipping 45° to 85°. Orebody, 100' wide, carries copper, molybdenite, wolframite, with manganese-iron ore. Ore said to average 5% copper, 4 oz. silver and \$1.50 in gold.

Development: aggregating 1,600' by 200' and 230' incline shafts, connected at 200' depth. Latest work on 140' level. **Ore reserves:** 10,000 tons claimed. 1,000 tons on dump valued at \$150,000.

Equipment: 20-h. p. gasoline hoist, 75-h. p. engine, compressor, etc. A 100-ton mill was started in April, 1917. It includes jaw crusher, 6'x22", Hardinge ball mill, Dorr classifier, K. & K. flotation machine, and Oliver filter. Property reported on by W. J. Adams, W. H. Storms, H. W. Turner, D. M. Folsom, C. H. White and other engineers.

WILSHIRE BISHOP CREEK CO.

CALIFORNIA

Bishop, Kern Co., Calif. Operates a mine owned by Rocky Point Cons. Mines Co., which see. Has 50-ton mill to be increased to 100 tons per day. Property reported on by E. W. Walter, Oct. 1915.

Reported that the Consolidated Wilshire M. Co. had acquired the Rocky Point company, but nothing definite is known.

YELLOW ASTER MINING & MILLING CO.

CALIFORNIA

Office: Coulter Bldg., Los Angeles. **Mine office:** Randsburg, Kern county, Calif.

Officers: Albert Ancker, pres.; Arthur Asher, v. p.; Rose L. Burcham, sec.; V. H. Rossetti, treas.; H. L. Bennett, asst. sec.; with R. H. Raphael and E. L. Kenny, directors. G. W. Shilling, supt.; J. H. Farrell, cons. engr.

Inc. Nov. 16, 1897, in Nev. **Cap.**, \$1,000,000; shares \$10 par; 86,761 issued; reorganized, April 30, 1917, in Nevada, with cap. of \$1,500,000; shares \$1 par; 1,077,600 issued. Annual meeting, May 16.

Statement for 1916 shows a revenue of \$437,197, less \$313,970 for operations, and \$53,473 for improvements.

From 1898 to October 31, 1917, revenue totaled \$8,725,588, of which \$1,245,789 was distributed.

Dividends: have been irregular for many years. Paid \$38,000 in 1916; \$35,000 to Oct., 1917.

Property: 47 patented and 6 unpatented claims, water rights and placer areas, totaling 796 acres, mostly at Randsburg, Kern Co., Cal., and one mile from Johannesburg on the Santa Fé railroad.

Geology: vein occurs in granite, schist, and porphyry. Main orebody is from 30 to 40' wide, with schist hanging wall. Ore is low grade, averaging \$3.21 per ton during 20 years. Gold is easily extracted.

Development: is extensive, aggregating about 27 miles of tunnels, stopes, open cuts and other workings to depth of 750'. Open cut work has produced most of the ore in the past. Improvements started and underway include stripping of 1,000 tons of overburden daily by steam-shovels, and mining ore by this method. Reserves estimated in December, 1916, by W. W. Hegeman, at 6,278,529 tons of \$1.77 ore. By the new system of screening this value should be raised to \$2.83 per ton, reducing the quantity by 50%.

Equipment: 150-h. p. and smaller hoists, 150-h. p. compressor, machine drills, steam shovels, pumping stations and several miles of water pipelines, 250-ton (per hour) screening plant, 100-stamp mill (back to back design, each 50 stamps driven by 150-h. p. motor), copper plates, steam boilers and engines, 3 oil-burning locos., sixty 3-ton side dump steel cars, machine shops, assay office and the Rand Mercantile store. Recent additions are costing \$250,000. A cyanide plant may be erected to treat 1,000,000 tons of tailing stored. Power is supplied by the Southern Sierra Power Co. So far, \$747,972 has been spent in plant on the property.

Production: from 1898 to October 31, 1917, there was mined 2,713,384 tons, yielding \$8,725,588, equal to \$3.21 per ton. The cost was \$2.44 per ton. Recent returns are as under:

Year	Tons	Value per ton	Cost per ton
1917*.....	98,105	\$2.84	\$1.80
1916	152,827	3.31	2.08
1915	166,446	3.14	1.83
1914	147,793	3.02	1.86
1913	131,481	3.03	2.22
1912	151,746	3.53	2.00
1911	162,683	2.52	1.71
1910	186,370	2.50	1.57

* 10 months.

Present daily capacity of the mill is 450 tons, but when the screening plant is working, up to 700 tons will be treated.

Yellow Aster has passed through much litigation in the past, but is now clear of further trouble, and is being handled in a business-like manner, with an open policy not desired by many companies in California.

LOS ANGELES COUNTY

MERCHANTS FINANCE CO. (Western Metals Co.) CALIFORNIA

Address: Los Angeles, Cal. Company in 1915, built an antimony smelter at Industrial Harbor, Los Angeles, operated antimony mines in California and Nevada and bought ores from the Western States, Alaska and foreign countries. The largest production was made from deposits of antimony ochre and stibnite near Wild Rose Spring, on the N. W. slope of Telescope Peak in the Panamint Range, Cal. These deposits known for many years, have been too far from transportation to be profitably worked until the high price of antimony in 1915 and the completion of a railroad to Trona on Searles Lake, 25 miles from the property made their exploita-

tion possible. The company also worked deposits 30 miles N. E. of Mojave, Kern Co., Cal.

SOUTHERN CALIFORNIA GOLD DREDGING CO. CALIFORNIA

Address: M. L. Brackett & Co., 334 Citizens Natl. Bank Bldg., Los Angeles, Cal.

Officers: A. S. Maynard, pres. and mgr.; Lyman Farwell, sec.-treas.; with A. H. Pratt, F. S. Owens, and W. W. Benson, trustees. O. S. Williams, supt.

Cap., 1,000,000 shares of no par value; non-assessable; 898,000 issued.

Property: 15 claims, 2,528 acres, in Palomas district, Los Angeles, Co., Cal.

Development: drilling started in Jan., 1917. Gravel said to average 51c per yard.

Extracts from reports given in prospectus are: "An average of 36c per cu. yd."; "It will be a Klondyke"; "Sufficient gold...to pay all of the National debt"; "Will yield \$14,435,559"; "Reasonably expect \$30,000 to \$40,000 a month"; "Most promising I have ever seen"; "A good and profitable dredging proposition." Five engineers gave gold contents as 45c, 22c, \$1, 40c and 35c per yard.

The above quotations show that the company is not in conservative hands. Is unfavorably regarded.

MADERA COUNTY

JESSIE BELLE M., M. & SM. CO.

CALIFORNIA

T. S. and Ray Daulton, of Madera, Madera Co., Cal., reopened the mine in 1914, under a 4-year lease.

Inc. 1902, in Arizona. **Cap.**, \$1,500,000; shares \$1 par.

Property: 3 patented claims, 40 acres, 7 miles from and in same belt as the Copper Queen mine, in Mariposa Co. Contains copper carbonate ore with gold and silver values.

Development: by 200' main shaft, shows 4 fissure veins, carrying oxide, carbonate and sulphide ores. Has steam power, air compressor and a 30-ton concentrator. Letters returned unclaimed from Madera, Cal. Probably closed down.

MADERA ENTERPRISE MINES & LAND CO.

CALIFORNIA

No recent returns. **Address:** Grub Gulch, Madera-Co., Cal.

Officers: Lou K. Johnson, pres.-gen. mgr.; A. L. Emberson, sec.-treas.; S. R. Johnson, mgr.

Inc. in 1914. **Cap.**, \$500,000; shares \$1 par. A close corporation.

Property: 550 acres patented, including the John W. Cates mine, 3 miles N. E. of Grub Gulch.

Ore: gold quartz in fissure vein in schist and slate. Vein runs N. 35° E.; dip 80° N. E. It was discovered in 1881 and worked for a short time, during which it is said to have yielded over \$108,000 from ore averaging \$13.13 per ton. It was then idle until April, 1913.

Development: by 4 tunnels, longest 365', drifts and winzes, totaling 1,500' of underground workings.

Equipment: 10-stamp, 25-ton mill built by present owners, air compressor and engine. Water from the Fresno river furnishes power, except in the dry season, when a gasoline engine is used; there are 1½ miles of ditch and flume. Employs 10 men.

MADERA GOLD MINING CO.

CALIFORNIA

Address: 625 Market St., San Francisco, Cal. Mine office: Grub Gulch, Madera Co., Cal.

Officers: R. W. Shingle, pres.; D. W. Shanks, v. p.; J. H. MacKenzie, sec.; above with Walter Dillingham, Clarence Olson, Howard Castle, A. W. Copps and J. Jorgenson, directors; A. N. Campbell, treas.; W. H. Parsons, supt.

Inc. Jan. 4, 1917, in California. **Cap.**, \$1,000,000; shares, \$1 par; non-assessable; 750,000 issued.

Property: 223 acres (220 patented) at Grub Gulch, Cal., said to show

a gold-silver quartz vein in schist, $2\frac{1}{2}'$ wide, dipping 78° and pitching E. W. Pay-shoot is 600' long. Ore is 30% sulphide and assays \$10 per ton.

Development: 800' shaft and 6,000' of underground openings. Ore reserves estimated at 15,000 tons blocked out and 25,000 tons of stope-fillings.

Equipment: 100-h. p. electric hoist, Ingersoll-Rand compressor, Aldrich triplex pump, and 100-ton mill employing amalgamation and concentration.

Profits ought to be fair from the property as it stands.

MARIPOSA COUNTY

EARLY MINE

CALIFORNIA

Geo. H. Hook, supt.; W. H. Washburn, mill supt., Jerseydale, Mariposa Co., Cal. Is a gold mine in southern section of Mother Lode. Ore medium grade and somewhat refractory. Mine unwatered 1917, after $1\frac{1}{2}$ years litigation, and new oreshoot found at a vein intersection on 200' level. Mill has 50-h. p. gas engine, 10 stamps. Employs 30 men.

HORNITOS GOLD MINING CO.

CALIFORNIA

Offices: 127 Montgomery St., San Francisco, and Hornitos, Mariposa Co., Cal. H. W. Morris, pres. In May, 1913, company took over and in 1915 began operating the Ruth Pierce gold mine, consisting of 2 claims, located 4 miles from Hornitos. Mine had been idle for some time. Vein averages 3' in width; developed by a 550' shaft, part vertical and part incline, with about 2,500' underground workings.

Equipment: includes a hoist, driven by 105-h. p. motor, 4-drill compressor, and a 10-stamp mill.

MARIPOSA COMMERCIAL & MINING CO.

CALIFORNIA

Office: Alaska Commercial Bldg., San Francisco, Cal. Owns several mining properties near Mariposa, Mariposa Co., Cal.

Property: the Green Gulch quartz mine, 1 patented claim, in Secs. 12 and 13, on the Mariposa Grant, 12 miles from Bagby; shows a 3' quartz vein in slate, with gold ore.

Development: 300' shaft, and 550' tunnel, total underground workings about 2,500'. Equipped with hoist and compressor. At last accounts was being worked by lessees.

The Guadalupe quartz mine, Sec. 32, Mariposa Grant, 17 miles from Bagby, shows an 18" vein in granite; worked by lessees.

The Mariposa quartz mine, 1 patented claim, in Sec. 23, 16 miles from Bagby, formerly a large producer, is idle. In 1914 a roasting furnace and cyanide plant was being built to treat concentrates at the mine.

In Dec., 1915, suit was brought against the company by G. W. Langan for \$1,500,000, involving title to Mt. Bullion property, the Mariposa mine, and the town site of Ophir, alleging that company failed to fulfill contract to sell the properties after agreements to this effect had been arranged and the first payment made.

Reported early in 1917 that property had been sold to W. J. Morgan & Co., but if so there is little activity evident to show it.

MOUNT GAINES GOLD MINING CO.

CALIFORNIA

Hornitos, Mariposa Co., Cal. Said to be financed by Los Angeles and Chicago capital.

Officers: Wm. B. Davidson, pres.; A. L. Irish, v. p.; D. J. Hoge, sec.-treas.; with A. E. Rutherford and P. B. Ellis, directors; W. J. McCray, mgr.

Cap., \$150,000; shares 10c par. The new company has paid for the mine partly in stock and given a first mortgage trust deed for \$66,000.

Property: 200 acres patented and 300 acres unpatented land in sec. 35, T. 4 S., R. 16 E., $4\frac{1}{2}$ miles E. of Hornitos, on the west vein of the Mother Lode, said to show gold ore.

Development: by 1,350' incline shaft with 11 levels and about 8,000' of workings. At present the mine is full of water, but old records are said to show a 5' vein assaying \$7 per ton.

Equipment: includes electric hoist, air compressor and 20-stamp mill with amalgamation and concentration tables. Electric power is obtained from the San Joaquin Power & Light Co.

Mine has been idle since 1910, but the new company, which came into full possession on May 10, 1916, was reported to be installing new machinery, 1917, and preparing to do development work.

MOUNTAIN KING MINING CO.**CALIFORNIA**

Office: 244 Kearney St., San Francisco.

Officers: Anthony McMillan, pres.; H. T. Harper, sec.-treas.; B. C. Austin, supt., Mountain King, Mariposa Co., Cal.

Cap., \$600,000; shares \$1 par; assessable, 598,340 issued. Gross earnings in 1916 were \$96,650 and operating expenses \$113,714. In June, 1917, earnings were \$4,546. Initial dividend of \$17,950 paid May 31, 1916, equal to 3c per share.

Property: 19 claims, patented, on the north fork of the Merced river on the Yosemite Valley R. R., in Coulterville, dissolved district of Mariposa Co., Cal.

Geology: quartz vein in slate and greenstone, said to carry gold and silver values in iron pyrite and tetrahedrite.

Development: by 450' shaft sunk at 55° incline; also 2,645' tunnel. Greatest depth of workings is 400' below tunnel-level. Sinking and exploration under known orebodies is contemplated. New work in 1916 totaled 3,866'.

Equipment: includes air compressor, hydro-electric plant, built in 1915, and a 30-ton stamp mill with concentrators. Power plant has one 350-kva. 3-phase, 4,000-volt generator direct connected to a turbine running at 600 r. p. m. Underground haulage is by electric trolley locomotive.

Production: for year ending March 31, 1917, 311,186 tons of ore. Extraction, 88.3%; 53.2% by amalgamation, 35.1% by concentration. Average value of ore crushed, \$3.09 per ton.

Company is operating a mine with good equipment; but large profits cannot be expected from \$3 ore. A serious accident in 1917 will probably affect the year's results.

POCAHONTAS MINING CO.**CALIFORNIA**

Office: 112 Market St., San Francisco. Mine office: Lewis, Mariposa Co., Cal.

Property: 320 acres, patented, including the Great Northern mine, in the White Rock district, shows several veins of cupriferous iron ore, between diorite, with altered diabase gangue. The main orebody, about 100' in width, occurs in a mineralized zone up to 1,000' across, having an oxidized zone of about 100' depth, from which a limited production of high-grade ores was made many years ago.

Development: by a 300' shaft, 200' tunnel and 900' of drifting.

Equipment: includes steam power and a hoist, and buildings include an office, laboratory, smithy and bunk houses. Making small shipments to the Selby smelter. Property worked by lessees in 1915-16.

No later returns.

WHITE GULCH MINING CO.**CALIFORNIA**

Office: 263 12th St., Oakland, C. C. Powning, supt., Bagby, Cal.

Property: the Virginia quartz mine, 8 miles from Bagby, Mariposa Co., The vein varies from a seam to many feet in width with serpentine footwall and diabase hanging-wall.

Development: 750' shaft, with 5 levels.

Equipment: includes a Fairbanks-Morse hoist and 35-h. p. motor; 50-h. p. Ingersoll-Rand compressor; 3 miles of power line; track, cars, pipe, buildings, etc. Also a 10-stamp mill with crusher and amalgamating plates and 50-h. p. gas engine. Company started operations in 1912. In Sept., 1917, 22 men were employed. The mill was treating 30 tons from the 300 and 500' levels and the 700' drift was being extended.

MENDOCINO COUNTY**REDWOOD COPPER QUEEN MINING CO.****CALIFORNIA**

Idle. Is a San Francisco corporation. E. R. Leach, pres.; Thos. Mellersh, sec.-treas.

Property: 840 acres, patented, is 25 miles from Cloverdale, nearest rail point, Mendocino Co., Cal. Developed by tunnels and winzes. Vein much broken by faults prominent on surface, has a 2' to 4' gossan capping, traceable for a mile. Country rocks are brecciated porphyry and sandstone. Ores include cuprite, melaconite, malachite, azurite, chalcopyrite and tetrahedrite.

Mineralized zone is 300' long, 10-40' wide and 125' deep, carrying kidneys and lenses of sulphide ore with as much as 8-9% copper and small gold-silver values. High sulphur content and absence of arsenic make ore desirable for manufacture of sulphuric acid.

MERCED COUNTY

ORIGINAL MINING & MILLING CO.

CALIFORNIA

Merced, Merced Co., Cal.

Property: the Original Quartz mine, 4 unpatented claims, at Merced, in Sec. 21, T. 3 S., R. 19 E., said to carry a 2' vein, with slate hanging and footwall.

Development: by 800' shaft and several thousand feet of workings.

Equipment: includes compressor, electric hoist, machine drills, 10-stamp mill and several buildings. Employs 40 men.

YOSEMITE DREDGING & MINING CO.

CALIFORNIA

Address: J. W. Neill, Snelling, Cal.; or 159 Pierpont St., Salt Lake City, Utah.

Property: 400 acres along the Merced river, near Snelling, Merced Co., Cal. Gravel is up to 20' deep, and is easily dug.

Equipment: a dredge with 3¾-cu. ft. buckets, screen, Hungarian riffles, 10 Neill jigs, and tailing elevator. Electric power is used throughout. A feature on this boat is the recovery of platinum.

Production: gravel is reported to yield up to 16c per yard, extracted at a cost up to 7c per yard. According to J. W. Neill in the Min. and Sci. Press of Dec. 8, 1917, in the 22½ months preceding July 1 of this year, the boat dug 1,534,750 cu. yd. Besides the gold, there was recovered 41 oz. of platinum and nearly 1 oz. of osmiridium, valued at \$3,438 and \$25 respectively.

Property has been highly profitable for several years, and is in the hands of a capable metallurgist.

MODOC COUNTY

HESS MINING CO.

CALIFORNIA

I. W. Gibbons, supt.

Property: at Alturas, Modoc Co., Cal., said to show gold-quartz ore.

Development: 300' shaft.

Equipment: 10-stamp mill, compressor and cyanide plant. Employs 15 men.

MODOC MINES CO.

CALIFORNIA

Highgrade, Modoc Co., Cal.

Officers: Wm. Wrigley, Jr., pres.; Jas. C. Cox, sec.-treas., Kesner Bldg., Chicago; N. E. Guyot, v. p. and mgr., Kingman, Ariz., directors.

Inc. May 1, 1909, in Arizona. **Cap.**, \$1,000,000; all outstanding; shares \$1 par. Annual meeting July 1. Is a close corporation.

Property: 259 acres, patented, in High Grade mining district, in the extreme N. E. corner of Modoc Co.

Ore: gold, in a vertical quartz vein in rhyolite, with average width of 10", and proved for 150' in length downward to the 200' level. The ore in 25 ton lots returned \$23 per ton gross.

Development: by 210' vertical shaft, with 1,800' of underground workings.

Equipment: includes 6"x10" hoist. Steam power is used. In 1915 about 100 tons of \$23 ore was shipped. Working conditions are bad, due to the heavy snowfall and opposition of ranchers and others. District has merits, but will doubtless remain undeveloped until better feeling prevails at New Pine Creek, Oregon, the railroad station for the district, according to officials of the Modoc company.

For geology of the High Grade district, see U. S. G. S. Bull 594, pp. 38-48.

MONO COUNTY

COLUMBIA CONSOLIDATED MINES CO. CALIFORNIA

John Phelan, pres., Bridgeport, Conn.; E. C. Klinker, mgr.; J. A. Brown, supt., Hotel Golden, Reno, Nev. Mine address: Sweetwater, Mineral Co., Nevada.

Property: 8 claims, unpatented, 160 acres, at Mt. Patterson, Mono Co., 3 miles west of Nevada-California State line.

Ore: gold, silver in fissure vein in porphyry. Recently acquired 160 acres, patented, at Ormonde. Vein has strike of N. 10° E. with 45° dip and average width of 28", of which $\frac{1}{3}$ is workable and said to average .05 oz. gold and 40 oz. silver per ton.

Development: by tunnels; No. 1 has about 850' of workings; No. 2 is in 410' with 700' of drifting. Underground workings total 4,500', and are said to block out 4,000 tons ore. Shaft sinking progressing 1917.

Equipment: includes 30 stamp mill and an aerial tram to carry ore from German and Ocean Star mines to the mill.

PITTSBURG LIBERTY MINE CALIFORNIA

Masonic, Mono Co., Cal.

Property: purchased at receiver's sale in 1914 for \$20,000 by the Stall Bros., was formerly owned by the Pittsburg Liberty Mining Co. The mine, near Masonic, was located in 1902 and started shipping to Selby smelter in 1907, operated until 1910 with a reported production of \$600,000; idle until 1915 when work was resumed.

Ore: which carries gold, is found in 5 veins, occurring in metamorphic schist, quartzite and slate; the intrusive is granite. Veins strike N. 25° W. and dip to the east.

Development: by 172' shaft and 2 adits, cutting the vein at 271' and 413' depth.

Equipment: includes 100-h. p. gasoline engine, and the 60-ton Pittsburg-Liberty mill, which was remodeled and equipped with cyanide plant and tube mill in 1915.

Lessees are operating and shipping, 1917. Said to have discovered new 2' vein of high-grade gold ore.

SARITA MINES CO. CALIFORNIA

Address: F. W. and G. E. Stall, mgrs.; W. M. Fuller, supt., Masonic, Mono Co., Cal. Not a share corporation.

Property: the Pittsburgh Liberty mine near Masonic, Cal., said to show a quartz vein in porphyry, dipping 45° W. and pitching W. Orebody is from 4' to 20' wide and shoots are from 50' to 200' long. Ore said to contain gold, silver and copper, worth \$20 per ton.

Development: by 700' tunnel to 200' depth.

Equipment: electric power, aerial tram, and 75-ton concentrating plant. Concentrate assays \$500 per ton. Extraction is 90%.

MONTEREY COUNTY

KINGS QUICKSILVER MINING CO., LTD. CALIFORNIA

Office: 502 King St., London, Ont., Canada.

Officers: Wm. Gray, pres.; W. P. Darsh, sec.; A. A. Lewis, supt.

Property: a group of claims, in Sec. 20, T. 23 S., R. 16 E., Kings Co., 14 miles E. of Parkfield, Monterey Co., Cal.

Ore: native mercury, cinnabar and calcite, occurs in a crushed zone, 35' wide, running S. E. with dip 45° S. W. Country rock is serpentine, shale and metamorphic sandstone.

Development: to depth of 200' by 700' upper and 850' lower tunnels, with raises and winze.

Equipment: includes 10-ton Scott fine ore furnace with brick condensers and 25-h. p. oil engine. Mine worked intermittently since 1902. Present management plans installing concentrator and further development.

NATIVE COPPER MINING CO.

CALIFORNIA

Inc. in 1911, to develop the Copper King, Native Copper and other claims on Table mountain, Monterey Co., Cal. W. H. Kerr, Coalinga, Cal., pres., at last accounts.

PATRIQUIN QUICKSILVER MINE

CALIFORNIA

Owned by Louis and A. G. Patriquin, Parkfield, Monterey Co., Cal. Gross earnings for 1915 were \$60,000 and operating expenses, \$12,000.

Property: 6 claims, 110 acres, in Sec. 2, T. 23 S., R. 14 E.; near Parkfield, is said to show cinnabar ore in veins and in chamber deposit in serpentine. Orebody said to be 3,000' long, with N. W. strike and dip of 60° N. E.

Development: by 360' tunnel and a total of 3,200' of workings.

Equipment: includes a 2-ton Johnson McKay retort furnace. A 1-12" pipe retort furnace was under construction, March, 1916. About 1,800 tons of 5% ore were treated in 1915, yielding 340 flasks of quicksilver.

NAPA COUNTY

ETNA QUICKSILVER MINE

CALIFORNIA

E. de Golla, mgr., and E. B. Frost, supt., Calistoga, Napa Co., Cal.

Property: is situated 9 miles N. E. of Calistoga, and 20 miles from St. Helena, the shipping point. Cinnabar was first found there in 1854, and production of quicksilver is over 40,000 flasks.

Development: by long tunnels and extensive workings.

Equipment: includes a concentrating plant and retorts.

Property was producing in 1917.

WHITE ROCK MINE

CALIFORNIA

Address: R. Sweasev, St. Helena, Cal.

Property: one of the largest magnesite mines in the State, 20 miles E. of St. Helena.

Equipment: machine-drills, aerial tram, 5 vertical kilns, auto-trucks, etc.

Production: about 100 tons of raw ore daily, equal to 50 tons of calcined material.

NEVADA COUNTY

ALLISON RANCH MINE

CALIFORNIA

Owned by Grass Valley Cons. G. M. Co., which see.

BLACK BEAR MINING CO.

CALIFORNIA

Office: David L. Killen & Co., 716 Copper Bldg., Denver, Colo.

Cap., \$375,000; \$1 par; 210,986 shares issued.

Property: 400 acres in Grass Valley mining district, Nevada Co., Cal., said to show several veins carrying gold values. Has 10-stamp mill, hoist and water power.

Denver office's advertising matter is not favorably regarded.

BRUNSWICK CONSOLIDATED GOLD MINING CO.

CALIFORNIA

Grass Valley, Nevada Co., Cal. Eastern office: 136 Liberty St., New York.

Officers: W. H. Oscanyan, pres.; R. Chester Turner, v. p.-gen. mgr.; J. C. Nilon, sec.-treas., with J. A. Beckwith, Theo. C. Camp, C. H. Mallen, directors. J. J. Halpin, asst. sec.-treas.; C. H. Mallen, supt.

Inc. Jan. 11, 1890. **Cap.,** \$500,000; shares \$1 par; 395,287 shares issued. J. J. Halpin, 136 Liberty St., New York, transfer agent; Farmers Loan and Trust Co., New York, registrar. Listed on San Francisco Exchange.

Financial statement: for fiscal year ending Jan. 25, 1917, shows balance Jan. 27, 1916, \$49,669; receipts from bullion, \$166,573; from concentrates, \$29,948; and misc., \$5,682; disbursements, \$201,061, as follows: genl., \$20,100; mining, \$132,087; milling, \$28,312; new shaft, \$8,491; repair account, \$5,216; improvements, \$6,855. Cash on hand and New York City bonds, Jan. 25, 1917, \$50,587.

Production: 1916, \$196,520; total production, 1893-1917, \$1,582,847.

Dividends: in 1906, 3c; in 1913, 6c; in 1914, 24c; in 1915, 18c per share. Total dividends to date, 51c; total assessments, \$1.22 per share.

Property: located on the Mother Lode, at Grass Valley, has gold quartz veins in schist and slates. For geology see Lindgren's Gold-Quartz veins in Nevada City and Grass Valley districts, Cal.; 17th Ann. Rept., pt. 2, 1896, pp. 1-262.

Development: by incline shaft to 1,100' level, and by 1,250' vertical shaft, being sunk to the 1,400' level. Underground work in 1916 totaled 2,185'.

Ore: blocked out ready for stoping, Jan. 27, 1917, roughly estimated at 30,000 tons above the 1,200' level. Also a considerable tonnage of low-grade ore indicated by exposed faces. Company contemplates sinking vertical shaft to greater depth and run lower levels from it.

Equipment: includes two 20-stamp mills, one going into commission in Oct., 1915.

Production:

	Tons	Costs Per Ton			Value Ore Per Ton	%	Bullion Prod.	
		Mng.	Mfg.	Total			Oz. Au.	Oz. Ag.
1916	34,091	\$3.87	\$0.83	\$5.90	\$6.44	89.5	7,998	1,856
1915	22,004	4.97	0.84	8.59	11.11	90.8	9,486	2,069
1914	16,237	6.05	.93	10.22	93.9	12,992	2,622

Company is planning to erect a small cyanide plant to treat concentrates at the mine.

CALUMET & CALIFORNIA MINING CO. CALIFORNIA

Office: Calumet, Mich. Mine office: Washington, Nevada Co., Cal.

Officers: Geo. C. Morrison, pres.; Wm. Wedlyn, v. p.; Elbert E. Boyd, sec.; Neil Dick, treas.

Inc. Aug. 3, 1914, in Wyoming. **Cap.**, \$200,000; shares \$1 par; assessable. Property was idle for several years when held by Fairview Mng. Co.; company reorganized 1914 under present title.

In 1916 work was kept going by assessments. A statement of Sept. 14, 1916, shows that out of \$14,067, only \$6,624 was spent on actual exploration, partly unnecessary. This money being gone the time had come for closing down, selling the mine, or raising more funds. In July, 1917, the secretary reports that the property has been abandoned and the machinery sold. The company is without assets and out of business.

CANYON MINES CORPORATION CALIFORNIA

Office: 33 State St., Boston, Mass.

Officers: Frank B. Keever, pres.-gen. mgr., Sharon Bldg., San Francisco, Cal.; Geo. H. Morrill, v. p.; H. A. Makay, sec.-treas. Jas. J. McCarthy, and Frank G. Hobbs, directors.

Inc. in Maine. **Cap.**, 1,000,000 shares, \$1 par. Company owns the shares of an operating company of same name.

Property: 500 acres, 2½ miles from Gorge, Nevada Co., Cal., on the S. P. R. R., 35 miles west of the Nevada-California line, and 172 miles east of San Francisco. Holdings cover a lode with hanging-wall country of gray Calaveras slate and a diorite dike footwall. The lode, said to vary from 5' to 10' in width at north end to 140' across at south end, consists of a stockwerk of quartz stringers and seams.

Development: aggregates 6,188', mostly tunnels, the 1,137' uppermost being 400' deep at face, the 1,862' No. 2 tunnel, 110' lower, while No. 3, 186' below No. 2, is 2,349' long, with a 112' winze below its floor; the 840' Mill tunnel is 700' lower. The superintendent figures reserves to average \$4.91 per ton. Mill runs averaged \$5.15 when mine was worked.

DELHI MINES CO.**CALIFORNIA****Address:** Box 703, Reno, Nevada.**Officers:** A. A. Codd, pres.-gen. mgr.; B. F. Boerner, sec.-treas.; H. Eddie, supt.**Inc.** May, 1917, in Nevada. **Cap.**, \$3,000,000; shares \$1 par. Is a successor of an old and successful company of similar name that has been inactive for many years.**Dividends:** forty-five of 10c each and two of 25c each were paid by the old company.**Property:** 11 claims, 5 patented, about 200 acres, in Columbia Hill mining district, 19 miles N. of Nevada City and Grass Valley, Nevada Co., Cal. Claims contain two known vein systems, the Delhi and St. Gothard, the Delhi vein being the only one worked extensively. Mines are credited with production of \$1,514,435 from 1890 to 1914. Examined by Hamilton Eddie in May, 1917.**Ore:** free milling gold, with 1% pyrite.**Development:** by 4 tunnels, about 200' apart, No. 4, the lowest, being 1,700' long; also by 400' vertical shaft. Vein at this depth said to be 3' to 8' wide and 360' long. Shaft is to be sunk 100' below No. 4 tunnel. Flow of water was 350 gal. per min. in 1914, when work was stopped.**Equipment:** surface tramway connecting tunnels, pumps, one 900 and one 1,600 cu. ft. compressor, twenty 1,000 lbs. stamps, concentrators, ditches for water power and buildings.

Another project to reopen an old Californian mine, and if estimated costs of \$2 to \$2.50 per ton are realized, a fair profit should be made, as property is well equipped.

EMPIRE MINES & INVESTMENT CO.**CALIFORNIA****Office:** 375 Sutter St., San Francisco, Cal. Mine address: Grass Valley, Cal.**Property:** the Empire mine and the Pennsylvania mine, formerly owned by the Pennsylvania Cons. Mines Co., which was bought for about \$500,000 in 1916.**Ore:** quartz carrying gold values. Shipping over 400 tons daily in 1916.**Development:** by 2,600' and 4,600' incline shafts.**Equipment:** includes 500-h. p. electric hoist, and 100-ton stamp mill.

Company had a great deal of costly litigation in 1915-16 with the North Star Mines Co., Grass Valley, Cal., over extra-lateral rights. The case was finally compromised in 1916 and both companies are mining part of the disputed orebody.

EXCELSIOR CONSOLIDATED MINING CO.**CALIFORNIA****Inc.** May, 1914, as a reorganization of Excelsior Cons. Gold Mines Co. and controlled by Worcester, Mass., parties. **Cap.**, \$3,000,000; shares \$1 par. R. B. Elder, mgr., W. H. Rea, supt.**Property:** Excelsior group, in Meadow Lake district, Forest Hill, Nevada Co., about 7 miles from Cisco, the nearest railroad station, said to show oxide ore with gold values averaging \$10 per ton. Ore is treated by amalgamation and cyanidation.**Development** 135' shaft and drifts. Use of Baltimore tunnel has been secured for further development at depth.**Equipment:** 9-stamp mill, a Marks centrifugal mill, 700-h. p. Horseshoe Bar electric power plant, bunk house and mine buildings. The mill treats about 250 tons of ore daily. Employs about 70 men.**Ore reserves:** management claimed to have \$35,000 worth of ore in bins. No recent returns.**FAIRVIEW MINING CO.****CALIFORNIA**

Washington, Nevada Co., Cal.

Reorganized as Calumet & California Mining Co., which see.

GOLD POINT CONSOLIDATED MINES, INC.**CALIFORNIA****Office:** Crocker Bldg., San Francisco. Mine office: Grass Valley, Nevada Co., Cal.

Officers: F. W. McNear, pres.; Errol MacBoyle, v. p. and mng. director; E. L. Oliver, sec.-treas.

Cap., \$2,000,000; shares \$1 par.

Property: company controls the Union Hill mines, Gold Point, South Idaho, Idaho Development, and Snook properties in the Grass Valley district, comprising 300 acres and a length of 8,000' along the strike of the Union Hill, Georgia, Greek, Lucky-Cambridge, Gold Point, and South Idaho veins. The famous Idaho-Maryland vein passes into these properties at a depth of 2,000' on the incline, and is thereafter controlled by the Gold Point Consolidated Mines.

Development: at present most of the development is being done on the Union Hill property (see Union Hill Mines). A shaft has also been sunk on the South Idaho vein to a depth of 150'. This shaft is equipped with oil-burning steam boiler, hoist, pumps, etc., six men are employed. In the near future the development of the other holdings will be undertaken.

GOLDEN CENTER MINING CO.

CALIFORNIA

Mine office: Grass Valley, Cal.

Officers: Rodney McCormick, pres.; J. W. Howard, sec.; C. A. Brockington, supt.

Cap., 300,000 shares, \$1 par; 285,000 issued.

Bullion from 3 years operation, \$312,291, of which \$152,000 was spent for property, \$90,000 for improvements, \$21,990 in dividends.

Property: 130 acres, including Golden Center Peabody workings under the town of Grass Valley.

Development: 6,000' to date; main shaft, 1,100' deep, is being sunk another 1,000'. Crosscut in hanging-wall at 1,100' level to be driven to cut Peabody vein. 85 men were employed. In July, 1917, ore extraction and milling were suspended to allow extensive exploration on which \$200,000 is to be spent.

Equipment: includes hoist, compressor, 20-stamp mill, etc. Cyanide plant to be erected.

Production: good yields were made for a time, enabling dividend to be paid, and many improvements to be made. Property in good hands.

GRASS VALLEY CONS. GOLD MINES CO.

CALIFORNIA

Mine office: Grass Valley, Cal.

Officers: Rodney McCormick, pres.; J. W. Howard, sec.; C. A. Brockington, supt.

Cap., 900,000 shares, \$1 par; 615,709 issued.

Financial: cost of property, \$88,000; improvement acct., \$175,000; reserve fund, \$43,728.

Property: Allison Ranch mine, south of Grass Valley, which produced gold worth \$2,300,000 from 1856 to 1866. In July, 1917, the adjoining Benoit tract of 168 acres was bought.

Development: by 9,000' of underground work to depth of 1,662'. Ore reserves estimated at 50,000 tons.

Equipment: twenty 1,575-lb. stamps, cyanide plant, etc. Mill started July, 1917.

Controlled by same people as Golden Center of Grass Valley M. Co. An old mine with good record and possibilities.

MOUNTAINEER MINES CONSOLIDATED

CALIFORNIA

Address: F. J. J. Sloat, 240 N. 7th St., Hamilton, Ohio.

Officers: Fred Searles, pres.; Carol Searles, v. p.; J. W. O'Neil, sec.; F. J. J. Sloat, treas., with Herman Brand, Ed. Schmidt and P. B. Ender, directors.

Cap., \$1,000,000; shares \$1 par. Capital reduced from \$3,750,000 and organization not completed since.

Property: 15 claims, 3 patented, in Nevada City district, Cal. Claims said to contain a gold-silver-lead vein in granodiorite with ore averaging \$11 per ton.

Development: by 1,200' incline shaft and 2,000' tunnel with total workings of 10,000' to depth of 1,200'. Ore reserves estimated, but not blocked out, at 125,000 tons. Mine worked by leasers.

NORTH STAR MINES CO.

CALIFORNIA

Offices: 22 William St., New York; 15 Exchange Pl., Jersey City, N. J.; Grass Valley, Cal.

Officers: Geo. B. Agnew, pres.; Sidney M. Colgate, v. p.; with C. E. Dodge, Walter Douglas, and William Hague, directors; W. D. Pagan, sec.-treas.; A. B. Foote, gen. supt.

Inc. April 10, 1899, in New Jersey. **Cap.**, \$5,000,000; shares \$10 par; \$2,500,000 outstanding. Stock is listed on Boston and San Francisco Exchanges. New York office and Old Colony Trust Co., Boston, transfer agents. Central Trust Co., New York, registrar. Annual meeting, 2nd Wednesday in April.

Income account for 1916 shows: total production North Star mine, \$1,160,007; production Champion mines, \$124,724; interest and dividends, \$37,755; balance from 1915, \$942,469, total \$2,264,955.

Expenditures: total operating expenses, \$1,054,091; dividends absorbed \$300,000; balance Jan. 1, 1917, \$910,864.

Balance Sheet:		Plant and		Champion	
Assets:	Property	Improv'm'ts	Mines	Current	Total
1916.....	\$1,271,764	\$253,393	\$976,411	\$910,864	\$3,412,432
1915.....	1,489,512	222,070	854,757	942,469	3,508,808
Liabilities:		Capital Stock		Surplus Dec. 31	Total
1916.....		\$2,500,000		\$912,432	\$3,412,432
1915.....		2,500,000		1,008,808	3,508,808

Dividends: 2% in 1899; 5% in 1903; 6% in 1904; 8% in 1905; 10% in 1906 and 1907; 15% in 1908; 23% in 1909 and 1910; 17% in 1911; 12% in 1912 and 1913; 18% in 1914; 10% in 1915; 12% in 1916. In 1917, 3% was paid for the first quarter, but the second quarter was passed, on account of high cost of operations, supplies, etc. Total dividends, to date, \$5,137,040.

Property: the North Star mine, 1½ miles S. of Grass Valley, and the Champion mine, at Nevada City, Nevada Co., Cal. Other properties in the district are being examined by the company with a view to their acquisition.

The North Star, the main producer of the group, was discovered 1851 and operated continuously to date, with exception of 10 years, 1874-1884, first by the original locators and later by the North Star Quartz, the North Star Gold Mining Co., and the North Star Mining Co.

Geology: ore carries gold and silver in a quartz gangue, the precious metals occurring free or associated with pyrite, galena, and sphalerite. The veins have a maximum width of 5', with ore shoots averaging 400 to 600' long and proved for 2,000' in depth.

Development: new work in 1916 amounted to 6,384' and produced a total of 6,826 tons of ore. This work opened profitable orebodies between the 2,700' and 4,400' levels, both east and west of the shaft, adding to the ore reserves a tonnage probably exceeding what was extracted during the year. No development was done below the 4,400' level.

The office, machine shop, mill and cyanide plant, etc., which were formerly near the collar of the North Star shaft have all been moved near the Central shaft, as no ore is now hoisted through the North Star shaft.

At the Champion mine, Nevada City, new development work amounted to 4,910'. The Providence shaft was sunk to a depth of 2,529'. Operations at the Champion property resulted in a total operating deficit of \$121,179. A total of 28,050 tons was crushed, the yield of which was \$4.45 a ton.

Milling plants: company now operates 2 mills, sixty 1,500-lb. stamps for the North Star mine, and forty 1,000-lb. stamps for the Champion. Ore is hoisted at the Central shaft of the North Star mine in 4-ton skips, dumping into bins over 1½" grizzlies. The coarse from the grizzlies goes into a bin separate from the fines and thence over two sorting tables to

two 14x14" Wheeling crushers. As it passes over the sorting tables it is washed and the waste sorted by hand; 7 men picking out 70 tons of waste a day. Bins at shaft have capacity of 500 tons of ore and 100 tons of waste. Ore is hauled to mill in 2½-ton side dump cars by 5½-ton electric locomotive. Mill bins have a capacity of 1,000 tons. Each ten stamps in mill are belted to a 35-h. p. back-gear motor. Pulp flows over twelve 3'x16' copper plates, thence to 7 Richards pulsator classifiers and three 5' cones. Overflow (slime) to cyanide, underflow to 7 double-deck Deister concentrators. Middlings from concentrators to single deck concentrator, concentrates to 5'x10' tube mill, tailings to twelve 100-ton leaching vats for cyanidation. Ground concentrates from tube mill over amalgamated plate to thickeners to 3 Devereaux agitators, slimes overflow from classifiers to Dorr thickeners, thence to Pachuca agitators and Oliver filters. Concentrate tailing after treatment in Devereaux agitators is added to slime. Merrill presses used for precipitation. Total cost of milling and cyaniding is 90.1c per ton crushed.

Flotation was being tried early in 1917 at the Champion mine, where the gold is now mainly in sulphides. The Champion mine is not developing favorably. The total outlay on the property has been \$1,762,100, and gold yield \$785,689. The North Star mine gives encouragement for the future. To date it has produced 1,469,724 tons of \$12.66 ore, or \$18,610,534. Company's financial position is particularly strong.

Production of the North Star mine in 1916 was 135,760 tons, hoisted, of which 24,430 tons were sorted out as waste, leaving 111,330 tons crushed; yielding \$10.42 per ton, at a total cost of \$6.26 per ton. Of the total production 80.78% was obtained in the mills by amalgamation and 19.22% by cyanidation. The value lost in tailings is estimated at 35c per ton crushed.

PHOENIX CONSOLIDATED MINES CO.

CALIFORNIA

Office: Humboldt Bank Bldg., San Francisco, Cal. A. Goering, supt., Box 171, Nevada City, Cal.

Officers: Judge B. V. Sargent, pres.; A. B. Mahony, v. p.; C. Martel, sec.; S. O. Trescott, treas.; H. C. Bocchio, mgr.; all of San Francisco.

Inc. Dec. 21, 1916, in Nevada. **Cap.**, \$1,000,000; \$1 par; 600,000 issued; 400,000 held for development fund.

Has a 4-year lease and option to 1921 on the Phoenix Cons. mine, formerly worked by the Phoenix Gold Mng. Co., for \$15,000, payable out of a 15% royalty.

Property: 4 claims, 2 patented, 320 acres, 1 mile N. of Nevada City, Nevada Co., Cal., adjoining the Odin and Manzanita mines. Ore deposits consist of a gravel channel which is believed to be the continuation of the Manzanita channel, credited with \$7,000,000 gold production. There are also 3 quartz veins occurring along a rhyolite-granodiorite contact. One vein was worked to water early in the 80's and the ore is said to average \$20 gold per ton.

Development: tunnel being driven to tap the Manzanita channel. Quartz veins are not being developed at present.

QUAKER HILL BLUE LEAD MINES CO.

CALIFORNIA

Address: 37 Wall St., New York City. **Inc.** 1917, in Delaware. **Cap.**, \$3,500,000.

Incorporators: H. E. Latter, C. L. Rimlinger and C. M. Egner.

Reported to own gravel properties in the Colfax quadrangle, Nevada Co., Cal.

SOUTH YUBA MINING & SMELTING CO.

CALIFORNIA

French Corral, Nevada Co., Cal. Al. Elliger, pres.; C. D. Tregonning, supt. **Cap.**, \$50,000.

Property: 10 claims, in process of patenting, including the Red Ledge mine, 10 miles N. W. of Nevada City, the nearest rail point. Mine shows granodiorite and diabase. There are 3 known veins, mainly copper-bearing, and 1 vein, originally worked for its gold ores, carries considerable quantities of this metal in the copper zone below.

Development: by 6 tunnels, longest 330', with total openings of about 2,000', showing malachite, chalcopyrite and good values in gold and silver. Principal tunnel, starting just above the South Yuba river, is expected to intersect 3 veins, including a 35' vein of cupriferous hematite, and give a back of about 1,500'.

Equipment: includes a 10-stamp mill, cyanide plant and water power. Reported bonded to a New York syndicate.

SPENCE MINERAL CO.

CALIFORNIA

Office: 1061 Mills Bldg., San Francisco, Cal. Mine near Spenceville, Nevada Co., Cal. D. M. Kent, sec.

Property: an old mine, operated 1875-1903, the shaft caving in the latter year. Fully described Vol. XI, Copper Handbook.

Property was bonded in 1917 for 2 years to McLain & Hales, who have unwatered shaft and recovered a fair quantity of copper from the water, making 2 shipments to New York.

UNION HILL MINES

CALIFORNIA

Office: Crocker Bldg., San Francisco. Mine office: Grass Valley, Nevada Co., Cal.

Officers: F. W. McNear, pres.; Errol MacBoyle, v. p. and mng. director; Robert E. Hall, sec.; E. L. Oliver, treas.

Cap., \$1,000,000; shares \$1 par.

Property: 150 acres in the Grass Valley district, controlling 2,800' along the Union Hill, Georgia, Greek, and Lucky-Cmabridge veins. All of these veins have produced and are producing free milling gold ore, also considerable quantities of tungsten (scheelite) ore.

Development: work is being done on the various veins on the 600', 800' and 1,000' levels. The inclined shaft (60°), 1,000' deep, is now being sunk to the 1,400' level.

Equipment: includes water-power hoist capable of sinking to a depth of 2,000', electrically driven 20-drill Sullivan compressor, complete 20-stamp mill, pumps, carpenter, blacksmith, and machine shops, assay office, buildings, etc.

Production: 10 stamps crushing gold ore from development, and 10 stamps on tungsten ore. Gold production \$3,000 to \$5,000 per month. Tungsten production since June 15, 1917, 25 tons scheelite concentrate carrying from 65 to 70% tungstic trioxide, value \$45,000.

Forty men are employed.

WILLOW VALLEY MINING CO.

CALIFORNIA

Office: 443 Holbrook Bldg., San Francisco. Mine office: Nevada City, Cal.

Officers: M. Dozier, pres.; J. L. M. Shetterley, v. p.; C. E. Reith, sec.-treas.; A. W. Hoge, C. F. Kinsey, R. W. Bender, directors. A. W. Hoge, supt.

Inc. May 18, 1915, in Cal. **Cap.,** \$1,000,000; shares \$1 par. Annual meeting in May.

Property: 9 claims, 4 patented, 125 acres, in Nevada City district, Nevada Co., has several veins, containing gold and silver ore, which occur in granodiorite and slate and dip from 20° to 70°. Developed by shaft and tunnel to depth of 800'.

Equipment: includes electric power, compressor, pump, tramway, stamp mill, etc. Developing only, 1916-17.

PLACER COUNTY

BOREALIS CONSOLIDATED MINES CO.

CALIFORNIA

Address: Letters returned from office of president, Dr. G. W. Hille-gass, Bacon Bldg., Oakland, Cal.

Property: 40 acres, including the Eureka mine, in Ophir district, 4 miles from Auburn, Placer Co., Cal.

Ore: quartz, exposed in shoots, averaging \$12 per ton.

Development: by 3 compartment shaft.

Ore reserves: estimated in 1915, by company, at 17,000 tons of \$12 ore in sight on Eureka ground.

Equipment: 20-stamp mill, electric hoist, good for 1,500', and air compressor. Regular shipments of concentrates to custom smelter made in 1915.

DAIRY FARM MINING CO.

CALIFORNIA

Property operated by Van Trent Mining Co., is practically worked out and will shortly be abandoned. See Vol. XII for description.

HIDDEN TREASURE MINING CO.

CALIFORNIA

Address: Harold T. Power, mgr., Call Bldg., San Francisco.

Owens gold-bearing gravel mine, 1,545 acres, five miles north of Michigan Bluff, in Damascus mining district, Placer Co.

ORO FINO MINING CO.

CALIFORNIA

East Auburn, Cal.

Officers: Wm. L. Curtis, pres.; Geo. H. Hyde, v. p.; Haines Gridley, sec.-treas.-mgr.

Inc. Aug. 29, 1913, in California. **Cap.**, \$200,000; shares \$1 par; 196,865 outstanding. Annual meeting, 2nd Monday in March.

Dividends: at rate of 12% yearly started Dec. 20, 1916. Paid to 1917, \$11,722.

Property: the Bellevue & Bullion mines, 13 claims, 8 patented, 95 acres, in Ophir Mining district, Ophir, Placer Co. Shows a fissure vein, 1'-4' wide, running E.-W., with dip of 75°, between schist hanging-wall and grano-diorite footwall. Ore is quartz with some sulphides, assaying from \$7-\$10 per ton in gold and silver.

Development: by 500' vertical shaft, with a total of 4,300' underground workings. Management estimated 20,000 tons of ore blocked out, Jan., 1917.

Equipment: includes 50 h. p. electric hoist, compressor, 2 electric pumps, and 10-stamp, forty-ton mill. Mill started operating in Oct., 1915.

Production: gross in 1915, yielded \$112,614.

PLUMAS COUNTY

COPPER QUEEN MINE

CALIFORNIA

Mine at Portola, Plumas Co., bonded to J. R. Walker, of Salt Lake City. Developed by tunnel, showing a vein of gold-copper ore. See Walker Mng. Co.

CRESENT GOLD MINE

CALIFORNIA

Crescent Mills, Plumas Co., Cal., being developed by Philadelphia Exploration Co. (which see), Crocker Bldg., San Francisco; Albert Burch, mgr.

EAGLE COPPER CO.

CALIFORNIA

Taylorville, Plumas Co., Cal. Owns groups of claims covering low-grade pyrite deposit with limited development. Company built small smelter, 1912.

EAGLE HILL MINE

CALIFORNIA

Address: G. H. Goodhue, mgr., Indian Falls, Cal.

Property: 23 claims, 460 acres, ½ mile east of Genesee, Plumas Co., Cal. Claims are reported to show chalcopryrite ore occurring in contact and fissure veins in porphyry and carrying 2% copper, \$1.10 gold and 2 oz. silver.

Development: by 48' vertical shaft and 560' tunnel, which is being driven on vein, 1917. Is a prospect.

ENGELS COPPER MINING CO.

CALIFORNIA

Office: 393 Mills Bldg., San Francisco, Cal. Mine office: Englemine, Plumas Co., Cal.

Officers: Henry Engels, pres.; F. Klamp, v.-p.; Landon A. Bell, sec.; E. E. Paxton, treas.-gen.-mgr., above with Richard Spreckles, I. J. Truman, Jr., J. F. Humburg and O. G. Traphagen, directors. John Reinmiller, supt.

Inc. 1901 in Cal. **Cap.**, \$2,000,000 shares \$1 par; non-assessable, 1,501,511 shares issued.

Statement Dec. 31, 1916 shows: liabilities, \$108,951; reserves for depreciation and depletion, \$172,716. Profits and loss, \$377,915. Gross earnings, \$1,039,515; operating profit, \$551,568.

Dividends: paying 1½% per share monthly, since July 20, 1916.

Property: 127 claims, about 2,600 acres, well watered and timbered, consisting of two groups, the Engels and Superior.

The Engels group at 5,000' elevation is in Sec. 3, 4 and 9 of T. 27 N. R. 11 E. The copper belt is 1,800' wide on this group and has been developed for over 2,500', running N. E. and dipping West. Orebody consists of high lenses lying in porphyry alongside of diorite dikes and well adapted for development by tunnel.

Development: work mostly done within the last 3 years, amounts to 14,465' of drifts, crosscuts and raises. Longest tunnel is 2,500' at a maximum vertical depth of 700'. Ore is principally bornite with some chalcocite and chalcopyrite and averages about 3% copper. A carbonate capping overlies a portion of the orebody with sulphide ore at shallow depth.

The Superior mine was opened in the summer of 1916 and results have been very favorable. Main tunnel has been driven 700', crosscutting the general strike of the ore, and is still in the orebody, having been continuously in ore from its portal averaging 3% copper with large lenses of 20% to 30% copper. Lengths of tunnels on the Superior total about 2,000'.

Ore reserves: company claims to have not less than 3,000,000 tons of ore above present tunnel levels; 500,000 tons bornite ore blocked out and total probable reserves of not less than 10,000,000 tons of 2½% copper ore.

A 3 compartment shaft is being sunk, 1917, on the Superior and a new tunnel, 1½ miles long, will be started towards the Engels mine, cutting the orebody 1,000' below the present working level.

Equipment: includes 500 ton Minerals Separation oil flotation plant, 1½ mile rope tramway, 400 h. p. hydro-electric plant, 6 compressors with total capacity of 6,000' per minute, saw-mill and all necessary buildings, etc.

In 1916, company built a 22 mile standard gauge railroad from its property to the main line of the Western Pacific, costing about \$500,000, thus greatly reducing its transportation costs.

Power used is hydro-electric, partly from company's 400 h. p. plant, but mainly from the Great Western Power Co.'s Butt Valley plant. The Great Western Power Co. has constructed a new line from its big Las Plumas plant to the Engels property, at its own expense, amounting to about \$150,000.

Company is building a 3,000 ton mill in 4 units of 750 tons capacity each. The first unit will be operating in October, 1917. New mill is located near the Superior mine and eventually the present mill will be moved down and form one of the units. A 2 mile rope tramway is under construction to carry the ore from the upper, or Engels group, down to the new mill.

Production: in 1915 was 2,893,133 lbs. copper, 30,726 oz. silver, and 414 oz. gold; in 1916, 4,400,000 lbs. copper; 41,219 oz. silver and 565 oz. gold. Mill treated 138,712 tons of ore in 1916, concentrates averaging 32.39% copper.

Employs 250 to 300 men.

FIVE BEARS MINING CO.

CALIFORNIA

Office: 503 Rector Bldg., Chicago, Ill. Mine office: Genesee, Plumas Co., Cal.

Officers: F. A. Meidinger, pres.; A. Vermaas, sec.; J. D. Meidinger, treas.; preceding, with G. H. Goodhue, directors.

Inc. April 10, 1903, in South Dakota. **Cap.**, \$2,500,000; shares \$1 par, non-assessable; issued, \$2,428,174.

Property: 10 claims, patented, 200 acres, well timbered, 28 miles from the Indian Valley railway, shows fissure veins in talcose schist, and contact replacement deposits between schist and porphyry. The gossan was

worked, 1876-93, for gold. Main vein, of 14' estimated average width, carries chalcopryite, associated with pyrite, estimated by managment to average 6% copper, 1.5 oz. silver and \$1.40 gold per ton.

Development: 2 tunnels, of 380' and 1,540', latter a drift tunnel, following the vein fault-fissure, showing low-grade chalcopryite for an average of about 12' width. Mine has 3,774' of workings, estimated to show 80,000 tons of ore, with 9,500 tons blocked out for stoping.

Equipment: includes a 50-h. p. water plant, a 3-drill air compressor, 50-ton mill with ten 850-lb. stamps, and electric light plant. There are 11 buildings. Operated under bond and lease with 25 to 30 men employed in 1917.

GENESEE VALLEY COPPER CO.

CALIFORNIA

Probably dead. Last address, Genesee, Plumas Co., Cal.

Officers: A. L. Beardsley, pres.; Henry Metz, v. p.; Mel. J. Smith, sec.-treas.; A. B. Clark and J. E. Baum, directors.

Inc. Nov. 1, 1909, in Nevada. **Cap.**, \$2,000,000; shares \$1 par, non-assessable; issued \$1,000,000. Annual meeting, August 1. Properties have been transferred to Mel. J. Smith, trustee, to satisfy creditors' demands.

Property: 15 claims, unpatented, 300 acres, in 3 groups, and a 120-acre mill site, showing porphyry dike in meta-andesite, with bornite disseminated through the porphyry. Dike runs N. 20° W., dips 54° S. W. Orebody reported as 80 to 300' wide, 3,000' long and proven for 150' depth, assaying 3% copper, 2 oz. silver and \$0.50 gold per ton. Company reported, 1913, about 100,000 tons. No recent development except drilling to determine tonnage and value. Ore shows 90% recovery by Minerals Separation flotation process, concentrates carrying 35% copper, 10 oz. silver and 1 oz. gold per ton. Property considered promising. Idle and will probably remain so for some time.

MADERO MINE

CALIFORNIA

Under development by U. S. Smelting Refining and Mining and Exploration Co., at Portola, Plumas Co., Cal. Copper ore mined 1917, and stored for shipment.

PHILADELPHIA EXPLORATION CO.

CALIFORNIA

Office: Albert Burch, mgr., Crocker Bldg., San Francisco, Cal.

Officers: Harold Boericke, pres.; Gideon Boericke, v. p.; John Boericke, sec. C. A. Joy, supt.

Inc. Oct., 1916, in Delaware. **Cap.**, \$100,000; stock assessable. Is a close corporation with only 5 shareholders.

Property: 14 claims, 3 patented, 140 acres, including the old Crescent and Green Mountain mines, near Crescent Mills, Plumas Co., Cal. Mines have not produced since 1886. **Ore:** gold-bearing quartz veins in granodiorite.

Development: by 400' shaft and 6,000' tunnel. Workings being unwatered and reopened, 1917.

Equipment: includes 50 h. p. electric hoist, compressor, 3 centrifugal pumps.

PLUMAS BASIN MINES CO.

Address: U. S. Exploration Co., Oroville, mine under lease and bond, and operated by U. S. E. Co., which has found good ore on 300' level.

PLUMAS EUREKA CORPORATION

CALIFORNIA

Chas. D. Stark, Jr., mgr., Johnsville, Plumas Co., Cal. Company was reorganized in 1916.

Property: one of the oldest and most prosperous gold quartz mines of California, having distributed over \$17,600,000 in dividends.

SENECA CONS. GOLD MINES CO.

CALIFORNIA

Address: J. J. Reilly, supt., Seneca, Plumas Co., Cal.

Property: the White Lily mine and claims a mile above Seneca on North Fork Feather River is driving 1,000' tunnel, and has mill in which cyanide plant will be installed 1917.

SIERRA RANGE COPPER CO.**CALIFORNIA**

A. L. Beardsley, mgr., Sioux City, Iowa. Mine office: Genesee, Plumas Co., Cal.

Property: the Mountain Lion group, shows a vein of gold-silver-copper ore, developed by tunnels, and the Iron Dyke and Hirschman groups.

The Iron Dyke is under bond to the U. S. S. M. & E. Co. Main tunnel in 700', opening high grade ore. Twenty men employed.

SOUTHERN EUREKA MINING CO.**CALIFORNIA**

Greenville, Plumas Co., Cal.

Inc. in Washington by George D. Needy, E. F. Yeager, M. A. DeHuff, Hal. J. Cole and H. R. Van Dreathen, all of Spokane. **Cap.**, \$2,000,000.

Property: the South Eureka, Hibernia, McClellan and Wardlaw mines, 12 claims, 450 acres, traversed by half a mile of the Crescent-Indian Valley and other lodes near Greenville.

Work was resumed late in 1916 and a mill was proposed.

UNITED STATES EXPLORATION CO.**CALIFORNIA**

Office: 617 Pacific Bldg., San Francisco. Mine office: Granite Basin, Plumas Co., Cal.

Officers: O. P. Posey, pres.; C. N. Miller, sec. and mgr.

Inc. 1904, in Nev. **Cap.**, \$1,000,000; shares \$1 par; promotion stock, 300,000 shares.

Owens the Pepin mine. Report of E. C. Reed, mining engineer, gives value of \$20.50 for 240' of ore-shoot. Vein said to average 2' wide. Machinery on ground for 75-ton mill, including crusher, rolls, jigs, concentrators.

In Aug., 1917, the Robinson mine, which was under option to company, passed to the Golden Feather Mines Co.

WALKER MINING CO.**CALIFORNIA**

Office: 618 Kearns Bldg., Salt Lake City, Utah. Mine near Portola, Plumas Co., Cal.

Officers: J. R. Walker, pres.; J. B. Whitehill, sec.-treas.; with Wm. Wraith, J. F. Cowan, and B. R. Howell, directors. V. A. Hart, mgr.

Inc. 1913 in Arizona. **Cap.**, \$1,250,000; shares \$1 par; all issued. Also 100,000 \$1 pfd. shares issued. Stock listed on the Salt Lake Exchange. Control of company is said to have been purchased, 1913, by the Cowan-Brown interests of Salt Lake City and Ogden.

Property: 34 claims, 10 patented, heavily timbered, elevation 7,100' is an unorganized district, 19 miles N. W. of Portola, on the Western Pacific railroad.

Geology: the claims show diorite largely overlain by volcanic tuff; the diorite showing fissuring and alteration for length of several claims. The vein is in diorite and contains commercial ore from 4 to 45' wide. Ore carries primary chalcopyrite and averages 4% copper, 2.75 oz. silver, and 0.02 oz. gold per ton.

Over 15,000 tons of ore of the above grade has been treated in the flotation mill from September, 1916, to June, 1917. This ore was largely from development work. Concentrates are shipped to Utah smelters.

Development: during 1916, approximately 2,500' of drifts and crosscuts have been driven, the vertical shaft sunk to a total depth of 215', and 260' of raises put up, besides starting stopes on the two upper levels. Contracts have been let and work started for the sinking of a 2½ compartment incline winze below the bottom level on the dip of the fissure; also for about 1,500' of drifts and crosscuts, besides raises.

Equipment: the mine has a 120 h.p. steam plant, large hoist, compressors, etc. A new boarding house, shop, saw mill, etc., were completed last summer. A bunk house, small dwelling houses, and hospital were built in 1917. An aerial gravity tram carries ore to the mill and supplies to the mine.

The mill capacity was doubled in 1917, and now treats 200 tons daily. In

Nov., 1917, electric power from the Great Western Power Co. superseded steam. Employs 200 men.

Control: the control of the property was optioned to the International Smelting Co. of Salt Lake City on August 13, 1916, for a reported price of \$630,000; expiration of same October 1, 1918.

RIVERSIDE COUNTY

ASSETS REALIZING MINES CORP'N

CALIFORNIA

Address: 810 Merchants Nat'l Bank Bldg., Los Angeles, Cal.

Officers: J. V. Priest, pres. and gen. mgr; F. R. Kellogg, v. p.; E. Fritze, sec.; with Chas. P. Grogan, Wm. A. Neer, C. L. Logue and E. S. Parker, directors.

General balance sheet for year ending March 31, 1917, shows: total assets, \$787,116, which includes: properties, \$595,652; development and equipment, \$105,807; treasury stock, \$80,171. Liabilities: paid in capital, \$576,994; notes and accts. payable, \$43,115; surplus, including treasury stock, \$167,005. Annual meeting, June 23rd.

Property: 400 acres, including the Arica, Big Butte, Crescent, Eldorado and January 1-11 claims, in the Ironwood Mng. district, Riverside Co., Cal. **Ore:** gold-silver, in six veins between dolomite hanging and schistose foot-walls.

Development: 2 shafts, one 700' deep, with 4 levels from the 80' to 330' levels. The 138' level said to be opened for 270' in ore averaging \$10 to \$30 per ton in gold. The second shaft, 330 deep, has levels at 165', 230', and 330' depths, and ore is said to average \$20 per ton.

Equipment: 150-ton plant, equipped with crusher and rolls, Hardinge mill, air-compressor, pumps, 20,000' of 2" pipe, assay office, boarding house and 10 buildings.

Ore reserves: reported, 18,000 tons ready for stoping.

BENDIGO MINES CO.

CALIFORNIA

Address: Vidal, Riverside, Co., Cal., Lester Scott, supt.

Purchased, Jan. 1915, the Morgan and Bradley group of claims, 7 miles from Vidal and did development work during the year. The ore is copper-gold and returns from shipment of several cars are said to be \$50 per ton.

Developed: by a 150' incline shaft, with a 60' vertical winze from lower level which is claimed to have opened up a 3' vein of ore. \$75,000 said to have been taken from the small block of ground opened by the shaft. There is also a large deposit of gypsum on the property. Company plans to sink a vertical shaft connecting with the winze.

CONTINENTAL MINES DEVELOPMENT CO.

CALIFORNIA

Office: 301 First National Bank Bldg., Riverside, Cal. Harwood Robbins, pres.

Inc. 1911 as a holding company. **Cap.**, \$500,000; shares \$1 par.

IRON MOUNTAIN COPPER CO.

CALIFORNIA

Office: 301 First National Bank Bldg., Riverside, Cal. Mine near Blythe City, Riverside Co., Cal.

Officers: Harwood Robbins, pres.; E. W. Tucker, v. p.; Holton Webb, sec-treas.

Inc. about July, 1911, in California. **Cap.**, \$10,000; shares \$1 par; issued, 5,000 shares.

Property: 35 claims, about 700 acres, known as the Crescent group, in Ironwood mining district, Riverside county, Cal., 26 miles S. of Blythe Junction on the Parker cut-off of the Santa Fé railroad. Claims show fissure veins in granite and porphyry, the main ledge being traceable 2 miles.

Development: includes 120' shaft with a level at 100' depth that is 70' long and shows high-grade copper ore containing visible gold. Ore shipments by former owners averaged \$100 per ton. Outcrop shows high-grade ore at several places. Mr. Robbins, who is said to have furnished all the money thus far, plans putting in a small smelter.

SACRAMENTO COUNTY

NATOMAS COMPANY OF CALIFORNIA

CALIFORNIA

Offices: P. C. Knapp, sec., 310 Sansome St., San Francisco; Emery Oliver, Box 1160, Sacramento and Natoma, Cal.

Officers: F. B. Anderson, pres.; Louis Sloss, v. p.; John D. McKee, treas., with P. T. Morgan, Curtis H. Lindley, W. M. Newhall, G. E. Webber, H. Fleishhacker, F. W. Griffin, all of San Francisco, and F. W. Kiesel of Sacramento, directors.

Inc. Dec. 24, 1914, in California. **Cap.**, \$25,000,000; shares \$100 par; non-assessable; \$16,104,000 issued. Bonds authorized: \$16,500,000; \$10,-049,100 issued.

Balance sheet for 1916 shows gross earnings of \$2,912,861, of which \$2,137,120 was from gold, silver and platinum; \$221,225 from land rentals, and the remainder from sales of rock, etc. Operating expenses totaled \$1,488,235. Profit from dredging was \$988,885. Non-operating expenditures in 1916 were \$1,147,551, for deferred land payments, bond redemptions, sinking fund, reclamation district No. 1000 costs, and dredge construction and purchase, the last being \$375,000. After allowing \$1,660,984 for dredging-ground exhaustion and depreciation for 2 years, there was a deficit of \$377,442. Properties are valued at \$19,123,566. Current assets are \$1,947,-678 and current liabilities, \$365,947.

Company is a reconstruction of Natomas Consolidated of California, whose history is long and complicated. Past troubles have been due to incorrect estimates of value and amounts of dredging ground, the land reclamation project, and because the large profits of dredges were largely absorbed by bond interest. These burdens are gradually being lifted by a careful management.

Property: 15,423 acres of mining lands, near Folsom, Sacramento Co., and near Oroville, Butte Co., Cal.; also over 70,000 acres of farm lands in Sacramento Co.

Equipment: includes 14 large, modern, electrically-driven dredges. Improvements in machinery and gold-saving apparatus are continually being made, also in leaving the dredged ground suitable for agriculture.

Two plants crush dredged rock for all purposes; the quantity produced in 1915 being 369,500 tons of crushed rock, 19,500 tons of washed gravel and 111,200 tons of screened gravel.

Reclamation of lands cost \$4,270,000 to end of 1916, including roads, drainage, levees, irrigation systems, etc. About 55,000 acres are under lease for fruit and other crops.

Production: 14 boats dug a total of 25,868,000 cu. yds. of gravel, averaging 8.26c., at cost of 4.44c per yard in 1916. Total profit was \$988,885. Reserves of dredgable gravel are estimated at 250,000,000 cu. yds. Old tailing is also being retreated.

If Natomas were operating its dredges alone, good dividends could be paid; but until the land project is self-sustaining there can be no distributions of profits.

SAN BENITO COUNTY

NEW IDRIA QUICKSILVER MINING CO.

CALIFORNIA

Office: 70 Kilby St., Boston, Mass.

Officers: W. B. Buckminster, pres.; H. C. Buckminster, v. p., sec., treas., and gen. mgr.; with K. Haas, R. B. Stearn, F. Rothschild, Andrew Adie, Sydney Harwood, C. B. Wiggin and J. E. Simpson.

Inc. 1896 in Wyoming. **Cap.**, \$500,000; shares \$5 par; all issued. Stock listed on Boston Curb. American Trust Co., Boston, registrar. Annual meeting, third Wednesday in January, at Cheyenne, Wyo. Company has been a dividend payer since 1897, with total disbursements to date of \$24.30 per share, or \$2,430,000.

Comparative Balance Sheet:

Assets:	Plant	Deprec.	Supplies	Cash	Quicksilver	Total
Dec. 31, 1916....	\$186,471	\$302,718	\$55,737	\$9,575	\$200,000	\$754,501
Dec. 31, 1915....	234,979	254,209	19,482	24,448	98,850	631,970
Dec. 31, 1914....	258,170	231,019	20,651	6,823	73,200	589,863
Liabilities	Capital	Unp'd	Profit &	Sell		
	Stock	Drafts	Loss	Agts.		Total
Dec. 31, 1916.....	\$500,000	\$37,284	\$118,128	\$99,089		\$754,501
Dec. 31, 1915.....	500,000	33,078	98,892		631,970
Dec. 31, 1914.....	500,000	89,863		589,863

Income in 1916 was \$832,445 from quicksilver sold, less \$98,850 metal carried over from 1915, but plus \$200,000 for metal sold and on-hand, making gross receipts \$933,595. Expenses totaled \$514,359, and dividends \$400,000, which left a balance of \$19,236. In 1915 the income was \$505,987, and profit \$159,028; in 1914, there was a loss of \$45,010.

Property: the New Idria and San Carlos mines at Jamestown, San Benito Co., Cal. Ore in 1916 came from upper levels of New Idria mine and dumps, also from San Carlos upper levels and dumps.

Operating results:

	Flasks	Net.	Cost per	Average
	Quicksilver	Earnings	Flask	Price
1916.....	10,828	\$419,236	\$47.50*	\$89.57
1915.....	6,250	159,028	55.50	74.21
1914.....	6,550	Loss 45,010	52.	48.31
1913.....	9,700	65,012	30.	39.54
1912.....	9,600	73,763	31.60	42.46
1911.....	9,750	136,809	26.50	46.54
1910.....	10,800	186,939	26.	47.06
1909.....	8,900	109,639	27.50	46.30
1908.....	9,600	147,289	25.50	44.84
1907.....	7,675	89,650	25.50	41.50

*Includes cost of erecting new mill and aerial-tram, \$70,000, or about \$6.40 per flask.

Construction during 1916 included a 1-mile aerial-tram from San Carlos mountain to the furnaces, crushing plant, concentrating plant, new houses, etc. A tram from Idria mine to the furnaces, storage bins, electric-bins, electric-power line, power drag for Idria mountain, and wet-sorting plant are proposed. Company now has an assayer and furnace expert, studying economical problems.

Production in 1917 has been increased to 1,000 flasks per month by May. Employs 200 men.

A progressive policy is now maintained at New Idria, and with mercury at over \$100 per flask profits in 1917, should be equal if not larger than in 1916.

SAN BERNARDINO COUNTY**ATOLIA MINING CO.****CALIFORNIA**

Address: 1404 Humboldt Sav. Bank Bldg., San Francisco. **Mine office:** at Atolia, San Bernardino Co., Cal.

Officers: E. C. Voorheis, pres.; E. A. Stent, sec.; J. H. Mackenzie, mgr.; Chas. S. Taylor, supt.

Property: a number of claims at Atolia on the Randsburg branch of the A. T. & Santa Fé R. R. are being worked for tungsten ores. The ore occurs as scheelite in both placer deposits and fissure veins.

Development: a 900' shaft with electric hoist and full equipment. The loss of the concentrating mill, destroyed by fire on Jan. 25, 1916, caused suspension of all operations for several months, but a new mill with a daily capacity of 100 tons has been built, making a concentrate containing from 50-75% scheelite.

The ore is hauled from mine to mill on 4-ton trucks which deliver 100 tons a day. From a large bin the ore is fed to a 10x18 Joshua-Hendy jaw crusher; then passes by bucket conveyor to the hopper feeding the rolls for finer crushing. Half of the product is fed into a single mill unit, composed of two 5' Huntingtons. The discharge passes over two large Deister roughing tables, where the most of the tungsten is extracted; the residue passes on to the Frue vanners. The other half of the rolls product goes to the 8' Marcy ball mill whose capacity is 30 to 40 tons in 24 hr. The 30-mesh pulp is discharged onto a Deister roughing table and then passes to a Dorr classifier. The slime from both units is thickened for concentration by use of three 8' Callow cones and then passes over three double-decked sliming tables; then to three double-decked Deister tables, whence the tailings are carried to the pond. The plant is operated by about 25 electric motors, each unit of machinery being driven by a separate motor. The mill will use 30,000 gal. of water when running full capacity and will produce 5 to 7 tons of concentrates every 24 hrs. The new electric hoist will be installed on the 900' level of No. 1 mine, to be used in sinking a winze on the ledge for prospecting the vein at greater depth.

Over 300 men are reported to be employed. Is one of the largest tungsten producers of the Country.

Shipments of concentrates and high-grade ore in 1916 amounted to 2,500 tons.

BROOKLYN MINING CO.

CALIFORNIA

Mine at Dale, San Bernardino Co., Cal.

Development: by 800' shaft, at which depth a rich find of gold ore was reported in 1914. Has gasoline power and a 3-stamp mill. Property optioned to Los Angeles parties for \$190,000, who were developing and shipping at last accounts.

CLIPPER MOUNTAIN GOLD MINING CO.

CALIFORNIA

Office: 600-1 Hellman Bldg., Los Angeles, Cal.

Officers: B. G. Doak, pres.; E. Petersen, sec.; preceded with A. H. Hayes, C. J. Gardner and J. C. Meadows, directors.

Inc. Sept. 12, 1916, in California. **Cap.**, 1,000,000 shares, 10c par; 625,646 shares outstanding.

Property: 4 claims, 80 acres, in Clipper Mtns., near Danby, San Bernardino county. A 50' dike is said to traverse the property. Two compartment shaft is being sunk, 300' deep, Aug., 1917.

Equipment includes 32 h. p. engine, hoist, compressor, pump, etc. Management plans sinking to 500' level, crosscutting and drifting at 100' intervals, also installing necessary machinery.

COCOPAH COPPER CO.

CALIFORNIA

Idle.

Mine and works office: Ivanpah, San Bernardino Co., Cal. Dan. Murphy, pres.; Dr. L. D. Godshall, v. p. and gen. mgr.; G. Holterhoff, Jr., sec.-treas.

Property: on Clear mountain, 20 miles from Ivanpah, the nearest railway point, includes the Copper World and Mohawk mines, formerly operated by the Ivanpah Consolidated Smelting Co. The Copper World group shows a broad mineralized zone, up to 300' in width, with a silicious iron outcrop carrying some malachite and occasional oxides. Mine has a 180' vertical shaft, with about one-half mile of workings, on a 5' vein, carrying mainly copper carbonates and oxides, in regular masses.

The Mohawk mine, 2 miles south of the Copper World, shows a 4' orebody with nearly vertical dip, between a porphyry foot and limestone hanging, similar to that of the Copper World, but carrying more azurite.

GIANT LEDGE GOLD & COPPER CO.

CALIFORNIA

Idle. **Office:** 500 Frost Bldg., Los Angeles, Cal. **Mine office:** Barnwell, San Bernardino Co., Cal. A. Glassell, pres. and gen. mgr.; H. G. Stoddard, v. p.; Mrs. L. Stone, sec.

Inc. July, 1901, in Arizona. **Cap.**, \$1,000,000, increased, 1910, to \$1,500,000; shares \$1 par. Company has kept out of debt.

Property: 30 claims, a 40-acre mill site and miscellaneous holdings, about 800 acres, in the New York district, 5 miles from Barnwell, closed down for five years. Fully described Vol. XII.

GOLDEN WEST MINING CO.

CALIFORNIA

Address: Needles, Cal. Company issued 100,000 shares each to T. A. Dumont and H. C. Adams for 17 patented claims in Ibex district, San Bernardino Co., Cal.; also selling 50,000 shares at 50c for development and plant.

GOLDSTONE MINING CO.

CALIFORNIA

Address: Goldstone, San Bernardino Co., Cal.

Officers: C. C. Rumrill, pres.; F. A. Shorey, v. p.; G. M. Leonard, sec.; W. S. Hubbard, treas.; all of Springfield, Mass. A. A. Turner, cons. engr.

Cap. \$2,000,000; shares \$1 par.

Property: 14 claims in new Goldstone district, 35 miles from Barstow, Cal., developed by shafts and pits. Ore occurs at limestone-diorite contact.

Company well known at Springfield, Mass., on account of queer share dealings by certain firms. No late news, as property is mostly leased.

Lessees shipped some good ore.

LUCILE GOLD & COPPER MINING CO.

CALIFORNIA

Letter returned, 1917. Probably closed down. Mine near Kelso, San Bernardino Co., Cal.

Officers: Dr. S. K. Walsworth, pres.; Frank L. Pitney, v. p.; F. R. Pitney, sec., treas. and mgr.; with C. V. Boyd, directors.

Inc. Nov., 1906, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 900,000 shares outstanding. Annual meeting, 3rd Tuesday in April. Management report \$650 expended on assessment work in 1915.

Property: 5 claims, unpatented, 100 acres, on the western slope of the Providence mountains, 11 miles from Kelso. **Ore:** gold-silver-copper, with iron sulphide, occurs in fissure veins in granite-porphry, said to be 25' wide, and to assay 69% iron, \$4.50 gold, \$1.50 silver and 6% copper per ton.

Development: 220' tunnel and 100' shaft. Mine has no equipment.

MOHAVE UNITED MINING & MILLING CO.

CALIFORNIA

Address: 506 Baker-Detwiler Bldg., Los Angeles, and Copper King Camp, Crucero, P. O. Baxter, Cal.

Officers: P. H. Lietzow, pres. and mgr.; John Hoeft, v. p. and supt.; O. E. Lietzow, sec.-treas., also directors.

Inc. July 5, 1916, in Arizona. **Cap.**, \$100,000; shares 10c. par; non-assessable; 550,000 issued.

Property: 142 claims, 2840 acres, in San Bernardino Co., Cal. Gold-silver-copper ore occurs in granitic schist; copper minerals are carbonates.

Development: by tunnels 42 and 25' long, with total workings of 167', estimated to block out 1,000,000 tons of ore, which is absurd.

MOJAVE ANNEX TUNGSTEN MINING CO.

CALIFORNIA

Office: 411-12 I. W. Hellman Bldg., Los Angeles, Cal.

Officers: J. B. Evans, pres.; H. G. Parsons, sec.-treas.; with C. M. Dunwoody, directors; P. H. O'Connor, supt.

Inc. Sept. 26, 1916, in Nevada. **Cap.**, \$250,000; shares \$1 par.

Property: about 140 acres in the Clark Mountain district, San Bernardino Co., Cal., 12 miles from Roach, Nev., on the Salt Lake Route. Claims are adjacent to the Mohave Tungsten Mining Co. Wolfram veins said to carry 5% tungstic trioxide (WO₃).

Equipment: 20-ton mill has been erected, and is operating on wolframite ore, Sept., 1917. With tungsten at \$25 per unit company should make big profits.

MOJAVE TUNGSTEN CO.**CALIFORNIA****Office:** 74 Broadway, New York.**Officers:** P. De P. Ricketts, mg. director; J. T. Smith, v. p.; G. F. Stringer, sec.; J. T. Anyon, treas., with J. J. Cone, Julian Cochman and R. M. Whitman, directors. F. S. Naething, supt. in California; N. H. Brown, supt. in Colorado.**Inc.** Nov. 23, 1915, in Del. Cap., \$1,000,000; par value \$2; non-assessable; all outstanding. Traded on New York and Boston Curbs. Transfer offices: The Corporation Trust Co., Jersey City; American Trust Co., Boston. Registrars: Empire Trust Co., New York; State Street Trust Co., Boston.**Statement** issued Aug. 31, 1916, showed a profit of \$34,888 for 8 months.**Property:** (California) 32 unpatented claims in the Clarke mining district San Bernardino Co., Cal., 20 miles from Jean, Nev., the shipping point. Tungsten occurs chiefly as wolframite in a quartz vein in gneissoid granite. The vein is practically vertical with N. W.-S. E. course.**Development:** by 2 main and 5 prospecting shafts, disclosing numerous small bodies of high grade wolframite ore. The longest oreshoot so far encountered was about 125' long on the 100' level in No. 1 shaft.**Colorado Property:** the Bracken group of 6 patented claims, at Boulder Falls, Boulder, Colo., containing the well-known Good Friday vein with the usual ferberite ore.**Development:** by 3 shafts, the Burdette main shaft 350' deep, connecting with No. 1 tunnel. There are 3 tunnels in the face of the mountain. Ore in No. 2 has been continuous for a distance of nearly 1,000'. On January 1, 1917, the consulting engineer estimated ore containing 330,000 lbs. of tungstic acid opened up.**Equipment:** includes a small mill on the California property. At the Colorado property the Begge-Clarke mill was acquired in May, 1917; this was the leading custom mill of the district with a capacity of 1,000 tons of tungsten ore monthly.**Output:** the Californian property is still in the development stage, and the output has only been 4 or 5 tons of tungsten concentrate monthly. The Colorado property is shipping regularly and is now on a basis of about one ton of concentrate daily. The output for the last few months has been sold to the French and Italian Governments.**ORO BELLE CONS. MINES CO.****CALIFORNIA****Address:** W. B. Andrews, 340 Wilcox Bldg., Los Angeles, Cal. and Hart, via Goffs, Cal.**Officers:** W. B. Andrews, pres.-mgr.; A. E. Seaman, v. p.; C. Wilson, sec.; F. W. Royer, treas.; with Thos. A. Merritt, directors**Inc.** 1916 in Nev. **Cap.**, 1,250,000 shares; \$1 par; 635,000 issued; 500,000 reported to have been given for the property, 1,000 shares issued to directors and incorporators and balance under option until Oct., 1918, to John Hays Hammond and associates, of New York.**Property:** the Oro Belle Mine and millsite, in Hart Mining district, San Bernardino Co., Cal., about 14 miles W. of Searchlight, Nev. **Ore:** mainly gold, occurs in two veins. On the 700' level the vein is said to be 6' wide and to carry 4' of ore averaging \$8 per ton. The Woodward lode was cut on the 100' level, showing a width of 125' and giving assays of from \$5 to \$20.**Development:** by 814' vertical main working shaft with levels at every 100', a total of 2,700' of lateral work.

In 1915, the Oro Belle was under lease to the Tonopah Belmont Development Co. but option was relinquished within the year.

Development work only being done.

ORO BELLE MINES CO.**CALIFORNIA**

Reorganized, 1917, as Oro Belle Cons. Mines Co., which see. Stock exchangeable on basis of 2 old shares for 1 of the new.

PACIFIC MINES CORPORATION**CALIFORNIA**

Offices: 120 Broadway, New York, N. Y. Mine office: Stagg, San Bernardino Co., Cal.

Officers: J. N. Beckley, pres.; David I. Walsh, v. p.; J. H. Hobbs, sec.-treas.; Josiah Anstice, asst. sec.-treas.; above, with Jas. M. Curley, Col. Sir Henry Mill Pellatt and D. C. MacDonald, directors; Frank W. Royer, mgr.

Inc. 1910 in New York. **Cap.**, \$1,000,000; shares \$5 par; reincorporated May 2, 1916, in Maine. **Cap.**, \$1,000,000; shares \$1 par; 642,000 shares issued; 300,000 shares treasury stock offered to the public, 1916.

International Trust Co., Boston, and U. S. Corporation Co., New York, transfer agents; Federal Trust Co., Boston, and U. S. Corporation Co., New York, registrars. Company is a consolidation of the Bagdad Chase Gold Mining Co. and the Roosevelt Mining & Milling Co. Dividends: to end of 1912, \$205,440. Last payment of 2% paid July, 1916. Listed for 642,000 shares on Boston Curb.

Property: 15 claims, patented, about 300 acres, in Bullion Mountain district, 9 miles from Ludlow. Country rock is trachyte porphyry and quartz monzonite. Orebodies occur in a silicified breccia along an E.-W. fault line, and have an average dip of about 35° N. Ores carry malachite and oxide with a little chalcocite and average 1.5% copper, 1.56 oz. silver and 0.36 oz. gold per ton.

Development: by about 8,000' of workings, including three shafts, deepest 300', and several tunnels. **Ore reserves:** estimated at 100,000 tons of \$10 ore and 200,000 tons of \$5 ore, according to report of F. W. Royer.

Equipment: includes an 85-h. p. Union gas engine, 3 hoists and a 10-drill compressor. Company also owns the Ludlow and Southern 9-mile standard-gauge railroad, with 2 locomotives.

Production: to end of 1915 is estimated at \$3,000,000. Production in 1914, 1915 and 1916 was about 100 tons per day. Shipments made under contract to United Verde smelter at Clarkdale, Ariz., reported to show net profit of \$4.49 per ton. Management plans increasing shipments to 200 tons in 1917 and erecting a mill to treat the low-grade ore on the property.

PARADISE MINE**CALIFORNIA**

R. Randolph Bruce, mgr.

Property: 5 claims on Spring Creek, about 20 miles N. of Barstow, said to have an orebody, proved for 1,000' in length, carrying carbonate and sulphide of lead, with iron oxide, in a gangue of silicious lime. The mine was idle from 1903-16.

The property is credited with production of 2,000 tons ore to 1904, that averaged 51.4 oz. silver and 59% lead. Shipments from Oct. 1, 1916, to Jan. 31, 1917, amounted to 1,050 tons, averaging 40 oz. silver and 40% lead p. t. Reported shipping 150 tons per month to the Trail smelter in 1917. 20 men employed.

SAGAMORE MINING CO.**CALIFORNIA**

Idle.

Offices: Third and Chestnut St., Philadelphia, Pa., and 401 First Nat'l Bank Bldg., Riverside, Cal. Mine near Purdy, San Bernardino Co., Cal. Norman P. Sloan, pres. and mgr.

Property: 8 claims, 160 acres, known as the New York mine, 5 miles S. E. of Manvel, in the New York mountains, an extension of the Providence range, shows limestone, quartzite and schist, with intrusive dikes of rhyolite and felsite along which the principal veins are found. Ores found in the quartzite are gold bearing, the silver and copper ores being in limestone.

Development: by shafts of 30', 45', 100' and 150' and several tunnels, longest beng 454', showing a number of veins ranging from 18" to 4' in width. A complete report on the property was made, 1902, by Carl Andersen.

Equipment: includes gasoline power and a 50-ton mill.

QUEEN MINE**CALIFORNIA**

Address: G. H. Hamstadt, owner, Nipton, Cal. Operated under lease by W. W. Wishon, Searchlight, Nev.

Property: 9 claims, 150 acres, in New York mountains, San Bernardino Co., Cal., said to show fissure veins in monzonite carrying gold-silver values.

Development: by 1,100' of underground workings, mainly tunnels. No. 2 tunnel reported to have opened up 10' of ore assaying 2.5% copper, 0.9 oz. silver.

Working, 1917.

UNITED GREENWATER COPPER CO.**CALIFORNIA**

Office: Tonopah, Nev. Mine office: Dale, via Amboy, San Bernardino Co., Cal.

Company operating the Supply mine and owns the O. K. mine. This group is developed by shafts of 800' and 1,100'. Has a 50-ton cyanide plant which was enlarged in 1915. Reported to have treated 60 tons of ore daily, 1915, averaging \$14 per ton. Milling costs said to be 75c per ton.

No recent returns.

WHITE PINE MINING CO.**CALIFORNIA**

Address: T. H. M. Crampton, supt., Las Vegas, Nev. F. A. Crampton, 207 Oregon Ave., Santa Monica, Cal.

Officers: F. A. Crampton, pres.; D. M. Hewey, v. p.; C. H. McCarter, sec.-treas.; also directors.

Inc. Aug. 5, 1915, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; non-assessable. 725,000 issued. Annual meeting 1st Wednesday in January.

Income from ore sales in 1916 was \$18,000 and expenses \$47,000.

Property: the Piute mine and 21 claims, 398 acres, at Cima, San Bernardino Co., Cal., and the Green Monster Extension at Goodsprings, Nev. The former group contains two mines shipping lead-silver and copper ores; the latter a zinc mine, is idle. Mines examined by J. N. Nevius, A. H. Black, O. B. Luhr and F. A. Crampton.

Geology: the Cima property shows contact deposits in limestone and granite, 2' to 8' wide. The longest shoot is 110'; the smallest 45'. Ores carry silver and lead, copper and zinc.

Development: at the Piute is by 210' shaft and 2,000' of workings. Reserves said to be large with over 2,000 tons blocked out. The shaft is to be deepened 200' and 3,000' of driving and 1,500' of prospecting done. In 1916 all operations were at the Piute mine.

Production: in 1915, 10 tons of copper and 35 tons zinc ores; and in 1916, 65 tons copper, 500 tons zinc and 350 tons of lead ores. The latter carries 9½% copper, 32% zinc and 26% lead.

SAN DIEGO COUNTY**ENCINITAS COPPER CO.****CALIFORNIA**

Office: 715 Timken Bldg., San Diego, Cal. C. A. McGee, pres.; W. H. MacKinnon, supt., Encinitas, San Diego Co., Cal.

Property: 8 miles east of Encinitas shows a vein in diabase and porphyry, said to carry 4% copper, 5 oz. silver and \$4 gold.

Recent tests have shown the ore amenable to flotation and a 50-ton plant will be installed, 1917.

FRIDAY COPPER MINES CO.**CALIFORNIA**

Care: Beecher Sterne, 1169 22nd St., San Diego, Cal. Is a close corporation, **Inc.** in California.

Owens a nickel property, 4 miles S. of Julian and 64 miles from San Diego. Ore is closely similar to that of Sudbury, Ontario, and carries 6% nickel, with but 1% copper. Ore is 35% sulphide. Described in U. S. G. S. Bull. 640, p. 77, 1917.

Development: work in progress, blocking out tonnage by 250' shaft.

Mine was expected to produce by October, 1917.

MONTEZUMA MINING & REDUCTION CO. CALIFORNIA

Address: F. W. Nash, 752 State St., San Diego, Cal.

Officers: F. G. Webb, pres.; F. E. Wallace and F. W. Nash, v. p's.; R. H. Halstead, sec.; W. C. Narlow, treas.; also directors.

Inc 1917, in Delaware. Cap., \$1,000,000; shares \$1 par, fully paid and issued.

Property: 13 claims, 260 acres, in Grapevine district, Hot Springs mountain, San Diego, Co., Cal. Said to show a vein in granite, carrying gold values.

Development: by about 5,000' of workings to depth of 165'.

Ore reserves: estimated at 30,000 tons of \$12 gold ore.

Equipment: includes 40-h. p. hoist, 120-h. p. compressor and 100-ton mill.

SAN LUIS OBISPO COUNTY

OCEANIC QUICKSILVER MINE CALIFORNIA

Murray Innes, owner, 217 Kohl Bldg., San Francisco, Cal. E. W. Carson, mgr., Cambria, San Luis Obispo Co., Cal.; Thos Knowles, supt.

Property: 3 patented claims, 500 acres, about 5 miles E. of Cambria, shows a contact deposit 800'x650'x20' in width running N. W., with nearly vertical dip, in serpentine and sandstone formation. The ore contains cinnabar and iron sulphide, assaying 0.4% quicksilver.

Development: to depth of 650' by 300' vertical winze and 1,500' tunnel. Underground workings total 5,000'.

Ore reserves: estimated by owner at 300,000 tons with 150,000 tons blocked out, July 1, 1917.

Equipment: includes 25-h. p. hoist, compressor, pump, ½-mile wire tramway and two 50-ton furnaces.

Recent production: 1,125 flasks in 1913; 1,256 flasks in 1914; 1,213 flasks in 1915; 1,070 flasks in 1916; June-July, 1917, at rate of 150 flasks monthly. Concentrates average 5% quicksilver. Average price received during 1915 was \$91 per flask.

Property bonded in Feb., 1916, to Clark & Coolidge of Boston, who erected 200-ton concentration plant which proved unsatisfactory. Mine closed down and reverted to owner and again operating, 1917.

SANTA CLARA COUNTY

QUICKSILVER INVESTMENT CO., INC. (THE) CALIFORNIA

Office: 45 Broadway, New York.

Officers: Geo. H. Sexton, pres.; Robt. Gibson, v. p.; Harry A. Nichols, 2nd v. p.; Chas. A. Frank, sec.-treas.; A. Heyward McAlpin, asst. sec.-treas.; above with Ira Barrows and Wm. Herbert, directors.

Inc. 1915, in Virginia. Cap., \$1,061,900, in \$61,900—7% cumulative, 1st preferred, issued to noteholders of old company; \$421,300—7%, 2nd preferred, and \$578,800 common shares; shares \$100 par; \$461,900 outstanding. All stock is held in a 5-year voting trust; voting trustees: Chas. A. Frank, chairman, Robt. Gibson and Ira Barrows, N. Y. City.

Company has a 25-year lease from 1915 on the Almaden quicksilver mine of the Quicksilver Mining Co., through its subsidiary the New Almaden Co., Inc., and will pay 20% of its net profits to owners. Reported operating at a loss; indebtedness to noteholders, March 1, 1915, was \$61,900. More than \$60,000,000 has been produced by Almaden mine.

QUICKSILVER MINING CO. CALIFORNIA

Offices: 45 Broadway, New York.

Officers: Jos. Kaufmann, pres.; Edw. Reynaud, v. p.; Chas. F. Tracy, sec.-treas., with Clinton E. Whitney, T. Tileston Wells, Clarence W. Francis, John Wells, W. L. Steinbarger, Wm. H. Lotty, Henry L. Steitz and A. H. Jarman, directors.

Inc. 1867, in New York. **Cap.**, 100,000 shares; \$1 par, in 57,087 common and 42,913 preferred, 7% non-cumulative. Annual meeting, 3d Wednesday in June, in N. Y. City. Stock listed on the New York Stock Exchange. Farmers Loan & Trust Co., New York, transfer agent; Equitable Trust Co., New York, registrar. In 1914, company defaulted on payment of notes, and was refinanced March, 1915.

Dividends: few and far between; none has been paid on the common since 1882 when 40c was paid. Payments on preferred: June, 1891, 4%; May, 1899, $\frac{1}{2}\%$; July, 1900, $\frac{1}{2}\%$; May, 1901, $\frac{1}{2}\%$; May, 1902, $\frac{1}{2}\%$; May, 1903, $\frac{1}{2}\%$.

Property: claims totaling 6,800 acres, including the New Almaden quicksilver mines at New Almaden, near San Jose, Cal. Mine is the oldest producer of quicksilver in the United States. Company has given a 25-year lease from Feb., 1915, on its mines to the New Almaden Co., a subsidiary of the newly organized Quicksilver Investment Co. and will receive 20% of net profits. Stockholders were offered voting trust certificates in new company on basis of one share of second preferred for 10 shares of old preferred in consideration of payment of \$3 for each share of old stock. New common was exchangeable for old common stock at same ratio plus \$1.50 per share of old common.

The ores recently worked carry 0.2% to 1% mercury, being the low-grade ore left in previous years workings and old fills. Prospecting of unworked territory had not been successful at last accounts.

On Dec. 1, 1917, it was reported that the directors had applied to the Supreme Court of New York for a voluntary dissolution of the company, on the ground that its assets do not ensure payment of obligations. Maurice Delches was appointed receiver, and testimony against the move is to be heard on Jan. 10, 1918. Indebtedness totals \$94,000.

SHASTA COUNTY

AFTERTHOUGHT COPPER CO.

CALIFORNIA

Office: 117 Chamber of Commerce, St. Louis, Mo. Mine office: Ingot, Shasta Co., Cal.

Officers: Geo. L. Porter, pres. and treas.; J. Taylor Stratton, v. p.; E. Bibbins, sec., with Chas. P. Keller, C. Cambirn, S. F. Lund and Jno. A. Elliot, directors; Jasper Robertson, gen. mgr.; John Bull, smelter supt.

Inc. Jan., 1909, in Arizona. **Cap.**, 1,600,000 shares, \$10 par; 1,544,898 shares issued. Is successor of Great Western Gold Co. A 20-year first mortgage 6% gold coupon bond issue of \$800,000 authorized; 350,000 issued, Sept., 1917.

Property: 19 patented claims, 380 acres, with mill and smelter sites and timber lands giving total holdings of 1,704 acres. Lands include the Afterthought, Liberty, Last Chance, Section 15 and Bull groups, mines more or less developed being Afterthought, Copper Hill and Copper Grand. Lands are on the east side belt which extends from Ingot to DeLamar, and is entirely distinct from the copper belt on the west side of the Sacramento river. Lands show porphyry, slates and shales, carrying contact deposits with sulphide ores, there being 5 known orebodies, of which 2 are under development, 1 being reported by company to be 160'x500'x35' in size.

The Afterthought mine, in the Furnaceville district, 20 miles east of Redding, had about 2,000' of workings, when taken over by predecessor of present company, and now has shafts at 216' and 327', with 7 tunnels, main tunnel being about 2,500' long, with a total of 8,500' of workings, reported by management to show 400,000 tons of ore, estimated to carry 2.7 to 3.4% copper, 10 to 25% zinc, a trace of lead, 6.4 oz. silver and 52 cts. gold per ton. Ore is almost exclusively chalcopyrite and sphalerite, a little oxidized ore having been shipped under former ownership. In 1905 ore smelted assayed 2.81% copper, 14.3% zinc, 11.6% iron, 18.7% sulphur, 5.3% alumina, 7.4%

barium sulphate, 5.4% calcium carbonate and 18% silica. The main working tunnel cuts a 25' body in the Copper Hill mine.

Equipment: includes blast furnaces, electric power, a 115-h. p. steam plant at the mine, with 20-h. p. and 30-h. p. hoists and a 5-drill air compressor.

A 14-mile standard-gauge railway, known as the California, Shasta & Eastern railway, connects the mine and works at Ingot with the Southern Pacific railway at Bella Vista.

The smelter: 1 mile north of Cow creek, and 1½ miles north of the mine, connected therewith by a 30" tramline, includes a small sampling mill. The smelter, blown in March 24, 1905, has water-jacket blast furnaces of 42"x96", rated at 75 tons, and 42"x150", rated at 250 tons daily capacity.

Development: work and ore extraction resumed in 1917, and flotation plant installed, that is treating 300 tons daily. To separate the zinc from copper, the flotation pulp is conveyed to a Skinner furnace, lightly roasted at 400° to 500° heat, and retreated in flotation cells.

Employs 100 men.

On Nov. 30, 1917, the mine was closed until the Spring of 1918, on account of treatment troubles which are expected to be solved during the shut-down.

AMERICAN MINING CO.

CALIFORNIA

Address: Redding, Shasta Co.

Inc. and controlled by Jas. Sallee.

In 1914 the company started to work the old American mine in the French Gulch district, whose holdings consist of 11 claims. Development work of the old mine includes 4 tunnels from 50' to 1,400' in length, and one stope 125' long and 240' in height. When mine shut down under former management ore is said to have assayed \$20 in gold per ton. It occurs in a fissure vein, strike N. 70° W., dip S. 75° E., slate walls. Pay shoot is 2' wide. A 10-stamp mill is on the property. Results of work of the new company not known.

No recent information received.

ARPS COPPER CO.

CALIFORNIA

W. W. Henry, Jr., supt.

Inc. 1917, in California.

Property: the Arps group, 15 claims, unpatented, in T. 34 N., R. 4, W., Shasta Co., Cal., developed by 5 tunnels, of about 1,600' aggregate length, showing sulphide ore. A deposit of manganese ore, 1,200' long and about 125' wide, was discovered in 1914; samples said to assay 40% metal.

About 16 men employed. Plan installing flotation mill. Shipping to Kennett smelter, Aug., 1917.

BALAKLALA CENTRAL MG. & SMELTING CO.

CALIFORNIA

Address: Coram, Shasta Co., Cal.

Inc. in Wyoming. **Cap.**, \$5,000,000, shares \$5 par; one-third of issue owned by Balaklala Consolidated Copper Co., the remainder by the Mammoth Copper Mining Co.

Owens 3 claims surrounded on all sides by Balaklala Consolidated Copper Co.'s holdings. Inactive.

BALAKLALA CONSOLIDATED COPPER CO.

CALIFORNIA

Office: 111 Broadway, New York. **Works office:** Coram, Shasta Co., Cal.

Officers: Thos. W. Lawson, pres.; W. A. Kerr, v. p. and treas.; S. A. Holman, gen mgr.; preceding officers and H. W. Hoops, directors. A. R. Buchanan, sec.

Inc. Feb. 24, 1906, in Nevada. **Cap.**, \$10,000,000, shares \$25 par. Bonds, \$1,500,000 have been retired.

Company was a reorganization of the Balaklala Mining Co., control of which was sold simultaneously to two parties, making a snarl requiring reconstruction to untangle. Is controlled, through ownership of entire stock

issue, by the First National Copper Co. Windsor Trust Co., New York, and Federal Trust Co., Boston, transfer agents; Trust Company of America, New York, and First National Bank, Boston, registrars.

Company report for fiscal year ending June 30, 1916, gives cash \$435,337, and total assets, \$10,800,829. Profit for two years ending June 30, 1916, amounted to \$79,265.

The report for year ending June 30, 1917, shows profit of \$444,309 compared with net profit of \$174,656 from resumption of operations in August, 1915, to June 30, 1916.

Profit and loss account:

Net ore sales.....	\$837,910
Cost of operations.....	393,601
Net profits	444,305
Other income	9,003
Total profit	453,311
Other charges:	
Exploration and development other property....	52,975
Experiments with Hall process	116,909
Dividend paid August, 1916	150,000
Total charges	319,884
Surplus	133,427
Previous surplus	79,265
Total surplus	212,693

Balance sheet of First National Copper Co., shows cash on June 30, of \$126,192, while Balaklala on same date had cash of \$378,977 in addition to demand loans of \$150,000.

Vice-Pres. Wm. A. Kerr says: "The past year's operations have been very successful, the mines having been operated continuously. Production of ore amounted to 108,465 tons, shipped to the Mammoth Copper Mining Co. under contract, from which net recovered values were 2.35% copper and \$1.25 in gold and silver, showing a net operating profit of \$444,309. Dividend of 40 cents a share was declared payable Aug. 15, to stock of record July 21.

"An extensive development program was carried on by diamond drilling throughout the year, which resulted in materially increased ore reserves, approximately 40 cents a ton having been spent on this exploratory work, which will be continued on a more liberal scale this year. An additional sum of \$52,975 was spent on exploration and development of other properties held under option by the company with view to prolonging its life."

Property: 65 claims, patented, 1,169 acres, also 800 acres of miscellaneous lands, including a smelter site, the town site of Coram and right-of-way for tram line. Mineral holdings are at Kimberly, in the Flat Creek district, 4 miles northeast of the Iron Mountain mine, and adjoin the Trinity mine. Property reported to carry 5 orebodies, with 2 developed. Apparently 4 orebodies are portions of the same ore zone, separated by faulting. Lands carry 3,040' of the strike of the main ore zone, developed for about 1,100'. Country rock is rhyolite, ore occurring in lenticular masses as replacement of country rock, in flat bodies, with slight dip to north, and greatest extension east and west, with a series of north and south step faults, causing displacement from a few feet to more than 100'. The two main orebodies are developed for lengths of 900' and 1,100'. Ore is cupriferous pyrite, copper values being mainly in chalcopyrite, with a little chalcocite and covellite, all carrying gold and silver values, estimated by management to average about 2.65% copper, 0.9 oz. silver and 50 to 60 cts. gold per ton. The larger orebody developing about 1,000,000 tons, gives a typical analysis of 2.7% copper, 0.95 oz. silver, 0.03 oz. gold, 21.4% silica, 31.5% iron, 0.3% lime, 3.4% alumina, 2.2% zinc and 35.2% sulphur.

Principal workings are known as the Windy Camp and Weil. The mine

has large reserves of low-grade ore. Development is by a large glory hole, and by tunnels, with upraises, providing for open-cast mining, giving cheap extraction, there being about 20 tunnels, including the Weil tunnel of nearly 6,000' length. Mining operations were resumed Aug., 1913, and were of a desultory nature for 2 years. The property has been working steadily since Aug. 13, 1915, shipping 250 tons of ore daily, increased May 13, 1916, to 300 tons, to the Kennett smelter of the U. S. Smelting Co. under a 10-year contract. Ore shipped assays about 2.81% copper per ton.

Ore reserves: said to be about 3,000,000 tons of 2.83% copper ore with 1.32 oz. silver and 60 cts. gold per ton.

Power equipment includes a steam plant installation of about 1,000 h. p. and electric power. Machinery includes a number of hoists, 5 compound air compressors and about 40 rock drills. Buildings include an office, store, school, hospital, sawmill and about 75 dwellings, all but the necessary mine buildings being located in the town site at the smelter.

The mine and smelter are connected by a Bleichert aerial tram of 16,130' length, of 75-tons hourly capacity, operated by gravity, having 62 wooden towers, highest 85'. The 1,700-ton smelter is thoroughly modern and well equipped. Ore passes through 4x10' revolving sizing drums, coarse material going to the blast furnaces and fines to the calciners. The 500' bin house has bins for ore, fluxes and fuel. The roast building has four 50-ton McDougal calciners.

The furnace building, of steel frame, no wood being used, has three 600-ton water-jacket blast furnaces, each 56"x240", first blown in Oct., 1908, and a 17x96' reverberatory furnace, of 150 tons daily capacity, for fines, burning petroleum, the waste heat generating power in 2 Stirling boilers, the power house having 3 additional Stirling boilers, burning petroleum. The converter plant has 96"x150" shells of horizontal type, and an electric traveling crane. The product when operating is 99% blister copper carrying 75 oz. silver and 1.5 oz. gold per ton, sent to Perth Amboy works for electrolytic refining. Power plant includes 3 Connorsville blowers, each driven by a 450-h. p. tandem compound steam engine, direct-connected. The slag line has electric locomotives.

Although the smelter is, about 14 miles from the nearest cultivated lands, the "smoke farmers" of northern California were busy and controversy with the Shasta County Farmers' Protective Association led to the installation of the Cottrell electrolytic flue dust precipitator, which took out the dust, but not the acid fumes, and hence was not successful. The Young process used at Campo Seco (Penn Mining Co.) and the Hall process were also unsuccessful. The Heslewood method in 1915 was the last one to be tried out, but was not satisfactory.

The smelting record is given in Vol. XI, the Copper Handbook.

Production: 1915-16, to June 30, 76,559 tons, netting \$174,656.

BALAKLALA COPPER CO.

CALIFORNIA

Reorganized as First National Copper Co.

BULLY CAVE CO.

CALIFORNIA

Address: c/o Hatch & Clute, 100 Broadway, New York. Mine at Winthrop, Shasta Co., Cal.

Officers: E. S. Hatch, pres.; Vincent P. Donihee, v. p.; Frank M. Clute, treas. and directors; Frank F. Gearn, sec.; E. J. McLaggan, supt. **Cap.,** \$5,000.

Property: owns the McClure group and has an option on the Michigan group on Bully Hill adjoining and west of the Bully Hill Copper Co.'s mine. Claims show two mineralized shear zones with clay gouge walls and about 40 "ore channels" 1½' to 6' wide. The ore carries iron pyrite with chalcopyrite and zinc sulphide.

Development: by Hawkeye tunnel, 1,050' with 74' and 150' drifts; Ydalpom II tunnel, 1,115' and 3 drifts; North Star tunnel, 1,050' and 2 drifts; Recorder 1,600' drift and winze; Recorder II, 400' tunnel; Ydalpom I, 150 tunnel.

Equipment: includes all necessary machinery, houses, etc. Company also owns a gold mine at Cave Creek, Maricopa Co., Ariz.

BULLY HILL COPPER MINING & SMELTING CO. CALIFORNIA

Office: 30 Church St., New York. Mine P. O.: Winthrop, Shasta Co., Cal.

Officers: D. M. Riordan, 525 Market St., San Francisco, Cal., pres. and mgr.; L. B. Judson, v. p.; M. F. Westover, sec.; Herbert R. Hanley, asst. mgr.; preceding officers, A. H. Jackson, A. W. Burchard and J. B. Keating directors.

Inc. 1900, in New Jersey. **Cap.**, \$2,500,000; shares \$25 par, reduced 1905 to \$1,000,000. Bonds, \$400,000, issued for construction of Sacramento Valley & Eastern railroad, stock of which is owned by the Bully Hill. Is controlled, through practically entire stock ownership, by the General Electric Co., Schenectady, N. Y.

Property: 450 acres, 320 patented near Delamar, Shasta county, includes the Bully Hill, Rising Star, Rising Sun, and old Winthrop & Baxter groups, all in the eastern end of the copper belt. Owns 14-mile railway (Sacramento & Eastern), connecting with S. P. R. R. at Pitt station.

Geology: ore occurs in nearly vertical N. E.-S. W. shear zones, or veins, in metarhyolite, varying from 4' to 400' and averaging 30'. Definite walls, if present, are post-mineral gouges; basalt forms the east wall. The ore forms irregular lenticular bodies that average 45' wide by 200' long and are connected by narrow seams of ore. Ore is a complex mixture of sulphide carrying chalcopyrite with zinc and antimony and low gold-silver values.

Development: several tunnels, lowest No. 3, crosscutting the vein at 1,100' and 600' below the outcrop. A 950' shaft was sunk at this point with levels 100' apart, and all necessary connections for work and air.

The 400-ton smelter has one blast furnace, two calcining furnaces, five converters and all necessary machinery, etc. It has been idle since 1910.

Company built a small experimental plant at Delamar, Cal., to try out electric smelting and recovery of zinc values. This plant, remodeled in 1915, produces 300 to 400 lbs. metallic zinc per day, using direct electrolysis of zinc sulphate solution with regeneration of acid. (See Met. & Chemical Engr'g, Feb. 1, 1916, p. 120.) The ore has also been tested by the Minerals Separation Co.'s flotation process with favorable results.

In Oct. 1917, Rising Star shaft was repaired and silver-gold-copper ore from lower levels was being shipped to the Mammoth smelter at Kennett.

COPPER MOUNTAIN CONS. MINING CO. CALIFORNIA

Address: Harry K. White, 53 State St., Boston, Mass.

Supposedly dead. Former mine near Redding, Shasta Co., Cal. See Vol. XII, 1916.

DELTA CONSOLIDATED GOLD MINES CO. (THE) CALIFORNIA

Office: Redding, Shasta Co., Cal. Mine on Dog Creek, near Delta, Cal.

Officers: Dr. Sherman T. White, pres.; C. Tracie, v. p.; S. D. Furber, sec.; A. Bystle, treas.

Inc. Sept. 3, 1903, in So. Dakota. **Cap.**, \$2,000,000; shares \$1 par; outstanding 1,150,000 shares, assessable. Last assessment $\frac{1}{2}$ c. due Sept. 15, 1917.

Property: the Pioneer group of 11 patented claims, 115 acres, and 80 acres timber land, on Dog creek, 6 miles west of Delta, shows quartz veins in andesite, and ores contain gold, silver, and a little copper. Ore shoots average 2' in width, with length of 300' and are said to have average assay of \$22.40.

Development: by tunnels with 3,500' of workings. Management claims to have 20,000 tons ore blocked out. Idle since 1915, but intends building a 50-ton stamp mill and cyanide plant.

Company has built a narrow-gauge railway connecting with the Southern Pacific tracks at Delta.

FIRST NATIONAL COPPER CO.**CALIFORNIA**

See Balaklala Cons. C. Co.

Office: 111 Broadway, New York. Mine and works office: Coram, Shasta Co., Cal.**Officers:** Thos. W. Lawson, pres.; Wm. A. Kerr, v. p. and treas.; A. R. Buchanan, sec.; with Frank M. Leland, gen. mgr.; preceding, with H. W. Hoops, John A. Young and E. M. Buchanan, directors.**Inc.** Jan. 20, 1908, in Nevada. **Cap.**, \$3,000,000; shares \$5 par, assessable; paid in \$3.75; 600,000 shares outstanding. Cash on hand, June 30, 1917, \$126,192.**Is** said to have 5,500 shareholders, including American Smelters Securities Co., owning 80,000 shares. Stock is listed on the New York and Boston Curbs. Empire Trust Co., New York and State Street Trust Co., Boston, registrars; Registrar & Transfer Co., New York, and International Trust Co., Boston, transfer agents. Annual meeting, last Thursday in October, at Carson City, Nev.**Is** a holding company, owning the entire capital stock of the Balaklala Consolidated Copper Co., which in turn owns the entire capital stock of the Coram Water Co., and other subsidiaries and a third interest in the Balaklala Central Mining & Smelter Co. **Dividends:** 25 cts., Aug., 1916; 40 cts. Aug., 1917.**The** mining property and smelter are described under the above titles. The smelter was shut down in 1909 by fume litigation in the California courts, and cannot resume operations until some device is successful in eliminating the damage done by smelter fumes. Mine closed Aug. 21, 1914, on account of low price of copper, and resumed operations Aug. 25, 1915. Shipping 300 tons of 2.8% ore daily to the Mammoth smelter of the U. S. Smelting Co. at Kennett, Cal. Company has entered into a 10-year contract with the U. S. Sm. Co. Management claims to earn about \$2.25 per ton on 19c copper.**The** Balaklala Consolidated Copper Co. had a bond issue of \$1,500,000, which was paid by the First National, in 4 annual installments of \$375,000 each. The First National authorized, 1909, a \$1,000,000 bond issue, flotation of which was a failure, but pledged some of these bonds for a loan of \$375,000, which loan presumably was paid by the proceeds of the last assessment. The stock was manipulated to \$10 per share by Boston interests in 1915. Property fully described under Balaklala Consolidated Copper Co.**FRIDAY-LOWDEN COPPER CO.****CALIFORNIA****Idle.** Letters neither answered nor returned from Redding, Shasta Co., Cal.**Officers:** T. H. Benton, pres.; S. E. Bretherton, v. p.; John R. Lowden, sec.-treas. and gen. mgr., at last accounts.**Inc.** 1909. **Cap.**, \$2,000,000.**Property:** 15 claims, partly patented, 300 acres, near the Balaklala, Mammoth and Trinity mines. Considerable diamond drilling done is said to have proven extensive orebodies, and there are 5 tunnels of 800' aggregate length.**GARDELLA DREDGING CO.****CALIFORNIA****Lawrence** Gardella, who operated gold dredges at Oroville for several years, is manager of this company. Two boats have been working on Clear creek, near Redding, Shasta Co., for some time, and two more are being constructed. These will leave the tailing material level enough to use for agricultural purposes.**GOLINSKY MINING CO.****CALIFORNIA****Mine** near Kennett, Shasta Co., Cal. **George** Bayha, pres.; W. D. Tillotson, v. p. Sold to the Golinsky Copper Co. in 1911.**Property:** 14 claims, adjoining the Mammoth mine on the east and 4

miles west of Kennett, shows an ore shoot 30' wide carrying low-grade copper ore with gold values. Equipment includes electric power. Idle.

GREEN HORN MOUNTAIN COPPER CO.

CALIFORNIA

Offices: 401 Mills Bldg., San Francisco, and Green Horn Mt., Shasta Co., Cal.

Officers: Albert Hanford, pres.; M. E. Dittimar, v. p.; F. M. Lee, sec.-treas.; preceding, with Luther Elkins and Andrew Turner, directors. M. E. Dittimar, supt., Redding, Cal.

Inc. Sept. 25, 1915, in Nevada. Cap., \$400,000; shares \$1 par; outstanding May 5, 1916, \$250,000. Annual meeting, Jan. 15.

Property: 12 claims, 360 acres, 160 acres patented, on Green Horn Mt., in French Gulch mining district, includes the Green Horn mine. Said to show gold-silver-copper sulphide ore, occurring as a fissure in porphyry. Vein strikes N. 61° W., dips 40°. Assays said to average 4.5% copper per ton.

Development: 3,000' of tunnels. Greatest depth of workings, 480'. Management claims 120,000 tons of ore blocked out.

Production: for 1914, 25,118 lbs. copper; 1915, 36,283 lbs. copper; all

HAZEL GOLD MINING CO.

CALIFORNIA

French Gulch, Shasta Co., Cal. J. O. Jillson, pres.; E. L. Young, supt.

Property: 178 acres patented and 485 acres, unpatented, at 2,300' elevation, on N. side of Cline Gulch, 5 miles N. E. of French Gulch, includes the Gladstone mine, the largest gold quartz producer in Shasta county. Claims were originally located by T. Cummings in 1896. After exhaustion of oxidized ore the mine changed hands several times until acquired by present company in 1901.

from 442 tons ore. Concentrator planned for 1916. No later returns.

Ore: free milling gold. Two fissure veins with E. W. strike and dip of 60° S. have been mined from adit level to 7th level; below 7th the dip changes to steep N.; average width 2½' to 3'; walls are slate. Ore shoot is 300' long. Milling ore averages about \$10 per ton.

Development: the upper 1,000' of vein has been mined by tunnels, while lower portion is worked from a winze on the main adit (Ohio) level. On the lowest, 1,300' level, a 700' crosscut cut the vein in Nov., 1915. Mine makes about 70 gal. water per minute.

Equipment: includes a 375-h. p. double-drum electric hoist, compressor plant, electric haulage from mine to mill, 9 miles of power and 5 miles of telephone lines. An electrically driven 30-stamp mill is equipped with concentrating tables and electroplating plant. Stamps weigh 1,050 lbs., drop 106 times per min., from height of 6"; capacity, 100 tons in 24 hours, through a 40-mesh screen; 92% extraction. Electric power is obtained from Northern Cal. Power Co. Company employs 140 men.

Production: previous to 1901, said to be \$85,000; 1901-1914 said to be \$3,000,000; yearly production about \$360,000.

See U. S. G. S. Bull. No. 540, pp. 35, 37, 46, 57-60; Mines & Min. Res. of Shasta Co., State Mineral Report 1915, pp. 43-44.

LITTLE BULLY HILL MINING & SMELTING CO.

CALIFORNIA

Idle. Mine near Winthrop, Shasta Co., Cal. Cap., \$1,000,000; shares \$1 par.

Property: 5 claims, said to adjoin the Bully Hill mine, and to be opened by a 130' tunnel and several trenches, that show sulphide ore. Company's prospectus misleading and its operations apparently unsuccessful. No recent information secured. Probably dead.

LITTLE NELLIE MINING CO.

CALIFORNIA

Address: Redding, Cal.

Operations resumed Oct., 1917, after two years' shut down, during which time 30 diamond drill holes were put down to an average depth of 800', defining lenses of 2% to 7% copper ore. Mill now running 15 stamps on gold ore; copper ore is to be shipped to Mammoth.

MAD MULE MINING CO.**CALIFORNIA**

Owens the Mad Mule mine, formerly known as the Banghart, 5 miles N. W. of Stella, in the Shasta mining district.

Mine is fully described in U. S. G. S. Bull. 540, pp. 40, 42, 52-54. See also Cal. State Mineralogist's Report 1915, Mines & Min. Res. of Shasta Co., p. 47.

MAMMOTH COPPER MINING CO. OF MAINE**CALIFORNIA**

Is a subsidiary of the U. S. Smelting, Ref. & Mng. Co., 55 Congress St., Boston, Mass. Mine office: Kennett, Shasta Co., Cal. A. P. Anderson, gen. mgr.; G. W. Metcalfe, mgr.; R. E. Hanley, supt., Mammoth mine; J. H. Kervin, supt., Mammoth smelter; D. G. Stuart, cashier.

Inc. Aug. 2, 1904, in Me. **Cap.**, \$2,500,000; shares \$25 par; 60,000 issued, all owned by U. S. S. R. & M. Co.

Property: the Mammoth group which is the principal property, comprises 1,117 acres, patented, and 434 acres, unpatented, 3 miles N. W. of Kennett, on the Shasta route of the S. P. R. R. The orebodies consist of a series of long, flat lying lenses, occurring irregularly in a rhyolitic zone of pre-Devonian age, ore occurring mainly as replacements of porphyry in fissure and shear zones. Occasionally quartz phenocrysts are distinguishable, but usually little or no trace remains of the original rock. Ore as mined averages 4% copper and \$2 in gold and silver.

Development: consists of 5 tunnels, No. 5, the lowest serving as haulage tunnel. It is 10' wide, 8' high and supplied with 3' gauge track, 56-lb. rail and electric haulage. The current production of about 1,000 tons of ore daily comes from between the 600' and 2,100' levels.

Last year's exploration was vigorously carried on, and although some good ore was opened, there was not enough to replace the quantity mined. Reserves, therefore, show a decline. The small rich lenses in Sec. 29 are exhausted. A tunnel is in 1,400' to prospect this area, but has found nothing of importance.

Equipment: compressor plant with 4,960 cu. ft. capacity per min., supplies air for drills, and two 175-h. p. motor generators supply electric motors with direct current. There is a full surface equipment and quarters for 600 men. Precipitating tanks are located below the tunnel to catch mine water and recover from it its contained copper in the shape of copper cement which is reduced at company's smelter into blister copper.

Production: was 233,848 tons copper and 10,597 tons zinc ore in 1916. Mining costs averaged \$1.56 per ton and exploration and development costs \$0.59 per ton in 1915.

In addition to the Mammoth mine proper, the company owns the following properties:

Friday Lowden group: 150 acres patented, 188 acres, unpatented, adjoining the Mammoth on the south, was acquired in 1915. Crosscut tunnel 4,000' long, April, 1917, is expected to cut the Mammoth ore zone 400' below No. 5 tunnel near this point.

Spread Eagle group: 22 claims, 163 acres unpatented, 15 miles S. W. of Kennett, was bought in 1913. Shows large bodies of pyrite carrying low copper values. Exploration work being carried on and although no ore has yet been found, indications said to be favorable.

Stowell group: 10 claims, 188 acres, 128 patented, ½ mile W. of the Spread Eagle group, was bought in 1916 for \$78,000. Exploration work has yielded a reserve of \$48,100 tons of 3.71% copper ore carrying \$1.50 in gold and silver per ton. An aerial tram has been constructed, connecting with the old Balaklala tram. Output is 175 tons daily. Prospects are good, and the mine is equipped with plant equal to a large output.

Sheridan group: 45.7 acres, patented, belonging to the Balaklala Central Mng. Co., in which the Mammoth Co. owns 60% interest, is undeveloped, though surface indications are favorable.

Anderson group: 15 claims, 260 acres, unpatented, 4 miles N. of Kennett, was located 1914. Group covers an ore bearing zone and is being

prospected. No ore of commercial grade has yet been found. Diamond drilling was done in 1917.

Butters section: 2,719 acres, patented, 2 miles N. of Kennett, in the Shasta Co. copper belt, adjoins the Mammoth and Anderson groups. Is being prospected.

Little Mammoth group: 57 acres, patented, in the Old Diggins mining district, Shasta Co., 6 miles N. of Redding and 6 miles S. of Kennett, was acquired to supply silicious ore for the Kennett smelter. Mine was formerly producer of gold bearing quartz, but ore now in sight is too low-grade to pay. Idle.

Buchanan Mine: 57 acres, patented, 7 miles from Raymond, Madera Co., Cal., purchased 1909, contained a small vein of ore running high in copper, gold and silver. Ore was extracted and shipped and mine closed down.

Properties taken under lease by the company in 1917 include the old Shasta King, Donkey, Grotefend, Delta, and Keystone, all in territory contiguous to the smelter at Kennett. They have been equipped and are being developed.

Company also owns 195 acres, patented smelter site, $\frac{1}{2}$ mile N. of Kennett; 184 acres, patented town site and 657 acres additional tracts.

The Mammoth Co. also owns the Taylor iron mine, 14 miles from Nevada City, Nevada Co., Cal., comprising mineral rights to the Robinson and Sanford ranches. Orebody estimated to contain 188,047 tons of 1.65% copper ore carrying small gold-silver values and 47% sulphur. Ore is a heavy iron pyrite, low in silica, valuable for sulphuric acid manufacture. Property lacks railroad facilities.

The Mammoth Copper Mining Co. owns and operates a copper smelter at Kennett. The plant has 5 furnaces, 3 of which are in operation. The plant has a capacity of 450,000 tons of charge per year. The smelter is equipped with a converter plant from which the blister copper is shipped to the refinery of the United States Metals Refining Co. at Chrome, N. J. With the usual auxiliaries, the smelter is supplied with a large baghouse, the purpose of which is to render the emissions of the smelter harmless to agricultural interests. By reason of this baghouse it is the only one of the smelters in Shasta Co., which is permitted to operate; such permission having been obtained by a decree of the United States Court. As a by-product of the baghouse a fine dust is obtained which carries high values in various metals, and steps are being taken to recover the values, which it is expected will add materially to the revenues of the company. The smelter treats the whole output of the operating mines and is easily accessible from any of the mining territory in Shasta Co. which the company is exploring. The smelter is also treating custom copper ores originating in northern California and silicious ore from California, Nevada and Oregon. There are frequently found in the Mammoth group of mines copper bearing ore bodies that carry high percentages of zinc. The smelter is equipped with a sorting plant for these ores which turns out a high-grade zinc product. The smelter is equipped with a power plant, machine shop, boiler shops, round house, etc., to allow an uninterrupted and economical operation.

The ore is brought from the Mammoth Mines to the smelter by the company's system of transportation operating in 3 sections: 1st. It is drawn from the mine chutes into narrow gauge railroad cars and taken over a 2-mile electric railroad, equipped with two 25-ton locomotives, six 25-ton gondola cars and nine 10-ton flat cars, to a set of ore-bins. 2nd. From these bins the ore is taken down a steep inclined gravity railroad in skips to another set of bins. The gravity railroad has a length of 4,000' and a drop in this distance of 1,700'. The skips have a capacity of over 23 tons of ore and travel at a speed of 2,000' a minute. 3rd. From these lower bins the ore is taken to the smelter over a steam railroad operated with three 40-ton locomotives and 22 standard steel railroad cars. The capacity of the transportation system is ample for 1,500 tons of ore per day.

An electrolytic zinc plant costing \$350,000 has been built on Backbone creek a mile above the smelter, using same process as that in operation at

Winthrop by the Bully Hill Copper Co. The new plant has 25,000 tons of baghouse dust to start with, that carries 23% zinc beside gold, silver, cadmium, bismuth and antimony.

Company employs about 1,200 men.

MOUNTAIN COPPER CO., LTD.

CALIFORNIA

Secretary's address: 3 Lombard St., London, E. C., England. Operating office: 332 Pine St., San Francisco, Cal. Mine office: Keswick, Shasta Co., Cal. Works office: Martinez, Contra Costa Co., Cal.

Major F. B. Lawson, chairman; Henry J. Wenham, J. T. Middleton, E. T. McCarthy and A. N. Frewer, directors; Wm. F. Kett, gen. mgr.; W. L. Cole, mine supt.; T. B. Swift, smelter supt.; Jardine, Matheson & Co., Ltd., 74 Wall St., New York, American sales agents.

Inc. Dec. 1, 1896, in Great Britain, and reorganized May 10, 1902. **Cap.**, £250,000; shares £1 par. In 1899 the company changed its capitalization of £1,250,000 into £250,000 in shares and £1,000,000 in 6% debenture stock; shares £4 par, on which a first payment of £1 per share was made Jan. 16, 1903, leaving £750,000 of stock outstanding. The change in 1899 was practically a complete amortization.

Balance sheet for 1915 showed profit of £78,325.

Dividends: before reconstruction, 1897-1901, aggregated 58½%. Profits were £150,255 in 1907; £28,112 5d in 1908; £24,557 12s 4d in 1909; a deficit of £3,042 in 1910; profit of £55,069 in 1911; £81,686 in 1912; £53,456 in 1913; £35,562 in 1914; £106,365 in 1915; £232,106 in 1916.

Property: is extensive, including the Iron Mountain and Hornet mines, 10 miles N. W. of Redding. The Iron Mountain mine was opened, 1880, for silver, and had a 20-stamp mill, treating the gossan in a small way for some years after 1884.

The Iron Mountain mine had a gossan of 100' to 300' width, covering a lens of ore, 100' to 400' wide, 800' long and 500' deep, in a shear zone of meta-rhyolite. The ore carries chalcopyrite associated with pyrite, averaging about 5% copper, 2 oz. silver and slightly under \$1 gold per ton. The orebody was worked pillar-and-stall, and stopes filled with waste, but pillars have been robbed and the mine now shows little high-grade sulphide ore, though there are reserves of 500,000 tons of silicious ore averaging 4 to 5% copper. The old orebody being pyrite, there was trouble from fires, but the application of the plenum system of ventilation, by Mr. Wright, restored normal conditions. Considerable cement copper was secured from the charged waters coming from the fire zone.

Ore reserves in No. 8 mine at end of 1915 were 187,000 tons, and in Complex mine, 75,000 tons.

The Hornet mine, lying to the north of the Iron Mountain, developed about 5,000,000 tons of pyrite ore, averaging only about 1% in copper tenor, with patches up to 2.5% copper, and carrying 47 to 50% sulphur. Gold and silver values are very small but the ore is valuable for the manufacture of sulphuric acid, saving the small copper and precious metal values as by-products.

The mines are connected with Keswick by an 11-mile narrow-gauge steam railway, traversing a rugged country, with an average grade of nearly 4%, the elevation gained being 2,000'.

In Sept., 1917, company was treating an average of 500 tons daily in its flotation mill. Including mill concentrates, pyrites from the Hornet mine and other ores, about 15,000 tons a month are shipped from the mines to the Martinez smelter.

Employs about 500 men in Shasta Co. and 200 at the smelter in Contra Costa Co.

The Keswick smelter, fully described in Vol. VIII, Copper Handbook, has been dismantled. A 250-ton oil flotation mill started operating in March, 1915 and was enlarged to 500 ton capacity in 1917. It is located 5 miles from Iron Mountain on the narrow gauge railway.

The 350-ton Martinez smelter, on San Francisco bay, has one of the most extensive and best planned acid works in existence, built at a cost

of approximately \$1,250,000. The Hornet ores, low*in copper but rich in sulphur, are burned, the sulphur fumes collected in lead-lined chambers and transformed into sulphuric acid by the Meyer chamber process, the cinder remaining after the roasting is smelted for its copper contents. The acid is sold crude and also is used as the basis of commercial fertilizers for which there is a considerable demand in the rich fruit and agricultural districts of California and the other Pacific coast states. The Martinez works also do a general custom business and are fully equipped with steam, electric and pneumatic power.

A 150-ton leaching plant was added to the smelter in 1917, and is successfully extracting copper from the cinders remaining after the sulphur is burned from the Hornet sulphide in the manufacture of sulphuric acid.

Production: Sept., 1917, was at the rate of 650 tons daily from the mines at Iron Mountain, and 350 tons daily from the Hornet. At one time, only a decade ago, this company was among the largest copper producers of the world, but has since greatly declined in output, production having been 29,727,040 lbs. fine copper in 1901; 19,116,160 lbs. in 1903; 6,814,000 lbs. in 1907; 3,638,619 lbs. in 1908; 2,775,197 lbs. in 1909; 2,987,815 lbs. in 1910; 5,400,000 lbs. in 1911; 5,614,000 lbs. in 1912; 6,890,000 lbs. in 1913; 5,454,000 lbs. in 1914; 7,280,712 lbs. in 1915; 9,172,390 lbs. in 1916.

Company has been managed with great prudence and marked success, both financially and technically and notwithstanding the depletion of an originally rich mine, has been able to make a successful change of base by which, low-grade pyrite ores are utilized for the manufacture of acid.

MOUNTAIN MONARCH GOLD MINING CO. CALIFORNIA

Probably dead. A Shasta Co. promotion. See Vol. XII.

PITTSBURGH & MOUNT SHASTA GOLD M. & M. CO. CALIFORNIA

Office: 403 Real Estate Savings Bldg., Pittsburgh, Pa. **Mine office:** Keswick, Shasta Co., Cal.

Officers: J. J. Schneider, pres.; Buffalo, N. Y.; R. Schmitt, v. p.; T. V. Scott, sec.-treas.; above with E. G. Lang, J. S. Phillips, F. A. Johnston, F. L. Hadley, R. W. Medick, G. E. Meyer, J. P. Jayme, B. H. Scott, G. H. Clapp and H. C. Steul, directors; C. F. Wieland, mgr.; J. J. Partington, supt.

Inc. 1903, in West Virginia. **Cap.**, \$2,500,000; shares \$1 par. Bonded debt, \$117,000 (\$200,000) authorized 6% first mortgage notes, due May 20, 1919.

Property: 10 claims, patented, 175 acres, known as the Bennington group, in the Flat Creek district, north of Redding, said to have been bought for \$18,000 cash and \$60,000 shares, also 24 patented claims, the Alleghany group.

Development: several thousand feet of underground work. A 4,400' main tunnel and 2 other tunnels show a vein of gold and silver-bearing copper ore, of varying tenor. Two diamond drills working, 1917.

Equipment: includes 15-stamp mill, carpenter shop, smithy, boarding house and 3 bunk houses, with electric power.

SHASTA BELMONT MINING CO. CALIFORNIA

Office: Carson City, Nev. **Mine office:** Winthrop, Shasta Co., Cal.

Officers: Will E. Casson, pres.; W. Brougher, v. p.; Jas. T. Davis, sec.-treas.; with S. L. Lee, W. H. Cavell, directors. Wm. Arps, supt.

Cap., \$1,000,000; shares \$1 par; 700,000 issued, and 50,000 offered at 25c each in Dec., 1916.

Property: 8 claims, unpatented, 140 acres, known as the Graham group, in the Copper City district and in the west central part of the Shasta copper belt. The group is about 3 miles east of the Bully Hill mine and smelter, and 8 miles from the Mammoth mine. The property is said to have a surface outcrop resembling that of the Bully Hill mine.

Development: by a 75' shaft, 4 short tunnels and several opencuts, all showing streaks and bunches of high-grade copper ore. Buildings include a cabin and smithy. Company did development work in 1914-1915 and made one small shipment of ore to the Mammoth smelter, which ran 7.21%

copper and about 4 oz. silver. Driving lower tunnel to reach the main ore-body. In Aug., 1917, the lower tunnel was being extended to open a small rich vein and in September the Leonard crosscut had cut 13' of copper ore.

SHASTA COPPER EXPLORATION CO.

CALIFORNIA

Redding, Shasta Co., Cal. M. E. Dittmar, mgr.; O. Scribner, sec.; Chas. Wheelock, supt.

Property: about 650 acres, lying between the Balaklala and Iron Mountain mines, near Kennett, is developed by 8 tunnels, of about 3,000' aggregate length. No. 7 tunnel cut 3 small stringers of copper ore. Company did a large amount of exploration and development work, 1915, but no recent report has been received despite repeated requests mailed them.

SHASTA-KENNETT COPPER CO.

CALIFORNIA

Address: M. B. Lindley, Room 608, No. 136 Liberty St., New York City. Mine office: Kennett, Shasta Co., Cal.

Inc. 1907, in Colorado. Cap., \$2,500,000. W. R. Girdner, M. J. Jordan and L. E. Dabold, organizers.

Property: near Kennett, has a 600' tunnel, said to show ore bodies carrying low to medium grade copper ore.

SHASTA MAY BLOSSOM COPPER CO., CONS.

CALIFORNIA

Office: 604 Mills Bldg., San Francisco, Cal. Mine office: Winthrop, Shasta Co., Cal.

Officers: Frank J. Blake, pres.; Simon Peter, v. p.; Kingsley W. Cannon, sec.; Carl Henrich, treas.; M. B. Lindley, directors.

Inc. 1903, in Arizona, as a reconstruction of the Shasta May Blossom Mining & Smelting Co. Cap., \$10,000,000; shares \$1 par.

Property: known as the Keith group, has 22 claims, about 300 acres, ½ mile N. of De La Mar, in the Pittsburgh or Copper City district. The claims show prominent outcrops and have several deposits between granite porphyry footwalls and slate hangings. The East vein outcrop, said to be 30' wide and traceable for about 1,500', shows copper ore with gold and silver values. The middle vein, 5' to 40' wide and said to be traceable, 1,900', carries sulphide ore, and is opened by tunnels of 200', 300' and 650'. with about 1,500' of workings said to show a considerable tonnage of chalcoppyrite ore. The West vein, reported to be upwards of 100' in width, has a 100' shaft and 780' tunnel which show ore giving assays of 2 to 7% copper and \$2 to \$2,000 per ton in combined gold and silver values. The mine, as a whole, is reported to have about 4,000' of workings.

In 1917, company reports that it is driving the "Compressor," or lower tunnel toward the 7 outcropping lodes.

Equipment: includes a hoist, air compressor, electric light and power station and machine shop.

SHASTA MONARCH MINING CO.

CALIFORNIA

Redding, Shasta Co., Cal. T. W. Rogers, supt.

Property: 80 acres at Stella (Whiskeytown), Shasta Co., has been worked for many years; credited with a production of \$127,000 from 1870-1912. There are 4 parallel veins, strike N. 50° W., dip 50° N., in alaskite porphyry near the contact with meta-andesite; pay shoot averages 18" in width; ore is free milling.

Development: by tunnels.

Equipment: includes a 10-stamp mill, erected 1914, at which time 10 men were employed. (For geology, see U. S. G. S. Bull, 540, pp. 38, 39, 50, 51.)

SHASTA NATIONAL COPPER CO.

CALIFORNIA

Office: Flatiron Building, San Francisco, Cal.

Officers: W. H. McEwen, pres.; M. P. Fries, v. p. and gen. mgr.; Horatio Alling, sec.-treas.; with S. S. Norton and A. Kennedy, directors.

Inc. in 1917. Cap., \$5,000,000; shares \$1 par. Company was organized to develop 1,000 acres of copper bearing land adjoining property of Mammoth Copper Co., Shasta Co., Cal.

STOWELL MINE.**CALIFORNIA**

Owned by Mammoth C. Mining Co. and described thereunder.

TRINITY COPPER CO.**CALIFORNIA****Office:** 33 State St., Boston, Mass. Mine office: Kennett, Shasta Co., Cal.**Officers:** Thos. W. Lawson, pres.; Arnold Lawson, v. p.; John M. Reynolds, sec.; Allen Arnold, treas.; preceding with Arthur P. French, John N. Reynolds, John R. Turner, E. A. McSweeney, directors.**Inc.** Oct. 18, 1900, in New Jersey. **Cap.**, \$6,000,000; shares \$25 par; 240,000 shares outstanding. International Trust Co., Boston, registrar; Federal Trust Co., Boston, transfer agent. Shares listed on Boston Stock Exchange and on the New York Curb. Federal Trust Co., Boston, transfer office.

Trial balance as of Sept. 1, 1916, showed assets totaling \$6,188,744, including \$5,221,000 for property, \$711,980 for development and construction, \$218,799 for expenses through Eastern office, \$56,500 for railway and power company, and \$464 cash. Liabilities include A. S. & R. smelting contract payable in ore, \$28,548; ore account, \$39,471; and accounts payable, \$120,725.

Property: 1,700 acres, also a patented town site, near Kennett, with total holdings of 3,233 acres. Property includes the Shasta King, which is the principal mine, the Lost Desert and King Copper groups.The **Shasta King** group, 12 claims, adjoins the Balaklala mine, on the southern fork of Squaw creek, 4 miles east of Iron mountain. The main double track tunnel is 1,145' long: there is another tunnel driven 175' vertically lower. The mine has 15,000' of workings and property has been tested by 5,119' of diamond-drill borings.

The orebody is a lens, claimed to be approximately 150' wide by 1,000' long, but apparently the ore does not go to great depth, and it is possible that the bottom limits have been reached. The property is said to have ore reserves of 400,000 tons, with fair chances of 750,000 tons, and possibilities of a greater tonnage. The crosscut tunnels, driven in from the sides of the mountain, connect with drifts on the orebody, which is low-grade pyritic ore containing disseminated chalcopyrite, and holding 1 to 2½% copper, with combined gold and silver values of about \$1 per ton. The ore carries small quantities of zinc and an excess of iron, and probably averages around 2½% copper and 1 oz. silver per ton, with small gold values. The Trinity also has an orebody, of undetermined size, on the opposite side of the gulch from the Shasta King.

The Shasta King mine has ore bins, and a 2,000' incline tram, of about 500 tons daily capacity, leading to the head house of the Balaklala tramway. The Copper King group of 22 claims, on Motion creek, about 2½ miles S. of the Shasta King mine, has about 1,000' of exploratory workings, but apparently no ore has been found in place. The Statesman group has been partially explored, in an effort to locate and develop silicious ores required for fluxing the heavy sulphide ores of the Shasta King mine. The Uncle Sam group, held under bond and lease at last accounts, also has been explored for fluxing ores, the Shasta King having large bodies of low-grade copper sulphide, but lacking the silicious ores required to make free-smelting furnace mixtures. The Uncle Sam group shows some oxidized ore, at and near surface, of 3 to 8% copper tenor.

Equipment: includes a steam plant with 6-drill air compressor and power drills; also a diamond drill, with which considerable boring has been done. Buildings include a laboratory, warehouse, shops, hospital and about 25 houses for employes.

The company was reported to be ready for production Sept., 1907, at the rate of about 150 tons daily. It started production Oct., 1908, and shipped ore to the Balaklala smelter, but closed down early, 1909, and no record of the actual production of copper can be secured. The Trinity Co. claimed to have a contract with the Balaklala smelter calling for the treatment of 300,000 tons of ore for the first year and 360,000 yearly for the 9 succeeding years; with a minimum of 300 and maximum of 1,000 tons

daily, which was to have been matted for \$3 per ton, but the contract was not carried out, and the mine has been closed down since Feb., 1909, waiting first for 15 ct. copper and now for the Balaklala smelter to resume operations. -For history of the company, see Vol. X, Copper Handbook.

President Lawson stated, at the annual meeting, 1913, that Trinity's day will come and that the property's decriers will be forced to "eat their born-of-ignorance criticisms." His statement was in part as follows: "Trinity is still awaiting the resumption of First National-Balaklala smelting operations, and if these efforts are successful, the unbroken chain of Trinity's misfortunes should be at an end."

On Aug. 13, 1917, T. W. Lawson told shareholders that the mine was again in operation and the entire property to be diamond-drilled; also that an advantageous 10 to 15-year contract had been made with the U. S. S. Co. for 200 tons of 3% ore daily. Furthermore that even if no additional ore is discovered the present developed deposit will supply 3% ore for many years. He added that a mining and financial statement would soon be made. He advises: hold on to shares, as Lawson tips on Butte, Chino and Copper Range were all correct. Verbum sap.

VICTOR POWER & MINING CO.

CALIFORNIA

Office: J. H. Sharpe, 828 Hearst Bldg., San Francisco. Mine office: Knob, Cal.

Officers: J. H. Sharpe, pres.; A. Bonick, v. p.; A. A. Barber, sec.-treas.; with A. W. Kirk and G. C. Garrett, directors.

Inc. Oct., 1907, in California. Cap., \$500,000; shares \$1 par.

Property: 3,400 acres in Harrison Gulch, Shasta Co., Cal., including the Midas, Gold Hill, Bonanza and other mines. The first named is credited with a gold yield of \$4,000,000.

Geology: quartz vein in diabase and slate, dipping 74° and pitching N. W. The orebody is 12" wide and 200' long, ore averaging \$22 per ton.

Development: by 1,200' vertical shaft. Workings total 45,000'.

Equipment: includes 250 h. p. Diesel engine, 70 h. p. electric hoist, 90 h. p. compressor, three 20 h. p. pumps and 80-ton concentrating plant.

SIERRA COUNTY

ANDY FITZ M. & M. CO.

CALIFORNIA

Address: 1391 Fruitvale Ave., Oakland, Cal. Andrew Fitzgerald, supt.

Property: The Fruitvale mine, in the Allegheny district, near Downiesville, Sierra Co., carries a vein of gold quartz ore. Developed by tunnel.

Company refinanced 1914 and underground development work to be resumed.

CROESUS MINING CO.

CALIFORNIA

Office: 734 Fifth Ave., New York. D. F. Sheehan, supt.; Chas. W. Smith, mill supt.

Property: the old Plumbago mine at Allegheny, Sierra Co., Cal.

Ore: gold quartz in veins in granite and amphibolite schist. Veins strike N. W.; dip N. to N. E. Ore usually occurs as small masses of high-grade in nearly barren quartz. See U. S. G. S. Bull. 580, pp. 176, 178.

Development: by tunnels, the longest over 4,000'.

Equipment: 15-stamp mill at Plumbago mine, put into commission July 5, 1915. Employs about 50 men.

GRAY EAGLE GOLD MINING CO.

CALIFORNIA

Address: Pacific Bldg., San Francisco, Cal.

Property: at Downiesville, Sierra Co., Cal. S. C. Love, supt. Was examined by New York interests in 1916.

KATE HARDY MINES CO.

CALIFORNIA

Office: Bacon Bldg., Oakland, Cal., A. D. Grant, supt.

Property: the Kate Hardy mine and mill at Forest, Sierra Co., Cal., has been operated intermittently since 1860 and is credited with a production of over \$225,000 in gold. Six veins have been cut on the property from

6-10' wide, carrying mainly oxides, but some sulphides. The main vein runs N. 20° W. and dips about 80° W. Pay ore occurs in patches of free gold and auriferous arsenopyrite. Developed by several tunnels, longest 600'.

Equipment: includes a 3-stamp mill, 1 classifier and Wilfley tables.

Geology: fully described in U. S. G. S. Bull. 580, pp. 181.

No recent information, but probably working irregularly.

NORTH FORK MINING CO.

CALIFORNIA

Office: 405 Crocker Bldg., San Francisco, Cal. Mine office: Forest, Sierra Co., Cal. Geo. W. Stone, gen. mgr.

Property: the North Fork mine, in Alleghany district, near Forest, shows a 2' quartz vein carrying arsenical sulphides and free gold. Developed by 1,000' crosscut in amphibolite, and a 20' incline shaft. Plan erecting 5-stamp mill and sinking shaft to 400'. In May, 1917, rich ore was cut at 265' in the incline shaft.

ORIENTAL GOLD MINING CO.

CALIFORNIA

Under lease to Croesus Gold M. & M. Co., 734 Fifth Ave., N. Y. City.

Mine office: Alleghany, Sierra Co., Cal. D. F. Sheehan, mgr.

Property: the Oriental mine, on Kanaka creek, about 1½ miles W. of Alleghany, has 2 quartz veins in granite and schist, with strike N. 70° W., and dip 35° N. The ore contains pyrite, arsenopyrite and gold.

Development: by tunnel 4,150' long and several crosscuts.

Equipment: includes 10-stamp mill with two 6' Frue vanners. Property was idle for several years, but lease was acquired by the Croesus Gold M. & M. Co., and development work is now under way.

SIERRA ALASKA MINING CO.

CALIFORNIA

W. S. Schuyler, pres.-mgr., Pike, Cal. J. F. Dickson, v. p.; O. Crook, sec.

Inc. Jan. 22, 1912, in California. Cap., \$2,000,000; \$1 par; all issued.

Property: near Pike, Sierra Co., carries a quartz vein with gold and pyrite, without base sulphides. Developed by 900' shaft and 1,700' of workings.

Idle, 1917. Has a 40-stamp mill with 10-ton cyanide annex.

SIXTEEN TO ONE MINE

CALIFORNIA

Property: situated ¾ of a mile south of Alleghany, Sierra Co., Cal., was located in 1908 and is credited with a production of \$150,000 to \$300,000 in gold to 1914.

Ore: quartz in a vein ranging from a narrow streak up to 4' in width. Country rock is amphibolite.

Development: by tunnels, main tunnel 900' long. Twenty men employed at last accounts. Production not given, like many other Californian mines.

TIGHTNER MINE

CALIFORNIA

Address: A. B. Foote, North Star Mines, Grass Valley, Cal.

Property: near Alleghany, Sierra Co., Cal., formerly owned by H. L. Johnson, and sold to Grass Valley men for \$550,000, the last payment being made in June, 1917.

Dividends: not published; but from \$100 to \$1,000 per share has been paid at various times, totaling fully \$1,000,000 in 5 years.

Geology: quartz vein in amphibolite schist, which is much altered and sheared near the walls of the vein. Faulting is frequent, and the shoots irregular.

Ore: carries gold, often in large, coarse particles and masses, associated with arsenopyrite and galena.

Development: in early days a bedrock tunnel in a drift-gravel mine cut a vein, but no attention was paid to it until 1907, when the tunnel was reopened and about \$400,000 extracted up to time of selling to present owners in 1911. The lower tunnel is over 4,000' long.

Equipment: complete, with 20-stamp mill.

Production: not published, but \$1,000,000 to June, 1913, and fully as much since.

SISKIYOU COUNTY

BELGIUM-BOHEMIAN MINING CO.**CALIFORNIA**

A Belgium company, that in 1914, owned the Highland mine, Liberty mining district, 11 miles S. E. of Etna Mills in the Klamath Reserve, Siskiyou Co., Cal.

Property: 100 acres at 640' elevation.

Ore: free-milling gold in shoots 130' long and 2' wide; strike N. 40° E.; dip 30° S. E. Footwall is a dioritic schist and hanging-wall is quartz porphyry.

Development: tunnels with several thousand feet underground workings; main tunnel 600' long. All work has been done near apex of mountain so that only a shallow depth has been obtained. Supplies are packed in over a 3-mile trail.

Equipment: includes a 10-stamp mill, run by gasoline. Mine is credited with a production of \$350,000.

BIG CLIFF MINING CO.**CALIFORNIA**

Idle. Does not reply to letters. See Vol. XII. Mine in Salmon River district, 18 miles from Etna Mills, Siskiyou Co., Cal.

BLUE LEDGE MINE**CALIFORNIA**

Office: 82 Beaver St., New York City. Mine near Hutton, Siskiyou Co., Cal. Property is held by the Mexican S. & R. Company, a subsidiary of the Compania Metalurgica Mexicana. Mine shipping to Tacoma, 1917.

Property: 27 claims, patented, about 440 acres in the Elliott mining district on Upper Appelgate river, 4 miles south of the Oregon line, also a large smelter site at Seattle Bar. Property located 1889, but only slightly developed until 1909. Company has spent over \$700,000 in work since that time.

Geology: the vein, with strike of N. 10° S., and almost vertical dip, slightly inclined west, traceable some 3,000' by prominent outcrops of 50 to 250' width, lies between a footwall of gray to black, slightly micaceous schist, and a hanging wall of soft white mica-schist, the walls not always being clearly defined, and with mineralization extending into the hanging wall. Orebodies are lenticular deposits, with clay gouge, said, by several authorities, to be in huge laminations in the schist formation, but ore apparently is persistent to depth. Ore is mainly chalcopyrite, associated with a little sphalerite and occasional native copper, average value being 6% copper and \$5 gold per ton.

Development: 9 tunnels, with upwards of 2 miles of workings and nearly 7,000' of diamond drilling.

Vein averages 5' in width and the mine workings block out 110,000 tons of 6% ore with 70,000 tons more probable. Main working tunnel is connected with others, by raises to surface 500' above. A winze opens a 600' drift on ore, 300' below the main tunnel. The mineralized wall rock carries commercial values and contains lenses of high grade ore, but above estimate refers to the quartz vein only.

Equipment: includes a hydro-electric power plant, taking water from Elliott creek under a head of about 150', at pressure of 85 lbs. Buildings include an office, assay office, boarding house, dwelling and sawmill. The company has improved the town site with waterworks, sewers and a school house, and has built a good road between Hutton and Yreka. A 40-mile railway to connect with the Southern Pacific, at Medford, Ore., has been projected. Mine is an important producer in 1917, shipping its high-grade ore to Puget Sound smelters.

DAKIN MINE**CALIFORNIA**

See Mason Valley Mines Co.

FORKS OF SALMON RIVER MINING CO.**CALIFORNIA**

Care A. C. Aiken, pres.; Flatiron Bldg., San Francisco Cal. Mines at Sawyer's Bar, Cal., and Blairsden, Plumas Co., Cal. B. M. Newcomb, v. p.; F. M. Doak, sec.-treas.

Inc. Nov. 1, 1909, in Cal. **Cap.**, \$200,000; shares \$1. par; all issued.

Property: two mines, one a hydraulic mine, located on the North Fork of the Salmon River, 14 miles from Sawyer's Bar, Siskiyou Co., and the other an old quartz mine near Sierra City, Cal.

Development: by 3 tunnels of 1,700', 1,300' and 2,500', one with back of 1,500'.

Ore: in shoot 6' wide and 600' long averaged nearly \$20. Development work is now being done at both properties. At the hydraulic mine, enough gravel is being washed to pay a small profit; it is one of the best equipped hydraulic properties in California, and is served by 4,500 miners inches of water through a flume 4 miles long, delivering it at a pressure of 250'. The company has 10 years supply of gravel. The old works at the quartz mine are being cleaned out preparatory to an examination.

Production to date, \$3,000,000.

GREY EAGLE COPPER CO.

CALIFORNIA

Office: 14 Wall St., New York. **Mine office:** Happy Camp, Siskiyou Co., Cal. Wm. Koerner, supt.

Property: 40 claims, 16 patented, owned by the Mason Valley Mines Co. (which see) of Thompson, Nev., said to show a blanket copper sulphide deposit in mica-schist, with dip of 15° N. E. and N. W. strike.

Development: by tunnels. Considered promising.

ISABELLA COPPER MINING CO.

CALIFORNIA

Directors: K. E. Rader, M. A. Fesler, Howard W. Williford, of Berkeley; E. J. Rader, Sacramento, and E. E. Rader, of Barzilla, San Mateo Co., Cal.

Inc. 1911. **Cap.**, \$500,000. **Property** in the Etna Mills district, Siskiyou Co. A 100' tunnel was being driven at last accounts.

JOE CREEK COPPER CO.

CALIFORNIA

Idle. Hutton, Siskiyou Co., Cal. Is one of the many prospects of the copper belt of northern California, whose owners believed a copper out-crop could be made to pay cost of development and equipment from ore mined from shallow workings.

Property: apparently owned formerly by Copper King Mining Co., lying between the Blomfield group and the Blue Ledge mine, has opencuts and crosscuts developing the mine to a depth of 400'. Mine is said to carry several large orebodies, ranging 5 to 8% in copper tenor and \$8 per ton in combined gold and silver values, an estimate considered excessive.

KING SOLOMON MINE.

CALIFORNIA

Owned by C. B. Cottrell, Westerly, R. I. W. H. Young, supt. Cecilville, Siskiyou Co., Cal.

Property: 40 acres in Secs, 6 and 7, T. 38 N., R. 11 W., near Randsburg, in the Liberty Mining district, Siskiyou Co., Cal., shows a 5' vein of free milling ore, with quartz porphyry foot and slate hanging-wall. The vein runs N. S. and dips 60° E. Developed by 460' tunnel, 130' shaft and drifts.

Equipment: includes an 8-stamp mill, hoist, boiler and buildings.

In June, 1917, mill was working nearly 2 shifts daily on ore from 450' depth.

MEXICAN SMELTING & REFINING CO.

CALIFORNIA

Office: 82 Beaver St., New York. A subsidiary of the Compania Metalurgica Mexicana and holds title to the Blue Ledge-mine in Siskiyou Co., Cal., which see.

TRAIL CREEK MINING CO.

CALIFORNIA

Callahan, Cal. G. A. Foster, pres. and supt.; G. Hart, sec.

Property: 100 acres in Trail Creek, Siskiyou Co., reached by trail from Callahan. A fissure vein occurring between schist walls, dips 60° N., course N. 40° W., is said to carry an ore shoot 300' long and 2' wide. Workings consist of 850' tunnel, drifts and a stope 200' long.

Equipment: includes two Huntington mills, run by water power and several buildings. Owners claim 3,000 tons ore reserves. Production to July, 1915, \$40,000.

SOLANO COUNTY

SAINT JOHNS MINES CO. (quicksilver)

CALIFORNIA

Address: Box 606, Vallejo, Cal.

Officers: C. G. Dennis, pres. and mgr.; John Martin, v. p.; C. F. Colmar, sec.

Inc. June, 1914, in Cal. Cap., \$150,000; shares \$1 par; outstanding \$90,000. Transfer office: 600 Call Bldg., San Francisco. Annual meeting, January 1.

Condensed balance sheet for 1916 shows: assets, \$106,603. Liabilities include: capital stock, \$90,000; surplus, \$8,198; other liabilities, \$8,405. Gross earnings, 1916, reported as \$46,202 with operating expenses of \$40,310.

Property: 713 acres on Soscol ranch, 6 miles N. E. of Vallejo, Solano Co., is said to show cinnabar ore occurring as bunches in sandstone and shale over a width of 2' to 30'. Developed by 320' shaft and tunnels; greatest depth of workings, 320'. Management reports 12,000 tons ore blocked out, average assay 0.27 quicksilver.

Equipment: includes a 25 h. p. gasoline hoist, two 7½-ton Neate and one 15-ton Scott furnace, capacity 30 tons daily and a 25 h. p. oil engine with 15 kw. generator.

Production: 1916, 9,068 tons ore, yielding 48,675 lbs. quicksilver; 5.37 lbs. recovered per ton of ore; cost per 75 lb. flask, \$62.11.

SUTTER AND TEHAMA COUNTIES

CALIF. & MASS. COPPER MINES CO.

CALIFORNIA

Inactive. Described Vol. VIII. Property at Red Bluff, Tehama Co., Cal., is leased for 99 years to Chicago Copper Refining Co., which see.

CHICAGO COPPER REFINING CO.

CALIFORNIA

Office: Kesner Bldg., Chicago, Ill. Mine office; Red Bluff, Tehama Co., Cal.

Officers: Wm. Wrigley, Jr., pres.; A. G. Cox, v. p.; N. E. Guyot, sec. and supt.; Edw. Dickinson, treas.; preceding, with Chas. P. Whitney, directors.

Inc. Aug., 1908, in Wyoming. Cap., \$2,000,000; shares \$5 par; non-assessable. Has no connection with the Chicago Copper Refining Co. of Illinois, now bankrupt.

Has a 99-year lease on the property of the California & Massachusetts Copper Mines Co.

Lands: 72 claims, 1,600 acres, unpatented, well timbered and watered, on Tom Head mountain, 25 miles west of Red Bluff, known as the Tom Head mine.

Geology: property shows schists, cut by rhyolite dikes, carrying 3 veins, with gossans of 90 to 300' width, 1 vein of 30' estimated average width, carrying chalcopryite, associated with pyrite, estimated to assay 2 to 3% copper, 0.5 oz. silver and \$1.40 gold per ton. Mine formerly was reported to carry bornite and native copper, and No. 3 tunnel is said to have given ore assaying up to 18% copper, with small gold values.

Developed: by tunnels of 45', 355' and 460', with about 2,000' of workings, estimated by management to show 250,000 tons of ore.

Equipment: includes an 80 h. p. steam plant, with a small hoist and 4-drill Sullivan air compressor. Lands carry undeveloped water power, estimated at 3,200 h. p. There is a 4,000' sawmill, and 10 buildings. Management is said to plan experiments with flotation process. Property, though low in grade, gives evidence of having large orebodies. Superintendent reports that "while property is intact and protected, work will not be resumed until Forestry Bureau exactions cease and smoke restrictions are modified so as to permit smelting."

KLEINSORGE MINE

CALIFORNIA

Address: W. E. Kleinsorge, Sacramento, Cal.

Property: an extensive area 40 miles by road S. E. of Red Bluff, Tehama county, on the S. P. R. R., in rough and bare country.

Geology: the hills, which are steep, consist mainly of serpentine, in places much shattered. In this rock chrome occurs as veins, pockets and disseminations. The last type of deposit covers a considerable area, and will only be commercial by concentrating.

Equipment: 7-mile road, two camps, aerial tram, loading bins, etc.

Production: started about mid-year, 1917, and amounts to several car-loads monthly of ore assaying 42% Cr_2O_3 and low in silica.

PACIFIC GOLD DREDGING CO.

CALIFORNIA

See Yukon Gold Company.

TEDOC MINING CO.

CALIFORNIA

W. A. T. Agard, supt., Red Bluff, Tehama Co., Cal.

Owens chrome mines on Tedoc mountain, 51 miles from Red Bluff, on Eureka road. Built 11 mile road 1917, to connect mine with stage road. Has contracted for shipments of 4,000 tons of chrome ore in 1918, by motor truck.

TRINITY COUNTY

BOBS FARM MINING CO.

CALIFORNIA

Sacramento, Cal., J. H. Byers, pres.; W. H. Montgomery, sec.

Property: 100 acres, in Sec. 5, T. 37 N., R. 12 W., in Trinity Reserve, at an elevation of 5,000', was located in 1883. Said to be the best producer in the New River mining district, Trinity Co., but is very expensive to operate, as supplies must be packed over a trail from North Fork, a distance of 40 miles, from the latter town.

Ore: gold in vein with diabase hanging wall and quartz porphyry foot-wall; strikes E.; dips 45° N.; width of orebody 2', and length 260'; maximum depth of workings 700'.

Development: tunnels; longest, 1,300'; 6 levels from 60' to 700' long; 2 crosscut tunnels, 300' and 600' in length; several thousand feet of workings.

Equipment: includes 3-stamp mill and one 3' Huntington mill, run by steam and water power. Twelve men employed in 1914. Said to have produced \$350,000.

See Mines & Min. Res. of Trinity Co., Cal., State Mineralogist's Report, 1915, p. 151.

BROWN BEAR MINING CO.

CALIFORNIA

Address: Redding, Shasta Co., and Deadwood, Trinity Co., Cal.; Thos. McDonald, pres.; B. McDonald, supt.

Property: 586 acres, of mineral land, 200 patented, and 671 acres of timber land, includes the Brown Bear mine, on north side of Deadwood Gulch at Deadwood, discovered in 1875, and worked ever since. The property is a consolidation of several mines and as a whole has been the largest producer in the Weaverville Quadrangle and the most famous mine in Trinity County. It is credited with a production of \$7,000,000 to \$10,000,000.

Geology: there are 2 main veins, the Monte Cristo and the Last Chance 200' south of the former, which lie for the most part in Bragdon slate formation, but also cut an intrusive soda granite porphyry. Veins are parallel, and strike N. 80° E. The Monte Cristo dips steeply to the north; the Last Chance dips south 60° to 80° . Width as a rule is not over 2', more commonly about 6", but stopes have been mined to a width of 22'. Ore-shoots are several hundred feet in length; those of the Last Chance vein pitch at a flat angle to the East. The veins show clay slips along both walls, so it is rare that the ore is frozen to the wall. Quartz is the principal gangue mineral; the ore contains pyrite, galena, sphalerite and arsenopyrite. Pyrite being the most common, rich ore is usually found, where galena and sphalerite are present. The best ore mined runs about \$100 per ton, but the average grade is between \$20 and \$50.

Development: 7 crosscut tunnels ranging in length from 100' to 2,400', the lowest being 1,080' below the outcrop. There are several miles of underground workings.

Equipment: includes a 10-stamp mill, 2 Wilfley tables and water power obtained from Deadwood Creek through a 3-mile ditch.

Lessees have been working the mine.

See Mines & Min. Res. of Trinity County, State Mineralogist's Rept., p. 141; and U. S. G. S. Bull. 540, p. 70.

ENTERPRISE GOLD MINING CO.

CALIFORNIA

Owens the Enterprise mine, 160 acres, in East Fork mining district, $7\frac{1}{2}$ miles north of North Fork, in the Trinity Forest Reserve, Trinity Co., Cal. The first claim, Lone Jack, was located in 1882, and mine has been operated more or less continuously since.

Ore: free milling gold occurs in vein in diorite. Vein has N. E.-S. W. strike and dip of 10° to 45° N. W. Ore occurs in 3 shoots, 900', 300' and 300' long, with average width of 14".

Development: by tunnels longest 1,400', has 3,000' of workings, with 3 stopes from 300' to 900' long, 50' to 240' high, and average width of 5'. Greatest vertical depth of development is 500'. At last accounts considerable ore was said to be blocked out.

Equipment: includes compressor plant, small electric plant and 10-stamp mill employs 12 men. Production to date said to be over \$350,000. Cost of operating is over \$7 per ton.

FIVE PINES MINING CO.

CALIFORNIA

Five Pines, Trinity Co., Cal. H. J. Van Ness, pres.; L. Van Ness, mgr.

Property: located in 1896, is on the N. E. side of Van Ness creek, about $1\frac{1}{2}$ miles above its mouth and 2 miles N. W. of Minersville. Mine is said to have produced to 1915 almost \$300,000, and to be the best producer of the district.

Ore: free milling gold quartz with calcite, occurs in a series of pockets in a contact vein between meta-andesite and overlying slate and sandstone.

Development: 225' incline shaft with a level at 125'.

Equipment: includes a small hoist and 2-stamp mill. Coarse gold and 80% of total value is recovered in hand mortar. Water power is used. Employs 4 men. See U. S. G. S. Bull. 540, p. 73, and Mines & Min. Res. of Trinity Co., State Mineralogist's Report, 1915.

GLOBE CONSOLIDATED LEASE, INC.

CALIFORNIA

Subsidiary of Crown-Reserve Mining Co., Ltd., Cobalt, Ont. Held option on Globe mine, Trinity Co., Cal., but according to gen. mgr., S. W. Cohen, anticipations were not realized, and the option allowed to lapse.

GLOBE CONSOLIDATED MINING CO.

CALIFORNIA

Canadian corporation, whose property was under option to Crown-Reserve Mining Co. of Ontario.

Address: Dedrick, Trinity Co., Cal.

Property: Bailey, Chloride, Globe groups, 200 acres, at an elevation of 6,100', in Canyon Creek mining district, 4 miles north of Dedrick, in Trinity Reserve, Trinity Co. Claims said to have 4 veins in hornblende schist, of which the Globe and Bailey are the main veins; the Globe is 6' wide, with a known oreshoot of 1,500' length; the Bailey can be seen 500' below this. Ore is free milling, assaying \$9 per ton.

Development: to date, by 6 tunnels, from 250' to 1,700' long, greatest depth on vein 620' with several thousand feet of underground workings. A large body of fair grade ore is said to be blocked out. The mine is 27 miles from a railroad; transportation is by auto.

Equipment: includes a 5,600' gravity tram from mine to mill, compressor, electrical plant, sawmill and dwellings. There is a 20-stamp mill and 125-ton cyanide plant. Water power is obtained from Canyon Creek. Plant is said to have cost over \$300,000.

Production: said to have produced \$750,000 in gold under previous owners, who had insufficient ore blocked out to operate at a profit. See

U. S. G. S. Bull. 540, p. 76-78; Mines & Min. Res. Trinity Co., Cal.; State Mineralogist's Report, 1915, pp. 145-7.

ISLAND COPPER CO.

CALIFORNIA

Office: Security Bank Bldg., Oakland, Cal. Frank A. Leach, pres.; C. H. Wilcox, v. p.; E. R. Leach, mgr.

Property: 4 patented mining claims and other property aggregating 265 acres, in the S. W. corner of Trinity Co., within 500 yards of the Northwestern Pacific R. R., operating from San Francisco to Humboldt bay. The postoffice is Island Mountain, Trinity Co., Cal.

Ore: a lenticular body of copper-iron sulphides occurs in metamorphosed sedimentary rocks, outcropping at several places.

Development: is said to indicate that these various outcrops are part of one mass, whose estimated dimensions are 90' to 100' in width, 450' in length and a proven depth of from 60 to 145'. Ores carry 3½% copper, 1½ oz. silver and \$2 in gold per ton.

Development over 2,500' of underground workings, opening up 275,000 tons of ore. Up to May 1 1917, 15,000 tons had been shipped.

LA GRANGE MINING CO.

CALIFORNIA

Offices: Gold Fields American Development Co., 233 Broadway, New York and Weaverville, Cal. James MacDougall, sec.

Inc. March 24, 1905, in New York. **Cap.**, \$1,000,000; \$780,000 issued.

Dividends: 6% in 1910, 2% in 1911, 5% in 1912, and 9% in 1913.

Property: owns extensive gravel deposits in Trinity Co., Cal., and is probably the largest hydraulic mine in the world. Latest report states that 2,000,000 cu. yds. was sluiced in the season, yielding \$39,762, or 2c per yard. Costs were 4c per yard. By rearranging the sluice-boxes it is considered that 4,000,000 yards could be hydraulicked each season, at a cost of not over 2 cents.

Production:

Year	Gold, etc.	Operations	Interest, taxes, etc.	Dividends	Loss
1916.....	\$ 41,148	\$ 76,097	\$21,361	\$	\$56,310
1915.....	55,062	81,879	24,978	51,795
1914.....	83,627	108,435	18,764	43,572
1913.....	122,957	100,882	12,207	67,500	57,632
1912.....	151,443	96,556	17,845	52,500	15,458

QUINBY MINING CO.

CALIFORNIA

Idle.

Address: Quinby, via Burnt ranch, Cal.

Property: 6 claims, on Quinby Creek, in Trinity Reserve, showing 4' vein of copper ore, developed by 2 tunnels, 100' and 400' long and 300' drifts. Oxidized surface ore was milled.

TRINITY GOLD MINING & REDUCTION CO.

CALIFORNIA

Office: D. W. Shanks, Merchants' Nat. Bank Bldg., San Francisco. Mine office: Carrville, Trinity Co., Cal.

Officers: at last accounts, Henry W. Miller, pres.; Archibald Nesbett, v. p.; James H. Lee, sec.-treas.

Inc. Feb. 1909, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; issued, \$969,220. Lincoln Trust Co., New York, registrar. Annual meeting, 2nd Tuesday in January.

Property: 498 acres, 323 patented, including the Headlight mine, in Trinity Center district. 1½ miles S. E. of Carrville. Company also owns 115 acres timber land. The mine has an orebody forming a flat shoot 40' thick but containing large dikes of disintegrated porphyry which did not show at the surface, so that the ore reserves reported by engineers do not exist and the oxidized ore has been worked out. A new orebody, found 1912, in another part of the property, is said to have developed 100,000 tons of ore, carrying ½ to 2% copper, 47% sulphur and about

\$4.50 in gold and silver. This orebody has been proved by diamond drilling and by a 200' crosscut.

Equipment: includes a complete power plant, stamp mill and concentrator, which in 1912 treated 47,600 tons of ore with a recovery of 81.88% at a cost of \$1.01 per ton. Mining costs were \$1.43 and the ore assayed \$4.36 per ton. Property was idle in 1914 and management was experimenting with a wet process for the treatment of the sulphide ore, as it cannot be roasted owing to the Government Forestry restrictions. Nothing has been reported since and the management has ignored all requests for information.

In April, 1917, company was reported to have sold its hydro-electric plant and distributing system to the California-Oregon Power Co. for \$22,000.

VALDOR DREDGING CO.

CALIFORNIA

Office: R. H. Elliott, Holbrook Bldg., 58 Sutter St., San Francisco. **Mine office:** G. H. Hutton, supt., Junction City, Cal.

Officers: Bulkeley Wells, pres.; R. H. Elliott, v. p.; A. D. Snodgrass, sec.-treas.; with T. D. Harris and Jafet Lindeberg, directors.

Inc. March, 1916, in California. **Cap.**, \$200,000; shares \$100 par; all issued. Annual meeting, 3rd Tuesday in February.

Property: placer claims, near Junction City, Trinity Co., Cal. Gravel contains gold and metals of the platinum group.

Equipment: one 7 cu. ft. close connected, electric driven dredge.

Production: in 6 weeks' work in 1916 the boat dug 145,500 yards at a cost of 3.6c per yard.

Dredging started late in 1916. Costs appear to be low.

TUOLUMNE COUNTY

APP MINE

CALIFORNIA

Owned by Dutch Sweeney Mining Co., which see.

BAGDAD-CHASE GOLD MINING CO.

CALIFORNIA

J. N. Beckley, treas.; Rochester, N. Y. Is a holding company owning all the stock of the Soulsby Consolidated Gold Mining Co., Soulsbyville, Cal., also a stock interest in the Pacific Mines Corporation, Camp Rochester, Cal., and in the Boise-Rochester Mining Co., Atlanta, Nev.

BLACK OAK MINES & MILLING CO.

CALIFORNIA

Office: First Natl. Bank Bldg., San Francisco. **Mine office:** Soulsbyville, Tuolumne Co., Cal. **Chas. E. Knox**, gen. mgr., Tonopah, Nev.; **R. C. Knox**, supt.; **F. N. Watts**, mill supt.

Property: several claims 1 mile west of Soulsbyville.

Ore: quartz, containing pyrrhotite, sphalerite, marcasite and galena, in a vein in granodiorite. Vein has strike of N. 15° E., with dip 60° to 70° W., varying in width from 1' to 25', and has several branches coming in from the hanging-wall side. The ore occurs in lenses at the intersections of diorite dike crossings and also near faults. Diorite dikes have a strike of N. 55° E., vertical dip, and are 1 to 2' in width.

Development: by a 70' incline shaft sunk in the foot-wall and levels at intervals of 100'. Lowest workings are on the 1,800' level. Two ore-shoots have been developed, one north of the shaft, 500' long, average width 4', the other south of the shaft, 300' long and average width of 20'. Ore milled averages \$20 per ton.

Equipment: 100 h. p. single-drum electric hoist, Ingersoll-Rand air-compressor, and pumps.

Mill: 20-stamp, weight, 1,250 lbs. each, drop 6", 100 drops per minute, crush 3.5 tons per stamp through 10-mesh screens. Ore is crushed in 1.85% KCN solution. Remainder of equipment includes a Dorr classifier, a 5x18' tube mill, treatment tanks, and Oliver filter, capacity 100 tons per day. CaO, 0.15%, is added to batteries and agitators, and 24 lbs. PbO to the tube mill and agitators. Mill makes an extraction of 96%, consuming 1.5 lbs. KCN and 3 lbs. lime per ton of ore. Daily capacity of mill is 75

to 100 tons. Costs per ton are: development, \$1.63; mining, \$2.22; treatment, \$1.59; general and misc., \$0.56; material in mill, \$0.96; labor in mill, \$0.62; total, \$7.59. Employs 85 men. See Mineralogist's Report, Mines & Min. Res. of Tuolumne Co., p. 138.

Diamond drilling disclosed some ore on 700' level, and new work in 1916 showed 4' of high grade ore on 1,800' level.

CONFIDENCE GOLD MINES CORP'N.

CALIFORNIA

Mine, 12 miles East of Sonora, Tuolumne Co., Cal.

Directors: W. B. Hunting, New York; E. S. Bolen and W. A. Stratta of Richmond, Va.; Edward Jassen, mgr.

Inc. 1917 in Virginia. **Cap.**, \$600,000; shares \$10 par; 1,000 preferred shares and 5,000 common. Listed on San Francisco Stock Exchange.

Property: Confidence group of claims and mill site opened by 33° shaft to depth of 1,100' with good ore opened on 800' level. Mine idle for 10 years past, has produced \$5,000,000 gold.

Equipment: new hoist and air compressor installed 1917, and is putting up 100-ton roller mill.

DUTCH-SWEENEY MINING CO.

CALIFORNIA

Office: 1018 Crocker Bldg., San Francisco, Cal. Mines at Quartz, Tuolumne Co., Cal.

Officers: W. J. Loring, pres.; R. D. Allan, sec.; C. H. Fry, supt.

Property: the Dutch mine, formerly owned by the Dutch Cons. Gold Mining Co., 70 acres, and the App, Heslep and Hitchcock groups. Claims are on the Mother Lode and carry gold values. On the Dutch claim the vein splits into 2 veins about 75' apart; the east vein is irregular, breaking up into stringers running in all directions, while the west vein is more regular. General course of veins is N. 35° W., with dip 65° N. E. Both walls are of Calaveras slate.

Development: by incline shafts. Main working shaft, 1,800', is sunk on 65° incline, with levels to the 1,200' level at 100' intervals, remaining levels at 150' intervals. On the 1,650' level the orebody has an average width of 16', shaft being sunk to 2,250'.

Equipment: includes 150 h. p. double-drum electric hoist, one 450 cu. ft. Leyner and one 1,000 cu. ft. Rand-Duplex air compressor. Water is pumped from 1,000' level by a Dean triplex pump.

Mill: 40 stamps, weights 1,050 lbs., drop 6", 106 drops per min., crushing 5 tons per stamp through 20-mesh; stamps are driven by two 50 h. p. motors. Pulp from batteries flows over Johnson and Frue vanners. Extraction assay \$36 gold per ton. Total operating costs are \$2.30 per ton. Company employs about 100 men.

Ores are treated by amalgamation, concentration and flotation.

EAGLE SHAWMUT MINE

CALIFORNIA

Acquired in Feb., 1917, by the Tonopah Belmont Dev. Co., which see. To depth of 2,300' the gold yield has been \$4,500,000.

FRANCO CONTENTION MINING CO.

CALIFORNIA

Mine address: Stent, Cal.

Officers: W. D. Waldman, pres.; H. C. Brentschneider, sec.; Casper, Wyo.; C. W. Burdick, v. p.; L. S. Grant, mgr.

Property: 180 acres on Knight creek, Tuolumne Co., Cal., closed down for duration of the war.

HARVARD MINE, INC.

CALIFORNIA

Letters sent to 141 Milk St., Boston, Mass., are unanswered. W. B. Buckminster, gen. mgr.; H. W. Gould, supt.

Property: 4 claims, and a mill site, 80 acres, on the S. E. slope of Whiskey Hill, one mile S. W. of Jamestown, Tuolumne Co., Cal. Claims cover 5,000' along the strike of the veins.

Ore: 3 veins, the east, central and west, with strike N. 37° W., dip 60° N. E. and average width 10', have been explored. Central vein consists of solid quartz 6' to 12' wide, but values are, as a rule, too low to mine. The east and west veins consist of a mass of quartz stringers cut-

ting the schist and containing free gold. Main footwall is serpentine with hanging-wall of Calaveras slates. Ore occurs W. of the central vein. There are 7 distinct ore-shoots developed on the property, average length 200', width 6'. Veins are faulted on S. end of orebody between the 1,200' and 1,400' levels, and on the N. end between the 1,100' and 1,200' levels; they are faulted 8' to 25' to the S. W.

Development: 3-compartment shaft, 1,650' deep, with levels at 200', 500', 700', 800' and below this at 150' intervals; lowest level is at 1,400'. Total underground workings about 4 miles. Shrinkage stoping is used. Ore pockets, 100 to 200 tons capacity, are in hanging wall of shaft.

Equipment: includes a 300 h. p. double-drum electric hoist; 2 electrically driven Rix compressors of 1,100 cu. ft. and 800 cu. ft. capacity, and a 60-stamp mill driven by two 75 h. p. motors. Weight of stamps, 1,200 lbs. each, drops 7", 100 times per min., crush 5 tons per stamp, through 40-mesh. Mill is 600' from shaft and ore is handled by a 15 h. p. electric motor, in two 1½-ton cars. An 86% extraction is made of the pulp from stamp batteries, by 24 Johnston vanners, driven by 35 h. p. motor. Concentrates assay \$30 per ton. Company employs 116 men. See Mines & Min. Res. of Tuolumne Co., State Mineralogist's Report, 1915, pp. 149-151.

HOPE MINES DEVELOPMENT CO.

CALIFORNIA

Address: Sonora, Tuolumne Co., Cal.

Officers: T. W. Whiteley, pres.; Henry Sadler, v. p.; C. W. Johnson, treas.; F. O. Horn, sec. Geo. Weston, mgr.

Statement of operations in 1916 shows: income from bullion sales, \$12,413; cash on hand, \$15,000. Expenditures were \$30,823, which includes \$14,600 for operating expenses, \$5,000 for new machinery and \$4,100 for property purchase.

Property: an old one, is on the Bonanza lead, ½-mile E. of Sonora, and is said to show free milling gold ore. Vein strikes N. 85° E. with dip of 23° W. and 2' average width. Has mica schist footwall and porphyry hanging. Bought 3 adjoining fractions, 1916.

Development: by tunnels, main tunnel is in 1,200'. New work in 1916 totaled 1,860'.

Equipment: includes a 25-h. p. gasoline engine and a 5-stamp mill. Eight men are employed.

Production: 400 tons in 1916. Average returns, 1917, amount to \$1,500 gross per month.

With new equipment and additional claims, 1917, operations should show a profit.

JAMESTOWN EXPLORATION CO.

CALIFORNIA

Idle.

Office: 546 E. Weber Ave., Stockton, Cal.

Officers: A. K. Kirkland, pres.-mgr.; J. P. Mangante, v. p.; L. T. Freitas, sec.; J. H. Utt, treas.; with W. S. Kelly, directors.

Inc. April 19, 1913, in Cal. **Cap.** \$100,000; shares \$1 par; assessable; 25,000 shares issued. Annual meeting, 1st Tuesday in April.

Property: 1 claim, patented, 20 acres, ¾ mile W. of Jamestown, Tuolumne Co., shows a 5' quartz vein with gold values, said to average \$14 per ton. Developed by 700' tunnel to depth of 100'. Work stopped since 1915, owing to lack of funds.

JUMPER CALIFORNIAN GOLD MINES CO.

CALIFORNIA

Stent, Cal., P. E. de Caplane, pres.; W. D. Waltman, v. p.; Lester S. Grant, mgr.

Property: 120 acres at Stent, Tuolumne Co., Cal., on the Mother Lode, is developed to depth of 1,800' by an incline shaft.

Equipment: includes a 60-ton 20-stamp mill. Operated for nearly 3 years by lessees. Annual yield \$100,000. Company receives 25% royalty and charges \$1 a ton for milling ore extracted.

LOUISIANA DEVELOPMENT CO.

CALIFORNIA

Office: 606 Electric Bldg., Cleveland, O.

Property: the Louisiana quartz mine, 4 claims, 50 acres, 2 miles N. W. of Tuolumne, Tuolumne Co., Cal., said to carry an 18" vein in grandodiorite, running N. 15° E, with dip 70° S. E. Ore occurs as free gold with pyrrhotite, sphalerite and galena.

Developed: by 520' shaft with N. and S. drifts of several hundred feet. Operated by lessees in 1916. Letters returned, 1917. Probably idle.

McALPINE MINES CO.

CALIFORNIA

Coulterville, Mariposa Co., Cal.

Officers: Frank R. Whitcomb, pres. and gen. mgr.; C. L. La Rue, v. p.; A. L. D. Barnard, sec.; Fannie W. McLean, treas.; with M. C. Hassett, directors. W. A. Irwin, supt.

Cap., \$1,500,000; shares \$1 par; fully paid and non-assessable.

Company was formed by California people to reopen the old McAlpine mine on the Mother Lode, Tuolumne Co., near the line between Tuolumne and Mariposa counties. The mine was a well-known producer in the 60's.

Property: 120 acres, covers 2,100' on the strike of the Mother Lode, including the water rights of Moccasin Creek.

Development: shaft-sinking is underway from 500 to 670' depth. Rich ore, said to have been opened on the 500' level for 135', then 90' in \$6 to \$25 ore.

Equipment: includes a Fairbanks-Morse hoist, a 55-h. p. motor and a 5-drill air compressor. Electric power is obtained from Pacific Gas & Electric Co. A 150-ton mill to be erected, using flotation.

NEW PROVIDENCE GOLD MINING CO.

CALIFORNIA

Office: 2041 Emerson St., Berkeley, Cal. John D. Hammond, sec.

Property: 5 claims, 90 acres, including the Providence and Consuelo, about 2½ miles S. E. of Tuolumne, Tuolumne Co., Cal., said to show 2 parallel veins, 5' wide, in black Calaveras slate, running N. 8° E., with dip 45° E. Ore is gold with galena and 2% pyrite.

Development: by 1,300' shaft with levels every 100'.

Equipment: includes 10-stamp mill. Product is a gold-silver concentrate said to run better than \$90 per ton. About 12 men employed.

NYMAN CONSOLIDATED MINES CO.

CALIFORNIA

Office: 502 Humboldt Bank Bldg., San Francisco, Cal. Mine office: Stent, Tuolumne Co., Cal.

Officers: A. L. Trowbridge, pres.; R. W. Barrett, v. p.; F. G. Mudgett, sec.-treas.; with C. P. Cutten and G. B. Gillson, directors; Fay Chadbourne, supt.

Inc. March 19, 1915, in California. **Cap.,** \$200,000; \$1 par; assessable; 161,586 shares issued.

Gross earnings from July, 1915, to March, 1917, were \$51,086, and cost of operation and maintenance, \$53,614. Cash assets at end of April, 1917, were \$8,791.

Property: 5 patented claims, 240 acres, on the Mother Lode, between Quartz and Stent, 2 miles S. of Jamestown, adjoining the Dutch-App on north and Cloudman-Jumper group on the south.

Geology: claims show a contact zone between amphibolite schist and greenstone. Three vein systems have been opened. The West or App is 20 to 90' wide, showing at N. end of Nyman claim; the Heslop or Middle is 50' long, with \$5 to \$10 ore across 7'; the Knox & Boyle shows, 2' to 8' of higher grade ore on the 700' and 800' levels. The Mascot shows shoots of high grade ore in Calaveras slate hanging wall. Considerable development is underway, 1917.

Production: in 20 months ended March 31, 1917, 8,550 tons yielded \$51,000 of gold. Mill recovery was 85 to 90% by amalgamation and concentration. Output to date is \$2,000,000. Costs with full equipment are estimated at between \$2.50 and \$3 per ton.

Development: by 15,000' of underground workings, consisting of 700' tunnel, 850' vertical shaft and 2 incline shafts, one 825' and the other 810' deep, both dipping 60° E., with levels 100' and 200' apart. Drifts have been

started on \$6 ore N. and S. of old crosscuts that apparently had not been sampled years ago.

Equipment: includes 2,000' double-drum hoist, 750 cu. ft. air compressor, pumps, electric power; 200-ton 40-stamp mill, with Frue vanners for 20 stamps and 22 buildings.

PITTSBURG-SILVER PEAK GOLD MINING CO. CALIFORNIA

Office: 912 California Bank Bldg., Pittsburg, Pa.

Officers: Wm. Flinn, pres.; Geo. T. Oliver, v. p.; T. J. Crump, sec.-treas.; Wm. A. Bradley, gen. mgr.; John Mocine, supt.; B. A. Rives, res. pur. agt.

Inc. May 25, 1906. **Cap.,** \$3,000,000; shares \$1 par; 2,793,733 shares outstanding. Annual meeting, first Monday in May. Stock is listed on San Francisco and Pittsburg Exchanges. Owns all the stock of the Silver Peak Gold Mining Co. 99¼% of the stock of the Mohawk-Alpine Mining Co., and all the stock of the Silver Peak R. R. running 17½ miles from Blair, Nev., to the Tonopah-Goldfield R. R., at Blair Junction.

Last dividend paid July 1, 1914, was 2cts. per share, with total dividends to date of \$784,800 or 28%.

Property: Company acquired the Rawhide gold mine near Sonora, Tuolumne Co., Cal., in 1915, and has moved the 120-ton mill and cyanide plant from Blair to the new property. The Rawhide mine is developed by an old 1,800' shaft, which has been unwatered. Work progressing, 1917.

Also owned 2,000 acres of mineral-bearing land at Blair, Esmeralda Co., Nev., formerly one of the largest producers of low-grade ore in the state. The orebodies became exhausted in 1914 and the property was abandoned.

YUBA COUNTY

YUBA CONSOLIDATED GOLD FIELDS. CALIFORNIA

Offices: Gold Fields American Development Co., 233 Broadway, New York; and Hammonton, Yuba Co., Cal.

Property: extensive dredging areas on the Yuba river, California, on which 14 large dredges are operating. No 16, launched a year ago, has 18 cu. ft. buckets. No. 17, of similar size, was launched on Nov. 4, 1917.

Production: in 1916, totaled 17,750,000 cu. yds. of gravel, averaging 12.02c per yard, at a cost of 4.27c. Recent yields have been 12.87c per yard, costing 3.7c. In the 1916 period the profit was \$1,374,868.

Company maintains a large machine-shop, wherein its dredges are made and repaired, and also makes them for other companies. The manufacturing concern is known as Yuba Construction Co., with works at Marysville, Cal.

COLORADO.

The mines and mining companies of this State are arranged geographically by counties, since outside of the Leadville and Cripple Creek districts, the mines are scattered over many counties and many small districts. Leadville properties will therefore be found under Lake County and Cripple Creek under Teller County.

COLORADO FUEL AND IRON CO. COLORADO

General Office: Boston Bldg., Denver, Colo.

Officers: J. F. Welborn, pres.; S. J. Murphy, v. p.; C. J. Hicks, asst. to pres.; J. Chilberg, v. p. and sales mgr.; S. G. Pierson, v. p. and gen. pur. agt.; J. A. Writer, sec.-treas.; L. B. Rogers and E. V. Cary, asst. secs.; A. D. Moss, asst. treas.; F. H. Bently, and J. B. McKennan, gen mgr

Inc. Oct. 21, 1892, in Colo. **Cap.,** \$44,200,000 com., and \$2,000,000 pfd.; of which \$34,235,540 and \$2,000,000 are issued. Funded debt outstanding: \$5,795,000 general mortgage 50-year, \$1,000 gold 5s, due Feb. 1, 1943.

Income for year ended June 30, 1917, was \$40,004,887, against \$25,626,-605 in 1916. Net income was \$9,019,602.

Property: besides steel works and coal mines, company has iron mines in Colorado, New Mexico and Wyoming. Total ore mined since 1892 is about 12,000,000 tons.

Production: from the iron mines: 813,728 tons in 1912; 853,878 in 1913; 614,039 in 1914; 441,026 in 1915; 709,601 tons in 1916.

EMPIRE ZINC CO. (COLORADO)

COLORADO

Company is a subsidiary of the New Jersey Zinc Co., 55 Wall St., New York City.

Office: 703 Symes Bldg., Denver, Colo. Owns and operates the following properties:

Small Hopes Mine, Leadville, Colo. Two operating shafts; the Emmett, 800', and the McCormick, 500' deep. Produces zinc, lead and iron sulphides; also some zinc carbonate.

Eagle Mines, Gilman, Colo. Two operating mines in Battle Mountain district, formerly owned by Eagle M. & M. Co. Ore is mainly zinc-iron sulphide and is treated by a roasting and magnetic separation treatment. Mill has a daily capacity of 150 tons. Formation is very similar to that at Leadville.

Canon City Mill, Canon City, Colo. Combined magnetic and wet mill designed to treat complex sulphide ores. Ores for this mill are purchased from outside producers. A very complete ore-testing plant is also maintained.

Kelly Mine, Kelly, New Mexico. Equipped with steam power plant and 100-ton concentrator, in which is treated a complex zinc, iron, lead sulphide ore. This property has been a large producer of zinc and lead carbonates. The ores occur in irregular replacements and shoots in flat dipping limestones. The Linchburg group of claims in this camp is owned by the Empire Zinc Co. and is now being developed.

Cleveland Mine, 10 miles north of Silver City, New Mexico, in Pinos Altos district. Equipment consists of mill using raw magnetic separation of 125 tons daily capacity and 400-h. p. power plant equipped with Diesel type of crude oil engines. The mine is connected with the railroad at Silver City by a 9-mile narrow-gauge mule tram. Ore is zinc sulphide occurring in metamorphosed limestones cut by intrusive dikes.

Hanover Mines, Hanover, New Mexico. Equipment consists of mill of 125 tons daily capacity using raw magnetic separation and 400-h. p. power plant equipped with Diesel type of crude oil engines. Ore is principally zinc sulphide associated with hornblende, serpentine and other metamorphic minerals occurring as irregular-shaped masses in limestones near igneous contacts. The oxidized zone has produced a large tonnage of zinc carbonate.

San Xavier Mine, 20 miles south of Tucson, Arizona. Is still in a development stage. The oxidized zone has produced a considerable tonnage of copper, lead and zinc carbonates. The sulphide zone shows low grade zinc ore of a very complex nature.

Potosi Mine, 20 miles west of Arden, Nevada. Equipment consists of sorting house and calciner. Ore is zinc carbonate occurring in a crushed limestone zone, as very irregular replacements. The calcined ore is hauled 20 miles to the railroad in auto trucks.

The Colonel Sellers Mine is worked out and abandoned.

EXCELSIOR MINING, MILLING & ELECTRIC CO. COLORADO

Office: 401 Continental Bldg., Denver, Colo.

Officers: F. B. Wiborg, v. p.-treas.; W. F. Robinson, sec.

Cap., \$250,000; shares \$1 par, fully issued, non-assessable.

Property: includes several mines under lease in different parts of Colorado. Original property was the Excelsior Mine at Frisco, Summit, Co., Colo., now being operated under lease and bond by E. Flood of Frisco. Said to show a vein carrying lead-copper ore with gold and silver values. Developed by 2,600' tunnel and 300' shaft, to be sunk to 600'. Mill being remodeled and flotation process installed, 1917.

Company has a lease from the Stratton Cripple Creek Mng. & Dev. Co. on the Longfellow mine, consisting of 2 claims adjoining the Golden Cycle and Vindicator mines, at Victor, in Cripple Creek district, Colo. The Longfellow mine was operated through the Golden Cycle shaft until April, 1917, but company is now deepening its own shaft and expects to resume work in December, 1917. Was shipping one car of ore daily when mine was closed down.

Company has a lease on part of the Bellevue mine at Empire, Colo., and on the Polar Star group at Georgetown, Colo.

GLOBE SMELTING & REFINING CO.

COLORADO

Denver, Colo. Controlled by American Smelting & Refining Co., and described thereunder.

PRIMOS CHEMICAL CO.

COLORADO

Office: Primos, Delaware Co., Pa.

Officers: Walter M. Stein, pres.; Gideon Boericke, treas.; John J. Boericke, sec.

Operates the Colorado Tungsten Corporation property.

Inc. Aug., 1912, in Colorado. Cap., \$500,000. Is the largest buyer and producer of vanadium, molybdenum, and tungsten ores in the United States.

Vanadium Department: company owns at Vanadium, Colo., about 5,000 acres of roscoelite bearing land, locally known as the Bear Creek property. At this place company operates a 400' shaft and tunnels, mining both on its own account and through a large number of lessees who pay 25% royalty. About 65 men are employed in the mine and 40 at the mill.

The output of this property, that at Placerville, San Miguel Co., and Saw Pit, San Juan Co., Colorado, also worked for vanadium, is treated in a mill and the concentrates are shipped to the parent company, at Primos, Pa. The Saw Pit is the biggest vanadium producer in America.

Molybdenum Department: operates the Young and Lively mine, the first in America to be worked for molybdenite exclusively. It is in the Daily district, 11 miles above Empire, Clear Creek Co., Colo. Ore occurs in veins, is mined through tunnels and an open cut, the product being sacked and shipped. The mine is equipped with compressor, and employs 40 to 60 men. In Sept., 1917, a flotation plant costing \$24,000 was being erected.

Primos Exploration Co.: subsidiary of the Primos Chemical Co. Same officers. H. Boericke, gen. mgr.

Inc. Nov. 24, 1915, in Delaware, to explore for ores and minerals. Cap., \$200,000.

Primos Mining & Milling Co.: is a close corporation, controlled by the Primos Chemical Co., the largest dealers in rare minerals in the world. Same officers, with C. F. Lake, v. p., and Harold Boericke, sec. and gen. mgr.

Company owns many properties at widely scattered localities, which are operated by different departments.

Company has large and extremely valuable holdings in Boulder Co., Colo., tungsten field, adjacent to Nederland.

Property: 1,680 acres, distributed over 5 sq. miles in the northern part of the Nederland field.

Geology: rocks are gneissoid granite and a granitic schist, which grade into quartz and mica-schist. These rocks are cut by dikes of pegmatite in which the ores occur as veins and streaks carrying ferberite, black tungstate of iron, in a matrix of quartz and feldspar and crushed rock. Veins run N. and S. and usually dip steeply, rarely as little as 45°.

The Conger is the principal mine, but two others are operated. At the Conger three veins are open, the Conger, Middle and East. The first two unite on their strike on the 450' level, making a large orebody. Ore shoots are lens-shaped, and show rapid pinching and enlargement. On the 200' level the vein has been stopped for a total distance of 800', and a big ore shoot has been stopped for 250' long, 90' high, and 8' wide.

Development: the shaft is said to be 1,100' deep, making it the second deepest tungsten mine in the world, the Atolia in California coming first. Levels are about 100' apart, and shrinkage stoping is employed. A working tunnel connects with the shaft at the 150' level.

Equipment: includes a Hendrie-Bolthoff geared hoist and a Norwalk 300 cu. ft. compressor. A two-mile tramway from mine to mill hauls ore in trains of five cars of 1½-ton capacity by 3½-ton General Electric storage battery motor.

Company also operates the Reddig mine, 600' deep, the Lily, 160' deep, and the Crow. About 75 sets of lessees were working on these properties early in 1916.

The Quaker and Oregon mines, about 4 miles from Lakewood, have a relatively small output, which is delivered to the mill by wagon. The Lone Tree mine, half a mile from Lakewood, has a high-grade orebody, 100' long, stoped for 70' high and as much as 20' wide. The Quaker shaft is 325' deep.

The Primos mill, at Lakewood, treats 60 tons daily of 3 to 5% ore. It has a 100-ton bin for company ore, and six 15-ton bins for custom ore. After sampling, ore goes over 1½" grizzlies, oversize to Blake crusher, then to 10 stamps of 1,000 lbs. each; delivering 3½ to 4 tons of 20-mesh pulp per 24 hours. Battery pulp goes to No. 6 Wilfley tables, making concentrates which are sent to settling tanks above Frue vanners, whose tailings go through settling tanks, with discharge to Dorr classifiers and sand to Prosser tube mill, whose product with part of settlers goes to Frue vanners. Tailings of vanners go to canvas tables. Milling practice produces concentrates carrying from 40 to 65% tungstic acid, with recoveries ranging from 65 to 85%.

UNITED LEAD CO.

COLORADO

Controlled since 1906 by the National Lead Co., which see.

BOULDER COUNTY

ALLGROVE M. & M. CO.

COLORADO

Office: Cardinal, Colo.

Officers: K. W. Hunt, pres.-gen. mgr.; Hudson T. Morton, v. p.; G. W. Nicholas, sec.-treas. Operates a lease on the properties of the Pine Grove M. & M. Co. and the Albion group, about 200 acres, 1 mile above Nederland, Boulder Co., Colo.

Development: 300' shaft with 2,000' of levels, and the 2,400' Alton tunnel, which has reached the bottom of the shaft, thus enabling economical development at depth. The Alton mill; remodeled in 1916, includes 15 stamps, a Monel slimer, Wilfley and Card tables, 1 Sampson crusher and a 50-ton oil flotation unit. Mine, heretofore solely a gold-silver producer, is now outputting 25% tungsten product.

AMERICAN MINES CO.

COLORADO

Address: 338 Foster Bldg., Denver, Colo.

Officers: A. E. Blakesley, pres.; E. M. Howell, v. p.; J. N. Caldwell, sec.-treas.; preceding officers, W. A. Burke, L. M. Beck, directors. J. W. Kirkbride, supt.

Inc. in Wyo. Cap., \$1,500,000; issued \$1,300,000; shares \$1 par.

Company owns one claim in the Gold Hill district, 12 miles north of Boulder, Boulder Co., Colo., which management claims has a body of ore 200' wide, proven for a length of 600', and assays \$4 in gold per ton.

Development: by 300' tunnel. A 25-ton stamp mill installed, March, 1916.

BALD EAGLE MINING & MILLING CO.

COLORADO

Office: 307 Guardian Trust Co., Denver, Colo. Mine is 5 miles north of Ward, about 60 miles from Denver.

Officers: W. M. McGaugh, pres.; Clement Crowley, sec.; Chas. J. Scheuerman, treas.

Inc. Sept. 20, 1916, in Colorado. **Cap.**, \$100,000; shares \$1 par, fully paid and non-assessable.

Company offered stock, 10,000 shares, Dec., 1916, at 25 cents a share, stating that the next 15,000 shares would be sold at 50 cents. The company's prospectus states that it holds an option on the claims, but does not give bond price. President in letter states the Bosser interests are owned.

Property: 3 claims, a mill site and placer claim, totaling 40 acres in the Ward district, Boulder Co., Colo. Claims are said to have two veins, one of them opened in five places and uncovered for a width of 22', the other 4' wide. **Ore:** Refractory, carries sulphides with gold.

Development: a 75' shaft with a drift at 30' depth and another 28' drift at the 75' level.

Company claims to have 1,000 tons of \$40 milling ore on its dump and to be able to treat same at a total cost of \$4 a ton, if a 50-ton mill is erected.

The development on the property is, in our opinion, insufficient to prove or disprove its value and the stock represents an equity in a blind pool, with an option to purchase unproven claims at a price not named.

BARKER TRACT

COLORADO

Address: J. G. Clark, owner and manager, Boulder, Colo. H. L. Barber, part owner, Great Northern Bldg., Chicago.

Property: 600 acres, patented, in the Grand Island mining district, Boulder Co., Colo., carries tungsten ore in many small shoots in fissure veins. Developed by several inclined shafts, 50' to 400' deep and by tunnels. Mine is worked by leasers. Electric and steam equipment.

Gross profit for 1916 is reported as \$60,100, shipments averaging nearly \$50 per ton.

BLACK CLOUD MINING CO.

COLORADO

R. H. B. Little, lessee, Salina, Colo.

Property: Black Cloud mine and mill at Salina, Boulder Co., Colo., shows quartz with gold values. Developed by shaft and equipped with air compressor, electric power and a 20-stamp mill.

BLACK METAL REDUCTION CO.

COLORADO

Office: 2009 13th St., Boulder, Colo. Is a private partnership, consisting of Prof. Ira M. DeLong, pres.; W. B. Stoddard, mgr., and John B. Ekeley.

Operates a plant for the production of pure tungstic acid from the 60% tungsten concentrates of the district. Reported to have \$35,000 invested in plant; \$25,000 in merchandise and stocks and \$9,100 cash in bank.

BOULDER TUNGSTEN PRODUCTION CO.

COLORADO

Office: Boulder, Colo.

Officers: J. G. Clark, pres.; F. A. Fair, v. p.; J. N. Williams, sec.-treas.; R. L. Alexander, supt.

Inc. in Colorado. **Cap.**, \$1,500,000, shares \$1 par. Commenced operations Jan. 1, 1912. During 1916, company sold \$400,000 worth of tungsten.

Property: 37 claims, 165 acres, in the Grand Island mining district, 2 miles from Nederland, Boulder county, said to show 4 to 10% tungsten ore in veins, a few inches wide.

Development: by tunnels; main tunnel now in over 1,400' and 400' below upper workings.

Equipment: 40-ton concentrating plant.

Company is building a refinery at Boulder, 1917, and will produce ferro-tungsten and tungstic acid from its ores.

CARIBOU MINES & MILLS CO.

COLORADO

Cardinal, Boulder Co., Colo.

Officers: F. H. Wickett, Chicago, pres.; Geo. L. Nye, Denver, v. p.; I. A. West, sec.; W. C. Russell, gen. mgr.

Inc. in 1916. **Cap.**, \$200,000. Company purchased from the trustee in bankruptcy the holdings of the Cariman Mining & Milling Co., in the Cardinal district of Boulder county.

Property: the Caribou and Poorman groups of claims, former producers. Also the Boulder County tunnel, projected as a great development, drainage and transportation tunnel from Cardinal toward the Caribou workings. The tunnel is now in about one mile. In the 80's the Caribou mine is said to have been considered the best silver producer in Colorado.

Equipment: includes the 100-ton Caribou mill and the 100-ton Cardinal mill and a cyanide plant. Management plans installation of flotation plant.

COLORADO METALS & CHEMICAL CO.

COLORADO

Louis Shafer, mgr.

Controls the Fourth of July Group in Boulder Co., Colo., together with the Cons. Copper M. M. & Sm. Co., and property is described under latter title.

COLORADO TUNGSTEN, GOLD & SILVER CO.

COLORADO

Address: Morton & Co., 15 State St., Boston, fiscal agts. **Mine office:** Nederland, Colo.

Officers: Theodore H. Thomas, pres.; L. V. J. Kimball, v. p.; Edmund H. Snyder, sec.; Warren B. Page, treas.; Thornton K. Thomas, mine mgr. Inc. Aug., 1916, in Colorado. **Cap.**, \$500,000, \$1 par.

Property: the Kentucky tunnel and Kentucky No. 2 lode claim, just west of Nederland, Boulder Co., Colo.

Development: by main drift tunnel on vein, and by new 65' shaft showing ore, but not in paying quantity.

CONSOLIDATED COPPER M., M. & SM. CO.

COLORADO

Mine office: Eldora, Boulder Co. Colo.

Officers: C. C. Munson, pres.; W. H. Hoke, v. p.; M. P. Givens, sec., 325 Bannock St., Denver, Colo.; M. L. Ericson, treas.

Inc. Oct. 16, 1899, in Colorado. **Cap.**, \$2,000,000; shares \$1 par. Annual meeting, second Tuesday in September. Consolidation with Colorado Metals & Chemical Co. reported in 1914.

Property: 27 lode claims, partly patented, 150 acres known as the Fourth of July group, 3 additional tunnel claims, a placer claim and a 160-acre timber claim, giving total holdings of about 600 acres, at the southern base of Arapahoe peak, in the Grand Island district. Said to have 4 contact deposits, with phonolite on one wall, of which 1, under development, was said to average about 7' in width, and to carry up to 60' of sulphides, of concentrating grade, including galena, chalcopryrite, bornite and chalcocite, all auriferous and argentiferous.

Development: by 3 shafts, deepest 360', and the Fourth of July tunnel, of 4,800' length. Has steam power, a 6-drill Leyner 2-stage air compressor and necessary buildings.

CONSOLIDATED REALTY & INVESTMENT CO.

COLORADO

Office: Boulder, Colo.

Officers: T. V. Wilson, pres.; D. A. Degge, sec., with M. Maury and J. A. Webber, directors; W. W. Degge, mgr. **Transfer office:** Boulder.

Inc. Dec., 1909, in Colorado. **Cap.**, \$1,000,000; shares \$1 par value; 866,700 outstanding non-assessable.

Financial statement showed total receipts of \$25,672, with disbursements of \$25,336.

Values of about \$18 per ton are in gold in a blanket deposit.

CRUCIBLE STEEL CO. OF AMERICA (Tungsten)

COLORADO

Office: 2 Rector St., New York.

Address: A. V. Echternacht, editor Nederland Tungsten Light, Nederland, Colo., a lessee. Is an iron and steel manufacturer, but owns tungsten mines near Nederland, Colo., operated by lessees, D. Waren, J. J. Allen, B. Dawson and A. V. Echternacht.

DEGGE-CLARKE TUNGSTEN MILL

COLORADO

Boulder, Boulder Co., Colo. W. W. Degge, v. p. and mgr. Operated a 100-ton concentrate mill in Boulder Canyon. Company is a purchaser of custom ores. Mr. Degge has an interesting past.

At a stockholders' meeting held in July, the sale of the mill was ap-

proved. The property was reported in good condition, and lessees working it are making a large production.

DENVER-BOULDER TUNGSTEN PROD. & DEV. CO. COLORADO

Address: 514 Mining Exchange Bldg., Denver, Colo.

Officers: D. S. Young, pres. and supt.; G. P. Howard, v. p. and treas.; F. E. Wise, sec.; S. V. Coffman, mgr.

Property: 10 claims on Lee Hill, Boulder Co., Colo., containing tungsten and gold. In July, 1917, a mill was operating, and high-grade ore was being shipped.

EAGLE ROCK TUNGSTEN PRODUCTION CO. COLORADO

Eagle Rock, Colo. Operated by 40 sets of leasers.

Property: 150 acres in the Boulder tungsten district; is reported to carry ore assaying 2-3% in tungsten.

Has a 75-ton mill and sampling plant.

GOLD HILL MINING CO. COLORADO

Office: Boulder, Colo.

Officers: W. A. Jackson, pres.; U. S. De Moulin, v. p.; J. M. Page, sec.; W. W. Pollock, treas.; with A. W. Glessener, G. W. Meser, C. A. Neal and W. H. Pruyn, directors.

Inc. in Colorado. Cap., \$2,000,000; shares \$1 par; 1,000,000 issued. Bonds authorized, \$150,000; outstanding, \$83,000.

Property: 74 claims, 43 patented, in Gold Hill and Central mining districts, Boulder Co., Colo., said to carry gold-silver ore in a fissure vein in granite. Claims to have 4,000 tons ore reserves.

Development: by 4,660' of tunnels and total of 25,000' underground work to depth of 875'. Plans sinking a shaft.

Has 100-ton cyanide mill and 7 drill compressor. Is not yet producing.

GOLDEN TRIANGLE MINING CO. COLORADO

Address: Jamestown, Colo.

Officers: J. M. McGonigle, pres.; J. F. Schofield, sec.; H. F. Linnenbrink, treas.

Inc. Dec., 1916, in Colorado. Cap., \$250,000; shares \$1 par; non-assessable; \$125,000 outstanding.

Property: 2 unpatented claims on Porphyry Mountain, Jamestown, Colo., said to show a deposit described as a junction of 20 fissures in granite-porphyry, dipping S. and E. Ore composed of quartz and fluorite, containing sulphides with gold, silver, copper, and molybdenum. Assays \$22 gold and 0.3% MoS₂.

Development: by 300' tunnel. Proposed to sink 200', erect hoist, and continue exploration. Assessment work only done in 1916.

A prospect.

GOOD MORNING GOLD MINING & INVEST. CO. COLORADO

Address: 1214 Elizabeth St., Denver, Colo. J. E. Bailey, pres.

Inc. Dec., 1904. Cap., \$2,000,000; shares 10c par.

Property: 9 claims in Sugar Loaf district, Boulder Co., Colo., idle for some time until middle of 1917.

Development: by tunnel. Veins said to carry telluride of gold. Suitable plant to be erected.

KEYSTONE CONSOLIDATED M. & M. CO. COLORADO

Idle. Officers at last accounts: Clifford A. Staley, mgr., Magnolia, Boulder Co., Colo.; Willis K. Howell, pres., New York; Richard Howell, v. p.

Property: the Keystone mine at Magnolia; is an old-time producer.

Development: by 400' two-compartment shaft which will be sunk to 700' and is drained by the Sylvanite tunnel driven by Wheelman tungsten people from Boulder creek.

Equipment: includes hoist, compressor and electric power. A 50-ton concentration mill with flotation equipment is reported under construction. Drifting is in progress on the 260' level and a shipment of 4 tons of \$62 ore made, 1916.

No later information.

MOJAVE TUNGSTEN CO.**COLORADO**

N. H. Brown, supt., Boulder Falls, Boulder Co., Colo.

Company and holdings described on page with California mines (San Bernardino Co.).

MUTUAL CO-OPERATIVE MINING CO.**COLORADO**

Office: 409 Exchange Bldg., Denver, Colo.

Officers: F. E. Gibson, pres.; H. R. Adams, v. p.; Frank E. Wire, sec.; L. E. Johnson, treas.; W. F. Headley, supt., with A. M. Startzell and F. E. Gibson, directors.

Inc. 1912. Cap., 2,500,000 shares; \$1 par; 1,800,000 issued. Balance in treasury, Dec., 1916, \$30,000.

Property: 10 claims in Gold Hill district, Boulder Co., including the Hoodoo and Columbus claims, $2\frac{1}{4}$ miles from Salina.

Development: by 600' of tunnels and an old shaft on the Hoodoo which was cleaned out and retimbered in 1916. Quantities of milling ore are said to exist in old workings and vein reported to be over 2' wide, carrying 2% copper with lead and gold-silver values. Driving a 140' drift S. W. on vein on the 55' level of the Hoodoo shaft. Company at last advice was developing its Kokomo mine in Summit Co., from which it reports that high-grade ore is being extracted. Shipments of 4 carloads of ore in Aug., 1917, netted \$868. Rather too much literature has been published.

NEDERLAND-BEAVER TUNGSTEN MINING CO.**COLORADO**

Office: Mining Exchange Bldg., Denver, Colo.

Officers: D. D. Shirley, pres.; W. M. Scott, v. p.; R. Woodworth, sec.-treas. To be incorporated in Colorado with capitalization \$200,000; shares 10c par; non-assessable. Pre-organization certificates offered to public early in 1916, at 3c per share, with 5% discount for cash.

Property: company claims to own 8 claims, 80 acres, in Nederland district, Boulder Co., Colo., and that, "the surface showing is excellent and orebodies should be opened with a small amount of work. The stock is to be sold to provide a development fund to open the tungsten ore." Careful investors will certainly refrain from investing in this "Tungsten opportunity."

SPRING GULCH MINING & MILLING CO.**COLORADO**

W. R. Benzie, sec., Majestic Bldg., Denver, Colo.

Officers: George M. Quigley, pres.; S. H. Dunlop, v. p.; George Lopez, treas.

Property: the Star mine and mill at Ward, Boulder Co., Colo., with a record of \$2,000,000 production. Has a 10-stamp mill.

Letters returned in May, 1917.

SUN TUNGSTEN CO.**COLORADO**

Address: J. N. Caldwell, sec., 325 Foster Bldg., Denver, Colo.

Officers: A. E. Blakesley, pres., Denver Cons. Stock Ex.; Valdo F. Wilson, v. p.; Paul Hardy, directors; Mr. Von Kueren, supt., Boulder, Colo.

Cap., \$3,000,000; \$1 par; \$2,800,000 in treasury.

Property: 2 claims, the Lucille group of tungsten mines, Sunshine district, near Boulder, Colo., held under bond and lease, and similar lease on the C. O. D. mine at Cripple Creek.

Development: at Boulder, an old tunnel reopened 1916, said to show a 6' vein. Stock offered at 5c a share, March, 1916. Is a G. R. Q. proposition and not favorably regarded.

SWARTHMORE CONSOLIDATED MINING CO.**COLORADO**

Idle. Mine near Cardinal, Boulder Co., Colo.

Officers: Chas. B. Galbreath, pres.; Harvey Hanes, v. p.; J. E. Carpenter, sec.; Paul Barriclow, treas.

Inc. July, 1907, in Colorado, as a merger of the Swarthmore Copper Co. and Enterprise Mining Co. Cap., \$3,500,000; shares \$1 par.

Property: 17 claims, 11 patented, 60 acres, about 2 miles west of Cardinal and the D. B. & W. R. R., in the Grand Island mining district of Boulder Co. Property includes the Golden Fleece mine, having fissure veins in pre-Cambrian gneiss cut by dikes. The vein thus far developed

said to average 8' wide and to carry a paystreak of 3 to 5% copper ore with occasional telluride of gold.

Development: by 5 shafts, deepest 403', and by tunnels of 800', 1,000' and 2,000'.

Equipment: includes 2 small steam plants, one having a 60-h. p. hoist and a 12-drill air compressor. There is a small concentrator with a 50-ton chlorination plant, and 4 new mine buildings.

Letters returned in May, 1917. Property leased to Consolidated Leasing Co. in July. C. E. Kahler, mgr.

TUNGSTEN EXPLORATION CO.

COLORADO

Probably dead as letters were returned unanswered in Sept., 1917. Lakewood, Colo.

Inc. April, 1916.

Officers: L. A. Ewing, pres.; Chas. Theobald (of Theobald & Knuth, Cripple Creek, Colo.), v. p.; Dr. R. W. Bailey, treas.; L. A. Tilborg, sec.; with C. M. Webb, Norfolk, Va., G. C. Stumm and Clark G. Mitchell, directors.

Property: the Bradley tract, 200 acres, 1 mile E. of Lakewood, adjacent to Primos Chemical Co.'s mines, the Cold Spring, Cross and Bonanza mines.

TUNGSTEN GIRL CO.

COLORADO

Probably dead as our letters were returned unanswered in July, 1917, from former address: 325 Majestic Bldg., Denver, Colo., and Ward, Boulder Co., Colo.

Officers: Joe Connors, pres.; S. T. Weller, v. p.; Dr. Osee Wallace, treas.; Hon. L. I. Harrington, sec.; above, with Kenneth Kennedy, A. V. Lafferty, Dorothy Weller and E. S. Connors, directors.

Inc. 1916 in Ariz. **Cap.**, \$1,000,000; shares \$1 par.

Property: the Blue Jay and Burnt Mountain groups, 3 miles from Ward, adjoining holdings of the National Tungsten Co.

TUNGSTEN METALS CORPORATION

COLORADO

Address: T. McSherry, supt., Boulder, Colo.

Inc. April, 1916. **Cap.**, \$550,000. Company took over property of the Tungsten Metals Co. and the Ferberite Co., including the Red Sign, Red Sign No. 2 and the Ferberite mines, and constructed a \$50,000 mill in Boulder Canyon, about 7 miles from Boulder.

TUNGSTEN MOUNTAIN MINES CO., THE

COLORADO

Offices: J. G. Clark, Boulder; and J. D. Maxwell, Tungsten, Colo.

Officers: J. G. Clark, pres.; L. R. Means, v. p.; S. A. Greenwood, sec.-treas.; with H. L. Barber and Thos. Leeke, directors.

Inc. Oct. 6, 1916, in Colorado. **Cap.**, \$1,250,000; shares \$1 par; non-assessable; \$1,049,500 issued.

Income in 1916 was \$53,000, of which \$371 was from royalty on ore sold. Expenses were \$11,314.

Property: 40 claims, 24 patented, 360 acres, in Grand Island district, Boulder Co., Colo., contains tungsten deposits in veins.

Development: by shafts, and tunnels, latter 2,400' long. Work only started June, 1917. Lessees are producing steadily.

U. S. GOLD CORPORATION

COLORADO

Address: Boulder, Colo.

Officers: N. P. Garretson, Topeka, Kansas, pres.; J. R. Wolff, v. p. and gen. mgr.; W. T. McGinnis, sec.-treas.; J. W. Middlesworth, J. H. Howry, F. E. Campbell and C. N. Watts, directors. J. R. Wolff, gen. mgr.; T. J. Benjovsky, mine supt.

Inc. 1903, in Colorado. **Cap.**, \$3,500,000; shares \$1 par; non-assessable; \$3,271,062 outstanding.

Property: the Klondike group, 225.93 acres, patented, Sphinx group, 22 mining claims, in T. 1 N., R. 72 W. in Boulder Co., Colo. Livingston group, 50 acres. Company also owns 50,000 shares, or entire capital stock of the U. S. Reduction Co., which owns the mill.

Development: 1914-15, totaled 1,470'. Claims show fissure veins in

porphyry, carrying gold ore. Widths, 3'-15' in different workings; mill feed varies from \$4 to \$12 per ton.

In July, 1917, company started exploring for the old No. 1 oreshoot in its Livingston claim, which is said to have yielded \$300,000 years ago.

Production: 34 tons of ore were shipped, 1915, to Denver smelters, which netted \$1,414. Company reported April 10, 1916, bullion to the amount of \$15,086 shipped to U. S. Mint, Denver, and that 7 tons ore shipped to Denver smelter Feb. 9, yielded \$1,974. Mill was treating up to 100 tons daily at end of 1916. During 1917 the yield was about \$75,000 from 15,000 tons of ore. Thirty-five men are employed.

After 13 years of intermittent development, and lurid advertising, company is at last producing. Barber & Co. said to be promoting the enterprise. The corporation is not looked upon favorably, and investors are advised to take company statements with a grain of salt.

VASCO MINING CO. (Tungsten)

COLORADO

Subsidiary of Vanadium Alloys Steel Co., Latrobe, Pa. J. A. McKenna, v. p. and gen. mgr., Voegtli Bldg., Boulder, Colo.

Acquired property in the Nederland district in Fall of 1915, and remodeled the old Boyd mill for concentration of tungsten ores which are both mined and purchased. Ore is ferberite occurring in veins in pegmatite or granite, containing from 3 to 50% WO₃, and averaging 10%.

Mill equipment: crusher, rolls to ¼", trommel, jigs, stamps for jig tails, classifiers for jig hutches and battery pulp, Card and Wilfley tables, Monell slime tables, Deister slime tables, and rag tables. Three mills have been built.

Property: includes 15 operating mines, shipping 8-10 tons concentrates weekly.

WOLF TONGUE MINING & MILLING CO.

COLORADO

Controlled by Firth Sterling Steel Co., Pittsburgh, Pa.

Address: Nederland, Boulder Co., Colo. Wm. Loach, mgr.; Wm. Todd, mine supt.; C. A. De Witt, mill supt.

Property: 593 acres, including the Cold Spring and other mines in the 75-acre Beaver group, a mile south of Nederland, and the Clyde mine of the Ranch group, 3 miles N. E.

The Clyde mine is the principal producer and has veins of from 1 to 10' wide, carrying 2 to 10% and averaging 5% tungstic oxide. The shaft is 405' deep, making it 200' below the main Clyde tunnel which connects with old shaft at 230' level. The Cold Spring mine is run by lessees and has been yielding 10% ore. The Bonanza and Orange Blossom are also producing 10% ore, as well as 11 others, mostly by lessees.

Ore: the principal ore mineral is ferberite, iron tungstate, occurring in veins in granite or pegmatite. Orebodies are commonly in the form of small lenses a few feet in length. For full description of Colorado tungsten ores see Bull. 583 of U. S. Geol. Survey by Hess & Schaller, 1914; also Bull. 652 by F. L. Hess, 1917.

The greater part of the mining is done by lessees who are paid for shaft sinking and ship their ore to the company's mill; the company receives as royalty 25% of the net proceeds, after deducting treatment charges.

In its leasing system the company supplies lessees with hoists, shaft houses, timber, rails, piping, ore cars, etc., and loans money for development when certain work is started.

The mill on South Boulder creek at Nederland treats 60 tons of 7% ore daily, 30.8% of which is from company's mines. It is described in detail by Leroy A. Palmer in Salt Lake Mining Review, Feb. 15, 1914, p. 14. The mill was improved to treat low-grade ore by adding a rag table plant of 7,200 sq. ft. Richards' jigs have also been installed. The recovery varies from 80 to 90%.

The Cold Spring mine, leased 1916 to Geo. Retallack et al., has a vein showing 6' face of ore with 18" streak of ore containing 57% tungstic acid, in a shoot 150' long on the 350' level.

CHAFFEE COUNTY

GIANT-ECLIPSE CONSOLIDATED CO.

COLORADO

Address: P. O. Box 488, Salida, Chaffee Co., Colo. Clyde H. Jay, pres. and gen. mgr.; F. L. Ream, sec.-treas.

Inc. Sept. 21, 1909, in Colorado. Cap., \$800,000; shares \$10 par, fully paid, non-assessable; 69,000 issued. Annual meeting, 3rd Friday in January.

Property: 11 claims, 101 acres, in Monarch district, Colo., showing contact deposits of lead-iron, copper, and zinc ores between granite, limestone and quartzite. Deposit runs N.-S. and dips at 45°. Orebody developed for 50 to 150' width, 1,400' length and 1,400' depth, claimed to carry 12 to 35% zinc, 3 to 25% lead, 1 to 3 oz. silver and 80 cts. to several dollars per ton in gold. Zinc occurs in ore and as clean zinc carbonate. Mine has tunnels aggregating several thousand feet. Company claims to have developed 10,000 tons low-grade zinc ore.

Equipment: includes electric hoist, compressor, and aerial tram to carry ore from mine direct to railroad cars.

Production: \$1,000,000 production since 1878. Shipment resumed in 1915; 500 tons zinc carbonate carrying \$20 to \$40 per ton, shipped from July, 1916, to March, 1917. Incline shaft being sunk to water level.

GOLD QUEEN MINING CO.

COLORADO

Idle. Considered a wild cat of the worst type. Claims on Barren mountain (so called for good cause), Chaffee Co., Colo. For further information see Vol. XII.

GRANITE TUNNEL CO.

COLORADO

Address: Granite, Chaffee Co., Colo. J. W. Ady, supt.

Property: about 20 patented claims known as the Yankee Blade and D. C. C. mines.

Development: by 1,815' tunnel. Ore is heavily mineralized, carrying 1.2 oz. gold and 1.5 oz. silver per ton. A 50-ton mill is on the ground.

Doing development work, 1917.

HIDDEN TREASURE MINING & LEASING CO.

COLORADO

Dr. Thos. E. Sample, sec., Omaha, Neb. C. W. Crawford, pres. Mine address: Salida, Chaffee Co., Colo.

Property: a lease on the Sedalia mine of the Sedalia Copper Co., 5 miles from Salida. See Sedalia C. Co.

Company is operating the mine.

MARY MURPHY GOLD MINING CO.

COLORADO

Offices: 414 Boston Bldg., Denver, and Romley, Chaffee Co., Colo.

Officers: Chas. C. Parson, pres.; Geo. E. Collins, v. p. and gen. mgr.; H. W. Robinson, sec.; John W. Hudston, treas., with Louis F. Eppich, directors; Alfred Ware, mine supt.; H. L. King, mill supt.

Inc. May 20, 1909, in Colorado. Cap., \$1,850,000; shares \$5 par; Jan. 1, 1916, outstanding \$1,790,500. Bonds authorized \$350,000; outstanding \$179,000. Majority of stock and bonds are said to be held in England. Stock transferred at Company's office. Continental Trust Co., Denver, registrar. Annual meeting second Monday in March.

Income statement for year ending Dec. 31, 1916, showed net smelter returns, 1916, \$477,692; misc. earnings, \$2,740; expenses were \$387,539; depreciation, interest, discounts, \$40,350, leaving net profit, \$52,535.

Comparative general balance sheet, year ending Dec. 31.

Assets	1915	1916	Liabilities	1915	1916
Prop. & equip.	\$2,007,223	\$2,009,074	Cap. stock ...	\$1,850,000	\$1,850,000
Supplies & pre-			Bonds	227,000	179,000
paid ins	28,401	34,710	Current liabil..	38,157	39,646
Current assets.	255,943	228,420	Sinking fund..	10,507
			Reserves (a) ..	110,544	126,905
			Surplus	65,866	66,146
Total	\$2,291,567	\$2,272,204			

Total \$2,291,567 \$2,272,204

(a) for examination, purchase and development of new properties.

Dividends: two of 7c per share each, paid in 1915, and one of 7c in 1916. There was set aside in 1915, \$110,000; and in 1916, \$15,000, for acquisition of new property.

History: the Mary Murphy mine, discovered 1874, was not extensively worked until acquired by a St. Louis company in 1880. The yearly output 1880-1885 averaged about \$300,000 net from ores sold to smelters. The gross value was about three times as much. One-third of the gross value of the ore was received by the mine, the remaining two-thirds being absorbed by smelting and refining charges, and by railway freight.

The first mill was erected in about 1886. Subsequently the property was leased and operated with varying success until about 1906. The lessees built mills at Romley and St. Elmo, and a smelter at Buena Vista. All of these plants were destroyed or dismantled, and the mine practically abandoned in 1906.

In 1909 the Mary Murphy G. M. Co. was organized; in 1910 active development work was commenced, and sufficient new ore opened up to justify the erection of a mill in 1912.

Property: 42 claims, mostly patented, 350 acres in Chalk Creek district, Chaffee County.

Ore: contains gold, zinc, lead, silver and copper, in order of value, in a complex network or system of nearly vertical fissure veins in quartz-monzonite; the Mary Murphy is the main vein. Veins vary in width from 6" to 12', and contain shoots and irregular lenses of ore. Average assay of milling ore: 0.2 oz. gold; 2.7 oz. silver; 4.4% lead; 7.9% zinc; 0.5% copper.

Development: by tunnels with a shaft connecting the tunnel levels; length of principal tunnels, No. 7, 750'; No. 14, 1,500'; Golf, 4,350'. Total underground workings over 8 miles; greatest depth of workings, 1,975' vertical from surface. In 1916 new work totaled 6,878' at an average cost of \$1.27 per ton of ore milled.

Equipment: includes small hoist, 3 air compressors, 2 aerial tramways and 175-ton concentrating mill. Steam power is used.

In the mill wet concentration is used followed by flotation of slime, using pine oil; there is a 25-ton electrostatic separation plant for the zinc-iron middlings.

Flotation did not act so well on the zinc ore in 1916, even on sulphide material. The process costs 23c. per ton of ore milled. Some interesting work has been done at this plant.

Production: in 1913, 14,428 oz. gold; 2,233,037 lbs. zinc; 3,321,313 lbs. lead; 146,606 oz. silver; 152,000 lbs. copper. Figures for 1914, 1915, and 1916 are not available.

Recent costs have been:

	Tons					
	Milled	Mng.	Mlg.	Tram-ways	Gen'l	Total
1916.....	51,116	\$4.11	\$2.18	\$0.16	\$0.34	\$6.79
1915.....	55,880	3.20	1.99	0.12	0.25	5.56
1914.....	48,526	3.08	1.96	0.13	0.21	5.38
1913.....	34,271	3.45	2.04	0.24	0.30	6.03

Note: mining costs are distributed over a slightly larger tonnage than tons milled.

The Mary Murphy mine has seen its best days. At the beginning of 1917 available ore was estimated as 8,000 tons, and 6,000 tons in the Iron Chest mine. Much of the ground being mined would not pay under normal metal prices. Unless larger orebodies are opened, the manager, G. E. Collins, predicts a suspension of milling operations.

Crude ore shipments were only 149 tons, worth \$2,651, against 2,642 tons and \$61,076 in 1915. This ore is almost exhausted.

OHIO & COLORADO SMELTING & REFINING CO. COLORADO

Office: 822 A. C. Foster Bldg., Denver, Colo., and 61 Broadway, New York. Works: Salida, Chaffee Co., Colo.

Officers: J. C. Kortz, pres.; H. V. Putzel, v. p.; Max Schott, sec. and gen. mgr.; O. E. Cary, mgr.; J. B. Beaty, treas.; E. H. Laws, supt.

Cap., \$3,000,000. Is controlled, through stock ownership, by American Metal Co., Ltd. Company owns no mines, but owns and operates the Salida smelter of 1,000 tons rated daily capacity, doing a general custom business. The plant has a 300-ton sintering plant, a sampling mill, 4 lead blast-furnaces, 48x180", of 250-ton daily capacity, and handles mainly silver-lead ores. The only copper treated is that bought with lead ores, which is concentrated to about 40% tenor.

PEERLESS MINING & MILLING CO.

COLORADO

Salida, Chaffee Co., Colo. H. F. Schnelker, pres. and gen. mgr.; I. W. Haight, sec.-treas.

Inc., Nov., 1904, in Colorado.

Cap., \$500,000; shares \$1 par; non-assessable.

Property: the North Pole group, 6 claims, 70 acres, with 10 acres timbered, on Cyclone mountain, in the Monarch district, 16 miles west of Salida, showing several fissure veins in granite. Veins have auriferous and argentiferous lead and copper sulphides, with lead values predominating. The mine has a 1,600' crosscut tunnel and a 65' shaft sunk on the vein. Idle several years.

ROCKY MOUNTAIN GOLDFIELD MINING CO.

COLORADO

Offices: Denver, Colo., and St. Elmo, Colo.

Property: the Hayden, San Diego, Little Johnny and Nellie claims, at Barren Mountain, Chalk Creek district, Colo., said to carry several veins whose outcrop is owned for 4,500'. The mine is near several producers, including the Mary Murphy, credited with a \$25,000,000 production.

Development: 600' tunnel and 80' shaft on Hayden vein, and shallow shafts on others. The Nellie has made shipments of \$40 ore. A new 150-ton concentrating mill at St. Elmo treats the ore.

SEDALIA COPPER CO.

COLORADO

Address: Wm. E. Humphreys, sec., 701 Colorado Bldg., Denver, Colo. D. A. Freeman, pres., Boston, Mass.

Inc., 1899. **Cap.,** \$1,000,000; shares \$10 par.

Dividends reported paid in 1900, when shares were sold at \$10, declining to \$1.

History: Whittemore Bros., shoe polish manufacturers, originally interested. Property formerly leased to Salida Gold & Copper Mining Co., succeeded by Shawmut Consolidated Mining Co., succeeded by Salida Copper Co., all now dead. The Shawmut Co. purchased the leaching plant and remodeled it for a 50-ton ore concentration mill.

Property: 40 acres, patented, 7 miles from Salida, Chaffee Co., Colo., shows 35' ledge of pyritic copper-zinc ore carrying 2.75% to 12% copper, 500' below outcrop. Upper levels show large amount of oxidized ore.

Development: by shaft and tunnels, aggregates 4,000'. Is an old property now leased and operated by the Hidden Treasure Mining & Leasing Co.

STANDARD GOLD-COPPER MINING & MILLING CO. COLORADO

Officers; F. E. Groves, v. p. and mgr., Salida, Colo.; Hon. W. P. O'Brien, pres.; George L. Ramey, sec.; J. S. Ramey, treas.; Jas Zoeter, John Millner, Dr. S. B. McFarland, directors.

Property: 8 claims, 144 acres, in Monarch district, Pass Creek, Chaffee Co., Colo., shows fissure veins in granite porphyry that carry copper-lead ores. Values run \$4-\$16 per ton.

Development: by 900' of tunnel work with 285' back. Company has a mill with flotation equipment and was expected to operate in 1916. Examinations have been made by Clyde H. Jay and J. H. Freeman. No later returns.

TAYLOR MOUNTAIN MINING CO.

COLORADO

Address: D. E. Cook, asst. sec., Chippewa Falls, Wis. **Mine office:** Garfield, Chaffee Co., Colo. W. F. Norway, pres.

Inc. Oct., 1905, in Colorado. **Cap.**, \$1,200,000; shares \$1 par. Annual meeting, in November.

Property: the Lily mine, 7 claims, 65 acres, in the Monarch district, 1½ miles from Garfield and 19 miles from Salida. The property has a nearly vertical N.-S. contact vein, between granite and limestone, carrying lead and copper ores. The mine shows copper ore which the management estimates will average 6% copper and 2 oz. silver per ton.

Development: by a 280' main shaft, with 4,000' of workings.

Equipment: includes electric power with 16-h. p. hoist and 35-h. p. General Electric air compressor. Buildings include an engine house, smithy, carpenter shop. Was shipping about 120 tons per month in 1914. No shipments reported since, as company is not working the mine at present.

CLEAR CREEK COUNTY

ACCORD MINING & MILLING CO.

COLORADO

No recent returns secured from Georgetown, Colo.

Cap., \$250,000.

Property: 40 claims on Saxon mountain, 3 miles from Georgetown.

Development: by means of the 900' Cully tunnel, which company intended to advance an additional 2,100' with expectation of cutting the American Sisters and Jo Reynolds system of veins on the East and the Capital Prize system on the West.

Property not unpromising, but company was not in good financial condition at last accounts. Closely related to the Alco Mining & Milling Co.

ALCO MINING & MILLING CO.

COLORADO

Idle. Address: Georgetown, Colo.

Inc. 1910, with same officials as Accord Mining Co.

Property: Group of lode claims on Saxon mountain, near Idaho Springs, Clear Creek Co., Colo., reported to show ore assaying \$30 to \$125 per ton.

Equipment: includes hoisting plant.

Company said to be out of debt and plans resumption of development work.

ALICE G. MILLS CORPORATION

COLORADO

Mine office: Idaho Springs, Clear Creek Co., Colo.

Inc., 1910, as successor of Alice Development Co.

Mine is opened by a tunnel, said to show a vein upwards of 75' in width, carrying ore averaging about \$4 per ton in combined copper, gold and silver values.

Equipment: includes a 12-stamp mill. Mine and mill reported sold at sheriff sale, April, 1914, and company presumably defunct.

ALMADEN MINES CO.

COLORADO

Property of the company, located in the Lower Fall mining district, near Idaho Springs, Clear Creek Co., Colo.; was sold in Nov., 1915, to satisfy a judgment of \$27,596. Purchased by Geo. Neill, of Topeka, Kan., and J. A. Greenfield, of Bellaire, Ohio, principal bondholders and stockholders, who plan to resume operations. The property is said to have been a good producer of silver ore in its day.

ARGO MG., DRAINAGE, TRANSP. & TUNNEL CO.

COLORADO

Office: 79 Milk St., Boston, Mass. **Mine office:** Idaho Springs, Clear Creek Co., Colo.

Officers: Chas. C. Parsons, pres.; H. W. Robinson, sec.; R. E. Schirmer, treas. and gen. mgr.; L. S. Stewart, supt.

Inc. 1893 in Colorado. **Cap.**, \$100,000. Is controlled, through ownership of entire stock issue, by Argo Mining & Tunnel Co., Ltd.

Property: the Newhouse or Argo tunnel, described under title of Argo Mining & Tunnel Co. Balance sheet for fiscal year ending Aug. 31, 1916, shows an operating loss of \$2,151, as compared with a net profit of \$1,112 in 1915, the decrease being due to inactivity of several properties and subsequent slackening of transportation business.

ARGO MINING & TUNNEL CO.

COLORADO

Office: 79 Milk St., Boston, Mass. Mine office: Idaho Springs, Clear Creek Co., Colo.

Officers: F. A. Schirmer, pres.; Chas. C. Parsons, v. p.; Chas. G. Schirmer, sec.-treas.; with F. Hargreaves, C. P. Woodbury, J. A. Caldwell and H. W. Davis, directors; R. E. Schirmer, mgr.

Inc. 1909 in Delaware. Cap., \$1,250,000, shares \$5 par; issued, \$952,335. Debentures, \$150,000 authorized; \$135,000 issued. Company succeeded Argo Transportation & Tunnel Co., Ltd., which succeeded Argo Tunnel & Mining Co., Ltd., which succeeded Newhouse Tunnel Co., Ltd. Owns the entire stock issue of Argo Mining, Drainage, Transportation & Tunnel Co., which holds direct title to the tunnel.

The Argo or Newhouse tunnel, 21,968' long, with nearly 20 miles of workings, is perhaps the most celebrated mining tunnel in existence. It starts at Idaho Springs and passes under Russell gulch and Quartz hill, with terminus in the Gunnell vein. The tunnel has double tracks, of 18" gauge, laid with 30-lb. rails. For the first 12,000' the tunnel is 9' high and 10' wide, balance being 8' high and 6' wide. Grade is 5" per 100'. The tunnel was begun Jan., 1894, and completed Nov. 18, 1910, and provides drainage, transportation, ventilation and air service for drilling operations.

The mines under which this tunnel passes are estimated to have produced about \$75,000,000 in metallic values, and the tunnel cuts sundry veins of ore carrying gold, silver, lead and copper, and several laterals have opened various orebodies of greater or less promise. The tunnel connects with the Concrete, Tremont, Prize, Burroughs, Kansas Golden Edge, Gem, Sun & Moon, Old Town, Pozo, Saratoga and Gunnell shafts at depth of 1,600'.

During 1916 the Tremont, Burroughs and Gem mines were the sole shippers. Development work by lessees on the Concrete and Pozo-Gilpin proved disappointing and was discontinued.

Equipment: includes 5 locomotives, handling 53-ton cars each. Transportation charge for waste work through the tunnel is 17c. per ton, and on ores from 40c. to \$1.25, according to values. Ore is turned over to the Argo Mill, whose charges are from \$3.50 up, including sampling and treatment.

ARGO REDUCTION & ORE PURCHASING CO.

COLORADO

Office: Idaho Springs, Clear Creek Co., Colo. Chas. G. Schirmer, pres.; R. E. Schirmer, treas. and gen. mgr.; J. A. Pearce, mill supt.

Inc. July, 1912, in Colorado. Cap., \$150,000; shares \$10 par; fully paid and nonassessable; issued \$112,000.

Property: 2-acre mill site at the portal of the Newhouse, or Argo tunnel, on which a 500-ton mill has been erected to treat custom ores.

All ore is purchased outright on the weight and assay value. Treatment consists of stamps for crushing, followed by tables, tube mills and flotation machines. About 200 tons of ore is treated daily.

BIG FIVE MINING CO.

COLORADO

Office: Majestic Bldg., Denver, Colo. Mine at Idaho Springs, Colo.

Officers: Wm. P. Daniels, pres.; Geo. A. Benton, v. p.; H. C. Von Reimer, sec.-treas.

Inc. in Wyoming, June 1, 1912, as a reorganization of the old Big Five Tunnel Ore Reduction & Trans. Co. Cap., \$750,000, shares \$1 par; issued \$400,579. Bonds outstanding, Dec. 31, 1916, \$137,362. Cash on hand, Dec. 31, 1916, \$8,535.

Property: company's principal enterprise is the Central tunnel over 9,000' long, at Idaho Springs, developing several claims. During the year 2,047' of drifting and crosscutting was done. The Edgar vein showed up better than the others under development; receipts from Edgar ore were \$10,096. Also owns several patented claims in San Juan Co. and the Frances property, now idle, in Boulder Co., Colo.

BOSTON MINE LEASING CO.

COLORADO

Office: 60 Congress St., Boston, Mass. Mine office: Idaho Springs.

Officers: Lombard Williams, pres.; Arthur Langley, v. p.; Horace H. Stevens, sec.-treas.; preceding officers, N. W. Jordan and J. C. Hershey, directors; J. C. Hershey, mgr.; J. F. Clark, supt.

Inc. June, 1915, in Colorado. **Cap.**, \$100,000; shares \$1 par; all outstanding, nonassessable. Gross earnings from ore sales in 1916 were \$30,000; operating expenses \$15,500, plus royalty of \$7,500. This compares with receipts from ore sold in 1915, \$30,196, of which \$12,000 was distributed in dividends. 1916 earnings used to retire company notes.

Property: a lease on a large portion of the property of the Edgar mine below level of Central (Big Five) tunnel at Idaho Springs, has options on the lease of all other property eastward owned by the Big Five Mining Co., and traversed by veins of the Edgar mine; also 47½% interest in Roy & Co. lease above the level of the tunnel. Leases are for five years.

Ore: occurs in fissure veins, in schist, strike E.-W., with dip 65° S.; consists of lead and zinc sulphides, containing gold and silver. Smelting ore, from a 2' width of the vein, said to average: gold 0.78 oz., silver 21 oz., copper 1%, lead 13.8%, zinc 5%. Orebody 350' long, ore 8" to 5' thick, averaging \$20 per ton. No ore blocked out.

Development: a 65° incline shaft, 100' deep and tunnels. The Central tunnel of the Big Five Co. cuts the main vein 2,460' from portal and 800' below surface. There is 1,100' of drifting on the vein, and 10,000 tons ore blocked out.

Equipment: hoist, pump and compressor. Power is bought from the Big Five Mining Co.

CAPITAL MINING & TUNNEL CO.

COLORADO

Georgetown, Clear Creek Co., Colo.

Property: the Ætna mine, developed by 5,200' tunnel, is said to show sulphide ores running up to 18 oz. gold, 35 oz. silver, 55% lead and 5% copper. Has electric as well as steam equipment, Leyner compressor, 200-ton concentrator and employs about 50 men. Lessees are working the mine and are reported to have struck a rich pocket of high-grade gold ore.

COLORADO CENTRAL MINING CO.

COLORADO

Georgetown, Colo.

Company plans for 1917-18 include unwatering the mine, building a 150-ton mill, a railroad to Georgetown and a new 750' tunnel from Equator tunnel to shaft.

Company has 370,000 tons of dump ore, assaying \$4.40 per ton, and 276,000 tons of \$10 ore in stopes.

COLORADO PAYROCK SILVER MINES CO.

COLORADO

F. F. Tyson, sec.-treas., 304 Symes Bldg., Denver, Colo.; Ernest Le Neve Foster, supt.

Cap., \$250,000; 50c. par.

Property: the Payrock mine at Silver Plume, Colo., an old mine "that has produced millions."

Shares advertised at 20c., 1917.

CONSOLIDATED MINES DEVELOPMENT CO.

COLORADO

Office: 717 Majestic Bldg., Oklahoma City, Okla. Mine at Alice, Colo.

Officers: L. T. Samuelson, pres.; J. A. Best, v. p.; W. C. Bickford, sec.-treas., with W. G. Harper and W. G. Luckenga, directors. W. G. Harper, mgr.

Inc. in Colorado. **Cap.**, \$1,500,000; shares \$1 par; \$850,000 outstanding. Annual meeting second Monday in October.

Property: 10 claims, 2 patented, 102 acres, in Upper Clear Creek and Argentine districts, Clear Creek County, said to show a quartz vein in granite, 6' wide, running N. E.-S. W. and assaying \$18 in gold, silver, and copper per ton.

Development: by tunnels, 1,100' and 400' long, said to prove 200,000 tons of ore. Operations during 1916 consisted of 800' of crosscutting, 300' of drifts and 180' upraise. Total operating expenses were \$26,000.

Equipment: includes 7-drill compressor, electric power and a flotation unit. A 100-ton mill being installed, 1917.

CONTINENTAL MINES, POWER & REDUCTION CO. COLORADO

Office: 401-2 First National Bank Bldg., Denver, Colo. **Mine office:** Lombard, Clear Creek Co., Colo.

Officers: Henry L. Seemann, pres. and gen. mgr.; K. R. Seemann, v. p.; Cyrus Locher, 2nd v. p.; Wm. H. Warrinner, sec.-treas.; preceding, with E. J. Weinand, and Chas. E. Brown, directors.

Inc. Nov. 7, 1905, in Colorado. **Cap.**, \$5,000,000; shares \$1 par, non-assessable; issued \$4,341,550. Annual meeting, first Wednesday in November.

Property: 182 claims, 2,000 acres, in the Lincoln mining district, said to show 75 fissure veins and contact deposits, ranging in width from 2' to 75'. Country rock is gneiss, schist and granite, with porphyry dikes. Vein system claimed to be proven to depth of 1,000' and traceable 4 miles. Ores are sulphides, reported by management to carry 1 to 7% copper, 1 to 35% lead, from a trace to 6% zinc, 1 to 200 oz. silver and \$5 to \$500 gold per ton.

Development: by shafts of 135', 150' and 200' and a number of tunnels of 100' to 2,000'. The Seemann tunnel, now idle, is about 4,000' long. The mine has approximately 4 miles of workings, with about 1 mile in ore, estimated by management to show 300,000 tons of ore in sight. Most of the work is now being done on the Lombard vein and through 4 tunnels, 800', 1,500', 1,600' and 3,800' long.

Equipment: includes electric power, 150-h. p. at mine and 150-h. p. at mill, 25-h. p. hoist and 7-drill Sullivan air compressor. There are about 20 buildings.

The mill has 20 quick-drop gravity stamps, one 8x12" Blake crusher, 3 Card tables, 3 Wilfey tables and 2 sizers, capacity 100 tons per day. Company plans continuous development, is now adding an oil flotation plant to the mill, increasing its capacity to 200 tons per day, and selling commercial current. Claims production will be started in 1917.

CROWN PRINCE CONSOLIDATED MINING CO. COLORADO

Office: 934 Gas & Electric Bldg., Denver, Colo. **Mine office:** Empire, Clear Creek Co., Colo.

Officers: M. H. Block, pres.; J. E. Rinehart, v. p.; Thos. Williams, sec.; Wm. G. Krape, mgr. and treas.; with Daniel Erickson, directors.

Inc. June 9, 1910, in Arizona. **Cap.**, \$3,500,000; shares \$1 par; outstanding, \$3,433,014.

Property: the Mint mine, 17 claims, 85 acres, near Empire. Gold-silver ore occurs in veins and is claimed to average from \$6 to \$12 per ton.

Development: by 75' shaft and tunnels, longest 1,025', with total underground workings of 7,000'. Equipment includes electric hoist.

Production claimed to have been \$200,000 in the past. Operations in 1916 consisted of 562' of drifting.

DENBIGH SILVER-LEAD MINES CO. COLORADO

Office: c/o Allen Arnold & Co., 85 Devonshire St., Boston.

Inc. 1916, in Colorado. **Cap.**, \$1,000,000; shares \$5 par.

Acquired property of Terrible Dunderberg M. & Power Co.

Property: a consolidation in 1913 of two old properties worked for 40 years, comprising 43 patented claims, about 300 acres, at Silver Plume, Clear Creek Co. The company controls a number of old-time producing mines, and the dump from the Seven-Thirty, Mammoth, Brown and Dunderberg workings, known as the "Big Slide in Brown gulch."

Ore: carries gold, silver, lead and zinc occurring in a fissure vein in granite and schist. Vein dips 70° N. and strikes N. E. The sulphide pay ore occurs in shoots and streaks of varying size.

Development: by a working tunnel with 7 levels above it and 7 below it, reached by a 70° shaft, 480' deep. Method of working, stulls and stope filling. Total extent of workings, about 5 miles. A winze 70' below deepest working is in \$50 ore the entire length.

Equipment: includes hoist, compressor and pumps. Both water power and steam are used. The 100-ton mill contains crushers, rolls, jigs and

tables. A 100-h. p. Ingersoll-Rand compressor was installed, 1917.

Recent operations consisted in remodeling and enlarging the mill, and introducing flotation treatment to handle the low-grade and zinc ores left in the old stopes or on the dump piles. Development to lower levels was in progress, this work in 1915 having yielded an income of \$3,000.

Owners claimed that the mine has a production record of \$10,000,000, all from high-grade ore, and that the property now has 100,000 tons of \$10 ore left. This includes 200,000 tons in the Big Slide, a great pile of ore carried down-hill by a snow slide, whose net value is figured at \$300,000.

Management was to expend \$50,000 to enlarge mill to 300-ton capacity, so as to handle 200 tons per day of low-grade ore from the dumps. The Big Slide ore is said to average 40c gold, 3.7 oz. silver per ton with 0.45% lead and 1.22% zinc.

H. C. Bonnevie has reported on both the mine and the treatment of the Big Slide ore. Property has attractive possibilities in depth and in virgin ground, if funds are provided for the plans outlined above.

DUBUQUE MINING & TUNNEL CO.

COLORADO

Idle. Office: Colburn Bldg., Denver, Colo. Mine near Idaho Springs, Clear Creek Co., Colo.

Officers: E. A. Colburn, pres.; W. W. Kirby, v. p.; J. A. Wright, sec-treas.; preceded with B. L. Gorich and D. C. Waugh, directors.

Inc. Dec. 4, 1905, in Colorado. Cap., \$2,000,000; shares \$1 par.

Property: 2 claims, known as the Dubuque mine, opened by a 460' tunnel, said to show a 6' vein with a 3' paystreak carrying copper carbonates and melaconite, with good gold values.

DUMONT MINING & MILLING CO.

COLORADO

Dumont, Colo.

Officers: George Wight, pres.; Ernest Wight, v. p., both of Denver; C. W. Sercher, sec. and mgr., Dumont, Colo.; Simon Batterman, treas., and Robbie B. Sercher, director.

Inc. Jan. 27, 1917, in Colorado. Cap., \$100,000; shares \$1 par; \$51,000 issued.

Property: 6 patented claims, 30 acres, known as the Syndicate property; also the Kokomo Pioneer mill at Dumont and the Pioneer Gold mining property and mill at Empire, Colo.

Ore: lead-bearing quartz in fissure vein in granite schist. Vein is 4' to 14' thick, runs E.-W. and dips at 15° to 45°. Ore has an average value of \$7.45 per ton.

Development: by McClelland and other tunnels, 100' to 900' long, with total of 4,500' of work, and a depth of 1,000' said to block out 30,000 tons of ore.

The 50-ton Pioneer mill started work in the summer of 1917.

GEM CONSOLIDATED MINES CO.

COLORADO

Address: W. E. Renshaw, or Richard White (receiver), at Idaho Springs, Clear Creek Co., Colo.

Inc. Jan. 1, 1907, in Colorado. Cap., \$5,000,000; shares \$1 par.

Property: 10 claims, patented, and a mill-site, showing a vein traceable 3 miles, carrying sulphide ores said to assay 10 oz. silver and \$18 gold per ton, with a little copper. Mine has about 5 miles of workings. A 550-h. p. hydro-electric plant supplies 350-h. p. to the mine and 200-h. p. to the mill. There are 4 hoists, good for 3,000' depth, and an 18-drill Ingersoll-Rand air compressor. Buildings include a machine-shop, carpenter shop, smithy, etc., and a 100-ton stamp mill. Several sets of lessees reported developing and producing at a profit in 1917. One lessee is opening \$50 ore.

Ore from this mine is being treated at the Newton mill, Idaho Springs, operated by W. E. Renshaw. Flotation is part of the process.

GEORGETOWN TUNNEL & TRANSPORTATION CO. COLORADO

Offices: C. A. Basse, sec., 608 Dearborn St., Chicago, Ill., and Georgetown, Colo.

Officers: C. G. Breitenbach, pres. and treas.; Geo. W. Talmage, v. p.;

H. Robeson, cons. engr., Denver; J. J. Keating, local mgr.; H. S. Parks and Alex Williams, directors.

The company is a transportation project. Its purpose is to provide power, drainage, light, ventilation, and an outlet for the ore and waste rock of the many mines within the working zone of its course, similar to the Argo, or Newhouse tunnel at Idaho Springs, Colo. The tunnel, when completed, will cut at great depth the veins and ore deposits that traverse Democrat, Columbia, Republican, Brown and Sherman mountains at Georgetown. It is being driven under contract, and was 1,200' long, May, 1917.

GILPIN TUNGSTEN PRODUCTION CO. COLORADO

Address: 1712 Champa St., Denver. C. M. Kittredge, mgr.

Cap., 1,000,000 shares, 800,000 unissued.

Property: the Empress claims in Idaho Springs district, Colo., and Sternberger tract in Gilpin Co., Colo. Company was operating in the tungsten belt of Boulder Co.

The Empress is opened by a 500' tunnel to depth of 300'. A lessee has opened good gold-silver-copper ore. Near the Sternberger the company has claims that contain silver and tungsten ore.

GILT EDGE MINES & SMELTING CO. COLORADO

Office: 402 First National Bank Bldg., Denver, Colo.

Officers: Henry I. Seemann, pres. and gen. mgr., P. O. Box 1375, Denver, Colo.; Wm. H. Warrinner, v. p.; A. W. Craig, sec.-treas., with E. M. Kirton, directors.

Inc. July 24, 1913, in Colorado. **Cap.,** \$1,500,000, to be increased later to \$2,500,000; shares \$1 par; outstanding Dec. 20, 1915, 1,002,750 shares. Annual meeting 4th Thursday in July.

Property: 46 claims, about 300 acres, mostly patented, in Lincoln mining district, Clear Creek Co., Colo.

Ore: gold-silver-copper in fissure veins in schist and porphyry, said to assay from \$9 to \$200 per ton. The Gilt Edge mine is said to have produced some rich gold ore.

Development: the Aurora tunnel is being driven to develop the property at a depth of 1,000'; in Dec., 1916, this tunnel was in 450'. Total underground workings, 2,000'.

Equipment: includes a 20-stamp mill and electric power.

Output in 1915, which was small, said to assay over \$200 per ton. Company plans adding an air compressor to equipment this year.

GOLDEN EMPIRE MINING CO. COLORADO

Address: Empire, Colo.

Officers: A. W. Tefft, pres.; B. F. Richards, v. p.; E. D. Payne, sec.-treas. and gen. mgr.

Is a reorganization of an Arizona corporation, with Colorado holding company. **Cap.,** \$300,000; shares 10c par; non-assessable; 2,000,000 shares issued. **Transfer office:** Empire, Colo. Annual meeting 1st Thursday in October.

Property: 31 claims, 20 patented, comprising the Denver City, Tennessee, Harrison and Breckenridge groups in the Upper Union mining district, Clear Creek Co., Colo. Also has 2 mill sites and water rights.

Company owns the Denver City group outright; has a 10-year lease on the Tennessee with an additional 10-year privilege; owns half interest in 2-year bond and lease for \$3,000 on the Harrison group, at 10% royalty, to be applied on purchase price; has half interest in 3-year bond and lease on the Breckenridge.

Ore: mines produce principally copper iron sulphides, but the Breckenridge group is said to carry lead-silver-gold-copper-zinc values. Assays are given as \$3-\$20 for mill dirt and \$20-\$200 for shipping ore.

Ore reserves: estimated at 5,000 tons blocked out.

Development: by 9 tunnels.

Equipment: includes 10-stamp amalgamation-concentration mill with capacity for 40-60 tons per 24 hours; extraction is 85-92%. There is also

a compressor with electric gasoline power.

Started producing, September, 1917. Employs 11 men.

HOOSAC TUNNEL & MINING CO.

COLORADO

Reorganized 1916, as New Life Tunnel & Mining Co., which see. Company has been in hands of receivers for a number of years.

IDAHO BRIDE MINING & MILLING CO.

COLORADO

Officers: E. D. Payne, sec. and gen. mgr., 227 Temple Court Bldg., Denver, Colo. H. A. Miller, pres.; R. A. Kramer, v. p.; A. A. Ancoin and H. Angerman, directors.

Cap., \$100,000; shares \$1 par, fully paid, non-assessable.

Property: about 150 acres near Idaho Springs. Company organized to take a lease on the Bride vein, worked through the Idaho tunnel, and supposedly has lease and bond on the Seaton mine, opened at depth by 300' drift in the Newhouse, or Argo, tunnel, 800' lower than the Idaho. Company took over Foxhall property, 1914. Work was resumed on Bride vein in March, 1917.

Ore: mostly galena with silver-gold content, from 1,300' level, said to have run \$9 to \$20 per ton.

Equipment: includes a concentrator. Recovery on \$4.65 ore is given as \$4.08, or 88%. Net smelter returns to Jan. 1, 1916, advertised as \$25,000.

Management stated that upward of \$500,000 has been expended in development work.

Mill has been leased for custom business to E. J. Jones. The company contemplates taking over some lead-silver-gold mines in the upper Union district of Clear Creek Co., Colo.

IDAHO MINING, REDUCTION & TRANS. CO.

COLORADO

Wm. E. Renshaw, mgr., at last accounts, Idaho Springs, Clear Creek Co., Colo.

Property: the Silver Age, Gem and Freightons Friend mines (formerly the Gem Cons. Mines Co.), showing veins with gold-copper ores.

Development: by several shafts and extensive tunnel workings. Is now operated by lessees.

Equipment: includes electric-driven compressor and hoist, and a 200-ton concentrator with 20 stamps.

IMPERIAL CONSOLIDATED MINING CO.

COLORADO

Office: 725 Colorado Bldg., Denver, Colo. **Mine office:** Georgetown, Clear Creek Co., Colo. Edw. J. Wilcox, pres. and mgr.; Henry Butler, supt.

Inc. as a reconstruction of the Waldorf Cons. Mining Co.

Property: 600 acres, patented, including the Tobin mine, in the East Argentine district, shows a strong fissure vein with 3' paystreak of gold-bearing copper ore.

Development: includes the Tobin and Wilcox tunnels, with 7 miles of workings. A 3' vein of high-grade copper was intersected, April, 1915, at depth of 500'.

Equipment: includes a 125-ton mill at the portal of the Wilcox tunnel. After an idleness of several years, operations were resumed in 1915.

A 42-ton trial shipment said to have averaged 10% copper, 8% lead, 1.53 oz. gold and 66 oz. silver per ton. Main development work was carried on by lessees in 1916 on the Commonwealth vein.

KENNEDY GOLD M. & M. CO.

COLORADO

Georgetown, Clear Creek Co., Colo. David Kennedy, mgr., at last accounts.

Property: the Centennial mine, 640 acres, shows cupriferous gold and silver ores in a 30" paystreak, assaying up to 24% copper, 5 to 50 oz. silver and 3 to 5 oz. gold per ton. Has steam power.

KITTIE LANE GOLD MINING CO.

COLORADO

Office: 507 Exchange Bank Bldg., Colorado Springs, Colo.

Officers: Marx Lorig, pres.; B. F. Webster, v. p.; Arthur Cornforth, sec.-treas. Is a reorganization of the Gould Mining Co.

Inc. in 1912. **Cap.**, \$2,000,000; shares \$1 par; 265,000 shares in treasury.

Company had no debts and \$2,000 cash and bills receivable, Jan. 1, 1917. Stock listed on Colorado Springs Exchange. Owns about 30 acres on Raven hill, adjoining the Elkton. Inactive.

LAKE MINE

COLORADO

Owned by Hal and Robt. H. Sayre. Robt. H. Sayre, Central City, Colo., mgr.

Property: 5 patented claims, in Virginia mining district, Clear Creek Co., Colo., show pyrite, chalcopryite, gray copper, zinc and lead. Ore occurs in fissure vein running N. 80° E. with dip 65°, in granite-gneiss formation.

Development: by 2 tunnels, 600' and 2,000' long to vertical depth of 2,400', with a total of 15,500' of underground workings.

Production: from Aug., 1915, to Aug., 1916, was 10,848 tons of ore, averaging \$8 per ton, yielding a gross return of \$125,000 and a net return of \$96,727. Dividend distributed among the owners for the fiscal year ending Aug. 1, 1916, was \$10,000. Mine is worked by lessees.

LINCOLN GROUP MINES CO.

COLORADO

Office: 1726 Broadway, Denver, Colo.

Officers: H. A. Wimbush, pres.; Peyton Hugh, v. p.; H. G. Wimbush, treas.; R. R. Moodie, sec., with Harry J. Newton, directors.

Inc. 1914, in Arizona.

Property: 10 claims at Idaho Springs, Clear Creek Co., Colo., said to carry streaks of ore assaying 7.8 oz. gold and 8.1 oz. silver. Developed by tunnels, crosscuts and drifts. Operated by lessees in 1916.

LITTLE GIANT GOLD M. & M. CO.

COLORADO

Lawson, Colo.

Officers: L. H. Mumbrue, pres.; F. F. Chady, v. p.; H. E. Minier, sec.-treas. and mgr., with R. L. Dear, F. L. Collom, Ira Spencer and F. P. Koontz, directors. Martin T. Michel, supt.

Inc. in Colorado. **Cap.**, \$500,000; shares \$2 par.

Property: 58 patented claims, 350 acres, in Downieville mining district, Clear Creek Co., Colo., carries gold-silver-lead ores in quartz veins, running E. W. with dip 60°. Country rock is granite.

Development: to depth of 900' by 2 tunnels, 3,500' and 1,000' long.

Equipment: includes steam hoist, compressor and drills.

Mine has been worked by lessees but company planned resumption of operations and installation of 50-ton concentration and flotation mill at last accounts.

The Little Giant is credited with a past production of \$4,000,000.

MARSHALL & RUSSELL GOLD M. M. & T. CO.

COLORADO

Out of business; property at Empire, Clear Creek Co., Colo., sold at receiver's sale July 9, 1917. See full description in 1916 edition of this book.

MEMPHIS & IDAHO SPRINGS GOLD M. & M. CO.

COLORADO

Idle. Mine near Idaho Springs, Clear Creek Co., Colo., J. J. Williams, pres.; Wm. M. Slack, sec.-treas., at last accounts.

Inc. in Colorado. **Cap.**, \$1,500,000; shares \$1 par, non-assessable.

Property: 14 claims, patented, carry veins with lead, copper and zinc sulphides. Mine is developed by shafts of 125', 250' and 460' and is tapped at depth of 2,350' by the Newhouse tunnel.

Equipment: includes 22-h. p. electric hoist and air compressor. Was leased to John Kuykendall of Denver at last accounts.

MID-COLORADO MINES CO.

COLORADO

Georgetown, Colo.

Officers: Abraham Plank, pres., Wooster, Ohio; O. H. Kniffen, v. p.; L. A. Lang, sec., Denver; I. E. O'Hail, treas., Wooster; preceding, with Geo. B. McFadden, directors.

Inc. March, 1915, in Colorado. **Cap.**, 600,000 shares; \$1 par; 400,000 outstanding. Annual meeting, 2nd Tuesday in July. Operating expenses in 1915, \$1,200 monthly. Indicated earnings in 1915, 10c per share, used for development work.

Property: 13 claims, 11 patented, on Republican Mt., ½ mile W. of

Georgetown, including the Mineral Chief mine, was purchased in 1915.

Ore: gold, silver, lead, zinc in fissure vein in porphyry, said to assay .09 oz. gold, 16 oz. silver, 18% lead, 7% zinc.

Development: by 7 shafts ranging in length from 140' to 1,100', with total workings of $1\frac{1}{2}$ miles.

Ore reserves: said to be 50,000 tons. Company has a 50-ton mill equipped with crusher, rolls, jigs, tables and flotation plant. Electric power is used.

Production: previous to 1915 said to be 190,000 tons. The output in 1915 came from development work and had an average value of \$15 per ton. Company intends driving a new tunnel 100' below the 6th level.

NEW ERA MINES

COLORADO

Office: 31 State St., Boston, Mass. **Mine office:** Idaho Springs, Clear Creek Co., Colo.

Officers: Benj. A. Howland, pres.; E. M. Sanger, sec.; Robt. H. McLaughlin, treas.; W. A. Gilman, mgr.

Inc. Nov. 8, 1915, in Maine. **Cap.**, \$500,000; shares \$1 par; 100,000 shares held in trust for treasury. Stock listed on Boston Curb. Paul Revere Trust Co., Boston, transfer agents. Annual meeting 2nd Monday in January.

Property: 15 claims, 3 patented, about 75 acres, and a millsite, $5\frac{1}{2}$ miles from Idaho Springs, formerly owned by the Trail Mining Co., and worked during 1913-14 by the Calumet-Corbin Mining Co.

Ore: consists of a mixture of coarse galena, chalcopyrite and pyrite, containing gold-silver values, with a quartz gangue and much siderite. Gray copper is abundant, while zinc blende is occasionally found. Five veins have been developed, with main workings on the Great Western and New Era veins. Selected smelting ore averages from \$50-\$60 per ton, mainly in gold and lead values.

Mine is said to have the extension of the Lamartine and Oneida veins, and is credited with a lead and gold-silver production of 2,361,000 lbs. and \$650,000 respectively. Developed by 4,000' of tunnels, crosscuts and shafts. Benj. F. Hall in 1914 estimated 64,330 tons of ore in sight, valued at \$415,382, based on an 85% extraction. Property reported on by Forbes Rickard in 1914.

Equipment: includes 15-h. p. electric hoist and a 50-ton 10-stamp mill.

Shipments: from Nov., 1910-1913, amounted to 4,219 tons of net value \$84,558, or \$20 per ton. About 40 men employed in 1916.

NEW LIFE TUNNEL & MINING CO.

COLORADO

Office: Idaho Springs, Colo.

Officers: H. C. Perks, pres. and gen. mgr.; E. D. Quigley, treas.

Inc. 1916 as a reorganization of the Hoosac Tunnel & Mng. Co., which company was in receiver's hands for many years. **Cap.**, 1,000,000 shares; 463,994 issued.

Company is using the proceeds from stock sales for paying off debts, notes, etc., of the old company and will again start mining operations when out of debt.

Property: 16 patented and 1 unpatented claims, 81 acres, in Spanish Bar mining district, Clear Creek Co., Colo., about $1\frac{1}{2}$ miles west of Idaho Springs.

Ore: is quartz impregnated with iron and copper pyrites, also some lead and zinc. It requires milling and concentration, as the gold-silver values are closely associated with the pyrites. Veins vary from 6" to 4' in width, about $\frac{1}{4}$ being of high-grade material, the balance milling ore.

Development: by 200' incline shaft said to show a vein carrying \$10-\$14 ore. Shaft is flooded below 50' in depth. Main working is the Hoosac tunnel which has been driven 1,015' on the Rising Sun vein. There are a few stopes, crosscuts and a 60' winze, all said to show ore.

Equipment: includes compressor and drills; hoisting equipment has been removed. Has a 10-stamp mill with classifier and 3 Wilfley tables.

Management seems to be earnestly trying to rehabilitate company, but appears to need more capital to put mine on a paying basis.

NEWHOUSE TUNNEL CO.

COLORADO

See Argo Mining and Tunnel Co.

ONEIDA-STAGG MINING & MILLING CO.

COLORADO

H. T. Rogers, mgr., Idaho Springs, Colo.

Inc. 1914, as a consolidation of the Oneida and Stagg Mining companies. Mine at Freeland, 5 miles from Idaho Springs.

Development: by 1,000' tunnel and a 150' raise from the tunnel level, which cut a 5' vein of gray copper ore, said to assay as high as 4% copper, 10 oz. silver and .52 oz. gold. A 50-ton cyanide mill was erected in 1914 to treat the ore by the continuous decantation system, but was remodeled in 1915 to use the oil flotation process. Milling costs are placed at 85 cts. per ton of ore treated. Production from development work pays all operating expenses.

No 1917 returns.

ONONDAGA MINES CO.

COLORADO

Office: 717 Onondaga Bank Bldg., Syracuse, N. Y. **Mine office:** Georgetown, Clear Creek Co., Colo. Arthur H. Osborne, mgr.; T. Kyner, supt.

Property: the Onondaga and Colorado Central-Aliunde group on Leavenworth Mountain, Georgetown. In the Onondaga, the Ruler vein 18" wide, showing gold-silver-lead ore, is under development through the Capital tunnel. Drifts are being run eastward on the vein at 3 different points. The Aliunde group has about 30 miles of underground workings, including the Hall and Doric tunnels; the latter will be advanced to intersect the Ruler vein of the Onondaga. The Aliunde is reported to have produced milling ore which yielded 275 oz. silver per ton in former years.

Equipment: includes compressor, hoist and power plant.

Production: from the 180' and 100' levels. Shipping 20 tons of ore daily to the Hudson mill at Idaho Springs, 1917. Employs 30 men.

PENNSYLVANIA MNG., POWER & REDUCTION CO. COLORADO

Wm. Wright, pres., Boynton, Pa. Leopold Sternberger, business mgr. and supt. P. O. Box 972, Denver, Colo.

Inc. in Colorado. **Cap.**, \$2,500,000; 600,000 shares in the treasury. Is a close corporation owning entire stock issue of the Fall River Hydro Electric Power Co.; also owns the Lotus group of mines and property formerly owned by Lucania Tunnels & Mines Co.

Property: at Idaho Springs, Clear Creek Co., Colo., the Pennsylvania group, 374 patented claims, including several millsites and placers, covers about 2,000 acres. Shows fissure veins with complex lead-zinc-copper ore, containing silver and gold, also uranium, molybdenum and tungsten. None of the mines are producers excepting the Lotus group which is reported to have shipped some ore until closed down by water.

Development: by shafts and tunnels, including the Lucania tunnel, over 8,000' long. Total workings, about 8 miles.

Equipment: includes steam and water-power plants, air compressors. a new 10-stamp mill and 2 Wilfley tables.

POZO GILPIN MINING CO.

COLORADO

Mine near Idaho Springs, Clear Creek Co., Colo., has lead-copper ore mined for its gold and silver contents, by shaft and tunnel work. Company was idle during 1915, but the Engineering Mining Co., operating a lease on the property, sank a 100' shaft below the tunnel level. Work was suspended in Oct., 1915, pending addition of electric power to handle the water encountered in this work.

Equipment: includes steam power plant with Ingersoll-Rand compressor.

PRIZE MINING CO.

COLORADO

Address: Schafer Bros., 55 Wall St., New York. **Mine office:** O. B. Willmarth, Idaho Springs, Colo.

Officers: W. H. Gibson, pres.; M. J. Katz, sec.; A. S. Schafer, treas.; with De Witt C. Cohen, H. F. Dawes, Fred Rothschild, Edward Schafer and Henry Sidenberg, directors.

Inc. in New Jersey. **Cap.**, \$50,000; shares \$1 par; non-assessable; all issued. Annual meeting, April 25th, at Jersey City.

Operating expenses in 1916 were \$25,000.

Property: 9 claims, 6 patented, 15 acres, in Gilpin Co., Colo. Examined by E. E. Chasc. Claims show a 4' N. W. S. W. fissure vein in granite. Ore is a sulphide containing gold and silver.

Development: by 1,500' shaft with 6,000' of workings.

Equipment: 37-h. p. electric hoist.

PURITAN MINE

COLORADO

Geo. R. Stuart, owner, Alice, Colo.

Property: 78 claims, 46 patented, 330 acres, in Lincoln mining district, Clear Creek Co., Colo., said to show contact and quartz fissure veins, up to 26' in width, in granite and schist.

Ore: is a sulphide, high in silica, from 20-30% sulphur, with gold, silver, copper and iron, gold predominating. Pay shoot said to be 400' long.

Development: by 4 tunnels, 1,320', 500', 190' and 135' long; also shafts 85', 40' and 35' deep. Total workings, 3,825'.

SANTIAGO CONS. MINING, MILLING & TUNNEL CO. COLORADO

Office: 413 (Mining) Exchange Bldg., Denver, Colo. **Mine office:** Georgetown, Clear Creek Co., Colo. Llewelyn Jones, sec. and mgr.

Mine has a 5,000' tunnel showing gold and silver-bearing copper ores. Work on the 4th level opened up a 3½' ore body said to give smelter returns of \$70 per ton. The 7th level is now being extended 800' into new ground.

Equipment: includes steam power and a 50-ton concentrator. **Shipments:** in 1916, mainly from the 6th level, said to run 5 oz. gold; 27 oz. silver, and 10% copper. Mine is worked both by lessees and on company account.

SARATOGA MINING CO.

COLORADO

Office: Union Trust Bldg., Detroit, Mich. **Mine office:** Idaho Springs, Clear Creek Co., Colo.

Officers: F. L. Colby, pres.; Chas. R. Dunn, sec.; E. W. Pendleton, treas.; with Edwin Lodge, directors. John Owen, gen. mgr.

Inc. Nov. 18, 1911, in Colorado, as the successor of the Clear Creek Mining & Reduction Co. **Cap.**, \$300,000; shares \$10 par; non-assessable; issued, 20,024 shares.

Property: the Saratoga-Gaston group, and the Cyclops claim, at Russell Gulch, opened through the Newhouse tunnel.

Equipment: includes steam power. The smelter, at Golden, has been disposed of. Idle 1914-1915.

In Aug., 1917, lessees were treating dump ore, but can only operate a few months on account of scanty water supply.

SEATON MINING & MILLING CO.

COLORADO

Address: Cincinnati, O. H. E. Machol, supt., Idaho Springs, Colo.

Property: the old Seaton mine on Seaton Mountain, near Idaho Springs. Mine reopened 1916 through Argo tunnel and 650' raise to be put through from west drift on Seaton vein to connect with Foxhall tunnel. The Seaton vein is cut at 6,007' from entrance to the Argo tunnel.

SHAFTER MINING CO.

COLORADO

Office: 1 Broadway, New York. **Mine office:** Idaho Springs, Clear Creek Co., Colo. M. S. Payton, pres.; Chas. D. Ross, sec.-treas.

Inc. 1880, in New York. **Cap.**, \$100,000; shares \$100 par.

Lands carry copper ores with values mainly in gold.

Development: by an 800' shaft and a 5,500' tunnel. Has been idle for several years.

SILVER PLUME CONSOLIDATED MNG. CO.

COLORADO

Address: W. H. Stevens, supt., Georgetown, Colo.

Cap., \$3,000,000.

Property: the Buxton, 3 miles from Silver Plume, Clear Creek Co., Colo. Being developed by tunnel, 700' long, started in May, 1917. A 12' vein was reported cut in August.

SILVER PLUME REDUCTION CO.

COLORADO

Operated the Burleigh mill near Silver Plume, Colo., and had a lease on Seven-Thirty mine. Installed an Edison plant and oil flotation, 1915.

Letters returned unclaimed in 1917.

SPECIE PAYMENT GOLD MINING CO.

COLORADO

Mine purchased in June, 1917, by C. A. O'Leary & Co., of St. Paul, Minn., who organized the Consolidated Specie Payment Mng. Co.

Address: Idaho Springs, Colo.

Property: shows gold-silver-copper ore, developed by 2,800' tunnel. The vein was intersected 2,800' from the portal of the tunnel and 1,000' of drifting has been done to the west.

Equipment: includes electrically driven air compressor and a 20-stamp mill. Recently worked by lessees.

STANLEY MINES CO.

COLORADO

Office: 1023 First National Bank Bldg., Denver, Colo. Mine office: Idaho Springs, Clear Creek Co., Colo.

Officers: J. J. Fisher, v. p.; J. W. T. Gray, sec.; J. P. H. Cunningham, treas.; H. J. Wolf, mgr.; preceding officers are directors.

Inc. 1904 as successor of the Consolidated Stanley Mining & Milling Co. Cap., \$750,000; shares \$5 par; 128,025 shares issued. Annual meeting in June.

Property: 89 claims showing gold and silver-bearing lead and copper ores.

Development: 641' main shaft, and 5 others from 60' to 680' deep; 24 crosscuts, total 1,050'; Hukill tunnel, 380'; adits and drifts, 22,790'; raises, 3,460'; winzes, 570'; a total of 30,181'. Vein area stoped is 635,000 sq. ft. Past production is \$3,500,000.

Property was sold in Aug., 1916, to Fisher, Cunningham & Johnson. Reorganization was planned and more development.

SUN-MOON LEASING CO.

COLORADO

Address: B. G. Jacobs, Idaho Springs, Colo.

Officers: J. C. Hershey, pres. and treas.; R. E. Schirmer, v. p.; G. L. Nye, sec.; with Paul Weiss, directors.

Inc. Feb., 1917, in Colorado. Cap., \$10,000; shares \$1 par; non-assessable; 7,000 issued.

Property: 14 patented claims, 60 acres, on Seaton Mountain, in Clear Creek and Gilpin counties, near Idaho Springs, Colo.

Geology: quartz vein in monzonite porphyry and granite schist, dipping 61° N. and pitching N. 60° E. Ore contains gold, silver, copper, lead, and iron.

Development: operated through the Argo tunnel, at 9,000' from portal. Greatest depth of workings is 2,000'. A 300' raise is being driven from tunnel level.

Property at one time employed 150 men, but was closed for 2 years until early in 1917.

TEK MINING, MILLING & LEASING CO.

COLORADO

Idaho Springs, Colo.

Property: an old mine with dumps estimated to contain 150,000 tons of complex gold-silver-lead ore averaging \$4 per ton.

Late in 1916 the main tunnel is said to have cut 3½' of 3 oz. gold and 7 oz. silver ore, also from 3 to 12% copper. Manager Weber appears, however, unduly reticent about development.

No 1917 returns.

TENNESSEE MINING & MILLING CO.

COLORADO

Office: care J. W. Thaver, sec., 677 Roscoe St., Chicago, Ill. Mine office: Empire, Clear Creek Co., Colo.

Officers: J. W. Loofbourov, pres.; S. B. Anderson, v. p.; J. F. Kidnell, treas., and H. J. Fersdick, directors; E. D. Payne, supt.

Inc. Feb. 11, 1911, in Colorado. Cap., \$400,000; shares \$1 par; non-

assessable; issued 260,000. Annual meeting, Aug 13. Company is a re-organization of the Gold Bug Mining Co.

Property: 6 claims, 2 deeded, in the Colorado district $1\frac{1}{4}$ miles from Colorado Southern railroad. Claims have veins which show gold and silver ore with traces of copper. Property has been leased and development work planned.

Development: by 1,300' of tunnels, a shaft and several drifts. Reported in June, 1917, that property was ready for large and steady production.

TERRIBLE DUNDERBERG MINING & POWER CO. COLORADO

Company being liquidated; entire assets sold to the Denbigh Silver-Lead Mines Co., which see.

VINDICATOR MINES & TUNNEL CO. COLORADO

Property near Idaho Springs, Colo., leased May, 1915, to Gold Standard Leasing Co., financed by Casper, Wyo., and San Francisco capitalists. Mine said to carry the Tom Tuck vein, 6' wide, with porphyry hanging-wall.

CONEJOS COUNTY

TEPEE MINING & DEVELOPING CO. COLORADO

Letters returned in May, 1917, from Alamosa, Colo.

Officers: J. F. Reynolds, pres. and mgr.; C. L. Cunningham, v. p.; W. W. Platt, sec.; B. P. Middleton, treas.; with J. F. Reynolds, W. W. Platt, T. L. Connolly, directors.

Inc. 1914, in Colorado. **Cap.**, 1,000,000 shares; \$1 par; non-assessable; in treasury, 95,000 shares.

Property: 21 claims, about 400 acres, at Alamosa Forest Station, Forest Reserve, Conejos Co., Colo. Pay ore occurs in shoots in veins in diorite. Veins vary from vertical to 45° dip, and from 8" to 2' in width, with strike N. E.-S. W. Ores are both oxidized and sulphide and contain gold-silver values.

There is one 90' shaft worked by windlass. It was proposed to cut vein by tunnel 1,500' long.

CRIPPLE CREEK DISTRICT (See Teller County)

CUSTER COUNTY

MARION MINES & MILLS CO. COLORADO

Office: 850 Equitable Bldg., Denver, Colo. **Mine office:** Rye, Colo.

Officers: Henry E. McElwain, pres.; John H. McElwain, v. p.; Jos. Giedlartz, sec.-treas.; preceding, with John S. McElwain, Frank Bulkley and Clarence A. Brandenburg, Denver, directors.

Cap., \$300,000, increased from \$200,000, fully paid by \$100,005 cash, balance in property. Outstanding debts, Feb., 1917, \$118,389.

Property: the Greenhorn group, 19 claims, 6 patented, together with one millsite claim, total 65 acres; also 120 acres held by location, making 185 acres mineral land in the Hardscrabble district, Custer Co., Colo.

Development: by tunnel showing a vein of zinciferous copper and lead ore with small gold and silver values. Has water power, compressor and 100-ton concentrating mill. Erected a 100-ton flotation plant to treat tailings, 1915. Is a small producer.

PEERLESS CONSOLIDATED COPPER CO. COLORADO

Offices: 430 Symes Bldg., Denver, Colo.

Officers: J. B. Tiffany, pres.; W. H. Bishop, sec.-treas.

Property in Custer Co. is operated intermittently.

DOLORES COUNTY

McINTYRE MINING CO. COLORADO

Address: John W. Prout, mgr., Rico, Colo.

Property: the Puzzle mine at Rico, Dolores Co., Colo., credited with past production of silver ore worth \$300,000.

Development: by 135' shaft with 2,315' of workings. Present owners have not shipped any ore, but have been looking for a vein lost 30 years ago. This was found, 4½' to 5' wide, but after driving 400' no commercial ore was developed. Work is to be continued.

RICO ARGENTINE MINING CO.

COLORADO

Office: Mackintosh Block, Salt Lake City. **Mine address:** Wm. McCullough, supt., Rico, Dolores Co., Colo.

Officers: Charles Read, pres.; A. E. Rykert, v. p.; J. H. Woodmanses, sec.-treas.; S. A. King, L. O. Hoffmann and Fred W. Price, directors.

Inc. 1911. **Cap.,** \$100,000; shares 10c par; 963,136 issued; assessable; assessment No. 6 of 1c per share levied Jan. 4, 1917. Company is its own transfer agent and registrar. Listed on Salt Lake Exchange.

Property: the Black Hawk and Argentine groups, 21 claims, 145 acres, mostly patented, adjoining the Rico-Wellington Mining Co. property.

Geology: alternating strata of limestone and sandstone, dipping at angle of about 30° and cut by almost vertical fissures of great extent and persistence. Where these fissures cross the soluble limestone they contain flat replacement deposits of sulphide ores, carrying copper, zinc, and lead, with gold and silver values. The ore shoots or bedded deposits are from 3-30' thick. These fissures and the limestone are identical both in character and occurrence with those which are producing in the Rico-Wellington property.

Development: a new tunnel, 200' lower than former workings, cut a strong shoot of marketable ore carrying copper, lead and zinc, with good gold and silver content. This opening drained the main shoot through to a connection with upper workings and assures a continuous shoot of good shipping ore for 340' on the slope, which is now yielding 20 tons daily. Lessees in the upper workings are producing an equal quantity.

Production: in August, 1917, 44 carloads of 25 to 30 tons each. By October this was to be doubled.

RICO CONSOLIDATED MINES CO.

COLORADO

Owned by Jesse Knight interests of Provo, Utah. G. Garren, supt., Rico, Dolores Co., Colo. Listed on Salt Lake City Exchange.

Property: adjoining the Rico Argentine on the N. E., is said to show a vein of copper-silver-lead ore 35' wide in the upper workings. Company is driving a tunnel to gain 140' depth; in April, 1916, this tunnel was in over 300', with only a short distance to drive. Company has been making shipments, but they are not reported. A long tunnel was driven in 1917 from Silver Creek to cut the vein on its downward extension.

RICO MINING CO.

COLORADO

Office: 9 Wall St., New York. **Mine office:** Rico, Dolores Co., Colo.

Officers: Henry Godet, pres.; Wm. R. Sainsbury, sec.; Geo. E. Hicks, supt.

Inc. Oct. 25, 1911, in Colorado. **Cap.,** \$3,500,000; outstanding, \$260,000 preferred, \$1,750,000 common stock and \$480,000 first mortgage bonds; shares \$10 par. Company owns properties of the Pro Patria Mining & Milling Co. and the United Rico Mines Co., both dead.

Property: 156 claims, 1,110 acres with 20 acres mill site and 320 acres coal land, in the Pioneer district of Colorado. Ore occurs in fissure veins as replacements of lime. Claims are reported to show veins averaging from a few inches to 15' in width, a mile long and proven to a depth of 700'. Ores in one mine carry 4% copper, 10% lead, 10% zinc and 10 oz. silver, the copper ore occurring as chalcopyrite associated with pyrite, sphalerite and galena in fluoritic gangue.

Development: by tunnels, 1,000 to 3,000' long. Equipped with 125 hydro-electric power at mine and 100-h. p. at mill. There are two 75-h. p. hoists, 2 compound air compressors, 10 air drills and 1 air electric drill; two 9x15 Blake crushers, 18 Wilfley tables, etc.

Production: to date estimated at 1,200,000 lbs. copper. Operating in a small way through leasing. Early in 1917, the Potter tunnel was completed and another was to be driven in the Syndicate mine.

RICO-WELLINGTON MINING CO.**COLORADO****Address:** Jesse Knight, pres., Provo, Utah.**Officers:** Jesse Knight, pres.; Chas. Read, v. p.; W. L. Mangum, sec.-treas.; K. S. Jordan, asst. sec.-treas.; J. W. Knight, gen. mgr., with J. C. Jensen and C. R. Bates, directors. Albert Lofquist, supt.**Inc.** August, 1911, in Utah. **Cap.**, \$1,000,000; shares \$1 par; 51% of stock owned by Knight Investment Co.

Treasurer's report for year ended Dec. 31, 1916, shows assets \$252,070, which includes mining property, \$234,708; cash and accounts receivable, \$4,727; liabilities, \$5,957. Receipts totaled \$108,420 from ore settlements and expenditures \$105,329, leaving a net gain for the year's operations of \$3,081, and a total gain to date of over \$146,112.

Since the property was taken over by its present owners it has earned over \$400,000, has invested \$50,000 in a mill and expended \$100,000 in development work. The debt of \$150,000 advanced for this equipment and work was paid off in 1916.

On April 25, 1917, No. 1 dividend of 1½c. per share was paid, followed by similar amounts in May and June. On July 25, 4c. was paid. The total is \$39,000.

Property: the Wellington mine, at Rico, which contains ore-shoots formed by replacement and contact metamorphism in the limestone beds of the middle member of the Hermosa formation. In 1914 a flat deposit of zinc-lead ore was cut, 400' long on the dip, 50' wide along the strike and 7 to 8' thick. It lies parallel to the Black Hawk fault. To the north the orebody is cut off by a cross fault parallel to the Nellie Bly fault, the orebody north of the fault being 170' below. Across the Black Hawk fault a copper deposit, replacing limestone and broken by several faults, has been opened, the ore carrying good copper and silver values.**Development:** consists of about 22,000' of underground work, reported to expose large amounts of lead-zinc and copper ore. Development for 1916 amounted to 7,062'. Exploration is now devoted to the Black Hawk and Iron fissures, two great ore-bearing formations traversing the property N. W. and S. E. In these the ore makes in lime beds almost like coal deposits, and as many as 5 and 6 beds, one above the other, have been opened. Other virgin ground is being explored.**Equipment:** includes a 2,500' tram to the Rio Grande railroad, handling 50 tons per hour at a cost of 23 cts. per ton. The 100-ton mill, formerly belonging to the Pro Patria Co. and leased for 5 years, has been remodeled at a cost of nearly \$30,000. A tube mill, 5 Deister tables, 6 Callow tanks, 2 Callow screens and electrical equipment have been installed.**Production:** for 1916 was 4,989 tons copper-lead ore, netting \$101,034, or \$19.09 per ton, and 292 tons of iron sulphide ore, netting \$1,167, or \$4 per ton.

Property is a good one and, being managed by Jesse Knight, the company is assured of skillful, economical and up-to-date operation.

EAGLE COUNTY**COPPER KING MINES PRODUCTS CO.****COLORADO****Office:** Copperbow, via McCoy, Eagle Co., Colo.**Officers:** Wm. Kelly, pres., Hutchinson, Kan.; Andrew B. Crichton, v. p., Johnstown, Pa.; J. R. Wood, sec.-treas., 2140 S. University Ave., Denver, Colo., preceding with E. E. Lloyd and J. N. Wyman, directors; W. H. Wagner, mgr.**Inc.** in 1914.

Company has a deposit of copper oxide ore reported at 50,000 tons on which they are experimenting with a 50-ton electrolytic mill.

EAGLE MINING & MILLING CO.**COLORADO**

Property sold to Empire Zinc Co., of Colorado, which see.

PINE MARTIN MINING CO.**COLORADO****Office:** 934 Gas and Electric Bldg., Denver, Colo.

Officers: E. P. Young, pres.-supt.; B. F. Bachman, v. p.; Chas. B. Bovier, sec.; Wm. G. Krape, mgr.-treas., with G. B. Kemp, directors.

Inc. March 27, 1915. **Cap.**, \$250,000; shares 10c. par; 1,139,400 shares issued. Annual meeting, 1st Wednesday in March.

Property: 10 patented claims, about 50 acres, held under bond and lease, at Red Cliff, Eagle Co., Colo., said to show a blanket quartz vein in porphyry-granite formation, carrying gold and silver values. The orebody strikes N. and is almost flat.

Development: by 8,000' of old workings, mainly tunnels. Management estimates 300,000 tons of ore developed and on dumps. Company built 100-ton amalgamation-concentration and flotation mill in 1916; also a dam with 2,000' pipe line supplying mill with its own power. Started operations August, 1917.

EL PASO COUNTY

GOLDEN CYCLE MINING & REDUCTION CO.

COLORADO

Colorado City, El Paso Co., Colo.

Officers: A. E. Carlton, pres.; E. P. Shove, v. p.; I. T. Snyder, sec.-treas.; with Spencer Penrose, Richard Roelofs, H. McGarry and L. G. Carlton, directors.

Inc. in West Virginia. **Cap.**, \$1,500,000; shares \$1 par; all issued. No bonded indebtedness or preferred stock. Listed on Colorado Springs Exchange.

Besides owning 50% of capital of East Colorado Springs Land Co., company controls Pikes Peak Consolidated Fuel Co., which has lands containing 15,000,000 tons of marketable coal. The Golden Cycle also holds 1,515,000 shares out of 4,000,000 in the United Gold Mines Co. of Cripple Creek.

Balance sheet of Dec. 31, 1916, shows: Assets, \$2,562,705, which included mill, plant and equipment, \$1,113,272; cash, gold and bullion, \$670,504; notes and accounts receivable, \$28,302; stocks and bonds, \$235,947. Liabilities: Accounts payable, \$157,315; surplus and reserves, \$90,851. Net earnings for 1916, \$471,725. Above earnings do not include those from the coal properties, at present about \$100,000 per year.

Dividends: to date, \$7,833,300; rate 36% per annum, payable monthly.

Property: 400 acres in the Cripple Creek district. In March, 1915, the Golden Cycle mine was sold to the Vindicator Cons. Gold Mining Co. for \$1,300,000. At Colorado City the Golden Cycle operates a cusom mill treating up to 40,000 tons monthly of Cripple Creek ore. Plant includes rolls, roasting furnaces and cyanide equipment.

Net earnings of mill have been as follows: \$571,108 in 1909; \$687,689 in 1910; \$571,047 in 1911; \$670,333 in 1912; \$583,292 in 1913; \$672,191 in 1914; \$682,990 in 1915; \$643,004 in 1916.

FREMONT COUNTY

COLORADO MINING LAND & INVESTMENT CO.

COLORADO

Idle. Office: Walsenburg, Colo. Mine near Hillside, Fremont Co., Colo. E. L. Neely, pres. and mgr.

Inc. 1911, in Colorado. **Cap.**, \$750,000; shares \$1 par.

Lands: 110 acres, owned partly in fee and partly leased, are said to show gold, silver, copper and lead assaying up to \$30 per ton.

U. S. REDUCTION & REFINING CO.

COLORADO

After several forced sales in 1916, the entire assets (1,500 acres of land, etc.) were sold to the Golden Cycle Mining Co., Colo., which in turn sold the extensive machinery to Morse Bros., of Denver. The plants contained 15,000 tons of machinery, 5,000 tons of structural steel and buildings, 12,000,000' of lumber, etc.

GILPIN COUNTY

AMERICAN METALS PRODUCING CO.**COLORADO**

Office: Central City, Colo. E. S. Moulton, pres.-mgr.; G. Whitney Adams, supt.-treas.

Cap., \$100,000; shares \$10 par, in 30,000 preferred and 70,000 common shares.

Operates a reduction plant at Blackhawk, Gilpin Co., equipped with Moulton-Adams system to handle low grade refractory ores. Plant treats custom ores.

ARAPAHOE MINING & MILLING CO.**COLORADO**

Last address: Colorado Bldg., Denver, Colo.

Officers: Thos. B. Everett, pres., treas. and gen'l mgr.; Chas. J. Jordan, v. p.; Harry A. Stewart, sec.; Will McLeod, mgr.

Inc. in Colorado. Cap., \$1,000,000; shares \$1 par; non-assessable. Treasury stock offered to the public at 3c. a share in blocks of 300 shares with a bonus of 20% and guarantee of refund out of initial earnings.

Property: 4 mining claims near Idaho Springs, 2 mill sites and water rights in Wisconsin mining district, Gilpin Co.; a contract with miners of Wisconsin district for daily supply of 50 tons of ore at \$3 per ton and a long lease on Rocky mountain concentrating mill at Blackhawk, Gilpin Co. Rocky mountain mill has daily capacity of 75 tons, fully equipped and reported in operation June 15, 1914. Management will "take no chances in the mining business," but intends sub-leasing mining claims and doing only a custom-milling business with expected net earnings of \$150 per day, to be divided among the stockholders in return for their confidence in the management.

AZTEC MINES CO.**COLORADO**

Property is the O. K. mine at Central City, Colo. A. H. Frost, pres., and J. R. Hastings, sec., Winona, Ont., Canada. Operated in a small way, 1915, by Henry R. Eilmann, lessee. Mine shows narrow fissure vein, carrying gold and copper values.

BATES LEASING CO.**COLORADO**

Address: Central City, Colo. Is not incorporated.

Property: Bates mine in Chase Gulch, Gilpin Co., Colo., which had been idle for 28 years.

Ore: occurs as pyrite and chalcopyrite in shoots about 3' wide, carrying gold, silver and copper. Milling concentrate averages 1.23 oz. gold and 7.80 oz. silver; smelter returns average 2.50 oz. gold, 14 oz. silver and 2.94% copper. The ore is treated at the Polar Star mill, leased by the company at Blackhawk and concentrate shipped to Globe smelter at Denver.

Development: consists of 100' winze sunk from the 400' level and drifting from it.

BEZANT GOLD MINING CO.**COLORADO**

Office: Central City, Colo.

Officers: O. J. Duffield, pres.-mgr.; G. H. Putman, v. p.; L. A. Duffield, sec.; C. C. Hendrie, treas., directors.

Inc. August, 1908, in Colorado. Cap., \$500,000; shares \$1 par; 435,000 outstanding. Dividends to date, 50c. per share.

Property: 3 claims, one patented, 14 acres, has a quartz fissure vein in granite and porphyry.

Development: by a 500' shaft and about 6,000' of drifts and crosscuts, is said to have cut 3 veins, all showing gold, silver and copper values.

Equipment: includes complete electrical plant, 50-h. p. electric hoist, etc. Plans building a mill. P. R. Alsdorf will be in charge.

Management claims to have a large tonnage of pitchblende-uranium ore blocked out.

Mine being unwatered October, 1917, prior to resumption of operations.

CALHOUN CONSOLIDATED MINES CO.**COLORADO**

Probably defunct. See Vol. XII. Mine at Central City, Colo.

CASHIER GOLD MINING & REDUCTION CO. COLORADO

Office: P. O. Drawer 46, Warren, Pa. Mine office: Central City, Gilpin Co., Colo.

Officers: Wm. Muir, pres.; F. M. Lockwood, sec.; E. E. Allen, treas.-mgr.; with H. P. Stone, M. A. Bliss, J. T. Meals, E. J. Lesser, W. P. Volgamore and F. L. Bensinger, directors. Wm. Auger, supt.

Cap., \$1,000,000; shares \$1 par; 555,843 issued. Report issued August 1, 1915, showed monthly earnings of \$3,428. Dividends paid during fiscal year amounted to \$36,696.

Property: includes the Pittsburgh, Meeker and Brooklyn mines, carrying chalcopryite and tetrahedrite, principal values being in silver, running up to 700 oz. per ton. The Pittsburgh mine is developed to depth of 1,000', by shafts, drifts and upraises. Equipped with boiler, pump, hoist and drills. Stopping method is used.

Production: 1,276 tons in 1914 and 1,800 tons in 1915, netting \$40,106. Average assays run 3.64 oz. gold, 7 oz. silver and 6.10% copper. Plan sinking shaft 100' and installing electric power. Has been a small but steady producer, partly from work of lessees.

COLORADO-GILPIN GOLD & RADIUM MINING CO. COLORADO

Office: 517 Drexel Bldg., Philadelphia, Pa.

Officers: Wm. Wright, pres.-gen. mgr.; Hon. Edw. Hart, v. p.; R. R. Grumer, sec.-treas.

Property: the Wood mine, at Central City, Gilpin Co., developed to depth of 350' and reported to carry a vein, from 18" to 2' thick, containing gold and pitchblende.

Equipment: includes power plant, compressor, etc. A notable shipment of 112 tons of ore, valued at \$85,000 and estimated to contain 715 milligrams of radium, was sent to the Colorado School of Mines for the U. S. Bureau of Mines in 1916. Is a close corporation and refuses to give information of its operations.

DRUID GOLD MINING CO. COLORADO

Office: 420 Equitable Bldg., Denver, Colo.

Officers: W. N. Vaile, v. p.; C. A. Chisholm, sec.-treas.; Geo. E. Collins, E. M., mgr., with H. N. Berry, directors.

Inc. in Colorado. Cap., \$1,000,000; shares \$1 par; nonassessable; all issued.

Property: 11 claims, 95 acres, in Russell mining district, Gilpin Co., Colo., has a complex system of fissure veins, carrying gold, silver, lead and copper in Archean schist. Developed by 1¼ miles of underground workings, including 1,200' tunnel and several shafts, deepest 650'. Equipped with steam hoists.

Production: in 1914, 457 tons smelting ore and 369 tons crude milling ore; in 1915, 259 tons smelting ore and 220 tons crude milling ore. Gross earnings for 1916 were \$11,569 from ore sales, and operating expenses were \$11,953, resulting in a loss of \$384 to the company. Property operated continuously since 1904.

EVERGREEN GOLD & COPPER MINES CO. COLORADO

Reorganized as the Evergreen Mines Co., which see.

EVERGREEN MINES CO. COLORADO

Office: 409 Empire Bldg., Denver, Colo. Mine office: Apex, Gilpin Co., Colo.

Officers: J. L. Tapp, pres.; Geo. E. Bell, v. p.; Wm. C. Hollister, sec.-treas.; preceding with W. J. Tapp, E. F. Krewinghaus, M. C. Shaffer, Edwin Ettinger, J. C. West and A. M. Roth, directors. Etienne A. Ritter, cons. engr. and mgr.; Shad Reid, supt.

Inc. Sept. 17, 1914, in Colorado. Cap., \$2,000,000; shares \$1 par; non-assessable; outstanding a little over 1,000,000 shares. Notes authorized, \$75,000, with \$35,000 outstanding. Annual meeting third Tuesday in August. Company is a reorganization of the Evergreen Gold & Copper Mines Co.

Property: the Evergreen mine with 9 claims, 3 patented, 60 acres, in the Pine mining district.

Geology: the property shows Archæan gneiss and crystalline schists, cut by pegmatite, with an eruptive rock called "evergreenite." This dike is 3 to 12' in width, bounded on either side by ore-bearing contact zones of about 50 to 80' width. The ore deposit is unusual, carrying secondary bornite disseminated irregularly through monzonite.

Development: by tunnel and 350' shaft. Two ore shoots were found on the 100' level, 1 on the 200' and a new one south of this on the 350' level. Main orebody is 15' to 18' thick. There are 4 known ore shoots, carrying chalcopryrite, bornite and covellite, estimated by management to average 3.5% copper, 2 to 8 oz. silver and 50c. to \$4 gold per ton. The upper workings show some malachite and tetrahedrite. Underground work amounts to 3,400'.

Equipment: includes electric power with a 45-h. p. hoist and 4-drill Leyner air compressor. A 100-ton mill has one 9x15" Blake crusher, Marcy mill, Dorr classifier and 2 Card tables.

Flotation plant installed and began operations August, 1916. Concentrates give an average value of \$110 a ton from crude ore showing a value of \$5 a ton.

GILPADO MINING CO.

COLORADO

Office: 512 Equitable Bldg., Denver, Colo.

Mine address: Harry T. Willis, supt., Central City, Gilpin Co., Colo. Forbes Rickard, pres.; W. C. Wright, sec.-treas.

Property: the Chase mine, said to show a vein of gold-silver bearing copper ore developed by 500' shaft. Equipment includes steam power.

In October, 1916, the company resumed work, unwatering the Running Lode mine below Blackhawk. In Sept., 1917, company reported to have opened an 8" streak of \$165 gold ore on the 6th level, 300' E. of shaft. Shipments made, 1917.

GILPIN-EUREKA MINES CO.

COLORADO

Address: Central City, Gilpin Co., Colo. Is a reorganization of the Gilpin-Eureka Mining & Milling Co., financed by Block & Platt, of Cincinnati, Ohio. E. L. Clark, gen. mgr., and N. E. Isbell, cons. metallurgist.

Development: main shaft 650' deep to be sunk to 1,000'. In reopening old workings good gold-silver-lead ore has been encountered. The property is considered to be well situated.

Equipment: includes 10-stamp mill and concentrators, motor driven, mill capacity to be doubled, 1918.

GILPIN MINES & REDUCTION CO.

COLORADO

Idle. Address: 1712 Champa St., Denver, Colo.

Officers: Albert Wagner, pres.; F. McLaughlin, v. p.; C. H. Yardly, sec.-treas.; C. T. West, asst. sec.

Inc. in Arizona. Cap., 2,500,000 shares. Has no debts.

Property: 100 acres in Pine Creek district, northern Gilpin Co., Colo. Owing to lack of funds, mine has not been worked for some years.

Development: to a depth of 700' by shaft. Suitable machinery erected.

GILPIN-ORION GOLD MINING CO.

COLORADO

Merged late in 1916 with Combination Mining & Milling Co., of Denver, which has property in Grand Co., Colo.

The Gilpin-Orion operated 40 acres on Bob Tail hill, Gilpin Co., which will be worked under the new arrangement.

GOLD CUP MINING CO.

COLORADO

Office: 27 State St., Boston, Mass. H. K. Dean, mgr., Central City, Colo.

Officers: H. L. Winchester, pres.; W. D. Drake, v. p.; L. F. Richmond, sec.; H. K. Dean, treas.; preceding officers, W. J. Troth, S. H. Hayden, and L. M. Fobes, directors.

Inc. July 24, 1914, in Colorado. Cap., \$500,000; shares, \$1 par; 415,264 outstanding, nonassessable.

Property: 10 claims, 6 patented, in Quartz Valley district, Gilpin Co., Colo., 1 mile from Central City, said to show a fissure vein in porphyry, with

N. dip and E.-W. course. Ore occurs as shoots from 2 to 6' wide. Ore averages 2 oz. gold, 10 oz. silver, 50% lead, 4% copper.

Development: by shaft following vein to 220'. Workings total 1,200'. Property still being opened, but 1917 should show fair shipments of high-grade ore. By June, 1917, 5 tons daily was being hoisted; while exploration had opened rich ore.

Equipment: steam hoist, compressor and drills; new hoist, shaft-house, electric power, and perhaps a mill to be added.

HAMPTON CONSOLIDATED MINES CO. COLORADO

Mine at Russell Gulch, near Central City, Gilpin Co., Colo.

Inc. in Colorado. **Cap.**, \$3,000,000; shares \$1 par. Company reported without funds and indebted to Chittenden estate for taxes, etc. The widow of W. H. Chittenden, organizer and moving spirit of the company, is practically the owner.

Property: 4 claims, patented, very close to the War Dance gold mine and believed to carry an extension of the ore shoot of that mine. The western, or 80' shaft of the Hampton, might strike this ore at 250'. The ore has bornite, tetrahedrite, pyrrargyrite, pyrite and marcasite, said to assay 2.7 to 35% copper, 6 to 35 oz. silver and 0.16 to 5.4 oz. gold per ton. The mine has a 250' tunnel, and shafts aggregating 300', with about 3,000' of workings.

Equipment: includes a 16-h. p. gasoline engine. Development work was resumed March, 1915, and electric hoist, compressor and 10 drills installed. Shipping gold-lead ore in August, 1917. Property believed to have merit.

INGALLS LEASING CO. COLORADO

Operates the Ingalls mine on Quartz hill, Gilpin Co., showing gold-silver-copper ore in veins. Developed to depth of 430' by shaft and cross-cuts.

Last shipments made to Chamberlain Ore Co., Blackhawk, Colo., in April and May, 1917, yielded 0.5 to 0.8 oz. gold, 10 to 20 oz. silver, and 9 to 11.83% copper. Operated by a pool and has no officers.

Idle since May 5, 1917.

OLD TOWN M., M. & TRANSPORTATION CO. COLORADO

Idaho Springs, Colo.

Officers: Wm. L. Bush, pres.; Geo. K. Kimball, sec., treas. and mgr., with R. J. Davies, J. Ramsey Speer and J. B. Phillips, directors.

Inc. 1910 in Colorado. **Cap.**, \$1,000,000; shares \$1 par; 738,302 shares outstanding. Gross earnings in 1915 were \$58,628. Annual meeting, 1st Monday in February. Company succeeded the Old Town Consolidated Mining Co., which itself was the successor of the Old Town Mining & Milling Co., both defunct. Property had not been profitable and was sold for a debt of \$60,000 at sheriff's sale, June 15, 1910.

Property: 22 claims, patented, 39,877 acres, in Russell mining district, Gilpin Co., Colo., has the Old Town vein, carrying a paystreak of 4' average width, with gold and silver-bearing copper ore.

Development: 2,205' incline shaft with 4,326' tunnel; over 5 miles of workings. Management estimates 150,000 tons of \$6 ore blocked out.

Equipment: includes hoist, pump, steam and electric power and Leyner air compressor.

Production: about 6,760 tons of ore, averaging \$8.40 per ton, were treated in 1915, yielding 3,298.11 oz. gold, 5,684.61 oz. silver and 9,992 lbs. copper. Total production to 1916 under present management, \$218,467.

Idle, 1917.

OPPORTUNITY CONS. GOLD MINING CO. COLORADO

Letter returned, 1917, from 318 Century Bldg., Denver, Colo. Arthur Park, Jas. R. Hayes, L. W. Partridge, Francis B. Choate and D. L. Cubberly, directors, at last accounts.

Inc. 1915. **Cap.**, \$500,000; shares \$1 par.

Has a 3-year lease and bond on the London mine, comprising 12 claims, in Pine or Wisconsin district, Gilpin Co., Colo., said to show well defined veins of gold-silver ore. Developed by 204' shaft with 3 crosscuts, 140', 250' and 132' in length.

Equipment: includes a 10-stamp, 50-ton amalgamating and concentration mill and boarding house. Probably closed down, 1917.

PIONEER MNG., MILLING, POWER & TUNNEL CO. COLORADO

Address: Fred H. Thompson, supt., Central City, Gilpin Co., Colo.

Property: 7 claims, 5 patented, said to have 4 small veins showing gold-silver, copper and tungsten values, with porphyry hanging-wall and granite footwall.

Development: by 665' tunnel and 400' drifts, reported to have cut the Martin vein, in May, 1916.

Equipment: includes stamp mill, compressor, etc. Company also owns 3¼ miles of patented placer ground and water rights on Pine and Clear creeks to generate electricity.

PITTSBURGH MINE

COLORADO

Central City, Gilpin Co., Colo.

Owned and operated by Cashier Gold Mining Co., which sec.

RARE METALS CO.

COLORADO

Officers: G. S. Wood, pres.; Irving T. Snyder, v. p.; Geo. A. Stahl, sec.; Nelson Franklin, mgr., Rollinsville, Colo. S. B. Tyler, supt.

Is a subsidiary of the Vindicator Consolidated Gold Mining Co. of Cripple Creek. Owns and operates a 75-ton custom tungsten mill at Rollinsville, Gilpin Co., on the D. & S. L. R. R., 4 miles from Nederland, Colo. The mill is equipped with crusher, rolls, ball mill, jigs, Wilfley and Deister tables, classifiers and Callow tanks. The concentrates produced average 60% in tungstic acid content.

Company is reported Sept., 1917, to have taken an option on the Little Melvin tungsten mine on Silver Creek, 3 miles from the mill, and said to show a 16' fissure vein.

SQUARE DEAL GOLD MINING CO.

COLORADO

Central City, Colo.

Officers: R. J. Foster, pres., 424 Wyoming St., Scranton, Pa.; Max Frank, v. p.; E. H. Lawall, treas., with J. K. Griffith and L. F. Hueblein, directors. Harry J. Wolf, mgr., Golden, Colo. Thos. Martin, supt. Capitalization and financial statement not reported.

Property: 3 patented claims, near Central City, said to show gold, silver, copper and lead ore in quartz vein. Vein strikes E.-W., dips 65° N.

Development: 850' incline shaft, with 4 miles of workings. Ore reserves and production not given.

Reported in Dec., 1915, that property is tied up in litigation, but is being operated by a lessee who places his royalties in trust pending the outcome of the suit.

TOPEKA CONSOLIDATED MINING CO.

COLORADO

Central City, Gilpin Co., Colo.

Officers: at last accounts. Henry P. Lowe, pres., treas. and gen. mgr.; C. A. West, sec., with Sir Chas. Allen, Arthur Firth and M. A. Lowe, directors.

Inc., July 30, 1909, in Colorado, as successor of Topeka Mining Co. **Cap.,** \$1,000,000; shares \$5 par; nonassessable; fully issued. Annual meeting, June 30.

Property: 7 claims, patented, 16.46 acres, in the Russell district, shows schists and metamorphic gneiss, cut by 3 veins with N.-E. strike and dip of 45°. One vein of 4' average width, traceable 1,300', carries chalcopyrite and sphalerite estimated to average 0.5% copper, 2% zinc, 2 oz. silver and \$10 gold per ton.

Development: by shaft 1,500' deep, with a second 510' shaft and a total of 11,640' of workings, estimated to show 50,000 tons of ore. The mine was discovered 1862, and worked at intervals until 1900, when closed by litigation, until reopened August, 1909.

Equipment: includes steam plants, with a 250-h. p. hoist at No. 1 shaft, and a 60-h. p. hoist at No. 2 shaft. There is a 7-drill Rand Imperial 2-stage air compressor and 15 hammer drills. The mine was closed down again in 1914, leaving workmen unpaid. Reputation of management was capable of much improvement.

U. P. R. MILLING & MINING CO.

COLORADO

Robt. L. Martin, agent, 310 Quincy Bldg., Denver, Colo.

Property: the Gregory-Buell group of mines at Central City and the Buell concentrator. Mines have vein with gold and silver-bearing copper ores, developed by 700' shaft, equipped with steam hoist and air compressor. The mill has 45 stamps and handles about 130 tons daily. Operating at last accounts.

GRAND COUNTY

MOLLIE GROVES MINING & MILLING CO.

COLORADO

Office: 328 New York Life Bldg., Kansas City, Mo. Operating office: 420 Ernest & Cranmer Bldg., Denver, Colo. Mine near Parshall, Grand Co., Colo.

Property: was not regarded favorably by the late Horace J. Stevens, owing to its alleged preposterous claims. Letters neither answered nor returned. Fully described Vol. XI, Copper Handbook.

GUNNISON COUNTY

AUGUSTA METAL MINING CO.

COLORADO

Address: C. L. Arzeno, 9 E. 5th St., Covington Ky.

Officers: C. L. Arzeno, pres.; Harry Levi, v. p.; Alf. E. Reinauer, sec.-treas.; preceding officers, G. T. McDuffie, Chas. H. Adams and B. S. Oppenheimer, directors.

Inc. in Colorado. Cap., \$2,000,000; shares \$1 par; issued 1,953,000 shares.

Property: about 300 acres, patented, on Augusta mountain, 10 miles north of Crested Butte, Gunnison Co., Colo., at an elevation of 12,625', shows a fissure vein containing gold, silver, lead and zinc, with general average said to be \$10 per ton. Vein is in diorite. Has been worked spasmodically since 1880.

Development: 320' vertical shaft and several tunnels, longest over 3,000'. The property has been idle for several years and surface equipment, including a 60-ton mill, has been destroyed by snowslides. Company in process of reorganization, preparatory to resumption of operations.

BLISTERED HORN MINE.

COLORADO

Owned by C. J. Carpenter, John Waldron and Andrew Lejune, supt., Tin Cup, Gunnison Co., Colo.

Property: shows several veins of gold-silver-lead ore developed by 2,900' tunnel, drifts and raises. The veins are from 2-12' wide and ore of good milling grade. Developing at last accounts.

BRANT INDEPENDENT MINING CO.

COLORADO

Office: Pitkin, Gunnison Co., Colo.

Officers: R. B. Anderson, pres.; R. J. Edwards, v. p.; A. P. Nelson, sec.-mgr.; M. J. Ostergard, treas.; preceding officers, M. Woolley, J. W. Hickman, A. T. Hammer, G. E. Crowell and Geo. Zapf, directors.

Inc. April 12, 1906, in Arizona. Cap., \$5,000,000; shares, par value \$1; fully paid, non-assessable; 4,635,000 shares issued. Bonds, \$150,000, 8% authorized, \$87,000 issued. Dividends to date, \$8,174. Annual meeting, 2nd Tuesday in January.

Property: 96 claims, partly patented, of about 1,056 acres, in Box Canyon and Quartz Creek districts of Gunnison Co., Colo. Four mines, the Camp Bird, I. X. L., Gold Ridge and Roosevelt, opened up and proven by Camp Bird shaft 200' deep; I. X. L. shaft 60' and 90' crosscut and the Gold Ridge tunnel, which follows vein for 130'. Ore occurs in fissure veins 6 to 20' wide in diorite and granite, said to carry 8% copper and \$20 gold per

ton. The Camp Bird mine has been operated under lease by other parties.

Crosscut tunnel, started in April, 1911, to drain and open up the entire territory at depth, had been driven 2,000' October 1, 1917.

Equipment: includes hydro-electric plant of 400-h. p. capacity, completed in 1915, 4-drill air compressor, 50-h. p. motor and drills. Quartz creek runs through the property. Mine is only a few feet from D. & R. G. R. R. and county road.

CAMP BIRD MINING, LEASING & POWER CO. COLORADO

Office: Pitkin, Gunnison Co., Colo.

Officers: T. R. L. Doughtrey, pres.; F. E. Gilbert, v. p.; O. C. Gilbert, sec.; G. R. Calhoun, treas.

Inc. in August, 1914, to operate the Camp Bird mine, located between Pitkin and Bowerman. The mine is said to have produced high-grade gold ore. Present management at last accounts was sinking a shaft with intention of crosscutting 80' to the old mine workings at a depth of 230'. Company refuses to furnish information for publication.

DAY STAR MINES CO. COLORADO

Office: Pitkin, Gunnison Co., Colo.

Inc. 1912, in Colorado. **Cap.**, \$1,000,000; shares \$1 par; 700,000 shares outstanding. Annual meeting in August.

Officers: Isaac R. Wagoner, pres.; Edwin Caldwell, sec.; J. H. Deakin, treas.; John E. Clark, gen. mgr., all of Marion, Ind.

Property: 19 lode mining claims, 40 acres of placer ground and a mill-site in Quartz Creek, about 9 miles from Pitkin.

Ore: gold, silver, copper and zinc in veins in limestone.

Property: is 2½ miles from the Mary Murphy mine, but company claims to own 8,000' of the Mary Murphy vein. Management reports 68' of tunnel work and 30' of shaft work done in 1916. Plans disposing of sufficient treasury stock to carry on development work, and perhaps build a concentrator. Property still in the prospect class.

HAHNEWALD LEASING CO. COLORADO

Has a lease on the Abe Lincoln mine in Poverty Gulch, near Pitkin, owned by the Brant Gold & Copper Co., which see. Reported shipping about 100 tons of fair grade ore per week in 1916. No later returns.

JEWELL MINES & REDUCTION CO. COLORADO

Idle. R. A. Schwab, sec., Century Bldg., Denver, Colo. W. E. Hager, v. p.-gen. mgr.

Property: the Pandora mine and mill site, 231 acres, partially patented, 7 miles E. of Pitkin, Gunnison Co., Colo., said to carry 8 fissure veins.

Development: by 1,800' tunnel.

Equipment: includes air compressor, machine drills, water power. No returns securable.

RAYMOND CONSOLIDATED MINES CO. COLORADO

Dexter T. Sapp, pres., Gunnison, Colo.

Property: about 600 acres, includes the Raymond mine in Gold Creek district, about 5 miles N. of Ohio City, said to have 2 ore-bearing veins.

Development: by 2,700' tunnel and drifts.

Equipment: includes compressor, steam plant and concentrating mill. **Idle.**

VULCAN MINES & SMELTER CO. COLORADO

Office: 302 Century Bldg., Denver, Colo. C. H. Mace, supt., Iola, Colo.

Officers: Robt. G. Ainsworth, pres.; C. H. Mace, v. p.; Chas. P. Mety, sec.-treas.; above with W. W. Mace, Geo. E. Bermont, John R. Rowland and F. J. Greenwald, directors.

Inc. Nov. 3, 1915, in Colo. **Cap.**, \$100,000; shares \$1 par; 75,000 issued. Stock transferred at company's office. Annual meeting in November.

Property: 9 patented claims, 95 acres, in Domingo mining district, Gunnison Co., said to show gold-silver-copper ore in fissure veins. Ore is a sulphide occurring in sericitic schist. The orebody strikes E.-W. and dips N.

80°. Old workings and dumps said to have a considerable tonnage of ore averaging 1 oz. gold, 4 oz. silver, and 2½% copper.

Development: by 700' vertical shaft with 5,000' of underground workings.

Equipment: includes steam power, hoist, and 50-ton hot blast copper matting furnace, installed in 1916. Mine credited with production of \$200,000 under former ownership.

HINSDALE COUNTY

COLORADO & CONNECTICUT GOLD MINING CO. COLORADO

Main office: Meriden, Conn. **Mine office:** Lake City, Hinsdale Co., Colo.

Officers: Geo. S. Wilcox, pres.; Hubert Little, v. p.; R. F. Dossin, sec.; B. F. Barnes, treas.

Inc. 1902 in South Dakota. **Cap.,** \$400,000; shares \$5 par, changed later to \$1,200,000, shares \$1 par.

Property: 3 claims, 21 acres, known as the Dolly Varden mine, in the Galena district, carrying three 2' fissure veins, opened by a 150' shaft and a 738' tunnel, with 1,900' of workings. Ore is chalcopryite, tetrahedrite and occasional argentite, giving assays of 9 to 19% copper, with occasional silver values, and test shipments have given returns of 141 to 479 oz. silver and as high as \$11 gold per ton. Management expects to have force working in 1917. Property was idle in 1915 and 1916.

COLORADO-UTAH MINES OPERATING CO. COLORADO

Officers: Arthur S. Larsen, pres.; A. B. Smith, supt.

Inc. in Utah. **Cap.,** \$100,000 shares 5c. par; increased Sept. 15, 1917, from \$30,000.

Property: the Golden Fleece mine, near Lake City, Colo. Equipped with new 100-ton mill which was expected to operate in August, 1917. Company deepened shaft to 800' and cut stations on Nos. 6, 7 and 8 levels.

FANNY FERN MINING CO. COLORADO

Lake City, Hinsdale Co., Colo. See Vol. XII.

FRANK HOUGH MINING CO. COLORADO

Office: 830 Equitable Bldg., Denver, Colo. **Mine:** Lake City, Hinsdale Co., Colo.

Inc. 1907, in Colorado.

Mine: on Engineer mountain, has a 2,500' tunnel, developing a large body of copper sulphides, including bornite, with assays up to 27% copper, 47 oz. silver and \$5 gold per ton. Mine shipped several hundred tons of high-grade silver-copper ore, under former ownership.

Equipment: includes 800-ton shipping bins.

Production: estimated at 250,000 lbs. fine copper in 1909, and 600,000 lbs. in 1910. Property considered promising, but was closed down in 1912 because of destruction by fire of its surface equipment. Presumably idle, 1916-17.

HANNA MINING & MILLING CO. COLORADO

Capitol City, Hinsdale Co., Colo. Has copper-lead ores, with steam and electric power and a 100-ton concentrator. Letters returned in 1916. Probably dead.

HINSDALE TUNNEL & REDUCTION CO. COLORADO

Is a reorganization made in 1907 of the Henson Creek Lead Mines Co.

Property: at Lake City, Hinsdale Co., Colo., known as the Bonanza group, is said to carry complex lead and copper ores. Has water and electric power and a 50-ton concentrator. Letters neither answered nor returned.

PELICAN MINING & MILLING CORPORATION. COLORADO

Office: 141 Milk St., Boston, Mass. **Mine office:** Lake City, Hinsdale Co., Colo. Mine is developed by tunnel and has electric power and air compressor.

LAKE COUNTY

LEADVILLE DISTRICT

A. Y. & MINNIE M. & M. CO.**COLORADO**

Leadville, Colo. Is a subsidiary of the Western Mining Co., which is controlled by the American Smelters Securities Co. S. D. Nichol森, gen. mgr. Produces lead-zinc sulphide ore, which is shipped to Sand Springs, Oklahoma, and to Pueblo, Colo. Developed by shaft, and employs about 50 men.

BENGAL TIGER-GORDON MINE.**COLORADO**

Operated by Twin Lake M. & M. Co., which see.

COLONEL SELLERS MINE**COLORADO**

Controlled by Empire Zinc Co.

Property: in California gulch, near Leadville, Lake Co., Colo., has been worked out and operations discontinued in 1917.

COLORADO MINERAL SEPARATION CO.**COLORADO**

Office: Room 1110, 137 S. La Salle St., Chicago, Ill.

Officers: C. S. Funk, pres.; Jos. Weatherby, v. p.; E. R. Winn, sec.-treas., with Chas. C. Shedd, T. I. Crane, E. J. Gardner and W. J. Souderback, directors.

Inc. July 20, 1914, in Delaware. **Cap.**, \$500,000; shares \$100 par; all outstanding.

Company operated several leases on mine dumps at Leadville, Colo., and is reported to have made a recovery of 97-98% in zinc concentrate. In August, 1917, the secretary reported that leases had expired and company was preparing to treat custom ores.

DERRY MINING & LAND CO.**COLORADO**

R. F. Lafferty, gen. mgr.

Inc. March, 1915, in Colorado. **Cap.**, \$100,000.

Owns placer land near Leadville, on which the Derry Ranch Gold Dredging Co. (which see) operates a dredge.

DERRY RANCH GOLD DREDGING CO.**COLORADO**

Office: 2 Rector St., New York. **Operating office:** R. F. Lafferty, mgr., Leadville, Colo.

Officers: A. C. Ludlam, pres.; R. F. Lafferty, v. p.; George Sommer, sec.-treas.; with John Nisbet and N. D. Wanless, directors.

Inc. in Colorado. **Cap.**, \$100,000; shares \$100 par; non-assessable; all issued. Gross earnings in 1916 were \$208,615 and expenses \$103,421. Dividends in 1916 were \$75 per share.

Property: 125 acres of placer ground near Leadville, Colo., owned by the Derry Mining & Land Co., and under lease to the Dredging company.

Development: drilling proved an average depth of 30', containing 25c per yard.

Equipment: modern 5½ cu. ft. dredge, digging 75,000 yards per month, using electric power.

DOLD MINING CO.**COLORADO**

Address: C. J. Dold, Leadville, Colo.

Property: the old Northern mine of 8 acres, adjoining the Coronado on the north, and idle for 15 years; held under a 10-year lease from the Leadville Basin Mines Co., which see.

Development: by 640' shaft. There are three ore horizons at as many contacts, which are porphyry and limestone. Reopening under way, 1917.

DOWN TOWN MINES CO.**COLORADO**

Offices: Chemical Bldg., St. Louis, Mo., and Leadville, Colo.

Officers: J. L. Goff, pres.; H. Mann, v. p.; Chas. J. Walker, sec.-treas., with C. W. Chamberlain, W. T. Nardin, directors. Jesse F. McDonald, mgr.

Inc. March, 1914, in Colorado. **Cap.**, \$400,000; shares \$10 par. Company has 20-year leases on several of the Down Town mines at Leadville.

Property: 400 acres, includes a number of old mines which have produced several millions. The mines have been idle for a number of years; it was thought that all the valuable ore had been extracted, but in former mining no zinc ore was taken out. The present company was formed to unwater the mines and resume mining operations. As underground workings are estimated to be 30 miles in extent the task of unwatering is a large one.

Pumping, which started in May, 1915, was done at the Penrose shaft with 4 electric vertical, centrifugal pumps. Property was drained to the 875', or lowest level, in summer of 1916, and a 4-stage centrifugal pump installed which handles 2,000 gals. per minute.

MAP SHOWING PRINCIPAL PROPERTIES IN LEADVILLE DISTRICT, COLORADO

Development: work is underway and daily shipments of 400 tons of zinc carbonate and iron manganese ore continued through 1917. Production is expected to increase steadily with development.

The Horrigan lease opened a large body of 35% to 50% manganese ore on the 440' level of Bohn shaft, Sept., 1917.

EDNA MINING CO.

COLORADO

Operating the Carbonate mine at Leadville, Colo., 1917, through Hagerman shaft. Said to show large bodies of silver-bearing iron pyrite ore. Mr. Jarbeau, mgr.

FANNY RAWLINGS MINING CO.

COLORADO

Office: 6 N. Nevada Ave., Colorado Springs, Colo.

Officers: John A. Himebaugh, pres.; Thomas S. Brigham, v. p.; Walter C. Frost, sec.-treas.; R. W. Coates, mgr.

Cap., \$1,000,000; shares par value \$1; cash in treasury, July, 1917, \$2,000. Has \$5,000 loaned at 5½% and secured by lien on first-class improved real estate, stock, 5,551 shares. Last stockholders' meeting held June 29, 1912. Listed on Colorado Springs Exchange. Total amount of dividends paid to date, \$50,000; last dividend, \$5,000, paid Dec. 29, 1908. All taxes paid and company has no debts.

Property: the Fanny Rawlings lode mining claim, about 10 acres, on Breece Hill, near Leadville.

Development: on south half of claim said to have cost \$255,000, and plant cost about \$13,000. Property is leased to Charlestown, W. Va., parties, who are operating on the 600' level.

Shipments in 1917 said to run 4.25% copper and 1 oz. silver, having a net value of \$55.81 per ton. The Fanny Rawlings company receives 35% of the net value of all shipments made by the lessees.

FIDELITY GOLD MINING CO.

COLORADO

Controlled by Chas. J. Fox, Philadelphia.

Property: in the Lackawanna gulch section, Leadville, developed by several tunnels. A 4' vein of smelting ore was opened up on the 1,200', or lowest tunnel level, reported to assay \$200 per ton in gold, with silver and copper values. Management said to have expended \$75,000 in development work to end of 1916.

FORTUNE MINE

COLORADO

John McNeece, mgr., Leadville, Colo. The mine is an old-time producer in Evans Gulch, developed by 2-compartment shaft, which connects with the Yak tunnel at depth of 1,000'. Ore carries mainly lead-zinc, with slight gold-silver values.

Six sets of lessees reported operating and shipping, April, 1917, to the smelter at Salida.

GARBUTT LEASING CO.

COLORADO

John Cortellini, mgr., Leadville, Lake Co., Colo.

Property: adjoining the famous Little Jonny mine on Jonny Hill, has 1,000' shaft, producing copper with good gold-silver values. Report that a large body of ore, assaying \$15 gold per ton, was found in 1915.

Equipment: includes a steam hoist and 15-drill air-compressor. A 200-ton mill was designed during 1916, but whether erected or not is not known. Company is a close partnership and does not care to divulge results of its operations.

IBEX MINING CO.

COLORADO

Office: 929 Equitable Bldg., Denver. **Mine office:** Leadville, Colo.

Officers: A. V. Hunter, pres.-treas.; John A. Ewing, v. p.; Chas. Caven-der, sec.; J. F. Campion, mgr., with W. W. Davis, Wm. Byrd Page and J. J. Brown, directors. Geo. Becker, supt.

Inc. March, 1891, in Colorado. **Cap.**, \$100,000; shares \$1 par; non-assessable; all issued. Annual meeting 1st Monday in June. Company is operated as a close corporation.

Property: 10 claims, patented, 52 acres, on Breece Hill, Lake Co., Colo., includes the Little Jonny claim, which has produced about \$25,000,000 worth of ore. Ore occurs in blanket deposits carrying silver, lead, copper and zinc values. Bodies of contact metamorphic ore encountered at depth were low-grade and not valuable. Vein structure is very complicated, owing to faulting.

Development: by 4 vertical shafts to depth of 1,250'. On the 900' level an oreshoot, opened for 2,000', is reported to be 70' wide and 55' high and to run from 0.80 to 1.30 oz. gold per ton.

Equipment: includes 18 machine drills, breaking about 350 tons of ore per day. Mine is worked by lessees, the Garbutt and C. D. G. being the largest operators, employing 100 men jointly. Operations in 1917 were curtailed by labor strike, but work resumed in August.

IRON SILVER MINING CO.**COLORADO**

Offices: Room 926, No. 52 Broadway, New York City, and 615 Stevens Bldg., Detroit, Mich. Mine near Leadville, Lake Co., Colo.

Officers: W. R. Cobb, pres.; Henry G. Stevens, v. p.; Homer A. Hoit, sec.; Fremont Woodruff, treas.; preceding, with Bruce G. Broad, R. H. Webber, Isaac J. Meyer, Eber W. Cottrell, H. C. DuVal, Samuel E. Reinhard and Chas. E. Hilton, trustees. Geo. O. Argall, gen. mgr.; Philip Argall & Sons, cons. engrs.

Inc. March, 1880, in New York. **Cap.**, \$10,000,000; shares \$20 par. Net earnings were \$267,034.64 in 1904; \$515,127 in 1906; \$65,366 in 1907; \$6,960 in 1908; \$183,121 in 1909; \$138,308 in 1910; \$187,639 in 1911; \$274,322 in 1912; \$123,927 in 1913; \$174,629 in 1914; \$184,199 in 1915; \$210,595 in 1916.

Dividends: \$400,000 in 1906; \$300,000 in 1907; none in 1908; \$50,000 in 1909; \$200,000 in 1910; \$100,000 in 1911; \$200,000 in 1912; \$200,000 in 1913; \$100,000 in 1914, 1915 and 1916, with total dividends, to Jan., 1917, \$5,150,000. Stock listed on N. Y. Consolidated Stock Exchange and the Detroit Exchange. Farmers Loan & Trust Co., New York, registrar. Annual meeting, first Tuesday in March.

In 1916 company mined 43,474 tons of ore of a net value of \$522,622. Total income for year was \$465,419, and total expenses \$254,823. Balance sheet Dec. 31, 1915, showed cash surplus of \$368,187.

Property: the Moyer, Tucson and Blind Tom mines, on Iron hill, about 2 miles E. of Leadville. Also controls through stock ownership, the Nisi Prius Cons. Mining Co. and the New Marian Cons. Mining Co., which see. In 1915, company purchased an undivided $\frac{1}{2}$ interest in the Proserpine and Cumberland lode mining claims, U. S. Survey No. 5214, which secured for the Iron Silver Co. a $\frac{5}{8}$ interest in these claims, consisting of 9.9 acres, adjoining the company's property on the N. W.

The Moyer mine yielded 17,269 tons of ore in 1916, net value of \$156,015. The mine has over 2 miles of workings and contains large orebodies of very low-grade complex lead-zinc ore from which large tonnages have been extracted for several years past. The "East" orebody opened and stoped in 1912, 18' thick, 70' wide and 360' long, was completely exhausted in 1915, and ore production was secured from older workings, abandoned in former years because the ore was considered too low-grade to pay. Development in the Moyer totaled 4,138'.

The Tucson yielded 17,495 tons of ore, worth \$270,625 net. Exploration amounted to 2,692'.

Lessees mined 6 classes of ore totaling 8,654 tons, valued at \$94,433 net.

To drain and develop an old area in the Graham Park basin of Leadville, Colo., the company in 1916 erected a plant costing \$500,000 at the Mikado shaft. This shaft was re-timbered to 1,200' depth. Like other old workings that have been recently unwatered at Leadville, it is hoped to mine ore that will pay under present conditions.

In 1916, six leases were operated on the upper workings of the Iron mine and lessees produced 6,008 tons of zinc carbonate, 1,674 tons of lead carbonate, 772 tons of iron oxide, 34 tons of zinc sulphide, 138 tons of zinc-lead sulphide and 28 tons of silicious sulphide.

The Tucson has a 1,200' aerial tram, of 12 tons hourly capacity, from the shaft to the railway siding, costing \$7,855, which has cut the cost of ore transportation from 60 cts. to about 12 cts. per ton.

Recent production: of the mines as a whole:

	Copper lbs.	Gold oz.	Silver oz.	Lead lbs.	Zinc lbs.	Iron lbs.
1916....	1,420,713	134.5	336,277	2,401,089	12,994,318	5,597,605
1915....	33,694	575.	136,674	4,205,616	16,674,848	2,957,235
1914....	12,751	923.1	327,976	10,608,734	17,396,362	5,247,433
1913....	7,230	509.	391,603	12,105,921	25,658,913	2,745,511
1912....	58,543	323.92	470,403	12,874,099	21,601,428	2,816,079

Property is well equipped and well managed.

The company's future operations are expected to disclose silver ore, though at present the Mikado mine yields only zinc ores.

JULIA MINING CO.

COLORADO

Address: Clarence Jarbeau, mgr., Leadville, Colo.

Property: the Home Extension and Cloud City mines in the Down Town area of Leadville, from which 50 to 100 tons daily of manganese-iron-silver ore is being shipped.

KATINKA GOLD MINING CO.

COLORADO

Owms property at Guyot Hill, Leadville, Lake Co., Colo., operated under lease 1915, by Progressive Gold Mining Co. Chas. Warden, mgr. Work stopped Jan., 1916, by threatened apex litigation.

LEADVILLE BASIN MINES CO.

COLORADO

Address: S. M. Carleton, Leadville, Colo.

Officers: J. K. Carleton, pres.; S. W. Eckman, treas.; S. M. Carleton, sec.; with I. B. Humphreys, directors.

Property: the Northern mine (leased to Dold M. Co.) and Capitol, Clipper, Congress and Castle claims at Leadville, Colo.

Development: will be by deep work to explore the porphyry-lime contacts. Rich silver bearing lead carbonate has been mined by former owners.

LILIAN MINE

COLORADO

Officers: J. Clarence Hersey, mgr.; R. I. Hughes, supt.

Property: on Printer Boy Hill, between Iowa Gulch and head of California Gulch, Lake Co., Colo.; developed by a tunnel, ½ mile long and much drifting. Ore carries gold-silver-lead and zinc values.

Worked by lessees and output estimated at 250 tons per month. Oxide ore from the Lovejoy claim containing lead-gold values, is shipped to the Ohio-Colorado smelter at Salida. Zinc carbonate ore from the Lilian is sold to the Western Zinc Oxide Co., and Oklahoma.

LUEMA MINING CO.

COLORADO

Leadville, Colo. Warren F. Page, mgr.

Property: the Valley and Forest Rose mines, on Prospect Mtn., developed by a 450' shaft and 2,000' tunnel, said to show silver-bearing copper and lead ores. On the 1,500' point in the bore, drill holes down to 200' have proved valuable orebodies and management plans sinking interior shaft on the course of the drills. Has electric power, hoist and all necessary machinery. Surface buildings, destroyed by fire in 1914, were rebuilt the following year.

MT. CHAMPION MINING CO.

COLORADO

Address: 55 Congress St., Boston, Mass., and Leadville, Colo.

Officers: C. H. Huff, pres.; C. Q. Adams, v. p.; W. E. McKee, sec.; H. A. Wentworth, treas.; all of Boston. Lucien W. Smith, mgr. Company is a close corporation, inc. in Maine, 1910.

Property: 12 patented, several unpatented claims, in Lackawana and Half Moon gulches, near Leadville, and 4 miles from Malta, the railway and loading station. The Colorado Power Co.'s transmission-line connects with mine and mill. The Ozark mine is under lease to company and possibilities are considered good.

Geology: ore zone is a granite intrusion in gneiss, accompanied by an alaskite dike with several branches passing through the granite, the latter being mineralized and faulted. Ore contains gold, a little silver, and an occasional shoot carrying some copper and lead. About 30% of the gold is amenable to amalgamation. Values are mainly in the sulphides, which assay \$200 per ton. Mill ore averages \$8.42, other ore \$75.25.

Development: by tunnels, mostly in ore. Total workings, 10,000'.

Equipment: 1,000 cu. ft. compressor 6,600' aerial tram, and 75-ton mill using breaker, Hardinge and tube mills, and concentrators.

NEW MARIAN CONSOLIDATED MINING CO. COLORADO

Company dissolved and property taken over by Iron Silver Mining Co. of Leadville Colo. See Vol. XII for description of mine.

NEW MONARCH MINING CO. COLORADO

Office: c/o J. C. Kortz, pres. Cuyahoga Bldg., Cleveland, O. Mine office: Leadville, Lake Co., Colo. Frank Fuller, supt., at last accounts.

Property: the New Monarch and Cleveland mines carrying lead and zinc sulphides. Developed by shafts and crosscuts. A crosscut to the N. E. is being driven in virgin ground at the bottom of the Monarch shaft.

Equipment: includes a steam plant, compressor, etc. Operated by lessees since 1914 and producing over 1,000 tons of ore per month, averaging \$20 in gold, silver, lead and zinc.

NISI PRIUS CONSOLIDATED MINING CO. COLORADO

Controlled through stock ownership by Iron Silver Mining Co.

Officers: J. B. Grant, pres.; J. A. Ewing, v. p.; Fremont Woodruff, sec.; G. O. Argall, treas.

Property: at Leadville Colo., worked by two sets of lessees in 1916.

Development: in 1916 amounted to 482'. Output was 2,656 tons yielding \$1,390 net. Surplus at end of 1916 was \$1,431.

ONTARIO, TIGER & GREEN MTN. LEASING CO. COLORADO

E. A. Smith and Hector McDonald, of Leadville, Colo., lessees. Inc. 1916.

Property: near the head of Iowa Gulch, was discovered in 1878 and is credited with past production of \$80,000. Strong flow of water caused shut-down.

Reopened 1916 and 300' lower tunnel was extended to 700' where a 4' vein was cut carrying \$20 to \$40 ore. Values are silver-lead-gold and copper. A raise being driven to upper tunnel, is reported in ore for 30'. Shipping, 1917.

PONSARDIN MINE COLORADO

W. E. Bowden, mgr., Leadville Colo.

Property: on Yankee Hill near Leadville. Lessees reported to have uncovered a body of sulphide ore, 70' long and 15' high, on the 430' level, containing 23-31% zinc, 19% lead, 6 oz. silver, and to be shipping at the rate of 50 tons daily in 1916.

PROGRESS MINING & MILLING CO. COLORADO

Address: R. D. McCausland, mgr., Frawley, Colo., and Equitable Bldg., Denver, Colo.

Officers: P. S. Smith, pres.; M. E. Peters, sec., with Wm. B. Brook and Martin Barber, directors.

Inc. in Colorado. **Cap.** \$2,500,000; shares \$1 par. No balance sheet issued.

Property: 26 claims, patented, including the Wilson mine, Robinson group and Felicia Grace, Champion and New York leases, all at Robinson, Colo., 16 miles from Leadville. Ore carries lead and zinc. Reserves estimated by T. H. Teal at 678,644 tons.

Development: by Robinson tunnel 3,000' long, which attains depth of 1,200' and exposes 4 ore shoots in 6' to 10' contact vein with incline shaft to open ground below tunnel. There are also 3 shafts, East, 650', El Dorado, 650' and the 1,200' Wilson shaft opening ore at 1,040' depth. Exploration work in progress, 1917.

Equipment: 300-ton Wilson mill not in operation at present.

The company is not, strictly speaking, a mining company, but rather an ore treatment enterprise, specializing in the separation of the complex zinc-lead-iron-silver-gold ores of Colorado in its 300-ton custom concentrator at Robinson. It controls, by contracts, the outputs of a large number of mines in the Kokomo district. However, the company also has mines of its own upon which it can rely in case of necessity. The company's first twelve carloads of lead-iron concentrates shipped, gave average smelter returns of \$33.73 per ton. When promotion was brought out in 1916, P.

S. Smith, pres. of the company, estimated profits on lead-iron concentrates at \$52,350 per month, promoters claiming 6,000,000 tons of ore blocked out that varied from \$20 to \$40 per ton.

Property: believed to have merit but ore treatment is not as easy or as cheap as estimated. Has been much touted in newspapers and brokers' circulars.

RUBY MINING & MILLING CO.

COLORADO

Weston Pass, Leadville, Colo. Is a new company holding a 5-year bond and lease on the Erie Mines Co. property, comprising the Ruby & Lafayette mines on Bull Hill. Mines show much ore in old workings, whose value has been tested in the Wild Horse mill. Company has erected a cyanide plant, known as the Worcester mill, near the Ruby dump. Shipments of calamine ore were made early in 1916.

ST. LOUIS-COLORADO MINING CO.

COLORADO

Address: D. W. Almond Leadville, Colo.

Officers: D. W. Almond, pres.; S. Davies, v. p.; F. D. Allen, sec.-treas.; with E. Saunders, directors.

Inc. March 3, 1915, in Colorado. **Cap.**, \$500,000; shares \$1 par; non-assessable; 300,000 issued.

Property: 16 patented claims, 320 acres, in Lake, Pitkin and Chaffee counties 15 miles S. W. of Leadville.

Development: by 3 tunnels, 50', 125' and 300' long, opening a vein carrying gold, silver, copper and lead values.

SMALL HOPES-BOREEL MINING CO.

COLORADO

Property: the Robert Emmet mine at Leadville, a great producer of lead-zinc ore, is now owned by the Empire Zinc Co. (See New Jersey Zinc Co.)

THIRD VENTURE MINING CO.

COLORADO

W. A. Palmer, pres.-mgr., Leadville, Lake Co., Colo. Company owns a lease on the St. Louis mine which has a vein with complex sulphide ores carrying copper-lead and zinc with gold-silver values.

Development: by 1,450' tunnel.

Equipment: electric with Leyner air compressor. Shipments reported to have been 25 tons a day during 1915. No recent returns.

WESTERN MINING CO.

COLORADO

Address: S. D. Nicholson, mgr., Leadville, Colo.

Subsidiary of the U. S. Smelting, Refining and Mining Exploration Co. Is an important producer of zinc carbonate ores from Big Chief, Maid of Erin, and other mines through the Wolfstone shaft, Carbonate Hill, Leadville, Lake Co.

Production: in 1915 was 500 tons daily. In January, 1916, shipments had been reduced to 6,000 tons monthly, owing to the depletion of ore reserves, but reported July, unwatering shaft to 1,000' level to get into sulphide orebodies. This work will also drain the Greenback mine and open up rich ground, idle for some years past.

In Sept., 1917, was producing 200 tons daily. Carbonate ore was recently opened in the upper contact, and sulphide in the drained areas.

WESTERN-ZINC OXIDE CO.

COLORADO

Office: C. H. Collins, pres.; W. A. Young, sec.-treas., Leadville, Colo.

Formed in 1915 to take over and operate the 50-ton plant of the Western Zinc Mining & Reduction Co., west of Leadville.

Employs the Wetherill process of producing zinc oxide by volatilization and collecting fume in flues. Plant operated continuously.

YAK MINING, MILLING & TUNNEL CO.

COLORADO

Office: Marbridge Bldg., W. 34th St., New York. Mine office: Leadville, Colo.

Officers: Myron T. Herrick, pres.; Harry C. James, v. p.; Walter W. Davis, v. p. and gen. mgr., Leadville and New York; J. C. Mitchell, sec.-treas., Denver Natl. Bank, Denver. Hugh C. Watson, supt.

Cap., \$1,000,000; shares \$1 par; all outstanding and assessable.

Comparative General Balance Sheet:

Assets:				Liabilities:		
	Tunnel & Prop.	Equip.	Other Current	Total	Capital Stock	Undiv. Profits
1915.....	\$977,543	\$66,386	\$724,383	\$1,768,312	\$1,000,000	\$768,312
1914(a)...	1,087,013	81,139	181,678	1,626,401	1,000,000	530,070
1913.....	1,000,611	85,582	93,889	1,439,787	1,000,000	410,765

Comparative Income Account:

	Mng. Co. Acct.	Total Net	Div.
1915	\$268,264	\$398,242	\$160,000
1914	217,949	306,545(a)	110,000
1913	154,928	210,985	80,000
1912	69,247	120,216	80,000

(a) Except certain charges in profit and loss account.

No statement is available for the past two years.

Dividends: quarterly, commenced March 31, 1904, have been continuous. Total \$1,877,685 to July 1, 1916, including a stock dividend of 12½% declared Oct. 31, 1904. Reported that \$780,000 was paid in 1916.

Property: owns 249 acres and controls an additional area of 1,817 acres at Leadville. Also holds agreements covering several hundred additional acres, under which agreements company has the right to drive the Yak tunnel into such ground at its option.

The Yak Tunnel is a 4-mile transportation and drainage tunnel which drains an important part of the Leadville camp, including the White Cap and Cord properties on Iron Hill. The portal of the tunnel is in California Gulch, about 1 mile from Leadville; the breast, Jan., 1916, was in the Vega group, 1,200' from surface. In Sept., 1917, extension of the tunnel in Vega ground was contemplated.

The ores developed by the tunnel are chiefly complex sulphides containing gold, silver, lead and zinc. For geology of the Leadville District see U. S. G. S. Bull. 320, by S. F. Emmons and J. D. Irving.

Company employs 140 men, has electric power and haulage.

In Nov. 1917, shareholders at Denver decided to sell a half interest in the property to the A. S. & R. Co., which will also direct operations. Development and pumping equipment absorbed most of the 1917 profits.

LA PLATA COUNTY

BOREN GULCH GOLD MINING CO.

COLORADO

Office: 518 Denham Bldg., Denver, Colo. Mine at La Plata, Colo.

Officers: Dr. Robt. Scrimgeour, pres.; E. M. Walker, sec.; S. N. Francis, v. p.-gen. mgr.

Property: 22 claims operated through 3 tunnels, longest over 807', driven on veins in porphyry. Ore contains sylvanite.

BOREN GULCH MINING CO.

COLORADO

Reorganized, 1916, as Boren Gulch Gold Mng. Co.

COLUMBUS MINES CO.

COLORADO

Office: 905 First Natl. Bank Bldg., Denver, Colo. Jas. Doyle, pres.

Inc. in Colorado. Cap., \$50,000.

Property: 3 claims in California district, La Plata Co., Colo.

In 1916-1917, development work was in progress and power, compressor plant and houses put up.

DURANGO SMELTER

COLORADO

Owned by San Juan Smelting & Refining Co., which is controlled by the American Smelting & Refining Co., at Durango, La Plata Co., Colo.

EAGLE PASS MINING & MILLING CO.

COLORADO

Address: M. S. MacCarthy, mgr., 728 First National Bank Bldg., Denver, Colo. Mine 3 miles from La Plata, Colo.

Inc. May 6, 1913, in Colorado. **Cap.**, \$250,000; shares \$1 par.

Property: 3 claims, 1 patented, 30 acres, said to show ore carrying gold, silver and lead values in fissure veins in limestone and porphyry. Developed by 1,000' tunnel. Only assessment work being done. Is a prospect.

PARAGON MINING CO.

COLORADO

Idle. Henry C. Demming, gen. mgr., 15 N. 3rd St., Harrisburg, Pa. Is successor of Tirbircio Gold Mining Co.

Property: 400 acres of lode and placer claims near La Plata, La Plata Co., Colo., is developed by 1,500' of adits.

Equipment: includes 1,000-ton rock crusher, a 50-stamp and a 10-stamp mill. Efforts made in 1916 to finance the company and resume work, appear to have been unsuccessful.

LARIMER COUNTY

COLDWATER COPPER MINING CO.

COLORADO

Office: Encampment, Wyo. Mine near Pearl, Larimer Co., Colo.

Officers: Z. L. Baldwin, pres.; H. N. Backus, v. p.; Walter Phipps, sec.; Burr Lobdell, treas. and gen. mgr.

Inc. May 18, 1900, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par.

Property: 5 claims, 52 acres, in the Pearl district of Larimer Co., Colo., known as the Wolverine mine. Claims have 3 fissure veins in granite and diorite, of which 1, of 20' estimated width, shows oxidized ores and native copper, with sulphides at a little depth, estimated to carry an average of 6% copper and 2.6 oz. silver per ton, opened by shafts of 90' and 170', bottom of principal shaft showing massive chalcocite and a little disseminated chalcopyrite, of high average grade. Has steam power. Idle several years.

LEADVILLE DISTRICT (See Lake County)

MESA COUNTY

NATIONAL RADIUM PRODUCTS CO.

COLORADO

George Kunkle, pres., Grand Junction, Colo. Reported in July, 1915, that carnotite holdings in Paradise Valley would be developed. Enlarging its experimental plant to 200 milligrams of radium per month.

SCHLESINGER RADIUM CO.

COLORADO

Address: K. L. Kithil, Box 1316, Denver, Colo. **Mine offices:** J. Cardoner, Gateway, Colo., and B. J. Manning, Paradox, Colo.

Officers: W. A. Schlesinger, pres.; K. L. Kithil, v. p. and gen. mgr.; V. C. Thorne, sec.-treas.; with S. B. Thorne and W. V. Hodges, directors.

Inc. 1915, in New York. **Cap.**, \$150,000; \$125,000 outstanding; shares non-assessable.

Property: 8 claims on Rock creek, in Paradox and Gateway district, Colo., said to show horizontal beds of disseminated ore in sandstone. Ore occurs as pockets and lean layers, varying greatly in each claim. Ore is carnotite, containing uranium (2 to 5% U_3O_8), vanadium (1 to 9% V_2O_5), and radium.

Development: surface work mostly with small underground stopes. Total workings, 500'.

Equipment: concentrator of 2 tons daily capacity in chemical plant at Denver. This is to be enlarged.

Production: 500 to 600 tons of carnotite ore per year, averaging \$100 to \$200 per ton in 1916. The recovery is 75% of metals contained, at cost of \$70 per milligram of radium extracted.

WESTERN SLOPE COPPER MG. & SM. CO.

COLORADO

Formerly operated in Unaweep district, Colo. Out of business, bondholders having taken over property. For description, see Vol. XII.

MOFFAT COUNTY

DOUGLAS MOUNTAIN COPPER CO.**COLORADO**

Craig, Colo. R. G. Morris, Denver, pres. Company installed new hoist, compressor, etc., 1917.

MONTEZUMA COUNTY

DOYLE CONSOLIDATED MINES CO.**COLORADO**

Mine office: Mancos, Montezuma Co., Colo.

Officers: Hon. Jas. Doyle, pres.; Earl P. Hopkins, v. p.; E. R. Marden, sec., 1426 You St., Washington, D. C.; D. T. Thompson, treas.; preceding, with Wm. W. Fry and J. J. Butler, directors; R. J. Doyle, mine supt.; R. C. Morrison, mill supt.; C. F. Doyle, engr.

Inc. Oct. 21, 1907, in Arizona, as consolidation of the Mancos Mining & Development Co., the Cliff Dwellers Gold Mining Co. and the White Quail Copper Co. **Cap.**, \$10,000,000; shares \$1 par; non-assessable; issued about \$3,000,000.

Property: 31 claims, in 3 groups of about 300 acres in Rush basin, part of the California mining district, Montezuma and La Plata counties, in southeastern Colorado. Claims are in a high part of the Sierra La Plata, 3½ miles from La Plata city and 4 miles from the Colorado Southern railroad. The White Quail group shows a copper-bearing "dike" of monzonite, porphyry, said to be 150' across and to average 2½% copper and \$4 gold, across its entire width. Other claims cover about a mile of the apex of the Sundown (or North Star) vein, a flat, dipping fissure in red quartzite, carrying milling ore with gold and silver values. Company developed properties for several years, through Columbus tunnel. Had 10-stamp mill in 1910 and erected a new 150-ton mill, operated July, 1912. Company advertised for lessees in 1914.

Property has thus far failed to fulfill the extravagant claims and promises of the White Quail promoters or their successors.

MONTROSE COUNTY

LA SAL COPPER-SILVER MINING CO.**COLORADO**

Paradox, Montrose Co., Colo. J. Ensign Fuller, pres.; John B. Overton, sec., at last accounts. Is a reorganization of Consolidated La Sal Mining & Smelting Co., which succeeded La Sal Copper Mining Co.

Property: the Cashin mine, 7 claims, patented, and 3 mill sites, 150 acres, some distance from a railway. The mine has a 1,540' tunnel, showing carbonate and sulphide ores, assaying up to 35% copper and 18 oz. silver per ton. Lands are also said to carry coal.

Equipment: includes steam power and a Leyner air compressor. Development resumed in 1915 after long idleness. No recent returns.

NATIONAL RADIUM INSTITUTE**COLORADO**

Officers: Dr. Howard A. Kelly, pres., Baltimore, Md.; Dr. Jas. Douglas, 99 John St., New York, sec.

Inc. 1913, in Delaware. Company has a lease on 16 carnotite claims in Paradox Valley, Montrose Co., Colo., owned by a subsidiary corporation of the Crucible Steel Co. of America, on a 15% royalty basis.

RADIUM COMPANY OF AMERICA**COLORADO**

Property: at Tidwell, 15 miles from Green river in Paradox Valley district, Montrose Co., Colo., comprises a number of claims covering carnotite bearing sandstone cut by quartz stringers. Carload shipments carry 2.24% uranium oxide and 3.87% vanadic acid. Described in U. S. Geol. Survey Bull. 530-K, p. 163.

STANDARD CHEMICAL CO.**COLORADO-UTAH**

Operating in Colorado and Utah, mining radium and vanadium-bearing ores in Paradox Valley, Colo. Company gives out no information. Stated

late in 1916 that company was employing several hundred men and shipping ore.

See U. S. Bureau of Mines Bull. No. 1:25, p. 944.

OURAY COUNTY

AMERICAN MINING CO.

COLORADO

Property: American Nettie mine, near Ouray, Ouray Co., Colo.

Ore: gold in broad, flat shoots, in quartzite, about 7' thick and proven for 700' in length. These orebodies believed to be the northerly continuation or downward faults of the Wanakah orebodies, which intersect the great monzonite porphyry dike running due east through the Nettie ground.

Development: 700' tunnel and upraise.

Equipment: Compressor, drills, and machinery.

Production: In gold since 1889. \$1,500,000.

AMERICAN NETTIE MINE.

COLORADO

See American Mining Co.

ATLAS MINING & MILLING CO.

COLORADO

Office: Ouray, Colo. C. H. Austin, pres.; C. C. Carson, v. p.-sec.; A. B. Shipman, treas.; with C. H. Wagner, Wm. Story, Jr., and Chas. D. Loper, directors. Jas. A. Lannon, supt., Sneffels, Colo.

Inc. Feb., 1904, in Colorado. **Cap.**, \$2,000,000; shares \$1 par; 1,921,000 shares outstanding. Authorized bond issue \$50,000; all outstanding. Annual meeting in August.

Property: 28 claims, patented, 204 acres in Mt. Sneffels district, Ouray Co., Colo., includes the Atlas & Crown Point mines. Ore, which occurs in 3' fissure vein in andesite, is a complex sulphide, carrying grey copper, gold, silver and lead. Average assays are reported to run 9 oz. silver and 0.05 oz. gold per ton. The vein is developed by a 2-mile tunnel to depth of 1,500', with a total of 20,000' of underground workings.

Equipment: includes electric power, air compressor, tramway and 150-ton 20-stamp mill with table and flotation (Min. Separation Co., Ltd.) concentration, giving a 90% recovery of ore values. Management expects to further solve treatment of complex ores and increase recovery to 95%. Employs 75 men.

Production: 30,000 tons in 1913, 35,000 tons in 1914 and 40,000 tons in 1915. Management estimates 50,000 tons of ore blocked out.

BACHELOR KHEDIVE MINES CO.

COLORADO

P. O. Box 1,139, Denver, Colo.

Officers: Henry A. Dubbs, pres.; Henry Lyne, v. p.; J. S. Williams, sec.; W. A. Johnston, treas.; with W. J. Kirsher, T. J. Hyland and W. B. McDonald, directors. L. G. Eakins, gen. mgr., Denver.

Inc. in Colorado. **Cap.**, \$1,000,000; shares \$1 par, all outstanding. Annual meeting 1st Monday in October.

Property: 11 claims, patented, 83 acres at Ouray, is a silver producer. Operated by lessees. Ore sales, 1916, totaled \$9,365, with net receipts of \$3,200. Reported producing 1,000-1,500 tons of ore per month in 1917.

BARSTOW MINE.

COLORADO

Office: 42 Broadway, New York. **Mine office:** Ouray, Ouray Co., Colo. Works at Ironton, Ouray Co., Colo. J. H. Fennessy, trustee. Property under bond and lease to C. R. Wilfley, 1917.

Property: 27 claims, patented, 199 acres mineral land with 5 acres mill site, in Red Mountain district. Ore found in fissure vein in andesite with N. W. strike and dipping 75°, is reported as 8' wide and carries 0.75% copper, 2.5% lead, 4% zinc.

Developed: by 2 shafts, 425' and 145' deep, and 2 tunnels, 3,200' and 3,300' long. Total length of underground workings 10,300', reported to have developed 17,000 tons of ore with 8,000 tons in sight.

Equipped: with 2 hoists, electric compressor, 6-drill capacity, frame stamp mill and concentrator with 2 Blake crushers, 9x15", 40 stamps, 20 Wilfley tables, 2 slime tables and buddles. Mine has 115-h. p., mill 175-h. p.

Mine is 11 miles from D. & R. G. R. R. and the Silverton R. R., operating in the summer, is 1 mile away.

The "spar" vein of this property, leased Sept., 1916, to Engineers Corporation of Boulder, Colo., who will work it for fluorspar. This vein, carrying 3' of fluorspar, cuts across the Barstow vein.

BENACK MINING CO.

COLORADO

Address: M. Fleming, 700 Fleming Bldg., Des Moines, Iowa.

Company formed to operate the Ouray group of claims, 50 acres, 7 miles S. E. of Ouray, Colo.

Development: by tunnel, said to have opened up an orebody for 400' and to have developed 17,967 tons of shipping ore and a larger tonnage of milling ore, ranging in value from \$10 to \$25 per ton.

Shipments to date total 29 cars sent to the Salida smelter, which are reported to have averaged 57 oz. silver, 13% lead, 2% copper, 5% zinc and to have yielded \$42 per ton.

BROWN MOUNTAIN SMELTING CO.

COLORADO

T. B. Crawford, sec.-treas., 403 Wyoming Block, Denver, Colo. Mine office: Ouray, Ouray Co., Colo.

Officers: W. E. Kreamer, pres.; P. J. York, v. p.; A. E. Ackerson, mine supt.

Inc. 1911 in Colorado. **Cap.**, \$300,000; shares \$1 par; issued, 280,000.

Property: the Hill, or Ouray smelter and the Guadalupe mine with 432 acres mineral land and 25-acre mill site in the Red Mountain district. The Guadalupe mine is reported to show an 18' vein of copper ore averaging 3% copper, 5 oz. silver and \$5 gold per ton in sulphide ore.

Development: totals 3,000', including a 2,000' tunnel and a 500' crosscut blocking out 50,000 tons of ore.

Equipment: at mine, 350-h. p. water power.

The 250-ton smelter, 6 miles from Ouray, has 2 blast furnaces of the Loder type, turning out 40% matte, which is shipped to the Garfield smelter for further treatment. It was blown in Oct., 1913.

CADIZ MINING CO.

COLORADO

Office: 220-2 1st Nat'l. Bank Bldg., Denver, Colo.

Officers: F. C. Wood, pres.; B. H. Graves, v. p.; J. H. Bender, sec.; S. M. Walker, treas.-gen. mgr. Mines are at Rico, Ouray Co., and at Black Hawk, Gilpin Co.

Inc. Sept., 1916, in Colorado. **Cap.**, \$100,000; shares, par \$1, full paid, non-assessable; \$31,000 outstanding.

Property: at Rico, A. B. G., Sydney, D. V. G. groups and Wabash and No. 7 claims, comprise 38 claims in all, aggregating 460 acres. It is reported that 6,000 tons of ore are blocked out, running 18% lead, 15% zinc and 15 oz. silver. At Black Hawk, Gilpin Co., the company has the Polly group. Work is being done through a 700' tunnel, which is reported to have cut veins of fair grade ore.

CALLIOPE CONS. MINING CO.

COLORADO

Office: 410 Foster Bldg., Denver. **Mine office:** P. O. Box 493, Ouray Colo.

Officers: S. W. Schroder, pres., 503 Downing St., Denver; L. J. Ford, v. p.; C. A. Larson, sec.-treas., Denver; preceding, C. F. Ogrem and A. A. Durson, directors. R. W. Davis, Jr., supt.

Inc. Feb. 9, 1914, in Colorado. **Cap.**, \$100,000, par \$1; outstanding 49,525 shares. No bonds. Annual meeting Feb. 9.

Balance sheet for 1916 showed net sales from ore as \$10,743; operating expenses, \$24,252. Income account, \$29,574.

Property: 10 patented claims at Dexter Creek, Ouray, Colo. Is being developed by 2,800' tunnel. The ore deposit is a quartz vein carrying gold, silver, lead, copper, and zinc. Production for 1916, 482½ tons.

GOLD CROWN MINING CO.

COLORADO

Address: J. C. Ingersoll, mgr., Ouray, Colo.; B. G. Brinkman, owner of mine, Lafayette Bank, St. Louis, Mo.

Property: 45 claims, 40 patented, 450 acres, at Ouray, Colorado, is being worked under option.

Ore: is a mixture of quartz, calcite and ferro-manganese silicates, carrying iron pyrite with gold and copper, mainly as chalcopyrite.

Development: by 1,400' shaft with 4,000' of workings.

Equipment: includes 300-ton mill using flotation.

HARPER-LARSON DEVELOPMENT CO.

COLORADO

Name changed, 1917, to Calliope Cons. M. & M. Co., which sec.

HUMBOLDT MINES CO.

COLORADO

Telluride, Colo.

Officers: Bulkeley Wells, pres. and gen. mgr., Telluride; F. N. Watriss, v. p.; Thos. J. Regan, sec.-treas., 120 Broadway, New York; preceding, with C. N. Bell and E. B. Adams, directors. C. N. Bell, supt.

Inc. 1915, in Colorado. **Cap.**, \$500,000; shares \$100 par; outstanding, \$382,000.

Property: 25 patented claims, 180 acres, in Mt. Sneffels mining district, Ouray county.

Ore: gold, silver, lead and iron, in a 2' quartz fissure vein in andesite with N. W.-S. E. strike and dip of 76°.

Development: 680' vertical Humboldt shaft with 7 levels and the mile-long Sheridan tunnel connecting with lowest level of the Humboldt shaft. Greatest depth of workings, 840'.

Equipment: includes a 50-h. p. electric hoist, Ingersoll-Rand compressor and a tramway. Power is electric.

Production: started Jan. 1, 1916. Producing 150 tons daily, 1917. Ore is milled by Smuggler Union Mining Co.

MOUNTAIN TOP MINING CO.

COLORADO

Address: Ouray, Colo.

Officers: Windsor Morris, pres.-treas.; G. H. Beebe, v. p.; G. H. Barnhart, mgr.-treas., with E. C. L. Bartow, Carl Larger, W. E. Hopton and J. A. Mathews, directors.

Inc. Aug. 11, 1911, in Colorado. **Cap.**, \$750,000; shares \$1 par, non-assessable; \$500,000 issued. Bonds authorized, \$250,000; \$146,000 issued.

Property: 12 claims 10 patented, 114 acres, in Mt. Sneffels district, Ouray Co., Colo., 6 claims covering 9,000' along the N. extension of the Smuggler-Union vein.

Geology: fissure-vein in andesite, showing ore with galena and gray copper, and carrying gold, silver, lead and copper values. Shoot is from 6 to 36" wide and 500' long. Mill ore reported to assay \$30 and shipping ore over \$200 net per ton.

Development: by crosscut tunnel 2,500' long, with total of 8,000' of workings, to depth of 1,000'.

Ore reserves: given as 30,000 tons.

Equipment: includes compressor and 50-ton mill employing 2 pneumatic flotation units. Plant is unique in that ore-treatment is all done underground in order to prevent snow-slides damaging mill. Extraction is 89%. All machinery is motor-driven.

NATIONAL BELL MINE.

COLORADO

Property at Red Mountain, near Ouray, Ouray Co., Colo., is a small producer of copper-silver ore. Operated by 3 sets of lessees in 1916.

OURAY SMELTING & REFINING CO.

COLORADO

Office: Hayden Bldg., Ouray. Thos. B. Crawford, pres.; Wm. E. Kreamer, sec.-treas.

Inc. in Colorado. **Cap.**, \$750,000; shares \$1 par; divided into 185,000 7% preferred shares, 82,000 outstanding, and 562,500 common stock, 150,000 shares outstanding.

Property: 435 acres, patented, on the Uncompahgre river, 4 miles from Ouray, Colo.

Development: by 250' shaft and 3,500' of tunnels and drifts. The company became financially embarrassed in 1914, and the mine was closed down. Reopened, 1917. The 350-ton smelter at Ouray is operating and a new 75-

ton custom mill has also been erected. Management has offered to run 1-ton sample lots of ore for local producers at \$1 per ton, in order to secure tonnage for the plant.

SAN ANTONIO MINING CO.

COLORADO

Office: 312 Century Bldg., Denver, Colo. **Mine office:** Red Mountain, Ouray Co., Colo.

Officers: M. T. Chestnut, pres. and gen. mgr.; Otto Koehler, v. p.; Wm. L. Stephens, sec.-treas.; J. F. Roper, supt.

Inc. Feb. 5, 1908, in Colorado. **Cap.**, \$500,000; shares \$1 par.

Property: 37 claims, patented, about 200 acres, a 20-acre mill site and 10 acres miscellaneous lands, 1 mile from a railway, in the Red Mountain district of Ouray and San Juan counties. Lands, including the Carbon Lake mine, show porphyry, carrying several orebodies, estimated at 20' to 30' width, traceable for more than 3,000' and reported by the company to show enargite ore carrying 12% copper, 10% lead, 10 oz. silver and \$3 gold per ton, which is from a narrow paystreak.

Development: by shafts of 37' and 200', the Camp Robber tunnel of 625', and the Koehler tunnel of 2,800', with a back of about 500'.

Equipment: includes a 5-drill air compressor and 10 mine buildings and dwellings. Idle several years.

Letters returned in 1917.

SLICK BROS. MINING & MILLING CO.

COLORADO

Address: B. B. Slick, Ridgeway, Colo.; W. B. Slick, pres., Boise, Idaho, Inc. 1909 in Nevada. **Cap.**, \$1,500,000; \$1 par.

Property: 10 claims 100 acres, patented, on Mt. Hayden, Uncompahgre district, Colo., shows fissure vein in andesite. The vein runs N. E.-S. W., dips at 45°, which for 2,400' long shows 3' of sulphide copper ore carrying gold-silver values, and reported to average \$35 per ton in all three metals. The shoot is said to carry ore for 600'x600'x3'.

Development: by 3 tunnels, aggregating 1,200' and having back of 350'. Property reported on by F. M. Kilmer, of Boston Inst. of Technology.

Company was to install machinery and power, expending \$60,000 for this and development work in 1916.

VERNON MINING CO.

COLORADO

Office: W. L. Fleming, 50 Broad St., New York. **Mine office:** A. G. deGolyer, mgr., Ironton, Colo.

Officers: W. L. Fleming, pres.; C. L. Horton, v. p.; N. L. Young, sec.-treas., with W. P. Ward, A. G. deGolyer and F. D. Armstrong, directors.

Inc. July, 1916, in Delaware. **Cap.**, \$1,000,000; shares \$1 par; 800,000 outstanding; 490,000 issued to syndicate subscribers.

Balance sheet for the term, July 13 to Dec. 31, 1916, shows receipts totaling \$75,865, \$70,500 being from sale of shares. There was spent at the mine \$57,681, and \$2,855 for miscellaneous, leaving \$14,928 cash on hand.

Property: 21 claims, 2 patented, 325 acres, located at timber line (11,000'), in the Red Mountain mining district of Western Colorado, about 7 miles from Ouray.

Geology: 3 well-defined fissure veins in altered andesite. The Beaver vein has not been prospected. The South Dakota vein, lying between the Vernon and the Beaver, is traceable for several thousand feet and shows an outcrop that is 50' to 80' wide. This vein is parallel to and about 150' from the Vernon; the dip being opposed the two veins should unite at about 300' in depth. The veins carry gray copper ore with high silver-copper values, in well-defined ore shoots. The South Dakota vein has a shoot 175' long that will average 5' in thickness opening to a width of 20' in stopes above the tunnel level where the ore averaged 12% copper, 44 oz. silver and \$2.80 per ton in gold. The Vernon vein shows a width of 3' of high-grade silver-copper ore in a drift at the bottom of a 48' shaft.

Development: on the South Dakota vein an incline shaft, 450' to 500'. Reserves are estimated as worth \$200,000.

Equipment: includes machine drills, electric hoist, compressor and 70-ton flotation plant.

Property meritorious; management good, but the president's office issues an immense quantity of circulars.

WANAKAH MINING CO.

COLORADO

Address: John T. Roberts, Jr., gen. mgr., Ouray, Colo.

Directors: G. H. Beebe, J. A. Matthews, J. T. Roberts, Sr. and Jr., S. McCurdy, L. P. Smith and S. F. Hancock.

Property: the Bright Diamond, Ironclad and Memphis groups, north of Ouray, Ouray Co. Operations have been intermittent, the 200-ton matting furnace having a capacity far in excess of the ore supply of the district. Opened as a custom smelter March 1, 1914; only 1,489 tons of ore was received during the remainder of the year. The smelter was sold late in 1916 to the Ouray S. & R. Co., a reorganization of the Brown Mountain S. Co., original owners.

Reported in June, 1916, that the Wanakah mine was being reopened preparatory to 6 months' development work. It is claimed that mine is not more than 25% worked out.

In June, 1917, company was reorganized by Syracuse, N. Y., people.

PARK COUNTY

BIG TOAD MINING & MILLING CO.

COLORADO

Office: 237 First Natl. Bank Bldg., Denver, Colo.

Officers: A. E. Chapman, pres.; W. J. H. Miller, v. p.; C. L. Dickinson, sec.; J. L. Hunter, treas.-mgr., preceded with Victor Neuhaus and Emil Affolter, directors.

Inc. Oct. 12, 1916, in Colorado. **Cap.**, \$500,000; \$1 par, non-assessable; 240,000 shares outstanding.

Property: 17 claims, 300 acres near Alma, Colorado, held under bond and lease covering 5 years. Purchase price, \$50,000, to be paid at the rate of \$10,000 yearly, first payment due Sept., 1917. Claims are on the eastern slope of Mt. Bross and are said to show 2 veins on the surface carrying gold, silver and lead values.

Development: consists of 250' tunnel to be driven 500', and an old shaft.

Equipment: includes "mill building" and 4,200' aerial tram, which have been bought by company. Treasury stock being sold, 1917, to equip a 100-ton mill.

Advertising of the Denver promoters is unfavorably regarded. Development of "orebody" considered insufficient to tell public there will be \$180,000 earnings per year, etc.

GREAT WESTERN MINE.

COLORADO

Armstrong and Vanetta, lessees. Mine near Lake George, Park Co., Colo.

Property: shows vein with gold-copper ore, developed by 218' vertical shaft, 800' of crosscuts and drifts. Equipped with steam power and air compressor. Development work continues and small shipments of sulphide ore have been made.

LAKE GEORGE DEVELOPMENT CO.

COLORADO

Office: 22 E. Columbia St., Colorado Springs, Colo. A. J. Kiser, sec.-treas., writes, 1917, that property has been sold and company is in receiver's hands. Fully described, Vol. XII.

LONDON MINING & REDUCTION CO.

COLORADO

Controlled by the Story, Jewett and Packard estates. Mine office: Alma, Park Co., Colo. Chas. Aicher, mgr.

Property: the London mine on London mountain, 7 miles W. of Alma, and about the same distance from Leadville, opened in 1875, is an old-time producer of gold-lead-silver ore.

The ore deposits are replacements of blue limestone at its contact with eruptives or are true fissure veins in quartz porphyry. The main London vein, 3-12' wide, runs N. 37° W., with dip 65° W. The gangue is pure quartz with small amounts of calc-spar and barite. Assays reported to average 3 oz. gold, 4 oz. silver, 8% lead. This vein is credited with all

but 10% of the total production of the mine to date, but there is another vein with same grade of ore.

Development: by 2 adits, one 300' below the other, opening the London vein for 2,980' and exposing backs of 150' to 650'. Company is driving a new tunnel 600' below the old workings which will be 2 miles long.

PITKIN COUNTY

HOPE MINING, MILLING & LEASING CO. COLORADO

Address: Aspen, Colo. Chas. O'Kane, pres.; H. W. Clark, sec.; J. B. Stitzer, treas.

Property: a group of claims, about 400 acres, includes the Little Annie mine in the Roaring Fork mining district. Ore is a sulphide of lead, silver and zinc, with a considerable quantity of barite.

Development: by 6,000' Famous tunnel, being driven to reach the Little Annie vein. Work in 1916 amounted to 1,252' at a total cost of \$16,169.

Several of the company's claims have been leased on a royalty basis.

SMUGGLER LEASING CO., THE. COLORADO

Address: C. E. Anderson, Aspen, Colo.

Officers: D. M. Hyman, pres.; E. M. Rogers, v. p.; J. L. Tilton, sec.; A. B. Simon, treas., with Mark Hyman, Edw. Kuhn and W. P. Arms, directors.

Inc. May, 1911, in Maine. **Cap.,** \$500,000; shares \$1 par; all issued, non-assessable.

Property: the Smuggler mine at Aspen, Colo., shows contact deposits in lime and shale, containing silver, lead and zinc ores.

Development: by 5,000' and 15,000' tunnels, and 1,500' shaft, opening ground to 1,800' depth.

Equipment: includes 2,250-h. p. electric plant, hoist, compressor, and 500-ton concentrating mill.

No returns available. Water is troublesome, 3,500 to 4,000 gal. per min. being pumped.

PUEBLO COUNTY

EQUITY CREEDE MINING CO. COLORADO

Office: 107 W. 3rd St., Pueblo, Colo. Mine office: J. W. Whitehurst, supt., Creede, Colo.

Officers: Frank Taylor, pres.; Geo. D. Weston, v. p.; B. E. Watkins, sec.; E. E. Withers, treas., above with A. V. Tobor and E. H. Morse, directors.

Reorganized March 6, 1915, in Colorado.

Cap., \$600,000; shares \$1 par; outstanding, \$375,000. Annual meeting second Wednesday in March.

Property: 20 claims, 216 acres, unpatented, 7 miles N. W. of Creede, in the King Solomon mining district. Claims are on the Nelson Mountain vein, which is said to show gold-silver ore in a contact vein in rhyolite and porphyry. Shipments made are said to have averaged \$24.65 net per ton.

Development: by tunnels, 225', 350' and 725' long; greatest depth of workings, 700'; total underground workings, 1,300'.

Total production to 1915, 43 cars netting \$18,555.

Equipment being installed, 1917.

GIBSON HILL MINING & MILLING CO. COLORADO

Address: Pueblo, Colo.

Inc. Oct., 1916, by B. M. Gill and C. R. Morris, of Pueblo, to operate the New York, S. Lambert, and L. C. Owens claims near Breckenridge.

Development: by tunnels. New York group said to contain large veins of gold, silver, and lead ore. Some zinc ore also mined.

PUEBLO SMELTER. COLORADO

Is owned by the American Smelting & Refining Co., which see.

UNITED STATES ZINC CO.**COLORADO**

All stock owned by the A. S. & R. Co., which see. Plant at Pueblo, Colo., has 2,320 retorts.

*RIO GRANDE COUNTY***BOWEN GROUP.****COLORADO**

E. T. Elliot, mgr., Del Norte, Colo.

Property: 8 patented claims, 200 acres at Summitville, Rio Grande Co., Colo., is said to show fissure veins in porphyry; ore contains gold, silver and copper, averaging about \$10 per ton. Developed by drifts and tunnels, longest 600'. Management plans resumption of development work in 1917.

*ROUTT COUNTY***BOSTON-SIERRA MADRE MINE INDUSTRY CO.****COLORADO**

Property sold for taxes in 1914 to L. E. Armstrong. Fully described, Vol. XI, Copper Handbook.

FARWELL MOUNTAIN COPPER CO.**COLORADO**

Probably dead. Described in Vol. XII. Mine in Routt Co., Colo.

HAHN'S PEAK GOLD MINING & MILLING CO.**COLORADO**

Office: Room 3, Algoma Bldg., Oshkosh, Wis. Mine at Hahn's Peak, Routt Co., Colo.

Inc. Jan. 29, 1906, in Colorado. **Cap.**, \$1,000,000; shares \$1 par; 956,000 shares outstanding.

Officers: H. O. Granberg, pres.; C. A. Spencer, v. p.; Chas. Olson, supt.; E. E. Meeleus, sec.-treas., preceding with Dr. H. A. Wolter, M. A. Rasmussen and W. E. Brown, directors. C. A. Arkins, cons. engr.

Receipts for year ended August, 1917, were \$17,000; disbursements, \$16,533.

Property: 25 claims, 248 acres, patented.

Development: 460' incline shaft and a 950' tunnel on Royal Flush claim, said to cut 5 veins; also the 2,200' Conundrum tunnel 430' lower, cutting 12 veins, values being principally gold and silver. Average assays, \$15 to \$21 per ton.

Equipment: includes gasoline engines, compressor, air drills, blower and 400-ton concentrating mill, which is to be rearranged for the oil flotation process. Development work has been going on since Sept., 1915.

Reported on by Arthur Lakes, Etienne Ritter, H. C. Beeler and others.

*SAGUACHE COUNTY***BACA MINING CO.****COLORADO**

Property known as the Baca Land grant originally belonged to Senor Don Luis Mana Baca as a gift from a King of Spain. The present owners opened the land to prospectors in July, 1914. B. T. Tipton, mgr., Crestone, Saguache Co., Colo.

Property: 35,000 acres of mineral land, including 23 partially prospected mines near Crestone, Saguache Co., Colo., on the D. & R. G. R. R. The largest mines of the group are the Eastern Star, Sunset, Julia D., Queen Esther, Von Moltke, Great Western and Independent, the latter being the only one developed by the company.

Geology: Ore occurs in 8 well-defined contact veins, along dikes and in true type fissure veins, in pockets and shoots; country rock is altered granite and schistose gneiss, cut by intrusive dikes of porphyry, phonolite and iron stained quartz, containing gold, silver, lead, copper and zinc. Mother Lode said to be traceable for 12 miles on surface. Smelter assays ran \$18 gold, 500 oz. silver and 8% zinc.

Development: considerable amount of old workings, shafts and cross-cuts. There is an unlimited water supply. Ore is shipped to the Pueblo smelter. Property worked by prospectors and lessees under 2-5-year leases. Miners receive free timber, water and assay services and pay 10-15% royalty on ore extracted. At last accounts were planning new Edison type mill.

GOLD HILL UNITED MINES CO.**COLORADO**

Idle. Office: Bailey Bldg., 1218 Chestnut St., Philadelphia, Pa.

Inc. June 1, 1910, in Delaware. Cap., \$2,000,000; shares \$1 par.. Registrar & Transfer Co., New York, transfer agent. Listed on New York Curb.

Properties: in the Kerber Creek, Manitou and Hull mining districts, Saguache Co., Colo. Inactive for several years, doing assessment work only.

RAWLEY MINING CO.**COLORADO**

Office: 25 Madison Ave., New York. Chas. E. Beckwith, mine supt., Bonanza, Saguache Co., Colo.

Officers: A. Filmore Hyde, pres.; Eugene G. Foster, v. p.; E. V. Cox, sec.-treas.; preceding, with John L. Cox, W. Hodges, Elmer Z. Burns and H. O. Hall, directors; Simons & Burns, cons. engrs.

Inc. 1901 in Colorado. Cap., \$2,500,000; shares \$1 par, non-assessable; 1,903,679 shares outstanding. Annual meeting 3rd Monday in January.

Property: 64 claims, 400 acres, shows fissure veins in andesite, running N.-S., nearly vertical and of 5' to 6' width; they carry argentiferous galena, bornite and chalcopyrite, in a heavy sulphide smelting ore on the 12th level. The mine has 15,000' of workings, estimated to show 97,000 tons concentrating and 225,250 tons smelting ore. The 6,235' tunnel cuts vein on 1,200' level. A 3-compartment raise was driven from 1,200' to 600' level in 1917 to facilitate ore extraction on upper levels.

Equipment: includes an 8-drill Rand air compressor, electric power with 50-h. p. at the mine and 100-h. p. at the mill, fuel being wood. There are 24 buildings and a 100-ton mill. Property still in the development stage. Idle 1915-1916. Operations resumed the latter part of 1916 and 50 tons per day being shipped to Ohio & Colorado Sm. Co., Salida, from the 1,200' level.

YUKON MINES CO.**COLORADO**

Office: J. B. Conger, pres., Century Bldg., Denver. Mine office: Parlin, Colo.

Inc. in Colorado. Cap., \$200,000; shares \$1 par; non-assessable; outstanding, May, 1915, 100,000 shares.

Property: the Alaska and Yukon mines, patented, Cochetopa district, Saguache Co. The ore in the Alaska shaft contains mainly zinc-blende; that in the Yukon vein, gold, silver and copper.

Development: by 2 shafts, the Alaska shaft being 165' deep.

Equipment: includes a compressor, and 100-h. p. boiler. Small shipments of copper ore have been made and lessees on the Alaska shaft have shipped zinc ore.

Property is a prospect.

SAN JUAN COUNTY**ANTI-PERIODIC GROUP****COLORADO**

Property, at Rain Gulch, Silverton, Colo., owned by Galena Mt. Gold & Silver Mng. Co., which see.

ASPEN MINE CO.**COLORADO**

Property: the old Aspen mine at Silverton, Colo. Controlled by American Smelting & Refining Co. Operated by lessees who are making small but steady shipments to Silver Lake mill.

CONGRESS GOLD & COPPER CO.**COLORADO**

Directors: J. B. Ross, pres.; Guy W. Mallon, v. p.; Frank L. Ross, sec.-treas., mgr.

Inc. April 16, 1908, in Colorado. Cap., \$500,000; shares \$10 par. Bonds, \$100,000 authorized, at 6%; all issued.

Property: 3 claims, 20 acres, the Congress and Arlington lodes at Red mountain, in San Juan Co., and the Midway lode in Ouray Co. Property is 12 miles south of Ouray and 12 miles north of Silverton. The Congress is a famous old mine worked 1884-93, said to have produced about \$400,000

worth of ore, averaging 18% copper and 11 oz. silver per ton, with small gold values. The mine, idle for some years, through litigation, was leased 1912-13. The KaPeGi Leasing Co. are operating the lower levels and the Offerman-Hansen Leasing Co. the upper levels.

Development: 400' shaft with about 1,500' of workings, showing chalcocite, reported by company to average about 5-10% copper, 10 oz. silver and ½ oz. gold per ton. Mine has electric equipment including hoist and compressor plant. See Southern Exploration & Mining Co.

CONTINENTAL MINING CO.

COLORADO

Office: Silverton, Colo.

Officers: Jos. Bordeleau, pres.-treas.-mgr.; F. B. Brown, v. p.; W. A. Way, sec.; preceding, with M. J. Heller, supt. and J. H. Slattery, directors.

Inc. in Colorado. Cap., 1,500,000 shares at \$1 par; 23,000 shares in treasury. Transfer office: Silverton. Annual meeting in December.

Property: 18 claims, about 150 acres, located in the Eureka mining district, San Juan Co., Colo., said to show quartz vein in fissure carrying gold and silver. Company spent \$8,000 on development work in 1916.

Development: by vertical shaft and tunnels. Tunnels are 3,000' long with 4,000' of development, having a depth of 500'. Ore shoot is said to be 1,500' by 350' and has 200,000 tons blocked out. Average assays are said to be \$18.

Equipment: includes electric hoist, and electric pump.

DETROIT & COLORADO MINING CO.

COLORADO

Address: care L. W. Partridge, sec., 517 Ideal Bldg., Denver, Colo.

Inc. Nov. 10, 1903, in Colorado. Cap., \$1,000,000; shares \$1 par.

Property: the Champion and Aletha groups, 3 claims, 4 patented, situated 1½ miles S. W. of Silverton, 9,700' elevation. Ore is a mixture of copper and iron sulphides with tetrahedrite, but Aletha ore is a silver-bearing galena with chalcopyrite. The Champion vein is a gold-silver quartz carrying copper pyrite. Ores are said to average 31 oz. silver, 4.5% copper and \$5 gold. The main development is by tunnel. Property idle because of litigation.

DORA CONSOLIDATED M. & M. CO.

COLORADO

Address: Silverton, Colo.

Officers: E. P. Ricker, pres. and gen. mgr.; with Joseph Boyce, resident director; Louis Gillette, local mgr.

Property: 26 claims and 8 mill sites, patented, 300 acres, near Silverton, formerly known as the Hercules Consolidated. Total output since the late seventies is said to be over \$10,000,000.

Geology: claims show fissure veins traversing a complex area of schists, quartzite and granites, overlying San Juan tuffs, in turn overlain by andesite and sedimentaries. These are traversed by dikes of diorite, etc. A large amount of smelting ore is said to be exposed.

Development: 6 crosscut tunnels, one 2,400' long, giving a depth of 1,500'. Total workings amount to 30,000'.

ELK MINING & MILLING CO.

COLORADO

Address: Silverton, Colo. J. J. Cusick, v. p.,-mgr.

Property: 325 acres on Red Mountain, near Gladstone, San Juan Co., Colo., said to show several veins in andesite from 2' to 7' wide, the ore carrying 9% copper, \$2 gold and 4 oz. silver.

Development: by tunnel driven at a depth of 1,200'. Management installed new machinery, 1917, and plans to drive tunnel 1,000' in 1918. Will erect concentrator close to railroad.

ELK MOUNTAIN MINING & MILLING CO.

COLORADO

J. J. Cusick, mgr., Silverton, Colo. Company installed new machinery, 1917, and plans concentration mill close to railway.

GOLD KING LEASING CO.

COLORADO

Mine at Gladstone, via Silverton, San Juan Co., Colo. J. H. Slattery, gen. mgr.; Louis C. Bastian, mill supt. Operates the Gold King and Sampson mines, formerly owned by the Gold King Cons. Mines Co., reorganized as New Gold King Mines.

Ore: claims show fissure veins carrying irregular stringers of lead-copper ore with gold-silver contents, in altered andesite, free gold occurring in white quartz associated with iron pyrite, galena or blende.

Development: by 600' shaft and 3,000' tunnel.

Equipment: includes complete steam and electric power, compressor, tramway, 300-ton mill, converted into flotation plant in 1915, 80 stamps, etc.

Production: the Gold King mine is credited with a production in excess of \$12,000,000 to end of 1915. Shipments in 1915 averaged about 400 tons of \$20 ore per month. Present work confined to first to fourth levels, with about 70 men employed.

HAMLET MINING & MILLING CO.

COLORADO

Address: C. T. Singleton, supt., Silverton, Colo.

Officers: J. S. Tucker, pres.; H. W. Fox, cons. engr.

Bonds: \$150,000 issued, 1911.

Property: 19 claims, about 200 acres, known as the Hamlet mine, 8 miles from Silverton, in the Howardsville mining district, San Juan Co., Colo.

Development: by tunnels, longest known as Mill tunnel, 500' below 5th level of old mine workings, connected by raises with tunnel.

Ore: a complex mixture of copper-lead and zinc sulphides carrying good gold and some silver values.

Equipment: includes steam power plant, compressor and conical mill with flotation unit, latter destroyed by fire, Dec., 1915. New plant built and fully equipped, 1917, is said to be making an 80% extraction. Company employs about 25 men.

HENRIETTA COPPER MINING CO.

COLORADO

Office: 1816 California St., Denver, Colo.

Officers: E. R. Moodie, pres.; N. M. Abbott, sec.-treas.

Inc. April, 1916. **Cap.,** \$3,000,000; shares \$1 par; non-assessable.

Company took over the holdings of the Henrietta M. & M. Co., formerly owned by the San Juan S. & R.

Property: about 6 miles N. of Silverton, San Juan Co., Colo., includes the Henrietta Co. mine, developed by 6,250' of workings, the main or No. 7 tunnel being 2,200' long and carrying auriferous and argentiferous copper ore. Active work reported under way, May, 1917.

HENRIETTA MINING & MILLING CO.

COLORADO

Dead. Company suffered from a complication of bad luck and bad financial conditions. Succeeded, 1916, by Henrietta Copper Mining Co., which see.

Company and its property, near Silverton, Colo., are described Vol. X, Copper Handbook.

IOWA TIGER MINING CO.

COLORADO

Property at Silverton, San Juan Co., Colo., is operated by the Melville Leasing Co. and several sets of independent lessees.

Mine is reported as being the largest shipper of concentrate from the Silverton district, the lead product containing good gold-silver values.

Flotation used in the mill, gives a high recovery.

KITTIMAC MINES CO.

COLORADO

Silverton, Colo.

Officers: Daniel B. Carey, pres.; Wm. Youngson, v. p.; Jos. L. Clark, sec.-treas.; Joseph Jacob, mine supt.; Frank Card, mill supt.

Inc. 1914, in Wyoming, as successor to company of same name inc. in Arizona and now dead, which is described in Vol. XI, Copper Handbook. **Cap.,** \$2,500,000; shares \$1 par; fully paid; non-assessable; \$2,000,000 shares issued and a \$40,000 bond issue outstanding. Property was transferred to a Colorado company in 1916, which continues active development and milling.

Property: 800 acres in Eureka Mining district, near Silverton, San Juan Co., Colo., includes 70 claims and a 76-acre mill site. Mine has 2 sulphide and 7 quartz veins, outcropping on surface for 3,000' and developed by 2 tunnels, 920' and 1,050' long, with 2,000' drifts. Ores carry gold-silver-

copper-lead-zinc and iron values. On the Isabella vein an orebody 19' wide has been developed for 600', said to average \$10 per ton in gold and silver.

Ore reserves: management estimates 500,000 tons of ore in sight.

Equipment: includes compressor, drills, electric motors, 10,040' aerial tramway, 150-ton mill with flotation unit, Huff electrostatic separators and several buildings.

LACKAWANNA MINING & REDUCTION CO.

COLORADO

Silverton, San Juan Co., Colo.

Inc. 1917, to operate the Lackawanna mine by R. E. L. Townsend and George Lugg, Silverton, Colo.

Property said to carry lead-silver-copper ore. Developed by 1,200' tunnel. Shipping in 1917.

NEW GOLD KING MINES

COLORADO

See Gold King Leasing Co.

OLD HUNDRED MINING CO.

COLORADO

Office: Room 706, Electric Bldg., Cleveland, Ohio. Mine near Silverton, San Juan Co., Colo.

Officers: Howell Hinds, pres.; W. S. Briggs, sec.-treas.; preceding, with H. H. Burgess, E. P. Price and Frank S. Whitcombe, directors; J. M. Elmer, supt.

Inc. June, 1906, in Maine. **Cap.**, \$5,000,000; shares \$5 par.

The company has authorized \$400,000 of series "A" first mortgage 6% bonds, none issued. The mine was floated by Thos. Nevins & Sons, of New York, who advanced the money for its equipment and development.

Property: 26 claims, patented, 500 acres, in Cunningham gulch, on Galena mountain, San Juan district, 5 miles north of Silverton. The Silverton & Northern railway runs to the mine. Claims show a quartz vein said to be 5' to 12' wide, carrying values in gold, silver, lead and copper, with increasing copper at depth, ore being claimed to carry average values of \$8 to \$12 per ton.

Development: mainly by tunnel. Mine is claimed to have upwards of 4 miles of workings.

Equipment: includes steam and electric power, numerous buildings, including a store, and the mine has a tramline. The 200-ton mill has 40 stamps, crushers, rolls, jigs, Frue vanners, concentrating and slime tables.

The property was promoted in New York upon representation by engineers that the mine contained bodies of low-grade ore which could be profitably mined if a larger output and lower milling cost could be secured. Despite the new machinery furnished and development done, the mine failed to redeem the promises made and is still awaiting some one who can make it pay by right management and proper ore treatment. Stock regarded as of little value.

PARKER GROUP OF MINES

COLORADO

John H. Meager, owner, Silverton, San Juan Co., Colo.

Property: 5 claims, about 2 miles N. E. of Silverton, said to show a fissure vein in andesite-lime-porphyry formation, traceable at surface for several thousand feet. The ore is a sulphide, containing copper, silver, gold, iron and molybdenum.

Development: by several tunnels and crosscuts. A prospect.

PRECIOUS METALS CORPORATION

COLORADO

Office: 109 W. 26th St., New York. Mines in Mill gulch, San Juan Co., Colo.

Officers: Chas. E. Force, pres.-treas.; F. W. Force, v. p.-sec.; and A. Fricke, directors.

Inc. Nov. 7, 1905, in Colorado. **Cap.**, \$5,000,000; shares \$5 par; issued, \$4,250,000. Columbia Trust Co., New York, registrar. Annual meeting, 3rd Monday in November. Company owned the entire stock issue of the East Canada Smelting Co., Ltd., which owned the McDonald copper-sulphur mine at Weedon, Quebec. The Canadian holdings were sold in 1915 to Weedon Mining Co., Ltd.

Company owns the Silver Crown group, 12 claims, 9 patented, and 4 mill sites, about 7 miles from Silverton; also the Forest and John mines, 9 miles distant, patented and freehold. Ore occurs in quartz veins in andesite, carrying lead and silver values. Developed by 2,500' of tunneling. Idle since November, 1914.

PRIDE OF THE WEST MINE

COLORADO

Address: A. W. Harrison, mgr., Silverton, Colo.

Property: the Pride of the West and Green Mountain mines, in Cunningham gulch, 6 miles from Silverton. The latter mine is opened by a 1,500' tunnel. At 600' a raise was driven to the surface and is said to have cut rich ore at 1,250' in March, 1917.

Equipment: the old mill was remodeled to include flotation and is now working on lead-silver ore.

ROSS MINING & MILLING CO.

COLORADO

Idle many years and probably dead.

Office: Ross Bldg., Waynesburg, Pa. Mines at Silverton, San Juan Co., Colo. The company has had much financial trouble, like its predecessors and collateral relatives in the chain of promotions. Fully described, Vol. XI, Copper Handbook.

ST. PAUL MINING & REDUCTION CO.

COLORADO

Silverton, San Juan Co., Colo. Norwood Johnson, pres. and treas.; J. B. Ross, v. p. and gen. mgr.; Frank L. Ross, sec.

Inc. March, 1908, in Colorado. **Cap.**, \$100,000; shares \$1 par.

Property: the St. Paul group, in the Red Mountain district, an old mine that formerly shipped some ore netting \$1,000 per carload. The mine has a 300' shaft, with levels at 200' and 300', developing small but rich ore shoots, said by former management to carry about 8% copper, 10% lead, 10% zinc, 5 to 10 oz. silver and 1 oz. gold per ton. Since 1914 the mine is being worked by lessees, who were sinking a shaft, said to be in solid ore averaging \$6 per ton.

SILVER LAKE MINES

COLORADO

Owned by American Sm. & Ref. Co. L. R. Clapp, supt, c/o A. S. & R. Co., Denver.

Property: 143 patented claims in the Animas mining district, Silverton, San Juan Co., Colo.

Ore: gold, silver, lead, copper and zinc in fissure veins and andesite. Veins dip 70°, and have an E.-W. strike. Ore reported to occur in shoots from 1'x20' to 8'x1,200', and said to assay 0.20 oz. gold; 6 oz. silver; 2.5% lead; 1% copper; 3.5% zinc.

Development: by tunnels, the two longest 12,000' and 7,500'; greatest depth of workings 1,700' below surface; total workings 165,000'.

Equipment: includes 2 air compressors, aerial tram and a 450-ton mill equipped with flotation plant.

Mine has been worked by lessees since 1911 and production figures are not available.

SUNNYSIDE GOLD MINES CO.

COLORADO

Property taken over by Sunnyside Mining & Milling Co., and operated by the U. S. S. R. & M. Exploration Co.

SUNNYSIDE MINING & MILLING CO.

COLORADO

Subsidiary of U. S. S. R. & M. Exploration Co.

Office: 514 First National Bank Bldg., Denver, Colo. Mine office: Eureka, San Juan Co., Colo.; W. L. Terry, supt.

Property: shows a deposit of complex silver-lead-copper-zinc ore, developed by 400' shaft and 200' tunnel.

Equipment: includes electric power, air compressor, a 150-ton concentrator with 40 stamps, tube mills, flotation unit and a Huff electrostatic zinc separating plant.

In June, 1917, company was erecting a 500-ton flotation plant, also enlarging mine and tramway equipment.

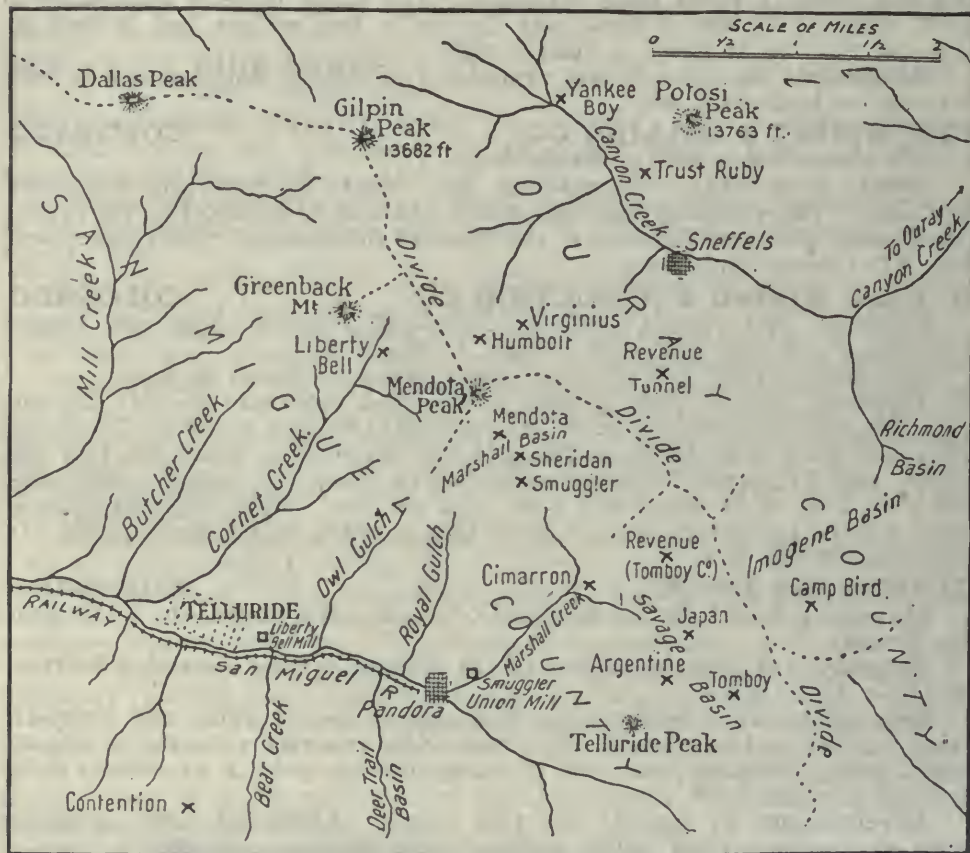

SAN MIGUEL COUNTY

BLACK BEAR MINING CO.**COLORADO**

Mine office: Telluride, Colo.

Inc. about 1894. Ike Navala, supt.

Property: 30 claims, includes Black Bear mine in Ingraham basin, Telluride, Colo., showing gold, silver, lead and zinc values in an 8' quartz vein; the ore is concentrated. Mill returns average about \$5.50 per ton, gold

SKETCH MAP OF TELLURIDE DISTRICT, COLORADO

bullion recovered running 30% of the total. Developed by shafts and equipped with electric plant and aerial tramway, connecting with the Smuggler Mill at Pandora.

Property was idle for many years; operations resumed the latter part of December, 1914.

Shipments: averaged 170 tons daily in 1916. Mining and milling costs total \$2.50 per ton, leaving a monthly profit of several thousand dollars if present production is maintained.

CAMP BIRD, LTD.**COLORADO**

Offices: No. 1 London Wall Bldgs., London, E. C., and Telluride, Colo. F. W. Baker, chairman; L. Clerc, F. A. Govett, F. H. Hamilton, G. de Pass and O. De Rivaud, directors. J. A. Agnew and L. Chevrillon, technical committee. A. A. Kelsey, sec.; Wm. J. Cox, gen. mgr.; J. B. Glasser, asst. mgr.; Jos. H. Scott, mine supt.; Thos. H. Woods, mill supt.

Registered Sept. 8, 1900, in England.

Cap., £1,100,000, increased to £1,350,000 in Dec., 1909, and in July, 1911,

to £2,100,000, consisting of 750,000 7% cumulative participating preference shares of £1 each, 649,625 issued, and 1,250,000 ordinary shares of £1 each; 1,100,051 issued. Total dividends to end of 1915: \$9,750,836, averaging almost 20% yearly on outstanding stock.

Accounts for fiscal year ending June 30, 1916, showed a profit of £138,684, making with balance forward a sum of £145,274, of which dividends, on 7% pfd. shares only, absorbed £45,473, directors' remuneration, £467 and income tax, £14,304. Balance carried forward was £85,028, to be used for development work. An income of £46,484 was derived from Santa Gertrudis shares. Balance sheet June 30, 1916, showed assets of £1,883,397.

Company's holdings in Santa Gertrudis, Ltd., Mexico, are 1,126,901 shares, or 75.13% of the issued capital, and in The Messina (Transvaal) Dev. Co. Ltd., 29,944 shares out of a total of 727,154. Of the latter company the Santa Gertrudis Ltd. holds 33,500 shares. Ore reserves of the Messina Dev. Co., at Messina, Zoutpansberg, Transvaal, estimated June 30, 1916, as 151,409 tons, 5.2% copper, of practically proved ore, and 56,652 tons, 3.4% copper, of prospective ore. Company owns 3,950 shares in the Nechi Mines (Columbia) Ltd., and 5,000 shares in the Anglo Colonial Estates, Ltd.

The company was formed in 1900 by F. W. Baker and John Hays Hammond to acquire from Thos. F. Walsh the Camp Bird gold mine, near Telluride, Colo. Purchase price was \$5,000,000. This property returned handsome profits for 10 years, when the lower levels showed signs of impoverishment. Other properties were then sought with the idea of making the company a mines-investment organization. The Santa Gertrudis silver mine was floated in this way and holdings acquired in the Messina.

The Camp Bird mine is located at an altitude of 11,000' and 8 miles from the railroad, which necessitates hauling supplies and concentrates over a mountain road, making operating costs comparatively high. The Camp Bird orebodies occur in a fissure vein in andesite. The ore has for its base hematite and is associated with iron, zinc and lead sulphides; it occurs in streaks, being less persistent and narrower with depth, and less regular in its relation to the walls. Stopping width is 5' to 8'.

Ore reserves: no quantity of new ore was developed, and as that available for milling was exhausted all work in mine has ceased pending completion of adit.

Content and value of ore per ton recovered in 1914-1915 is as follows:

Year—	Gold	Silver	Lead	Copper	Value
1914.....	1.13 oz.	4.27 oz.	1.32%	0.26%	\$26.19
1915.....	1.33 oz.	3.78 oz.	1.05%	0.17%	29.47

Past production from April 30, 1903, to June 30, 1916, is given as 820,730 tons treated, yielding £4,778,591, at an expenditure of £1,798,227, leaving a profit of £2,980,363.

Development: shafts and tunnels. Work done in year ending June 30, 1916, amounted to 3,936'. The No. 3 shaft, the main working shaft, is 1,003' deep and opens up the 9th level at the 1,000' point.

Equipment: includes a 60-stamp mill, of which 25 stamps only are used at present, and a cyanide plant. An aerial tramway connects the mine and mill.

During the year ending June 30, 1916, the mill treated 25,601 tons of ore, compared with 32,313 tons the previous year, yielding \$723,421 in gold, \$48,441 in silver and \$19,887 in lead and copper, a total of \$791,749 or \$30.92 a ton.

Plans systematic exploration in depth by means of a low-level adit. This adit will be 10,700' long and will cut the lode 450' deeper than any existing workings and 800' below the main ore-bearing ground. Up to Dec. 15, 1917, 8,000' had been driven and narrow veins cut. Selected samples of these veins assayed 80c to \$2.40 gold, 3 to 10 oz. silver, and 18% to 50% lead. In this part of Colorado the sedimentary series is overlain by a great thickness—10,000' maximum—of lava flows and breccias.

It has been proven by experience that the richer veins in breccia covering do not continue into the sedimentaries, but become impoverished before reaching that horizon. As the adit will be from 1,000' to 2,000' above the sedimentaries, it seems as though there is sufficient margin of safety between it and the limit of possible productivity.

It was thought several years ago that the mine was on the verge of paying its last dividend, but each year has seen it well up on the list of dividend payers, and if present plans of the management are productive of the results they deserve the mine will continue to be a profitable producer for a long time to come.

COLORADO SUPERIOR MINING CO.

COLORADO

Office: Telluride, Colo.

Officers: J. H. Jasberg, pres.; Bulkeley Wells, v. p.; John E. Porthan, sec.-treas., Ely, Minn.; Isaac Nevala, gen. mgr., with O. J. Larson, directors.

Cap., \$1,000,000; shares \$1 par; 561,635 outstanding. Bonds authorized, \$250,000 (8%); issued, \$156,100.

Statement as of Sept. 30, 1916, shows total receipts \$259,324, of which \$257,477 was from ore sales; total disbursements, \$191,664, leaving a net operating profit of \$67,659. Current quick assets, \$18,361, with current liabilities of \$15,621. Current assets in excess of current liabilities were \$8,932.

Property: 322 acres, patented or applied for, near Telluride, in San Miguel Co., at an altitude of 12,500'.

Ore: sulphides of lead and zinc containing gold and silver in a vein averaging 10' in width and supposed to be a continuation of the Argentine vein in the neighboring Tomboy mine. Company owns the Black Bear Mining Co.

Development: to depth of 1,100' by shaft, 500' from N. W. end of property, and crosscuts, totals 5,100' of underground workings. During early part of 1916 new work totaled 1,256' of drifting.

Ore is treated at the Smuggler Union Mng. Co.'s mill, where 20 stamps have been used on Colo. Sup. ore. Ore milled during 1916 amounted to 48,450 dry tons, with average assays per ton of 0.226 oz. gold, 2.49 oz. silver, 3.23% lead and 5.77% zinc.

Ore reserves are estimated at 100,000 tons, averaging better than \$5 per ton, with 75,000 reported blocked out, July, 31, 1917.

Equipment: includes electric hoist, 2 compressors and a 250-ton flotation unit.

Production: for 1916, 7,055 oz. gold, 68,306 oz. silver, 2,354,459 lbs. lead, 2,233,536 lbs. zinc and 15,509 lbs. copper.

Lead concentrates average 1.81 oz. gold, 18.47 oz. silver, 48.88% lead, 4.90% zinc, 1% copper; zinc concentrates: 0.27 oz. gold, 6.95 oz. silver, 6% lead, 23.96% zinc.

Recovery ran from 40% for zinc to 75% for lead. About 6,548 tons of concentrates were produced. Concentration ratio was 7.4 to 1.

HIGHLAND MARY MINES CO.

COLORADO

Address: Ophir, Colo. Wm. Parsons, mgr.; J. D. McAlpine, engr.

Mine said to show several bodies of silver ore of milling grade. Plans to install flotation, 1917.

JAPAN-FLORA MINES & TUNNEL CO.

COLORADO

Idle. **Office:** 702 Colorado Bldg., Denver, Colo. Mine near Telluride, San Miguel Co., Colo.

Officers: J. J. Fisher, pres.; Chas. H. Johnson, v. p.; Wm. E. Humphreys, sec.; J. P. H. Cunningham, treas.; preceding, with Geo. W. Johnson, directors.

Inc. Aug. 22, 1903, in Colorado. **Cap.**, \$2,000,000; shares, \$1 par; non-assessable; fully issued.

Bonds: \$300,000 authorized, at 6%; issued, \$248,900. Annual meeting in October.

Property: 43 patented claims, 311 acres, and a 5-acre mill site at

Pandora, in the Upper San Miguel district, 4 miles from railway. Property shows 5 fissure veins, in brecciated andesite and porphyry, 3 being exclusively developed and said to show a width of 1' to 8', carrying complex sulphide ores with gold and silver, associated with pyrite, in a quartz gangue. Ore averages 0.23 oz. silver, 23% copper, 7.7% lead, and 3.2% zinc.

Development: by tunnels from 500' to 2,000' long with total workings of 20,000'. Lowest point is 900' below the surface. New work proposed is 1,000' of driving on the Flora vein.

Ore reserves: are estimated at 86,000 tons of \$14 ore.

Equipment: includes 50-ton concentrating plant, but a new mill is proposed.

Property has produced considerable ore in the past, the last shipment in 1910 averaging \$47.85 per ton. Inactive since 1910.

LAKE SUPERIOR OPHIR MINING CO.

COLORADO

Ophir, Colo. Inc. Sept., 1911, in Arizona. **Cap.**, \$1,000,000; shares \$2 par. Is reorganization of the Calumet-Telluride Mng. Co.

Property: in Chapman gulch above Ophir, San Miguel Co., Colo., said to carry free gold ore.

Equipment: includes aerial tram, electric power and 20-stamp mill, handling about 100 tons of \$15 ore daily at last accounts. Probably idle.

LEWIS MINE CO.

COLORADO

Telluride, San Miguel Co., Colo., Bulkeley Wells, mgr. Property has fissure veins with shoots of complex lead-zinc-copper ore, which was treated in 50-ton concentrating mill. Developed by 500' shaft and equipped with steam plant. Idle.

LIBERTY BELL GOLD MINING CO.

COLORADO

Office: 131 State St., Boston, Mass. Mine office: Telluride, San Miguel Co., Colo.

Officers: Arthur Winslow, pres.; J. J. Cairnes, v. p.; Henry L. Rand, sec.-treas., with Hermann Kuhn, Geo. R. Fearing, Jr., directors. Charles A. Chase, mgr.; H. G. McClain, supt.

Inc. in Missouri. **Cap.**, \$700,000; shares \$5 par; \$667,755 outstanding.

Dividends: in 1915 amounted to 16%; in 1916, 28%.

Property: the Liberty Bell mine at Telluride, shows gold and silver-bearing quartz in a fissure vein averaging 3' to 4' in width. The main orebody runs N. W.-S. E. and dips 57° W. For geology of the district, see U. S. G. S. Geologic Folio No. 57; also Tomboy Gold Mines Co., Ltd. Shipments in 1916, averaged 2 oz. silver and .204 oz. gold.

Development: by 2,600' tunnel and 1,000' raise from tunnel level to abandoned upper workings. Ore is mined by open stopes on stulls or by shrinkage stoping.

Equipment: includes hoist of 50 tons hourly capacity, electric power, 1 Leyner duplex compressor, 1 Norwalk compressor, 1.5 miles tram and a 500-ton concentrator and cyanide mill. Extraction averaged 88%, and total cost per ton amounted to \$4.07 in 1916.

Production:

	Tons Ore Treated	Oz. Silver Produced	Oz. Gold Produced
1916.....	165,300	256,711	30,580
1915.....	173,700	314,432	24,054
1914.....	173,840	315,919	33,150
1913.....	179,216	288,602	36,693
1912.....	175,340	313,845	48,993

MOUNTAIN FLOWER GOLD MINING & PROS. CO.

COLORADO

Office: 502 Corby-Forsee Bldg., St. Joseph, Mo. Mine office: Telluride, Colo.

Officers: H. C. Carter, pres.; J. R. Jennings, v. p.; T. G. Sorter, sec.-treas.

Inc. 1907, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable.

Property: 17 unpatented claims, 340 acres, at Deep Creek, Telluride district, San Miguel Co., Colo., said to show a quartz vein in diorite and porphyry. Ore is 4' wide and contains gold, silver, zinc, and lead values.

Development: by tunnel, 932' long, early in Aug., 1917, which was expected to cut Delta vein at depth of 1,000'.

Judging by prospectus and other literature of this company, it expects to develop an enormous body of ore. Some of the figures are contradictory, and the reasons for buying shares are flippant. A photo shows vein-matter 30' wide, of which 4,500' in length is owned by company, which the writer of the prospectus argues could not be worked out in 100 years.

Same management as Octotillo Copper Co., which see.

NEW ENGLAND EXPLORATION CO. (THE) COLORADO

Office: 14 Ashburton Place, Boston, Mass. Controls the Smuggler Union Mining Co., Colo., which see.

Officers: T. L. Livermore, pres.; Bulkeley Wells, v. p.; with R. L. Agassiz, H. L. Higginson, Q. A. Shaw, directors. T. E. Sherwin, treas.

Inc. 1898, in Maine. **Cap.**, \$2,000,000; shares \$100 par; outstanding, \$1,875,700. Annual meeting 1st Wednesday in June, at Portland, Me. Stock transferred at company's office.

OPHIR GOLD MINES, MILLING & POWER CO. COLORADO

Succeeded Oct., 1915, by Ophir Range Gold Mining Co., which see.

OPHIR GOLD MINES & RED'N CO. COLORADO

J. H. Sankey, J. M. Belisle, F. W. Ruble and Gord Galloway, of Ophir, Colo., incorporators.

Inc. Aug., 1916, in Colorado. **Cap.**, \$250,000; shares 10c par. One million shares paid for property.

Property: the New Dominion mine at Ophir, San Miguel Co., Colo.; said to show ore in upper workings carrying gold and silver with lead-zinc values at depth.

Development: by 985' tunnel and 1,100' crosscut tunnel. Over \$30,000 has been spent in development work. Management plans to install a flotation plant, 1917.

OPHIR RANGE GOLD MINING CO. COLORADO

Letter returned, 1917, and mine probably closed down.

Ophir, San Miguel Co., Colo. Company acquired the holdings of the Ophir Gold Mines, Milling & Power Co., Oct., 1915. W. P. Day, pres., Peoria, Ill.; A. W. Wilson, sec.; W. H. Staver, mgr.

Inc. July, 1915, in Colorado.

Operates a lease on the Suffolk mine, 300 claims, partly patented, at Ophir.

Ore: gold-silver, in fissure veins, traversing andesite and noted for its pockets of free gold ore.

Development: by several tunnels from 500' to 2,000' long, with a total of 20,000' of underground workings.

Equipment: includes 300 cu. ft. air compressor, 5,270' tramway and 100-ton concentrating mill with 2 Wilfley tables.

Production: in 1915 amounted to 2,000 tons of ore. Concentrates averaged \$15 per ton in gold and silver.

SMUGGLER UNION MINING CO. (THE) COLORADO

Telluride, Colo.

Officers: Bulkeley Wells, pres. and gen. mgr., Telluride; H. L. Higginson, v. p., with R. L. Agassiz, T. L. Livermore, N. H. Stone, Q. A. Shaw and J. M. Crafts, directors. T. E. Sherwin, sec.-treas. Chas. N. Bell, gen. supt.; Carl Aikele, mine supt.; F. B. Thomas, power supt.; O. M. Sackett, tram. supt.; W. L. Reid, mills supt.; J. L. McMenamin, store supt.; A. D. Snodgrass, cashier.

Inc. 1891, in Colorado. **Cap.**, \$5,000,000; all outstanding; shares \$100 par. Bonds authorized \$250,000; outstanding \$67,500. Annual meeting in June. 14 Ashburton Place, Boston, transfer office. Financial reports not made

public. No dividend reported since 1901. Company is controlled by The New England Exploration Co.

Property: 77 patented claims, 996 acres, in San Miguel and Ouray counties. Ore carries gold, silver, lead and iron, occurring in a true fissure quartz vein cutting andesite, tuff and rhyolite for a vertical distance of 2,000'. Vein strikes N. W.-S. E., dips 70°; average width 2½'. For geology of the Telluride district, see U. S. G. S. Geological Folio No. 57; also see Tomboy Gold Mines Co., Ltd., in this volume.

Development: by tunnels, with a 280' winze from lowest tunnel, 3,700' long; main haulage level, 3,600' long; greatest depth of workings, 2,300'. Total workings aggregate 30 miles.

Equipment: includes a 50-h. p. electric hoist, 2 compressors, pumps, hydro-electric power, one 60-stamp and one 80-stamp mill, 600-ton cyanide plant, and flotation unit.

Production: 118,668 tons ore in 1912; 137,567 in 1913; 126,505 in 1914; 107,119 in 1915; 53,009 in 1916. Grade of ore and recovery not made public.

TOMBOY GOLD MINES CO., LTD.

COLORADO

Under management of Exploration Co., Ltd., of London.

Office: T. D. Pillans, sec., 24 Lombard St., London, E. C. **Mine office:** D. A. Herron, gen. mgr., Telluride, Colo.

Officers: Lord A. Butler (chairman), Marquis D'Hautpoul and J. H. M. Shaw, directors. P. L. Foster, cons. engr.; W. K. Betty, metallurgical advisor.

Inc. June 7, 1899, in England. **Cap.**, 350,000 shares; £1 par; issued 310,000 shares.

Total revenue for year ending June 30, 1916, \$1,120,320; profit, \$369,200; with balance of \$99,760 there was available \$468,960, of which \$149,000 was paid in dividends. After allowing for depreciation, income tax, etc., the balance was \$94,560.

Dividends: since 1899 total 53s 6d (\$12.84) per share, or 262%.

Property: included, July, 1915, 76 claims; others have since been added. Original holdings were the claims acquired from the old Tomboy Gold Mines Co. of W. Va., also claims carrying a parallel vein, known as the Argentine. Later the company bought the claims containing the Montana vein and its northern extension from the Nevada Tunnel Co. The Sidney-White Cloud property was acquired in 1916, for \$75,000.

A cyanide mill and concentrating plant have been built and paid for out of profits, as well as additions and improvements to the plant of the Tomboy Tramway and Tunnel Co.

Geology: the veins in the Telluride district are filled fissures, 2½' to 4' in width, larger lodes sometimes appearing as a number of parallel plates of filled veins separated by sheets of altered rock. Country rock is andesite, rhyolite and San Juan tuff, with underlying sedimentaries in which the existence of the veins has not been proven. Principal metallic minerals are gold, pyrite, galena, zinc blende, and chalcopyrite. Ores contain 2 to 3% sulphides, and yield about \$6 in gold and a few ounces of silver per ton. For geology of the district see U. S. G. S. Geologic Folio No. 57, also Lindgren's "Mineral Deposits."

Development: the Tomboy and Montana properties to 2,400' depth, and on the Argentine to 2,200'. In the Argentine lower levels is a large quantity of complex sulphide ore containing zinc, lead and copper, which will be profitable if a process is available. Work in 1916 in the Montana covered 5,159', and this mine is now opened longitudinally by the Ophir or 1,750' level, also 300' beyond the boundary.

Ore reserves: June 30, 1916, Argentine, 175,000 tons; Montana, 400,000 tons.

Equipment: 80-stamp mill, concentrating plant and cyanide mill, all arranged practically under one roof, have a daily capacity of 400 to 450 tons.

Milling for the year ending June 30, 1916, gave an average of \$7.14 per ton, 42% being recovered as bullion and the rest as concentrates.

Flotation is being tried at the mill.

Production: for year ending June 30, 1916, amounted to 150,488 dry tons of ore, which yielded in bullion and concentrate \$1,074,088

Costs were \$4.92 per ton, against \$4.49 in the previous year.

WELLER GOLD MINING CO.

COLORADO

J. C. Weller, mgr., Telluride, Colo. Operates the Ballard mine near Telluride, San Miguel Co., Colo. Employed 15 men and was shipping bullion twice a month, in 1915.

Equipment: includes pipe-line, tramway, 10-stamp mill fitted with plates and concentrating tables.

SUMMIT COUNTY

ALTEZUMA GOLD M. & M. CO.

COLORADO

Chas. F. Kennedy, v. p. and mgr., at last accounts.

Inc. in Arizona. **Cap.**, \$5,000,000, shares \$1 par; 2,399,190 shares in treasury.

Property: 4 claims, 2½ miles from Montezuma.

Ore: lead-silver, picked ore said to assay \$100 per ton.

Development: 4 tunnels, longest 190', known as the Franco tunnel, Plans in 1915 included the refinancing of company and driving the Franco tunnel an additional 200', but have not been carried out.

BESSIE-CORA MINING CO.

COLORADO

Ralph Roseberry, supt. Owns a group of claims, including Silver-Wave, at Montezuma, Summit Co., Colo.

Ore: silver-lead, in paystreak, 2½' wide and proven for about 100' in Silver-Wave ground.

Development: tunnel, winze and drifts.

Equipment: aerial tramway, air-compressor and electric power. Employs about 15 men.

CUMBRE MINING CO.

COLORADO

Address: 1669 Broadway, Denver, and Breckenridge, Summit Co., Colo.

Officers: C. L. Colburn, pres.; F. W. Freeman, v. p.; P. E. Fields, sec.-treas.; with Carl A. Allen and Mrs. B. Maxwell, directors.

Inc. in Colorado. **Cap.**, \$200,000; shares \$1 par; 100,000 outstanding. Annual meeting in September.

Has lease and bond on the Carpenter and 86 placers, consisting of 90 acres, near Breckenridge. Ground is being actively worked by sub-lessees. New exploration contemplated by company.

DUNKIN MINING CO.

COLORADO

Breckenridge, Summit Co., Colo. Owns the Dunkin mine, worked under long-time lease by O. K. Gaymon, Theo. H. Knorr and W. W. Wharton of Breckenridge, and J. A. Summer of Salt Lake City.

Property: on Nigger hill, 1½ miles from Breckenridge, shows lead-sulphide ore carrying good gold values. Several rich pockets of ore were reported found in 1914-15 and to have netted the lessees \$15,000, \$30,000 and \$35,000. The Wolfstone vein, under development, is said to carry lead-carbonate ore, valued at \$40-\$50 per ton, at a depth of 500'.

Development: to depth of 600' by shaft, tunnel and crosscuts. Producing 1 carload monthly at last accounts.

ELK MOUNTAIN MINING & MILLING CO.

COLORADO

Owns the Wilfley mine and mill in the Kokomo-Robinson district, north of Leadville, Summit Co., Colo.

Ore occurs as replacements in limestone and carries silver, gold, lead and zinc values.

KING SOLOMON TUNNEL & DEVELOPMENT CO.

COLORADO

Office: 810 Majestic Bldg., Denver, Colo. **Mine office:** Frisco, Summit Co., Colo.

Officers: F. C. Dinsmore, pres. and gen. mgr.; S. H. Alexander, v. p.; C. W. Rowe, sec.-treas.; preceding, with W. W. Theobald, H. J. Theobald, R. L. Cosmu, C. D. Johnson, E. S. Blau, directors. H. S. Sanderson, managing engr.

Inc. Jan., 1903, in South Dakota. **Cap.**, \$2,500,000; shares \$1 par; non-assessable.

Property: 64 quartz claims and 250 acres placer claims, in the Ten-Mile district, shows fissure veins in granite, carrying auriferous and argentiferous copper and lead ores.

Development: by a 5,200' tunnel with 5,000' drifting. Company is working the "Eleven" vein, 3,700' from portal of the tunnel, said to show gold-silver and lead values. Steady shipments are being made from this vein, and additional development is planned.

Equipment: includes a 160-h. p. steam and 115-h. p. electric plant, with an 8-drill compressor. Management plans erecting mill. Colorado & Southern R. R. runs by the property.

MARIE MINING CO.

COLORADO

Idle and probably dead. Breckenridge, Colo. Is a reorganization of the O'Reilly Gold Mining Co.

Inc. 1915, in Arizona. **Cap.**, \$1,500,000. Owned by Haverhill, Mass., capitalists.

Property: 51 acres on North Star Mtn., 10 miles S. of Breckenridge, Colo., said to show Witch Hazel and other veins of gold ore.

Development: by 763' adit, expected to cut vein at 1,100', at depth of 1,000' below apex.

MICHIGAN MINING & MILLING CO.

COLORADO

Office: 901 Majestic Bldg., Denver, and Kokomo, Summit Co., Colo.

Officers: Edward Moir, pres.; S. H. Dunlop, v. p. and mgr.; W. R. Benzie, sec.-treas.

Inc. in Colorado.

Property: Michigan group of 8 claims and Snowbank group of 3 claims in the Consolidated Ten-Mile district, Summit Co., Colo.

Property is an old one, extensively developed, and has produced considerable quantities of gold-silver ore, but was forced to close down several years ago due to the heavy zinc penalty on the ore. Since that time it is said bodies of zinc and lead ore have been opened and shipments started early in 1916.

Production: since Sept., 1916, shipments total 6,696 tons. Iron sulphides go to the Globe smelter at Denver; lead sulphides to the Arkansas Valley smelter at Leadville. Present output is 50 tons daily, to be increased to 100 tons.

O'REILLY GOLD MINING CO.

COLORADO

Reported in 1915 that company was to be reorganized as the Marie Mining Co., and development continued. Owns the Bay State mine, near Breckenridge, Summit Co., Colo. Developed by a 300' tunnel, showing auriferous and argentiferous copper ore.

PHILADELPHIA MINES CO.

COLORADO

Mine office: Montezuma, Colo.

Officers: E. F. Pooley, pres.; F. P. Rosengarten, v. p.; W. F. Wagner, sec., 16th and Indiana Sts., Philadelphia, Pa.; W. B. Le Wald, treas.-mgr.; with T. W. Bunnell, directors; F. E. French, supt.

Inc. May, 1913, in Colorado. **Cap.**, \$1,250,000; shares \$1 par; \$755,760 outstanding. Reported gross earnings for 1915, \$8,000, and operating expenses, \$16,000.

Property: 75 claims, 16 patented, about 365 acres, in Montezuma mining district, Summit Co., Colo., carries a sulphide ore in fissure veins traversing Montezuma granite and porphyry, said to give average assays of 1.07 oz. gold; 8.7 oz. silver; 15.05% lead; 26.6% zinc; 40% copper. The main ore-body is reported to be from 8" to 8' wide and 900' long, running N.-W., with dip of 45°.

Development: by 6 tunnels, the 405' Jumbo, 150' Monitor, 450' Tip Top, 1,490' Philadelphia, 3,400' Colorado-Toledo and 112' Cross Lode, with total workings of 7,500'.

Equipment: includes Blaisdell compressor, electric power and 100-ton wet concentrating mill. About 1,000 tons of ore were treated in 1915 and

shipments of concentrates, started in November, totaled 350 tons, averaging \$35 per ton. Plans adding ball mill and flotation unit to treat the slime.

PUZZLE LEASING CO.

COLORADO

Addresses: Bulkeley Wells, Telluride, or William Keogh, supt., Breckenridge, Colo.

Property: the Puzzle mine in the Breckenridge district, Summit Co., Colo.

Development: by 500' shaft and several thousand feet of drifting. In June, 1917, high-grade lead ore was shipped to smelter, and the mill was being overhauled. Examined by Forbes Rickard.

RILLA MINING CO.

COLORADO

Address: Samuel Klous, gen. mgr., 50 Congress St., Boston, and Breckenridge, Colo.

Officers: Wm. A. Irving, pres.; Edson W. Noyes, v. p.; Frank S. Sinnick, sec.-treas.; above with Samuel Klous and Geo. S. Sinnick, directors.

Inc. Feb. 18, 1915, in Colorado. **Cap.**, 1,000,000 shares, \$1 par; 500,000 in trust, 177,000 shares listed on Boston Curb, Jan., 1916. Annual meeting, 3rd Wednesday in January. Company is practically a reorganization of the O'Reilly Gold Mining Co., capital being reduced from \$2,500,000.

Property: the Bay State group, 13 claims, 65 acres, on the north slope of North Star Mt., 8 miles from Breckenridge, Colo., is said to show copper, silver and gold ore in fissure veins in diorite and porphyry. The Witch Hazel vein is 8' wide. Porphyry dike cut 1916 is said to carry \$4 values for 18' in width and 1,000' in length.

Development: tunnels, 1,300', 200', 100' and 60' in length. In the 1,300' tunnel a 200' crosscut is said to have cut a 6' vein of copper ore. Management claims that \$125,000 has been spent on development work. No ore reserves given.

Equipment: 330 cu. ft. air compressor, electric power. Future plans provide for 100-ton mill and 2 additional compressors.

Is one of a new crop of Curb promotions of Boston. It is a tunnel proposition and is favorably regarded as a speculative venture.

ST. JOHN MINES (COLORADO), LTD.

COLORADO

Edwin H. Platt, mgr., Equitable Bldg., Denver, Colo. M. F. Bremer, Broad St. House, E. C., London, Eng., sec.; Geo. A. Williamson, chairman; with Herbert Weld-Blundell, E. J. Nicholas, Chas. P. Winterton, M. M. Dewar and Count Lewenhaupt-Falkenstein, directors.

Inc. Feb. 13, 1913. **Cap.**, £75,000; shares 5s. par; all issued and fully paid.

Accounts for 2 years ended June 30, 1916, showed expenditure on St. John mine, £78,576, and on Revenue property, £5,354.

Property: company was organized to acquire from E. L. A. Munby and E. J. Munby, the St. John silver-lead-zinc mines, 19 claims, 100 acres, together with concentrator, located on the west side of Glacier Mt., 1½ miles south of Montezuma, Summit Co. Purchase price was £58,250, payable £3,000 cash and £30,000 in fully-paid shares for the property and £20,000 cash and £5,250 in fully-paid shares to the promoters, the Tres Forcas Synd., Ltd.

In addition the company owns 50 acres timber land within a mile of the mining property. The bulk of St. John ore is milling grade; small shipments of high-grade ore, £4 to £7 per ton, coming from development work, were being made in February. Ore on dump, in stope fillings, and in the mine estimated at over 100,000 tons.

Company also holds an option on the Revenue Tunnel group of mines, 600 acres, in the Ouray district; this property includes the Virginus mine, which is reported as having 400,000 tons of stope filling and 50,000 tons probable ore below the tunnel level. The purchase price of this property is \$187,000, of which the final payment of \$42,223 was due July 1, 1917. To provide for further payments a loan of £25,000 was decided upon of which £21,000 was subscribed to. The loan carries 7% interest. The undeveloped portion of this property was sold in Nov., 1915, for \$75,000.

In Sept., 1915, a 1/3 interest was acquired in the Hilltop mine at Leadville, said to be producing high-grade zinc carbonate ore, £8 to £9 per ton, until forced to close temporarily owing to the weather; the mine is at an altitude of 13,000'.

The company holds a 2/5 interest in the Ruby mine at Leadville. Production started in Dec., 1916, and in Feb. was returning a profit of £40 per day. A lease is also held on the Shamrock, Mt. Sneffels and Lake claims.

At last accounts mill was being remodeled to include flotation.

TONOPAH PLACERS CO.

COLORADO

Controlled by the Tonopah Mining Co., Tonopah, Nev.

Office: Bullitt Bldg., Philadelphia, Pa. Operating office: Breckenridge, Colo.

Cap., \$1,000,000; shares \$1 par. Notes outstanding, \$112,000.

Balance sheet at Dec. 31, 1916, showed assets totaling \$1,433,538, of which \$1,018,482 was for property and \$268,634 for dredges. Current assets were \$146,419, and liabilities \$82,255.

Revenue in 1916 was \$406,368, and expenditures \$257,139. Gross profit was \$151,591, less \$78,062, on account Farncomb company's agreement, leaving \$73,529, less depreciation on property and plant, \$108,218, making a loss of \$34,689. Surplus was \$239,279.

Property: placer deposit near Breckenridge, Colo., on which 3 dredges operate about 9 months each year.

Production: in 1916 was 19,559 oz. gold and 4,748 oz. silver from 3,199,-962 cu. yds. of gravel. The average gold content was 12.7c. per yd. and cost 7.2c.

TUCKER MOUNTAIN M. & M. CO.

COLORADO

Office: 901 Foster Bldg., Denver, Colo. Mine office: Kokomo, Colo.

Officers: G. P. Lingenfelter, pres.; S. H. Dunlop, v. p. and mgr.; W. R. Benzie, sec.-treas.; with G. N. Quigley and F. A. Clarkson, directors.

Inc. Nov. 9, 1916, in Colorado. Cap., \$150,000; shares 10c par; non-assessable; 500,000 issued.

Property: the Washington and Hancock mines at Kokomo, Summit Co., Colo., said to show a contact deposit in limestone, dipping 22° and striking N. W.-S. E. Ore is a sulphide of lead and zinc, with gold and silver, assaying \$15 to \$20 per ton.

Development: by 300' tunnel and 1,000' of workings. Shipments commenced June, 1917.

WASHINGTON MINE

COLORADO

P. M. Tyler, mgr., Breckenridge, Colo. An old-time property on Nigger Hill, near Breckenridge, Summit Co., operated under lease by Tyler & Myers after many years idleness. Ore treated in 20-stamp mill, and silver, lead and gold concentrates shipped. Some rich ore was reported as opened in April, 1917. Examined by V. C. Alderson.

WELLINGTON MINES CO. OF COLORADO

COLORADO

Office: 1000 Grand Avenue Temple, Kansas City, Mo. Mine office: Breckenridge, Colo.

Officers: J. W. Oldham, pres.; J. H. Harkless, v. p.; C. Charpiot, sec. and treas.; the foregoing and F. J. Dean, C. Histed, W. B. Burget, directors. R. M. Henderson, gen. mgr.

Inc. June 12, 1906, in Ariz. Cap., 10,000,000 shares; \$1 par; non-assessable; all outstanding. Company office in Kansas City, transfer office. C. Charpiot, registrar. Annual meeting, 1st Monday in June. The company organized in Arizona was only a holding company, property being operated by the Wellington Mines Co. of Colorado, which had a capital of \$50,000. To reduce taxation the former was dissolved and the present company reorganized Jan. 16, 1917, with a capital of \$1,000,000; shares \$1 par. Company has over 5,000 shareholders.

Receipts in 1916 totaled \$950,612, of which concentrates yielded \$947,-764. Expenditures amounted to \$350,612. Cash and bills receivable were \$227,799 at the end of 1916.

Dividends were \$300,000 in 1915 and \$600,000 in 1916. In 1917, to October, the amount was \$400,000.

Property: 15 patented claims, 75 acres at Breckenridge, is said to show lead and zinc sulphide ore in a fissure vein in diorite; dip 60° S.; strike N. 50° E. Pay ore occurs in shoots and is said to give average assays of 3% lead, 18% zinc, 23% iron, 15% silver.

In Sept., 1917, the Dives-Pelican claims at Silver Plume were acquired.

Development: by one vertical and incline shaft and several tunnels, longest 1,800'. Greatest depth of workings, 1,000'; total linear extent several miles. Orebody is mined by stulling method. In 1916, 3,367' of work was done. Ore extraction was confined to the Great Northern vein, and the shoot in the upper workings has been opened for 750' on No. 5 level. One-third is not commercial ore; the remainder carries 25 to 50% zinc. Reserves were estimated at 40,000 tons of 23% zinc ore. Mining costs, \$3.13 per ton.

Equipment: includes double-drum electric hoist, 500' compressor, a number of pumps, 1,800' tramway, all electrically driven. There are two mills, a concentrator, and a plant for roasting and magnetic separation. Capacity, 2,000 tons monthly. Lead concentrates shipped in 1916 averaged 29.5%; zinc concentrates, 48.2%.

Production: in 1916, the concentrator treated 39,230 tons of 0.5% lead and 24.3% zinc ore, yielding 8,603 tons of 42.4% zinc and 130 tons of 29.5% lead concentrates. The magnetic mill treated 22,275 tons of middlings, assaying 24.2% zinc and 1.5% lead. This yielded 9,453 tons of 48.2% zinc concentrates and 95 tons of 70% lead concentrates. Other products consisted of 2,175 tons of 45% zinc ore and 3,500 tons of magnetic iron tailing. Mill work and construction cost \$2.228 per ton. Total costs were \$6.231 per ton of dry ore mined and milled.

Wellington Mines is now a highly profitable concern, handling a complex ore in a satisfactory manner.

CRIPPLE CREEK DISTRICT TELLER COUNTY

ACACIA GOLD MINING CO.

COLORADO

Mining Exchange Bldg., Colorado Springs, Colo. Mine office: Cripple Creek, Colo. K. Mackenzie, pres.; C. S. Gambrill, v. p.; K. Macdermid, sec.-treas.

Cap., \$1,500,000; shares 5 cts. par; outstanding, Jan. 1, 1916, 61,011 shares. Gross production to Jan., 1917, \$1,395,291. Net production, 1916, \$50,776. No liabilities. Annual meeting in Jan.

Dividends: to Jan., 1916, \$136,703. Payment of last dividend, Dec. 15, 1912, \$14,389.

Property: The Burns and Morning Star claims, patented, 20 acres, on Bull Hill, Cripple Creek. Developed by a 425' shaft with over 2,000' of underground work, on the Morning Star, and 3 shafts on the Burns claim, one being double compartment with depth of 1,350' and a mile of underground workings. A second shaft, 350' deep, has 3,390' of drifting, and a third, 825' deep, has 3,600' of drifting. Cost of development work is about \$694,000. The Burns claim is being worked at present, shipments being made from the 1,200' level. Ten men employed.

AJAX GOLD MINING CO.

COLORADO

Address: 416 E. 10th Ave., Denver, Colo. Mine address: Victor, Colo.

Reported Dec., 1916, to have sold its entire property, except the Colburn mill, to Ernest A. Colburn, for \$480,400.

Officers: E. A. Colburn, pres.; Wm. Lennox, v. p.; B. L. Gorich, sec.-treas.; E. A. Colburn, E. A. Colburn, Jr., Wm. Lennox and C. H. Dudley, directors; W. S. Black, supt.

Reorganized in 1914.

Cap., \$1,250,000; shares \$1 par; outstanding, \$1,000,000.

PROPERTY MAP OF CRIPPLE CREEK DISTRICT, COLORADO

Property: 11 claims, patented, 33 acres, on southeast slope of Battle Mt., Cripple Creek mining district, show quartz fissure veins in granite, phonolite and basalt. Veins dip 72° S. W. with strike of N. 32° W. Pay ore occurs as telluride. Company reported 1914 to have leased the property of the Aloha Gold Mining Co., adjoining on the south. Lessees found good grade gold ore on the different levels of the Ajax from the 400' to 1,200' levels, in veins from 2' to 4' wide, probably the extension of ore shoots previously worked. Average grade of ore shipped in 1915 was \$16 per ton.

Development: is by means of the Ajax shaft of 1,800' depth, with over 12 miles underground workings. There is a 300-ton cyanide-concentration mill on the property treating custom ores in addition to company ore.

Equipment: includes a steam hoist and 40-drill air compressor. Output to date said to total \$4,500,000. Property operated by lessors in 1916.

ALBERT BEACON GOLD MINING CO.

COLORADO

Office: Cripple Creek, Colo.

Officers: Frank Vetter, pres., treas. and gen. mgr.; F. W. Revoice, v. p.; John R. Dunn, sec., with Wm. Y. Seaman, D. W. Kilpatrick and A. M. McVicar, directors.

Inc. May, 1916, in Colorado. **Cap.**, \$250,000; shares 10 cts. par; 1,602,-825 shares in treasury, Jan. 20, 1917. Annual report for 9 months, ending Jan., 1917, shows: net receipts from ore shipments and stock sales, \$11,596; expenditures for the same period amounted to \$10,577.

Company has a 3-year bond and lease on the property of the Prince Albert Cons. Mining Co., with option to purchase for \$50,000; all royalties paid on ore shipments during life of lease to apply on the purchase price.

Property: the Prince Albert, Beacon and Eureka claims, 26.42 acres, patented, on Beacon Hill, Cripple Creek, Teller County, credited with a past production of \$1,000,000. Company's literature closely resembles that of a stock-jobbing scheme. Reported merged with Gold Camp Syndicate, May, 1917, and a new company organized, the Victory Gold Mining Co., which see.

ALOHA GOLD MINING CO.

COLORADO

Property: the Coriolanus mine on Battle Mountain, Cripple Creek, Colo.; under lease in 1914 to Ajax Gold Mining Co., whose property adjoins on the north.

Ore: gold occurs in footwall of intrusive dike, phonolitic in character. See Ajax G. Mining Co.

ANCHORIA LELAND M. & M. CO.

COLORADO

Address: Cripple Creek.

Inc. about 22 years ago. **Cap.**, \$600,000; shares \$1 par. Irving Howbert, principal stockholder; Chas. Howbert, mgr.

Property: Anchoria mine on Gold Hill, Cripple Creek, is one of the old-time producers and dividend payers. In 1914 the company had a debt of \$30,000, due to attempts made in recent years to open up new orebodies. The mine has been worked down to the barren zone, reaching from a depth of 500' to 1,000', the lowest development. Recent work has been done by leasers. No recent returns secured.

BANNER GOLD MNG. CO.

COLORADO

Address: 317 Exchange National Bank Bldg., Colorado Springs, Colo.

Officers: J. T. Hawkins, pres.; J. R. McKinnie, v. p.; E. C. Sharer, sec.-treas.; A. D. Aitken, asst. sec. and treas.

Cap., \$2,000,000; shares \$1 par. Treasurer's statement, Jan. 1, 1916, shows 11,000 shares in treas., and cash on hand \$185. At last accounts taxes paid to 1915; liabilities, \$490. Last stockholders' meeting June, 1903. Listed on Denver and Colorado Springs Exchanges.

Property: 7 claims, patented, 68 acres, on Beacon Hill, Cripple Creek, show 3' fissure vein, containing gold and silver, and the C. K. & N. vein, 3' wide where cut.

Development: 90', 110' and 400' shafts, with prospecting on 3 levels. Worked in 1915 by lessees through the 700' level on the Henry Adney

shaft on adjoining property, and produced \$1,800. Gross production to Jan. 1, 1916, \$8,149.

BIG THOMPSON MINE

COLORADO

Worked under lease by L. G. Carlton and I. T. Russell, Elkton, Colo. **Property:** the Big Thompson mine, an old-time producer, near Elkton, Teller Co., Colo. Ore occurs in vein 15' to 25' wide, reported to average \$14 per ton; mined by stoping. Shipping in 1915. No recent returns.

BLUE FLAG GOLD MINING CO.

COLORADO

Office: 703 Exchange Bldg., Denver, Colo.

Officers: J. F. Erisman, pres. and gen. mgr.; Jos. J. Gunnell, v. p.; Jos. S. Pigall, sec.-treas.; preceding officers, D. A. Schaffnit, J. M. Heaton, J. M. Burkhart and Geo. W. Duke, directors. Company is a close corporation.

Properties: Blue Flag Mine on Raven Hill, Cripple Creek, the Laurium group at Breckenridge; also holdings in the Harshaw mining district, Ariz., and at Ballarat, Calif. Ore is gold quartz. Blue Flag main shaft is 1,100' deep; management plans sinking to the 1,400' level. Equipped with 150-ton cyanide plant.

The Laurium group is developed by tunnels, one over 1,800' long.

Ore: gold-silver-lead-zinc. Property equipped with 100-ton mill.

Operations resumed in 1917.

BOB LEE CONSOLIDATED MINING CO.

COLORADO

H. H. Mitchell, sec.-treas., 65 Independence Bldg., Colorado Springs, Colo., writes, 1917: "Company lost its property through excessive taxation. Deed has been given and title quieted."

Eight years taxes, or about \$1,800, hardly seem excessive in our opinion. See Vol. XII for description of property.

BUCKEYE MINES & MILLING CO.

COLORADO

Office: Colorado Springs. **Mine:** Cripple Creek, Colo.

Officers: E. S. Johnson, W. J. Chinn, R. C. Argo, of Colorado Springs. Inc. in Colorado. **Cap.,** \$50,000.

Operating property of the Blue Bird Gold Mining & Milling Co. on Bull Hill, Cripple Creek, Colo. The Blue Bird shaft is down 1,875'. Lessees are working in bottom level which is deepest in the district.

CATHERINE GOLD MINING CO.

COLORADO

Chas. Walden, mgr., Victor, Colo.

Reported to have taken 5-year bond and lease, 1917, on the Last Dollar mine, adjoining the Modoc, in Cripple Creek district, Teller Co., Colo.

Installed electric hoist and 12-drill compressor, costing over \$15,000. Total equipment destroyed by fire, July, 1917.

CHRISTMAS GOLD MINING CO.

COLORADO

See Vindicator Consolidated Gold Mining Co.

C. K. & N. MINING CO.

COLORADO

Cripple Creek, Colo. G. A. Macdermid, gen. mgr.; H. Christiansen, supt.

Property: the C. K. & N. mine, 5.3 acres, on Beacon Hill, Cripple Creek, shows veins 3-4' wide. Ore occurs in shoots, and is said to average \$20 to \$30 gold per ton.

Development: by 860' shaft.

Production: amounts to about 550 tons of ore monthly. Mine worked by lessees in 1916, has been a steady producer for many years and is credited with a total output of \$1,350,000.

C. O. D. CONS. GOLD MINING & DEVELOPMENT CO. COLORADO

Idle. Cripple Creek, Colo.

Officers: Jas. E. Hanley, pres.; L. A. Van Tilborg, v. p.; Virgil Mann, sec.-treas. E. J. Evans, supt.

Inc. 1915. **Cap.,** \$200,000; shares 10 cts. par.

Organized to operate the C. O. D. mine in Poverty Gulch, Cripple Creek, Teller County, which was one of the old-time producers, credited with an output of \$1,000,000 in gold. The mine was closed down years ago as a result of drainage difficulties and was in litigation for a number of years.

The El Paso and Roosevelt drainage tunnels have since lowered the water level 1,000' or more below the lowest workings of the mine. A new discovery of shipping ore was made, August, 1917, on the line between this and the Gold King Mining Co. property (El Paso claim).

The main 3-compartment working shaft was bottomed at 800', with the 10th level the lowest. Present management is said to have found an ore-body on the 10th level which warrants sinking the shaft to 1,300' level. The first ore was shipped in Sept., 1915.

Equipment: includes a new 65-h. p. air compressor.

CONSOLIDATED MINES & REDUCTION CO.

COLORADO

Office: 433 Century Bldg., Denver. Colo. **Mine office:** 412 E. Bennett Ave., Cripple Creek, Colo.

Officers: P. A. Burns, pres.; R. A. Schwab, v. p.; John H. Gallup, sec.-treas.; J. B. Conger, gen. mgr.; with W. W. Oliver, directors.

Inc. March 10, 1916, in Colo. **Cap.**, \$1,200,000 common and \$300,000 preferred stock; shares \$1 par.

Property: the Mary A. and Ella W. claims on Tenderfoot Hill, in the Cripple Creek district; the Kittie Wells No. 2 mine, on Carbonate Hill; the Buckhorn mine, adjoining the Kittie Wells on the east, and the Tenderfoot Hill mine. In April, 1916, company secured a 5-year lease on the Dante Gold Mine Co., which sec. Company also has a millsite on Carbonate Hill. The Ella W. has been developed to a depth of only about 85'. Vein opened for 100' along the strike, said to be 20' wide and to assay \$20 to \$50 per ton.

The Tenderfoot Hill property is said to show ore in vein 1' to 22' wide, assaying \$3.20 to \$75 gold per ton.

Development: the 700' Tenderfoot tunnel with drifts and crosscuts.

Equipment: includes a 30-h. p. hoist and an 8-drill electric air compressor.

Production: claims to have shipped 20 cars ore in first 3 weeks of March, 1916. Plans building a 250-ton mill and cyanide plant, sinking a third shaft, extending the Tenderfoot tunnel an additional 700', and adding a 6-drill air compressor to the tunnel equipment. Company has sent out much expensive advertising and is evidently in the hands of the "promoter." No reports since July, 1916, are available.

COOPERATIVE MINING AND LEASING CO.

COLORADO

Officers: A. LaMontague, mgr., Cameron, Colo.; C. D. Taylor, sec., Colorado City, Colo.

Property: company operates a lease on school section 16, adjoining the Isabella mine.

Development: 1,500' of drifting was done in 1916, on upper levels. Shaft is 875' deep with levels at every 135'. In the lower levels it is said that there is a stope 600' long, 6' to 8' wide and 125' high, averaging \$12 to \$14 a ton, which can not be mined owing to mine water. Company has 200,000 tons of tailings said to run \$3 per ton.

CRESSON CONSOLIDATED GOLD M. & M. CO.

COLORADO

Office: 800 Exchange Nat'l. Bank Bldg., Colorado Springs, Colo. **Mine office:** Cripple Creek, Colo.

Officers: A. E. Carlton, pres.; C. K. Boettcher, v. p.; A. F. Zang, sec.; E. P. Shove, treas.; A. L. Blomfield, gen. mgr.

Cap., \$1,500,000; shares \$1 par; 1,220,000 issued. **Transfer office:** Columbia Trust Co., N. Y.

During the 13 months ended Aug. 31, 1917, under new ownership, ore sales, etc., amounted to \$2,388,620. Operations cost \$350,579, and net profit was \$1,934,971. On Aug. 1, 1916, cash on hand amounted to \$960,689; and 13 months later \$1,201,566, after paying \$1,769,000 in dividends.

Dividends: 10c. per share monthly; total to June, 1917, \$5,075,163. In 1916, 85%; 1917, to Aug., 60%; being 10c per share monthly, for \$122,000.

Property: 49 acres on Raven Hill, Cripple Creek, Colo., considered of little value until 1914, when a sensational discovery was made in a cave, 14'x33'x36', found on the 1,200' level, with walls lined with rich telluride

of gold. One shipment returned \$468,637. The then owners divided \$1,200,000 in first half of 1915, and in July, 1916, present company bought the mine for over \$4,000,000.

Ore Reserves: estimated at 206,236 tons, worth nearly \$30 per ton, developed to the 14th level. New vein on 1,400' has ore shoot 8' wide, proved for 125', running \$500 per ton. June 23, 1917, Cons. Engr, Noble reported fully developed reserves net value of \$3,917,880.

Production: including former company's totals over \$8,000,000. From Aug. 1, 1916, to Aug. 31, 1917, the new company produced 101,348 tons of ore assaying \$29.66 per ton, shipments realizing \$2,359,663. Output about 200 tons daily.

Is a gold mine of considerable importance.

CRIPPLE CREEK DEEP LEASING CO.

COLORADO

F. H. Denman, supt. Cripple Creek, Colo.

Inc. in 1915. Company is a close corporation, 50% of the stock being held by the Milltown Extension Gold Mining Co., a Nevada corporation, and the remainder by those controlling the Jerry Johnson mine. The Deep Leasing Co. has a lease on the workings of the Jerry Johnson mine below the 650' level. The property is described under title of Jerry Johnson Gold Mining Co.

The 750' level is yielding \$16 ore, which is being shipped. Driving is underway at 950' to connect with the winze from the 850' level.

CRIPPLE CREEK DRAINAGE & TUNNEL CO.

COLORADO

Colorado Springs, Colo.

Officers: A. E. Carlton, pres., with J. T. Milliken, J. T. Snyder, R. Roelofs, Irving Howbert, executive committee; Colo. Title & Trust Co., treas.; W. R. Weston, sec.; T. R. Countryman, engr.; C. H. Fuller, supt.

Cap. \$1,000,000; shares \$1 par.

Company drove and controls a drainage tunnel through properties of Cripple Creek producers, from western slope of Grouse Mtn. toward the Golden Cycle and Vindicator mines at the N. E. end.

The tunnel as originally driven had a length of about 14,300'. In sections it is 9' wide, 7' high, with a ditch on one side, 2' deep and 4' wide. Grade is 0.3%. Average cost per foot of tunnel was \$27.27, the cost being defrayed by the larger companies of the district. An extension financed in the same manner has been started and should be completed by November, 1917, when the tunnel will have a total length of 22,000'. The only large mines not directly benefited by the tunnel are the Vindicator and Golden Cycle, but the extension, a little over 7,700' long, will pass under these mines, cutting the Vindicator at 1,950' vertical depth. In 1917, the tunnel was discharging 10,000 gallons water per minute, but this varies with the season.

CRIPPLE CREEK GENERAL MINING & EXPLORATION CO.

COLORADO

Cripple Creek, Colo.

Officers: Geo. S. Ryan, pres.; S. N. Francis, v. p.; with H. T. Hartman, E. A. Ritter and O. H. Nelson, directors. M. M. Belshe, sec.-treas.

Inc. in Colorado. **Cap.** \$200,000; shares 10 cts. par. Treasury, 1,250,000 shares.

Property: 5 claims, 25 acres, patented, on Bull, Raven and Ironclad hills at Cripple Creek, had been idle for some time previous to recent acquisition by present company. Developed by a 300' shaft, 3 shallow shafts and a tunnel, all on the Katie Hollis claim.

Extensive underground prospecting under way, 1917.

CRIPPLE CREEK GOLD MINING CO.

COLORADO

No recent returns secured.

Address: Victor, Teller Co., Colo. Company is a close corporation. Geo. Harris, mgr.; B. J. Corbett, supt.

Property: the Kohyneo mine at Victor, first worked about 14 years ago, operated unsuccessfully for a time, closed down and again reopened in 1914.

Ore: shows gold-quartz ore in veins 18" to 2' wide, in contact between black schist dike and granitic country rock.

Development: 220' shaft and drifts on the Strong vein, which traverses the property. Shaft is being sunk an additional 300'. Two levels are said to show large bodies of fair grade ore; a few shipments in 1915 said to have assayed \$15 per ton.

Equipment: hoist, air compressor and 80-h. p. boiler.

DANTE GOLD MINING CO.

COLORADO

Office: 317 Exchange Bank Bldg., Colorado Springs.

Officers: L. L. Aitken, pres.; W. Arthur Perkins, v. p.; A. D. Aitken, sec.; Thos. A. Dines, treas. A. B. Crosley, supt.

Cap., \$1,250,000; shares \$1 par; all issued. Company has no liabilities and had \$6,495 cash and \$1,575 securities in the treasury, Jan. 1, 1917. Stock listed on the Colorado Springs Mining Exchange. Charter renewed Nov. 25, 1915, for 25 years.

Property: Dante mine, about 10 acres, patented, in Sec. 20 on Bull Hill, Cripple Creek, is under 5-year lease from April, 1916, to the Cons. Mines & Reduction Co. Said to show gold ore averaging \$20 per ton.

Development: 850' shaft with 6,500' of crosscuts and drifts, 520' shaft with 3,800' of crosscuts and drifts.

Equipment: 75-h. p. hoist, air compressor, complete machinery plant, 1,000' of cable and surface buildings.

Production: (gross) to Jan. 1, 1917, \$1,120,951; gross production for 1916, \$871; 1915, \$3,559 from mine, and \$13,641 from mill. Mill was treating about 2,000 tons of \$2 gold ore per month when it was destroyed by fire in Nov., 1915.

DEXTER GOLD MINING CO.

COLORADO

A close corporation controlled by Eastern capitalists.

Property: the Dexter mine, on Bull Hill, Cripple Creek, under lease to C. W. Benkleman, of Denver, and Anderson Bros., of Victor, Colo. Gold ore occurs in veins, 4' wide and proved for 175'.

Development: by 1,300' shaft, crosscuts and tunnel. Has been a steady producer for several years. Average output 600 tons monthly, showing values from \$10 to \$30 per ton.

Equipment: compressor, power plant and surface buildings. Employs about 15 men. Plans further development to the 1,400' level.

DIG-GOLD MINING CO.

COLORADO

Inc. 1915. **Cap.,** \$150,000.

Officers: M. B. Burke, pres. and gen. mgr., Denver, Colo. Chas. Bender, supt.

Property: the Alpha and Omega mines, on Gold Hill, near Cripple Creek, Teller Co., Colo.

Ore occurs in a vein, 5' wide on 200' level, and is said to assay from \$9 to \$60 per ton in gold. Surface work said to show a number of veins containing low-grade ore.

Development: by new shaft on line between the two claims. Will mine ore from 100' level. Mine is drained to 200' level by the Roosevelt tunnel.

Equipment: includes steam hoist and air compressor.

DOCTOR JACK POT MINING CO.

COLORADO

Offices: First Natl. Bank Bldg., Cheyenne, Wyo., and Cripple Creek, Colo.

Officers: A. E. Carlton, pres.; J. A. Hayes, v. p.; V. H. Mann, sec.-treas.; L. G. Carlton, mgr., with H. L. Shepherd, Ira Harris, F. H. Gay, A. M. Stephenson, directors.

Inc. Aug. 31, 1905, in Wyo. **Cap.,** \$75,000; shares 2½c. par; \$71,083 outstanding; non-assessable. Colorado Title & Trust Co., Colorado Springs, transfer agents. Annual meeting, 2nd Wednesday in June. Listed in Colorado Springs and Denver. Balance sheet Jan. 1, 1917, shows cash \$83,941, accounts receivable \$467. No liabilities.

Gross production by present company, Sept. 1, 1905, to Dec. 31, 1916, \$1,356,224; under former owners about \$2,480,000. Gross earnings, 1916,

were \$37,396, of which \$25,944 was from ore sales; operating expenses were \$16,733.

Dividends: to Jan. 1, 1917, \$143,264; last dividend, \$30,000, paid Dec., 1916.

Property: 15 claims, 99.3 acres, patented, on Raven Hill, Cripple Creek, said to show gold ore in fissure veins.

Development: tunnels and vertical shafts, amounting to several miles of underground workings with deepest at 900'. The Raven tunnel is over 3,000' long. A total of 577' of work was done in 1916 without developing any ore. There are 8 sets of leasers working on the property, 3 of whom are making occasional shipments.

Three fractional claims were purchased at a cost of about \$5,000, in 1916.

Equipment: includes a 52-h. p. electric hoist and air compressor. Electric power is used.

Production: in 1916, 15,216 tons gold ore, averaging \$7.47 per ton.

EAGLE ORE CO.

COLORADO

Operates ore sampling plant at Victor, Colo.

ECLIPSE LEASING CO.

COLORADO

F. R. Marsh, pres., Colorado Springs, Colo.

Inc. 1917, to operate a lease on the Jo Dandy mine, Raven Hill.

EL PASO CONSOLIDATED GOLD MINING CO.

COLORADO

Offices: 20 Broad St., New York; Cripple Creek and Colorado Springs, Colo.

Officers: H. McGarry, pres. and gen. mgr.; Fred W. Bailey, v. p.; Geo. N. Miller, 2nd v. p.; Daniel Thatcher, sec.-treas.; preceding, with J. K. Corbiere, W. C. Sherwood, Geo. W. Gano, R. M. Rankin, and A. E. Carlton, directors.

Executive Committee: H. McGarry, F. W. Bailey, and R. M. Rankin. Owen Johnson, mine supt.

Inc. Feb. 27, 1893, in Colorado. **Cap.**, \$2,450,000; shares \$1 par; changed, 1913, to \$2,500,000; shares \$5 par; outstanding, 490,000 shares. No bonded debt. Stock transferred at office of secretary, Colorado Springs. Colorado Title & Trust Co., Colorado Springs, registrar. Annual meeting, 2nd Monday in April. Fiscal year ends March 31. Listed in Colorado Springs and on New York Curb.

Dividends: (on stock of \$1 par) 1903, 2½c.; 1904, 13½c.; 1905, 23c.; 1906, 7c.; 1907 and 1908, 2c. each; 1909, 1c.; 1910, 2c.; 1911, 2½c.; 1912, 5c.; (dividends on stock of \$5 par): March 31, 1913, 12½c.; Feb. 25, 1914, 10c.; none in 1915. Total dividends, \$1,707,545.

Balance sheet of Dec. 31, 1916, shows: assets, \$2,806,041, which includes: mining property (stock), \$2,500,000; mining property (cash), \$92,762; stocks and bonds, \$11,457; notes receivable, \$215; accounts receivable, \$2,113; ore in transit, \$537; cash, \$4,686. Liabilities show: working capital, \$50,000; surplus, \$229,931; vouchers payable, \$2,842.

Accounts for 1916 show: company ore sales, \$56,779; royalty, \$34,892; other income, \$20,772; total income, \$112,443. Mining and general expenses, \$80,634; net operating profit, \$31,809. Company's indebtedness of \$29,000 on Jan. 1, 1916, paid off, leaving cash balance Jan. 1, 1917, of \$2,647. In treasury Feb., 1917, \$4,229.

EL PASO EXTENSION CORP'N. OF WEST VIRGINIA COLORADO

Al Campbell, supt., Cripple Creek, Colo.

Property: Rocky Mountain and North Slope claims; 9.55 acres on Beacon Hill. First named claim has old 250' shaft. Is driving a cross-cut tunnel to cut vein.

ELKTON CONSOLIDATED M. & M. CO.

COLORADO

P. O. Box 146, Colorado Springs, and Cripple Creek, Colo.

Officers: George Bernard, pres.; A. E. Carlton, v. p., with M. F. Stark, C. G. Kingsbury, C. B. Ferrin, D. C. Goddard and E. P. Shove, directors. H. M. Ragle, sec.-treas.; R. P. Windsor, supt.

Inc. 1892 in Colorado; extended 1912 for 20 years. **Cap.**, \$3,000,000; shares \$1 par; 500,000 shares in treasury. Annual meeting in Feb. Listed in Colorado Springs and Denver. Company is one of the oldest in the Cripple Creek district.

Balance sheet as of Feb. 13, 1917, shows: assets, \$3,536,070, which includes, property and plant, \$2,845,980; treasury stock, \$500,000; Cripple Creek Drainage & Tunnel Co., \$98,400; cash, \$774; accounts receivable, \$622; current liabilities, \$31,260.

Earnings from ore sales amounted to \$283,090; miscellaneous earnings, \$8,379; expenses, \$316,425; depletion of mine, \$283,090; net loss from operations, 1916, exclusive of depletion, \$14,955.

Dividends: to Jan. 1, 1916, \$3,579,460; last dividend paid May 24, 1915, \$50,000, previous to which time the rate had been 2c a share quarterly.

Property: Elkton group, 93½ acres, patented, on Raven Hill, in Cripple Creek district. Company holds the Arequa lease on the property of the Raven & Beacon Hill Gold Mining Co., but operations in 1915 showed a slight loss.

Ore: telluride in fissure veins in breccia and granite.

The Ida May group of claims, purchased in 1911, was developed by 390' of crosscutting, 1916, but work was temporarily abandoned due to gas in the workings.

Development: by shafts, with many miles of underground workings. The main shaft is 1,636' deep, has 17 levels, and is connected with the Roosevelt tunnel by a raise from the tunnel level. In 1916, 1,797' of development work was done, compared with 3,471' in 1915.

Work for 1916 disclosed a great decrease in values on the 16th, 17th and 18th levels, and the management states that the Elkton has at last reached the so-called lean zone. Since October, 1916, only lessees have operated on the property.

Production: in 1916, on company account, 11,539 tons of ore averaging \$10.67 gold per ton; on lessees' account, 23,797 tons of \$6.90 per ton gross value.

Production: (from the Elkton mine)

	Tons Ore	Value p. Ton	Cost p. Ton (a)	Freight & T'tment
1916.....	36,036	\$8.09	\$...	\$4.17
1915.....	16,510(b)	18.42	3.30	5.63
1914.....	29,509	18.37	2.62	5.34
1913.....	28,814	18.88	2.40	5.95
1912.....	29,163	19.01	2.22	5.85

(a) Total cost of ore shipped includes underground labor and sorting, sampling and loading, but not development. (b) Production was curtailed, awaiting extension of Roosevelt drainage tunnel.

FAUNTLEROY GOLD MINING CO.

COLORADO

Office: 317 Exchange National Bank Bldg., Colorado Springs, Colo.

Officers: Verner Z. Reed, pres.; L. L. Aitken, v. p.; A. D. Aitken, sec.-treas.

Cap., 1,250,000 shares; \$1 par. In treasury Jan. 1, 1917, \$65.44; no stock. All taxes paid. Liabilities, \$3,336. Last stockholders' meeting, April 18, 1911. Listed on Colorado Springs Exchange.

Property: 5 claims, 20.3 acres, patented, on Gold Hill and Mineral Hill, Cripple Creek.

Development: on the Little Fauntleroy, consists of 900' of work done from the Ophelia tunnel at 278' from surface. Shaft from surface also connects with tunnel. On the Garfield claim is an 80' shaft with 100' of drifting. During 1916 about 100' of drifting and crosscutting was done.

Little Fauntleroy claim is leased for two years on graduated royalties ranging from 15 to 25%; 50 shifts per month required. Gross production to date, \$8,311; production during last six months of 1916, \$421.

FINDLEY MINES CO.**COLORADO**

Cripple Creek, Colo.

Officers: L. G. Carlton, pres.; A. E. Carlton, v. p.; V. H. Mann, sec.-treas.

Inc. Jan. 1, 1912, in Wyoming. **Cap.**, 2,000,000 shares; par value 2½c. In treasury Jan. 1, 1917, 750,000 shares stock.

Dividends: Total, \$337,500; last dividend paid September, 1906, by original company; amount, \$12,500. Colorado Title & Trust Co., Colorado Springs, transfer office. Annual meeting 2nd Wednesday in June. Last meeting, June, 1913. Stock listed on Colorado Springs Exchange. Liabilities, \$3,000 demand note.

Property: 5 claims, patented, 12.5 acres, on south slope of Bull Hill, Cripple Creek, Colo.

Ore: carries gold and occurs in fissure veins. Underground workings are extensive, aggregating about 6 miles. Property fully equipped with machinery.

Litigation: Stratton C. C. M. & D. Co. vs. Findley, re-ownership of certain ores. Gross production to date, \$1,651,183.14. None of this company's mines are being worked.

FLOWER OF THE WEST GOLD MINING CO.**COLORADO**

Cripple Creek, Teller Co., Colo.

Officers: K. C. Schuyler, pres.; N. S. Gandy, sec.-treas.

Cap., \$1,500,000; shares \$1 par. In treasury Jan. 1, 1916, 69,500 shares; cash, \$10,000. All except current taxes paid. No liabilities. Exchange Registry and Guarantee Co., Colorado Springs, transfer office. Listed in Colorado Springs.

Property: 2 claims on Squaw Mountain, and 2 on Gold Hill, 15 acres, patented. Gross production to date, nominal.

FREE COINAGE CONS. MINES CO.**COLORADO**

Address: Killen, Reinert & Downey, 717 Cooper Bldg., Denver, Colo. John B. Neville, mgr., Altman, Colo.

Is successor of Free Coinage Gold Mng. Co., and owns mine of this name and the Delmonico, acquired for \$500,000 in April, 1917.

Property: 5 claims of the Free Coinage group in Cripple Creek district, said to show the Pinto, Wilson, Black Dick and Pueblo veins. The Delmonico adjoins them.

Development: will be through the 1,125' Delmonico shaft, into Pinto and Wilson ground, two mines that have a record of \$2,000,000 production. Work requires 2,000' crosscutting and will take a year.

Property well worthy of deep development, but brokers' literature considered rather sensational.

GOLD BOND CONSOLIDATED MINES CO.**COLORADO**

Offices: 415 Kittredge Bldg., Denver, and Cripple Creek, Teller Co., Colo.

Officers: G. A. Hummer, pres.; S. R. Herber, v. p.; C. R. Slusser, sec.-treas., with I. W. Herber and F. H. Beers, directors.

Inc. 1900 in Colorado. **Cap.**, \$1,350,000; shares \$1 par; outstanding, 1,350,000 shares. In treasury Jan. 1, 1917, \$100. Taxes unpaid for 1915.

Gross production to 1916 said to be \$100,000. Company office transfers stock. Exchange Guaranty & Registry Co., Colorado Springs, registrar. Listed on Colorado Springs Exchange. Last shareholders' meeting held in 1900. No sale of stock in 1916.

Property: 4 patented claims, 18 acres, on S. W. slope of Gold Hill, Cripple Creek.

Ore: gold in fissure veins in granite, said to average \$5 to \$32.50 per ton, with 1915 shipments of \$12 ore.

Development: 300' vertical shaft with over 2,500' underground workings. Worked by lessees, 1916.

GOLD BOND LEASING & DEVELOPING CO.**COLORADO**

Operating under lease the Cripple Creek claims of the Gold Bond Consolidated Mines Co., which see.

GOLD CAMP SYNDICATE.**COLORADO**

Address: W. Y. Seaman, 1842 Stout St., Denver, Colo.

Property: 16 acres, said to be favorably situated at Cripple Creek, Colo., but the method of raising money by boom literature, memberships, (\$35 per membership, three for \$100) and shares of an adjoining property, are not conducive to much faith. In July, 1917, it was proposed to transfer property first to a trustee, then to a new company, the Victory Gold Mining Co.

GOLD DOLLAR CONSOLIDATED MINING CO.**COLORADO**

Mine office: Cripple Creek, Colo.

Officers: H. L. Shepherd, pres.-treas.; J. J. Hughes, v. p.; preceding with E. E. Quentin and J. E. Jones, directors. J. R. Young, sec., 128 N. Tejon St., Colorado Springs.

Cap., 2,500,000 shares; par value 10c. In treasury Jan. 1, 1917, \$225 cash; no stock. Transfer office: 125 East Pike's Peak Ave., Colorado Springs, Colo. Liabilities, \$12,000.

Dividends: paid to date, \$100,000; last dividend, \$12,500, paid Dec. 1, 1912. Listed on Colorado Springs Exchange.

Property: 62 acres, patented, being a part of the Arequa townsite, Cripple Creek mining district. Gold ore occurs in vein 2' to 4' wide, said to average \$20 gold per ton. Under lease to various syndicates, one, the Union Leasing Co., reporting good development.

Development: the 1,050' Mabel M. and Union shafts, from which there has been considerable drifting and crosscutting. In July, 1917, fire destroyed most of surface plant.

Gross gold yield for first 6 months, 1917, \$6,441; net to company, \$518.

GOLD KING MINING CO.**COLORADO**

Probably dead. See vol. XII.

GOLD SOVEREIGN MINING & TUNNEL CO.**COLORADO**

Office: 218 Burns Bldg., Colorado Springs, and Cripple Creek, Colo.

Officers: Jas. F. Burns, pres. and treas.; John T. Hawkins, v. p. and sec.; with Daniel Thatcher, A. Feringher, directors. C. G. Jackson, supt.

Charter renewed Oct. 31, 1915. Cap., \$2,000,000; shares \$1 par; in treasury Jan. 1, 1917, 195,228 shares; cash, \$8,471. Listed on Colorado Springs Exchange. Dividends, \$32,559, last dividend of \$5,000 paid in 1912.

Property: Gold Sovereign and J. G. Blaine claims, 7.2 acres, patented, on Bull Hill (Sec. 20), adjoining the Cresson, is under lease to the Union Leasing Co. Management believes firmly that rich Cresson veins extend into the Gold Sovereign ground. Shoots reported as 3' wide and assaying \$50 per ton in gold said to be disclosed on the 15th level.

Development: 1,350' shaft, to be sunk an additional 200'.

Production: gross production of lessee, Union Leasing Co., for 1916, \$38,559, netting company \$5,554. Lessees spent \$6,260 on development in 1916.

GRANITE GOLD MINING CO.**COLORADO**

Offices: 301 Mining Exchange, Colorado Springs, and Victor, Colo.

Officers: C. M. MacNeill, pres.; C. C. Hamlin, v. p., treas. and gen. mgr.; Spencer Penrose, sec.; C. B. Garnett, asst. treas., with Michael Finerty, E. P. Shove, C. L. Tutt, directors. D. L. McCarthy, supt.

Inc. 1905, in Wyoming. Cap., \$1,750,000; shares \$1 par; non-assessable; outstanding, \$1,650,000; stock transferred at company's office. Colorado Title & Trust Co., Colorado Springs, registrar. Annual meeting, 4th Monday in April. Stock has been very closely held, but was listed on Colorado Springs Exchange in July, 1915.

Owns all the stock, excepting 3 shares, of the Little Montana Mining Co. Those portions of the Granite Gold property lying within the City of Victor were incorporated as a separate company, the Little Montana Mining Co. Financial statement of this company for 1916 shows: gross income, \$40,701; expenses, \$40,768; net loss, \$67.

Receipts from ore sales in 1916 were \$272,068, including 16,033 tons of \$18.24 company ore, 21,691 tons of \$17.91 lessees' ore, and \$42,332 from the

Little Montana lease. Profit was \$29,050, less \$25,029 for depreciation, leaving \$4,020 net. Total production to 1917, about \$14,772,000. Profit for 1st quarter in 1917 was \$47,584.

Dividends: paid to date, \$319,500. Last dividend paid Sept., 1917, \$16,-500. Expected to continue rate of 1c. per share each 2 months.

Property: 11 claims, 40.5 acres, patented, in the Cripple Creek district. In 1914, to avoid apex litigation, the Dead Pine claim, owned by the Raynor Gold Mining Co., was bought for \$87,500. The main production of the company is now coming from this claim. For geology of the Cripple Creek district, see U. S. G. S. Prof. Paper 54.

Development: by shafts with several miles of underground workings. The Dillon shaft is 1,770' deep, the Gold Coin shaft, 1,300' deep. The Roosevelt tunnel will, when completed, drain Granite Gold ground and deeper development will be possible. In March, 1916, an orebody said to be over 450' long, was being developed on the 1,400' level of the Dillon shaft, the ore shoot following the contact of the Little Montana phonolite dike with the granite. There is 550' of unprospected ground between the bottom of the Dillon shaft and the Roosevelt tunnel level. Upper levels of the various properties are operated under lease; lower levels are worked by company.

Equipment: mines are well equipped; a hoisting plant good for 2,000' installed at the Dillon shaft. Employs 75 men.

Stock of the Mohican Gold Mining Co. was purchased for \$22,580, and new plant erected at the Dillon shaft made necessary the borrowing of \$15,000, since repaid.

Production: in Aug. 1917, was 2,360 tons of ore, averaging one ounce gold per ton. Shipping about 2 cars daily from the Dillon mine.

The mine is considered one of the most promising at Cripple Creek.

HENRY ADNEY GOLD MINING CO.

COLORADO

A close corporation operating the Henry Adney mine on Rosebud Hill, Cripple Creek.

HONDO GOLD MINING & MILLING CO.

COLORADO

Cripple Creek, Teller Co., Colo., C. W. Savery, pres. and gen. mgr.

Inc. in 1914.

Property: adjoins that of the Golden Cycle on Battle Mountain and includes the old Keystone property, developed by the Sitting Bull shaft, down 250' at the time property was acquired. Also owns 3 claims in the Tenderfoot Hill section. Little work had been done on the Battle Mountain property for 20 years. Present management sank the shaft to the 500' level, and is said to have opened up low-grade ore from the 3rd to 5th levels. At last accounts a crosscut on the 5th level was being driven to strike the 3 veins cut on the 4th level. Some shipments have been made, but results are not available.

Reported, August, 1917, that company had abandoned its lease and option on the Keystone G. M. Co. properties and had removed its mine plant.

ISABELLA MINES CO.

COLORADO

Office: 203 Burns Bldg., Colorado Springs. J. W. Brown, sec.-treas. **Mine office:** Independence, Colo.

Officers: E. E. Quentin, pres.; R. M. Carson, v. p.; C. G. Mitchell, mgr.; foregoing with H. S. Lunt and J. T. Hawkins, directors.

Inc. 1903 in Wyoming. **Cap.,** \$3,000,000; shares \$1 par; 2,528,291 outstanding. Stock listed on Colorado Springs Exchange. Colorado Title & Trust Co., registrar. Annual meeting 1st Monday in February at Cheyenne, Wyo.

Profit in 1916 was \$66,663. An initial dividend, 1%, or \$25,283, was paid.

Property: 116 claims, patented, in N. E. $\frac{1}{4}$ of Sec. 20 and N. W. $\frac{1}{4}$ of Sec. 21 on Bull Hill, Cripple Creek district, shows quartz veins in breccia carrying gold and some silver values.

Development: by 2 main vertical shafts, the Lee, 1,274' and the Empire, 1,407'. During 1916, 18,587' of development work was done, as compared with 17,289' in 1915. Much work was done on the lower levels of the mine, and a good tonnage of rich ore was found on the bottom level of the Lee shaft. The Buena Vista vein was cut in March, 1917, on No. 16 level, giving high assays in gold and silver. In Oct., 1917, a depth of 1,500' was reported for the winze sunk below the 1,250' level of the Lee shaft, and drifts run on the East Victor vein.

Equipment: includes a 100-ton concentrating mill, entirely remodeled in 1915, to use a cyanide process with sand leaching, pump, Parkison furnace, Heine boiler, etc. This plant is recovering 76% from \$3 ore.

Recent production: has been as follows:

Years—	Tons Mine ore	Tons Dump ore	Total tonnage	Gross Value
1916.....	19,377	19,377	\$412,962
1915.....	23,861	837	24,698	507,791
1914.....	15,706	2,040	17,746	345,819
1913.....	11,385	6,903	18,288	243,251

Of the 1916 output 30 sets of lessees mined 16,573 tons, worth \$258,688.

Total production to date estimated at \$8,400,000. Company is one of the oldest in the Cripple Creek district and is operated successfully along conservative lines.

JENNIE SAMPLE CONSOLIDATED MINING CO. COLORADO

Office: 218 Burns Bldg., Colorado Spring.

Officers: Daniel Thatcher, pres.; Jas. F. Burns, v. p.; R. M. Frank, sec.; F. H. Gay, treas.; John T. Hawkins, gen. mgr.

Inc. in Wyoming. Cap., \$25,000; shares 1c par; 1,668,885, shares issued. Stock listed on the Colorado Springs Stock Exchange. Gross earnings for 1915 were \$42,351, all from ore sales; operating expenses amounted to \$16,061. Company had no liabilities and \$958 cash in treasury, Jan. 1, 1917. Shares ranged between 2c and 4c during 1916.

Property: 5 patented claims, 31 acres, on S. slope of Raven Hill, in Cripple Creek district, shows fissure veins with streaks of gold. Developed by shafts and drifts to depth of 1,100'. Equipped with hoist, drills and steam power. Company inactive, but property worked by lessees in 1916.

JERRY JOHNSON GOLD MINING CO. COLORADO

Office: 427 Symes Bldg., Denver, Colo. **Mine office:** Cripple Creek, Colo.

Officers: A. P. Mackey, pres. and mgr.; C. F. Potter, v. p.; J. W. Graham, sec.-treas.; with J. F. Mackey and C. A. Graham, directors; D. C. Smith, supt.

Inc. 1902, in Wyoming. Cap., \$250,000; shares 10c par; all issued, has paid \$187,500 in dividends to date. Last payment of \$5 per 1,000 shares in Nov., 1914. Stock listed on the Colorado Springs Exchange. Company had \$19,326 cash in treasury, Jan. 1, 1917, and no debts. Derives income from royalties on leasing operations.

Property: 35 claims, patented, in Cripple Creek district, shows gold-silver ore in contact veins. Developed by 975' vertical shaft to depth of 850'. The mine is being worked from surface to the 650' level by Frank Caley, and below the 650' level by the Cripple Creek Deep Leasing Co.

Equipment: includes steam power, 8 drills, concentrator and 75-ton cyanide mill, erected in 1915 by Frank Caley. Total output to 1917, \$1,783,126. In 1916 the mine produced \$45,000. In the first 5 months of 1917, 28 cars of 2 oz. gold ore were shipped.

About 20 men employed.

JOE DANDY LEASING CO. COLORADO

Thos. Smith, supt. Operates a lease on the Joe Dandy mine on Raven Hill, Cripple Creek district, Teller Co., Colo. Mine developed to about 1,000' depth by shaft and drifts, exposing an orebody, 2' to 4' wide, said to

average \$30 per ton. Reported shipping from 3 to 5 cars of ore per week, Jan., 1916.

The Joe Dandy cyanide leaching plant, operated under lease by Thos. Kavanaugh, treats about 2,000 tons of ore per month, partly \$2 per ton dump ore. No 1917 report received.

KISHMAN LEASING CO.

COLORADO

Out of business in May, 1916. Fully described, Vol. XII.

LAST DOLLAR GOLD MINING CO.

COLORADO

Property: the Last Dollar mine, 18 acres, adjoining the Portland & Modoc mines, Cripple Creek district, Teller Co., Colo. Mine is credited with a past production of \$30,000,000.

Bond and lease on Last Dollar mine reported taken, 1917, by Catherine Gold Mng. Co., which see.

Development: by 1,517' shaft with levels at 500', 1,000', 1,200', 1,300' and 1,500'. The West vein, opened on the bottom level, is said to be $2\frac{1}{2}$ ' wide. Shipments are made to the Golden Cycle mill at Colorado City. Four sets of lessees are working above the 1,100' level.

LAURA LEE MINING & LEASING CO.

COLORADO

Address: Wm. A. Steiniger, sec.-treas. and mgr.; Cripple Creek, Colo.

Officers: A. S. Pierce, pres.; C. J. Hallett, v. p.; with J. B. Braidwood, directors.

Inc. 1916, in Colorado. **Cap.**, 1,500,000 shares; 10c par; fully paid and non-assessable; 300,000 issued.

Property: a 3 years' lease, with option to purchase, on the Laura Lee mine, on the southern slope of Mineral Hill, Cripple Creek, owned by the Vindicator Cons. Gold Mining Co.

Development: by 200' shaft, sunk about 15 years ago, and 2 west drifts on the vein for 200'.

Equipment: includes 15-h. p. hoist.

A prospectus of the company contains the following typical paragraph: "Our Ore—starting from the 100' level: This is about as low as any mine can figure on stoping ground (meaning breaking the ore down from above in place of digging at much greater expense), and what have we? Ore that will assay from a few dollars a ton to as many thousands a ton, as you would want in your wildest imagination of possible wealth, and it will average enough to make every pound of it Pay Ore. The drift to the South is offering possibilities of riches that would make any prospector work without food and sleep to get to the 'big pay streak,' etc., etc. Advertising literature and stock selling campaign very unfavorably regarded.

New officers in charge, 1917, but advertising matter of same character being sent out.

LELAND MINING & DEVELOPING CO.

COLORADO

Chas. Howbert, Cripple Creek, Colo., gen. mgr.

Property: the Conundrum and Anchoria Leland mines on Gold Hill, Cripple Creek district. The Conundrum is developed by an 800' incline shaft and the Anchoria Leland mine is operated through the Gold Hill tunnel. Development work reported in progress by company and lessees in 1916.

No later returns.

LEXINGTON GOLD MINING CORPORATION

COLORADO

Office: 702 Colorado Bldg., Denver. Mine office: Manitou, Colo.

Officers: H. J. Anstie, pres. and mgr.; N. H. Partridge, v. p.; Wm. E. Humphreys, sec.-treas., with W. H. Wadley and J. W. T. Gray, directors.

Inc. 1917, in Colorado, as a reorganization of the Lexington Gold Mng. Co. **Cap.**, \$20,000; shares \$14 par. Stock listed on Colorado Springs Exchange. Colorado Title & Trust Co., Colorado Springs, registrar and transfer agents.

Property: 5 patented claims, 12.6 acres on Gold Hill, Cripple Creek district, shows gold ore in fissure veins, assaying from \$7 to \$8 per ton.

Developed to depth of 350' by shafts and crosscuts. The mine is credited with an output of \$200,000, and management estimates 125,000 tons of ore blocked out. Lessees have been operating the property on a royalty basis during the past few years, but company plans resumption in 1917 and erection of a 100-ton cyanide mill.

LITTLE MONTANA MINING CO.

COLORADO

Office: Colorado Springs, Colo.

Officers: C. M. MacNeill, pres.; C. C. Hamlin, v. p.; C. B. Garnett, sec.-treas.

Inc. 1912, in Wyoming. Cap., \$150,000; \$1 par. In treasury, May, 1917, \$2,056.

Gross earnings, 1916, were \$21,749; expenses, \$10,788.

All stock, except three shares, owned by Granite Gold Mng. Co., which company operates mine. Property described under Granite Gold Mng. Co., in Cripple Creek district.

MARY McKINNEY MINING CO.

COLORADO

Address: Colorado Springs and Cripple Creek, Colo.

Officers: Chas. Castello, pres.; Daniel Thatcher, v. p.; John L. Nichols, sec.-treas.; preceding, with John T. Hawkins and W. H. Spurgeon, directors. Dave Buckles, supt., Anaconda (Cripple Creek), Colo.

Inc. 1892, in Colorado; renewed March, 1912. Cap., \$1,500,000; shares \$1 par; outstanding February, 1916, \$1,309,252. Transfer office: 306 Exchange Bank Bldg., Colorado Springs. Colorado Title & Trust Co., Colorado Springs, registrar. Annual meeting, 2nd Monday in February. Listed on Colorado Springs Exchange.

Balance-sheet for 1916 shows: revenue, \$233,044 (inclusive of \$4,698 misc.); expenses, \$232,169; profit, \$875. In 1915 profit was \$27,517. Cash on hand at end of 1916 was \$82,306. Of the revenue, \$97,080 was from lessees' ore, who were paid \$50,689 net.

Dividends: to 1917, \$1,182,398; last paid Oct. 26, 1916, \$13,093.

Property: several claims, 144 acres patented, on west slope of Raven Hill, at Cripple Creek. First claim was discovered in 1891. In 1906, the property of the Anaconda Gold Mining Co. was purchased.

Ore: gold in LeClair and Mary McKinney quartz veins in phonolite. Ores carry tellurides in fluorite, quartz and altered wall rock. (For geology of the Cripple Creek district, see U. S. G. S., Prof. Paper No. 54.)

Development: shafts to the 1,300' level; shaft sunk to the 13th level in 1916. Total underground workings, about 15 miles. In 1916, 6,031' of new work was done, compared with 4,939' in 1915. Ore between No. 11 and 12 levels was irregular during 1916, resulting in lower yields. Mine was examined Dec., 1916, by J. T. Milliken and L. S. Noble, who recommended that No. 9 and 10 levels be extended N. to the West vein, until they reach its intersection with No. 5 vein. The latter vein and others are then to be explored. Junctions in upper levels showed good shoots. Work will cost \$20,000.

Equipment: includes two plants, with 100-h. p. electric hoist, 200-h. p. electric compressor, boiler-plant, machine-shop, etc.

Company employs 40 men. There is also considerable work done by lessees; in 1916, 37% of output was result of leasing operations.

Production: gross to end of 1916 was \$8,964,287. In 1916, 6,328 tons, worth \$131,265 by company, and 5,232 tons, worth \$97,080 by lessees.

Property is well managed, and a policy of extensive exploration is now under way.

MARY NEVIN GOLD MINING CO.

COLORADO

Cripple Creek, Colo.

Officers: H. J. Gehm, pres.; R. S. Ellison, v. p. and sec.; H. J. Gehm, treas.

Cap., \$1,500,000; shares \$1 par. In treasury, Jan. 1, 1916, 38,000 shares. Listed on Colorado Springs Stock Exchange.

Property: the Mary Nevin and Hibernia patented claims, 10 acres, on Rosebud Hill.

Development: by a 385' shaft on the Hibernia claim and a 200' shaft on the Mary Nevin claim; some drifting has been done. Property is under lease and is being operated through the Henry Adney shaft.

MARYANA MINING & LEASING CO.

COLORADO

Cripple Creek, Colo. W. A. Matlock, mgr.

Inc. in 1914. In 1915 company had a lease on the Mary McKinney mine from the 8th level down.

MODOC CONSOLIDATED MINES CO.

COLORADO

Address: A. H. Frankenburg, mgr., Victor, Colo.

Officers: F. Cannon, pres.; A. H. Frankenburg, v. p.; with R. Roelofs, T. Arneal, M. A. Skinner, and E. D. Avery, directors.

Property: a rich old Cripple Creek gold producer, credited with production of about \$2,000,000 since 1892. Bought by T. M. Pettigrew and others of Denver, late in 1916.

Development: was by 600' incline shaft and 500' winze. A new 1,500' vertical shaft is being sunk. At 1,000' depth a shoot 400' long, carrying \$30 ore is said to have been cut.

MODOC MINING & MILLING CO.

COLORADO

Property operated by Modoc Cons. Mines Co., which see.

MORNING GLORY MINE

COLORADO

Jas. Harbaugh and A. B. Harbaugh, owners, Pitkin, Teller Co., Colo.

Property: 12 claims, 120 acres, at the head of north fork of Quartz Creek, said to show a number of veins from 4' to 35' in width, developed by tunnels. A 400' tunnel is said to cut a 10' vein assaying up to \$107 per ton in gold and silver. An 800' tunnel is said to cut a 35' vein that will assay 4% copper, in addition to 4' of molybdenum ore, while a third tunnel, 190' long, cuts a 4' vein assaying \$8 per ton in copper, lead and zinc.

Lessees working on property and some shipments being made.

OSTON LEASING CO.

COLORADO

I. J. Russell, supt. Operates under lease the 7 upper levels of the Thompson shaft on the Elkton Cons. Mining & Milling Co.'s property on Gibbons Hill, Elkton, Teller Co., Colo.

Shipments resumed in March, 1916, amounted to 980 tons, estimated to average \$8 per ton. Ore is shipped to the Golden Cycle mill at Colorado City.

PHARMACIST GOLD MINING CO.

COLORADO

Officers: L. G. Carlton, pres.; Thos. J. Ward, v. p.; V. H. Mann, sec.-treas.

Inc. Jan. 3, 1912. **Cap.** \$15,000; shares 1c par. In treasury Jan. 1, 1917, 55,000 shares and \$437 cash. Stock listed on Colorado Springs Exchange. Exchange Registry & Guarantee Co., Colorado Springs, Colo., transfer office. Paid dividends to Feb., 1910, \$7,500; none since.

Property: 10 patented acres on Bull Hill, Cripple Creek district, Teller Co., Colo.

Development: being carried on from the 500' level of the Isabella Mines Company shaft.

Production: in 1916 was \$142. Operated by lessees.

PORTLAND GOLD MINING CO.

COLORADO

Office: 310 Mining Exchange Bldg., Colorado Springs, Colo. Mines at Victor, Colo. Mills at Colorado Springs and Victor, Colo.

Officers: Irving Howbert, chairman; Frank G. Peck, pres.; Dr. D. H. Rice, v. p.; Thos. F. Burns, sec.-treas.; above with J. F. Burns, directors. Harry V. Holman, purch. agent. Frank L. Smale, mine mgr.; Fred Jones, mine supt.; O. A. Willson, engr.; Geo. M. Taylor, mgr. of mills; Jas. B. Heffernan, mill supt. at Colo. Springs; Thos. B. Crowe, mill supt. at Victor. Hills & Willis, cons. engr.

Inc. 1894, in Iowa. **Cap.** \$3,000,000; reorganized 1905, in Wyoming, same capitalization; shares \$1 par; all issued. Colorado Title & Trust Co., registrar. Stock transferred at company's office. Listed on Colorado Springs Exchange. Annual meeting, 3rd Monday in February, at Cheyenne, Wyo.

Comparative General Balance Sheet:

1915.....	590,594	591,046	1,767,789	336,957	360,000		1,661,878(b)

(a) Jan. 1, 1916. (b) Jan. 1, 1915.

Dividends: 16% per year, paid quarterly, from Jan. 15, 1907, to and including Jan. 15, 1909; April 15, 1909, 3%; July 15 and Oct. 15, 1909, 2% each; 1910, 1911, 1912, 8% each; 1913, 10%; 1914, 12%; 1915, 12%; 1916, 14%. Total dividends to November, 1917, were \$11,047,080.

Property: the Portland and Independence mines, 253 acres, in Cripple Creek district, Teller Co., Colo., carrying gold ore in quartz veins. The Independence mine and mill, comprising 110 acres on Battle Mtn., were purchased from the Stratton-Independence, Ltd., a British corporation, in July, 1915, for \$325,000. The Independence mine has over 15 miles of workings and is credited with a gross production to July, 1915, of \$23,621,728.

Development: the Portland mine, worked continuously for 23 years, has a total of 59 miles of underground workings. Total work in 1916 was 18,263', as compared with 19,808' in 1915.

For geology of the district, see U. S. G. S. Prof. Paper, No. 54; also Vindicator Cons. G. M. Co.

Mine is worked by 2 shafts, No. 2 2,000' deep. Oreshoot on the 19th level is over 1,000' long and contains unusually high-grade ore. Mine is drained by the Roosevelt tunnel. In October, 1917, rich ore was opened in 2,000' level of No. 2 shaft.

Company operates two mills at Victor, Colo., with a capacity of 2,000 tons daily, and reduction works at Colorado Springs, treating 400 tons daily.

The Independence mill at Victor, taken over in July, 1915, was completely remodeled into an oil-flotation plant for treatment of the unoxidized ores and enlarged to 1,000 tons daily capacity. Experiments demonstrated that the oil flotation was not satisfactory in treatment of the oxidized ores, which predominate in upper workings of the mine, so the cyanide treatment will be continued.

Costs per ton crude ore was \$1.7965; total mining cost was \$676,152; milling cost was \$1.22189 at Colorado Springs and \$2.5186 at both mills.

Production: from the Portland mine in 1912, 44,562 tons, gross value, \$987,416; in 1913, 53,245 tons, gross value, \$1,380,713; in 1914, 62,997 tons, gross value, \$1,467,005; in 1915, 72,192 tons, gross value, \$1,710,277; in 1916,

96,045 tons, gross value, \$2,236,842; with a grand total from April, 1894, to Jan., 1917, of 1,480,106 tons, gross value, \$40,071,567.

In addition the Victor mills produced from 1910-1917, 1,333,937 tons, gross value, \$3,773,298.

Management estimates from 12-15,000,000 tons of low-grade ore in the mines and on the dump.

Company has a co-operative insurance fund and maintains a hospital at Victor, jointly with the Vindicator company, for the benefit of the employees. The management is excellent, and the outlook promising for many years of profitable operations and substantial dividends.

PRINCE ALBERT MINE

COLORADO

Formerly owned by the Prince Albert Cons. Mining Co., and purchased at foreclosure sale in Dec., 1914, by Frank Johanningsmann, of Cincinnati, for \$31,496.

Property: on Beacon hill, near Cripple Creek, Teller Co., Colo., operated under 3-year bond and lease from 1916 by Frank Vetter, who was reported, July, 1916, to have organized the Albert Beacon Gold Mining Co. to take over the mine. Developing through the Hand tunnel.

QUEEN BESS MINE

COLORADO

A fractional claim on Tenderfoot hill, owned and operated by August Hahnewald, Cripple Creek, Colo. The mine is being developed from the 500' and 900' levels of the El Paso Gold King. Reported shipping 3-5 cars of ore per week, that averages \$50 per ton, July, 1917.

QUEEN GOLD MINING CO.

COLORADO

John Lind, supt., Cripple Creek, Colo. A close corporation, reported controlled by John T. Milliken of St. Louis. T. B. Burbridge, pres.; Thornton Brown, sec.-treas.

Property: 90 patented acres on Butte Mtn. and Raven hill, including the Eclipse mine, between the Elkton and Cresson mines, at Cripple Creek, formerly owned by the El Oro Mng. & Dev. Co., and purchased by present company in 1915. Mine is said to show 2 parallel veins, carrying \$15 gold ore.

Development: by 1,000' shaft, with levels every 100'. Equipped with machine drills, hoist, pumps and electric power. Shipped 2 cars of milling ore daily during part of 1916. Employs 8 men.

RAVEN & BEACON HILL GOLD MINING CO.

COLORADO

Office: 309 Exchange Bank Bldg., Colorado Springs.

Officers: W. W. Price, pres.; John T. Hawkins, v. p.; W. B. Price, sec.

Cap., \$170,000; shares 10c; in treasury Jan. 1, 1917, 328,000 shares stock and \$4,500 in cash. Listed on Colorado Springs Exchange.

Property: 17 acres of the Arequa townsite and 7 acres of the Cameron townsite, at Cripple Creek; crosscut by the Roosevelt tunnel. Developed by 554' shaft. The mine has been blocked out for leasing; the Elkton Cons. M. & M. Co. operates Blocks 1 and 2 from the Roosevelt level of the Elkton main shaft.

Gross production to date, \$85,691; none since 1915.

REQUA-SAVAGE MINES CO.

COLORADO

Was formerly the Requa-Savage Gold Mining Co.

Address: 112 Tejon St., Colorado Springs, Colo.

Officers: J. S. Geyer, pres.; J. Yeomans, v. p.; A. Schumacher, sec.-treas.

Reincorporated Nov., 1915, as original incorporation had expired by limitation.

Cap., 1,250,000 shares; 1c par; 393,000 shares in treasury Jan., 1917; also note, secured for \$1,713. Stock listed on Colorado Springs Exchange. Total dividends, \$8,070.

Property: Roman, Savage and Trojan claims, on Beacon Hill, and 1 acre on Gold Hill, Cripple Creek district, Colo., under lease, 1916. De-

veloped by several shafts, deepest 700' and a 100' tunnel. Production to date, \$161,378.

ROSE NICOL GOLD MINING CO.

COLORADO

Offices: Colorado Springs and Cripple Creek, Colo.

Officers: L. L. Aitken, pres.; J. F. Burns, v. p.; A. D. Aitken, sec.-treas., with J. T. Hawkins and R. H. Forbes, directors.

Inc. in Colorado. Cap., \$1,500,000; shares \$1 par; non-assessable; all outstanding. Colorado Title & Trust Co., Colorado Springs, registrar. Income from lessees' royalty, \$156; expenses, \$855.

Property: 11 acres on Battle Mountain, between the Portland, V. G. M. and Cresson mines, Cripple Creek, Colo.

Development: by lessees for 6 years. Workings total 3,000'. Mining to 720' depth by shaft and 1,000' by adjoining Portland mine drift. Rich ore was reported in September, 1917.

Production: in 1916 was \$2,884, making \$22,327 to end of last year.

SCHOOL SECTION LEASING CO.

COLORADO

Address: Victor, Colo. Operates under lease from State, block 8 of School Section 16, on Bull Hill, near Cameron. Company is reported to have operated for 15 years consecutively and to be a steady producer.

SEEMANN INVESTMENT & FINANCE CO.

COLORADO

Address: Box 1375, Denver, Colo.

Officers: Henry I. Seemann, pres.; K. R. Seemann, v. p.; W. S. Lippincott, sec.-treas., Flint, Mich.

Inc. July 12, 1904, in Colorado. Cap., \$100,000; shares \$100 par.

Company owns the following mining claims at Cripple Creek, Teller Co.:—Black Crow Lode, Mayflower Lode, Pride of Grassy Lode, W. E. S., E. F. C., & Rittenhouse, The 4-11-44, Idlewild & Mexican, Dark Cloud and Nada Lodes; and in Clear Creek Co.: Golden Star Lode, Ace of Diamonds Lode, Deuce of Diamonds Lode, Jack of Diamonds Lode, Und. ½ Surprise Ext. West, Vindicator Lode.

The company is not a mining company. It is the intention to lease or sell, or probably form a mining company, and turn the properties over to such company.

STRATTON CRIPPLE CREEK MNG. & DEV. CO.

COLORADO

(Stratton Estate.) Property: the American Eagle, Abe Lincoln and other mines on Bull Hill and Globe Hill at Cripple Creek, with the typical veins of the district. Company is operating the American Eagle mine and has 30 sets of lessees at work on other properties.

Matoa Gold Mng. Co. is a subsidiary, and there are a half dozen or more incorporated leasing companies working on Stratton ground.

STRATTON'S INDEPENDENCE, LTD.

Secretary and offices: H. P. Smith, 3 Lothbury, London, E. C., Eng. Directors: C. F. Rowsell, Ch., F. W. Baker and F. S. E. Drury. Philip Argall & Sons, Denver, cons. engrs.

Inc. Sept. 8, 1908, as a reorganization of a company of same name, inc. April 29, 1899. Cap., £62,500 in 1,000,000 shares of 1s 3d each, all issued; was originally £125,000. Under reorganization plan stockholders were offered one share credited as 1s 6d paid for every old fully-paid £1 share held. On sale of the property it was decided to reduce the capital to present amount, by canceling 9d per share and returning to stockholders 6d per share, thus reducing the shares to 1s 3d each. Plan was approved by the Court, Dec. 14, 1915, and warrants were posted for the return of capital, Jan 7, 1916.

During year ended June 30, 1915, net profit was £12,042, plus £13,233 brought forward. Of total, £12,849 was written off, and £12,426 distributed. Cash amounted to £85,646, debtors £10,720, War Loan £9,943, and creditors £6,122

Dividends: by present company, 1908-9, 5%; 1909-10, 15%; 1910-11, 10%; 1911-12, 20%; 1912-13, 20%; 1913-14, 5%; 1914-15, 13⅓%; paid January 31, 1916.

Company formerly operated the Independence Gold mine and mill at Cripple Creek, Colo., sold, June, 1915, to the Portland Gold Mining Co. for £68,027. Out of the cash received stockholders had returned to them 6d per share, the balance being retained with a view to acquiring a new property. Up to date of sale mine produced ore with a gross value of \$23,621,728, yielding \$8,116,778 in earnings. Present company paid \$455,625 in dividends and had \$510,000 cash on hand after selling the property for \$372,000. Company has closed its business at Cripple Creek and is looking for a new property.

STRONG GOLD MINING CO.

COLORADO

Victor, Colo. Is a close corporation, owned in Colorado Springs.

Property: the Jolly Tar claim, 7½ acres near Victor, in the Cripple Creek camp, shows a cluster of veins in granite, carrying large shoots of ore. The yield of gold per acre is said to be the richest of any mine in the camp.

Development: by 1,600' shaft with extensive levels and drifts. Has 20-drill compressor.

TENDERFOOT HILL CONS. MNG. CO. COLORADO-SO. DAKOTA

Office: 317 Exchange Nat'l Bank Bldg., Colorado Springs.

Officers: W. A. Otis, pres.; L. L. Aitken, v. p.; A. D. Aitken, sec.; T. A. Dines, treas.

Cap., \$1,500,000; shares \$1 par; all issued. Listed on Colorado Springs Stock Exchange. Last stockholders' meeting held 1911. No liabilities and no production. Cash in treasury; Jan. 1, 1916, \$14,210.

Property: 61 acres on Tenderfoot Hill, Cripple Creek district, and 93 acres in the Black Hills, South Dakota.

Development: main shaft on Cripple Creek property, 511' deep with 600' of drifting. Black Hills property has drifts, tunnels and crosscuts totaling about 1,350'.

UNION LEASING CO.

COLORADO

Mine office: Cripple Creek, Colo. C. G. Jackson, supt. Owns a lease on Mabel M. and Husted shafts of Gold Dollar Consolidated Mng. Co. (which see). High-grade ore was opened in 1917.

UNITED GOLD MINES CO.

COLORADO

Office: Exchange Nat'l Bldg., Colorado Springs, Colo.

Officers: A. E. Carlton, pres.; H. McGarry, v. p. and gen. mgr.; R. C. Wilson, sec.-treas.; I. J. Russell, supt.; R. Roelofs, A. E. Carlton, H. McGarry, W. D. Wright and C. S. Davis, directors.

Stock is listed on Colorado Springs Stock Exchange.

Controls several subsidiary mining companies at Cripple Creek, Teller Co., Colo., including the W. P. H., Damon and Montrose Co., Ironclad Hill, May B, Squaw Mountain, Deadwood, Wild Horse, Requa Gold Mining & Milling Co., B. H. & S. M. Co. on Bull Hill. Company leases its mines.

In October, 1917, the B. H. & S. Co.'s property was purchased outright for \$31,642.

Production: by lessees in 1916, 17,435 tons of ore worth \$425,869, against 13,966 tons and \$181,657 in 1915. In August, 1917, the yield was 3,200 tons, worth \$65,800.

UNITED STATES MINING CO.

COLORADO

W. R. Benzie, 502 Majestic Bldg., Denver, Colo.

Inc. in Colorado. Cap., \$50,000; shares \$1 par; non-assessable. "No individual liability." Organized to operate leases in the Cripple Creek district. Is a stockholders' mail order promotion.

VICTOR GOLD MINING CO.

COLORADO

Cripple Creek, Colo. Controlled by Moffatt-Smith estates. Owns the Victor mine, with reported production of \$2,250,000 to 1900. Operated 1916, under lease by A. Osberg. Mine had been inactive for many years and was supposedly exhausted when present lessees began operations.

Main shaft 1,000' deep, has 14 levels. For geology of district see U. S. G. S. Prof. P. 54.

Production: in 1915 varied from 200 to 500 tons monthly, of milling ore yielding \$10 to \$20 per ton.

VICTORY GOLD MINING CO.

COLORADO

Frank Vetter, supt., Cripple Creek, Colo. H. J. Newton, president, promoter, and effusive "slush writer."

Reported to be a consolidation of the Albert Beacon, Cripple Creek General and Gold Camp Syndicate companies in May, 1917, headed by the notorious promoter, Harry J. Newton, with a capital of 5,000,000 shares at 10c par. Some of the claims have produced a good deal of gold and are operated by lessees.

In September, 1917, said to have bought the Leora V. mine, also at Cripple Creek.

VINDICATOR CONSOLIDATED GOLD MINING CO. COLORADO

Office: 603 Symes Bldg., Denver, Colo. Mine office: Independence, Colo.

Officers: G. S. Wood, pres.; I. T. Snyder, v. p. and gen. mgr.; A. F. Zang, v. p. and treas.; G. A. Stahl, sec.; with A. E. Carlton, C. Sigel, Jr., and P. A. Zang, directors. W. E. Ryan, gen. supt.; A. R. Minner, mill supt.; L. A. Noble, cons. engr.; T. H. Sheldon, purch. agent.

Inc. Nov. 20, 1896, in Colorado. **Cap.**, 1,500,000 shares; \$1 par; all issued; non-assessable; no bonded indebtedness. Annual meeting 2nd Thursday in February. International Trust Co., Denver, transfer agent and registrar. Listed on Colorado Springs Stock Exchange.

General Balance Sheet:

(a) Includes depreciation and mine depletion, \$631,794. (b) Includes notes paid, \$910,000. (c) Deficit.

Dividends: 1900, 17½%; 1901, 15½%; 1902, 23%; 1903, 16%; 1904, 9%; 1905, 13%; 1906, 12%; 1907, 13%; 1908, 15%; 1909, 7½%; 1910, 1911, 1912, 1913, 12% each; 1914, 18%; 1915, 15%; 1916, 18%; and to Oct. 25, 1917, 9%; total, \$3,712,500.

Property: a number of patented claims, about 130 acres, at Independence on Bull Hill, Cripple Creek district, Teller County. Owns 95% of stock of Christmas Gold Mining Co. and bought the mine of the Golden Cycle Mining Co., 43.5 acres, purchased March, 1915, for \$1,300,000, fully paid April, 1916. Since then has yielded \$900,000 net. Property includes former holdings of the Keystone Mng. & Mlg. Co. Owns La Bella plant, near Golden Cycle dumps, to be used as a flotation plant. Two acres for millsite and tailing disposal were leased during 1916.

Geology: the plateau on which Cripple Creek is located is mainly made up of a red granite. Breaking through this is a plug of volcanic breccias and tuffs, composed of phonolite, and including many granite fragments torn off and carried up from below. This volcanic core is cut by dikes

and intrusive masses of syenite and phonolite, and latest of all the basalt dikes.

The ores occur in veins which follow a system of steep fissures, the veins being mere fissures with a central film or streak of ore filling and an impregnation of the wall rock on both sides. The low-grade ores are formed by mineralization of the country rock adjacent to such narrow seams. Most of the veins occur in sheeted zones ranging in width up to 40'.

The gold occurs chiefly as the telluride calaverite, with but little silver, but associated with it there are small quantities of iron, copper, zinc, and molybdenum sulphides. The gangue is either quartz and fluorite with some carbonate or merely altered rock. The greatest horizontal extension of any pay shoot thus far opened is about 1,300'. Such pay shoots are many and usually vary from 4' to 40' in length. The vertical extension has not yet been reached in some shoots. For detailed geology see U. S. G. S. Prof. Paper No. 54; "Nature of Ore Deposits," by Beck and Weed, or Lindgren's "Mineral Deposits."

The gold content of the ore from the Vindicator and Golden Cycle mines in 1916 averaged \$22.85 per ton; of the ore shipped by lessees, \$15.88 per ton.

Development: by Vindicator shaft, 1,950' deep, and Golden Cycle, 2,200'; linear extent of workings, about 245,107'. Mining methods, filled stope and square sets.

New openings in 1916 amounted to 22,029', lessees doing 8,294'. Development resulted in 36,261 tons being added to reserves, which was somewhat disappointing. No commercial ore had been opened on No. 20 level of the Golden Cycle, and only a small quantity on No. 19 of the Vindicator; but only 25% of the mineralized area has been prospected. There is no geologic reason why ore shoots should not be found at these points. The present position is a repetition of other mines in the Cripple Creek district. Reserves are estimated at 412,796 tons, of which 100,740 tons are broken in stopes. In addition are 2,000,000 tons of ore-house reject dumps, which contain from 50 to 75c per ton profit. Mining cost \$2.81 per ton hoisted.

Upon completion of the Cripple Creek drainage tunnel, pumping costs, \$42,984, in 1916, will be greatly reduced. In October, 1917, the heading was under 3,000' from the Golden Cycle shaft, advancing about 300' per month. Three 4-stage centrifugal pumps were installed in 1916 on No. 20 level of the Golden Cycle shaft.

Equipment: includes two hoists, Sullivan electric and Ingersoll-Sargent compressors, 3 electric triplex 175-h. p. pumps, electric locomotive on No. 17 level, and steel sharpening shop on No. 16 level. Power is steam and electric. Treatment plants consist of one 300-ton washing and concentrating mill, which handled in 1916 a total of 127,947 tons of \$1.68 ore at a cost of 17.4c per ton. This ore and the reject from the Golden Cycle ore house, averaging about \$2 per ton, is now treated, with the 2,000,000 tons mentioned above, in a 300-ton flotation plant started in October, 1916. Ball mills and the Minerals Separation flotation system are operated. On \$2.26 ore the recovery in January, 1917, was 84.4%, and the process deemed a success.

Production: for 1915 was 218,487 tons crude ore, which yielded 125,397 tons shipping ore; gross value, \$2,164,669; net, \$1,718,022. Lessees shipped 49,188 tons; gross value, \$815,183; net, \$546,364. Received net royalties from lease operations, \$251,624. In 1916, 319,197 tons of crude ore, producing 119,130 tons of \$19.27 ore; the company's share being 57,978 tons of \$22.85 ore, and lessees' 61,152 tons, averaging \$15.88 per ton. The gross value was \$2,295,730, and net value \$1,644,120. Royalties from lessees amounted to \$226,231.

To date the company has produced 696,100 tons of shipping ore. Its net ore receipts were \$12,175,842, and operating profits, \$4,471,131, of which \$3,532,500 was paid in dividends.

Like other Cripple Creek mines, the Vindicator has had its day,

although good ore will continue to be mined for some time; but much of the future lies in profitable treatment of the lower-grade ores.

WAR EAGLE CONSOLIDATED MINES CO.

COLORADO

Address: Cripple Creek, Colo.

Officers: T. Scott, pres.; M. E. O'Bryan, v. p.; W. H. Malone, sec-treas.; the foregoing and S. J. Burris, T. Annear, T. E. Munson and T. R. Countryman, directors. T. R. Countryman, cons. engr.; C. Kissell, supt.

Cap., 5,000,000 shares; par value not reported; in treasury, 4,000,000, to be used in acquiring and developing additional property. Financed by T. M. Pettigrew & Co., Denham Bldg., Denver.

Property: originally 17.3 acres, since increased to 41 acres, in Cripple Creek district, upon which in January, 1916, there was a bond of \$50,000, due in 3 years.

Development: mostly by lessees. Official statements have been mostly with past performances of surrounding properties, and efforts seem to be confined to the sale of stock.

In 1916 the Scott shaft was sunk to 500' in the Happy Year claims. In June, 1917, \$10 to \$15 ore was opened in this ground. On the 400' level the shoot is 110' long, and shipments were made. Great results were anticipated from connections with the Moffat tunnel.

YELLOW BIRD GOLD MINING CO.

COLORADO

Address: J. J. Yeckel, pres. and gen. mgr., Cripple Creek, Colo.

Cap., 1,500,000 shares; 10c par; non-assessable. A new company promoted to revive and develop a group of claims, about 40 acres, on Gold Hill, Cripple Creek, Teller Co., Colo., including the Yellow Bird, Red Bird, Cottontail, Volcano, Mound Rock and Red Jacket. These properties have been inactive for years except for a little work by lessees. Initial offer of stock was made at 2½c a share.

In February, 1917, 250,000 preferred shares were issued in place of an equal number of common shares. Work was then resumed.

CONNECTICUT

NEW HAVEN COPPER CO.

CONNECTICUT

Property at Seymour, Conn., shows a copper-bearing band of hornblende schist, carrying chalcopyrite with some bornite. Operations have been carried on intermittently for several years, the last work being done in October, 1911. Company has power plant on the border of the Naugatuck river.

TUNGSTEN COMPANY OF AMERICA

CONNECTICUT

Office: 115 Broadway, New York. Mine and concentrating plant at Long Hill, Conn.

Officers: B. T. Lyons, pres.; Lawrence Mortimer, v. p.; F. H. Osborn, sec.; E. M. Post, treas.; with H. C. Dickinson and Melville E. Grey, directors; T. Parsons, asst. sec.; Kirby Thomas, cons. engr.

Inc. March 9, 1916, in Delaware. Cap., \$1,000,000; shares \$5 par; all outstanding. Listed on New York Curb.

Statement of assets and liabilities June 9, 1916, shows: assets, \$1,323,140, which includes leases and contracts, \$1,250,000; accounts receivable, \$10,340; ore and concentrates, \$22,500; equipment, \$40,000; cash, \$300. Liabilities include bills payable, \$20,000; accounts payable, \$11,500; surplus, \$68,640.

Property: the old tungsten mine at Trumbull, Conn., was acquired in January, 1916. See U. S. G. S. 22nd Annual Report, 1900-1901.

Geology: consists of wolframite, scheelite and wolfram ocher, occurring in a contact deposit, 3' to 5' thick, between crystalline limestone and hornblende-gneiss; dip 25° N. Company claims ore averages 2 to 3% tungsten.

Development: shallow pits and a short adit. Management states "pending the completion of the new plant, mining operations on a large scale will be continued to block out large bodies of ore and to pile up

ore reserves," also "the cost of mining and milling this ore will not exceed \$5 per ton."

The old buildings were destroyed by fire; plans building a 100-ton concentrator. The present company began production of tungsten concentrates about April 6, and to May 11, 1916, shipped to the Vanadium Alloys Steel Co., Latrobe, Pa., 4,008 lbs., yielding \$8,734. Prior to being taken over by new management the property had been operated in a small way. Mine is an old and well-known mineral producer, but it is very doubtful if it could pay operating expenses should the price of the tungsten ore decline to its anti-war price of \$6 per unit.

No recent information available.

GEORGIA

CROWN MOUNTAIN M. & P. CO.

GEORGIA

Address: Dahlonga, Lumpkin Co., Ga. W. D. McGinnis, mgr. Will erect 100-ton cyanide plant to treat \$6 gold ore.

GEORGIA COPPER CO.

GEORGIA

Has lease, 1917, on the Magruder mine of the Lincoln Gold & Copper Mng. Co., which see.

Address: Magruder Mine, Lincolnton, Ga.

LINCOLN GOLD & COPPER MINING CO.

GEORGIA

Idle. Metasville, Wilkes Co., Ga. Carl Heinrich, pres. and gen. mgr.; Inc. June 11, 1906, in Oklahoma. Cap., \$2,000,000; shares \$1 par; issued, \$1,820,000. Paid 1 dividend, of one-half of 1%. Was practically the successor of the Seminole Mining Co., which was a sad failure. Annual meeting, first Tuesday in Aug.

Property: 901 acres, freehold, known as the Magruder or Seminole mine, just over the Wilkes Co. line, 12 miles from the Georgia Central railroad and 70 miles from Ducktown, Tenn. Shows gray sericitic schists, intruded by eruptive dikes of 2 different ages, with 4 veins in schist and between schists and eruptive rocks. They have an average strike of N. 30° E., to N. 40° E., and dip of 50° to vertical, veins averaging 3 to 14' in width, and traceable 1,200', showing ores consisting of pyrite with chalcopyrite, some bornite, cuprite and melaconite, estimated by company to average 2.5% copper, 3% lead, 1.5% zinc, 4 to 5 oz. silver and \$5 gold per ton.

The mine, opened 1852, and closed 1862, on account of the American Civil War, was reopened 1878, 1899 and 1905.

Development: by a 225' main shaft, a 150' air shaft and shafts of 40', 45' and 80', with about 1,500' of workings.

Equipment: includes a 175 h. p. boiler, 12 h. p. and 15 h. p. hoists and a 4-drill Rand air compressor. There are 10 buildings, including a machine shop, smithy, assay office and boarding house.

The small and ramshackle mill is equipped with a Gates centrifugal crusher, set of rolls, Twentieth Century jig, 2 Bartlett tables, elevators and revolving screens.

The toy smelter, immediately adjoining the concentrator and very close to the mine, has a 16-ton rectangular water-jacket blast furnace, and a 10-ton reverberatory furnace, making, when in operation, a matte of 15 to 20% copper tenor, carrying 20 oz. silver and 1.5 to 3 oz. gold per ton, shipped to the Maurer works of the American Smelting & Refining Co. for reduction, first-class ore and concentrates also being shipped to Maurer.

Mine under lease, 1917, to the Georgia Copper Co., a Tennessee corporation.

IDAHO

The great mining region of the State is in the Coeur d'Alene, in Shoshone Co., but inasmuch as the properties of the Boise section, of Hailey, Mackay, Seven Devils and other camps can be easily found under the county name, they are grouped that way.

*BOISE, Ada County***WEST COAST MINES CO.****IDAHO**

Directors: C. E. Stables, sec.-treas., Lansing, Mich.; Wm. L. Hoag, pres., Lansing, Mich.; H. C. Wyman.

Property: the Pearl mine near Boise, Idaho, showing a vein of gold-silver ore.

Idle in 1917 for want of capital.

*ADAMS COUNTY***AMERICAN MINING CO., LTD.****IDAHO**

Office: 630 Monroe Ave., Helena, Mont. Mines are located in the Seven Devils district, Idaho.

Officers: A. H. Kleinschmidt, pres.; Maria Kuphal, sec.; A. H. Kleinschmidt, treas.; preceding officers and Louis Hillehecht, directors.

Inc. Oct. 2, 1910, in Montana. **Cap.**, \$50,000; shares \$1 par; non-assessable; issued 25,000 shares, sold at \$1.

Property: A number of patented claims in Montana, also a one-half interest in the Blue Jacket and Queen mines, near Landore, Adams Co., Idaho. The Blue Jacket mine has a 400' shaft, and the Queen has a 1,500' tunnel; these properties said to have produced about \$250,000 in ore, with smelter returns up to 47% copper. The company's half interest in this group is under lease to John C. Rogers, Huntington, Ore. on a royalty basis.

Holdings also include a five-eighths interest in the Peacock, White Monument, a two-third interest in the Helena mines, held jointly with A. M. Holter and S. T. Houser; and a one-half interest in the Blue Jacket No. 2, Copper Queen, Norma, Legal Tender, Copper Crescent and Calumet mines, held jointly with Mr. A. C. Johnson and Amelie H. Kleinschmidt.

The Peacock mine, discovered 1869, is the most noted property and the largest producer in the Seven Devils district, having 1,500' of workings, said to have produced 25,000 tons of high-grade ore, and estimated to show 200,000 tons of 4½% copper ore with about \$5 combined gold and silver values per ton. Shipments, 1903, returned 13.3 to 18.3% copper, from 3 to 5 oz. silver and \$1.33 gold per ton; and 11 shipments to the Oregon Smelting & Refining Co. gave returns of 20.5 to 40.2% copper, 1.15 to 8.7 oz. silver and \$1.20 to \$3.40 gold per ton. Production, 1905, was 500 tons of ore, of about 15% copper tenor, equal to 150,000 lbs. fine copper. Property idle since 1909, owing to litigation.

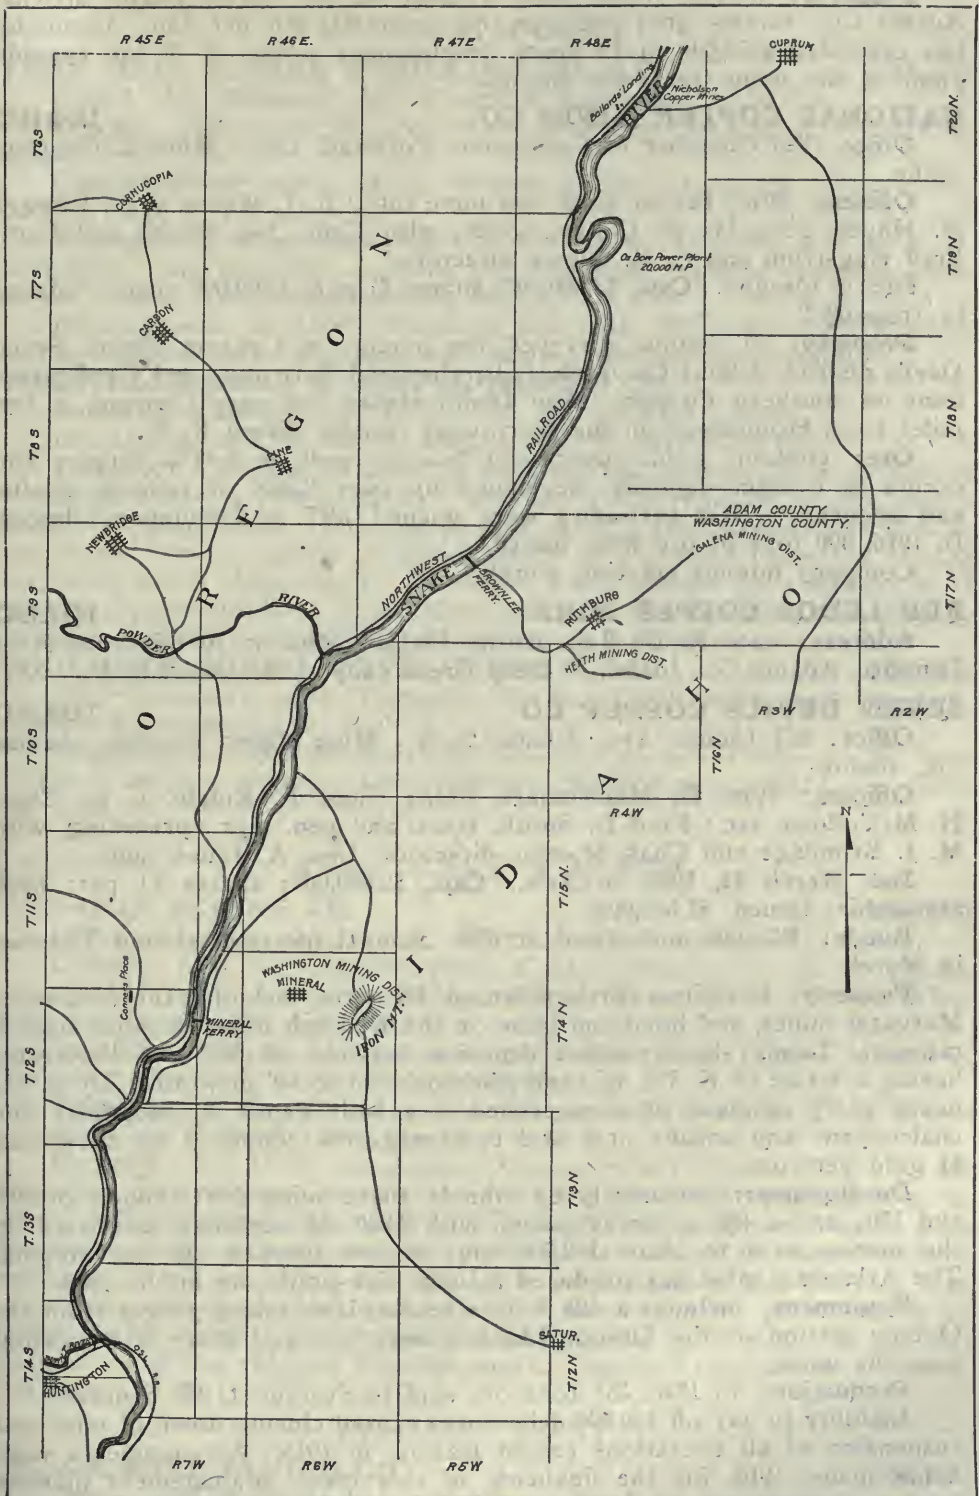

See Mines Handbook, Vol. XII.

BLUE JACKET COPPER CO., LTD.**IDAHO**

Company has discontinued operations. Fully described Vo. XI, Copper Handbook.

IDAHO GOLD COIN CO.**IDAHO**

Controlled by the Salger Seed Co., La Crosse, Wis. S. W. Ford, supt., Landore, Idaho.

SOME MINING DISTRICTS NEAR THE IDAHO-OREGON BORDER

Property: in the Black Lake section of the Seven Devils district, Adams Co., carries gold ore assaying from \$12-\$16 per ton. Company has expended \$250,000 in 12 years development work. A 50-ton cyanide plant at the mine treats the output.

NATIONAL COPPER MINES CO.

IDAHO

Office: 926 Chamber of Commerce, Portland, Ore. Mine at Cuprum, Idaho.

Officers: Wm. Trevor, pres. and mine supt.; R. J. Marsh, v. p.; Edward H. Hayes, sec.; W. F. Coffey, treas., with Capt. Jas. Wolfs and Capt. Fred Hagstrom and C. H. Skews, directors.

Inc. in Oregon. **Cap.**, \$3,000,000; shares \$1 par; 1,500,000 shares "placed in treasury."

Property: 31 claims, surveyed for patent, in Cuprum Basin, Seven Devils district, Adams Co., Idaho; also the Gold Barr mine and Coad placer mine in southern Oregon. The Idaho claims are near Cuprum, a few miles from Homestead on the Northwest (Snake River) R. R.

Ore: contains gold, silver, and lead as well as 5-17% copper, and occurs in contact deposits, developed by over 3,500' of tunnels, shafts, and opencuts. New orebodies were opened 1917, and shipments began. In 1916, 300 tons of ore were mined.

Company intends erecting a mill.

RED LEDGE COPPER MINE

IDAHO

Address: care R. N. Bell, Boise, Idaho. Mine is 10 miles north of Landore, Adams Co., Idaho, in Deep Creek canyon, described in Vol. XII.

SEVEN DEVILS COPPER CO.

IDAHO

Office: 217 Linden Ave., Ithaca, N. Y. **Mine office:** Landore, Adams Co., Idaho.

Officers: Wm. K. MacNamara, pres.; Chas. F. Riddle, v. p.; Chas. H. McColloch, sec.; Fred D. Smith, treas. and gen. mgr.; preceding, with M. J. Brundage and Chas. Marvin, directors; Geo. A. Jones, supt.

Inc. March 31, 1908, in Ariz. **Cap.**, \$2,000,000; shares \$1 par; non-assessable; issued, \$1,558,993.

Bonds: \$250,000 authorized at 6%. Annual meeting, second Tuesday in March.

Property: 15 claims, partly patented, 134 acres, including the Arkansaw, Margaret mines, and bond and lease on the Decorah mine, 16 miles from a railway. Lands show contact deposits, between diorite and limestone, having a strike of N. 75° W., and said to be 15 to 50' in width. These deposits carry oxidized ores, succeeded at a little depth, by sulphides, the chalcopryite and bornite ores said to average 5% copper, 2 oz. silver and \$1 gold per ton.

Development: exclusively by tunnels, there being drift tunnels of 900' and 150', and a 483' crosscut tunnel, with 2,800' of workings, estimated by the management to show 182,700 tons of ore blocked out for stoping. The Arkansaw mine has produced a little high-grade ore in the past.

Equipment: includes a 125 h. p. electric plant, taking power from the Oxbow station of the Oregon-Idaho Power Co., and there is a sawmill near the mine.

Production: to 1916, 555 tons ore said to average 11.2% copper.

Inability to pay off \$20,000 debentures caused closing down of mine and suspension of all operations except leasing, in 1915. Arrangements were being made, 1916, for the financing of this loan. Management planned further development of Iowa tunnel and addition of compressor, drills, etc., at last reports.

BANNOCK COUNTY**FORT HALL MINING & MILLING CO., LTD.****IDAHO**

Care C. W. Pomeroy, sec., Pocatello, Bannock Co., Idaho.

Officers: Wm. A. Hyde, pres.; C. W. Pomeroy, sec.; M. A. Hendricks, treas.**Cap.,** \$1,000,000; shares \$1 par; 600,000 shares in treasury. Stock listed on Salt Lake City Exchange.**Property:** 23 unpatented claims, 7 miles from Pocatello, said by R. N. Bell, State mine inspector, to show big, low-grade deposits of copper-iron-sulphide ores, not as yet profitably mined.**Development:** by 6,000' of tunnels, 300' shaft, 200' winze, 100' of raises and 300' of crosscuts. Equipped with steam power and 50-ton mill.**POCATELLO GOLD & COPPER MINING CO.**

Pocatello, Bannock Co., Idaho. H. W. Lockhart, pres.

Inc. Dec. 1, 1902, in Idaho. **Cap.,** \$1,000,000; shares 50c par.**Property:** 7 claims, 140 acres, in the Fort Hall district, 12 miles east of Pocatello, shows a vein of about 3' average width, reported to give assays of 30% copper, 13.8 oz. silver and \$1 gold per ton, from bornite and chalcoppyrite ore. Ore is mainly of milling grade with a small paystreak of rich ore, from which shipments to the White Knob smelter gave returns of 17 to 30% copper and 15 to 18 oz. silver per ton. Development is mainly by short tunnels, with about 1,000' of workings. Presumably idle.**SOUTHERN IDAHO DEVELOPMENT CO.****IDAHO**

D. J. Mahoney, supt., Pocatello, Idaho. U. B. Sollie and Dr. J. C. Arnout, directors.

Property: group near Pocatello, showing a vein of copper ore, from which a carload shipped, 1916, returned 17.7% copper and 4 oz. silver per ton.**BEAR LAKE COUNTY****BONANZA MINING CO.****IDAHO****Office and mine:** Montpelier, Bear Lake Co., Idaho.**Officers:** Col. E. J. Parrish, pres.; E. M. Stewart, v. p.; A. D. Young, sec.; H. H. Hoff, treas.; preceding officers, Chas. Sweet, M. F. Whitman and Ira Chaffin, directors.**Inc.** Nov., 1905, in Idaho., successor of Montpelier Copper Mining & Smelting Co. **Cap.,** \$5,000,000; shares \$1 par.**Property:** 25 claims, unpatented, 500 acres, 9 miles S. W. of Montpelier on the Oregon Short Line Ry.**Geology:** the U. S. Geological Survey report (Bull. 430-B., p. 49) describes the geological occurrence of the ore as an impregnation of sandstone and underlying shale, only 4' thick in all, with copper carbonate stain associated with carbonized fossil plant stems. There is no well-defined orebody. Good specimens are obtainable but average values are very low. Workings includes a shaft said to be 350' deep on a dip of 50° and a 50' shaft farther south. The copper bed is traceable for 8 miles on the east side of a Red Bed ridge of Permian rocks. Property regarded as of doubtful value.**BLAINE COUNTY****BLACK BARB MINING CO.****IDAHO****Office:** 625 Rookery Bldg., Spokane, Wash.**Officers:** Raymond Guyer, pres. and mgr.; Wm. Black, v. p.; H. L. McNair, sec.-treas.; J. G. Sawyer, supt., Hailey, Idaho.

Inc. March 21, 1917, in Idaho. **Cap.**, \$1,500,000; shares \$1 par; all outstanding.

Property: 14 claims, 4 patented, 280 acres in Mineral Hill mining district, Blaine Co. Ore contains gold, silver, lead and zinc with iron pyrites, occurring in quartz fissure veins in limestone.

Development: consists of 2,600' of underground workings, including tunnels, 600', 200' and 300' in length.

BOSTON-IDAHO MINING CO.

IDAHO

Office: 720 Scollay Bldg., 40 Court St., Boston, Mass. **Mine office:** Ketchum, Blaine Co., Idaho.

Officers: Levi Diamond, pres.; Joseph Briggs, v. p.; Winthrop, Me.; M. A. Costello, sec.; E. M. Schwarzenburg, treas., with A. H. Bailey, Winthrop, Me.; David A. Calhoun, Portland, Me.; J. H. Hickey, Boston, Mass. and W. C. Smith, directors; C. Fred Howe, supt., Ketchum, Idaho.

Inc. May 28, 1907, in Maine. **Cap.**, \$2,500,000, in 1,000,000 common; \$1 par; and 150,000 preferred, \$10 par. In treasury \$200,000 common, \$1,300,000 preferred. Bonded debt, \$125,000 authorized, \$110,000 issued.

Should not be confused with another company of same name, operating 2 gold dredges on Elk and Moore creeks, near Idaho City, which has a bond on the Banner mine.

Property: 500 acres, 29 claims, 7 patented, 12 held by location, 8 leased and bonded; 2 mill sites, at Boyle Mtn., Idaho, comprising one zinc and two lead-silver mines. Claims cover a granite-limestone contact showing fissure veins a few inches to several feet wide, cutting across the granite. Veins carry complex sulphide ores showing argentiferous galena, zinc blende and other sulphides in irregular stringers and replacements. The ore shipped is reported to show from 9% lead and 10 oz. silver to 79% lead and 36 oz. silver, per ton, with 19% to 54% zinc. Over a million dollars' worth of ore is reported to have been taken out by former owners.

Development: 3,000' tunnel work with depth of 900'.

Property large, requiring \$150,000 or more to develop lead-silver and \$100,000 to explore zinc deposits, and company thus far has not been able to secure funds for this work.

Equipment: includes 100-ton Traylor mill. Buildings include an office, laboratory, 2 warehouses, boarding house, bunk house, 2 smithies, 2 stables, 2 powder houses, a 5,000' sawmill, 2 ore houses and 8 dwellings.

COPPER & URANIUM MINING CO.

IDAHO

Office: Rexburg, Idaho. **Mine office:** Clyde, Blaine Co., Idaho.

Officers: N. P. Hansen, pres.; M. H. James, v. p.; Alfred J. Cole, sec.-treas. and mgr.; preceding officers and James Shail, directors; H. Hill, supt.

Assessment of 1/5c a share levied July 30, 1917.

Property: known as the Automatic mine, near the Wilbert mine, in the Hamilton district, 40 miles from Arco, has a 125' shaft on a 10' contact vein between limestone and quartzite, said to show copper and uranium ores.

Development: by 800' tunnel at a vertical depth of 400'. The last 30' are reported to have been driven on 15' vein with a narrow streak showing 7% to 17% copper. Ore, for shipments comes from a 5' vein on upper levels. Plans new tunnel. Ships from Arco.

CROESUS GOLD & COPPER MINING CO.

IDAHO

Company dead. See Croesus mine.

CROESUS MINE

IDAHO

Reported sold, Dec. 1, 1915, to F. C. Robertson, Spokane, Wash. Formerly belonged to Croesus G. & C. Mng. Co.

Mine, 4 miles west of Hailey, Blaine Co., has an 800' three-compartment vertical shaft, on a 20 to 60' fissure vein of nearly vertical dip, in granite; pay streaks on both walls said to carry chalcopryite, with value mainly in gold. There also is a nearly vertical blind vein, apparently joining the main vein at depth, carrying silver-lead ore at depth of 600'.

Equipment: includes steam and electric power, and a 12-drill electric air compressor. The 100-ton concentrator has 10 stamps, crusher, rolls and Huntington mills.

Idle for some time, but development under way in 1917. Under previous owners, output was \$75,000 in 2 years.

GOLDEN GLOW MINING CO.

IDAHO

Office: 403 Commercial Bldg., Portland, Ore., T. Papworth, pres., sec. and treas.

Cap., \$750,000; shares 50c par.

Property: near Ketchum, Blaine Co., Idaho, contains low-grade silver-lead-copper ore, opened by tunnels. Operated intermittently only.

IDAHO EXPLORATION CO.

IDAHO

Property: a group of patented claims in Kelly Gulch, W. of Hailey, Blaine Co., Idaho, showing lead-silver ore at surface. A rich strike made in 1915, said to have disclosed an orebody several feet wide, assaying 110 oz. silver and 70% lead per ton. Under development in 1916; nothing new in 1917.

INDEPENDENCE MINING CO.

IDAHO

Address: Mrs. H. J. Allen, Hailey, Idaho.

Property: in Wood River district optioned until November 15, 1917 to Federal Mining Co. of Wallace, for \$300,000.

MASCOT MINING & MILLING CO.

IDAHO

Address: Pocatello, Idaho. **Mine office:** Hailey, Idaho.

Officers: Chas. Peter, pres.; J. M. Stevens, sec.-treas., with E. S. Keys, Paul Gardner, A. Walton, A. J. Weber and O. Olson, directors; A. Rammelmeyer, supt.

Inc. March 6, 1915, in Idaho. **Cap.,** \$1,000,000; shares \$1 par; outstanding, \$650,000. Annual meeting, first Monday after first Tuesday in Oct.

Property: 7 claims, 4 patented, 150 acres, at Peter, near Hailey, in Warm Springs Creek mining district, Blaine Co., Idaho, said to show gold, silver and lead ore in a vein in limestone-shale formation.

Development: main workings at Silver Fortune claim. The Perkins tunnel cut a vein at 50', which is 35' wide in one place. One shoot yields 60% lead ore. Milling ore exists in fair tonnages.

Equipment: hydro-electric power, hoist at 80' shaft. 100-ton mill to be erected in Fall of 1917, sawmill, etc.

MINNIE MOORE MINES CO.

IDAHO

Officers: I. E. Rockwell, Bellevue, Idaho, pres.; J. A. Blomquist, v. p.; Lalla Rookh White, sec.-treas.

Cap., \$500,000; shares \$1 par.

Property: at Bellevue, in the Mineral Hill district, Blaine Co., was bonded to Chas. M. Schwab interests but relinquished by them in 1906 when ore was found to be cut off by complex faulting.

In June, 1912, all the property of the Idaho Cons. Mines Co. was bought at receiver's sale and in 1914 the Mill Site and Onyx lode claims were bought for \$5,000. Some lead and zinc concentrates have been shipped. Probably idle, 1917.

SMOKY BULLION GROUP

IDAHO

E. A. Worswick, mgr., Lovelocks, Nev.

Property: 3 claims, patented, 57 acres, on headwaters of Smoky river

near Hailey, Blaine Co., Idaho, contains a big deposit of low-grade concentrating ore opened for 4,200' on a contact zone between granite and limestone. Ore carries galena chalcopyrite and zinc. The sulphide shows on the surface.

Development: amounts to 2,000', mostly by tunnels, one 600' long, with 375' back. Property has been examined by Prof. Knutson and by J. M. Wilfley.

Property has milling plant erected by an eastern syndicate which spent \$100,000 on the property and allowed it to be sold for taxes. Regarded as a promising prospect.

Reported in July, 1917, that mine was being reopened by A. G. Kirby of Toronto, Ontario, under lease.

UNITED MINES CO.

IDAHO

Office: 501 C. of C. Bldg., Spokane, Wash. **Mine office:** J. L. Magney, Fairfield, Idaho.

Officers: T. S. Griffith, pres.; E. J. Peterson, v. p.; L. J. Raef, sec.; Chas. Uhden, treas., with V. A. Johnson, E. A. Worswick, Jack Wallace and J. C. Lawrence, directors.

Inc. May 17, 1916, in Washington. **Cap.**, \$250,000; shares 25c par; non-assessable; 659,670 issued.

Property: 8 claims, 160 acres, 13 miles N. E. of Fairfield, Blaine Co., Idaho, said to show a fissure vein in granite, dipping 45° with N. S. course. Shoots are 3 to 7' wide, 260' long and 150' deep. Ore is mostly sulphide, carrying pyrite, galena and chalcopyrite. Value in gold, silver and copper is \$20 per ton.

Development: by 511' tunnel, opening to 157' depth with total of 897' of workings. Ore reserves estimated at 30,000 tons, 13,000 tons blocked out. The lower tunnel is being extended to gain depth.

Equipment: 10-stamp mill and 2 concentrators, to be enlarged, including flotation.

UTAH BELLEVUE MINES CO.

IDAHO

Bellevue, Idaho.

Officers: A. W. Kelley, pres. and mgr.; T. H. Saxman, v. p.; L. H. Goulet, sec. and treas., with J. E. Naylor and M. Cullinson, directors.

Cap., 500,000 shares; in treasury, 165,000. No bonded indebtedness.

Property: 3 claims in Wood River district, Blaine Co., Idaho, said to show silver, lead, zinc ore. Developing at last accounts.

WILBERT MINING CO., LTD.

IDAHO

Office: 222 Kearns Bldg., Salt Lake City, Utah.

Officers: A. S. Ross, pres. and gen. mgr.; J. A. Foley, sec.-treas.; D. J. Lennion, supt.

Inc. in Utah, 1907. **Cap.**, \$1,000,000; shares \$1 par; assessable; all issued. Annual meeting May. Stock transferred at company's office. Listed on Salt Lake Stock Exchange.

Dividends: \$10,000, Nov. 15, 1915; \$40,000 in 1916; and \$30,000 in 1917 to October.

Receipts for year ending May 1, 1917, were \$181,389 and disbursements, \$128,475, dividends, \$40,000; leaving \$12,914 cash in bank. Received from ore sales, \$120,889.

Property: 16 patented claims, in the Dome mining district, 40 miles from Arco, Fremont Co. The claims have a fissure vein in Cambrian quartzite that contains lead and silver ore, mostly of concentrating grade. The top of the vein has been folded into a nearly horizontal bed, worked by quarrying. The main ore-shoot has been followed to a depth of 600', and is stoped out from No. 5 level to the surface, May 1, 1916.

Development: in 1916-17, 1,045' of new work cost \$9.61 per foot, and a new shaft was sunk 152', costing \$7,493. By the end of 1917 this incline will be 800' deep, connecting with the fifth level, and reducing handling.

Equipment: includes a 100-ton concentration mill. In the annual statement, value of the mill is placed at \$65,000, and that of the mine plant, \$50,000.

Production: for year ending May 1, 1916, was 15,204 tons crude ore, assaying 25% lead and 3.86 oz. silver, which yielded by sorting and concentration, 5,787 tons, assaying 52% lead and 8 oz. silver. Costs were \$3.56 per ton.

In 1916-17, the mill treated 6,981 tons of 18.7% lead and 4.9 oz. silver ore, yielding 1,758 tons of concentrate, assaying 54.2% lead and 15.3 oz. silver. Extraction was 72.9% and 78.6% respectively. Milling cost \$1.89 per ton.

In Sept., 1917, the output was from \$15,000 to \$20,000 net per month.

BOISE COUNTY

GOLD HILL & IOWA MINES CO.

IDAHO

Quartzburg, Boise Co., Idaho, E. E. Carter, mgr.

Property: Gold Hill & Iowa groups, at Quartzburg, said to show gold-quartz ore averaging \$7 per ton.

Development: 10,000' tunnel and shaft.

Equipment: 20-stamp mill, 10' Lane mill, 8' Hardinge mill, tables, Lenn amalgamators, cyanide plant, compressor, stamps, electric power. Employs 50 men. A production of \$5,000,000 is claimed for the property.

LAKINA COPPER CO.

WASHINGTON-IDAHO

Office: Eagle Bldg., Spokane, Wash.

Officers: E. A. Patrick, pres. and mgr.; E. J. Coleman, v. p.; T. E. Coleman, sec.-treas., with G. W. Dickinson, H. R. Waters and L. N. Koonz, directors.

Cap., \$3,000,000; shares \$1 par; 1,750,000 shares outstanding.

Property: 2 claims, 40 acres, in Deadwood mining district, 3 miles N. E. of Lowman, Boise Co., Idaho, and 4 claims, about 25 miles N. of Twisp, Okanogan Co., Wash. The Idaho property is a free milling proposition reported to carry a fissure vein, 30' wide, traversing granite-porphyry and giving assays of from \$48-\$76 per ton. Both properties are under development.

LUCKY BOY GOLD MINING CO.

IDAHO

Office: Empire Bldg., Boise. **Mine office:** Idaho City, Idaho.

Officers: Thos. Brown, pres.; E. W. Barry, v. p.; Fred V. Tinker, mgr., with R. E. Highnote, F. E. Johnesse and John G. Huber, directors; T. E. Rippey, sec.-treas.

Inc. Sept. 30, 1914, in Idaho. **Cap.,** \$500,000; shares \$1 par; 320,000 shares outstanding.

Property: 7 claims, 120 acres, in Gambrinus mining district, Boise Co., said to show a shear zone, 3'-40' wide, of granite porphyry, carrying some quartz streaks and considerable soft talc. The orebody runs E.-W. and dips about 60°. Ore is free gold and said to average \$4.78 per ton.

Development: by 300' shaft and 840' tunnel to depth of 360', with 2,100' of drifts and crosscuts.

Equipment: includes Newark 12"x14" compressor, electric power, 100 h. p. crude oil engine direct connected to 55 k. w. electric generator, 100-ton Marathon mill and electric hoist.

Ore reserves: estimated Feb., 1916, 130,000 tons of ore. Credited with

production of \$130,000 under former owners. Present management competent and property considered promising.

McKINLEY GOLD MINES CO.

IDAHO

M. F. Smith, sec., 506 Gumbel Bldg., Kansas City, Mo.

Inc. in Ariz. **Cap.**, \$1,000,000; \$1 par. Has spent \$75,000 without return.

Property: 700 acres on Jupiter Mountain, Boise Basin, 6 miles from Idaho City, Idaho, shows a big vein carrying erratic values.

Development: a crosscut tunnel which has not yet reached the vein. Idle for lack of funds.

NATIONAL MINING & DEVELOPMENT CO.

IDAHO

Address: A. C. Gallupe, pres., Placerville, Boise Co., Idaho.

Inc. Sept. 23, 1911. **Cap.**, \$1,000,000; shares \$1 par; divided into 600,000 common and 400,000 preferred shares.

Property: the Mountain Chief mine at Placerville, Boise Co., Idaho, shows gold-silver ore in a fissure vein, 1-3' wide. Ore averages from \$20-\$25 per ton. Developed by 5 tunnels.

Equipment: includes 30-ton all-sliming cyanide plant.

Producing since 1912. Property promising. Geology described 17th Annual Report of the Mineral Industry of Idaho, 1915.

NELLIE BLOOM MINING CO.

IDAHO

M. E. Hopkins, supt.

Property: the Nellie Bloom mine, about 2 miles from Horse-shoe Bend, Boise Co., Idaho, shows a shoot of oxidized gold ore, 3-5' wide, 500' long at depth of 300', said to carry average milling values of \$10 per ton.

Equipment: includes a 10-stamp mill and electric power. Employs 16 men. Management estimated six months' supply of free milling ore blocked out Jan., 1916.

BONNER COUNTY

ARMSTEAD MINES CORPORATION

IDAHO

(Formerly the Blacktail Mining Co.)

Sagle, Pend d'Oreille Lake, Idaho.

Officers: H. H. Armstead, pres. and mgr., Washington, D. C.; A. H. Burroughs, v. p.; Karl Jungbluth, 2nd v. p.; H. D. Kingsbury, treas.; H. L. Brown, sec., with C. C. Dula and J. Peterson, directors.

Property: the Keystone, or Blacktail mine, on Blacktail mountain, west side of Pend d'Oreille lake, near Blacktail landing, Shoshone Co.; mine was formerly owned by the Keystone Mines Corporation (described in Volume XII).

Development: to depth of 900' by 1,400' tunnel, with a 1,000' upraise and about 3,000' of drifting, said to expose 20,000 tons to 70,000 tons of ore with gold-silver-copper values, averaging \$25 per ton, mainly in silver.

New equipment has been installed and company is extending 1,400' Rainbow No. 3 tunnel, 2,200' further to cut the vein at a depth of 1,600'. At the end of October the heading was about 1,800' in. A concentrator is planned. Property sold by Blacktail Co. (Volney D. Williamson), for \$250,000 in June, 1917. This resulted in a distribution of 13½¢ a share to the 1,746,440 shares of the old company.

IDAHO CONTINENTAL CO.

IDAHO

Officers: A. Klockman, pres. and gen. mgr., 711 Paulsen Bldg., Spokane, Wash.; J. B. Whitehill, v. p.; R. Schacht, sec.-treas.; preceding, with E. M. Robinson, Wm. Wraith, directors.

Inc. 1909, in Wash. **Cap.**, \$1,500,000; shares \$1 par; all issued. John D. Ryan, through the International Smelting & Refining Co., advanced \$325,000

for the development of the property on condition that it be given a 10-year contract to treat the company's ores, and receive an option on 150,000 shares at 50c a share.

Property: 20 patented claims, 26 miles from Port Hill, Bonner Co., Idaho, N. of head of Priest Lake, said to show a strong vein in quartzite and slate with a succession of ore shoots, 8' to 20' wide, carrying galena and a little copper ore. These ore shoots have been opened to a depth of 600' and on that level exceed 1,000' in length. Is an important new lead producer. A 300-ton concentrator was erected and was operating during June and July, 1915, producing over 2,000 tons of concentrates, when destroyed by fire. Rebuilt 1916.

Output: 30 to 40 tons concentrates daily.

IDAHO-MONTANA AMALGAMATED MINING CO. IDAHO

Owens the Idaho-Montana mine, near Kalka station, on the Great Northern R. R., 7 miles E. of Bonner's Ferry, Bonner Co., Idaho.

Developed by a 400' incline shaft which discloses a 2 to 4' vein in diorite, containing lead and silver values associated with iron sulphide, expected to develop copper with depth. Has 50-ton concentrator.

Considered promising.

LAWRENCE MINING & MILLING CO., LTD. IDAHO

Office: 728 Mission St., Spokane, Wash. **Mine office:** Clarke Fork, Idaho.

Officers: Jos. Reed, pres. and mgr.; O. A. Turnbow, v. p.; S. Hilliard, sec.-treas., with John Callan and W. W. Wood, directors.

Cap., \$75,000; shares 5c par; 1,472,794 outstanding.

Property: 10 claims, about 1½ miles from Clarke Fork, said to carry gold-silver-copper-lead ore in fissure vein, 2" to 9' thick.

Development: 1,000' tunnel. Equipped with 60-ton concentrator, pump and compressor. Property considered promising, but development hampered by lack of capital.

PONDERAY SMELTER IDAHO

Sandpoint, Bonner Co., Idaho. Owned by Idaho Smelting & Refining Co., whose properties were sold at sheriff's sale to Union Trust & Bank Co., of Spokane. A new company will be formed by the bondholders.

BONNEVILLE COUNTY

CARIBOU GOLD MINES CO. IDAHO

Office: 325 Kearns Bldg., Salt Lake City, and Mount Pisgah, Idaho.

Officers: John W. Clark, Jr., pres.; J. P. Fanning, v. p. and gen. mgr.; J. W. Stringfellow, sec.-treas., with C. R. Bates and A. B. Rockhill, directors. Company was formed in 1915 to take over the property of the Idaho Gold Mining Co.

Cap., 1,000,000 shares, par value 1c. All outstanding.

Property: 13 claims and a millsite, 2 claims and millsite patented, in Mount Pisgah district, Bonneville Co., 42 miles from Soda Springs. The mine was first operated in the early 70's, but was closed down on account of poor management, after an accredited production of \$200,000 from free milling gold ore. Mine has been idle for 15 years, but present company believes it can be made to pay as the ore, though low-grade, is said to be in a vein 18 to 30' wide, and capable of being mined cheaply.

Developed by tunnels, main tunnel over 400' long and a 280' shaft.

Ore reserves: said to have blocked out 12,000 tons, in 1915, averaging \$6.14 per ton in gold.

Equipment: 10-stamp mill, 100 h. p. engine, air compressor and hoist.

BOUNDARY COUNTY

IDAHO GOLD & RUBY MINING CO.

IDAHO

Address: Lenia, Boundary Co., Idaho.

Property: gold placer. In Feb., 1917, company spent \$12,000 on plant capable of hydraulicking 25,000 cu. yd. gravel daily.

CASSIA COUNTY

MELCHER MINING & MILLING CO.

IDAHO

Office: 409 Hooper Blk., Salt Lake City, Utah. **Mine office:** Albion, Cassia Co., Idaho.

Officers: Samuel McIntyre, Sr., pres., gen. mgr. and treas.; R. M. Wilkinson, sec. and purch. agt.; P. McIntyre, supt.

Inc. in Utah. Cap., \$50,000; shares 10c par; 500,000 issued.

Property: 37 claims, including former holdings of the Cumora Mining Co., bought 1912, in the Stokes district, 25 miles from a railroad. Country rock is schist, granite and quartzite, orebodies occurring as fissure veins in both schist and granite. The vein developed runs N. 10° E. and dips 68° west.

Development: by two shafts and 4 tunnels, one 3,290' long. Shows a 3' quartz vein carrying chalcopryite and galena and lead carbonates, said to average 5% copper, 4% lead, 5 oz. silver and \$5 gold per ton.

Equipment: includes 200 h. p. steam and water power plant, 5-drill air compressor and 6 small buildings. Company developing vein in Giant tun-

nel and driving the Melcher crosscut tunnel to crosscut the 3 veins. A 100-ton concentrating mill is being built.

CLEARWATER COUNTY

KING DAVID CO.

IDAHO

Address: 302 Hyde Bldg., Spokane, Wash. **Mine office:** Neva, Idaho.

Officers: A. R. Immisch, pres.; W. L. Smith, v. p.; P. A. Hughes, sec.; L. A. Smith, treas., with J. A. Brown and F. C. Dolke, directors.

Inc. Aug. 27, 1915, in Washington. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; 1,150,000 issued.

Property: 6 unpatented claims in Ruby Creek district, Clearwater Co., Idaho.

Geology: contact veins in trachyte and metamorphic granite with vertical streaks, 1 to 4", carrying 45 to 63% zinc, with some lead-silver values.

Development: by 100' shaft.

Equipment: includes steam hoist, compressor, pump, etc. A prospect.

COEUR d'ALENE DISTRICT, SHOSHONE COUNTY

ADVANCE MINING CO.

IDAHO

Office: 824 Vine St., Missoula, Mont. **Mine office:** Mullan, Shoshone Co., Idaho.

Officers: F. D. Fox, pres.; Herbert Crego, v. p.; Henry Hubert, sec.-treas.; preceding officers, and F. H. Murphy, directors; Joe Peila, mgr.

THE COEUR d'ALENE REGION (SHOSHONE COUNTY), IDAHO

Inc. 1903. **Cap.**, \$1,000,000; shares \$1 par, assessable. Last assessment, 5 mills per share, levied May 8, 1916.

Lands: 5 unpatented claims, 4 miles from Mullan, on Snowstorm Hill, lying between the Snowstorm on the east and the Butte & Coeur d'Alene on the west and 107 acres of timber land.

Development: by 1,550' tunnel with 2 crosscuts showing streaks of chalcopryite ore. Management plans further development work, installation of a Pelton water wheel and other necessary machinery.

AEOLIAN COPPER CONSOLIDATED MINING CO., LTD. IDAHO

Idle. Described in Copper Handbook, Vol. XI.

AETNA M. & M. CO. IDAHO

Address: Wallace, Idaho.

Officers: Jas. Murphy, pres.; O. W. Lewis, sec.-treas., with Dr. C. S. Stone, Dr. F. Leo Quigley and A. Wilmot, directors.

Cap., \$150,000; shares 1c par.

Property: 4 claims, unpatented, 1 mile S. E. of Burke, Shoshone Co., developed by 250' of underground workings. Idle since 1915.

AJAX MINING CO. IDAHO

Office: Burke, Idaho.

Officers: Harry W. Woodward, v. p., Lynn, Mass.; A. C. Bixby, mgr.; J. A. Harghorst, treas.

Cap., \$1,600,000; shares \$1 par; all issued; assessable; 8 assessments of 5 mills each called to Aug. 1, 1917.

Property: 13 patented claims, 184 acres in Gorge gulch, Coeur d'Alene district, adjoining the Hercules on the E. and said to carry the extension of the Hercules vein system for 1¼ miles in length. About \$200,000 has been expended in development work and \$10,000 in equipping property.

Ore contains silver-lead values, but to date nothing of commercial value has been found. Management plans sinking from 600' to 800' level in 1917 and completing 10,000' tunnel, in 8,000', Aug., 1917. Ten men employed.

ALAMEDA MINING CO. IDAHO

Wallace, Idaho.

Officers: F. J. Finucane, pres., 323 8th St., Spokane, Wash.; Frederick Burbridge, v. p.; Chas. McKinnis, mgr.; J. A. Wayne, sec.-treas.; above, with Chas. Hussey, directors.

Originally inc. 1900 as the Alameda M. & M. Co., Ltd. Reorganized 1910 as Alameda Mng. Co. **Cap.**, \$1,500,000; shares \$1 par; assessable; 14 assessments levied since 1900. Control of 800,000 shares purchased April, 1916, at 15c a share, by syndicate consisting of above named officers. Stock listed on Spokane and Butte Exchanges.

Property: 6 claims adjoining Success 'Mng. Co. ground; on the E., in Nine-mile section, Coeur d'Alene district, Shoshone Co., Idaho. Little work has been done on the property during the last 5 years, owing to litigation with the Success Company, but operations of the latter company have shown that orebodies opened on the 400, 450 and 700' levels of the Success mine extend into Alameda ground. The faces on the 400' and 450' levels are said to average 31.7 oz. silver per ton, 31.5% lead, 21.1% zinc and on the 700' level, 7.5% lead, 7 oz. silver and 25.7% zinc.

Operations through a new crosscut tunnel to tap the vein were started in 1916.

Development: up to Jan., 1917 consisted of a 7½' by 9' tunnel in 900'. Property considered promising and new management able. Further litigation with the Success Company pending.

ALICE MINING CO.

IDAHO

Address: Wallace, Shoshone Co., Idaho. Jas. F. McCarthy, mgr.

Property: The Alice mine, located between Wallace and Mullan, output of which is lead, silver ore. Developed by 640' shaft.

Equipment: includes a compressor and 125-ton concentrator. Electric power is used.

AMAZON-DIXIE MINING CO.

Office: Wallace, Idaho. **Mine office:** Mullan, Shoshone Co., Idaho.

Officers: Wesley Everett, pres. and gen. mgr.; Hugh Tool, v. p.; Herman J. Rossi, sec.-treas.; preceding officers, W. W. Woods and A. W. Ellenburger, directors; F. W. Calloway, engr.

Inc. 1909, in Montana. **Cap.**, \$750,000; shares 50c par; assessable; 1,450,000 shares outstanding. Stock pooled since organization.

Property: 8 claims and 4 mill sites, 64 acres, well timbered, at Sildix, Mont., near Lookout, just across the Montana line, adjoining the Leslie Copper Mining Co. Property shows a fissure vein in quartzite exposed by surface trenching for 2,000', carrying galena, chalcopryite and lead carbonates, associated with pyrite, with values mainly in galena.

Development: by 2 tunnels, 6,500' long, the lower or main working tunnel with mouth near the Northern Pacific railway. Tunnels are connected by a 400' raise.

Company claims to be blocking out an orebody, 3'-8' average width and 600' long, carrying lead, copper, zinc and silver ore. Plans sinking 500' shaft, down 250', Aug., 1917, and, if results of development warrant it, building a concentrator.

Equipment: includes a water-power plant developing 110 h. p., a 10-drill compressor, 8x10' hoist, pump, 20,000' sawmill, machine shop, smithy, carpenter shop and other necessary mine buildings. Property is served by the Northern Pacific railway, 160' from the mine.

AMBERGRIS MINES CO.

IDAHO

Address: Wallace, Idaho.

Officers: Eugene R. Day, pres.; Harry L. Day, v. p., with August Paulsen, W. Clayton Miller and Al. Page, directors.

Inc. June, 1916, in Idaho. **Cap.**, \$1,000,000; shares \$1 par; assessable; last assessment, 2c per share, called August, 1917. Company is a reorganization of the Ambergris Mining Co., organized under laws of Washington with \$3,000,000 capitalization. Stock was exchangeable at the rate of 3 shares of old for 1 share in the new company. Controlled by the Day family.

Property: 3 claims, patented, adjoining the Hercules at Burke, Shoshone Co., developed by 200' shaft, said to show 2-3' of silver-lead ore. As a result of former litigation, company has the right to use the Hercules tunnels and the aerial tramway for shipments to the railroad. Developing through the No. 4 Hercules tunnel to cut the Ambergris vein at depth of 1,200' in 1917.

AMERICAN COMMANDER M. & M. CO.

IDAHO

Address: Mullan, Shoshone Co., Idaho.

Officers: E. J. Clark, pres.; M. J. McHugh, sec.-treas.; Jas. Gearon, supt.

Cap., \$1,250,000; increased in 1915 to \$2,500,000; shares \$1 par; assessable; 3 assessments called to April, 1917.

Property: 2 claims, patented, 40 acres, located 3,000' north of Mullan, shows lead-silver ore of good grade in a vein 50' wide on surface. It is claimed that the You Like vein of the Federal M. & S. Co. and the Hunter vein cross the claims. Property is developed to a depth of 1,200'

by several tunnels varying in length from 500' to 1,200'. In the experimental state.

AMY-MATCHLESS M. & M. CO.

IDAHO

Wallace, Idaho. Gus Smith, mgr. and principal owner.

Inc. Dec., 1913, in Arizona. **Cap.**, \$1,250,000; shares \$1 par.

Property: several developed claims on Pine Creek, 3 miles from a railroad. At last accounts company was planning to build a 50-ton mill.

ANTIMONY-SILVER MINING CO.

IDAHO

Address: Wallace, Idaho. H. J. Rossi, Theo. Brown and John Fimmel, directors.

Inc. April, 1915. **Cap.**, \$100,000; shares 10c par. Claims, on Pine Creek, are said to show silver-antimony ore in a vein 10 to 36" wide, exposed by tunnels and a shallow shaft.

Presumably active.

ARGENTA MINING CO., LTD.

IDAHO

Address: Mullan, Idaho.

Officers: E. Lindsley, pres. and mgr., Missoula, Mont.; D. C. Smith, v. p.; C. D. Brock, sec.-treas., with A. L. Duncan and W. C. Richardson, directors.

Inc. Dec., 1906, in Idaho. **Cap.**, \$1,092,000; shares \$1 par; assessable; all outstanding. Annual meeting, second Monday in January. Operating expenses for 1916, amounting to \$3,000, paid for by sale of stock.

Property: 5 claims, 3 patented, 75 acres, in Hunter district, Shoshone Co., claimed to show quartz fissure vein, 12' wide, carrying carbonate and oxide ore at surface and sulphide ore at depth; the surface ores consisting of iron oxide, quartz and barite, average 2% lead and 1 oz. silver. Development by 875' tunnel to depth of 400'.

Management was crosscutting for the vein, August, 1917.

AURORA-SAMPSON MINING CO.

IDAHO

Consolidated Jan. 14, 1916, with H. E. M. Mng. Co. to form the Western Union Mining Co., which see.

BASIN MNG. CO.

IDAHO

Wallace, Idaho.

Incorporators: John P. Gray, Therrett Towles and F. Pfirman. Control purchased May, 1916, by the Hercules Mining Co., which bought 700,000 shares of issued and 500,000 shares treasury stock.

Inc. July, 1915. **Cap.**, 1,500,000 shares, par value 5c. This company is a reorganization of the old Basin Mng. Co., involved in litigation since 1907. Owns 5 patented claims in the Burke section, south of and adjoining the Hercules mine, between the Laclede on the west and the Stanley group. It is valuable to the Hercules Co. for tunnelling from the Hummingbird and Stanley into the Hercules mine.

BEAR CREEK MINING CO.

IDAHO

Address: Patrick Burke, pres., Wallace, Idaho.

Officers: P. Burke, pres.; R. E. Dunlap, v. p.; J. F. Morton, sec.-treas.; B. W. Jacobs, mgr.

Inc. Aug., 1916. **Cap.**, \$250,000; shares 25c par. Annual meeting third Tuesday in August. Company bought the holdings of the Oro Fino Co. at receivers sale, June, 1916, and is a reorganization of that company.

Property: 11 claims, about 7 miles from Murray, in the Summit district, 3 miles from the railroad. Also has a 3-year lease on the Bear Top Mining Co.'s mill.

Development: about \$60,000 was spent by the Oro Fino Co. in driving two tunnels, some raises, etc. A new tunnel 400' lower is being driven, 1917. Company plans to install a flotation plant in its mill to treat the 4 years' ore supply claimed to be in sight.

BEAR TOP MINE**IDAHO**

Formerly owned by Bear-Top Orofino Cons. Mng. Co., which owed \$162,000 and went into hands of receiver, in 1913. Under 5-year lease from 1917 to Henrietta Leasing Co., which see.

BELMONT-BANNER MINING CO.**IDAHO**

Office: Hutton Bldg., Spokane, Wash. Mine at Delta, Shoshone Co., Idaho.

Officers: Conrad Wolffe, pres. and gen. mgr.; E. A. Wolffe, v. p.; I. E. Poole, sec.-treas.; above, with A. J. Davis and Gale Smith, directors.

Cap., \$1,000,000; shares \$1 par.

Property: 10 claims, one fractional, near Delta and about 12 miles from Wallace, shows a fissure vein of 3 to 4' surface width, in quartzite, carrying silver, lead and copper values. Mine has a tunnel over 500' long with a 60' winze sunk on the orebody.

BELMONT MINING CO., LTD.**IDAHO**

Office: Wallace, Shoshone Co., Idaho. Mine in Two Mile gulch, Evolution district, 3 miles north of Osborn.

Inc. 1900. **Cap.,** \$100,000; shares 10c par, with 200,000 shares in treasury. Reorganized 1909, 1,000,000 shares at \$1 par, assessable; placing 500,000 shares in treasury. Assessment levied Aug., 1916.

Officers: William Scheave, pres.; M. E. Hess, v. p.; Frank P. Hess, sec.-treas., with Ida Scheave, Christ Anderson, Dr. T. C. Witherspoon and Harold Scheave, directors.

Property: 13 claims, showing several contact veins in Burke and Revett quartzite. Ore is said to assay 2.5% lead, 2 oz. silver, 15% manganese with only a trace of copper.

Development: by tunnels and total work amounts to 2,600'. Continued development work is planned for 1917. Claims are in a silver-lead district and copper values incidental. Is a development proposition only.

BENTON MNG. CO.**IDAHO**

Address: Burke, Shoshone Co., Idaho.

Officers: John Callahan, pres. and mgr.; F. P. Candee, sec.-treas.; E. G. Gnaedinger, cons. engr., with Fred Richardson and L. V. Tyler, directors.

Cap., \$1,250,000; shares \$1 par; issued 1,165,000 shares; assessable; 3 assessments totaling 10½ mills have been levied; last one, 3 mills, was 2 years ago. Listed on Spokane Exchange. \$1,000 in treasury in Oct., 1915. Annual meeting in April at Wallace.

Property: 6 claims on east side of Gorge Gulch, adjoining the Stanley and Moonlight, near Burke, supposed to have a continuation of the Stanley vein system.

Ore: silver-lead-copper-antimony, occurring in fissure veins, said to assay 60% lead, up to 12% copper and up to 65% antimony. Lead vein dipped out of winze at 60' depth and at 200' the McNeil fault was passed through. Crosscutting at this level exposed lead vein to the S. E., but main orebody is supposed to be deeper.

Development: adits, 200' winze from main adit level, with over 1,000' of drifting.

BEST CHANCE MINING CO., LTD.**IDAHO**

Main office: 203 Paulsen Bldg., Spokane, Wash. **Mine office:** Wallace, Shoshone Co., Idaho.

Officers: Chas. H. Bell, pres.; W. A. Cox, v. p.; Chas. A. Gram, sec.-treas.; Elmer Harr, mgr. and purch. agt.; other directors, J. A. Scott and Chas. Harr.

Inc. March, 1909, in Idaho. **Cap.,** \$1,500,000; shares \$1 par; fully paid and assessable.

Lands: 12 claims, unpatented, in the Yreka mining district of the Coeur d'Alene, Idaho.

Fissure veins said to be 100' wide in Burke quartzite with 2,800' of underground work. Development work in progress in 1917. Is primarily a silver-lead property.

BIG CREEK LEASING CO.

IDAHO

Address: Kellogg, Idaho.

Officers: D. W. Price, pres. and gen. mgr.; R. R. Price, v. p.; A. O. Larson, sec.-treas.; Wm. Beaudry, mgr.; W. G. Thomes, supt.

Cap., \$50,000; shares \$10 par; all issued. An initial dividend of 50c per share paid, Sept., 1917, and a second dividend of 50c paid Oct., 1917. Annual meeting, July eighth.

Property: Company has a 7-year lease, to 1920, on the ground below the 500' level of the Yankee Boy Mng. Co. property (which see).

Ore was encountered in 1916 and 2½ carloads shipped to the Tacoma smelter valued at \$48,000. Values are silver and copper.

See Big Creek Mng. Co.

BIG CREEK MINING CO.

IDAHO

Wallace, Idaho.

Officers: G. Scott Anderson, pres. and mgr.; W. W. Smith, sec.; above, with A. H. Featherstone and C. E. McCoy, directors.

Cap., \$1,250,000.

Property: near Kellogg, in the Coeur d'Alene district, Idaho, carries silver-copper ore (tetrahedrite). Shipments of 17 carloads in 1915-17 are said to have given a net return of \$44,010, with high silver values, 1-5% copper and 2-5% lead.

Crosscut being run 560' below leased ground was 2,000' long, September, 1917.

Property is equipped with compressor and electric power.

BLACK BEAR CONSOLIDATED MINING CO., LTD.

IDAHO

Officers: Peter Bernier, pres., Wallace, Idaho; L. L. Brainard, sec.; directors are Peter Bernier, Otto Grice, S. D. Lemieux, M. J. Sweeney and E. P. Howard.

Inc. in Idaho. Cap., \$1,000,000; shares \$1 par; increased to \$1,250,000 and again increased, Jan., 1917, to \$2,000,000.

In March, 1917, stockholders voted to reorganize company as Black Bear Mines Co., exchanging stock share for share.

In Dec., 1915, the Rex Cons. Mng. Co. acquired control of the Black Bear Cons. by agreeing to take 250,000 shares of stock of that company, paying \$112,500 therefor in monthly payments extending over a period of 10 months. Option was allowed to lapse, due to a hitch in carrying out the plan called for by option; the \$10,000 initial payment was taken by Black Bear in exchange for treasury stock.

Property: 4 claims, 70 acres, patented, lying between the Frisco and Mace mines of the Federal Mng. & Sm. Co., near Wallace.

Development: No. 1 tunnel cut the main vein 250' from the portal and has a winze, 125' deep sunk in ore. No. 2, the main working tunnel, intersects the vein 2,530' from the portal and at a vertical depth of 1,180' below No. 1 tunnel. Workings on this level total 5,500' and are said to expose considerable ore. Vein said to be 5.7' wide, averaging 2.2 oz. silver, 7.7% lead and 16.5% zinc. Estimated ore reserves between tunnels No. 1 and No. 2 are 800,000 tons.

BLACK BEAR MINES CO.

IDAHO

Office: Wallace, Idaho.

Incorporators: H. J. Rossi, Afam Lieb, Dennis Goggin and Dr. L. E. Hanson.

Inc. in Idaho, March, 1917. **Cap.**, 2,000,000 shares, 20c par. Company formed to take over assets of Black Bear Cons. Mining Co., which see.

Company has lease on the Western Union Co.'s mill, which will be remodeled to treat their ore.

BLACK HAWK MINING & DEVELOPMENT CO., LTD. IDAHO

Controlled by Federal Mining & Smelting Co., which see.

BLAINE & EMMETT MINING CO., LTD. IDAHO

At Murray, Shoshone Co., Idaho. Is a silver-lead mine, copper being incidental and not recoverable. Described Vol. X.

BOULDER CREEK MNG. & MLG. CO., LTD. IDAHO

Idle. **Office:** 922 Old Nat'l Bank Bldg., Spokane, Wash.

Officers: Leo Greenough, pres. and mgr.; W. D. Greenough, v. p.; W. J. Beaton, sec.-treas.

Cap., \$1,500,000; shares \$1 par; assessable; 976,230 issued. Annual meeting, first Monday in December.

Property: 1 claim, 20 acres, about 2 miles S. of Mullan, developed by several tunnels, longest 1,200', said to show ore assaying 10-15% lead with gold-copper-silver values. Property considered promising.

BROWN LEASING CO. IDAHO

Office: Kellogg, Idaho.

Cap., \$25,000; shares \$1 par. Stock held by S. A. McCoy, and J. A. McEachran, Spokane, Wash.; B. Swartz and T. Brown, Beeler, Idaho. Close corporation.

Inc. October, 1916, to do general leasing, mining, milling and smelting business.

BULLION MINING CO., LTD. IDAHO

Mine P. O.: Wallace, Idaho.

Officers: William Squance, pres.; R. A. Marshall, v. p.; Jas. H. Taylor, sec.-treas. and mgr., with Frank Taylor and J. M. Klingman, directors.

Inc. 1902, in Idaho. **Cap.**, \$1,500,000; shares \$1 par; all issued; 9 assessments, one-half cent a share, levied up to Nov. 1, 1912, yielding \$39,229.

Property: 16 claims, 2 patented, 320 acres, near Lookout, 2 miles from the Chicago, Milwaukee & St. Paul railway, and 4 miles from Borax station, on the Northern Pacific line, on the Idaho slope of the Bitter Root divide, with a good wagon road to Borax. Property has a quartz vein of 4 to 20' width, with average of 6 to 12', and nearly vertical dip, carrying shoots of copper ore, 2-4' wide, mainly chalcopyrite. Concentrates estimated to average 19.8% copper, 3 oz. silver, \$2.40 gold, 28.5% iron and 4% silica per ton.

Development: by shafts and 2 crosscut tunnels, one 200' vertically above the other. The upper one has 130' crosscut and 186' drift on vein. Lower tunnel cuts a 28' vein 350' from portal, with 4' of solid ore. Ore-body proved for 35' upward by raise and downward by shaft.

Equipment: includes steam power, a 12 h. p. hoist, Pelton wheel, and a 5-drill air compressor.

A trial shipment of 24 tons to the East Helena smelter, Sept., 1912, showed 56% copper and 1 oz. silver per ton. Concentration tests on 5.2% ore showed a 73% recovery. No production since 1912. Diamond drill work was done in 1913 and company plans driving lower tunnel to intercept ore at depth of 430'.

BUNKER HILL & SULLIVAN MNG. & CONCENTRATING CO.

IDAHO

Offices: 1022 Crocker Bldg., San Francisco, Calif., and Kellogg, Idaho.

Officers: Fred W. Bradley, pres., San Francisco; J. W. P. McFall, v. p.; Wm. H. Crocker, treas.; Geo. F. Holman, sec.; G. D. Abbott, asst. sec.; M. A. Folsom, executive head, Bunker Hill Smelter; Stanly A. Easton, mgr.

Inc. 1885, in Oregon. **Cap.**, \$3,270,000, all issued; shares \$10 par. Not listed. Company is practically a close corporation. Transfer agent and registrar, asst. sec. of the company at San Francisco. Annual meeting, third Thursday in June.

General Balance Sheet (Year Ending, Dec. 31):

Assets—						
	Property & Plant	Supplies	Cash, Ore & Concts.	Dividend Reserve	Miscel.	Total
1916...	\$46,180,979	\$125,976	\$977,395	\$1,029,409	\$226,889	\$48,540,648
1915...	4,977,268	253,583	603,416	1,047,550	190,274	7,072,095

Liabilities—					
	Capital Stock	Surplus Account	Mine Revaluation	Miscel.	Total
1916.....	\$3,270,000	\$2,761,946	\$42,290,265	\$218,437	\$48,540,648
1915.....	3,270,000	3,691,165	110,930	7,072,095

Income Account (Year Ending Dec. 31):

	Operating Revenue	Other Revenue	Operating Expense	Net Earnings	Dividends Paid	Balance
1916.....	\$6,223,162	\$579,355	\$4,437,477	\$2,437,550	\$1,716,750	\$929,219*
1915.....	4,217,927	584,106	2,957,361	1,819,888	1,062,750	662,692†

* Stands in books as deficit due to ore depletion charge of \$1,577,509.

† Surplus.

Re-valuation of mine increased the property account from \$4,977,268 in 1915, to \$46,180,979 or over 900%, which seems peculiar when ore reserves decreased from 3,573,000 tons in 1915 to 3,453,146 tons at end of 1916, and plant improvement (smelter) only cost about \$1,000,000. The temporary high price of lead (up to about 12c per lb.) could not have added this great value to the lead content of reserves. Some explanation would seem to be justified.

Net earnings available for dividends: \$2,437,550 in 1916; \$1,819,888 in 1915; \$1,017,829 in 1914; \$1,285,751 in 1913. Cash surplus on March 1, 1917, was \$1,700,000 of which \$1,000,000 was in a contingent reserve and the remainder set aside to finance the construction of the new smelter, now in operation.

Recent dividends: in 1910, \$3.15; in 1911, \$2.65; in 1912, \$2.30; in 1913, \$2.50; in 1914, \$3; in 1915, \$3.25; in 1916, \$5.25 per share; in 1917 to July 1, \$3.25; total dividends paid to July 1, \$19,552,500. As a result of apex litigation with the Caledonia Mng. Co., the B. H. & S. Co. controls that company, owning 1,305,000 shares out of 2,605,000 issued. See Caledonia Mng. Co. The Sierra Nevada is also a subsidiary of the B. H. & S. Co. The

Property: about 5,000 acres, patented, at Kellogg.

Geology: the larger part of the ore is principally a replacement of the Revett quartzite, in which the replacement is closely connected with fissuring. The principal ore minerals are galena with some pyrite and zinc blende, and in places a little argentite rich in silver. The orebodies are definitely related to a persistent fissure, strike N. 45° W., dip 38° S. W., locally known as the "foot wall fissure." The zone of fissured quartzite in which the orebodies occur has a maximum width of 300'; ore is found in the hanging-wall of the fissure. The orebodies are very irregular in form and may be several hundred feet in length and depth with width in places as much as 40'. For geology of this district see U. S. G. S. Prof. Paper 62, *Geology and Ore Deposits of the Coeur d'Alene district*.

Development: tunnels and shafts. The Kellogg tunnel, 8x9', in section, and about 2 miles long, is the main working level. It is equipped with electric haulage. Above the tunnel the orebodies have been explored to surface. Below the tunnel at 200' intervals are 5 working levels, Nos. 10, 11, 12, 13 and 14. Development work in 1916 totaled 3,944', costing \$9.87 per ft., as compared with 4,783', costing \$7.32 per ft. in 1915, and 2,754', costing \$10.77 per ft. in 1914.

Ore reserves: Jan. 1, 1917, were 3,453,146 tons. Milling ore averages 9 to 12% lead and 3.7 to 4.5 oz. silver per ton. Shipping ore runs from 15% to 78% lead and 17 oz. silver per ton.

Equipment: includes 3 concentrators, power plant, water power, machine shops, saw mill, etc. Replacement value of surface equipment is placed at \$800,000. Mill extraction is about 80% for lead and 70% for silver.

The company has a 25-year contract, dated March 20, 1905, to sell portions of its ore, assaying between 30 and 70% lead to the A. S. & R. Co., but friction between the two companies had been constant and in 1917, the B. H. & S. Co. built its own smelter at Kellogg. Initial daily capacity, 1,000 tons. Power obtained from the Washington Water Power Co. of Spokane. Equipment includes Dwight-Lloyd sintering machines and Wedge turret roasters, 3 blast furnaces, bag houses, and an electrolytic refinery to desilver the lead bullion.

Production:

	Ore Mined, Tons	Cost per Ton	Concts. Tons	Lead, Lbs.	Silver, Oz.
1916.....	475,784	\$2.36	76,284	77,298,879	1,406,260
1915.....	452,142	1.99	59,901	74,584,741	1,298,284
1914.....	440,819	1.98	56,163	70,663,236	1,161,324
1913.....	436,060	2.25	59,471	71,860,773	1,227,076

Cost of producing lead is between 3 and 4c per lb. Company issues a report containing considerable detailed costs, but little on underground conditions.

Company's right to smelt its own ores will be contested in the courts. The first step toward this end will be taken when argument upon the application for an injunction restraining the company from smelting its ores and to compel compliance with the 25-year contract with the American Smelting & Refining Co. was started in the Federal court in Portland on Oct. 18. The complaint filed by the A. S. & R. Co. is a voluminous document and gives much interesting information regarding the relations of the two companies and the great value of the Bunker Hill product in the profitable operation of plaintiff's smelting plants. The story begins in 1905, when the Bunker Hill contracted its ores running from 30 to 75% lead to the smelting company, it being optional with the smelter to take the product below 30% or above 75%. The contract was entered into following the purchase of the Tacoma smelter from the Bunker Hill company, and it is alleged in the complaint that plaintiff would not have purchased the Tacoma plant had it not felt secure in obtaining the Bunker Hill ores during the 25 years covered by the contract. The contract provided for revision every five years, and at these periods the Bunker Hill company would be entitled to the same freight and treatment rate at which the majority of the ores of the Coeur d'Alene district was being shipped. In 1910, the end of the first five years, the Bunker Hill was given a concession which amounted to about 85c per ton, but the real clash occurred in 1915.

"On May 31, 1915, the Hercules contract with the A. S. & R. Co. expired and the smelting company refused to renew it on the same terms. It had been entered into three years before and presumably has some connection with the elevation of Harry L. Day to the presidency and management of the Federal Mining and Smelting Co. It was the most favorable A. S. & R. contract in the district, providing for a freight and treatment rate of \$14 per ton, said to be \$2 lower than the Bunker Hill. The refusal to renew the Hercules contract was soon followed by the retirement of Mr. Day from the head of the Federal and the negotiations by the Hercules people for the Northport smelter. The day following the expiration of the Hercules contract, June 1, was the date for revision of the Bunker Hill contract. With the Hercules out of it, the majority of the ores shipped from the district were represented by the Federal, owned by the smelting company, and shipping under a lower contract than that of the Bunker Hill. Under the circumstances the demand of the Bunker Hill for a revision of the terms of its contract was refused.

"The following October the Bunker Hill & Sullivan company made definite announcement that it would build a smelter for the treatment of its ores and those of other mines of the district. The smelter was completed in July, 1917, but up to Sept., only one furnace has been blown in on account of inability to get coke. It is said that no ore from the Bunker Hill mine has yet been treated and that shipments are going forward as usual under the contract with the A. S. & R. Co. The Bunker Hill smelter is under contract to treat Hecla ore, which with other smaller producers requires all present capacity.

CALEDONIA DEVELOPMENT CO.

IDAHO

Office: Wallace, Idaho. **Chas. McKinnis**, mgr., associated with others in the Caledonia Mining Co., which see.

Company formed to examine and acquire a new mine for the Caledonia Mining Co.

Cap., 1,500,000 shares, \$1 par; 500,000 in treasury.

In December, 1916, an option was acquired on the stock of the Jemison Mines Co., Mohave Co., Ariz., after examining its mine and its operations for several months. Stockholders in the Caledonia Mining Co. had the privilege to Apr. 30, 1917, of subscribing to 200,000 shares of treasury stock at 20c a share.

CALEDONIA MINING CO.

IDAHO

See Caledonia Dev. Co.

Office: Wallace, Idaho. **Mine office:** Wardner, Shoshone Co., Idaho.

Officers: S. A. Easton, pres.; C. F. Kratzer, v. p.; **Chas. McKinnis**, sec.-treas. and mgr.

Inc. July 9, 1907, in Idaho. **Cap.**, \$2,605,000; shares \$1 par; assessable; all issued.

Dividends: at rate of 3c a month, 1917; total \$2,753,150 to Nov., 1917, or 99c a share. Surplus, August 31, 1917, was \$719,183. Listed on San Francisco and Butte Exchanges.

Property: 5 unpatented claims, about 50 acres; adjoining property of the Bunker Hill & Sullivan M. & C. Co., at Kellogg, Idaho, shows a strong fissure vein with an oreshoot 1,000' long, that is in places 50' wide and carries cupriferous silver-lead ores, averaging 15 to 40 oz. silver, with a little native copper.

Development: by a 500' shaft and 2 tunnels, lower tunnel, 4,000' in length, giving a back of about 1,300'. The 1,000' level showed 7' of shipping ore, though broken faulted ground was encountered. Feb., 1916, reports show a drift being run from Keating level, 75' below the 1,000' level to pick up orebody.

The mine was idle from 1912 to July, 1914, on account of litigation with the Bunker Hill & Sullivan M. & C. Co. over apex rights. A compromise was effected whereby the capital stock of the Caledonia company was increased from \$1,500,000 to \$2,605,000, the B. H. & S. Co. taking 550,000 shares. The company is virtually a subsidiary of the Bunker Hill company. 150,000 tons of ore reported blocked out, Dec., 1915. Major portion of ore is being taken from between the 500' and 700' levels. Production is at the rate of 1,200 tons monthly, crude ore and concentrates in about equal proportions. Ore is treated at the mill of the B. H. & S. Co. plant.

Equipment: includes an electric hoist, air-compressor and electric pumps. Company employs about 35 men when active.

Costs per ton for 1916: mining \$2.61 on 46,177 tons mined; milling \$0.59 on 38,929 tons concentrates produced; shipping \$0.22 on 18,117 tons shipped. Net bullion value, \$1,302,113. Profits for 8 months ending Oct., 1917, \$905,000.

Production:	Copper, Lbs.	Lead, Lbs.	Silver, Oz.	Net Profits
1914(a).....	245,610	6,599,720	537,854	\$761,797
1915.....	659,660	11,142,580	1,212,730	760,324
1916.....	741,225	10,412,640	1,297,193	1,154,762
1917*.....	331,743	5,081,140	575,575	661,779

(a) For seven months after operations were resumed.

Ore reserves: estimated by company as sufficient for about a year's production.

* 1st half, 1917.

Management reported May 1, 1917, to stockholders that development work has failed to disclose new ore and that the downward extension of orebody has been faulted and cannot be located.

Company has acquired stock control in the Jemison Mines Co., which see.

CARBONATE CENTER MINING CO.

IDAHO

Mine office: Mullan, Shoshone Co., Idaho.

Officers: Archie Gillis, pres.; John H. Foss, v. p.; John E. Sherrard, sec.-treas.; preceding officers, John Erickson and Hans J. Rice, directors.

Inc. 1912, as successor of Tombstone Mining Co. **Cap.**, \$1,500,000; shares \$1 par; assessable. Last assessment of 1 mill per share called Nov. 5, 1914.

Property: 8 claims, near the Carney mine, on Stevens peak, south of Mullan, shows a promising vein of 8 to 15' surface width, carrying a little silver-lead ore. The mine has a 500' crosscut tunnel, with about 1,000' of workings, showing ore that has given assays up to 15% copper and 2.5 oz. silver per ton. Idle, but plans to resume operations.

CARBONATE HILL MINING CO.

IDAHO

Mullan, Idaho.

Cap., \$1,500,000; shares \$1 par; issued \$1,470,000. Listed in Spokane, Wash. Bonds on stock at 40c per share said to have been given to H. L. Martin, auditor Spokane and Int. R. R. Co. of Spokane; first payment of 5c per share being due Nov. 1, 1916, with equal payments thereafter until whole amount has been paid.

Property: 10 patented, 2 unpatented claims, 200 acres, 1½ miles S. E. of Mullan.

Development: by adit with 3,500' of workings. Orebody said to have been cut at 900' and drifted on for 200'. Development is said to indicate an ore zone 125' wide in which a footwall orebody shows 24' lead-zinc ore with zinc predominating, in the center 8' of ore, and on the hanging-wall or south side, 27' of milling ore.

CARNEY COPPER CO., LTD.**IDAHO**

Mullan, Shoshone Co., Idaho.

Officers: J. L. Martin, pres.; A. P. McRae, v. p.; C. D. Miller, sec.-treas.; preceding officers, W. C. Richardson and C. D. Martin, directors. Inc. 1906, in Idaho. **Cap.**, \$1,500,000; shares \$1 par.

Lands: 11 claims, 4 fractional, 175 acres, carrying a good water right, is next north of the Reindeer, on the northern slope of Stevens peak, about 4 miles from Mullan.

Development: by 3 tunnels, the uppermost showing a body of chalcoppyrite ore that has not been found in the lower tunnel. The upper, or No. 1 tunnel, is 450' long, with 3 crosscuts, and No. 2 tunnel, 1,500', with 1,300' of crosscuts and drifts, No. 3 tunnel is in 350', and will be driven about 300' to the ledge where commercial ore is expected. There also are several open cuts and pits, showing ore of about 3% copper tenor. Workings show up to 4' of solid ore, carrying chalcoppyrite, with some chalcocite and bornite. No. 1 tunnel shows an ore shoot up to 40' width, and about 175' long, averaging about 2% copper, with small values in lead and silver, with a paystreak of 6 to 18" assaying 5 to 35% copper. Company has leased upper levels and ore is being stoped and shipped.

CHAMPION COPPER MINING CO.**IDAHO**

Probably defunct. See Vol. XII. Property at Mullan, Idaho.

CHICAGO-BOSTON MINING CO.**IDAHO**

Wallace, Idaho. Reported under bond and lease to E. R. Day.

Cap., \$1,500,000; shares \$1 par. Dr. L. E. Hanson said to own 1,000,000 shares recently acquired at 10c.

Owens 7½ claims on Lake Creek, 2 miles S. W. of Wallace, said to show two ore-bearing veins, one, the Tin Cup, having high-grade gray copper ore, from which shipments have been made. The second vein, the Kill Buck, is said to have 8 to 12' of milling ore, opened by No. 6 tunnel. Developed by 6 tunnels, lowest 1,200' long. Power is furnished by the company's water-power plant.

CLARINDA COPPER MINING CO.**IDAHO**

Temporary officers: Judge John E. White, pres. and treas., Clarke Fork, Idaho; John P. Delaney, v. p. and sec., with Jas. E. White, Russell Guest and Thos. Compton, directors.

Inc. April 1, 1916, in Arizona. **Cap.**, \$1,500,000; shares \$1 par. U. S. Corporation Co., New York, registrar and transfer agents.

Property: 2 claims, 40 acres, in Coeur d'Alene district, 3 miles from Clarke Fork, Bonner Co., Idaho, show gold-silver-copper-iron ore in vein, said to be 6' wide at slight depth. Developed by 2 short tunnels and a main working tunnel, 124' long, May, 1917. A prospect.

COEUR d'ALENE ANTIMONY MINING CO.**IDAHO**

Kellogg, Idaho.

Officers: M. E. Jolley, pres., Coulee City, Wash.; H. J. Hibschan, v. p., 1014 Paulsen Bldg., Spokane; C. M. Powell, sec.-treas., Kellogg, Idaho.

Cap., 1,500,000 shares; 10c par; 731,016 issued.

Company in Sept., 1915, reopened antimony mine on Pine Creek, west of Kellogg, that had been idle for 10 years.

Development: by 150' shaft and tunnels, said to show two shoots of ore, the largest being 240' long and 4' wide. The high-grade ore is said to assay 35% antimony.

Development work being done, 1917.

Has 100-ton mill in operation, and is shipping both crude ore and concentrate, Aug., 1917. Will install flotation unit.

COEUR d'ALENE CRESCENT MNG. CO.

IDAHO

Officers: F. W. Mauser, sec.-treas., Spokane, Wash.; L. W. Bonney, pres., Seattle; J. B. Millspaugh, S. B. Osburn and F. R. Crocker, directors.
Cap., \$1,250,000; shares \$1 par; assessable.

Property: 6 unpatented claims and millsite, one mile N. W. of Osborne, Idaho. No development since Jan. 1, 1917.

COEUR d'ALENE DEVELOPMENT CO.

IDAHO

Controlled by Stewart Mining Co. and described thereunder.

COEUR d'ALENE EMPIRE M. & M. CO.

IDAHO

Inc. 1917, in Wash. to take over property of Coeur d'Alene M. & M. Co.

Directors: H. W. Greenberg, T. H. Holland, F. D. Garrett, Frank Johnson and A. Herman, all of Spokane.

COLONIAL MINING & MILLING CO.

IDAHO

Watson Beebe, sec., Wallace, Idaho.

Inc. in 1915 by Beebe Bros. of Wallace with the ostensible purpose of operating the Little Pittsburg mine on Pine Creek which was under bond to them.

Cap., \$1,000,000; shares 25c. It is said that half of this was appropriated by the promoters; the other half placed in the treasury and later 200,000 shares issued. Work was started with the accompaniment of a line of lurid advertising. A payment on the bond became due about March 3 and was not met; in addition to this the company in March, 1916, owed \$23,000, including \$5,000 back payrolls. There seems to be no hope that stockholders will recover anything. The company was a fake which fortunately died an early death.

COLUMBIA COPPER MINING CO.

IDAHO

Address: care Sharp & Irvine, Paulsen Bldg., Spokane, Wash.

Directors: B. E. Sharp, pres.; Jos. Huber, v. p.; Jos. Andrews, sec., and A. G. Kerns.

Inc. May, 1914, at Wallace, Idaho. **Cap.,** \$2,500,000; shares \$1 par.

Property: a consolidation of the properties owned by the Aeolian Cons. Copper Co., the Marguerite Mng. Co. and the California Group, all near Mullan, Shoshone Co., Idaho, and all long idle.

COMET GOLD & COPPER MINING CO., LTD.

IDAHO

Office: care Jos. F. Whelan, sec., 408 Sixth St., Wallace, Idaho. Mine near Mullan, Shoshone Co., Idaho. Archibald McCullom, pres. and gen. mgr.; A. L. Honeker, treas.

Cap., \$100,000; shares 10c par; assessable; ½ mill per share levied 1913 and 1914.

Property: 4 claims, adjoining the Springfield, east of Mullan, on Stevens peak, and near 2 railroads, shows 2 veins, of 10' and 15' estimated width, about 150' apart, carrying chalcopryite and bornite, with iron and quartz gangue.

Development: by tunnel, cutting a hematite vein, with about 1,600' of workings. Property worked in a small way, with proceeds of assessments levied, but no orebodies of commercial value have thus far been developed.

COMSTOCK COPPER MINING CO., LTD.

IDAHO

Mine near Burke, Shoshone Co., Idaho.

Officers: E. S. Amsden, sec., Wallace, Idaho; Otto A. Olsson, treas.; John H. Nordquist, mgr., with C. W. Anderson and A. Swan, directors.

Inc. in Idaho. **Cap.,** \$1,500,000; shares \$1 par.

Lands: on Baldy mountain, east of Burke are developed by 800' tunnel and 700' of drifting on the vein. Is developing on a small scale, raising money by assessments of 1 mill per share.

CONSOLIDATED INTERSTATE-CALLAHAN MINING CO. IDAHO

Offices: 61 Broadway, New York. **Mine office:** Wallace, Idaho.

Officers: John A. Percival, pres.; M. G. Rodearmel, 1st v. p.; Milie Bunnell, 2nd v. p. and treas.; above, with J. B. Cotton, A. L. Riley, A. L. Warner, S. S. Titus, Otto Sussman, Jas. F. Callahan, P. H. Nelson, Frank Boutin and Louis Hanitch, directors; C. W. Newton, supt.; D. F. Haley, cons. engr.; Julian B. Beaty, sec.

Inc. June 12, 1912, in Arizona as a consolidation of the Interstate Silver-Lead Mining Co. and the Callahan Mining Co. **Cap.**, \$5,000,000; shares \$10 par; non-assessable; 464,990 shares outstanding June 1, 1916. Listed on N. Y. Exchange. Title Guarantee & Trust Co., New York, transfer agent; Registrar & Transfer Co., New York, registrar.

Financial statement: shows June 30,

Current Assets—

	Cash	Ore Account	Other	Total	Current Liabilities	Surplus
1916.....	\$143,573	\$596,239	\$101,709	\$841,571	\$34,860	\$806,711
1915.....	316,538	784,190	50,864	1,151,642	56,780	1,094,862

Comparative operating statement: year ending June 30,

	Income (a)	Op. Gen. Expen's	Year's Profit	Surp. from Last Year	Prop. Invest.	Divid's	Surplus
1916..	\$4,013,172	\$912,681	\$3,100,491	\$1,142,967	\$181,818	\$3,254,930	\$806,711
1915..	2,161,177	569,404	1,591,773	(b)200,686	697,597	1,094,862

(a) All from ore and concentrates except \$27,076 for 1916 and \$14,894 for 1915.

(b) Operating deficit \$99,314; proceeds of bonds sold \$300,000.

Company's financial year has been altered to coincide with the calendar year, so no complete statement is available. During 12 months ended June 30, 1917, the net value of crude ore and concentrate shipments was \$3,007,861. Profit, less \$130,000 deducted for improvements, was \$1,836,471. With the surplus from 1915-16 there was available \$2,743,182, of which, \$2,324,950 was paid in dividends.

Initial dividend of \$116,360 was paid April 1, 1915; total for year was \$697,597.50. Dividends for calendar year 1915 amounted to \$5.50 per share, and for 1916, \$6 per share. Up to June 30, 1917, the total paid was \$13.50 per share, or \$6,277,365. So far company has paid over 40% per annum on par value of its \$10 par stock. The dividend for third quarter of 1917 was passed, as company wishes to have a large reserve with which to meet new taxes, etc.

Company is a consolidation of two prospects, called the Interstate and Callahan groups, the first named developed and the Interstate vein found while Walter Harvey Weed was consulting engineer, on whose advice the present consolidation was effected at a time when this part of the Coeur d'Alene district was regarded by many mining men as worse than unpromising. The mine has developed into one of the principal zinc-lead producers in the U. S.; in fact, the third largest, and one of the world's greatest.

Property: 79 claims, 1,004.84 acres, 601 patented; also the Nipsic group, 7 claims, the Blue Grouse (two combined have 225 acres); and a controlling interest in the Silver State Mining Co., adjoining the Interstate, all in the Coeur d'Alene district, Wallace, Shoshone Co.

Geology: the two fissure veins thus far worked in the property are the Interstate and the Callahan. The veins cut through Prichard slates, which

are intruded by a monzonite porphyry dike and by small diabase dikes. The Interstate vein varies from 3-20' in width, the Callahan from an inch to 8'. For geology of the district see U. S. G. S. P. P. 62, and 17th Annual report of the mining industry of Idaho, 1915, by Robt. N. Bell.

Development: totals 30,000'. The principal working level is tunnel No. 4, about 1,200' below the mountain top, where an oreshoot 1,200' long has been encountered, running from 1-54' in width. This ore extends from the uppermost tunnel down, with equally good values on the lowest level. The present shaft has been sunk 700', and Nos. 5, 6 and 7 levels have been opened at a point 223', 457' and 675', respectively, below No. 4 level. New work for year ending June 30, 1916, was 6,463', mainly crosscuts and drifts.

The 3-compartment shaft was sunk to No. 8 level by Oct., 1917, and a crosscut is being run from this level to cut the Interstate vein. Shaft will be sunk 225' more.

A factor aiding deep development (to 3,000', or 1,500' below No. 7 level) is the construction of the O. W. R. & N. Ry. branch from Mullan, up to Beaver creek. Ore for the proposed new mill at Enaville will be carried over this line.

Ore reserves: 350,000 tons, averaging 25% zinc. Development has not yet found lower limits of orebody, nor of ore shoots on Nipsic, Blue Grouse or Amazon-Manhattan veins, for which the outlook is decidedly promising.

Equipment: is modern and installed with a view to future big development. Buildings include saw-mill, bunk and rooming houses for 300 men. The concentrating mill, which treated at the rate of 11,100 tons of ore per month during 1917, was completely remodeled and equipped with 16" main feed elevator, screens, jigs, Traylor rolls, Akins de-slimmer, settling classifiers, two 3" pumps, concentrate bins, two 12' Dorr tanks, 30' Dorr settling tank, spitzkasten, tables, motors, Callow tank, Oliver filter press, tube mill and flotation unit. Shipments are at the rate of 4,700 tons of concentrates per month, and the recovery averaged 76% in Apr.-June, 1917. Ore is conveyed from the mill over an aerial tramway to Sunset, on the N. P. R. R. A new mill, which will double the present output of the property, is to be erected at Enaville at some future time.

Company owns the **Nipsic group**, bought 1916, the Nipsic Co. being dissolved, Aug., 1916. The showing of this mine in 1917 was reported as very satisfactory.

This tract of 7 claims, 6 patented, is located about a mile north of the portal of Interstate No. 4 tunnel, the main working level of the mine. The group lies between the Idora and Interstate-Callahan groups on the Beaver creek side of the Nine Mile divide.

The claims are crossed by two fissure veins in quartzite and slate, that average 3' in width and carry bands and shoots of lead and zinc ore, the lead ore carrying 4 oz. silver per ton to each 10% lead. The mine has been intermittently prospected since 1892, but no important orebody discovered. There are several tunnels, longest 1,200', with a total of 2,140' of workings.

The group is intrinsically valuable, but has an additional value to the Interstate Callahan, as it permits much deeper tunnel work than any now existing and gives an outlet on the Beaver county side of the mountain, with easy access to the North Fork.

Production: for year ending June 30, 1917, amounted to 160,401 tons, from which there was produced 70,720 tons of crude ore and concentrates. Costs for third quarter, 1917, were: mining, \$5.178; milling, \$1.334; a total of \$6.512 per ton.

Flotation was decided upon as the best system for treating this zinc-

lead-silver ore, so a contract has been made with the Minerals Separation Co. for the use of its patents. The plant has been installed and a 90% recovery or over is assured. Concentrate will contain 50% zinc, against 44.8% as at present. With additions to the plant (finished in Sept., 1917), the mill capacity is greater by 1,000 tons per month.

Management is able and progressive. With spelter at 8c and silver at \$1, Interstate-Callahan should continue to make big profits on an average monthly output of 5,000,000 lbs. spelter, 550,000 lbs. lead, and 20,000 oz. silver.

CONSTITUTION MINING & MILLING CO.

IDAHO

Address: Judge Geo. Turner, pres., 525 Seventh St., Spokane, Wash.; Frank H. Graves, v. p.; B. H. Kizer, sec.-treas.; Frank T. Post, Richard W. Nuzum and Thos. Thwaite, directors; Joseph Trainor, supt.

Cap., \$1,500,000; increased Jan., 1916, from \$1,000,000; shares \$1 par; assessable; all issued.

Property: 350 acres patented, on east fork of Pine Creek, 9 miles from Pine Creek siding on O. W. R. & N. R. R., Coeur d'Alene district, shows zinc-lead ore in veins 4' to 8' wide.

Development: by adits, one at vertical depth of 150' and the other at 400'. At 1,500' south of the latter a 550' crosscut tunnel cuts the vein 150' below tunnel No. 2. This orebody is said to be several hundred feet long. A shaft, sunk at the portal of tunnel No. 2, is 200' deep and from the bottom a 700' drift is said to have been run on ore.

Has complete equipment including hoist, compressor, motors, etc., using electric power.

Production: 100-ton mill reported in operation in April, 1917, treating a feed of 4½% lead, 10% zinc and 3 oz. silver per ton. It is run by electric power. Previous to construction of mill, shipments of 200 tons of hand sorted ore are reported to have averaged 11.6% lead, 26% zinc and 8 oz. silver. Crude ore and concentrate shipped to Anaconda Copper Co.'s zinc plant is netting \$20 to \$27 per ton. Output in 1917, 25 to 35 tons crude and 15 tons concentrate daily.

COPPER KING MINING & SMELTING CO.

IDAHO

Mullan, Shoshone Co., Idaho.

Officers: D. K. McDonald, pres.; Dave Holzman, v. p.; Hon. Harry W. Ingalls, sec.-treas. and gen. mgr., with S. Edelstein, B. Mabry, H. Schroeder and R. C. Vanderford, directors.

Inc. Oct., 1901, in Idaho. **Cap.,** \$1,500,000; shares \$1 par; issued, 1,494,588 shares; assessable; assessment No. 15 of 10 mills per share, called July, 1917. Annual meeting, first Wednesday in Sept.

Financial statement for 14 months, ending July 20, 1917, showed an indebtedness of \$4,918.

Property: 18 claims, surveyed for patent, on the west fork of Deadman's creek in the Snowstorm copper belt, has 2 narrow fissure veins carrying galena and zinc ore.

Development: by 2 tunnels on the Copper King vein, on the Burke side of the mountain and No. 3, the lower tunnel, on the west fork of Deadman gulch, at depth of 1,700' on the dip of the vein. No. 2 tunnel is 2,000' and No. 3 about 5,000' long. Assays of the new strike in the crosscut tunnel were given by B. N. Sharp as 2.35 oz. silver and 14.3% lead on a 3' vein and 4.85 oz. silver and 24.7% lead on one foot in the center. J. V. Richards secured assays, over a 5' width, of 0.40% zinc, 1.40% lead and 0.48 oz. silver. Diamond drill exploratory work is in progress, 2,000' having been drilled to July, 1917.

Equipment: includes 12" and 24" Pelton wheels, taking water under a

500' head, with a 4-drill Franklin air compressor and a small electric light plant. Buildings include an engine house, boarding house, bunk house and barn. About 10 men employed.

From reports of June, 1917, company is in the hands of stock manipulators.

COPPER PRINCE CONSOLIDATED M. & M. CO. IDAHO

Office: Coeur d'Alene, Idaho. **Mine office:** Herrick, Shoshone Co., Idaho.

Officers: Samuel R. Hite, v. p.; W. H. Batting, W. M. Ramsey, W. W. Parshall, John S. Craig, E. E. Dillinger and Boyd Hamilton, directors; Frank Drummond, supt.

Inc. July 30, 1910, in Idaho. **Cap.**, \$4,000,000; shares \$1 par; non-assessable; cap. reduced, Sept., 1915, to \$400,000. Annual meeting, first Monday in September.

Property: 37 claims, unpatented, 740 acres, in 2 groups on the north bank of the St. Joe river, 6 miles and 20 miles, respectively, above the head of navigation. Property includes water rights. The Copper Prince group, formerly known as the Black Prince, has 13 claims, and the Idaho-Virginia, or Gold Ridge group, of about 24 claims, is about 6 miles east of the Copper Prince, and 3 miles from the C. M. & St. P. railway.

The Copper Prince group shows contact orebodies, between granite and Revett quartzite, of 20 to 30' estimated average width, carrying chalcoppyrite, bornite and gray copper, giving assays of 3 to 41% copper, and 8 to 13 oz. silver per ton. **Developed:** by 500' of drift tunnels, driven from the sides of 2 canyons. The orebody has been traced by trenches and cross-cut tunnels, on each claim, for the entire length of property, a distance of 7,800'.

The Idaho-Virginia group is reported to have a 15 to 20' contact deposit, between granite and slate, carrying galena giving assays of 8 to 40% lead, and 14 to 46 oz. silver. **Developed:** by 2 shafts of 50' and 250' depth, and 3 crosscuts, intercepting a vein said to show galena ore of good quality. Buildings include a smithy, boarding house and a stable.

Company plans utilizing water power from Prince Creek, by 6 miles of 3' ditch and 1 mile of 3' flume.

Equipment: includes 4 boilers, 2 hoists, 2 six-drill air compressors, and a saw mill. Property has been under development for 6 years. Former president, S. B. Holbert, brought suit in 1916 against company to recover \$27,970 for services rendered and money advanced.

COPPER QUEEN MINING & MILLING CO., LTD. IDAHO

See Reindeer Queen Mining Co.

CROWN POINT LEASING CO. IDAHO

Inc. April, 1915, in Idaho. **Cap.**, \$25,000; shares 50c par; 24,999 shares retained in treasury. Arthur Cooper, F. L. Rowley and C. R. Teel, of Kellogg, Idaho, incorporators.

Company has a long-time lease on the Crown Point mine in Government gulch, near Kellogg, Shoshone Co., Idaho.

Ore: occurs in veins and is said to run 40 oz. silver and 48% lead. Developed by tunnels and shaft.

Production: 2 cars monthly at last accounts. Mine is an old-time producer. Company plans further development and erection of mill.

CUSTER CONSOLIDATED MINING CO. IDAHO

Wallace, Shoshone Co., Idaho.

Inc. July, 1910, in Nevada. **Cap.**, \$1,000,000; shares \$1 par.

Property: near the Tamarack & Chesapeake mine, was acquired by stock control by the Day Bros. Property a good one.

DENVER COPPER CO.**IDAHO****Address:** H. M. Ross, Spokane, incorporator.**Property:** 200 acres, in Pine Creek district, Idaho, on which the Admiral vein is said to be exposed by surface workings for 3,000'. A 15' shaft opened 8 to 10" of 6% ore. Deeper work is underway.**DOUGLAS MNG. CO.****IDAHO****A.** Wyman, sec., Wallace, Idaho.**Cap.**, \$1,500,000; shares \$1 par; \$1,200,000 issued. Two dividends of 1c each paid in 1917.**Property:** the Douglas mine on Pine Creek, under option to the Anaconda Copper Mng. Co., for \$256,000. The operating company pays a royalty of \$3 per ton on all ore shipped; shipments amount to about 50 tons crude ore daily.**DREADNAUGHT MINING CO.****IDAHO****Address:** W. J. J. Smith, Wallace, Idaho.**Property:** near the New York and Manhattan claims of the Interstate-Callahan, Coeur d'Alene district, Idaho.**Development:** by tunnels. At depth of 730' No. 1 shoot is 42" wide and said to contain 10 oz. silver, 12% lead and 4% zinc. About 200' farther in a larger orebody is expected. All ore carries a little copper and gold. Shipments are contemplated at an early date.**DULUTH-MINNEAPOLIS MINING CO.****IDAHO****Address:** O. B. Wallace, mgr., Wallace, Idaho.**Officers:** G. W. McClelland, pres.; R. M. White, v. p.; P. M. Olson, sec.; J. J. Ecklund, treas., with M. G. Rodearmel and J. S. Graves, directors.**Property:** on Grouse gulch, Coeur d'Alene district, Idaho. Crosscuts said to have opened from 12 to 20' of lead-zinc ore, and conditions are reported as favorable.**EAGAN COPPER MINING CO.****IDAHO****Address:** Adair, Idaho.**Officers:** Roy A. Henkle, pres.; J. T. Dickinson, v. p.; L. L. Brainard, sec.-treas.; above, with Tom Eagan, F. E. Rice and F. C. Blakely, directors. Inc. 1916 in Idaho. **Cap.**, 1,250,000 shares; 10c par.**Property:** 2 miles from Adair, Idaho; has been under development by Tom Eagan since 1892. Claims reported to show copper ore in the upper tunnel, and for 200' in lower tunnel.

Present management plans to continue lower tunnel, 1917.

EAST CALEDONIA MINES CO.**IDAHO****W.** A. Barter, sec., First National Bank Bldg., Kellogg, Idaho.**Officers:** Herman J. Rossi, pres., Wallace; W. H. Nichols, v. p., Butte; W. A. Barter, sec.-treas., with W. I. Hall, Kellogg; and Frank Pferman, Wallace, directors; Rush J. White, mgr.**Inc.** March, 1915, in Idaho. **Cap.**, \$1,000,000; assessment of 1c a share levied Aug., 1917.**Property:** 130 acres, including the Keating mine at Wardner, Shoshone Co., Idaho.**Ore:** silver-lead in 4 known veins, from 9-26' wide. Assays said to run from 1½% to 36% lead, with good silver values. Company claims to own or control 2,300' of the Silver-King-Caledonia vein system for a length of 4,500'.**Development:** several tunnels and the Keating 416' vertical shaft, to be sunk to 600'. The mine had been worked intermittently for several years before present company acquired control. Recent development is said to have opened up a 2' vein of lead-silver milling ore on the 400' level.

Equipment: hoisting plant, 60 h. p. engine, air compressor, pump, cable, shaft house and blacksmith shop. Plans development at depth after dewatering old workings.

EAST HERCULES EXTENSION MINING CO.

IDAHO

Office: 337 Rookery, Spokane, Wash.

Officers: J. B. Millspaugh, pres.; C. S. Crawford, v. p.; W. H. Macfarlan, sec.-treas.; W. H. Reeves, mgr., Cheney, Wash.

Inc. in Idaho. Cap., \$1,500,000; \$1 par.

Property: 8 claims, unpatented, 176 acres, 4 miles east of Burke, Idaho, and about 2½ miles from the Hercules mine, reported to show a quartz vein carrying gold, copper, silver values.

Development: by tunnels, 137' and 500' long. Annual assessment work only being done. Is a prospect.

EAST SNOWSTORM MINING CO.

IDAHO

Mine near Larson, Shoshone Co., Idaho. A fraud order was issued, 1911, by the postal authorities against C. E. Mitchell, promoter of this company, and also against the company. The title was changed, 1911, to "The Snowstorm Deep Mines, Ltd.," which has also been branded fraudulent. Property described Vol. X, Copper Handbook.

ECLIPSE MINING CO.

IDAHO

Was formerly the Lead King Mining Co., name changed Aug. 13, 1917, and stock pooled for one year.

E. W. Conrad, pres-mgr., Spokane; **S. V. Osborn**, **J. B. Swearington**, Pendleton, Ore.; and **E. B. Heath**, Centralia, Wash., directors. See Lead King.

EXCELSIOR MINING CO.

IDAHO

Burke, Shoshone Co., Idaho. **Chas. Chriswell**, supt.

Property: 6 claims, carrying a 15' vein, said to show copper carbonates and galena at surface.

Development: by 2 tunnels.

FEDERAL MINING & SMELTING CO.

IDAHO

Offices: 32 Broadway, New York, Wallace, Idaho, and Dover, Del. (Corporate office).

Officers: **F. H. Brownell**, pres.; **H. A. Guess**, v. p.; **F. C. Druding**, treas., with **H. W. York**, **F. R. Raiff**, **W. E. Bennett**, **Edw. Brush**, **E. L. Newhouse**, **G. F. Hilton**, **Fred. Burbidge**, **Wm. J. Hall**, **Chas. Earl** and **Roger W. Strauss**, directors; **B. Hoyt**, sec.; **Fred. Burbidge**, gen. mgr.; **Wm. J. Hall**, asst. gen. mgr.

Inc. 1903 in Del. (charter perpetual), amended Aug. 22, 1903. Cap., authorized \$20,000,000 Pfd., 7% Cum., and \$10,000,000 Com.; shares \$100 par. Outstanding, \$12,000,000 Pfd. and \$6,000,000 Com. Preferred stock has no voting power except in connection with the increase of preferred stock, but is preferred as to assets. One-sixth entire capital stock said to be held by American Smelters Securities Co. Federal Guaranty Trust Co., New York, transfer office; U. S. Mortgage & Trust Co., New York, registrar. Annual meeting, second Monday in April. Listed on New York and Spokane Exchanges.

(a) Includes 28,000 shares Bunker Hill & Sullivan stock carried at par value.

Note—Mines and equipment carried at par value of outstanding stock, regardless of actual value of property.

The Federal has a contract with the A. S. & R. Co., dated Oct. 16, 1905, terminating Aug. 31, 1930, by which the Federal company must sell all of the silver-lead ores, slimes and concentrates, of its own or leased mining properties, and all owned or leased property of any company in which the Federal owns 75% of the capital stock to the A. S. & R. Co., and the A. S. & R. Co. agrees to take all such output.

The A. S. & R. allows the Federal 90% of the contents of the latter's lead ore at 90 % New York quotations, when lead sells at less than \$4.10 per 100 lbs.; when the price is over \$4.10 they divide the difference between \$4.10 and the market price. Contract for silver calls for 95%, based on Handy & Harman quotation. Contract for gold calls for 95% at \$20 per oz., provided ore contains 0.05 oz. per ton. Contract provides deductions of \$8 per ton for treatment charge plus freight to smelter (app. \$7.17 per ton) and 50c per ton for each 1% or fraction of 1% of zinc in excess of 10%. Federal cannot lease or dispose of its stock in a company owning or leasing mining property without previous written consent of the A. S. & R. Co.

Suit was filed Feb., 1913, by Sydney Norman, on behalf of the minority stockholders, to set aside the above "alleged unfair smelting contract" and to recover \$2,000,000 damages to Feb., 1913; said amount being the estimated difference between New York price of lead and the lesser terms of the contract. On July 1, 1914, this suit was dismissed in the Supreme Court of New York City, but it was appealed and being heard by the Appellate division, Nov., 1917.

Apex litigation with the Bunker Hill & Sullivan, started in 1908, was settled in 1910 by agreement between the two companies.

History: company entered upon the operation of its properties Sept. 1, 1903. Of the preferred stock, \$10,500,000, and of the common stock, \$5,250,000, were issued upon the acquisition of all the mining property formerly owned by the Empire State-Idaho Mng. & Dev. Co., by the Standard Mining Co., the Mammoth Mines in Idaho, and certain smelting property at Everett, Wash. The smelting property has since been sold without loss to the company. The above mentioned mining property consists of silver-lead mines in the Coeur d'Alene mining district.

In 1910, company acquired an option on a portion of the stock of the Govt. Gulch Dev. Co., lying east of the Black Hawk mines in the Wardner district. On account of default of the stockholders, 414,000 shares out of a million reverted to the Federal Mining & Smelting Co. The property of this company consists of 1 patented and 6 unpatented claims. Company also controls through stock ownership the Black Hawk Mng. & Dev. Co., Ltd.

The company exercised an option on 7/10 of the Cleveland group of the Idaho Investment Co., and started negotiating for remaining 3/10, also, for the Green Hill ground. This resulted in the organization of the consolidated Green Hill-Cleveland Mng. Co., to which company Federal deeded its 7/10 interest, and the owners, thereof deeded their 3/10 interest in the Cleveland group, and also all of the Green Hill ground. Subsequently Federal leased to the Green Hill-Cleveland Mng. Co. all of the mining and milling plant of the Mace mines for an indefinite term, until the ores in the ground belonging to the new company are exhausted, receiving therefor a rental of \$180,000, payable out of the first profits of the new company, before any dividends were declared. Ownership of the Green Hill Co. lies 50% with the Federal company and 50% with the Green Hill interest. Owners of each half interest share equally in directorate and management of the new corporation, operations of which were started Nov. 1, 1912. Dividends received by the Federal from the Green Hill-Cleveland Co. amounted to \$352,000 in 1913, \$576,000 in 1914, \$192,000 in 1915, \$160,000 in 1916.

The Helena-Frisco property was purchased in Jan., 1913, for \$100,000. Operations proved unprofitable and the mine was closed down, Aug. 9, 1916. The mill, plant and buildings were sold to the Tamarack Custer Cons. Mng. Co. for \$150,000, the Federal company retaining all mineral rights.

In July, 1915, Federal purchased, at receiver's sale, the mine, concentrator, power line and supplies of the Iron Mt. Tunnel Co., at Superior, Mineral Co., Mont., for \$100,000. The mine is an old one, having been stoped for 1,700' above water level about 20 years ago. Operations proved disappointing and the mine was closed down, August, 1916. Salvage value of plant was \$78,331.

In the 1916 annual report the following active properties are named: the Wardner, which includes the Last Chance mine at Wardner; the Mace, or Standard-Mammoth, one mile west of Burke; the Morning, at Mullan.

The Wardner group consists of 40 patented and numerous unpatented claims, also several hundred acres of agricultural land. Mineral claims cover over 7,000' in length of the Wardner lode, developed by the Last Chance mine, north and west of the Bunker Hill & Sullivan; orebodies belong to the same vein as those worked by that company, and lie chiefly along the Jersey fissure zone. The Sweeny adit level is the principal level. It is about 700' above the Kellogg tunnel of the Bunker Hill & Sullivan. Ore is hauled to the Arizona portal, from there over a spur of the O.-W.

R. R. & Nav. Co.'s line to the mill at the mouth of Government Gulch. Below the Sweeny tunnel is an inclined shaft several hundred feet deep with several levels. The mine has been a steady producer for 25 years, but is approaching the end, together with the Mace. Only the prevailing high metal prices during 1916 have made profitable operations possible. Profit for 1916 was \$103,844 for the Wardner and \$169,661 for the Mace.

Negotiations for the purchase and development of the Independence mine in Wood River district, Idaho, for \$500,000, will come to a focus Nov. 15, 1917.

The Morning mine, $\frac{1}{2}$ mile N. W. of Mullan, is one of the large lead-silver properties in the district, and one of the best equipped. It is the most important mine of the Federal group, though its ores are the lowest grade of any property in the district and very difficult to treat.

Development: on the 800' level has proved the extension of the main orebody and enabled the increase in production to 300 tons per day. The ore is treated at the Wallace No. 1 mill, installed in 1917. This mine made a profit of \$1,006,020 during 1916.

For geology of the Coeur d'Alene district, see U. S. G. S. Prof. Paper, No. 62.

The North Star-Triumph mines, near Hailey, Idaho, acquired under bond, 1916, have a 300-ton concentrator with flotation system and electric separator under construction. The properties are said to carry a large tonnage of complex ore, containing gold, silver, lead and zinc. In 1916, \$314,923 was expended on development work and equipment.

Ore reserves and development work for past three years:

		Reserves Milling Ore Tons	Concts. Ore Tons	1st Class Ore Tons	Dev. Feet (b)
Wardner.....	Jan. 1, 1915	62,200	4,060	1,020	3,655

Total.....	Jan. 1, 1915	988,450	99,150	48,640	7,256
	Jan. 1, 1916	1,107,600	131,370	68,180	12,432
	Jan. 1, 1917	807,100	76,330	78,580
Increase or decrease.....	Jan. 1, 1916	119,150	32,220	19,540	5,176
	Jan. 1, 1917	72,400D	9,980D	10,610I

(a) Includes lead and zinc. (b) For year ending.

The Federal company is amply provided with modern concentrating, pumping, hoisting, compressor and electric plants.

Employed an average of 1,223 men, 1916, at average wage of \$4.509 per shift.

Production:

Figures for 1916 not available, but profits from individual mines are given under their respective heads.

Year	First-Class Ore			Milled Tons	Lead Concs. & Shipping Ore				Zinc Concs.	
	Total Tons Mined	Tons	% Pb.		Tons	% Pb	Oz	Ag	Tons	% Zn.
1915(a).....	461,252	29,338	30.4	408,315	66,610	40.20	14.77		8,839	42.46
1914.....	421,631	21,091	34.0	389,450	57,058	44.67	16.01		4,200	44.61

(a) Morning mine only operated for last 8½ months.

	First-Class Ore		Concentrates				Frisco (a)		Iron Mt. (b)	
	Wardner	Morn.	Wardner	Morn.						
	%	Oz.	%	Oz.	%	Oz.	%	Oz.	%	Oz.
	Pb.	Ag.	Pb.	Ag.	Pb.	Ag.	Pb.	Ag.	Pb.	Ag.
1915.....	45.7	28.9	57.7	19.6	46.1	15.5	25.9	7.6	37.1	60.1
1914.....	51.2	29.6	59.1	22.4	44.7	14.7

(a) % zinc in zinc concentrates was 40.0%; (b) % zinc in concentrates was 37.6%.

The Last Chance and Green Hill-Cleveland mines are practically worked out, the former reverting to the Bunker Hill Co. whenever it fails to show an operating profit for 5 consecutive months. Inasmuch as \$12,000,000 7% preferred stock is in arrears \$1,000,000 and the common has received no dividend since 1909, and is now worthless, the sole property of value, the Morning mine, has a heavy load to carry.

The company is earning exceptional profits in 1917 owing to high lead and silver prices, and it is possible its net surplus on hand Jan., 1918, will cover unpaid preferred dividends, and the market price of the stock.

It is evident, however, that company's stock is merely a liquidating proposition.

FLORENCE MINING & MILLING CO.**IDAHO**

Address: John B. Steffes, sec.-treas., Kellogg, Idaho.

Officers: Chas. Dallaire, pres.; J. D. Chisholm, Jas. Ezkiel and John Haalund, directors.

Inc. 1908, in Idaho. **Cap.**, \$1,000,000; shares \$1 par; assessable; 440,000 issued. Annual meeting, second Tuesday in July.

Property: 10 claims, 170 acres, due E. of the Alhambra and S. E. of the Sherman and Roanoke mines in the Yreka mining district, of the Coeur d'Alene. Ore occurs in vein in Revett quartzite, carrying lead, silver and copper. Orebody is 100' wide, has dip of 70° and S. E.-N. W. course. Developed by crosscut tunnels, 150' and 300' long, with a total of 800' underground workings. A lower tunnel has been started to intercept the vein at depth of 1,000'. The power line was installed during 1916 and a compressor is to be added to the equipment in 1917.

FRIEND MINING CO.**IDAHO**

Address: 505 Jamieson Bldg., Spokane, Wash.

Officers: C. M. Weller, pres.; Wm. Schierding, sec.-treas and mgr., with T. Havens, David Bayth and Geo. Baxter, directors.

Inc. 1915, in Idaho. **Cap.**, \$150,000; shares 10c par; assessable; 2c called July 24, 1916.

Property: 3 claims, in Beaver Creek district, Coeur d'Alene district, Idaho, said to show a fissure vein, 7' wide, carrying zinc-lead-silver values. The mine is developed to vertical depth of 1,500' with 600' of drifting. Developing June, 1917.

GERTIE MINING CO.**IDAHO****Office:** 708 Hutton Bldg., Spokane, Wash. **Mine office:** Burke, Idaho.**Officers:** L. W. Hutton, pres.; John Harvey, treas., with Mrs. E. C. Travers and A. A. Booth, directors; G. N. Crawford, sec.; A. Anderson, supt.**Cap.,** \$150,000, increased in 1914 to \$250,000; shares 10c par; 240,000 outstanding. Listed on Spokane Stock Exchange.**Property:** 3 patented claims, 35 acres, adjoining Hecla on the S. E. and Maher Ahearn group on the W., near Burke. Also owns about 10 acres at mouth of crosscut tunnel. Company has been driving a long 6'x8' tunnel, now in over 4,100' with depth of 1,400', in the expectation of cutting a vein mined on the Hecla property. This vein is said to have shown 3 or 4" of clean galena, 300' from the Gertie lines and 250' farther back Hecla is said to have mined 3 to 5' of clean ore. A large vein was cut, Dec., 1915, but results were very disappointing and management decided to start work on a different fissure, March, 1916. In Nov., 1916, mine was closed, but reopened, June, 1917. Crosscut tunnel to Gertie claim is to be extended to Iron King to find the vein. Expenditures to date, \$75,000.**GIANT LEDGE MINING CO.****IDAHO****Office:** Spokane, Wash.**Officers:** J. J. Taylor, pres.; J. Erikson, v. p.; W. W. Johnston, sec.-treas., Spokane; above, with D. S. Prescott and A. B. Shelton, directors.**Inc.** 1913, as a reorganization of the Granite Allie Co. **Cap.,** 1,500,000 shares; \$1 par; 1,350,000 issued. Chas. G. Taylor, mgr.**Property:** on Granite Gulch, 4 miles E. of Murray, Shoshone Co., Idaho. Several claims added in 1916.**Recent development:** in July, 1917, a 160' crosscut from the 400' level of new shaft opened 40' of ore assaying \$5 gold, 2 oz. silver and \$42 lead per ton.**Equipment:** 7-drill compressor, hoist, pumps, 1½-mile flume and electric power. A 150-ton mill was being built in 1917. Favorably regarded.**GIANT MINING & DEVELOPMENT CO.****IDAHO****Address:** 517 Bank St., Wallace, Idaho.**Officers:** A. Rechsteiner, pres.; E. R. Turk, sec., with G. Malcrida and I. Davis, directors; P. Liever, mgr.**Cap.,** \$100,000, paid up; stock assessable; 4 mills per share levied, August, 1917.**Property:** 7 claims in Beaver district, Idaho. Three men employed.**GOLD HUNTER MINING & SMELTING CO.****IDAHO****Office:** Mullan, Idaho.**Officers:** P. J. Hennessy, pres.; Dennis Ryan, v. p.; E. C. Hennessy, sec.; T. F. Keeley, treas.; C. L. Herrick, managing supt.; C. K. Cartwright, mine supt.**Cap.,** 200,000 shares; \$10 par. Is a close corporation.**Property:** 7 claims and a fraction, patented, in Hunter district, Coeur d'Alene district, Idaho; also 20-acre millsite.**Geology:** fissured zone in quartzite and shale. Lead-silver sulphide ore occurs as shoots with dip of 80° S. and course of N. 75° W. The mineralized area is 200' by 1,800'.**Development:** by tunnels and shafts. Main tunnel 4,800' long. Winze down 1,200' below tunnel level will be sunk to 1,600'. Two shoots developed, the N. 12' wide, the S. 20' wide. Best ore coming from east part of Yolande and west part of West Hunter claims.**Equipment:** includes 150 h. p. electric hoist, two 3,000 cu. ft. compressors, 100 g. p. m. pump, 340-ton mill using 9 air agitated flotation cells.

Results of operations:

	Tons Ore	Gross	Cost Mining	Trans. and Treatment	Improve- ments	Net Profit
1915....	118,764	\$614,590	\$333,904	\$214,315	\$34,707	\$31,662
1916....	119,490	815,779	482,275	180,186	8,044	161,361

In 1914 there was a loss of \$45,926, but \$370,000 was spent in improvements. Gross earnings were \$421,318.

GOLDEN CHEST MINE**IDAHO**

Address: Vivian Green, gen. mgr., 45 W. 34th St., New York; R. T. Horn, supt.

Property: near Murray, Coeur d'Alene, Idaho.

Geology: quartz vein in Prichard slate. Ore from upper levels was free milling, and the gold easily recovered. At depth the ore became pyritic and rebellious to simple treatment. Gold and tungsten occur in the same vein, but the scheelite is confined to the disturbed part of the vein and is almost free from gold. The gold shoots are free of tungsten, yet in mining, both become mixed to some extent.

Treatment: in Bull. 128 of the A. I. M. E., R. R. Goodrich and N. E. Holden describe tests made on this ore, tungsten with a little gold. Considerable clean scheelite is sacked direct for market. It was found that gravity concentration gave 53.7% tungstic oxide concentrate, with much pyrite, not a marketable product; flotation does not clean the concentrate properly and loses tungsten in the overflow; roasting and magnetic separation of the pyritic tungsten material yields over 60% grade; and the net extraction of WO_3 is about 90%.

GRAY COPPER MINING CO., LTD.**IDAHO**

Osburn, Shoshone Co., Idaho. E. F. Hall, pres.; W. H. Herrick, sec. and mgr.

Cap., \$375,000; shares 25c par.

Property: 7 claims, 2 very hard miles from a railroad, on McFarren gulch, 12 miles from Osburn, shows a vein of 6 to 20' surface width, developed by a combination crosscut and drift tunnel, showing mainly gray copper ore, said to average 17% copper, 20 oz. silver and \$10 gold per ton. No recent returns secured. Probably idle.

GREAT EASTERN MINING CO., LTD.**IDAHO**

Wallace, Idaho.

Officers: John Carlson, pres.; Edwin Erickson, v. p.; John C. Furst, sec.-treas. John Carlson, Chas. Solberg and John C. Furst, directors.

Inc. Sept. 19, 1900, in Idaho. **Cap.,** \$1,000,000; outstanding \$800,000; shares \$1 par. Annual meeting in April.

Property: the Great Eastern group, 14 claims, patented in Leland mining district, $4\frac{1}{2}$ miles N. E. of Wallace, said to show silver-lead-zinc ore in fissure veins.

Development: by shafts and tunnels, longest tunnel 3,000'. Claims are still in the development stage, and have been for a number of years. Management states that \$6,000 was spent in 1915 on development work. Property is easily accessible to Northern Pacific and Union Pacific (O.-W.) railroads.

GREAT WESTERN MINING CO.**IDAHO**

Burke, Shoshone Co., Idaho.

Officers: W. W. Russell, pres. and mgr.; Victor Huot, v. p.; G. T. Edmiston, sec.-treas.; preceding officers, F. P. Robinson, John J. Jenkins, R. R. Carnes and C. H. Kratzer, directors.

Property: 7 claims, patented, 3 miles from Burke, show vein traced for about 1,200' by trenching, carrying copper and lead ore.

Development: tunnels of 1,270' and 900' and a 207' shaft. Work was begun Aug. 12, 1904. A raise being driven, 1914, reported to have opened up a 12' orebody. Assays average 7% lead, 1.54% copper and 0.4 oz. gold.

Equipment: includes hoist and small Rand air compressor, driven by a 6 h. p. motor. Idle.

GREEN HILL CLEVELAND MINING CO.

IDAHO

See Federal Mining & Smelting Co.

GUELPH MINING & MILLING CO., LTD.

IDAHO

Head office: Kellogg, Idaho. **Mine office:** Sunset, Idaho.

Officers: Byrd Coyle, pres.; W. C. Boyle, v. p.; A. P. Corby, sec.; Eliza H. Steffes, treas.; J. I. Joy, T. J. Yarbrough, H. H. Rodes, J. B. Steffes and S. D. Lemieux, directors.

Inc. Mar. 6, 1916, in Idaho. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; 1,300,000 outstanding.

Property: 5 patented claims, in Placer Center district, adjoining the Hercules, Ambregris, Sunset and Interstate-Callahan mines.

Geology: quartz vein in Burke quartzite, with dip of 55° and strike, S. E. to N. W. Ore occurs as streaks and contains lead carbonate and silver chloride.

Development: by 200' shaft to be sunk to 400', and by 2,200' of tunnels.

Equipment: includes 75 h. p. hoist, Sullivan compressor, Cameron pump, and electric power supplied by Washington Water Power Co. Expenses in 1916 totaled \$10,000.

HAMBURG-AMERICAN COPPER M. & M. CO.

IDAHO

Kellogg, Idaho.

Officers: Wm. Schaefer, pres.; D. W. Price, v. p.; J. A. Walden, sec.; W. W. Papesh, treas.; Elmer Brown, Paul Jacobs, H. Froehlich and Frederick Bell, directors.

Inc. Nov., 1908, in Idaho. **Cap.**, \$1,500,000; shares \$1 par.

Property: 8 claims, between the Handspike and Riverside, on the Little North fork, shows copper ore.

Development: by 749' tunnel. Mine 18 miles from O. W. R. & N. Co.

HAYES CO.

IDAHO

Operates a flotation plant for recovery of values from slimes from the bed of the south side of Coeur d'Alene river.

Officers: A. Hayes, pres., Kellogg, Idaho; S. A. Easton, treas.

Inc. 1917, in Idaho. **Cap.**, \$50,000; shares \$1 par.

Property: company has a lease on about 1,200 acres, including 3 miles of river bed.

Production: to Aug., 1917, 9 cars of slimes running about 22 oz. silver and 30% lead.

Plant is reported to have cost \$50,000 and is designed to treat 200 tons daily.

HEADLIGHT MINING CO., LTD.

IDAHO

Idle.

Office: 324 Hutton Bldg., Spokane, Wash.

Mine Address: Wallace, Idaho.

Officers: F. P. Markwell, pres.; Alex. Murphy, v. p.; Everett H. Pattison, sec.; Oscar Nordquist, treas.; above with C. A. Markwell and Angus Sutherland, directors.

Inc. 1900 in Idaho. **Cap.** \$1,800,000; shares \$1 par; non-assessable; 1,438,995 issued. Bonds: \$50,000 issued.

Property: 13 claims, 10 patented, 130 acres, in the Leland mining dis-

trict, Shoshone Co., Idaho, reported to show lead-silver ore in fissure veins in quartzite. Developed by tunnels.

HECLA MINING CO.

IDAHO

Wallace, Idaho.

Officers: Jas. F. McCarthy, pres.-treas. and gen. mgr. Wallace; Frank Upman, v. p., with Sarah Smith Wilbur, Carl Landsee, F. J. Kipp, W. J. C. Wakefield and H. C. Lambach, directors. L. E. Hanley, sec., Wallace.

Original Hecla Mining Co., inc. in Idaho in 1891, with cap., \$500,000 and shares \$1 par, owned the Hecla and Katie May claims. **Reincorporated** July, 1898, in Wash. **Cap.**, \$250,000; shares 25 cts. par; all issued and fully paid. Security Transfer and Registrar Co., New York, transfer agent; Metropolitan Trust Co., New York, registrar. Annual meeting in April. Listed on New York Curb and Spokane Stock Exchange.

Balance sheet, Dec. 31, 1916, shows: assets, \$5,601,172, which includes property, \$4,423,263; improvements, \$633,039; inventory accts., \$44,587; accts. receivable, \$7,506; ore in transit, \$302,650; cash, \$186,624. Liabilities include: accts., payable \$111,949; reserves for depreciation, \$383,471; surplus, \$639,396.

Income statement for 1916 shows: net receipts from ore sales, \$2,543,072; interests and misc., \$6,122; total, \$2,549,195. Expenditures were \$741,187, which includes, mining and development, \$524,820; ore sorting, \$40,901; haulage mine to mill, \$19,539; milling, \$93,194; taxes and general, \$62,731. Net income, \$1,808,008; depreciation reserves, \$50,380, leaving net profit of \$1,757,628.

Dividends: for 1916 amounted to \$1,550,000; in 1917, \$1,500,000 to Oct. 20th, bringing total dividends to November, 1917, to \$6,895,000. Present dividend rate, 15c monthly.

Property: 29 patented claims, 347 acres, near Burke, also mill site at Gem. **Ore:** Chiefly silver-lead sulphides accompanied by sphalerite and pyrite, occurring in the Hecla lode; strike N. W.-S. E., with average dip 80° to N. E. General country rock is serictic Burke quartzite. The lode is intimately associated with a lamphrophyric dike, which has an average width of 2'. Ore averages 5' to 6' in width, occurs mainly in the quartzite on one or both sides of the dike, and, to a large extent, fills fissures. The pay shoot has an extreme length of 1,200'. For geology of Coeur D'Alene district, see U. S. G. S. Prof. Paper No. 62. Also paper by Oscar A. Hershey. Published by Mng. & Sci. Press.

The east vein has been proven to vertical depth of 900' and for over 900' in length on No. 3 level. Ore is narrower and silver values lower at 900'.

A new vein of zinc-silver-lead ore was cut, 1916, on the 300' and 600' levels and company is shipping about 200 tons daily of zinc-lead ore from development work. The Marsh Mng. Co's mill at Black Cloud has been leased to concentrate this ore.

Development: by tunnels and shafts; working shaft 1,600' deep with 20,000' drifts and crosscuts. Development work in 1916 amounted to 6,421'. Lowest level is at 1,600', where orebody has been drifted on for its full length. A 1,400' raise on the east vein on No. 3 level, was driven, 1916-17.

Ore reserves: estimated October 1, 1917, at 1,296,000 tons, sufficient at present rate of production to last over 4 years.

Equipment: the property is one of the best equipped in the district with hoists, compressors, machine shops, and a 500-ton concentrator, the latter at Gem, has a flotation unit, using General Naval Stores oils. Electric haulage is being tried out on the 1,600' level; if successful there, it will be extended to other levels. Company employs 175 men.

Production:

	Ore & Cncts. Shipped Tons	Lead Lbs.	Silver Oz.	Lbs.Pb.Oz.Ag. per T. per T.	Selling Price Cents	
					Pb.	Ag.
1916.....	40,832	40,217,573	1,195,841	985 29.30	6.936	67.3
1915.....	26,214	24,917,867	692,444	951 26.4	4.866	50.4
1914.....	20,051	18,957,823	509,200	945 25.4	3.866	55.0
1913.....	19,937	18,832,534	507,236	945 25.4	4.364	59.5

Production during 1917 averaged about 700 tons daily.

Costs per ton, 1915, were as follows:

Mng.	Dev.	Sorting	Perm. Imp.	Misc.	Mill.	Trans.	Gross Rec.	Exp.	Profit
\$1.68	8.7c	14.7c	14.7c	38.3c	35.7c	9.9c	\$7.05	\$2.65	\$4.40
Costs in 1916:									
\$1.90	19.3c	16.3c	50.7c	25.0c	50.6c	10.6c	\$10.1	\$2.95	\$7.21

Company has made a 5-year contract with the Bunker Hill & Sullivan Mng. & Concentrating Co., for the smelting of its lead-silver ores., at the Kellogg plant.

The Hecla mine, unsuccessful in its early years, has become one of the steady dividend payers of the district. The property is kept up to a high standard in condition and is most efficiently managed.

H. E. M. MINING CO.**IDAHO**

Consolidated with the Aurora-Sampson Mining Co., to form the Western Union Mining Co., which see.

HENRIETTA LEASING CO.**IDAHO**

Organized, 1917, by Wm. A. Beaudry, P. Weber, Ben. Harmon, Sidney Shonts and Frank H. Skeels. Wm. A. Beaudry, mgr., Wallace, Ida. Has a 5-year lease from 1917 with option to purchase at \$80,000, on the Bear Top mine, formerly owned by the Bear-Top Orofino Cons. Mining Co.

Property: about 5 miles from Murray, shows a vein in slate, carrying silver-lead ore in pockets and irregular shoots. Lessees operate on a royalty basis, paying 15% on lead settled for under 7½c per lb. and 20% for shipments netting above that figure.

HERCULES MINING CO.**IDAHO**

Address: Eugene R. Day, mgr., Burke, Idaho.

Is a partnership, not a corporation, the Day family owning a half interest and dominating the policy.

Property: The Hercules mine, a group of claims near Burke, also various stock interests as follows:

500,000 shares Northport Smelting & Refining Co.

168 shares Pennsylvania Smelting & Refining Co.

9,800 shares Hidden Treasure Co.

720,330 shares Idaho & Eastern Mining Co., a controlling interest.

912,779 shares Hummingbird Mining Co. a controlling interest.

505,333 shares Ambergris Mining Co., a controlling interest.

840,854 shares Basin Mining Co., a controlling interest.

The Hercules mine is the greatest bonanza mine of the entire district. It has one big vein in quartzite and slate, cut by two cross faults and one dike. The development is by tunnels, at various levels, the lowest, haulage, or Hummingbird tunnel, nearly level with Burke, with a shaft 530' below it, a total depth of 2,252' below the apex.

The output is shown in the following table.

OUTPUT OF HERCULES MINE FROM 1901 TO OCTOBER 28, 1916

Year	Average Price		Tons	Content		Shipments		Content	
				Lead	Silver	Crude	Concts.	Lead	Silver

Average 11 years...	52.33	44.49				
Average 16 years...						

Production: in 1916 totaled 87,179 tons, worth \$7,272,258. Extraction costs were \$1,501,129, or \$17.20 per ton; freight and treatment, \$2,634,028, or \$30.20 per ton; net profit, \$2,931,136, or \$33.60 per ton.

Capacity of the Hercules mill at Wallace has been increased to 700 tons daily.

HIGHLAND SURPRISE CONSOLIDATED MINING CO. IDAHO

Kellogg, Idaho.

Officers: W. W. Papesh, pres.; M. J. Sinclair, v. p.; Chas. Weigand, sec.-treas.; preceding, with Chas. R. Mowry, George Lamielle and L. F. Macheski, directors; P. F. Rogers, mgr., Beeler.

Inc. 1912 in Idaho. **Cap.**, \$1,200,000; shares \$1 par; assessable; 1,158,000 shares outstanding. 1c assessment levied Sept., 1917. Company is a consolidation of the Surprise Mining & Milling Co., and the Highland Chief Group. Annual meeting, fourth of April. Listed on Butte Exchange.

Annual reports for fiscal year ending March 1, 1917, shows: net returns from ore shipped, \$92,978; misc. receipts and accts., owing, \$23,492; total expenses, \$83,760; net profit, \$10,016. Cash on hand, \$1,099. Cost of development amounting to \$11,956 is not included in mining costs, only the \$1,939 expended in diamond drilling being included.

Property: 21 claims, 3 patented, 400 acres on Pine Creek, 15 miles by road S. of Kellogg.

Ore: silver-lead-zinc sulphides in fissure veins in slate; veins strike N.; 60° E. dip 70°. Purchased 9 claims, 1917, lying east and on the strike of the Highland vein, tying up property to the Bunker Hill & Sullivan ground.

Ore: silver-lead-zinc sulphides in fissure veins in slate; average values 5 oz., silver, 8% lead and 20% zinc. A shoot of zinc ore opened 1916 is 640' long, 3 to 12' wide, and carries considerable iron.

Ore reserves: enough ore is estimated as blocked out to last until Sept., 1918. Shaft will be sunk 200' from No. 4 level on the ore, which should give another 2½ years ore supply.

Development: by tunnels, longest 2,000' with 4,750' of underground workings; greatest depth of workings, 325'. New work, 1916, totaled 1,175' all on the orebodies on No. 4 level, 1,027' of diamond drilling was also done.

Electric power obtained from the Washington Water Power Co. Concentrates hauled to the railroad at Pine Creek siding. Company employs about 35 men.

Equipment: includes 6-drill and 800 cu. ft. compressors, 35 h. p. hoist, two 80 h. p. boilers, pump, etc. Mill capacity increased to 125 tons per 24 hours in 1916 and flotation plant installed. Recoveries increased from 56% to 80% of the metallic contents of the ore. Late in October, 1917, a mono-rail to carry concentrate from the mill to the new railway up Pine Creek was completed. The cost of haulage will be reduced from \$4 to 25c per ton.

Production: for 1916 was 18,458 tons, netting \$92,978. Regular shipments being made to U. S. Smelting Co., 1917.

HILARITY MINING CO.

IDAHO

Cons. Jan., 1917, with the Pine Creek M. & M. Co., which see. W. H. Moffitt, sec., Wallace, Idaho. Jacob Lackman, pres., Nampa, Idaho.

Cap., \$1,000,000; shares \$1 par. A 6 months' option, dating from April 18, 1916, on majority of stock, has been taken by Spokane brokers. Listed on Butte Exchange.

Property: 7 claims in the Pine Creek district, covers about 1 mile along strike of vein said to be the extension of the Constitution Douglas.

Ore: lead-zinc. Development under way in 2 tunnels. Property is a prospect.

HORST-POWELL COPPER MINING CO.

IDAHO

Address: P. O. Box 2221, Spokane, Wash.

Officers: S. W. O'Brien, pres.; M. F. Mendelhall, sec.-treas.

Property: 5 claims and a 5-acre mill site, well timbered, on the Little North Fork river, Coeur d'Alene.

Development: by 3 tunnels, 300', 600' and 200' long, and 2 shafts, 50' and 100'. Vein is of 15' estimated surface width, opened up for 800' and proved to depth of 400' with slate footwall and quartzite hanging wall, carrying copper ore averaging 2-6%.

Equipment: includes steam and gasoline power, with a hoist and necessary mine buildings. Mill installed 1916. Property is connected with Idaho No. R. R. at Murray by 5-mile wagon road. Estimated 15,000 tons of copper ore on the dumps. Thirty men employed.

Under option until Jan., 1919, to the Empire Copper Co., the owners however controlling and operating the property.

HYPOTHEEK MINING & MILLING CO.

IDAHO

Address: Wallace, Ida. **Mine office:** Kingston, Shoshone Co., Ida.

Officers: J. H. Kerns, pres. and gen. mgr.; J. H. Guenther, v. p.; O. A. Olsson, sec.-treas. and asst. mgr.; with A. Hitchcock and W. W. Dawson, directors.

Cap., \$200,000; shares, 10c par. **Bonds:** \$105,000, 7%, 12-yr., authorized in 1914.

In quarter ended Apr. 30, 1917, net profit was \$14,730 from smelter returns totaling \$40,901. Ore and concentrate on hand was worth \$30,000. By January, 1918, it was expected that the indebtedness would be wiped out.

Property: 9 claims, located, 1886, by Octave Guay, shows 3 veins, 2 of 10 to 20' estimated width, the third vein, known as the Great Western, of 8 to 25' width, having a 12 to 18" paystreak carrying native copper and cuprite, assaying up to 16% copper, balance of vein carrying low-grade ore, estimated to carry 2% copper, with small gold and silver values with quartz gangue.

Development: by 1,000' tunnel and 3-compartment shaft to the 1,100' level. The 523' level (750' below surface) opened up a fine shoot of commercial lead ore in 1912. The 900' level also shows an ore shoot 6' thick and 400' long, from which small shipments were made in 1915. This is the deepest mining work in the Prichard slates of the Coeur d'Alene sedimentary series, a formation hitherto considered unpromising. The finding of chalcocite at this mine below 1,000' of Burke quartzite completely contradicts all former views. In Feb., 1916, a crosscut on the 1,100' level opened up a vein of solid galena ore from 18"-2' wide.

Property examined by J. V. Richards in June, 1917, who said that the ore shoot opened by the 700', 900' and 1,100' levels, was 400' long and averaged 3' in width. The ore is largely lead carbonate, assaying 10% lead and 1 oz. silver per ton. Half-way between 900' and 1,100' the shoot is cut off and but little ore is found at 1,100', or 100' below it, although the vein is strong. Reserves would not exceed 20,000 tons. In July, 1917, the company let a contract for drilling the ground north and south of the vein, also below 1,200'. Late in October it was reported that 4' of 20.5% lead ore had been cut by the drill.

Management has been accused of not giving enough information to shareholders. Apparently there is not much of a future unless drilling discovers other shoots.

The mine is electrically equipped and has a 200-ton concentrator with Chilean mill, Wilfley tables, Frue vanners, etc., A 3-mile aerial tram was installed to convey ore from the mine to the railway.

Production: 25 tons of crude ore and concentrate weekly.

IBEX MINING CO.

IDAHO

Mullan, Shoshone Co., Idaho. Controlled by the Amalgamated Stock Holding Co., of Wallace, Idaho.

Inc. April 15, 1911, in Idaho. Company still in existence, but comatose.

Owens 4 claims, adjoining Idaho, Boulder Creek and Bitter Root mines. three-fourths of a mile S. of Mullan and 300' from N. P. R. R. Property shows 4' iron vein adjacent to a diabase dike. Developed by 2 tunnels, the lower starting from Coeur d'Alene river to cut vein at 700' below outcrop.

IDAHO CARBONATE HILL MINING CO.

IDAHO

Address: W. D. Greenough, Millan, Ida.

Property: An option on the Carbonate Hill and Idaho Giant claims, also owning the Boulder Creek claims, adjoining, lead and zinc have been opened in the first-named.

IDAHO COPPER MINING CO., LTD.

IDAHO

Office: Wallace, Idaho. **Mine office:** Mullan, Shoshone Co., Idaho.

Officers: John H. Nordquist, pres.; A. N. Stroud, v. p.; Geo. F. Stoney, sec.; A. H. Featherstone, treas.; W. H. Herrick, gen. mgr.

Property: 6 claims, 3 patented, on the Continental divide, between Idaho and Montana, near the head of Willow creek, in the Hunter district, west of the Reindeer Copper & Gold M. & M. Co., Ltd. Claims carry about 4,500' of the strike of the extension of the Reindeer vein, and are developed through the 3,000' Reindeer crosscut tunnel. Requests for information ignored by Co.

IDAHO GIANT MINING CO.

IDAHO

Cap., \$100,000; shares 10 cts. par.

Property: the Idaho Giant mine adjoins the Carbonate Hill above Mullan, Shoshone Co., Idaho.

Development: mainly by tunnels, shows lead-silver ore in veins. The mine was bonded to Thos. Brennan, manager of the Hunter mine, for 5 years, starting April 1, 1915, with first payment of \$10,000 to be made at the end of 3 years.

IDAHO AND LOS ANGELES M. & M. CO.

IDAHO

Wallace, Idaho. An assessment of 5 mills per share was levied Aug. 18, 1917.

Property: 6 lode claims, in process of patenting, in Beaver and Placer Center mining districts, Shoshone county, said to show a well defined vein containing lead-silver-zinc and copper ore. Developed by 250' tunnel which is being extended in search of a continuous orebody.

IDAHO MONTANA MINING CO., LTD.

IDAHO

Office: J. H. Wixom, sec., Box 32, Wallace, Idaho.

Officers: Walter H. Hanson, pres.; E. H. McConnell, v. p.; Harry Harris, treas.; preceding, with F. P. Miller, directors; Harlan L. Heward, sec.

Inc. Aug. 18, 1905, in Idaho. **Cap.,** 1,000,000 shares; 10 cts. par; assessable; 386,349 shares outstanding. Annual meeting 1st Saturday in Sept.

Property: 10 claims, unpatented, 200 acres in Shoshone Co., Idaho, and Sanders Co., Mont., showing lead-copper-silver ore in quartz veins. Developed by 1,200' tunnel to depth of 540'. Mine has no equipment and is not yet producing; but development work was steadily prosecuted, 1917.

IDAHO NEVADA EXPLORATION CO., LTD.**IDAHO**

Wallace, Idaho. **Officers:** M. J. Mahoney, pres.; Jos. Peila, v. p.-gen.-mgr.; E. R. Turk, sec.-treas., with A. B. Livingston and August Holst, directors. W. B. Lively, mgr.; S. L. Shonts, cons. engr.

Inc. 1914, in Idaho. **Cap.**, 1,500,000 shares; shares given to those agreeing to pay an assessment of 1 mill per share every 2 months.

Property: 3 lode claims, the Castle Rock, Smart Alec and Arlington, and a mill site, formerly owned by the Castle Rock Mining Co., about 3 miles S. E. of Wallace on Placer Creek. Ore occurs as chalcopyrite in a 4' vein in quartzite formation.

Developed to depth of 250', from whence a crosscut is being driven to intercept the main vein. During 1917, 250' of drifting and crosscutting was done and the winze sunk to the 250' level. Six men are employed.

Equipment: includes compressor and hoist. A carload shipment to Tacoma smelter in 1915 said to have assayed .04 oz. gold, 10.89% copper, 10.5% silica, 35.7% iron. Surface equipment and buildings destroyed by snowslide, Jan., 1916; since re-built.

IDAHO NORTHERN MINERAL CO.**IDAHO**

Mine office: Murray, Idaho.

Officers: F. Swanson, pres.; Vina Burton, sec.-treas., with A. Engquist and J. A. Sangren, directors.

Inc. in Washington. **Cap.**, \$1,500,000; shares \$1 par.

Property: 18 unpatented claims, in the Summit mining district, 5 miles from Murray, shows copper, lead, silver and gold ore in 2 well defined veins. Developed to depth of 400' by 1,500' tunnel. Property still in development stage.

IDORA MINING CO., LTD.**IDAHO**

Office: Jamieson Blk., Spokane, Wash. **Mine office:** Wallace, Idaho.

Officers: J. C. Broad, pres.; J. B. Carson, v. p.; C. E. Malette, sec.-treas. and mgr., with C. J. Orland and D. B. Fotheringham, directors. E. L. Latta, supt.

Inc. May, 1915, in Idaho. **Cap.**, \$150,000; shares 10 cts. par; 1,200,000 shares issued, assessable; 1 ct. levied in 1916. Annual meeting 1st Monday in April. Company had \$26,000 debts in August, 1915, which have since been partly paid off. Property formerly held by the Idora Hill Mining Co., was purchased for \$100,000.

Property: 9 claims, 1 patented, in Beaver district, Shoshone county, show lead-silver-zinc ore in 3½' quartz vein. Formation is Prichard slate. Average assays reported to run 50% lead; 25 oz. silver, 8% zinc.

Development: by 8,000' of underground workings to depth of 600', including a 5,000' tunnel.

Equipment: consists of electric power, compressor, 150-ton concentrating mill and a tramway. A new Janney flotation unit was installed in 1916. Shipped from 80 to 100 tons of ore a month, in 1916, to Globe smelter at Denver and the Northport smelter in Washington. Employs 15 men.

IMPERIAL MINING CO.**IDAHO**

Mine office: Burke, Shoshone Co., Idaho.

Officers: John H. Nordquist, pres.-gen. mgr.; J. N. Thennes, v. p.; H. G. Brown, sec.; with G. A. Lahaefer, E. Day, directors.

Inc. 1906. **Cap.**, \$1,000,000, increased 1908 to \$1,500,000; shares \$1 par. Assessment of 1½ mills per share levied 1913, 5 in 1915, and 8 in 1916.

Property: 6 claims and 3 fractions, 180 acres, adjoins the Copper King, on the west, near Burke. Developed by 5,000' of tunnels and crosscuts. After being closed down for 2 years, property was reopened in 1915. Over \$15,000 worth of development work was done, including diamond drilling

and raising, to prospect the orebody found in the upper or 4,000' tunnel, which was not encountered below. Contract for a new 400' tunnel was given in 1916.

Equipped with 3-drill electrically driven compressor.

INDEPENDENCE LEAD MINES CO.

IDAHO

Officers: Maurice W. Bacon, pres., Old National Bank Bldg., Spokane, Wash.; John H. Wourms, v. p.; W. E. Cullen, Jr., sec.; with R. A. Carnochan and C. Van Ordstrand, directors.

Inc. Nov., 1914, in Idaho, as a reorganization of the Independence Gettysburg Mining Co. **Cap.**, \$1,500,000; shares \$1 par; 1,400,000 shares issued. Stock listed on the Spokane Exchange.

Property: 8 patented claims and a $\frac{1}{2}$ interest in the Key Lode claim, in the Coeur d'Alene district, 1 mile from Mullan, on the No. P. R. R. Claims adjoin the Gold Hunter M. Co. holdings to the E. and the You-Like and Morning mines of the Federal M. & S. on the W. Mine shows 3 veins believed to be the extension of the Morning-Evening, You-Like & Midnight orebodies, which have been profitably worked to depth of 2,800' on adjoining properties.

Development: mainly by 4 crosscut tunnels, 200', 400' and 1,800' long. The longest, or No. 4 tunnel, 370' vertically below No. 3, early in 1916 intercepted the You-Like vein, showing 8' of ore assaying 4 oz. silver, 3% lead with some iron sulphide. This tunnel is being continued north to reach the Morning vein. Employs 15 men.

INDEPENDENT COPPER MINING & MILLING CO.

IDAHO

Officers: John H. Nordquist, pres.; J. N. Thennes, v. p., gen. mgr. and agt., Wallace, Idaho; Otto A. Olsson, sec.-treac.; preceding, with James A. Beau, Aug. Mott, Chas. McKinnis, Forest Clark and Henry Bilberg, directors.

Inc. 1907 in Idaho. **Cap.**, \$1,250,000; shares \$1 par; issued \$950,000; assessment to date $1\frac{1}{2}$ cts. per share. First meeting in 7 years held June, 1914.

Property: 3 claims, the Bullpen, San Quentin and Independent Fraction, in the Snowstorm copper belt, $3\frac{1}{2}$ miles N. E. of Mullan in the Hunter mining district. Claims show quartzite cut by 4' fissure vein running N. 72° W., 80° S., the vein underground said to be 10' wide and to carry scattered bunches of 2% copper ore.

Development: includes 800' crosscut tunnel, with 300' or more of drifts at a depth of 300' below the outcrop. Development to date, 1,300' shows ore in various places, but not in commercial amount. Property inactive since 1908, but reopened 1913.

Equipment: includes 100-h. p. electric motor, etc. Is a prospect.

INDEPENDENT DEVELOPMENT CO.

IDAHO

Address: W. A. Smith, Wallace, Idaho.

Cap., \$100,000; shares, 10c par.

Proposed to recover tailings from the Coeur d'Alene river between Kingston and Dudley and to extract the lead and silver minerals by flotation. Said to be 500,000 tons worth \$3.54 per ton, that can be treated and marketed at \$1.64 per ton.

IVANHOE MINING CO.

IDAHO

Oscar Nordquist, mgr., Wallace, Ida. **Cap.**, \$1,500,000; shares \$1 par.

Property: the Ivanhoe and Palisades groups, patented, adjoining the Star group on the S., 3 miles N. W. of Mullan, Shoshone county, shows lead-silver-zinc ore. Mine supposed to have continuation of Morning vein. A crosscut from the Star main tunnel intersected the main vein at 1,400' vertical depth. Drifting on the ledge for 200' proved it to average 6' in

width with 2' of low-grade milling ore. Property has been under development since 1904. Employing 15 men at last accounts.

JACK WAITE MINING CO., LTD.

IDAHO

Address: United Supply Co., Spokane, Wash. Mine Office: Union, Ida.

Officers: E. Winsby, pres.; C. E. Chamberlain, sec.-treas.; C. I. Grims-moe, supt.

Cap., \$1,500,000; shares \$1 par; assessable; 1c levied Oct., 1915. Stock listed on Spokane Stock Exchange.

Property: 3 patented claims on Tributary creek, 10 miles from Union, Ida. P. O. R. station at Waite, Ida., said to show a vein in slate dipping 60° S. W. and pitching N 70° W. Size of orebody is given as 300' by 10' and average of ore from 8 to 15% lead.

Development: by 2 tunnels, 1400' and 2900' long respectively. The greatest depth of workings, which total 5000', is 1300'.

Ore reserves are estimated as 100,000 tons.

In 1916, ore shipped returned 45% lead and 4 oz. silver per ton.

JUMBO MINING CO.

IDAHO

Wallace, Idaho. John Carlson of Gem, J. N. Morgan of Mace and John Wood, C. E. Conn and Chas. Minch of Gem, Idaho, incorporators.

Inc. Aug. 28, 1913. Cap. \$1,000,000, shares \$1 par. No returns secured.

KELLOGG SUNNYSIDE MINING CO.

IDAHO

Jacob Thorpe, pres., Kellogg, Ida.

Inc. April, 1916, in Idaho. Cap., \$150,000; shares 10c par. J. A. McEachran, S. A. McCoy and Geo. H. Wilson of Spokane, incorporators.

KELLOGG UNITED MINES CO.

IDAHO

Address: Kellogg, Ida. Directors: S. A. McCoy, J. A. McEachran, G. H. Wilson and G. W. Sommer of Spokane, Wash., and Theo. Brown of Kellogg.

Cap., \$500,000; shares 25c par. Is a consolidation of the Kellogg-Sunnyside Mining Co., Brown Leasing Co., and Coeur d'Alene Atlas Mining Co.

Property: 3 groups of claims, about 500 acres, in the Pine Creek district. Said to have 40,000 tons of lead-zinc-silver ore developed and 100-ton mill to be built.

Mine is in a promising district.

KEYSTONE MINES CORPORATION.

IDAHO

Property sold to Armstead Mines Corporation, (which see), 1917, for \$250,000. Stockholders received 13½c per share for their holdings.

KILL BUCK MINING CO., LTD.

IDAHO

Owned by estate of Jos. Clark and by Hon. W. A. Clark. Cap., \$100,000; shares 10c par; all issued; unlisted.

Property: 5 claims on Lake creek, adjoins Chicago-Boston holdings, 2 miles S. W. of Wallace.

Development: by extension of Coeur d'Alene Vulcan M. Co. tunnel, 3,500' southerly to cut vein, already opened 900' above. Shipped silver-lead ore many years ago but idle lately.

LACLEDE MINING CO.

IDAHO

Wallace, Ida. Officers: C. Fred Kratzer, pres.; O. W. Lewis, v. p.; Jas. A. Wayne, sec.-treas.; with E. H. Knight, J. M. Sheets, C. E. Sogn and E. G. Gnaedinger, directors.

Cap., \$1,000,000; shares \$1 par; increased, 1916, to \$1,500,000; all issued; assessable at the rate of 3 mills every 3 months.

Property: lies between the Interstate-Callahan and Tamarack & Custer, in the Coeur d'Alene district, Shoshone Co., Idaho.

Development: consists of 300' crosscut tunnel, a winze down 300' below the tunnel level, Feb., 1916, or 600' vertically below the apex of the vein, with drifts run each way every 100'. Ore occurs irregularly and thus far is not of commercial grade.

The Day interests are reported to have secured control, June, 1917, by purchase of 400,000 shares of stock at 9c a share.

LEAD KING MINING CO.

IDAHO

Address: E. W. Conrad, gen. mgr.-sec., Eagle Bldg., Spokane, Wash.

Inc. 1911 as successor of the Marie Mining Co., Ltd. **Cap.**, \$1,000,000. Assessment of 1 mill per share levied, Nov., 1914.

Property: 13 claims, in McFarren gulch, about 1 mile south of Osburn, Idaho, said to carry 2 veins, one with outcrops, of high-grade galena, the other showing outcrops of silver-copper ore.

Development: mainly by 4 tunnels, longest 550', with open cuts and shallow shafts, showing silver-lead and gray copper ore, giving good assays.

Equipment: includes several small cabins for mine purposes. Company dormant since 1913.

LESLIE COPPER MINING CO.

IDAHO

Office: 508 Bank St., Wallace, Idaho. **Mine Office:** Wallace, Shoshone Co., Idaho.

Officers: Wesley Everett, pres. and mgr.; A. W. McLaughlin, v. p.; Hon. Herman J. Rossi, sec.-treas., with A. M. Stevens and O. E. Peppard, directors.

Inc. Feb., 1899, in Idaho. **Cap.**, \$100,000; shares 10c par.

Property: 11 claims, 220 acres, adjoining the Amazon-Dixie, also a mill site and 2 water rights, lying east of Mullan. Has several fissure veins, in porphyry, the main vein, of 12' average surface width, having a 35' shaft.

Development: mainly by tunnels, with about a mile of underground openings. The upper workings show galena and copper ore, and a lower tunnel is to give a back of 650'. The property carries mainly silver-lead ore, of concentrating grade, with a narrow copper paystreak.

LEWIS & CLARK MINING CO.

IDAHO

Mullan, Shoshone Co., Idaho. J. Wm. Grismer, pres.

Inc. 1907, in Idaho. **Cap.**, \$1,250,000; shares \$1 par; 375,000 shares in treasury.

Property: 19 claims, N. E. of the Snowstorm, has surface showing of red hematite, with silver-copper values.

Development: consists of 120' tunnel. Management attempting to raise funds for further development.

LITTLE NORTH FORK COPPER M. & M. CO., LTD.

IDAHO

Officers: T. R. Mason, president; Archie McDonald, sec.; John Locke, treas. Jas. H. Hoskins, supt.

Inc. Sept., 1903, in Idaho. **Cap.**, \$1,500,000; shares \$1 par, assessable; 1 mill per share called Sept., 1914.

Property: 10 claims, known as the Handspike Mine, on Little Copper creek, near Little North Fork, 12 miles from a railroad. Claims lie above the Horst-Powell holdings.

Development: by the 232' No. 1 upper tunnel, showing ore assaying up to 28.8% copper, 1 oz. silver and \$1.20 gold per ton, and the No. 2 lower tunnel of 1,500' showing a 12 to 18" paystreak of argentiferous copper ore that averages \$8 to \$30 per ton. Property claimed to have \$200,000 worth of copper ore in sight.

In 1914 Jerome Day took an option on the property, which was not exercised and management is reported to have resumed development work, 1916. No later returns.

LOMBARDY MINING & MILLING CO.**IDAHO**

Kellogg, Shoshone Co., Idaho.

Officers: Peter Albinola, pres. and gen. mgr.; Hon. Herman J. Rossi, v. p.; Edw. Albinola, sec.-treas.; H. O. Bemis, mgr.

Inc., 1898, in Idaho. **Cap.,** \$1,000,000; shares \$1 par. Annual meeting, fourth Thursday in April.

Property: 15 claims, one mile N. of Kellogg, Ida. A bedded vein, estimated to average 27' wide with shale footwall and quartzite hanging has been traced for 800'. Ore is said to carry variable values in copper, up to 47% lead and 33 oz. silver per ton.

Development: by tunnels of 360' and 900', and 200' shaft, with about 2000' of workings. Management expects to crosscut at 200' and drift into the orebody cut on tunnel level.

Equipment: includes 85 h. p. electric motor operating hoist and drills.

LOOKOUT MOUNTAIN M. & M. CO.**IDAHO**

Office: Kellogg, Idaho. **Officers:** R. L. Brainard, pres.; Wm. Boro, v. p.; W. L. Penny, sec.-treas.; above with Frank Boro and W. T. Roach, directors.

Inc. 1916. **Cap.,** \$1,500,000; shares \$1 par.

Property: 7 claims and 2 fractions, about 140 acres, in the Pine Creek district of the Coeur d'Alenes, Idaho, said to show several veins in quartzite carrying lead-silver values.

Development: by 2 tunnels, lower one 250' beneath upper, about 100' long, to be extended to 500'. Management hopes to cut the downward extension of the veins encountered in upper tunnel, which are reported to average 14" in width and to carry 4% lead and 4 oz. silver.

LOST CABIN MINING CO.**IDAHO**

Address: Wallace, Ida. Wm. M. McCarter, Spokane, Wash., pres.; C. C. Landis, supt.

Inc. 1916 in Idaho. **Cap.,** \$250,000; shares 25c.

Property: 5 miles from Murray, Shoshone county, said to carry lead-zinc ore.

Development: by 200' crosscut tunnel.

LUCKY CALUMET COPPER MINING CO., LTD.**IDAHO**

Office: Wallace, Idaho. **Mine office:** Mullan, Shoshone Co., Idaho.

Officers: John H. Nordquist, pres. and gen. mgr.; Chas. H. Solberg, v. p.; Otto A. Olsson, sec.-treas., Eagle Block, Wallace, Idaho; with A. J. Olsson, directors; Al. J. Grills, supt.

Inc. Oct., 1906, in Idaho. **Cap.,** \$1,500,000; shares \$1 par; assessable. Last assessment 5 mills per share, levied in 1914.

Property: 10 claims, patented, 181 acres, on Snowstorm hill, between the Independent and Snowstorm mines, and about 5 miles N. E. of Mullan. Property shows 2 fissure veins of 10 to 50' width, in quartzite.

Development: by 3 tunnels. The upper one, of 1,700' length, has a quarter-mile of drifts and crosscuts, which develop what is supposed to be the extension of the Snowstorm vein, showing low-grade ore carrying disseminated carbonates and bornite of 2 to 3% estimated copper tenor. The lower tunnel, a crosscut, from the head of Gentle Annie gulch, is 3,600' long and has opened up a good body of ore, presumably the National, at depth of 1,200'. Property is worked intermittently with proceeds of annual assessments, but information is hard to obtain from this as well as all other Nordquist companies.

Equipment: includes electric power, with 2 motors, and a 5-drill air compressor.

LUCKY FOUR MINING CO.**IDAHO**

Office: corner E. 73rd and E. Glison Sts., Portland, Ore.

Officers: Chas. Hyle, pres.; Henry Wingert, sec.-treas.

Cap., \$50,000; 5c par; \$29,285 issued.

Owns four lode and one placer claim in Summit mining district, Shoshone Co., Idaho.

LUCKY FRIDAY MINING CO.**IDAHO**

Wallace, Idaho.

Officers: Franklin Pfirman, pres.; Jas. A. Wayne, sec.; J.H. Wade, mgr. Is a reorganization (1914) of the Lucky Friday Mines Co.

Cap., \$1,500,000; shares \$1 par; assessable; 170,000 shares in treasury.

Property: 4 claims, adjoining the Hunter mine on the south.

Development: by 90' shaft, 625' upper crosscut tunnel and 700' lower crosscut tunnel, developing a 10' vein, with 4' paystreak giving assays up to 3.5% copper, 29% lead and 89 oz. silver per ton.

Equipment: includes electric drilling plant, trackage and ore cars. Development work resumed in 1915 and lower tunnel being driven 100' further to reach the main ledge.

LUCKY SWEDE GOLD & COPPER MINING CO.**IDAHO**

Office: 625 Cedar St., Wallace, Idaho.

Officers: Morris Pearson, pres.-gen. mgr.; Otto A. Olsson, sec.-treas.; L. F. Maceijewski, Harry Pearson and Ida Pearson, directors.

Inc. May, 1909. Cap., \$1,000,000; shares \$1 par; assessable; last assessment 3 mills per share, levied 1913; 300,000 shares issued.

Property: 14 claims in the St. Joe district, S. E. of Mullan, near the C. M. & St. P. R. R., shows 3 veins with surface ores giving good assays in copper and gold.

Development: by tunnel with about 600' of workings. Company's last assessment provided funds for a new 1,500' tunnel to start near the railway line and cut a copper vein expected to be reached at depth of 1,000'.

Equipment: includes compressor, installed 1913, and a Pelton wheel. No recent returns.

MAINE-STANDARD MINING CO.**IDAHO**

Address: Wallace, Idaho.

Officers: Alexander Murphy, pres.-mgr.; J. W. Gator, v. p.; E. H. Pat-tison, sec.-treas.

Cap., \$1,500,000; shares \$1 par.

Property: 5 unpatented claims in Yreka district, Coeur d'Alene region, Ida. Apparently idle.

MARSH MINES CONSOLIDATED.**IDAHO**

Office: 601 Empire State Bldg., Spokane, Wash. Mine office, Wallace, Idaho.

Officers: W. M. Lee, pres.; Edw. Pohlman, v. p.; W. T. Smith, treas.; Jos. McCarthy, sec.; J. V. Pohlman, mgr.; preceding are the directors. F. L. White, supt.

Is the successor of Marsh Mining Co., which was incorporated 1909 in Washington.

Cap., \$1,500,000, increased to \$2,000,000 at time of reorganization in July, 1916; shares 25c par. Annual meeting in March. Stock listed on Spokane Exchange and New York Curb. Assessments 1911-1917 aggregate \$180,000.

Statement for 1916 (4 months' work) shows receipts, \$139,111, and ex-penses \$140,262. Debt of company is about \$20,000.

The Marsh Mining Co. and Green Mountain Mining Co. are being liquidated, all assets being transferred to Marsh Mines Consolidated.

Reorganized July, 1916, as the Marsh Mines Consolidated. All stock

was exchanged for stock of the new company share for share. In addition, for each three shares of Marsh, stockholders subscribed for one share of new stock at 15c a share. One of the chief reasons given by the Board for shutting down the mines in 1916 was that litigation with the Federal Mining & Smelting Co. threatened. The latter company owns mining properties to the south and west of Marsh, and at the time the mine was shut down and for some time previous, Marsh had been mining certain orebodies which extended underneath the surface of the Federal Mining & Smelting Co. ground. Marsh contended that it was the rightful owner of these orebodies under the apex laws. The operations were at a depth of 900' below the main tunnel level and approximately 1,300' below the surface. An exact examination of the rights of the Marsh Co. under these conditions could not be determined without a great deal of exploration work and survey. The Federal Co. threatened Marsh with an injunction and with a suit for damages for removing the ore. This controversy has been settled.

Under the agreement with the Federal Mining & Smelting Co., Marsh was given a lease for a period of 10 years on the Mono, Russell and O'Neil mining claims of the Tiger-Poorman group, which include the vein in controversy. This agreement provides for a complete settlement of all claims for alleged trespass.

Operations were suspended for a year. In March, 1917, a new Gould pump was installed on the 900' level, the mine was unwatered and milling was resumed in May.

Exploration work on the "Got-em-now" vein, exposed in the Gertie tunnel, which traverses the Marsh property, is now under way. This vein was cut 512' from the portal of the Gertie tunnel and at a depth of 350' to 400' from the surface. It is a promising fissure vein. In the event that ore is encountered, it can be quickly mined by utilizing the present working shaft of Marsh now 900' deep and splendidly equipped to handle a large output.

Property: 7 claims, about 100 acres in O'Neil gulch, N. E. of Burke and adjoining the Tiger-Poorman mines. Claims show simple fissure veins in quartzite. The vein is 2' wide in the upper 175' tunnel, averaging 5' on the 5th level. It carries silver-lead ore with zinc in shoots, the orebody thus far developed being 300' long and 4½' wide. The shoot is short, limited by a fault, and must be developed in depth to get tonnage.

Development: includes a main working tunnel and 940' shaft with levels at 399, 550, 687 and 904'. Tunnel cuts the vein at 625' and a drift follows it for 475'. The vein runs north 70° west and dips 78° south. A rich lead-silver vein was cut, 1917, on the 900' level and is producing a small quantity of ore. The shoot is narrow, 8", but is promising.

Ore reserves: estimated at 26,000 tons, equal to 8 or 10 months' production. Arrangements under way to deepen shaft to 1,100', but a winze is also to follow the shoot found at 900'.

Equipment: includes 1,150' Ingersoll-Rand and 690' Franklin compressors, 300-h. p. Nordberg electric hoist, 40-h. p. Lidgerwood and two Ottumwa hoists, Gould and Cameron pumps, Ingersoll, Waugh & Wood drills, etc., with complete electrical equipment.

Company leases and operates the California or Pittsburg mill in Nine Mile Canyon, 2½ miles from Wallace. Freight on Northern Pacific costs 15c a ton. The mill, remodeled at cost of \$34,000 in 1915, handles 150 to 225 tons daily, saving 90% of the lead and 85% of the silver. It contains 2 sets of 14"x30" rolls, 7"x10' tube mill, trommel lines, 4 Wood screens, 7 new concentrating tables, Pachuca agitator, Callow flotation cells, two 24"x10' Dorr thickeners, etc.

The mill is now operated jointly with the Hecla Mining Co., the Marsh Co. treating 200 tons daily for 10 days each month, the remainder of the period under control of the Hecla. This tenancy by Hecla is subject to cancellation on 30 days' notice.

Smelting contract with the A. S. & R. Co. runs for a period of 10 years from July, 1916.

Production: in July, 1917, 2,200 tons of ore, yielding 200 tons of concentrate assaying 52 to 58% lead and 22 to 28 oz. silver, also 100 tons of concentrate containing 21% lead, 33% zinc, and 12 oz. silver per ton. Output yielded \$14,000 net.

Net returns from ore shipments have been as follows: 1911, \$30,313; 1912, \$114,648; 1913, \$139,429; 1914, \$81,944; 1915, \$143,640; none in 1916. The Marsh mine and mill were closed down May 15, after operating a little more than 4 months in 1916, and producing 17,828 tons of ore, worth \$139,111, which just balanced expenses.

Marsh seems to be over its troubles and is in a fair way to make profits. When indebtedness is paid off, and if development continues good, 1918 should see payment of dividends. Employs 55 men.

MIDWAY SUMMIT MINING & MILLING CO., LTD.

IDAHO

Idle and probably dead.

Office: 419 Chamber of Commerce Bldg., Spokane, Wash. Mine near Burke, Shoshone Co., Idaho. Geo. Herron, mgr.

Inc. 1911 in Idaho. **Cap.**, \$1,500,000; shares \$1 par. Applied for patents on 11 claims, 1914, in Leland and Hunter districts.

Development: over 6,000' of work has been done on property, without disclosing ore in commercial quantities. Drifting on 1,100' level, 1915. No information for 1916-17.

MINERAL FARM MINING CO.

IDAHO

Offices: Paulsen Bldg., Spokane, and Mullan, Idaho.

Officers: C. J. Carlson, pres. and mgr.; Wm. Sellars, v. p.; C. D. Miller, sec.-treas.; with J. H. Pelletier, director.

Inc. 1904 in Idaho. **Cap.**, 1,500,000 shares; \$1 par; assessable; outstanding 800,000. Annual meeting, first Monday in September. Listed on Butte Exchange. Income \$5,000, and expenditure \$4,500 in 1916.

Property: 8 claims, 7 patented, 170 acres, 1 mile west of Mullan, has a fissure vein in Revett and Burke quartzite, on which work was started in 1908.

Development: 3 tunnels, 60', 800' and 1,445' in length, with 3,700' of underground workings.

MISSOULA COPPER MINING CO.

IDAHO

Mullan, Shoshone Co., Idaho.

Officers: A. McLeod, pres.; C. A. Barnes, v. p.; R. J. McLeod, gen. mgr.; preceding with Harry Cheney, J. N. Thennes and John Brown, directors.

Inc. 1901, in Idaho. **Cap.**, \$100,000; increased 1907, to \$1,500,000; shares \$1 par, assessable; issued, \$1,350,000. Shares listed on Spokane and Vancouver Stock Exchanges. Annual meeting, first Tuesday in November.

Assessment levied in April, 1917, to pay for having examination made of property.

Property: 10 claims, about 175 acres, at the head of Deadman gulch, adjoining the Lucky Calumet, and about 1½ miles N. W. of the Snowstorm, in the Hunter district. Property has a strong fissure vein, of 85' maximum width, in Revett quartzite, carrying native copper, cuprite, azurite, malachite, bornite and chalcopyrite, with values mainly in sulphides, ranging from about 1%, on the hanging wall, to 8% on the foot-wall, ore averaging

about one-half oz. silver per unit of copper. The property also carries some argentiferous galena.

Development: consists of a 1,400' upper tunnel and a 2,800' lower tunnel, with a connecting shaft and nearly 1 mile of workings. The main tunnel runs N. 30° E. for 1,900', then N. 70° E. for 700', passing from purple St. Regis slates at the portal into Revett quartzite. (Geology described U. S. G. S. Bull., 540, E. p. 48, 1913.)

Equipment: includes a 100-h. p. electric plant, with an 8-drill air compressor and necessary mine buildings.

March 1, 1914, ten of the largest stockholders formed an ironclad pool with 650,000 shares, deposited with Union Trust & Savings Bank of Spokane to March 1, 1916. In April, 1914, a lease and bond was given to Snowstorm M. Co. at \$600,000, said agreement calling for expenditure of \$2,000 for each month the option ran. Snowstorm expended \$36,000, and option was cancelled on Sept. 12, 1915, claiming that development and values were disappointing.

Missoula stockholders assert that property contains apex of National vein. The Missoula vein is flat, dipping about 37° S. and towards National vein which was struck in long crosscut at vertical depth of 1,400', and is said to show dip similar to Missoula's. It is said that National Co. feared to raise lest it prove apex in Missoula ground. Property should be consolidated with the National Co. Both companies are failures at present, but if combined might succeed.

Diamond drilling was under way in October, 1917.

MONTANA-IDAHO COPPER CO.

IDAHO

Office: Paulsen Bldg., Spokane, Wash. **Mine office:** Harbona, Ida.

Officers: H. F. DeBower, Chicago, pres.; J. L. Dirks, Spokane, v. p.; W. J. Kirby, sec.-treas., directors. Otis Hill, gen. mgr.

Inc. 1914 to take over holdings of Monitor Cons. C. M. Co. **Cap.**, 6,000 shares; \$100 par. Stock listed on Spokane Exchange.

Property: 25 claims, 10 patented, $\frac{1}{4}$ to $1\frac{1}{2}$ miles from Adair, Ida., on main line of C. M. & St. P. Ry. First copper location in the eastern Coeur d'Alene. A fissure vein of 10 to 30' width, with N. E. strike and nearly vertical dip, has a paystreak carrying mainly massive chalcoppyrite ore, balance of vein carrying disseminated chalcoppyrite, mainly of concentrating grade. Occasional native copper is found. Shipment of selected ore returned 30.5% copper, 7 oz. silver and \$1.50 to \$5 gold per ton. The bottom level of the mine, which is wet, shows good ore.

Monitor mine was closed down 1910 after the entire plant had been destroyed by forest fires.

Company is driving tunnel to cut vein at 1,800' depth, or 1,100' below lower level of old Monitor shaft. Company has developed its own water-power for compressor plant.

MONITOR CONSOLIDATED COPPER MINING CO.

IDAHO

Stockholders sold property to Montana-Idaho Copper Co., 1914, for \$102,000, payable in shares of new company at par, stock to be exchanged April 17, 1917. See Mont.-Idaho C. Co.

MOONLIGHT MINING CO.

IDAHO

Burke, Idaho.

Officers: Eugene R. Day, pres.; Jas. J. Murphy, v. p. and mgr.; E. Hedin, sec.-treas.

Property: 9 patented claims, adjoining the Hercules mine on the east. The main tunnel through which the property has been worked is an extension of the old Trade Dollar tunnel, 600' below the upper workings and 900' below the outcrop. The vein was cut in 1914 and drifting was started, but

vein was found to be cut off by a fault. A crosscut was then started 1,400' back. About 800' of drifting has been done, but little ore has been found. Working, April, 1916, but no 1917 returns received.

NABOB CONSOLIDATED MINING CO.

IDAHO

Address: H. C. Barnett, mgr., Kellogg, Idaho.

Inc. 1917 in Idaho. **Cap.**, \$3,500,000; shares \$1 par; 1,750,000 shares held by Stewart Mining Co., which organized and financed the Nabob Cons., which in turn absorbed Nabob Mining. (See Vol. XII, Mines Handbook).

Property: 3 patented and 22 unpatented claims in the Pine Creek section, near Kellogg, Idaho. Principal claims are the Denver, Mascot and Nabob.

Development: by tunnels; Denver No. 1 tunnel said to follow 18" to 10' of ore assaying 18% zinc, 12% lead and 5 oz. silver per ton for 220'; No. 2 tunnel, opening for 150', 3' of 15% zinc, 15% lead and 7 oz. silver ore. Reserves are estimated at 22,000 tons positive and 46,000 probable ore. The Federal company's mill has been leased, but Nabob is to have its own mill later.

NABOB MINING CO.

IDAHO

Absorbed by Nabob Consolidated Mining Co., which sec.

NATIONAL COPPER MINING CO., LTD.

IDAHO

Address: August Paulsen, pres., Spokane, Wash. Mine at Mullan, Shoshone Co., Idaho.

Officers: A. P. McCrae, v. p.; Chas. McKinnis, sec.-treas.; Jas. F. McCarthy, mgr.; foregoing with Harry White, H. H. Stambaugh, and R. C. Steese, directors.

Inc. Sept. 22, 1906, in Wash. **Cap.**, \$2,500,000; shares \$1 par; increased from 1,250,000 shares in July, 1913; 1,800,000 issued; 800,000 shares treasury stock were sold at 50c. Assessments of 19½c per share have been levied to date, a total of \$342,000.

Statement of accounts from March to Aug., 1917, shows receipts \$27,639, of which \$25,000 was from assessment No. 16. Expenditures totaled \$23,773. Cash on hand, \$3,866. Stock listed in Spokane.

Property: 9 patented claims, 180 acres, in Deadman gulch between Mullan and Larsen, on the north side of the Coeur d'Alene valley. It is about 1½ miles west of and in the same belt as the Snowstorm copper property, which it closely resembles in character. Ore occurs in a fault vein in thickly-bedded white Revett quartzite with talcose slips bordering the ore. The vein runs nearly E.-W. and dips steeply to south. The surface gives no indications of the great orebody 1,700' beneath it and in fact the ore-bearing quartzite does not show in the upper workings.

During the "boom" days of 1906-07, the company sank a 400' shaft and drove an adit tunnel developing a fissure vein and a strong fault, but found no ore in commercial quantity. Dec., 1912, a large body of silver-bearing copper ore was cut at a distance of 4,800' from the portal, about 1,000' lower than the old tunnel and shaft. The crosscut tunnel is driven about 4,000' through very hard and tight Wallace slates and St. Regis quartzites to a fault separating the St. Regis from the more favorable Revett quartzite. This fault showed mineralization, but no commercial ore. Beyond this fault the beds of white Revett quartzite run N. W.-S. E., dipping steeply, 80° S. E. About 200' from the big fault zone just noted, there is a nearly vertical quartz vein, filling a fault in Revett quartzite, the beds north of this vein running slightly north of west and dipping at but 45° south. This vein carries copper ore and a drift east disclosed the orebody which gave the mine its shortlived prominence. A sample cut across the orebody where it was 85' wide showed an average value of 2½% copper, 5 oz. silver and 80c in gold.

Development: by a 1,200' upper tunnel, 4,800' lower crosscut tunnel with about 1,000' of drifting on the vein, a 400' shaft with 400' of drifting and a winze sunk to the 1,500' level. In Feb., 1916, company reported sufficient ore above the 1,200' level to run the mill 2 years. Leached areas on the 800' and 1,000' levels make the extent of orebody uncertain.

New work done in 1917, totaled 736'. Shaft was sunk to 1,500' level and 284' of work done at that depth.

An estimate of 545,000 tons of ore available above the 1,000' level, made 1913, was changed to 170,000 tons because of an unexpected barren streak.

A 500-ton concentrator, flotation plant, 2-mile trolley line and other works were completed in April, 1914. The dry crushing plant can handle 500 tons in 16 hours and crush the ore to $\frac{1}{2}$ ". The storage bins have a capacity of 1,100 tons, receiving the ore over a 2-mile electrically driven railroad. The various motors at the mill total 615-h. p.

Mill was only operated in April and May, 1914. In Oct., 1915, operations were resumed, the mill crushing 4,243 tons of 0.83% copper ore carrying 1.99 oz. silver per ton; in Jan. making 22% concentrate valued at \$10,815, a loss of \$1,300 on operating expenses for the month.

Operations were suspended in June, 1916. In August, 1917, a crosscut from shaft at depth of 535' below main working tunnel, passed through 35' of ore of better grade than in upper workings, which confirms theory that better ore would be found at depth. Management considers that profits can be made treating this new ore and the mill is being operated again.

Property represents an investment of \$400,000 without a dollar's profit, the mill having been built before a producing mine had been developed. Deep development alone can open up a large tonnage, but management announced this would not be done unless new work above the 1,200' level justified it.

NELLIE MINING AND MILLING CO.

IDAHO

Listed in Vol. XII as Nellie Mining Co.

Owned by Jack Alger and Capt. A. P. Horton of Osborn and O. R. Young of Wallace, Shoshone Co., Idaho. Ernest Kelly, supt.

Property: $1\frac{1}{2}$ miles from Osborn, on O. W. R. & N. R. R., has a fissure vein with gray copper ore (tetrahedrite) in quartz, the ore being said to carry 100 to 240 oz. silver per ton.

Development: by 3 tunnels, shafts and 10,000' of stoping and raises. A crosscut on the 500' level opened up a vein 3' wide, showing good milling ore. Shipped 20 tons of high-grade ore in Sept., 1914, from leasing operations. Has water power plant for pumping and hoisting work, and a small mill. Company plans active development.

NEVADA STEWART MINING CO.

IDAHO

Wallace, Idaho.

Directors: A. J. Devlin, Dr. C. R. Mowery, Dr. Herbert Mowery, M. J. Sinclair and H. E. Huemann.

Inc. Nov. 19, 1915, in Idaho. **Cap.**, \$150,000; shares 10c par.

Property: 7 claims in Pine Creek district, near Kellogg, Shoshone county, adjoining the Highland Surprise on the west, shows lead, silver, zinc ore in veins. A 500' crosscut tunnel driven, 1916.

Equipment: includes electric power and air compressor. Plant burned in 1917, but rebuilt.

NONPAREIL COPPER MINING CO.

IDAHO

Idle and supposedly dead.

Office: Wallace, Idaho. Mine near Mullan, Shoshone Co., Idaho. Amos M. Stroud, pres. and gen. mgr.; Jas. A. Wayne, sec.

Inc. in Idaho. **Cap.**, \$1,500,000.

Property: 4 full and 3 fractional claims, on the west fork of Willow creek, across from the Carney mine, 3 miles S. E. of Mullan.

Development: by 4 tunnels. Surface ores have given assays up to 1.5% copper, and 8 to 19 oz. silver per ton. Has not replied to requests for information.

NORTH AMERICAN MINING CO., LTD.

IDAHO

Idle. Wallace, Idaho.

Officers: John Presley, pres.-mgr.; L. B. Whitton, sec.-treas., with A. Schmit and B. Knutson, directors.

Cap., \$1,500,000; shares \$1 par.

Property: 880 acres, in Coeur d'Alene district, Shoshone Co., Idaho, adjoining the Bunker Hill & Sullivan, and believed to carry the continuation of the B. H. & S. main fissure. Developed by two tunnels and equipped with water power, compressor drills, and surface buildings. Company was trying in 1916 to raise necessary funds to continue the main tunnel another 1,200' by means of spectacular advertisements written by an "advertising agent."

NORTH BUNKER HILL MINING CO., LTD.

IDAHO

Address: N. T. Hardy, mgr., Kellogg, Idaho.

Officers: Elmer Brown, pres.; J. L. Trowbridge, v. p.; N. T. Hardy, sec.; D. W. Price, treas.; with Chas. Cartwright, A. W. Vangilder and Lloyd Draais, directors.

Inc. Feb. 16, 1907, in Idaho. **Cap.,** \$1,250,000; shares \$1 par; 1,053,721 issued; assessable.

Property: 3 patented claims, 60 acres, at Wardner, Coeur d'Alene district, Ida., joined on the E. by the East Caledonia, on the W. by the Caledonia, and on the S. by the Bunker Hill & Sullivan Mines.

Development: sinking on orebody in Sept., 1917, at 300' from E. end line. In the tunnel, 150' from the portal, shaft has an incline of 52° to the S. Sinking is to continue to 400' to cut a vein which is over 60' wide in the East Caledonia and contains a 6' band of high-grade lead-silver ore.

NORTH FRANKLIN MINING CO.

IDAHO

Address: Norman Ebbey, pres., Wallace, Ida.

Inc. in Idaho. **Cap.,** \$1,000,000; shares \$5 par.

Property: 7 claims adjoining the Morning mine on north, near Mullan, Idaho. Idle.

NORTHERN LIGHT MINING & MILLING CO.

IDAHO

Office: Wallace, Ida. **Mine office:** Kellogg, Shoshone Co., Ida.

Officers: W. G. Nye, pres.; Fred W. Sachse, v. p.; Tom J. McGrath, treas.; Benj. E. Harmon, sec.-gen. mgr.; directors. S. E. Harmon, mine supt.

Inc. Jan., 1915, in Idaho **Cap.,** \$75,000; shares 5c par; assessable; one assessment levied Aug., 1915; 1,400,000 shares outstanding. Annual meeting second Saturday in May, at Wallace, Idaho.

Since June, 1915, \$45,000 has been expended on development; \$7,500 cash on hand, 1917.

Property: owns 2 claims and has 7 adjoining claims under bond and option, about 234 acres, 2½ miles south of O. W. R. N. Ry. on Pine creek, about 5 miles west of Kellogg, and 3½ miles west of the new Bunker Hill smelter at Bradley.

Bond on the 7 claims amounts to \$49,000 and has 3 years to run.

Property contains two veins: No. 1 vein is said to be 6' wide and to carry clean high-grade lead with 0.33 oz. silver, 1% lead, free from iron and zinc. Amount ore blocked out in this vein is estimated at 19,500 tons running 7% lead and 2.5 oz. silver. Extension of this vein into claims held under option shows 7,500 tons developed through 185' shaft.

No. 2 vein, 247' S. of No. 1, varies in width from 5 to 12' with continuous ore shoot developed for 200' by drift on 400' level, a 60' raise and 175' winze, from 400' level, also 100' of openings at bottom of winze, called 500' level. On 400' level 20,000 tons of ore are estimated as blocked out, averaging 5.5% lead, 9.5% zinc and 2.1 oz. silver. Winze and raise are being continued to prove continuity of ore and a 200-ton mill will be erected if ore continues. Ore on dump and available for milling is 3,000 tons. Shipping ore on dump is 50 tons.

Development: by 500' tunnel and 400' vertical shaft, with 2,400' drifts and crosscuts, 100' feet raises and 70' winze.

Equipment: includes hoist at main shaft, Ingersoll-Rand compressor, electric power, Gould and Cameron pumps, air hoist in winze, machine drills, etc.

Transportation: a complete survey for railroad up Pine creek was made 1916 by the O. W. R. N. Ry. Co. to serve the mines of this district all of which were recently examined by Albert Burch in interest of the railroad company to determine if sufficient ore is in sight to warrant 9-mile spur line. Recent construction of Bunker Hill smelter and that company's intention to build an electrolytic plant for the treatment of lead-zinc ores indicates possibility of road being built, 1917. In fact, the railroad company has since made written agreements with the mining companies to pay a bonus of \$1.50 per ton on the first 100,000 tons of ore shipped. Construction was expected to start in Sept., 1917.

Mine examined and reported on by Merriam Bros. of Wallace, Idaho, Albert Burch and S. L. Shonts, Wallace.

OLD VETERAN MINING CO.

IDAHO

Office: Barnard Blk., Wallace, Idaho.

Officers: M. J. Farrell, pres.-gen. mgr.; Allan G. Kennedy, v. p.; L. L. Brainard, sec.-treas.; with F. H. Harper and B. J. Farrell, directors.

Inc. March, 1915. Cap., \$150,000; shares 10 cts. par; assessable; 750,000 shares of stock were sold at 2 cts. per share, upon which assessments of 2 cts. are to be levied every two months.

Property: 7 claims, 2 miles above Burke, Shoshone Co., shows several fault fissures. Developed by 1,500' of tunnels. No. 3 tunnel was 350' long at last accounts, and in Aug., 1917, it was reported that a few inches of copper ore had been cut.

ONTARIO MINING CO.

IDAHO

Officers: M. A. Folsom, pres.; Stanly A. Easton, treas. and gen. mgr. An apex suit brought by the Stewart Mining Co. was decided in favor of the Ontario Mining Co., giving the latter company a verdict for \$48,245.

Property: on Ontario Creek, adjoining the Stewart in the Kellogg-Wardner district, Shoshone county, shows quartz fissure veins carrying pyrite, sphalerite and galena ore, and proved to be the southern extension of the main Stewart orebody. The vein system is faulted, as in the Stewart, and the ore crushed, making mine operations troublesome.

Development: by 800' crosscut tunnel from which a shaft was sunk to 320' depth.

Equipment: includes a 200-ton mill.

Profits in 1914 were \$239,175; in 1915, \$223,724.

Production: in 1915, 81,208 tons of ore. No later returns.

OOM PAUL CONSOLIDATED MINING CO.

IDAHO

Office: Wallace, Idaho. **Mine office:** Burke, Idaho.

Officers: Jas. F. McCarthy, pres.-mgr.-treas.; F. H. Richardson, v. p.-supt.; L. E. Hanley, sec., with Edward Ryan, J. B. Sloan and Walter Mackay, directors.

Inc. April, 1907, in Idaho. **Cap.**, \$1,600,000; shares \$1 par; assessable; 5 assessments of 1c each levied; 1,397,598 shares issued. Stock listed on Butte and Spokane Stock Exchanges.

Property: 10 patented claims, 200 acres in Coeur d'Alene district, near Burke, shows silver-lead ore in fissure veins traversing a quartzite formation.

Development: by 2,761' crosscut tunnel, driven to cut the downward extension of the ore found above. A vein was cut but contained no values.

Equipment: consists of an Ingersoll-Rand compressor. Work suspended, July, 1917, because of disappointing results.

PANDORA COPPER MINING CO., LTD.

IDAHO

Address: Box 170, Wallace, Ida. **Mine office:** Larson, Shoshone Co., Ida.

Officers: Walter H. Hanson, pres.; John C. Weatherhead, sec.-treas. and gen. mgr.; preceding officers and C. M. Baillie, directors.

Inc. Oct., 1906, in Idaho. **Cap.**, \$1,000,000; shares \$1 par; -assessable; issued, \$450,000. Annual meeting, fourth Wednesday in October.

Lands: 10 claims, 150 acres, adjoining the Snowstorm mine on the east, and supposed to carry about 3,000' of the Snowstorm ore zone. Property shows St. Regis and Revett quartzites, with copper impregnations in the latter.

Development: includes 1,750' main, or working tunnel, which has not yet crosscut the vein. Only assessment work done since 1915.

PARAGON CONSOLIDATED MINING CO.

IDAHO

Office: 436 Sibley St., St. Paul, Minn. **Mine office:** Paragon, Idaho.

Officers: Geo. S. Monson, pres.; M. O. Nelson, v. p.; F. O. Hammer, sec.-treas., with W. W. Dunn, Geo. J. Rank, R. C. Patterson, directors. L. W. Stedman, mgr., and N. A. Stockett, supt.

Inc. Nov., 1908, in Minnesota. **Cap.**, \$1,500,000; shares \$10 par; non-assessable; outstanding, \$1,202,700. Bonds: authorized \$100,000; outstanding, \$25,000. Annual meeting in November.

Property: 43 claims, 19 patented, about 850 acres, in the Coeur d'Alene district, shows fissure and contact orebodies. Values are in lead, zinc, silver and gold. Extent of workings, about 16,000'.

Ore is concentrated in a mill, capacity about 100 tons, leased from the Black Horse Co. Mainly zinc concentrates are shipped. Power is developed at water-fall nearby, but operations have been hampered by scarcity of water. The mine has been an intermittent shipper during the past few years.

PARK COPPER & GOLD MINING CO., LTD.

IDAHO

Office: 616 Cedar St., Wallace, Idaho. **Mine office:** Mullan, Shoshone Co., Idaho.

Officers: Thos. Brennan, pres.-mgr.; Nellie J. Stockbridge, sec.-treas.

Cap., \$1,500,000; shares \$1 par.

Property: 7 claims, on the southern side of Stevens Peak, 5 miles from a railway. The property is said to have a fissure vein in quartzite, of about 60' in average width, capped by a 40' gossan of mixed hematite and siderite, carrying kidneys of high-grade copper carbonates and chalcopyrite, with occasional native copper.

Development: by two 25' shafts, and 3 tunnels, the two upper tunnels showing ore, while No. 3, the lower tunnel, of 1,680' length, with a back of about 1,000', shows no ore. The mine has about one-half mile of workings. Idle.

PATUXENT MINING CO.

IDAHO

Address: Wallace, Idaho.

Officers: Jas. F. Callahan, pres.; J. H. Wemes, v. p.; F. C. Boutin, sec.

Property: adjoining the Cons. Interstate-Callahan on the S., in the Coeur d'Alene district, near Wallace, reported to show a 4' vein of high-grade lead-zinc ore, in a fissure zone 50' wide.

Development: totals 3,000' of tunneling, crosscutting and drifting.

PHEDORA SILVER-LEAD MINING CO.

IDAHO

Kellogg, Idaho.

Officers: Wm. Schaefer, pres.-gen.mgr.; Geo. Moison, v. p.; W. W. Papesh, sec.-treas.; with Elmer Brown and Chas. Bollinger, directors. Officers, with exception of vice-president, reported to have resigned June, 1916.

Property: 12 lead-silver claims, adjoining the Jack Waite, in Eagle district, near Murray, Shoshone Co., Idaho, has been under development since 1909.

PHOENIX MINING & MILLING CO., LTD.

IDAHO

Wallace, Idaho.

Officers: Norman Ebbley, pres.; Jos. Whelan, sec.

Cap., \$1,000,000; shares \$1 par; assessable; 800,000 shares outstanding. Annual meeting, 2nd Monday in May.

Property: 14 claims, in Coeur d'Alene district, near Wallace. Unproductive.

PINE CREEK DEVELOPMENT CO.

IDAHO

Kellogg, Shoshone Co., Idaho.

Inc. in 1916 by W. W. Papesh, Geo. H. McKinnis, J. A. Rock and others, to operate the Sherman group on Pine Creek, Kellogg, under 2-year bond and lease.

Property: 6 claims, owned by the Sherman Mining Co. and developed by 1,000' of underground workings, said to show zinc and lead values.

Mine now leased to Sherman Development Co., which see.

PINE CREEK MINING & MILLING CO.

IDAHO

Office: Wallace, Idaho.

Officers: Dr. C. S. Stone, pres.; H. Williams, v. p.; O. W. Lewis, sec.-treas.; R. S. Merriam, mgr.; above with J. A. Wayne and Geo. Steward, directors.

Inc. April, 1916, in Idaho. **Cap.,** \$150,000; shares 10 cts. par.

Property: 11 unpatented claims, known as the Lee group on Pine Creek, in Yreka mining district, adjoining the Hilarity claims reported to carry lead-silver ore. Will be developed, 1917-18. Consolidated Jan., 1917, with the Hilarity Mng. Co., Ltd., (which see).

PITTSBURGH LEAD MINING CO.

IDAHO

O. B. Wallace, mgr. **Directors:** Henry L. Collins, G. B. Oberall, of Pittsburgh; W. M. Rumley and Christopher Murphy, of Chicago, and Senator A. Kerns. Merged with California Cons. Mng. Co. and Panhandle M. & M. Co., July, 1916.

Cap., \$1,000,000; all issued.

Properties: of the three above named companies are in Nine Mile Creek section, or Placer Center district.

Pittsburgh property: formerly a shipper but idle several years, comprises a small group only. **California Consolidated:** the Black Cloud group, 4 patented claims, idle since 1901, but owns mill 2 miles above Wallace, leased and operated until recently by the Marsh Co.

Panhandle group: 2 patented claims on Nine Mile Creek.

PLACER CREEK MINING & MILLING CO.

IDAHO

Officers: F. C. Bailey, mgr., 2903 Sinto St., Spokane, Wash.; J. W. Wentworth, pres.; Geo. Yancy, v. p.; Ray E. Bigelow, sec.-treas., with Elmer West and R. G. Mack, directors.

Cap., \$1,000,000; shares \$1 par; 400,000 shares treasury stock and 50% of the issued stock reported under 1-year option from April 18, 1916, to F. C. Bailey, who is developing the mine.

Property: 5 claims, on Placer Creek, 6 miles from Wallace, Shoshone Co., Idaho, developed by a 1,400' tunnel, said to cut the vein at a vertical depth of 600'.

POLARIS MINING & DEVELOPMENT CO.

IDAHO

Address: Wallace, Idaho.

Officers: W. E. Mann, pres.; P. J. Gearon, mgr.; L. C. Wilson, sec.-treas., above with P. Schmitz and H. M. Davenport, directors.

Inc. Dec., 1915, in Idaho. **Cap.**, \$50,000.

Property: 3 patented claims between Osborn and Kellogg, in the Cœur d'Alenes, Idaho. Ore: lead-silver with some copper values.

Development: by tunnels and 165' winze.

Production: several carloads shipped reported to average 140 to 200 oz. silver and 3%-6% copper.

PORTOMA MINING CO.

IDAHO

Office: 213 Board of Trade Bldg., Portland, Ore.

Officers: D. C. O'Reilly, pres.; F. A. Knapp, sec.-treas.

Cap., \$100,000; shares 5 cts. par; \$53,000 issued.

Operating a group of claims in Shoshone Co., Idaho.

PRINCEMONT MINING CO.

IDAHO

Address: Marble Creek, Ida. J. D. Olley, supt., at Noxon, Mont.

Officers: S. B. Holbert, pres.; E. F. Holbert, v. p.; W. M. Ramsey, sec.-treas.; with W. H. Batting, C. F. Briggs and W. J. Williams, directors:

Inc., 1916, in Idaho. **Cap.**, \$2,000,000; shares \$1 par; non-assessable; 1,650,000 issued. Annual meeting second Monday in September.

Property: 43 claims, 875 acres, as follows: Copper Prince of 13 claims on C. M. & St. P. R. R., Ida., also the Idaho-Virginia group of 24 claims, near St. Joe, Ida.; and the Pilgrim group of 6 claims near Noxon, Sanders Co., Mont. These properties contain copper and gold ores, others lead and silver ore and others only copper.

The Copper Prince and Idaho-Virginia properties are fully equipped; the former developed by 600' tunnel and 125' shaft and the latter by 162' shaft. The Pilgrim is opened by tunnels.

PURITAN MINING CO.

IDAHO

Idle. Address: Wallace, Idaho.

Officers: Frank Boutin, pres.; Theo. Anderson, v-p.; Jas. F. Callahan, treas.; Chas. A. Solberg, sec.; above with O. B. Olsson and John H. Roberts, directors:

Property: a group of lead-silver claims in Placer Center mining district, Shoshone Co., W. of the Tamarack & Chesapeake.

Development: by 1,100' tunnel. Patent applied for in 1914. No recent information published.

RAINBOW MINING CO.

IDAHO

Letters returned, 1917. Control under option to S. Edward Brown of Kellogg until July 25, 1916.

Cap., \$1,000,000; shares \$1 par; 800,000 in treasury.

Property: on Little North fork of the Cœur d'Alene river shows quartz vein 10'—25' wide with silver, lead and zinc ore.

Development: to be by tunnels to cut lode at a depth of 450'.

RAINBOW MINING & MILLING CO., LTD.

IDAHO

Office: Peyton Bldg., Spokane, Wash.

Officers: Geo. Austin, pres.; S. Hofslund, v. p.; R. P. Woodworth, sec.-treas., with Terrett Towles, A. A. Nourse and A. Bronson, directors.

Inc. June, 1907, in Idaho. **Cap.**, \$300,000, increased 1913 to \$500,000; shares 25 cts. par, assessable; 800,000 in treasury, Aug., 1917. Annual meeting, June 1st.

Property: 19 claims, 7 patented, 360 acres, in 2 groups. The Rainbow No. 1 group, 3 miles west of Wallace on Shields creek, has St. Regis and Burke quartzite cut by the Sunshine and the Rainbow veins. The Sunshine vein carries grey copper ore with iron and quartz gangue. Development, 2,200', includes a 40' tunnel on the Sunshine vein and the main No. 3 tunnel on the Rainbow vein. Latter follows vein N. 75° W. for 1,350', exposing 3" to 4' of vein filling with black footwall seam containing tetrahydrite, galena and chalcopyrite. Another tunnel on the opposite side of the creek is 450' long. Commercial ore expected at greater depth.

Equipment is ample. Railroad is $\frac{3}{4}$ mile away.

The second group, of 5 claims, bought 1910, is about 3 miles from the Handspike mine, and 15 miles from a railway, at the mouth of Bootjack creek, a tributary of the North fork of the Coeur d'Alene river, in Secs. 23 and 24, T. 31 N., R. 1 W., in an unorganized district. This property shows a vein of 12' estimated average width, traceable 6,000', carrying lead and copper ore, associated with iron carbonate, in a quartz gangue. Development by crosscut and drift, by tunnels 575' long.

Improvements include 5 buildings and an air compressor on No. 2 group. Company is developing steadily with funds derived from stock sales on the assessment plan.

RAY JEFFERSON MINING CO.

IDAHO

Address: Daniel L. McGrath, mgr., Wallace, Idaho.

Officers: E. R. Day, pres.; H. L. Day, v. p.; with Geo. K. Garrett, directors.

In May, 1916, control passed to the Day interests, owners of the Hercules, Tamarack-Custer mines, and of the Northport S. and R. Co. Company sold treasury stock to finance construction of mill and installation of electric haulage system, 1916. The company had \$100,000 in treasury May 1.

Property: 38 claims, 600 acres in a compact group, adjoining the Consolidated Interstate-Callahan holdings and including the Hill group. Is reported to show the Interstate-Callahan, Amazon and Manhattan veins, one with an orebody 400' long. The Carlisle is a cross vein running northerly and intersecting the Interstate. The latter is supposed to be the Hercules vein.

Development: by the Blue Grouse and Carlisle tunnels. The Mountain Goat tunnel opens a shoot 300' long, showing 3' of shipping ore and 9' of mill ore on the Callahan vein. The Carlisle tunnel has 400' of drifting on the vein of this name, carrying 5' to 10' of mill ore for the entire distance. About 50 men employed. A 400-ton mill and 30-drill compressor were installed in 1916. The mill is not in operation, pending further development work.

The Beaver Creek branch of the O. W. R. & N. R. R. was completed to the Ray Jefferson property in Feb., 1917.

RED MONARCH CONSOLIDATED MINING CO.

IDAHO

Offices: 417 Hutton Bldg., Spokane, Wash., and Wallace, Idaho.

Officers: Conrad Wolfe, pres., gen. mgr.; W. G. Collins, v. p.; Gale Smith, sec.-treas., with G. I. Toeys, Orris Dorman, F. R. Wolfe and Ralph Smith, directors. Henry Hewer, supt.

Inc. in 1915, in Washington. **Cap.**, \$2,000,000; shares \$1 par; assessable. Annual meeting, first Tuesday in April.

Property: 43 claims, about 800 acres, in Beaver Creek district, 9 miles

north of Wallace, adjoins Cons. Interstate-Callahan on the west; claims are on S. W. slope of Sunset Mt. and on opposite side of the mountain from the Interstate. Said to show 5 well defined fissure veins of silver, lead, zinc ore in Prichard slate and Burke quartzite. Veins are parallel, strike N. 70° W., dip 80° to the S. W.

Development: up to the time acquired by the present company, Nov., 1915, consisted of 2,000' of prospect tunnels and open cuts. Ore had been found in one tunnel, 650' long, at a depth of 500'. Company is now driving two tunnels from Missoula Gulch, one north to attain a depth of 1,000' within a length of 1,000', and one south to attain a depth of 2,000' within a length of 3,000'.

Equipment: includes an Ingersoll-Rand compressor, capacity 2,000 cu. ft., operated by a 250-h. p. G. E. motor.

Property is considered promising.

REINDEER QUEEN MINING CO.

IDAHO

Office: Wallace, Idaho. **Mine address:** Mullan, Idaho.

Officers: E. B. Crawford, pres. and mgr., Mullan; J. C. Glahe, v. p.; J. H. Wixon, treas.; W. B. Heidfelt, sec.; preceding with A. R. McRae, P. P. Weber and S. D. Le Micux, directors.

Inc. Sept. 19, 1913, in Idaho. **Cap.**, \$200,000; shares 10 cts. par, assessable. Company is a consolidation of the Copper Queen and the Reindeer Queen companies, whose holdings are contiguous and cover extensive copper exposures. The new company assumed all obligations of the old corporation and exchanged stock, share for share. The consolidation makes possible the speedy development of the orebody already cut by the Reindeer tunnel, which has been extended as a drift along the vein into the ground heretofore owned by the Copper Queen.

Property: 15 claims in the Mullan copper belt, including the Stevens Peak (or Copper Queen) group and the Reindeer group of 6 claims, all at the head of Willow Creek. The outcropping shows a big copper-stained fissure vein, 5 to 20' wide.

Development: by a crosscut tunnel which has cut the vein at a depth of 800', showing bornite and chalcopyrite ore opened by a drift on the vein. Some lead-silver ore occurring in Burke quartzite was encountered in drift, May, 1917.

Equipment: includes compressor, 200-ton mill and electric power.

Examined by Rush J. White, 1915.

REX CONSOLIDATED MINING CO.

IDAHO

Offices: 25 Broad St., New York, and Wallace, Ida.

Officers: L. E. Whicher, pres.; Raymond Guyer, v. p. and gen. mgr.; R. M. Atwater, Jr., treas.; with C. C. Burger, John Gorlow, Robert Sweeney, E. Cohen, Harold Pierce, and Henry Sachs, directors: H. Pelz, sec.; N. C. Sheridan, supt.

Inc. July, 1915, in Delaware. **Cap.**, \$1,500,000; shares \$1 par; increased to \$2,000,000 in Oct., 1916; 1,900,000 outstanding; reduced to \$1,205,000; shares 25 cts. par, Oct. 22, 1917. U. S. Corp. Co., 36 Nassau St., New York, transfer office and registrar. Annual meeting, third Monday in February. Listed on Spokane and Butte exchanges, Boston and New York Curbs.

Annual report for year 1916 shows assets of \$2,142,231, which includes property, \$1,869,445; investments, \$39,070; cash, \$51,684; development and equipment, \$182,031. Current liabilities were \$34,361.

Property: 15 claims and a mill-site, 185 acres, in Nine Mile section, Coeur d'Alene, including the Sixteen-to-One mine near the Cons. Interstate-Callahan and Success mines, held under bond and lease. Was extensively

developed years ago by the Finch-Campbell interests of Spokane, but increase of zinc values at depth made operations unprofitable. About 4 years ago the mine was reopened by another company and much money spent in equipment for deep exploration. In Dec., 1915, this company took an option on the property of the Black Bear Cons., which see; after paying \$10,000, the option was relinquished.

On Sept. 29, 1917, it was decided to complete purchase of the property and Rex mill and further develop at depth; also to acquire the Friel tract in the Miami zinc belt of Oklahoma, which has been extensively drilled.

The claims are in the slate belt, long considered valueless as an ore formation, until W. H. Weed attacked this view and demonstrated its falsity by work at the Interstate-Callahan. The claims contain 3 strong veins, the Rex, Okanogan, and Delaware, which converge at depth.

Development: through a main working tunnel, 900' long. Below this a 2-compartment shaft has been sunk to No. 9, or 1,380' level. A crosscut at this depth cut the 3 parallel veins. The Okanogan vein is strong and measures from a few inches to 10' in width. The Delaware outcrops stronger than the Rex or Okanogan and lies 350' S. of the latter. Underground work totals over 10,000', at a cost of over \$350,000. From a relatively small area in the upper workings there was produced more than \$800,000 of silver-lead ore. Most of the zinc remains.

Equipment: 75-h. p. electric hoist and 3 air hoists underground, 15-drill compressor of 1,050 cu. ft. capacity driven by 200-h. p. motor and mill costing \$200,000. On lead ore the mill has a capacity of 350 tons daily, and on zinc-lead ore, 200 tons; the latter capacity is to be enlarged. Plant includes flotation and an Oliver filter. At upper terminal of the 6,600' aerial tram of 400 tons capacity, a modern sorting plant is operated. Surface improvements include repair shops, bunk and boarding houses, dwellings, etc.

Production: lead-zinc concentrates worth \$15,000 in August and \$24,000 in September, 1917. One car of zinc and four of lead concentrates per month are now being shipped.

RIVERSIDE MINING CO.

IDAHO

Address: T. R. Mason, pres., Kellogg, Idaho. Owned in Kellogg and Spokane. Claims in National Forest Reserve, at headwaters of the North Fork of Coeur d'Alene river.

Property: shows a 7' vein with 18" of high-grade silver-lead ore.

Development: 460' crosscut tunnel with 100' back.

ROBERTA MINING & MILLING CO.

IDAHO

Mine near Gem, Shoshone Co., Idaho.

Officers: Jos. Lutey, Jr., pres.; E. V. Moran, sec.; W. C. Orton, treas.; Thos. Roberts, mgr.; preceding with Curtis Lewis and Alex. Penaluna, directors.

Property: 12 claims, patented, well timbered, on Nine Mile Creek, carry 4 known veins.

Development: by tunnels, lower 300' long, to be driven 2,000' to give a back of 800' and to cut 4 veins, one of which shows lead and copper carbonates at surface, giving assays up to 6% copper, 10% lead, 16 oz. silver and \$3 gold per ton. Company's holdings are in the lead belt of the Coeur d'Alene.

SAINT JAMES MINING & MILLING CO.

IDAHO

Mrs. Theresa James, mgr., Wallace, Idaho.

Inc. 1911, in Idaho. **Cap.**, \$50,000; shares 5 cts. par.

Property: the St. James mine, comprising the Ula and Try Me claims on Sunset peak near Wallace. **Ore:** carries lead, silver, and zinc. No. 2

tunnel started Nov., 1915, cut vein at 300', showing 8' of milling ore. Drift toward shaft is in 700' with 600' to go, making a vertical depth of 900' on the vein.

SHERMAN DEVELOPMENT CO.

IDAHO

Office: Wallace National Bank Bldg., Wallace, Idaho.

Officers: Charles McKinnis, E. R. Day, H. R. Allen, A. Swan, and D. A. Swan, directors.

Inc. in Nevada. **Cap.**, \$500,000; shares 25 cts. par.

Has lease on the Union mine near Burke, probably that described under Pine Creek Development Co.

Development: proposed to explore 700' deeper by extending Hidden Treasure tunnel 1,800' in Sherman ground. At 900' depth 3' of lead-zinc shipping ore has been opened and shipments made.

SIERRA NEVADA CONSOLIDATED MINING CO.

IDAHO

Subsidiary of Bunker Hill & Sullivan Mining & Concentrating Co., which see.

Officers: Stanley A. Easton, pres.; C. W. Simmons, sec.

Production: in 1915, 15,159 tons.

Net profits in 1914 were \$159,339; in 1915, \$46,364—a decrease in 1915 of \$112,985.

Company began production in July, 1913, selling its output under contract to April 29, 1915, to the American Sm. & Ref. Co. Management being unable to extend contract satisfactorily, discontinued production and only moderate exploration and maintenance work has been done since. Said to have considerable ore reserves.

Not operating in 1916.

SILVER CLIFF GOLD AND COPPER MINING CO., LTD.

IDAHO

Idle. Office: Wallace, Idaho. Mine near Larson, Shoshone Co., Idaho. Jas. D. Young, pres., treas. and gen. mgr. Edw. C. Young, sec.

Cap., \$1,500,000; shares \$1 par; an assessment of 5 mills was levied Sept. 15, 1917.

Property: 18 claims, 7 miles from Mullan, developed by 3 tunnels, the lower of 850' and longest of 1,500', showing copper ore with some lead and fair gold value.

Equipment: includes a Pelton wheel and an 8-drill air compressor. No report received 1916 or 1917.

SILVER MOON MINING CO., LTD.

IDAHO

Office: Ed. Ehrenberg, Box 297, Spokane, Wash.

Officers: Eugene Sage, pres.; H. C. Lambach, v. p.; G. Ehrenberg, sec. treas.; with Geo. Steward and Ed. Ehrenberg, directors.

Inc. Sept., 1906, in Idaho. **Cap.**, \$1,500,000; shares \$1 par; assessable; 946,903 issued.

Property: 9 claims, north side of Canyon Creek, 4½ miles from Wallace, adjoining the Frisco mine, shows 2 veins of lead ore in quartzite.

Development: by 2,133' crosscut tunnel and 1,533' of other work, to depth of 600'. Prospecting being continued, while 2 veins cut in tunnel are to be opened.

Equipment: includes a 200 cu. ft. compressor, electrically driven.

Property is a prospect; reported that "buyers must be prepared for a long pull"—which is undoubtedly true.

SILVER MOUNTAIN MINING CO., LTD.

IDAHO

Office: Potlatch, Idaho.

Officers: L. Tice, pres.; E. D. Wilkins, v. p.; W. E. Horstkotte, sec.; G. L. Fulton, treas.; directors; Arthur Horstkotte, mgr.

Property: 9 claims, 4 patented, near the Alice mine, on St. Joe Gulch, shortly west of the Morning Mill, about $3\frac{1}{2}$ miles from Mullan. The mine has 3 tunnels, and a 900' crosscut tunnel intersects an 8' vein carrying ore said to give assays of 2% copper, 3 oz. silver and \$1.80 gold per ton.

Equipment: includes a small steam plant and an air compressor. Development with a small force.

SILVER TIP MINING CO.

IDAHO

Office: care Coleman & Rietze, 50 Broad St., New York. **Cap.,** \$150,000; shares 10c par.

Property: 140 acres in Coeur d'Alene district on Montana side of divide, north of Wallace and 2 miles from Snowstorm mine and Big Eight.

Development: 800' of tunnel work. Is a prospect.

SILVERADO MINING CO.

IDAHO

Office: C. D. Muxen, sec.-treas., Old National Bank Bldg., Spokane, Wash.

Officers: Dr. W. B. Pickrell, pres.; W. Wood, v. p.; preceding with John Wyand, Gus Eiler, H. A. Long, directors. W. L. Zeigler, supt., Osborne, Idaho.

Inc. in Wash. **Cap.,** \$2,500,000; \$1 par; about 1,850,000 shares issued. Has a \$4,000 mortgage.

Property: a group of claims near Osborne reopened in 1915, after several years' idleness, shows fissure vein in shale, running downward into the underlying quartzite.

Development: 4,000' tunnel, 400' of it a drift on a 1-3' vein showing 6"-18" silver-lead and gray copper ore. A 120' winze shows persistence downward.

Reserves in September, 1917, were sufficient for several months' milling. At 4,000' in main tunnel and at depth of 1,400', there has been opened 100' of ore 3' wide, assaying 0.4% copper, 10.4% lead and 13.4 oz. silver per ton.

Equipment: includes compressor and electric power. A 100-ton mill with flotation plant was working one shaft daily in September, 1917. Has 6-drill compressor and electric power.

Mill seems to have been erected before enough ore was developed, as there was a suspension during the year.

SNOWSHOE MINING CO.

IDAHO

Mullan, Shoshone Co., Idaho.

Officers: P. J. Gearon, pres.; Paul Lucia, v. p. and gen. mgr.; H. G. Loop, sec.-treas.; with J. A. Bean and A. P. McRae, directors.

Inc. Sept., 1903, in Idaho. **Cap.,** \$1,000,000; shares \$1 par; assessable; fully issued; 13 assessments of 5 mills each and one of $2\frac{1}{2}$ mills levied to March, 1917. Shares are listed on the Spokane and Butte Exchanges. Annual report to Jan. 1, 1916, shows cash on hand, \$2,000. Expenditure in 1916 amounted to \$10,380.

Property: 7 claims, patented, adjoins the Snowstorm on the east and supposedly carries the extension of the Snowstorm fault, at the head of Gentle Annie gulch, near the top of Snowstorm mountain, in the Hunter district, 1 mile from railway. Claims show Revett quartzite, mineralized for 30' in the Snowstorm fault, with some cuprite, azurite and chalcopyrite, giving assays up to 9% copper and 8 oz. silver per ton.

Development: by crosscut tunnels, longest 2,000', and drifts, a total of about 5,000' of underground workings, showing a mineralized zone of 30 to 40' width, carrying various copper ores sparsely disseminated. Drifting on the N.-S. fissure opened up a body of high-grade copper ore, 8"-2' wide,

at 650' depth and about 1,600' from portal of No. 2 tunnel. The upper crosscut tunnel, 700' long, intersected a vein up to 60' wide and running from 1-20% copper, at a vertical depth of 250'. A second crosscut, 696' vertically below No. 1, cut the vein 1,700' in without disclosing any values.

No. 2 tunnel has been extended 1,000' since Jan. 1, 1917.

Equipment: includes an air compressor, power house and several buildings. Further development planned and necessary.

SNOWSTORM APEX MINING CO.

IDAHO

J. H. McIntyre, M. E. Delgrove and B. V. May of Spokane, trustees. Inc. 1908 in Wash. **Cap.**, \$1,500,000; shares \$1 par.

Property: on Snowstorm mountain, east of Mullan, shows 2 veins opened by a shallow shaft and a 130' tunnel, with about 200' of workings.

Leters returned in 1917 from Mullan.

SNOWSTORM EXTENSION COPPER MINING CO.

IDAHO

Address: A. J. Richardson, treas., 216 Wright & Callendar Bldg., Los Angeles, Calif. **Mine Address:** Mullan, Shoshone Co., Idaho.

Inc. Oct., 1909, in California, as successor of Snowstorm Extension Mining Co., Ltd. **Cap.**, \$1,000,000. Assessment of 2 mills per share, delinquent March 3, 1914.

Property: 9 claims, adjoining the Snowstorm on the east, supposedly carry the extension of the Snowstorm ore zone. Pits and trenches have shown ore of about 3% copper tenor, markedly similar to that of the Snowstorm.

Development: by a drift tunnel, starting from North Fork creek, 2,000' long at last accounts, planned to be driven to secure an eventual back of 1,630', on the dip of the vein.

SNOWSTORM MINING CO.

IDAHO

Company being dissolved, July, 1916. Succeeded by Snowstorm Mines Consolidated (Montana), which see.

Office and mine: Larson, Shoshone Co., Idaho.

Officers: Leo Greenough, pres.-gen. mgr.; J. W. Greenough, v. p.; R. E. Walter, sec.-treas., preceding, with J. B. Greenough, J. C. Broad, M. D. Hall and H. E. Chaney, directors.

Inc. July, 1900, in Idaho. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; issued 1,499,500 shares. For fiscal years ending June 30, earnings were \$5,677 net in 1905; \$144,322 in 1906; \$498,013 in 1907; \$243,262 in 1910; \$25,691 in 1911; \$15,787 in 1912; \$141,639 in 1913; \$152,904 in 1914 and in 1915 there was a net deficit of \$57,891. Company reported a surplus of \$172,761 June 30, 1915 and profit of \$119,677 for 1916.

Dividends: \$90,000 in 1906; \$360,000 in 1907; \$150,000 in 1908; \$202,000 in 1909; \$179,940 in 1910; \$44,985 in 1911; \$74,975 in 1912, \$142,452 in 1913 and \$22,492 in 1914, a total of \$1,169,640 to end of fiscal year, 1914.

The property of this company was fully described in Vol. XI, Copper Handbook. By Sept., 1914, ore reserves had been exhausted and mining ceased, but development work was continued until June, 1915, at which time the mine had been thoroughly explored down to and including the 2,200' level. Exploration was fruitless.

In view of the fact that the company owned complete surface and underground mining equipment and had about \$160,000 cash on hand, the management deemed it desirable to continue in other mining activities rather than dissolve. Since then it has been searching for other properties. It had an option on 650,000 shares of the Missoula Copper Co. and did considerable development work on the property, but last reports state it had surrendered its option to the National Copper Co. for \$27,000.

Production: (for fiscal years ending June 30)

Year	Ore, Tons	Copper, Lbs.	Silver, Oz.
1905.....	4,950,000
1906.....	6,233,940
1907.....	76,224	6,850,000	525,000
1908.....	87,503	8,000,000	596,000
1909.....	119,816	10,363,438	734,968
1910.....	91,368	7,125,105	605,075
1911.....	34,464	2,653,036	267,263
1912.....	29,964	2,074,447	204,870
1913.....	4,522,605	368,906
1914.....	4,632,943	286,695
1915.....	775,980	45,090

SONORA MINING & MILLING CO.**IDAHO**

Dr. W. A. Smith, sec., White & Bender Bldg., Wallace, Idaho. Norman Ebbly, C. W. Gibbs, A. H. Featherstone, E. O. Hering, all of Wallace, are heavily interested. Funds are raised by occasional 2 mill assessments.

Property: 12 claims, patented, over the hill from the Marsh mine above Burke. Is an old mine on which work has been prosecuted since 1896, spending \$75,000 and doing 3,200' of work prior to 1908, when a 6' vein was cut at 1,400' from portal and at depth of 800'. In 1914, a contract with John Moffat was made to "find" the vein for 100,000 shares of stock.

In 1914 a shaft and winze was sunk on the Cooney vein at 1,950' from the tunnel mouth, the ore-shoot proving elusive on the Sonora vein. In 1916, company let contract for 200' extension of the 1,500' tunnel, hoping to crosscut another vein. Another extension of 100' was driven late in 1916.

STANLEY MINING CO.**IDAHO**

Burke, Idaho. **Cap.**, \$1,500,000; shares \$1 par; treasury, 200,000 shares. Listed in Spokane. Controlled by Day family, principal owners of Hercules Mining Co.

Property: 12 patented claims, west of Benton and N. E. of Humming Bird, in George Gulch, N. of Burke, said to show antimony ore. Authentic information is scarce. The Humming Bird crosscut tunnel, run by the Hercules, passes through Stanley ground. In June, 1916, was shipping antimony-gold ore.

STAR ANTIMONY CO.**IDAHO**

Address: Kellogg, Idaho.

Officers: Burke A. McIntosh, pres.; W. W. Papesch, mgr.; J. S. Ross, sec.-treas.

Inc. March, 1916, in Idaho. **Cap.**, \$10,0000; shares 1c. par.

Property: the Brown & Fennell claims and others, eleven in all, on Pine Creek, Coeur d'Alene district, Idaho. Ore carries antimony sulphide as stibnite.

Development: by 3 tunnels, equal to 1,500'. Exploration under way in 1917.

Production: 3 carloads in 1916, assaying 52.4 to 54.8% antimony. Mine assayer reports 50c. to \$15.36 gold per ton.

STEWART MINING CO.**IDAHO**

Office: 61 Broadway, New York. **Mine office:** Kellogg, Idaho.

Officers: H. C. Todd, pres.-treas.; C. W. Saacke, v. p.; C. T. Lark, sec.; C. L. Williams, asst. treas.; Wm. A. Beaudry, gen. mgr.; with Judge Nash Rockwood, directors.

Inc. Aug. 29, 1902, in Idaho. **Cap.**, \$1,250,000; shares \$1 par, increased July, 1916, to \$3,000,000; shares \$1 par; 2,738,362 outstanding. No bonded indebtedness. C. L. Williams, New York, transfer agent; Metropolitan

Trust Co., New York, registrar. Annual meeting in August. Listed on New York Curb.

Balance sheet of June 30, 1917, shows: total assets, \$3,430,544, which includes plant and equipment, \$2,981,927; ore and concentrates, \$16,143; acct's receivable, \$45,309; demand loans secured by collateral, \$78,125; cash, \$20,389. Current liabilities, \$21,996. Surplus was \$670,186.

Profit for fiscal year 1915 was \$654,694, almost \$200,000 less than dividend requirements. Earnings in 1914 were \$854,436. Company controls the Coeur d'Alene Development Co. through ownership of 562,498 shares out of 1,000,000 shares.

Dividends: paid at the rate of 10c quarterly from 1913 to Dec., 1915, with extra dividends amounting to 32½c in 1913; 62½c in 1914; 70c in 1915. Rate was reduced to 5c quarterly in 1916.

Property: the Stewart mine at Kellogg, 8 claims, partly patented, 150 acres, 2,000' along the outcrop of the contact, carries silver-lead ore averaging \$6.06 per ton. Country rock is soft Burke quartzite. Output during 1914 and 1915 averaged 500 tons daily, but reduced to 125 tons in 1916. The mine is practically worked out, and as extensive development work in 1915 failed to locate any new orebodies, management purchased properties at Tuscarora, Nevada, and the Coeur d'Alene Development Co. property, which adjoins the Stewart.

The Tuscarora property is estimated to contain from 400,000 to 600,000 tons of \$14 ore, for which a 300-ton mill has been erected.

In Idaho the Nabob and Denver mines were bought. In September, 1917, 2 to 4' of ore in the Nabob assayed 13% lead and 5 oz. silver per ton. A mill is to be erected near the Denver mine. On May 27, 1917, W. A. Beaudry reported on the Nabob and Denver claims in the Pine Creek district. Country rock is one of the Algonkian sedimentary series, known as Pritchard slate. Veins of these mines are true fissures cutting the bedding planes of the slate at nearby right angles. Faulting is common, though not troublesome. Lead occurs as galena and zinc as sphalerite. The Denver is developed by tunnels, and ore blocked out amounts to 22,000 tons, probable ore, 46,000 tons.

Tests on ore assaying 5.4 oz. silver, 13.3% lead, 14.5% zinc, 7.3% iron and 50% silica, 10.1% zinc and 21 oz. silver; also ore containing 34.2% zinc, gave by gravity concentration, a concentrate assaying 59.5% lead, 10.1% zinc, and 21 oz. silver; also ore containing 34.2% zinc; both suitable for smelting. Estimated costs for all operations are \$5.75 per ton, leaving a profit of \$11.33 per ton. Mine yielded 100 tons daily in May, and 300 tons in November, 1917. Treating 100 tons daily, the monthly profit should be \$34,000. The Nabob contains 10,000 tons of positive ore, assaying 8% lead and 2 oz. silver per ton.

Mill: the Stewart mill at Wallace, 12 miles from the mine, has a daily capacity of 500 tons. **Equipment:** includes crusher, 4 sets of rolls, 2 Huntingtons, 12 Wilfley tables, 18 Frue vanners, 36 Harz jigs, 4 Deister slimers. A flotation unit was added in 1914. General Naval Stores flotation oil is used. Concentration ratio is 6 into 1, the product averaging 50% lead and 50 oz. silver per ton.

Production and Costs in 1915: (1916 not published.)

Tons extracted.....	189,615
Gross yield.....	\$2,140,363
Cost of extraction.....	612,796
Cost of transportation mine to mill.....	29,392
Cost of smelting.....	563,833
Cost of reduction.....	76,592
Cost of repairs.....	3,317

Management has been searching for new properties for some time, and various mines have been investigated and considered, including the Old Sport Group of the Quatsino Copper Co., comprising 26 patented claims, 2,000 acres, Vancouver, B. C., on which \$100,000 was spent before the option was relinquished.

Litigation with the Ontario Mining Co., was decided adversely, April 1915, and the Ontario company granted \$48,000 for ore illegally extracted.

Notwithstanding the spectacular career of the Stewart Company under the Heinze regime, the mine made good, paying \$1,000,000 a year dividends for two years.

The Stewart mine is earning \$9,000 per month net and company is to treat tailings.

Coeur d'Alene Development Co.

Property: 10 patented claims, developed to 400' level and equipped with a mill. Ten years ago a rich orebody produced about \$150,000 worth of ore, but property was abandoned when this vein was worked out. Extensive development work under way.

SUCCESS MINING CO.

IDAHO

Office: Wallace, Idaho.

Officers: P. J. Gearon, pres. and gen. mgr.; Jas. Gearon, v. p.-supt.; L. C. Wilson, sec.-treas.; with E. H. Becker and C. M. Carroll, directors.

Cap., \$1,500,000, shares \$1 par; all outstanding stock listed in Spokane and Butte; traded in on New York Curb.

Balance sheet: Dec. 31, 1916, showed: assets, \$1,680,354, which included: property, \$1,514,002; cash, \$150,871; ore in transit, \$2,450; other current assets, \$15,010. Liabilities included: surplus, \$137,151; current, \$43,203.

Profit and loss statement: income, \$702,902; operating expenses, \$471,862; profit, \$231,040; balance from 1915, \$251,111; total available, \$482,151; from which \$345,000 was paid in dividends, leaving surplus of \$137,151.

Dividends: suspended April 20, 1913, totaled \$345,000 to that date; resumed April 30, 1915 and \$550,000 paid in 1915; \$345,000 to July 26, 1916; none since.

Property: is one of the oldest located properties in the Wallace district; first operated by the Granite Mining Co., taken over in 1905 by H. F. Samuels, who organized the Success Mining Co., continued under his management until 1915, when control passed to "practical" mining men and brokers, and large blocks of stock, aggregating over 1,000,000 shares, were worked out through the New York, Duluth, Spokane and Butte exchanges.

The company has had considerable publicity during the past year, due to stock manipulation, said to be aided by the management, and to friction between the management and several publications on mining news. This has been aggravated by the seeming aversion of the directors to take stockholders into their confidence, especially in connection with the new smelter contract with the Grasselli Chemical Co., effective May 1, 1916. The distrust of the management culminated, April, 1916, in the Success officials being summoned to court to show why stockholders should not know the terms of contract. This covers 2,000 tons monthly for 3 years, with minimum zinc content of 38%, and maximum lead of 5% at certain prices.

Litigation with the adjoining Alameda company, which claimed payment for ore, said to have been extracted from its ground by Success, was decided in favor of Alameda Co., but the Success Co. appealed and won. This was followed by the Alameda appealing, but the court dismissed case in May, 1917.

Property: 8 claims on Nine Mile Creek, 2 miles N. W. of Wallace. Company also operates the Red Bird mine in Custer county, where 828,-

727 tons of 10.73% lead and 7.86 oz. silver ore is estimated in reserve. A 100-ton mill was to be erected in 1917.

Ore: zinc with lead-silver content. According to U. S. G. S. Prof. Paper, No. 62, there is no vein, the ore occurring in masses of irregular form and size, which are chiefly replacements of quartzite in places where it has been most thoroughly fissured. The ore is strictly confined to the sedimentary rock; surrounding country rock is monzonite..

Development: by tunnels to 700' level, and by shaft from 700' to 1,500' level, the latter recently opened. New work in 1915, 1,575', included 200' of shaft sinking. Considerable time and trouble were required to locate the ore on the 1,200' level.

Ore reserves: under date of Jan. 24, 1916, the president reported "tonnage now in sight is better than at any time during the past year, and is estimated sufficient to run the mill at the present rate for about 18 months." Grade of ore not given. Examination made in March, 1916, said to show 21,500 tons ore, blocked out above the 1,200' level, and in addition 87,200 tons of probable ore, no grade given.

The nature of the ore occurrence almost necessitates having but small reserves. Present conditions indicate the possibility of opening up new ore at depth. In May, 1917, it was reported that the orebody had been cut on the 1,500' level, showing 6' of high grade zinc ore and considerable lead.

Equipment: includes a 250-ton mill. Flotation is used.

Production: in 1916, was valued at \$693,045 from zinc, lead, silver and flotation slime.

The reticence of the management regarding operations and costs, its connection with the stock promotion, and the many conflicting reports issued, are all poor policy and have tended toward giving a feeling of uncertainty to stockholders and the investing public. If the management is sincere, a little frankness would do no harm.

It was reported in September, 1917, that company's books were to be examined by court order. Overhead charges are said to be excessive and in each month for a year there have been losses. Ore sales for 7 months in 1917 were \$226,000 against \$555,000 in that period of 1916. The whole affair is highly unsatisfactory.

TAMARACK & CUSTER CONSOLIDATED MINING CO. IDAHO

Wallace, Idaho. **Officers:** J. J. Day, pres., gen. mgr. and treas.; E. R. Day, v. p.; H. L. Day, sec.; R. M. Walker, E. H. Knight, F. M. Rothrock, E. Boyce, directors.

Inc. in Nevada, 1913. **Cap.**, \$2,000,000; \$1 par; unissued, \$223,500.

Financial statement shows net profits for 1914, \$187,063; for 1915, \$346,796; for 1916, \$338,746.

First dividend of 2 cts. per share was paid May, 1916; total in 1916 was \$71,050.

Property: about 40 claims and fractions, acquired from the old Tamarack & Chesapeake and Custer companies, on Nine Mile Creek, Coeur d'Alene district, Shoshone Co., Idaho. The Hercules mine nearby is controlled by the same interests.

Ore: contains 9% lead and 7 oz. silver, part direct smelting and part concentrating. Mill recovery is reported to be about 83% without flotation.

The company with the Hercules interests built and is operating the new lead smelter at Northport, which is to be enlarged to handle custom products. Direct information is not available but it is said that the gross ore reserves are about \$9,000,000. One ore-shoot on the Leonard tunnel level is reported to have been proved for 1,500' with ore on both faces.

Little is available concerning this company for 1916, the policy of reticence that has resulted in much criticism in the past being continued. Early in 1917 the 500-ton Frisco mill at Gem was purchased from the Federal Mining Co., for \$150,000, also the 8,000' Hercules aerial tram. To this line was added 2½ miles to connect the mine and mill. In June, operations were resumed after suspension since March. The remodeled mill includes a flotation plant. About 350 men are employed. In July, 1917, mine produced 3,000 tons of crude ore and concentrate valued at \$150,000.

TEDDY MINING & MILLING CO., LTD.

IDAHO

Kellogg, Shoshone Co., Idaho. J. B. Cox, sec.

Cap., \$1,000,000; shares \$1 par.

Property: 7 claims and a mill site, 1 mile E. of Kellogg, shows 2 veins, 1 of about 15' width, carrying copper ore with quartz gangue, and 1 of about 12 to 35' width, carrying silver-lead ore giving assays up to 12% lead and 30 oz. silver per ton.

Development: by crosscut tunnels of 100' and 550'. There are several mine buildings.

Mine is being operated under 2-year lease from March, 1916, by C. W. Browne, Dr. T. R. Mason and J. W. McCrea, of Kellogg. The lease covers only the ground above the intermediate tunnel, which was extended 40' to intercept the main vein.

TERRIBLE EDITH MINE.

IDAHO

A group of claims in the Eureka district, near Murray, Idaho, under lease to C. and W. H. Conn, of Butte, Mont.

Development: by 1,300' crosscut and 600' of drifting developed zinc ore of shipping grade. Several shipments of 50% ore were made and 150 tons monthly contracted for. The mine is also said to show promising bodies of galena with silver and gold.

TUCKER MINING & MILLING CO.

IDAHO

Address: Box 68, Wallace, Ida.

Officers: Peter Bahn, pres. and gen. mgr.; J. Pearson, v. p.; W. Turner, sec.-treas.; above are directors.

Inc. June, 1908, in Idaho. **Cap.**, \$1,000,000; shares \$1 par; assessable; issued, \$600,000; given in exchange for the property. Annual meeting in June.

Property: 7 claims, unpatented, 140 acres, in the Hunter district, 3 miles E. of the Snowstorm, shows Revett quartzite, cut by a diabase dike with veins, 1 to 4' in surface width, said to carry copper-gold-silver ore.

Development: by a 1,000' tunnel, shows low-grade copper ore at depth of 100' in E. crosscut tunnel. At 400' depth owners expect to cut the vein.

TUSCUMBIA MINING CO.

IDAHO

Address: Morton Webster, sec.-treas., Wallace, Idaho. **Officers:** George May, pres.; George W. Dougherty, v. p.; with D. L. McGrath, Wallace, D. J. Whaley, M. L. Whaley and A. A. Whaley, of Stevensville, Mont., directors.

Inc. 1910 in Idaho. **Cap.**, 1,500,000 shares; 50c par. Mine was under lease for 2½ years from April, 1915, to Gust Ehrenburg, of Spokane, and Albert Nelson, of Wallace.

Property: 4 claims, 76 acres, covers nearly 3,000' of the apex of the Tuscumbia (Sunset) lode, and 1,000' more or less of the Idora lode. The Tuscumbia is a strong, persistent vein in Pritchard slate, varying from 6 to 20' in width and branching at times. It carries shoots of silver-lead ore and of zinc.

Development: by tunnels, the lowest now worked being the Idora

crosscut tunnel. The Hill tunnel, 4,000' long, has not cut the vein; it is 1,015' below the Idora tunnel.

Mine has been stoped and orebodies largely mined out above the Idora tunnel, but the vein is believed to give promise of large bodies of milling ore at deeper levels. The property also has title, through ownership of apex, to an important orebody of the Idora mine. Deep development can be done by tunnels, as the Roy or Hill tunnel is 1,300' below the Tuscumbia apex and 1,015' below the Idora tunnel.

Property considered very promising, but company needs financing to provide funds for deep and extensive development work.

UNITED LEAD CO.

IDAHO

Name changed to Silverado Mining Co., which see.

VIENNA-INTERNATIONAL MINING CO.

IDAHO

Address: R. A. Marshall, sec., Wallace, Ida.

Officers: A. H. Featherstone, pres.; C. R. Mowery, v. p.; R. A. Marshall, sec.-treas.; with A. B. Livingston and D. Rosenbaum, directors.

Annual meeting was held on Sept. 4, 1917.

Property: 6 claims, 3 patented, and a mill site, near the mouth of Flora gulch, on Placer creek, 6 miles S. of Wallace, shows banded shales and quartzites of the middle part of the Newland formation, striking N. 50 to 60° W., and dipping 70° S. Principal vein has a quartz-siderite orebody, 3 to 5' wide with strike almost E.-W. and vertical dip. Ore on the dump shows galena, pyrite and chalcopryrite in a quartz-siderite gangue of too poor a grade to be profitably concentrated.

Development: by a 400' shaft, and 2 tunnels of 700'. New management plans unwatering the shaft, sinking to 500' and drifting on the 400' and 500' levels.

WALLACE MINING, MILLING & REALTY CO.

IDAHO

M. R. Evans, mgr., Wallace, Idaho.

Property: 9 claims on Placer creek, alongside of city limits of Wallace, said to show a big vein with scattered galena ore.

Development: by 1,500' tunnel. Is equipped with electric power, compressor, etc.

WARDNER LEASING CO.

IDAHO

Address: J. D. Owen, Kellogg, Ida.

Officers: W. A. Beaudry, pres.; D. W. Price, v. p.; J. D. Owen, sec.-treas.; with R. A. Carnochan, directors.

Inc. April, 1917, in Wash. **Cap.**, \$500,000; shares \$1 par; assessable; 410,000 issued.

Property: has 25-year lease on 60 acres of patented ground in Wardner townsite. Company has definite development plans and sufficient funds. Contiguous properties are the Caledonia, Last Chance and Bunker Hill & Sullivan, all well known producers.

Development: in Aug., 1917, the shaft was down 100', making 5' daily.

WEST HECLA MINING CO.

IDAHO

Office: 601 Empire State Bldg., Spokane, Wash.

Officers: Morton Webster, pres.; R. H. Bailey, v. p.; J. V. Pohlman, sec.-treas.; with A. A. Booth and T. A. Russell, directors.

Inc. in Wash. **Cap.**, \$1,500,000; shares \$1 par; assessable; 1,450,000 issued.

Property: 3 patented claims opposite the Hecla mine, Burke, Ida.

In Sept., 1917, company was prospecting in quartzite for the Hecla lead-silver vein. Workings to depth of 650' totaled, 1,750'.

WEST HUNTER MINING CO.

IDAHO

Address: A. M. Strode, Mullan, Idaho.

Cap. 1,500,000 shares; 10c par; 600,000 shares in treasury.

Property: 1 patented, 7 unpatented claims about one-half mile from Mullan, in the Coeur d'Alene district. The claims show a large body of quartz sprinkled with galena, which has been exposed by surface workings.

In Aug., 1917, a crosscut tunnel was being extended to cut ore exposed on the surface.

WEST NINE MILE MINING CO.

IDAHO

Chas. Heilbronner, pres. and gen. mgr., Wallace, Idaho. H. C. McAllister, treas. Olin & Co., fiscal agents.

Property: 4 claims west of the Success and Alameda mines on west fork of Nine Mile Creek.

Development: by 400' tunnel shows a vein said to carry occasional bunches of ore. In June, 1917, 200' additional tunneling was to be done. T. W. Clayton and F. C. Moore recommended sinking on the surface showings.

WESTERN UNION MINING CO.

IDAHO

Idle. Letters returned unanswered in May, 1917, from Wallace, Idaho.

Officers: D. H. Anderson, pres.; B. L. Collins, sec.; L. L. Woodford, treas.; D. H. Anderson, R. F. Collins, J. E. Burbank, G. W. Allen, W. Holm, W. Bjorklund, E. Hagman, directors; E. Roberts, supt.

Inc. Jan., 1916, in Idaho. **Cap.**, 2,000,000 shares; 10c par; 1,500,000 shares issued in exchange for stock in Aurora-Sampson and H. E. M. companies; 500,000 shares in treasury for future development.

Property: 30 claims of the Aurora-Sampson and H. E. M. companies near Wallace, in the Coeur d'Alene district. Owns the H. E. M. 100-ton concentrating mill at Wallace, which has a flotation unit using Naval Stores oils.

Development: aggregating 8,500' includes the H. E. M. lower tunnel, which at 2,300' and at a vertical depth of 1,000' encountered a large orebody in Aurora-Sampson ground. Drifts on the vein extend 800'. Values are lead and silver. The H. E. M. mine has 8,000' of underground workings. Management proposes active mining work and ore extraction.

WISCONSIN MINING CO.

IDAHO

Letters sent to Kellogg returned unanswered in May, 1917.

Officers: Louis Bolduc, pres.-treas.; P. Mason, v. p., with J. Bolduc, F. Jones and J. W. Thompson, directors; J. S. Ross, sec.

Inc. 1912. **Cap.**, \$1,500,000; shares \$1 par. Company is practically the successor of the Gold Leaf Consolidated Mines and the Coeur d'Alene Consolidated Mining Co., the shares of the old companies being made transferable share for share in the new company, upon payment of back assessments.

Property: 4 claims, unpatented, 2½ miles east of Kellogg, has 800' of tunnels and crosscuts and one 90' vertical shaft, developing a vein of 5 to 6' width, carrying copper ore and a little lead.

Equipment: includes a 2-drill compressor, run by water power from Moon creek, and a hoist. Development work only was done in 1915.

WONDERFUL MINING CO., LTD.

IDAHO

Office: Otterson Blk., Wallace, Idaho. A. H. Featherstone, sec.-treas. Stock is assessable.

Property: 4 claims, patented, near Mullan, Shoshone Co., Idaho., W. of the Bullion mine, on the eastern slope of Stevens peak. A 1,200' crosscut tunnel is developing a vein said to give a fair showing of galena and copper ore.

YANKEE BOY MINING CO.**IDAHO**

Scott Anderson, pres. and mgr., Wallace, Idaho. Property leased, in part, to Big Creek Leasing Co., which see. The Yankee Boy mine is in the Big Creek section, near Kellogg, Shoshone Co., Idaho.

Development: includes an 1,800' tunnel and a 500' raise. A 4' vein cut in 1916 is said to average 200 oz. silver per ton with copper-lead values. Samples said to have assayed 123 oz. silver; 8.4% lead; 14% iron; 0.8% copper.

Equipment: includes gasoline engine, compressor, etc.

Production: in 1913 was 271 tons with gross value of \$35,461 and 381 tons in 1914 returning \$38,646. Net profit for 1914 was \$4,557. No later returns available.

CUSTER COUNTY**CHAMPION MINING CO.****IDAHO**

Idle. R. T. Badger, sec.-treas., Utah National Bank Bldg., Salt Lake City, Utah. **Mine office:** Mackay, Custer Co., Idaho.

Officers: Edw. R. Hall, pres.; C. T. Mixer, v. p.; preceding, with O. D. Mallory and J. E. Frick, directors; H. A. Brown, supt.

Inc. 1905 in Utah. **Cap.**, \$100,000; non-assessable.

Property: 9 claims, unpatented, in the Alder Creek district, 6 miles from a railroad. Developed by tunnel, with about 1,500' of workings, showing silver, lead and copper ores.

CLAYTON MINING & SMELTING CO.**IDAHO**

Clayton, Custer Co., Idaho.

Lands: 18 claims, showing argentiferous copper and lead ores. Has water power and a smelter rated at 50 tons. Reported sold to Idaho Smelting & Mining Co., in 1914.

COPPER BASIN MNG. CO.

Main office: 804 Newhouse Bldg., Salt Lake City. **Mine office:** Mackay, Idaho.

Officers: John Pingree, pres.; H. W. Weiler, v. p. and supt.; R. P. West, sec.-treas.; F. H. Vahrenkamp, managing director and cons. engr.

Cap., \$1,000,000; shares \$1 par; increased from 100,000 shares. Levied 2c assessment Aug. 18, 1917.

Property: 15 claims and 3 fractions, 24 miles from Mackay, Idaho, at Copper Basin, Mont. Claims to have an orebody on the 100' level, 200' long, 50' wide with a 65' winze still in ore from which assays from carload lots run 10½% copper, 13% iron and some silver.

Production: 30 to 50 tons daily. Company had 40 teams hauling in summer, 1917.

CUSTER SLIDE MINING & DEV. CO.**IDAHO**

Officers: R. L. Holland, pres.; D. Y. Butcher, sec.; Wm. H. Fitts, gen. mgr.; all of Colorado Springs, Colo.

Property: 700 acres in Yankee Fork district, Custer Co., Idaho, including the Montana and Sunbeam groups, also mill, power plant and dam of the Sunbeam Cons. Mines Co. The Montana mine was operated during 1916 and some rich gold ore is said to have been found. Mine is an old producer. Active operations began in 1917, the past two years being devoted to preliminary work. An aerial tram connects the mine with the Sunbeam mill.

EMPIRE COPPER CO.**IDAHO**

Office: F. G. Taylor, sec. and transfer agt., 322 Eccles Bldg., Ogden, Utah. **Mine address:** Mackay, Custer Co., Idaho.

Officers: L. R. Eccles, pres.; J. M. Eccles, v. p.; Jos. Scowcroft, treas.; F. A. Behling, mgr.; above and John Pingree, directors.

Inc. June, 1907, in Maine. **Cap.**, \$1,200,000; shares \$1 par; 1,000,000 shares issued. Stock listed on Salt Lake City and Kansas City Stock Exchanges. Annual meeting 3d Tuesday in May.

Dividends: paid since May, 1913, \$680,000. Is on regular 5% quarterly dividend basis, 1917.

Property: the White Knob Copper Mine, 3 miles south of Mackay on the Salmon River branch of the Oregon Short Line, with 39 claims, 18 patented, 700 acres, also mill and smelter sites of 480 acres, and a railroad right-of-way, in the Alder Creek district, Custer County, Idaho.

Geology: property carries a great number of lenticular contact replacements, in quartz porphyry and granite porphyry. The property is remarkable for its peculiar ore deposits, varying greatly in size and shape, occurring in the metamorphosed garnetized margin of contact, garnetization existing in some instances for fully six hundred feet from the contact. The geology has been carefully studied and is described by Kemp in the Transactions Am. Inst. of Mg. Eng., 1907, and in Genesis of the Mackay Copper Deposits, by Jos. B. Umpleby, Econ. Geol. The ore is largely a cupriferous pyrite with much chrysocolla derived from its alteration. The average assay of the 68,475 tons of ore mined in 1916 was copper, 4.008% gold, .04 oz.; silver, 1.97 oz. per ton.

Development: mine has a glory hole, 125 to 200' wide, but mining is mainly by tunnel. The property is opened by some 46 tunnels and five shafts, and has a total of underground workings in excess of 15 miles. The greatest vertical depth has been attained in the Cossack tunnel, which is some 5,000' long, having a depth of 1,800'; some ore showing. A raise of 1,000' is now being run to connect with the Alberta tunnel. Only shipping ore is being extracted and plans are under consideration for the erection of a mill to treat the low-grade ores that have been and are now being developed.

Equipment: includes air compressors having a capacity of 36 drills, steam driven; machine shop, blacksmith shop, bunk houses, boarding-house and commissary.

At present the mine is reached by an 85-mile branch of the Oregon Short Line R. R. Co., running from Blackfoot to Mackay, and is connected by the 7¾ miles Empire Railroad, owned by the company, of 36" gauge, equipped with two 33-ton and one 35-ton Shay mountain climbing locomotives and 34 cars. The line has a maximum gradient of 9%, with a rise of 2,000', and has one 6% grade on a 34° curve. A 3-mile aerial tramway of 1,000 tons daily capacity will be in operation before 1918.

Smelter at mine is not in operation, ore being shipped to the A. S. & R. Co.'s plant at Garfield, Utah, for treatment.

Year	Tons Mined	Lbs. Copper	Oz. Gold	Oz. Silver
1916.....	69,475	4,990,147	2,860	123,353
1915.....	54,295	4,702,119	3,155	125,135
1914.....	18,251	2,012,244	962	53,768
1913.....	34,722	3,565,479	1,812	92,805

The average number of men employed during the past year on company account has been 150, and in addition about an equal number have been engaged by the 50 sets of lessees working on the property.

Because of strong metal prices, average royalty paid by lessees during the past year was 32½% of the net smelter returns.

LOST PACKER MINING CO.

IDAHO

Office: 564 E. First South St., Salt Lake City, Utah. **Mine and works office:** Ivers, Custer Co., Idaho.

Officers: Jas. Ivers, pres.; J. T. Finlen, v. p.; Henry Welsh, sec.-treas., with J. Frank Judge and H. A. McCornick, directors; J. P. Boyle, mgr.

Inc. 1903, in Utah. **Cap.**, \$150,000; shares \$1 par; changed 1916 to 600,000 shares, 25c par. Stockholders privileged to purchase new shares at ratio of 3 for each old share held. Company declared a dividend of 25c. a share, Oct., 1913. Stock listed on Salt Lake City Exchange.

The Packer Co. was inc. June, 1917, as a holding company to take over 80% or more of the Lost Packer Mng. Co. stock.

Property: 34 claims, 4 patented, in the Loon Creek district, 112 miles west of Mackay, the nearest rail point. The mine and smelter are in the mountains 7,100' above sea level, but an auto road runs to the mine. Claims said to show a number of iron outcrops, covering two contacts, two miles apart, one a limestone diorite contact, the other between limestone and quartzite. These outcrops are of favorable character.

Development: by drift tunnels, No. 1 having a back of 450', No. 2 a back of 700', and No. 9 a back of 870', later showing rich ore, and planned to have a back of 2,000', ultimately. Tunnels are drifts on a vein of 2 to 7' average width, with maximum width of 15 to 18', carrying ore said to average 9 to 16% copper, and 2-8 oz. gold per ton, with a paystreak of 2" to 5' width, proven to average about 2' for a distance of 500', and depth of 400'. Mine is developed to 1,000' level. See U. S. G. S. Bull. 530 G.

Company employs 80 men at the mines and 400 horses are required to handle supplies and output.

Equipment: about \$225,000 has been expended on surface improvements and equipment, including the smelter, but excluding the 50-ton oil flotation concentrator, built in 1915. The property has water power, with an electric light plant, assay office and necessary mine buildings.

The smelter has a 100-ton water-jacket blast furnace, making matte of about 45% copper, 25 oz. silver and 8 to 10 oz. gold per ton, with slags running only about 0.2% copper. The smelter ran 24¾ days in the summer of 1913, smelting 1,800 tons of ore, and producing 380 tons of matte. Total production to end of 1915 was \$800,000. Management estimates 20,000 tons of ore in old stopes expected to net \$4.97 per crude ton.

No 1916 production, as company was developing only.

LOST PACKER MINING & SMELTING CO.

IDAHO

Mine near Ivers, Custer Co., Idaho. John T. Clarke, treas. and managing director.

Inc. 1907, in Wyoming. **Cap.**, \$3,000,000; shares \$5 par, as a holding company, to gradually acquire the outstanding stock of the Lost Packer and other mining companies.

PACKER CO., THE.

IDAHO

Offices: Mackintosh Block, Salt Lake City, Utah, and Suite 625, No. 149 Broadway, New York.

Officers: Chas. Read, pres.; E. G. Rowe, v. p.; with W. A. Black, T. E. Guhin and A. J. Miller, directors. J. H. Woodmansee, sec.-treas. Register & Transfer Co., N. Y., register and transfer office.

Inc. June 12, 1917, in Me. **Cap.**, \$600,000; par \$1; \$500,000 issued.

Organized as holding company to take over 80% or more of Lost Packer Mining Co. stock (which see).

RAMSHORN MINE.

IDAHO

At Bay Horse, Custer Co., Idaho. Presumably belonging to Ramshorn Mining Co. Was reported by State Inspector of mines in 1912, to be the best developed source of dry silver ore in Idaho.

Shows well-defined fissure veins in black altered slate of igneous material. Vein varies from a few inches to several feet in width and carries

quartz and spathic iron with ore shoots containing streaks and spots of tetrahedrite carrying high copper and silver values.

Examined 1913 by Frank Leland and said to be under option to him.

RANKIN CREEK PLACER MINES CO.

IDAHO

Address: A. S. Thatcher, pres., 1455 Michigan Ave., Salt Lake City, Utah. T. B. Meldrum, sec.-treas.

Inc., 1917 in Utah. Cap., \$25,000; shares 25c par; 60,000 in treasury.

Property: 80 acres in Yankee Fork district, Custer County, reported to carry free gold. About 1,000' of placer ground previously worked averaged \$3 per cu. yd. There is an old mill on the ground. Active development to start Sept., 1917.

RED BIRD MINING & SMELTING CO.

IDAHO

Inc. 1913 to take over assets of Idaho Smelting and Mining Co. J. B. Jones, sec.-mgr.

Property: consists of extensive holdings near Clayton, Custer Co., 60 miles N.-W. of the Oregon Short Line terminal at Mackay, including the Ella group at Clayton, Red Bird group on Squaw Creek, Silver Rule group on Slate Creek, Skylark group at Bayhorse, and a 100-ton smelter at Clayton. The Red Bird mine is the principal property, containing lead-silver-copper-gold ore. Ore occurs in well-defined veins opened to maximum depth of 900' by shafts and crosscuts. The smelter was closed down, Nov., 1915, after an unsuccessful run of one month, during which it turned out 2,700 bars of bullion, containing good silver values. Development work has apparently also been discontinued.

ELMORE COUNTY

BOISE ROCHESTER MINING CO (INC.)

IDAHO

Address: Atlanta, Elmore Co., Idaho, and care of Leo. J. Falk, pres., Boise, Idaho; S. G. Smith, supt.

Property: the Bagdad Chase Gold M. & M. Co., also known as the Pettit mine. Claims show a fissure vein 3-12' wide developed for 800' by tunnel. Ore is said to average \$9 per ton in gold and silver for this entire distance.

Ore is delivered to 40-stamp mill by Bleichert tram. Treatment consists of amalgamating, concentrating and cyaniding.

ELMORE COPPER CO.

IDAHO

Address: 137 South La Salle St., Chicago, Ill. Wm. O. Reuss, pres.

Inc. in Idaho. Cap., \$5,000,000; \$1 par; non-assessable.

Property: 8 claims, 160 acres, 10 miles from the Boise cutoff railroad, said to show ore throughout entire holdings.

Development: by 980' of drifts and crosscuts and 200' shaft, showing an orebody.

FREMONT COUNTY

WEIMER COPPER CO.

IDAHO

Office: care Jesse Knight, Provo, Utah. Mine near Dubois, Fremont Co., Idaho.

Property: 18 claims, 360 acres, on Birch Creek, in Skull canyon district, shows a crushed zone 100 to 200' thick between quartzite and limestone, which carries high-grade ore in pockets and in cross fissures, of 3" to 2' width, running at right angles to the main contact deposit.

Development: by an open cut and 2 tunnels of 300' each. Idle for several years.

IDAHO COUNTY

BLACK PINE MINING CO.

IDAHO

Office: 926 W. Lehigh Ave., Philadelphia, Pa. Mine office: Elk City, Idaho.

Officers: S. J. Rieben, pres.; Louis H. Michel, v. p.; Dr. Wm. H. Kuich, treas.; R. T. Moyer, sec., with J. B. Shourds, Dr. Fred. Bridgland, E. Thompson and Jas. McGrath, directors.

Inc. Feb. 13 in Arizona. Cap., \$1,000,000; shares \$1 par.

Property: 41 claims, 700 acres, includes Black Pine and Crown Point mines, at Elk City, Idaho Co., Idaho.

Ore: gold-silver, in veins believed to be a continuation of the Mascot lead. Ore said to average \$12 per ton in gold, silver, lead and zinc.

Development: by 1,400' tunnel.

Equipment: 50-ton mill and concentrators. The mill is to begin operations, Sept., 1917. Management plans to thoroughly prospect the ground.

BLUE GROUSE MINE.

IDAHO

Owned by V. W. Brasch, Paulsen Bldg., Spokane, Wash.

Property: in the Orogrande district, 1½ miles N. W. of Orogrande, Idaho County, said to have the extension of veins opened up in the adjoining Umatilla mine.

Development: 600' of tunnels, said to show veins 4½ to 10' wide, averaging \$12 per ton in gold and silver.

BLUE JACKET MINING CO.

IDAHO

Mine P. O.: Lucile, Idaho Co., Idaho.

Officers: W. B. Clark, pres., Johns Hopkins University, Baltimore, Md.; B. N. Baker, v. p.; J. M. Lawford, sec.-treas.; with F. T. Homer and Frank E. Johnesse, directors; F. E. Johnesse, gen. mgr. and supt.

Inc., Oct. 20, 1908, in Idaho. Cap., \$50,000; shares \$1 par, fully paid. Annual meeting, first Monday in January. Company is a close corporation.

Property: 7 claims, patented, about 132 acres, in Crooks Corral mining district, Idaho Co., Idaho.

Geology: ore occurs as replacement along contact between diorite and andesite porphyry. Orebody is from 50 to 70' wide, runs east and west, and dips at an average angle of 35°. It has been opened up by a 300' shaft, numerous tunnels, crosscuts and drifts, aggregating 3,395'. These workings block out 33,000 tons of ore, carrying 3.7% copper with 1.5 oz. silver and \$1.80 gold per ton. The orebody is more or less oxidized down to the 700' level, though the greater part of the ore in the lower levels is original sulphide and the enriched portion lies between the 1st and 4th levels. Reserves estimated at 542,000 tons. Property has no mill, hoist or reduction plant of any kind and has been closed down since 1909 awaiting railroad transportation, which is still 40 miles away. Property is a good one and officers able and responsible.

CLEARWATER GOLD & COPPER MINING CO.

IDAHO

Mine office: Clearwater, Idaho Co., Idaho.

Officers: Samuel Scidenfeld, pres.-mgr., 1027 W. 10th Ave., Spokane, Wash.; Herman A. Bush, v. p.; J. H. Wourms, sec.-treas.; Dennis Reardon, supt.

Inc. 1907, in Idaho. Cap., \$2,500,000; shares \$5 par, assessable; 489,000 outstanding.

Lands: 16 claims, including the Cunningham group, on the north fork of the Clearwater river, 50 miles south of Wallace, nearest rail point Amador, with 6 miles of wagon road and 11 miles of trail. Property shows a vein said to be traceable 5 miles, 1 mile on company's lands, carrying oxi-

dized ores near surface, with chalcopryrite and chalcocite at depth, giving assays of 5% copper, \$1.50 gold, and 1 to 2 oz. silver per ton.

Development: by 3 tunnels, lower tunnel, 1,900' long, cutting the ledge at the face 300' below surface. Management estimates 18,000 tons of ore on dumps, June, 1915, and total reserves at 400,000 tons, averaging 4½% copper.

Equipment: includes hoist and air compressor. \$250,000 bond issue contemplated to provide funds for aerial tramway, necessary equipment and development work.

GOLDEN GATE PLACER MINES.

IDAHO

Office: Pendleton, Ore.; B. Parlett, sec. **Cap.,** \$75,000, shares \$1 par. Operating mine in Idaho Co., Idaho.

HAMILTON MINING CO.

IDAHO

Office: 307 Benton St., Portland, Ore.

Officers: R. E. White, pres.; A. N. Hamilton, sec.

Cap., \$2,400; shares \$1; all outstanding.

Property: on the South fork of Salmon River, Idaho Co., Ida. Company reported, October, 1917, to have purchased the Grand Central mine, consisting of 2 claims in Cable Cove district, near Sumpter, Baker county, Oregon, formerly owned by Mollie Gibson Gold M. & M. Co.

Development: by 500' of tunnels, said to show an ore bearing vein from 2-4' wide. The tunnel is to be extended 400'.

HARTWIG MINING CO.

IDAHO

Mine at Pollock, Idaho Co., Idaho.

Officers: Wm. Hartwig, pres.; G. W. G. Geiger, sec.; W. J. Moore, treas.; preceding officers, C. Brinkman, Fred Goldsmith and Gustave Peters, directors.

Inc. Jan. 3, 1906, in Iowa. **Cap.,** \$72,000; shares \$25 par; fully issued.

Property: 5 claims, patented, 72 acres, and a 5-acre mill site, in the Rapid River district, near Salmon river, said to carry several contact deposits between limestone and diorite, of which 4, under development, are of 30' estimated average width, traceable 400', carrying oxidized and chalcopryrite ores, reported by company to average 14% copper, with traces of lead and zinc, 3 oz. silver and \$10 gold per ton. Figures undoubtedly too high for an average of the orebody.

Development: 75' shaft, and 3 tunnels of 1,000' aggregate length, an 875' lower tunnel cutting the ore zone, which shows but little ore. Property has 4 buildings but no power equipment. -Idle some years, owing to lack of transportation facilities.

IDAHO ANTIMONY MINING CO.

IDAHO

H. L. Williams, Seattle, Wash., managing director. Channing Prichard, supt.

Property: in Yellow Pine mining district, near Cascade, Idaho county, shows an orebody of stibnite, 18-30" wide, developed by 4 tunnels. Two carload shipments, 1915-16, are reported to have yielded 47% antimony. No later returns.

MINERAL ZONE MINING CO.

IDAHO

No recent returns secured. G. L. L. Baskett, supt., Elk City, Idaho.

Property: known as the Parr group, includes the Mineral Zone gold mine near Elk City. In April, 1916, a clean-up of a 15 days' run is said to have yielded \$2,300.

Development: is by tunnels. There is a 3-stamp mill on the property. Ten men employed.

NORTHWESTERN MINING CO.**IDAHO**

Out of business.

Property: a copper mine near Lucile, Idaho Co., Ida., was acquired by the Blue Jacket Mining Co., R. H. Bayard, pres., Gailbin Bldg., Baltimore, Md.

OLIVIA GROUP**IDAHO**

Owned and operated by Hazlitt & Trader, Dixie, Idaho Co., Idaho.

Property: 11 unpatented claims, 210 acres in Dixie mining district, shows gold-silver-copper ore in quartz fissure veins, 8"-40" wide, running N. W., with dip 60° N. E. The country rock is granite and gneiss.

Development: by 100' tunnel, 100' vertical shaft and drifts, totaling 1,000' of underground workings.

Equipment: includes a new 10-ton Huntington mill, which ran only a short time in 1915. Plan driving tunnel on Ironsides claim to depth of 250'.

STECKNER GOLD MINING CO.**IDAHO**

Care D. B. Cornell, sec.-treas., Great Barrington, Mass. Henry Tator, pres.; F. H. Cornell, v. p.

Inc. Feb. 17, 1914, in Arizona. **Cap.**, \$2,000,000.

Property: the Gold Dollar group, 10 lode and 5 placer claims, near Orogrande, Idaho Co., Idaho, shows fissure veins in granite. The veins are 2'-4' thick and carry gold ore, shown by systematic sampling to carry \$3 to \$13 per ton.

Development: by 3,000' of work, all tunnels, 1,000' depth.

UNA MINING CO.**IDAHO**

J. M. Hinton, supt., Orogrande, Ida.

Officers: J. W. Turner, pres.; Thos. A. White, v. p.; Ralston McCraig, sec.-treas., with W. B. Phillips and W. S. Willis, directors.

Inc. 1914. **Cap.**, \$1,250,000; shares \$1 par; 650,000 issued.

Property: the Una mine, near Orogrande, shows a vein 10' wide, carrying pay streaks of a few inches to 5' thick. In the 40' shaft the ore is said to average \$7 per ton in gold with some silver.

Development: by 900' tunnel to cut vein at 200' depth.

UNITY GOLD MINES CO.**IDAHO**

Offices: care of Idaho Mines Syndicate, 120 Broadway, New York and Boise, Idaho.

Officers: Jas. H. Hawley, pres.; L. M. Hart, v. p.; George C. Luebbbers, sec.; George W. Fletcher, treas.; J. A. Czizek, mgr.; above are directors. R. A. Beall, supt.

Inc. April, 1916, in Del. **Cap.**, 500,000 shares; \$5 par; outstanding 200,000 shares. Security Transfer & Registrar Co., New York, transfer agt. and registrar. Listed on New York curb.

Property: 2 groups of claims, 120 acres, including the Little Giant and Charity mines, in the Warren mining district, Idaho Co., 40 miles from a railroad. Has been idle for several years. Claims said to cover 2 distinct veins for 4,500' along the outcrop. In addition company owns a millsite and 4½ miles of ditches and pipe lines with water rights. Parallel quartz veins carry gold ore.

Development: by tunnels and shallow shafts. Present management is driving a 6,000' tunnel to cut the veins 400' below present workings. The Charity mine has been developed by a 150' shaft and shallow tunnels. By July, 1917, the long tunnel was in 1,450', where the Banner vein was 5' wide. At 600' beyond is the Giant vein, and the Charity mine 3,000' farther, opening it at 2,000' depth.

The proven shoot in the Little Giant vein is said to be 1,200' long, worked to 200' depth; and that on the Charity vein 1,100' long worked to 150'.

The former will be cut at 700' and the latter at 1,200' depth by the tunnel. The last 5,500 tons milled from the Little Giant upper workings yielded \$85 per ton.

A 50-ton mill is being erected, driven by water power.

KOOTENAI COUNTY

COMMONWEALTH MINING CO.

IDAHO

Ernest C. Wood, supt.; 401 Empire State Bldg., Spokane, Wash.

Property: Commonwealth mines at Hayden Lake, 140 acres, worked for 25 years by various companies.

Development: totals 1,100' including 400' shaft sunk on dip of vein. From 12 to 18 men are employed. Values are in lead and silver reported to average \$12.

LATAH COUNTY

GOLD CREEK MINING & MILLING CO.

IDAHO

Office: A. A. Kirby, sec.-treas., Paulsen Bldg., Spokane, Wash.

Officers: E. V. Thompson, pres.; A. G. Crum, v. p.; Paul Bockmier, mgr.; preceding with J. H. Fussy, C. C. Burr, directors.

Property: in Gold Creek district, Latah Co., Ida., considered promising. Financial condition satisfactory and work proceeding.

LATAH COPPER MINING CO., LTD.

IDAHO

Potlatch, Latah Co., Idaho. Idle since 1907. See Vol. XI, Copper Handbook.

MERGER MINING CO., LTD.

IDAHO

Address: J. C. Northrup, mgr., Palouse, Wash.

Officers: J. C. Northrup, pres.; C. E. Frederick, v. p.; W. E. McCroskey, sec.; G. A. Weldon, treas.; above with J. A. Saylor, directors.

Inc. Oct. 15, 1913, in Wash. **Cap.**, \$3,750,000; shares \$1 par; 3,350,000 issued; assessable for annual labor only.

Property: 20 claims, 318 acres, known as the Hoodoo mine, well watered and timbered, on Copper mountain, near the Palouse river, in the Hoodoo district, Latah county, almost 40 miles from Palouse, with a 20-mile wagon-road to Harvard, and 10 miles from the Puget Sound railway. The property shows quartzite and schist, with contact fissures in quartzite and schist, having a N. E. strike, and a N. W. dip. Orebody said to be 10 to 40' wide, and to contain chalcopryite, and chalcocite ores, the latter with 22% and the chalcopryite ore, 3% copper. No production during 1916.

Development: includes 5 tunnels, with about 2,000' of workings.

Equipment: includes 60-h. p. gasoline power, with a 3-drill air compressor. There are 16 buildings. Property leased in 1917, and concentrator to be built.

MIZPAH COPPER MINING CO., LTD.

IDAHO

Property sold to Merger Mng. Co., which see.

LEMHI COUNTY

ALLIE MINING CO., LTD.

IDAHO

Edgar C. Ross, of the Ross Syndicate, Salt Lake City, pres.-gen. mgr. Company inc. 1905. Property, 18 claims, including the Allie mine in the Texas district, near Gilmore, Lemhi Co., Idaho. Lead-silver ores occur in fissure veins in flat Devonian limestone underlain by Cambrian quartzite.

A development tunnel 4,500' long has been driven into Gilmore mountain jointly by this, the Gilmore and the Pittsburg-Idaho companies. This crosses a dozen silver-lead and one gold vein. Development 1915 was on

the Latest Out lead vein at 800' below the outcrop. For geological features see Umpleby, Bull. 528, U. S. Geol. Survey, 1913, p. 107.

The Allie vein, closely parallel to the lead veins, has a gangue of iron oxide with no lead, only a trace of silver and almost exclusively gold values, averaging 1 ounce gold with 50% iron.

In 1914 ore reserves were claimed to be 15,000 tons, with average assay of \$12 per ton gold. Extensive prospecting had not up to 1913 shown any commercial silver-lead deposits, but had opened up good gold ore.

Production: First shipment in Feb., 1914, of about 26 tons gold ore showed smelter returns of \$11,060. Total production was 50 tons, averaging better than \$300 per ton. Later returns, if any, are not available.

BLACKBIRD COPPER & GOLD MINING CO., LTD. IDAHO

General office: DuBois, Pa. **Office:** 807 Newhouse Bldg., Salt Lake City, Utah.

Officers: John E. DuBois, pres.; Chas. J. North, v. p.; F. O. Frick, sec.; W. H. Watt, treas. and gen. mgr.; with L. N. Morrison, directors.

Inc. in West Virginia. Cap., \$2,000,000; shares \$1 par; nonassessable. Bonds, \$500,000, at 6%. Annual meeting, fourth Tuesday in January. Is a close corporation.

Property: Brown Bear mine and adjoining ground, covering 29 claims, patented, 482 acres, in the central part of the Blackbird district, Lemhi Co., Idaho.

Development: 3 shafts, with drifts and numerous short tunnels. Ore-bodies are irregular replacements along fracture zones in schist and quartzite. Idaho property is in one of the best mineralized sections of the state and is said to show wide zones of disseminated ore carrying 2½% copper and 5 cts. gold for each per cent copper. This district is regarded as promising. Property shut down since patenting.

Company also owns 97 claims, 87 patented, adjoining the Cactus mine in the San Francisco district of Utah. This property has considerable development and was explored by diamond drilling. Development of the 300' level from an old shaft disclosed a vein of chalcopyrite ore.

CARMAN CREEK MINING CO. IDAHO

Salmon City, Lemhi Co., Idaho. J. W. F. Halcombe, pres.-mgr.-sec.; John Harlan, v. p.; Wm. Wallace, treas.

Inc. Dec., 1905, in Washington. Cap., \$1,000,000; shares \$1 par; non-assessable; 999,500 issued.

Property: 7 claims, about 140 acres, 16 miles from Salmon, said to carry an oreshoot showing gold, silver and copper ore. Assessment work only was done in 1916.

COPPER QUEEN MINE IDAHO

T. E. G. Lynch, owner, Digby, Nova Scotia, Canada. Mine near Tendoy, Lemhi Co., Idaho.

The mine is erroneously reported to be the property of the Copper Queen Gold Mining Co., in a Geological Survey report (Bull. 528, p. 120), but has belonged to T. E. G. Lynch since 1899. The Copper Queen Mining & Smelting Co. leased the Queen of the Hills mine, 40 miles away. Lessees Copper Queen mine shipped 448 tons of sorted ore to Salt Lake City, 1911, that averaged 29.4% copper, 5.2 oz. silver and 0.81 oz. gold per ton. Reported Dec. 1915, that mine has recently been leased to the Idaho-Seattle Mining Co., which see.

COPPER QUEEN MINING & SMELTING CO. IDAHO

Office: 608 Lonsdale Bldg., Duluth, Minn. **Mine office:** Salmon, Lemhi Co., Idaho.

Officers: Geo. H. Crosby, pres. and gen. mgr.; Emerson Hill, v. p.; A. J. McLennan, sec.-treas.; A. F. Bennett, supt.

Inc. June 12, 1905, in Arizona. **Cap.**, \$500,000; shares \$1 par; nonassessable; issued, \$282,000. Absorbed 1908, the Copper Queen & Crescent Mining & Smelting Co., giving 1 share for 8.

Property: the Queen of the Hills mine, 17 claims, 320 acres, in the Eureka district, 7 miles N. W. of Salmon, is said to show 3 nearly vertical fissure veins in granite and schistose quartzite, with a generally N. E. strike. The Eva, or westernmost vein, shows an 8 to 14" quartz band on the wall of a brecciated zone 5' wide. The central, or Queen, and the Nellie veins show 12 lodes of granite breccia partly cemented by quartz. The ore is coarsely crystalline quartz, carrying pyrite, chalcopyrite and some galena, with \$3 to \$5 in gold occurring in 5 known oreshoots, 2 in the Nellie, 2 in the Queen and 1 in the Eva vein.

Development: by shafts of 105' and 400' with 5 levels and by 7 tunnels, longest 450' with 4,700' of workings.

Equipment: includes 100-h. p. electric plant, a 24-h. p. hoist, good for 700' and a 5-drill air compressor. There are 10 buildings, including a 50-ton log mill, having 15 Allis-Chalmers stamps, a gyratory crusher and 2 Wilfley tables.

Property idle, in charge of a watchman.

DULUTH-LEMHI MINING CO.

IDAHO

Former secretary-treasurer writes, 1917, that company is out of business. Described in Vol. XII.

ERICKSON MINE

IDAHO

Bond and lease held by G. W. Holmberg on copper mine 8 miles west of Leadore, transferred to Salmon River Copper Co., July, 1917.

GILMORE MINING CO.

IDAHO

Offices: 222 Kearns Bldg., Salt Lake City, Utah; and Gilmore, Lemhi Co., Idaho.

Officers: Edgar C. Ross, pres. and gen. mgr.; Frank Hahne, v.-p.; Harry R. Hyde, treas.; Clarence Warnock, asst. sec., with E. B. Critchlow, directors.

Inc. Feb. 10, 1912 in Utah. **Cap.**, \$1,000,000; shares \$1 par, assessable; outstanding \$800,000. Bonds authorized, \$100,000; none issued. Company is a close corporation. Annual meeting, Jan. 2. All receipts from ore sales spent in development work.

Property: 12 patented claims, 250 acres, in the Texas mining district, at Gilmore, was purchased from the Allie Mng. Co., Ltd.

Ore: gold-silver in fissure veins in limestone, said to have an average value of \$14.50 per ton. Veins strike N. 10° E. and dip 60°.

Development: by a 60° incline shaft and tunnels, greatest depth of workings on the vein is 850'. Total underground workings, 8,800'. This company in conjunction with the Pittsburgh-Idaho and Allie Mining companies has run a 4,500' development and transportation tunnel into Gilmore Mountain, which is said to cut a number of lead-silver fissures and one important gold vein.

Production: Shipments early in 1917 totaled \$72,084, ore averaging 0.025 oz. gold, 7.75 oz. silver, and 23.16% lead. Monthly output is 15 cars of ore. See U. S. G. S. Bull., 528, p. 107.

HARMONY MINES CO.

IDAHO

Office: 602 Hearst Bldg., Chicago, Ill. **Idaho address:** Salmon, Idaho.

Officers: A. W. Nieman, pres. and mgr.; C. Nickelson, v. p.; Gladys Nieman, sec.; J. W. Reihman, treas.; E. F. Nieman, supt.; above, with C. V. Nieman, H. Cohen, A. C. Skafgard and G. Prasche, directors.

Inc. Jan. 24, 1916, in Nev. **Cap.**, \$1,000,000; shares \$1 par; 649,000 issued. Annual meeting, third Tuesday in January.

Statement for 1916 shows income from stock sales, etc., of \$46,866; operating expenses, \$42,686; gross earnings, \$1,191. 30,000 shares sold at \$2, 1917.

Property: 11 claims, unpatented, 218 acres, in Whithington Creek mining district, Lemhi Co., Idaho. Claims show 2 well defined orebodies occurring in a shear zone in schist. Vein being worked is 18' wide, but the center is low grade material and only the higher grade streaks of ore on the walls are mined.

Ore: sulphide, occurring as chalcopyrite with average assays of 6% copper.

Development: by two tunnels, 180' and 700' long, with total underground workings of 1,085'. Lower crosscut tunnel will be main working level.

Equipment: includes compressor and 2-bucket tram. Employs 20 men.

Production: 28 tons of ore in 1916; 5 carloads averaging 8% copper, to July, 1917.

Company seems to be developing its property energetically.

IDAHO-SEATTLE MINING CO.

IDAHO

Office: 1604 Hoge Bldg., Seattle, Wash. **Mine office:** Tendoy, Idaho.

Officers: F. R. Van Tuyl, pres.; L. E. Eyman, v. p.; R. V. T. Horsha, sec.-treas., with F. A. Linforth and L. R. Margetts, directors; S. A. Matthews, supt.

Inc. Oct. 13th, 1915, in Mont. **Cap.**, \$1,000,000; shares \$1 par; 100,000 issued. Annual meeting 2nd Monday in January. Gross earnings in 1916 were \$20,000 from dump and mine.

Property: 3 claims, 2 patented, 60 acres, known as the Copper Queen mine, in Agency creek 8 miles from Tendoy, Lemhi county, held under bond and lease. Claims show bornite, chalcopyrite, copper glance and quartz in fissure veins dipping at from 45-70°. Ore occurs in shoots 20"-16', reported to average 10% copper, ½ oz. gold, 1 oz. silver per ton. Developed by 1,600' of underground workings to depth of 300'. Ore is mined by overhead stoping.

Equipment: includes small concentrator. Underground workings to be unwatered during 1917. Machine-drills installed in 1916.

IDAHO TUNGSTEN CO.

IDAHO

Had a 7-year lease on the Ima Cons. M. & M. Co. (which see) property near Ima, Patterson Creek, Lemhi Co., Idaho. Said to have shipped 12 tons of 60% tungsten concentrates, 1915.

IMA CONSOLIDATED MINING & MILLING CO.

IDAHO

Warren Zeigler, supt.

Inc. 1900 in Idaho.

Property: 21 patented claims near Ima, on Patterson creek, 21 miles S. W. of Landore, Ida. Tungsten was discovered on this property in 1903, but was not mined until 1911.

Ore: mainly hubnerite with some wolframite, occurs in white quartz fissure veins, 1-10' thick in a formation of pre-Cambrian sedimentaries, closely resembling silicious schist. The quartz gangue shows lead, zinc and iron sulphides.

Development: aggregates about 2,500' of tunnels and drifts.

Equipment: includes a 50-ton concentrator with flotation unit. Property was worked under a 7 years' lease by the Idaho Tungsten Mining Company. Shipped about 12 tons of 60% tungsten concentrates in 1915. Reported under lease to L. A. Jeffs and E. W. Johnson, 1916.

LATEST OUT MINING & SMELTING CO.**IDAHO**

Ralph Nichols, mgr., Gilmore, Lemhi Co., Idaho.

Property: the Latest Out mine, at Gilmore, is a lead-silver mine, developed to depth of 800'. Shipments of 27,000 tons were made 1910-12. Worked by lessee in 1915-16. (See full description by Nichols in Trans. Am. Inst. M. E., Vol. XLVI, pp. 937-9, Lead-Silver Mines of Gilmore (Lemhi Co., Idaho.).

Ore: limonite and hematite replaced by shoots of lead minerals in fissure veins in limestone at right angles to bedding with south rake to ore-shoots. Sulphides decrease with depth. Ore on 200'-500' level assays 32% lead, 10% silica, 25% iron, 3% zinc and 12 oz. silver per ton. Oreshoots are 30'-40' wide in places.

LEMHI GOLD MINING CO.**IDAHO**

Operates the property of the Virginia Cons. Mining Co., near Baker, Lemhi Co., Idaho.

PITTSBURGH-IDAHO CO., LTD.**IDAHO**

Office: 223 Fourth Ave., Pittsburgh, Pa. **Mine office:** Gilmore, Idaho.

Officers: A. S. Ross, pres.; Irvan Neckermann, 1st v. p.; Robt. B. Little, 2nd v. p.; W. A. McCutcheon, sec.-treas.; with G. W. Provost, J. W. Brown and J. S. Alexander, directors; H. F. Ellard, supt.

Inc. in Idaho. Cap., \$1,000,000; shares \$1 par; 809,407 shares issued. Authorized bond issue, \$150,000; \$18,000 retired by sinking fund; \$5,000 outstanding. Commonwealth Trust Co., Pittsburgh, registrar; 223 Fourth Ave., Pittsburgh, transfer office. Annual meeting, 1st Monday in July. Stock listed on Salt Lake City Exchange.

Dividend: 3c per share paid Apr., 1916. Total dividends to date, \$375,000.

Statement of year ending Jan., 1917, shows: quick assets, including cash, accts. rec., supplies, etc., \$447,760; property, \$887,070; total, \$1,334,830; liabilities: cap. stock, \$1,000,000; sinking fund bonds, \$150,000; accts. payable, \$2,421; surplus, \$182,409.

Net income for 1916 was \$159,934, out of which \$44,928 was distributed in dividends. Total operating expenditures were \$165,468.

Property: 25 claims, 5 patented, about 500 acres, at Gilmore, Lemhi county, said to show fissure veins in limestone, from 3 to 26' wide and 150 to 450' long. Veins strike N.-S., with dip of about 45°. Ores are carbonate-oxides, and shipments to date average 26% lead, 12 oz. silver and 75 cts. gold per ton of crude ore.

Company is also developing the Brown group on which high-grade ore has been discovered. A recent shipment netted \$86 per ton, the ore averaging 62% lead, 30 oz. silver and .03 oz. gold per ton. Is a very promising prospect.

Development: by 600' shaft being sunk to 800'. Winze down about 150' below 600' level discloses a continuous oreshoot averaging 44% lead, 26 oz. silver and .03 oz. gold per ton; vein is 7' wide at bottom of winze.

Equipment: Diesel electric generator plant ordered, 1917.

Production: ore shipments in 1916 netted \$229,460 and leasers paid \$38,187.

PITTSBURGH-IDAHO MINING & MILLING CO.**IDAHO**

Office: Kamiah, Idaho. **Mine office:** Gilmore, Idaho. A. S. Ross, pres.-gen. mgr.

Inc. Jan., 1903, in Idaho, as successor of Pittsburgh-Idaho Mining Co. Cap., \$1,000,000; shares \$1 par.

Property: 19 claims, 380 acres, in the Lo Lo district, near the Montana line. Claims said to show 6 contact veins, between gneiss and quartz-porphry, of which two, of 50 to 100' width, carry cuprite, malachite, bornite

and chalcopryrite, giving assays up to 12% copper, 14 oz. silver and \$20 gold per ton.

Development: to 600' level by shafts and tunnels of 40', 290' and 600'. A winze sunk 50' from the 600' level on a 3' vein showed lead carbonate ore with high lead and silver values. Company employed 28 men in 1915 and granted 30 leases. Gasoline power is used.

Production: was at the rate of 2,000 tons per month in 1912; 800-900 tons in 1913; 200 tons in 1914. No recent returns.

SUNSET MINING CO.

IDAHO

Address: Thomas Walden, Leadore, Ida.

Officers: D. C. Smith, pres.; D. L. McGrath, v. p. and gen. mgr.; E. G. Ellis, treas.; G. W. Dougherty, sec.; with E. R. Day, J. R. McGrath and Matilda Ellis, directors.

Property: at Leadore, Lemhi Co., Ida., said to show lead-silver ore.

Development: by 900' crosscut tunnel. In July, 1917, about 50 tons daily was shipped. A 200-ton mill contemplated.

VIRGINIA CONSOLIDATED GOLD MINING CO.

IDAHO

Idle.

Office: 207 Atlas Blk., Salt Lake City, Utah. Mine near Baker, Lemhi Co., Idaho. L. M. Byers, pres.; W. A. Byers, sec.-treas. and gen. mgr.

Inc. 1904, in Idaho. **Cap.**, \$500,000; shares \$1 par.

Property: 15 claims, 11 patented, 300 acres, in the Sand Creek district, 5 miles from a railroad, show slate, granite and porphyry, with 8 fissure veins, said to average 2' in width and to be traceable 6,000', carrying chalcopryrite and galena, assaying up to 7% copper, 2 oz. silver and \$25 gold per ton. Mine is reported to have 6,000' of workings, with 10,000 tons of ore in sight.

Equipment: includes a 3-stamp mill.

LEWIS COUNTY

DEER CREEK MINING & MILLING CO.

IDAHO

Forest, Lewis Co., Idaho.

Officers: W. J. Orr, pres.-gen. mgr., Bellefontaine, O.; A. M. Orr, v. p.; E. C. Orr, sec.-treas.; S. Q. Orr, asst. sec.-mgr.; with B. F. Pool, J. P. Lorang, P. Myers, W. Gesler, E. Fisher and G. Harshman, directors.

Property: 17½ claims, 17 miles S. W. of Winchester, in the Salmon River direct, shows orebodies 10 to 20' wide, carrying copper ore with gold values. One vein has 4' of chalcopryrite ore developed by a tunnel: \$150,000 reported to have been spent in development and equipment, latter including 2,000' of flume, water wheel, and compressor. Company plans 1,500' tunnel to tap vein at 1,000' and rebuilding mill, destroyed by fire in 1916.

OWYHEE COUNTY

BANNER M. & M. CO.

IDAHO

Peter Steele, pres. and gen. mgr.

Property: 20 claims, at Silver City, Owyhee Co., Idaho, an old-time producer. Authorized bond issue in 1915 provided sufficient capital for development work.

Ore: quartz, carrying gold and silver.

Development: by tunnel.

Equipment: 4 (Nissen)-stamp mill, using pan-amalgamation and concentrators, compressor and electric power. Is working small crew in development.

DEMME MINES CO.**IDAHO**

Main office: Nampa, Idaho. **Mine address:** care M. T. Rowland, Demming, via Murphy, Ida.

Officers: W. L. Kellogg, pres.; M. T. Rowland, v. p. and gen. mgr.; E. A. Gilbert, sec.-treas.; with P. A. Alquist and George Wagner, directors. E. W. Rowland, 1st asst. gen. mgr.; Harold Rowland, 2nd asst. gen. mgr.; J. H. Winchell, assayer and engineer.

Inc. in Idaho. Cap., \$15,000,000; shares \$5 par.

Property: 38 claims, 600 acres, 38 miles S. E. of Murphy, Owyhee county, Ida. Claims show fissure veins in granite that run N. E.-S. W. and are cut by cross fissures 5 to 12' wide. Ore is sulphide carrying gold and silver values.

Development: by tunnels and shaft. Reserves in No. 1 were estimated as worth \$400,000.

Equipment: 100-ton mill using ball mill, Janney flotation machines and Oliver filter, compressor, auto-trucks, etc. Mill to be enlarged.

SILVER CITY MINING CO.**IDAHO**

Silver City, Owyhee Co., Idaho. Requests for information unanswered.

Property: near Silver City, adjoins the Trade Dollar Consolidated on the east and has a system of parallel fissures containing gold-silver ores. In 1914 the company remodeled the old Blaine mill, purchased from the Trade Dollar Consolidated, located in Long Gulch, ½ mile S. E. of Silver City. Mill has 10 stamps, classifiers, concentration tables, and a 25-ton cyanide plant. Recent production not reported.

SINKER TUNNEL MINING CO.**IDAHO**

Address: W. G. Adams, sec., Nampa, Ida.

Property: the War Eagle group of gold claims in Silver City district. Idle since 1878, but re-opened in April, 1916, since when the 6,400' tunnel has been extended 310', cutting a rich vein, said to be 9' wide, including a "granite horse."

SHOSHONE COUNTY

(See *Coeur d' Alene district.*)

ILLINOIS**AMERICAN ZINC CO. OF ILL.****ILLINOIS**

A subsidiary of the Amer. Z. L. & Sm. Co. and described under that title.

BURR MINING CO.**ILLINOIS**

Connersville, Ind.

Officers: F. C. Bosler, pres.; Jos. R. Mountain, v. p.; P. H. Kinsler, sec.-treas.; J. H. Billingsly, gen. mgr., Galena, Ill.; preceding officers, J. H. Banghman, directors. F. J. Dewilde, cons. engr.

Inc. in Ind. and Wis. Cap., \$30,000; shares \$100 par.

Operating the Treganza lease, 40 acres mineralized land, near Galena, Ill. A 165' shaft develops sheet-ground formation. Company put a new 200-ton mill in commission, Feb., 1916. Output is zinc concentrates. Shipping at the rate of 160 tons of 45% concentrates weekly, 1916-17.

GREAT WESTERN LEAD MANUFACTURING CO.**ILLINOIS**

Address: Galena, Ill.

Property: the Pittsburgh lead mine, the second largest producer in northern Illinois. Workings are down 140' and a 100-ton mill is operated.

MATTHIESSEN & HEGELER ZINC CO.**ILLINOIS**

Address: La Salle, Ill. Owns and operates large zinc oxide and spelter furnaces, etc., and are noted buyers of pure and high grade zinc ores from the Missouri-Oklahoma fields. Is also a manufacturer of sulphuric acid.

MINERAL POINT ZINC CO.**ILLINOIS**

Subsidiary of the New Jersey Zinc Co., 55 Wall St., New York.

Property: the Marsden-Black Jack, the largest lead and zinc producer in northern Illinois. Shafts are 200 and 250' deep. A mill is operated.

ROSICLARE LEAD & FLUORSPAR CO.**ILLINOIS**

Property: is opened to 500'. Mill has a 500-ton capacity. It is the largest lead producer in southern Illinois.

VINEGAR HILL ZINC CO.**ILLINOIS**

Address: Galena, Ill.

Property: the Unity and Graham mines in the Galena district. During 1916 there were 13 holes drilled and mining was started on one lease; on the ore blocked out by the other 36 holes, a working shaft was sunk and a 200-ton mill erected and started.

The Unity is the third largest zinc producer in the State.

WISCONSIN ZINC CO.**ILLINOIS**

Subsidiary of the American Zinc, Lead & Smelting Co., 55 Congress St., Boston, Mass.

Property: the Birbeck zinc mine in the Galena district. northern Ill.

INDIANA**INTERNATIONAL LEAD REFINING CO.****INDIANA**

East Chicago, Ind. Is a subsidiary of the International Smelting Co., and described thereunder.

KANSAS**ADMIRALTY ZINC CO.****KANSAS-OKLAHOMA**

Address: Douthat, Okla. F. M. Aiken, Tulsa, Okla., pres.; O. F. Brinton, mgr.; John Griffard, supt.

Inc. in Delaware. **Cap.**, \$750,000.

Property: 180 acres in Oklahoma and Kansas, shows a blanket deposit between lime and flint, carrying zinc-lead sulphides, said to average 10% in metal content.

Development: by vertical shaft to depth of 220'.

Equipment: includes 8"x8" hoist, 3 compressors, 4 electric pumps, tramway and 4 mills, with a daily capacity of 1,200 tons. Ore treated during 1915-16 amounted to 51,200 tons, concentrates averaging 62.50% zinc and 81.50% lead.

Recent production has been as follows: in 1915: 936,750 lbs. zinc and 156,000 lbs. lead; in 1916: 6,085,400 lbs. zinc and 1,014,200 lbs. lead. Management plans erecting 2 new mills in 1917.

AMERICAN PIPE LINE CO.**KANSAS-OKLAHOMA**

A subsidiary of the Amer. Z. L. & Sm. Co., and described under that title.

BIG LEAD MINING CO.**KANSAS**

Address: D. G. Bailey, sec., Muskogee, Okla.

Officers: J. A. Settle, pres.; J. J. Poole, v. p.; with J. E. Horshal, M. T. Hardin, J. S. Goldsmith, E. C. Wright and F. C. Hoffman, directors.

Has a lease on the Chubb land on the Kansas side of the new district, N. W. of Picher, Okla.

CHANUTE SPELTER CO.**KANSAS**

Office: St. Louis, Mo. Works office: Chanute, Kansas.

COLUMBUS M. & D. CO.**KANSAS**

Property sold 1917 to American Metal Co. for \$3,000, and a royalty of 2½% on future output.

COMMERCE MINING & ROYALTY CO.**KANSAS**

One of the largest operators in the Kansas-Oklahoma field.

Address: Picher, Okla. Has a lease on the Weber land, N. of Picher. Drilling showed ore at 270' depth to which one shaft has been sunk.

INSPIRATION MINING CO.**KANSAS**

Address: Amos Gipson, 1st Natl. Bank, Joplin, Mo.

Property: zinc claims N. of Picher, Okla., on the Kansas side. Drilling showed a deposit 108' long, from a depth of 225' to 275'. Two shafts are down and drifting started. The A. R. G. 400-ton mill, formerly at Duenweg, Mo., has been rebuilt here.

JOPLIN ORE AND SPELTER CORPORATION**KANSAS**

Offices: 40 Exchange Place, New York, and Joplin, Mo. Works at Pittsburg, Kan.

Officers: Wm. Barret Ridgely, New York, pres.; E. Allendorf, Joplin, Mo., treas.

Inc. April, 1916, in West Virginia, to take over the property of the Joplin Ore & Spelter Co., of Missouri. Cap., \$2,000,000; shares \$1 par, changed from \$5 July, 1916; all issued and fully paid. Empire Trust Co., New York, registrar. Stock transferred at company's office.

Dividends: initial one of 5.5% paid May 25, 1916.

Property: a zinc smelter at Pittsburg, Kan., about 37 miles from Joplin, Mo. Plant consists of 6 blocks of furnaces, each having 224 retorts, a total of 1,344 retorts. Two additional blocks of 224 retorts, built in 1916, give the company a total of 1,792 retorts and an estimated capacity of 14,380,000 lbs. of spelter annually. Property reported on by Arthur E. Feust, E. M., in 1916.

In the 9 months ended Dec. 31, 1916, gross income was \$813,006, less \$546,739 for ore purchased, leaving a gross profit of \$266,267. Operations cost \$209,761, leaving \$56,506 net profit. Full capacity was not attained owing to the low price of spelter in 1916.

MAINE**DOUGLAS COPPER MINE****MAINE**

Blue Hill, Maine. Operated by American Smelting & Refining Co. for the 60,000 tons of fluxing ore developed on property.

MARYLAND**BALTIMORE COPPER SM. & ROLLING CO.****MARYLAND**

(Baltimore Copper Works), Fourth Ave. and Fifth St., Canton, Baltimore, Md. Jos. Clendenin, pres.; Wm. H. Peirce, v. p.; Edw. Brush, v. p.; H. A. Thoman, sec.; Chas. N. Sappington, treas. Company succeeded the Baltimore & Cuba Smelting & Refining Co., which built the first American copper smelter, 1845, and is controlled, through stock ownership, by American Smelting & Refining Co. (American Smelters Securities Co.)

Lands: 45 acres, located on one of the best harbors of the Atlantic seaboard, with direct rail connections, being very advantageously located for both domestic and foreign business. The plant is large and modern, including a smelter, nickel refinery, electrolytic plant, and sheet copper rolling mill. The electrolytic refinery, of 1,000 tons daily capacity, has

anodes arranged on both series and multiple plan. Material treated is entirely auriferous and argentiferous, being received in the form of blister copper from various western states, and from several foreign countries. Works employ about 3,500 men.

GREAT FALLS MINE.

MARYLAND

Formerly called the Hill-Townsend Gold Mine, in Montgomery Co., Md. In 1914 the old workings were cleaned out, the shaft retimbered, and new drifts run. The 25-ton tube mill was only used to make tests of ore mined. Small shipments were made to the smelter and results said to have been satisfactory.

UNITED M., M. & COPPER SM. CO.

MARYLAND AND PENNSYLVANIA

Idle. Office: Frederick, Md. Mines at New London, Md., and Charmian, Pa. A. L. Wickart, sec., Allentown, Pa.

Inc. 1913, in New Jersey, as a merger of the Eagle Metallic Copper Co. and the Linganore Copper Co., now dead. Owns all the property of Linganore C. Co.

Cap., \$2,000,000.

Property: 806 acres, in 2 groups, include the Dolly Hyde, New London and Eagle mines, on the Western Maryland and Baltimore & Ohio railroads.

The Dolly Hyde mine, 220 acres, was for many years the principal copper property of Maryland, though never a large producer. The mine has contact deposits in dolomite and phyllite, carrying a little malachite in the upper workings, succeeded at shallow depth by bornite and chalcopryite in white marble. This mine is idle, but was being prepared for production, late 1913.

The New London or Linganore mine, 86 acres, with 14 acres of timber land, was opened and worked 1835-55, apparently at a profit, and was idle after 1881, until reopened, May, 1907, but is again idle. The property has two 4 to 5' fissure veins in slate, with N.-E. strike, carrying bornite and gray copper, estimated to average 3% copper and 16 oz. silver per ton, with a trace of gold. Development is by a 250' shaft and 4 tunnels, longest 340', with a total of 1,095' of workings, estimated to block out 17,307 tons of ore for stoping.

The New London mine has a 65-h. p. steam plant, with a 35-h. p. hoist, good for 500' depth, and an 8-drill Sullivan air compressor. There are 12 buildings.

The mill, 40x25' in size, consisting of a ball mill and slime tables, was built in 1911.

The Eagle mine comprises 500 acres near Charmian, including an old copper mine, never successfully worked. Property shows a mineralized zone of 400' average width, carrying native copper, chalcocite, bornite, chalcopryite and tetrahedrite, averaging about 2 oz. silver per ton, with traces of gold. Mine has a 480' shaft at 40° incline, in ore from surface, giving assay up to 6% copper, but is worked opencast.

Equipment includes a 175-ton smelter and 150-h. p. steam plant.

MASSACHUSETTS

NEW ENGLAND MINING CO.

MASSACHUSETTS

Idle. Office: 35 School St., Greenfield, Mass. Mine office: Chalemont, Franklin Co., Mass. Othello A. Fay, pres.; E. Forrest Sweet, sec.; Capt. Geo. H. Davenport, treas. and gen. mgr., at last accounts.

Inc. 1902. Cap., \$500,000; shares \$5 par.

Owns about 1,000 acres 2 miles west of the Davis pyrite mine. Vein

traceable 700', is approximately vertical, conforming closely in dip and strike with the Savoy schist in which it occurs. Deposit apparently is a fahlband, lacking well-defined walls, ore occurring scattered through 15 to 20' of the schist, with 6 to 12" of quartz, well mineralized, on the south wall, and a heavy impregnation of chalcopyrite, 1 to 2' wide, on the north wall. Property has been partly stripped, and vein trenched across.

REVERE COPPER CO.

MASSACHUSETTS

See Taunton-New Bedford Copper Co.

TAUNTON-NEW BEDFORD COPPER CO.

MASSACHUSETTS

Taunton, Mass. Henry F. Bassett, sec.-treas. Absorbed Revere Copper Co.

Inc. Jan. 15, 1831. **Cap.**, \$1,200,000; shares \$100. Corporation does a copper manufacturing business, making sheet brass, copper print rollers, etc.

MICHIGAN

The Copper companies are grouped together in one section and the Iron mining companies in another list, arranged alphabetically, irrespective of counties or ranges.

COPPER MINES

ADVENTURE CONSOLIDATED COPPER CO.

MICHIGAN

Office: 32 Broadway, New York. **Mine office:** Greenland, Ontonagon Co., Mich.

Officers: W. Parsons Todd, pres.; Charles G. Lund, v. p.; preceding officers, Chas. J. Devereaux, W. R. Todd, Jas. L. Bishop and Chas. D. Hanchette, directors; W. A. O. Paul, sec.-treas.; E. W. Walker, supt.

Inc. Oct. 17, 1898, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; paid in, \$23. American Loan & Trust Co., Boston, registrar; Old Colony Trust Co., Boston, transfer agt. Annual meeting, first Thursday after first Wednesday in June. Stock listed in Boston.

Operations, 1912, were conducted at a loss of \$38,741, and company ended year with cash assets, \$42,307, and liabilities, \$33,634. An assessment of \$1 per share was levied July 20, 1911, and again in March, 1916. On Jan. 1, 1917, balance on hand was \$38,412 as compared with \$2,245 on Jan. 1, 1916, and \$2,054 on Jan. 1, 1915. Receipts for 1916 totaled \$100,037 and expenditures \$61,625. Receipts were derived from rents, sale of previously stored mass copper and assessments paid.

Property: Consists of 3 old mines; the Adventure, Knowlton and Hilton, opened in 1850, 1853 and 1863 respectively, 1,696 acres on the mineral belt, also a mill site on Lake Superior. The mineral lands are located in Secs. 35 and 36, T. 51 N., R. 38 W., and in Secs. 1 and 2, T. 50 N., R. 39 W. The Toltec and part of the Belt lie on the north, South Lake east, Toltec and Mass on the South, and the Mass on the west of the main tract. The Knowlton tract has the Mass to the north and east, Flint Steel to the south and Michigan to the west, the Ridge mine of the Mass lying between the two Adventure tracts. The village of Greenland lies on the northwestern corner of the Adventure's principal tract, and the village of Maple Grove, controlled by the company, is near the mine.

The old Adventure mine was opened 1850, along a line of ancient pits showing prehistoric mining. The largest annual production was 233,941 lbs. fine copper, 1857. After being closed by owners, the old openings were worked for years by tributors, proving notably rich in silver.

The Hilton, or Ohio mine, opened 1863, on the Mass lode, never was worked vigorously. The Knowlton was opened in 1853. These three old

mines made 1,949,173 lbs. fine copper, previous to their merging as the Adventure Consolidated which started work Nov. 1, 1898.

Diamond drill work and crosscutting has disclosed four copper-bearing lodes.

The Adventure property has a series of 7 parallel copper-bearing beds in a cross-section of about 1,200' and these coupled with the existence of Adventure bluff, a 300' hill, caused the opening of the mine by adits, as well as by shafts. The Evergreen belt, of Ontonagon county, comprises a belt of bedded traps, amygdaloids and conglomerates, 7 of these amygdaloidal beds carrying copper on the Adventure tract. These beds were fully described, Vols. I to VII, inclusive.

The cupriferous beds of the Evergreen belt are notoriously bunchy, being rich in spots and worthless at other points. The strike of the parallel lodes of the Adventure is N. 73° E. on the main tract, where operations were conducted, shafts being sunk at an angle of 45°. The old mine has 4 tunnels and 4 shafts, latter, except No. 1, which is in the Merchant lode, being sunk on the Knowlton bed, at 45°, and numbered from west to east.

Production from the old mines ceased, Jan., 1908, since which time only exploratory and development work was done. Shipments were resumed in November, 1916.

There are 5 shafts, of which No. 5 is the deepest.

No. 5 shaft, started May 6, 1909, is 6x16' inside measurement, with two 6x6' hoisting compartments and a 4x6' compartment for ladders and pipes. Shaft is vertical and was 1,520' deep, June, 1913. It is located about 1,500' south of No. 3 shaft, is lined with concrete for a depth of 50' from the collar, and is solidly timbered from surface. The shaft cuts No. 1 Adventure lode at depth of 894', and is expected to cut No. 2 lode at about 2,200' depth, and No. 3 at about 2,600' depth. The No. 1 lode, opened by an 80' crosscut on the 1,021' level has been drifted upon for a distance of about 200' and discloses very little copper. A 1,150' exploratory crosscut south and west on the 1,500' level intercepts 3 beds, designated as Nos. 2, 3 and 4, cutting the first at a distance of 634', the second at 880' and the third at 1,015' from the shaft. These lodes, opened by drifts out from the crosscut, are altogether without promise so far as opened, the No. 2 lode, 29' wide, and opened for a distance of 145', carrying much copper in the first 7' with the remainder practically barren; No. three, 32' wide, and opened 547', showing varying amounts and generally poor, and No. four, 65' wide, carrying practically no copper in the 34' drift run along the footwall of the lode. A fifth lode, No. 1½, first encountered in shaft sinking, is opened for a distance of about 130' at a depth of 1,190' in the shaft, and makes a fair showing. All work was suspended June, 1913, and only resumed in May, 1916. No. 3 shaft has been unwatered to the 8th level and ore is being mined from 3rd-8th levels.

The new Mass lode, so-called, lying about 120' S. E. of the Evergreen bed, was opened by test pitting, May, 1909, and some crosscutting was done from the Evergreen bed, down to the 6th level of No. 2 shaft, but only a few feet of drifting was done. This bed shows a width of 8 to 12', but carries flaky copper, with considerable epidote. No work is in progress on this bed.

The mine equipment includes a 38x59' steel boiler house with three 500 h. p. Burt boilers; a 59x59' steel engine house having an Allis-Chalmers duplex double-cone drum direct-acting hoist with 42x60" cylinders, capable of raising a 12-ton load from a depth of 5,000' on an incline of 45° at a speed of 2,000' per minute, and a 38x65' steel compressor house having a 60-drill Rand-Corliss air compressor. There is a complete electric light

and power plant and protection from fire is furnished by water mains. The principal mine buildings are sheathed with steel and painted, and the property is served by a spur of the Copper Range railroad.

Production has been as follows: 23,572 lbs. in 1900; 29,361 lbs. in 1901; 606,211 lbs. in 1902; 2,182,608 lbs. in 1903; 1,380,480 lbs. in 1904; 1,606,208 lbs. in 1905; 1,552,628 lbs. in 1906; 1,244,874 lbs. in 1907. Shipments to the Winona mill begun in November 1916, have been gradually increased to about 300 tons per day.

AHMEEK MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Kearsarge, Keweenaw Co., Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; Clarence H. Bissell, sec.-treas.; G. L. Osgood, asst. sec.-treas.; Rodolphe L. Agassiz, Wm. A. Hodgson, Thomas L. Chadbourne, Jr., E. V. R. Thayer, Thomas N. Perkins and Francis L. Higginson, directors; S. Russell Smith, supt.; Thos. Rapson, mg. cap.; J. T. Reeder, purch. agt.; John G. Bennetts, clerk; A. L. Burgan, mill supt.

Inc. March 22, 1880, in Michigan and charter extended, 1910, for 30 years. **Cap.**, \$1,250,000; shares \$25 par, fully issued; \$17 paid in; increased, June 8, 1915, to 200,000 shares; par \$25, 4 new shares being given for each one of the original shares. Last assessment was \$5, Feb. 5, 1904. Paid dividends of \$5 in 1911, \$22 in 1912, \$17 in 1913, \$4 in 1914, \$13 on old capitalization and \$2.50 on new in 1915; \$14 per share in 1916; \$12 for 9 months of 1917.

Annual meeting, second Tuesday in April. American Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent.

Balance of assets was \$968,772 at end of 1914; \$1,583,654 at end of 1915; \$2,233,364 on Dec. 31, 1916. Is controlled by the Calumet & Hecla Mining Co., through ownership of 98,048 shares, of a total issue of 200,000 shares.

Net income for 1916 was \$3,449,710 compared with \$2,180,000 in 1915; \$463,000 in 1914; \$207,420 in 1913, and \$1,465,397 in 1912.

Property: 931 acres, lying between the Mohawk and Allouez mines, set off, 1880, by the Seneca Mining Co., to work the Kearsarge or Houghton conglomerate. Under the management of Capt. John Daniell, 2 shafts were sunk on this bed, which averages about 70' width, with 3 paystreaks of 2 to 3', aggregating 7' width, each carrying copper in good quantities, but bed not payable as a whole, owing to great width of partly or wholly barren rock. Boundary lines were rectified, by exchange of 11.18 acres with Allouez, July, 1903, and by a similar exchange of 20 acres, with Mohawk, 1909, giving straight boundary lines on the dip of the bed, permitting easier development by all mines concerned. Work on the present mine was started Dec. 2, 1902, as work at the Mohawk mine had disclosed the position and trend of the Kearsarge lode.

The Kearsarge bed, on which the present mine is opened, ranged 14 to 18' in width, with but little poor ground encountered in the entire mine. Openings are considerably ahead of stoping requirements, and blocking out is almost entirely by drift stopes, which are carried about 9' wide and 14' high, to the boundary limits, where extraction is begun and brought backward to the shafts, thus reducing timber requirements to a minimum. The mine keeps 3,000,000 to 3,500,000 tons of stamp rock blocked out for stoping. All levels below the first are 125' apart. A Richmond electric bell signal system connects all underground workings with the engine rooms, and underground stations are connected with surface by telephone. Concrete is substituted for timber in the construction of the shafts, and in other places where practicable, rendering the shafts as nearly fireproof as possible. Mules are used in tramming rock underground.

During 1916, exploration was continued in the Kearsarge conglomerate. On No. 10 level of No. 2 shaft, the drift was swung at right angles to the general strike of the lode and continued as a crosscut to a point 1,352' W. of the Kearsarge lode, where the Kearsarge conglomerate lode was cut. This body is 36' wide, and carries a little copper in streaks. Other work did not find commercial ore, but a S. drift opened a fissure giving 12 tons of mass copper.

A cross fissure vein of domeykite, copper arsenide, 71.7% copper, and mohawite, a copper-nickel-cobalt arsenide, mainly the former, that is 4 to 12" wide, was opened 300' south of No. 1 shaft, on the 5th level, and a second vein of 2 to 12" width is found about a quarter-mile south, both crossing the bedded formation at practically right angles.

The mine has 4 shafts, numbered from south to north, planned to develop the entire tract. Nos. 1 and 2 shafts, 1,445' apart, sunk at 42°, are each 8x17' 4" in size, with 2 hoisting compartments and a ladderway. These shafts were 2,720' and 2,971' deep respectively at end of 1916. Each shaft has, between the 9th and 10th levels, a 400-ton rock bin, equipped with a measuring hopper holding exactly one 7-ton skip load, loaded in 20 seconds by one man, this system saving much time, and confining hoisting of all rock mined down to the 10th level to 1 point in the shaft. No. 1 shaft can be sunk to about 3,000' depth before cut off by the Allouez line, and No. 2 can be sunk much deeper.

All openings from No. 1 shaft show ore of average quality, save those on No. 8, 10, 14 and 16 levels south, beyond the disturbed area.

Extensions on No. 3, 14, 16 and 17 levels north, on No. 18 south, and on No. 19, 20, 21 and 22 both ways from No. 2 shaft, have been in average ore but from No. 16 down the copper is not so uniformly distributed.

The northern end of the mine is developed by shafts 3 and 4, begun August, 1908. These will command the 12 forties lying in the western half of Sec. 28 and eastern half of Sec. 29. Shafts 3 and 4, three-fourths mile N. E. of No. 2, have a common collar, being only 6' apart at surface, but diverging north and south, from the surface, at an angle of 42°. These shafts are sunk through 70' of overburden, and are concreted into the solid rock ledge for depth of 95' from surface. Owing to the outcrop of the Kearsarge lode being owned by the Mohawk, Ahmeek having only the underlay at its northern end, shafts 3 and 4 are sunk in the hanging, at an angle of 80° on a plane corresponding longitudinally to the strike of the bedded formation, and bend at depth of 980', in a curve with a radius of about 400', bringing the shafts to 34°, to correspond with the rather flat dip at the Kearsarge bed, both shafts entering the bed, early 1911, at depth of about 1,275'. Concrete sets and stringers have been used in these shafts wherever ground would permit. Each shaft has 3 compartments, with two 8x8' skipways and a 4x8' ladderway. It is proposed to work out the upper portion of the bed by crosscuts, beginning at depth of 1,020' in No. 4 shaft, which will be the 1st level in these shafts, which have 3 stations above the point where the bed intersects, from which crosscuts will be run to the Kearsarge bed, to the Mohawk line. No. 3 shaft was 2,473' and No. 4 was 2,319' deep at end of 1916. In 1915 new workings totaled 8,769' compared with 13,654' in 1916.

During 1916, openings north of No. 3 were of average grade, but stoping showed the vein to carry copper in bunches. Development at No. 4 shaft was generally satisfactory.

The main power house, between shafts 1 and 2, is in 2 parts, of brick and steel, with composition roof. Equipment of No. 1 power house includes 60-drill and 50-drill Nordberg cross-compound 2-stage air compress-

ors, and a 32x72" cylinder Nordberg hoist. The electrical plant consists of a 13x26" Nordberg tandem-compound engine, direct-connected to a 200 k. w. 250-volt Northern Electric generator. Condenser pumps and reheaters are located in the basement. No. 2 engine house is a duplicate of No. 1, containing a similar hoist with double conical drums with maximum diameter of 18'-6", capable of hoisting 10-ton skips in counterbalance from 1 mile depth. Nos. 1 and 2 engine houses are connected by a steel-frame boiler house, having six 200 h. p. boilers, with room for 8 equipped with feed pumps, ash sluices, coal trestles, etc. The boiler house has a self-supporting steel smokestack, 150' high and 7'6" in diameter, on a sandstone-faced concrete base. A 1,360 cu. ft. Sullivan compressor was installed early in 1917.

Shafts 3 and 4 are equipped with two 32x72" cylinder Nordberg hoists, a triple-expansion Nordberg compressor, and turbo-generator, housed in a brick structure 65' wide by 146' long, with corrugated-iron roof; a steel boiler house 57' wide and 84' long with corrugated-iron roof, housing eight 200 h. p. boilers, and a steel self-supporting brick-lined smokestack, 7' diameter and 140' high. There is also a change house of brick construction, 39x139'. One shaft rock house serves both shafts.

The central crushing plant, of brick, is 800' north of No. 1 shaft, and 624' south of No. 2 with which the plant is connected by a temporary frame trestle 37' high and 14' wide, carrying a double track for 7-ton tram cars, which are dumped by means of cradles, and rock directed by grizzlies and chutes to the crusher, below which is a hopper, feeding directly into a shaker driven by a 7½ h. p. electric motor, crushed rock, thence being fed automatically into a link-belt conveyor driven by a 35 h. p. motor, going to the rock bin. The crusher building, of steel, contains 3 Farrell crushers, driven by a 12x24" Nordberg engine, and tram cars are actuated by two 35 h. p. motors, located in the 2nd story of the building. Crushed rock goes to a 1,600-ton cylindrical steel rock bin, 32' in diameter and 48' high, set on concrete piers, with tunnel and railway track beneath, permitting the filling of cars by gravity, 1 man loading a 40-ton car in 10 seconds.

Mine buildings include office building, machine shop, warehouse, connecting with railway tracks; an office for mining captains and timekeepers, smithy, cold-storage shed, and about 100 dwellings. The locality is protected by a water system having 6,000' of 6" mains with 16 Ludlow hydrants. Water is taken from an 8' dam across the outlet of Seneca lake. This water supply probably will be adequate for several years, but is located on another company's land. A large water supply could be developed from Ahmeek lands near the Allouez boundary, and an inexhaustible supply is available from Lake Superior, 4 miles distant, but about 600' lower. The fire-protection system was connected with that of the Calumet & Hecla during 1916.

The mine has rail connections with both the Mineral Range and Keeweenaw Central lines, and is connected with the mill by the Mineral Range, which enters the structure over a steel trestle 100' high.

The stamp mill, at Hubbell, on Torch lake, went into commission June, 1910. There were 4 heads, each stamp breaking about 560 tons of rock daily. The mill site has a frontage, on Torch lake, of about 2,000' with a maximum water depth of 90', providing for wasting sands for many years. Ground was broken May, 1913, for an addition to the mill, with room for 4 heads, all of which have been installed, together with extensive regrinding machinery. No. 7 stamp started in July, 1916, and No. 8 in Feb., 1917. The output in April, 1917, was 4,200 tons daily.

Several new ideas are embodied in the erection and equipment of this

mill. The material of construction is steel and concrete throughout. Stamps rest on concrete piers, each standing on a concrete slab 4'6" thick that rests directly upon a hard pan of closely-cemented gravel. Each slab holds about a mile of wire cable, interlaced upward on its surface and reaching into the pier above, which is 40x40' at the base, pyramidal in form and 38' high, giving the stamps an elevation of about 50' above lake level. There are four 1,000-ton rock bins. A new feature in local mill construction is double-deck floors, the jigs being located on the upper or roughing floor, and sands overflowing to Evans round tables and Wilfley concentrators on the ground floor. Wash equipment includes 88 jigs, 12 Evans round tables, 45 Wilfley tables and 4 sets of Woodbury jigs. Tests made to end of 1910, indicate a saving of about one-half pound fine copper per ton from the Woodbury system of milling, over the old system. The jigs and tables are actuated exclusively by electricity.

The mill power house has six 200 h. p. boilers, and a low pressure steam turbine. The plant has a 300 k. w. generator, and a pump of 40,000,000-gal. daily capacity, capable of supplying water for 8 heads, connected with Torch lake by a 600' pipe intake.

Production:

Year	Tons R'k Treated	Lbs. Mineral Produced	Lbs. Cu. per Ton R'k Stpd.	Cost(a) per Ton	Lbs. Copper Produced	Tot. Cost per Lb.	Rec'd per Lb.
1916....	1,164,010	20.7	\$1.46	24,142,158	11.47c	25.72c
1915....	948,874	32,292,325	23.0	1.26	21,800,492	7.96	18.28
1914....	590,519	20,333,000	23.1	1.55	13,634,605	9.71	13.08

1909....	406,045	22.7	9,198,110	15.48(b)	13.39
1908....	298,178	21.1	6,280,241	12.66	13.36

(a) Includes mining, transportation, stamping and taxes. (b) Due to unusually heavy construction costs.

Copper production is marketed through the United Metals Selling Co. Reserves not officially given are maintained at about 5,000,000 tons, and the life of the mine is estimated at 18 years, with present output.

The strike called by the Western Federation of Miners on July 23, 1913, and declared off on April 12, 1914, curtailed production during that time. Later in 1914 when the European war broke out, the copper market was demoralized and the mines were operated on a three-quarter time basis from Sept. 1, 1911, to Feb. 1, 1915.

With 8 stamps operating, Ahmeek is now producing at the rate of over 30,000,000 lbs. copper per year, figured on the basis of 21 lbs. ore, with a cost per lb. copper of about 11c.

ALGOMAH MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. Mine office: Lake Mine, Ontonagon Co., Mich.

Officers: R. M. Edwards, pres. and gen. mgr.; S. L. Powers, v. p.; Albert L. Wyman, sec.; Henry Tolman, treas.; R. M. Edwards, J. H. Rice, Henry Tolman, S. L. Powers and Arthur C. Paine, directors; Thos. Bennetts, supt.; Wm. Wearne, mg. capt.

Inc. June, 1910, in Michigan. Cap., \$2,500,000; shares \$25 par; issued 70,000 shares; paid in \$13. Last assessment, May 18, 1916, \$1. Of the capitalization, 60,000 shares were given land owners in full payment for

property and 10,000 shares were sold to public at \$10 per share. Annual meeting, third Tuesday in April. American Trust Co., Boston, transfer agent; Federal Trust Co., Boston, registrar. Stock is listed on the Boston Stock Exchange.

The treasurer's statement, Dec. 31, 1916, showed excess of assets, \$26,470, as compared with excess of liabilities, \$18,133, Dec. 31, 1915; \$14,597 surplus assets at close of 1914 and \$27,707 in 1913.

Property: 480 acres, adjoining the Lake mine in Ontonagon Co., Michigan, being the N. $\frac{1}{2}$ and S. W. $\frac{1}{4}$ of Sec. 3, T. 50 N., R. 30 W. Property was owned formerly by a company of the same name, which began work 1852, and did a little prospecting, with negative results, expending about \$65,000.

An 8x12' exploratory shaft, started in an amygdaloidal bed, without definite data as to pitch, was over 560' deep, May, 1917. For the first 95' the shaft continued in vein material, passing into the hanging wall at about 95' from surface. The first level, opened at 104', has about 2,350' of drifts, and a 90' crosscut to the eastern sandstone. The second level, 212' from surface, has a crosscut northwest across the formation which, for more than 1,000', exposes almost solid trap, a small amygdaloid, 560' from the shaft, showing some native copper in about 680' of drifts. The Algomah bed, in which the shaft is sunk, apparently has a dip of about 80° and a width ranging from about 40' at the first level to about 60' at a depth of 470', indicated by diamond-drill borings.

The Algomah bed is peculiar in both strike and contents, strike apparently being nearly north and south, in line with the strike at the Lake mine, next north, and the bed carrying copper oxide instead of native copper, as is the case with all of the other copper mines of the Lake Superior district opened on the bedded formation of the Keweenawan series. Ore is mainly black oxide, or melaconite, carrying traces of native copper, and chrysocolla of 16 to 19% assay tenor was found in a test pit near the shaft. Assays made of a small quantity of selected ore, removed in the course of shaft sinking, gave a copper value of 24.1%, this selected ore representing one-eighth of the entire body of material taken from the shaft.

Considerable diamond drilling has been done in the area west of the orebody, and to great depth, but results are conflicting and nothing definite is known concerning either the dip, strike or value of the several copper-bearing formations there encountered. No mining work was done on the property during 1914, but one shipment of selected ore was made, which yielded 5,005 lbs. copper and sold for \$1,695. A few shipments of ore, taken from above the 40' level, were made in 1915, the first assaying 14% copper. Shaft sinking, resumed in the summer of 1915, to be continued to 500' depth, and development work will be done on this level. It is expected that in depth the shaft will encounter some of the lodes worked in the Lake and South Lake mines, as they flatten downward and dip toward the Algomah ground. Property is a likely prospect only.

Equipment: includes a steam hoist, with capacity to lift a 3-ton load from a depth of about 500', and an air compressor. Buildings include a power plant, office and boarding houses. Property considered promising and management good.

ALLOUEZ MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Allouez, Keweenaw Co., Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; preceding officers, Harry F. Fay, D. S. Dean, F. L. Higginson, Geo. S. Mumforn, D. L. Pickmaside and Alex. White, directors; Geo. G. Endicott, sec.-treas.; F. W. Ridley, supt.; J. J. Gibbens, mg. capt.

Inc. Sept., 1859, in Michigan. **Cap.**, \$500,000; shares \$25 par; reorganized and reincorporated, 1889, with capitalization \$2,500,000; shares \$25 par; paid in, \$22.25. Last assessment, \$3 per share, was levied 1904. Annual meeting, second Wednesday in April. Old Colony Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Owns a half interest in the Lake Milling, Smelting & Refining Co. Is controlled through ownership of 41,000 shares, by Calumet & Hecla Mining Co.

Initial dividend, \$1 per share, was paid July 31, 1915; \$9 in 1916, and \$3 for first quarter, 1917.

Balance sheet of Dec. 31, 1916, shows quick assets and cash of \$1,545,814, and accounts payable of but \$154,602. Construction expenses for 1916 were \$22,321; mine expenses, \$901,042; smelting, etc., \$185,805, with a gain from mining operations of \$1,524,511.

Lands: 3,400 acres, including mineral ground 640 acres, adjoining the Ahmeek Mining Co., which contains the Kearsarge amygdaloid at great depth.

The old mine, opened 1859, is on the Allouez conglomerate, a bed underlying the greenstone. The conglomerate, 30' wide in many places, with strike of N. 39° E., and dip of 39°, average 0.7 to 1% copper, and is very refractory under the stamps. There are 3 shafts, deepest about 3,700'. Mining was begun actively in 1869, and stopped in 1877, with an exhausted treasury. The mine was then leased to Watson & Walls, who made money from it, after paying a royalty of one-eighth on gross production. In 1880 the company resumed control, to quit once more, financially exhausted, in 1885. Watson & Walls took the mine again, and once more did well; the company resumed work on its own account for the third time, and again lost money, stopping all work in 1892. The old mine had been idle for some years, except for exploratory and development work in 1898 to 1900, when a shaft was sunk 1,200' on the Osceola lode, and nearly 4,000' of openings secured thereon, with indifferent results. The shafthouse at the Osceola shaft has been demolished. The old stamp mill, on Hills creek, has 3 old-fashioned heads, and is too antiquated for use. The old Allouez made 26,051,528 lbs. fine copper, 1869 to 1892.

At No. 1 mill, Point mills, the water system was improved in 1916. At No. 2 mill, Hubbell, work progressed slowly on the two new stamps. The fire system was connected with the Calumet & Hecla.

Development: at the Allouez mine is on the Kearsarge amygdaloidal bed, which does not outcrop on Allouez lands, though underlying the entire 640-acre tract, hence was opened on the underlay. The mine had but one producing shaft, until late 1909. Shafts Nos. 1 and 2 are connected by crosscuts and drifts, on several levels. The Kearsarge bed, above the 14th level, is opened by crosscuts, uppermost being at the 6th level, below which plats have been cut in the shafts at the 8th, 10th and 12th levels, for crosscuts to be run to the bed. The Kearsarge bed averages about 16' width in the Allouez mine.

New underground openings totaled 8,517' in 1912; 4,400' in 1913; 3,526' in 1914; 4,858' in 1915; 3,503' in 1916.

No. 1 shaft, at the extreme southeastern corner of the tract, with 3 compartments, started May, 1903, and 3,688' deep, leaves surface at an angle of 75°, but at slight depth takes an angle of 80°, continuing thereon to about 1,435' depth, when a curve of 60' brings the shaft to an angle of 38° 30', which is the dip of the bed. At the change of angle, on reaching the bed, a single idler with a very wide flange cares for the cables passing at either end. Owing to the steep pitch of the shaft, back rails of 6x10" timber are set so close to the wheels of the skips that their flanges cannot leave the

steel rails, the wooden timbers serving as guides. The first level is opened at depth of 1,264'. In order to save pumping charges on surface water, a gutter, cut entirely around the shaft, leads to an incline 36' long, used as a sump. This shaft showed very fine ground in its upper levels, but deeper openings are not so good. Equipment at No. 1 shaft includes a 42x62' steel shaft rock house having two 18x34" crushers. The floor was re-modeled during 1916.

Development on Nos. 18 and 19 levels of No. 1 shaft have been of average quality, though on No. 19 north, the ground was somewhat erratic.

No. 2 shaft, 1,500' northeast of No. 1, is similar to No. 1 in general design, but changes pitch when entering the bed at 2,307' from surface, from 80 to 42°. The bed above the point of intersection will be reached, to the boundary, by crosscuts. This shaft is sunk further in the hanging than No. 1, owing to the proximity of a lake. A new record in shaft sinking was established, 1908, at No. 2, when, with 2 drills, the shaft was sunk a total of 1,275', in addition to which 4 plats were cut, and 105' of crosscutting was done. The collar of No. 2 shaft is of concrete. Washington fir and 16x24" steel I beams, with 14x14" square timber wall plats and 4" plank sheathing. The interior, from collar to solid rock ledge, is lined with 22" of concrete, dividers having their ends bedded in concrete, this giving an impregnable shaft, sunk through 52' of treacherous quicksand overburden. Both shafts can be sunk to about 9,400' before reaching the western boundary line. No. 2 shaft is 3,408' deep.

At No. 2 shaft during 1916, No. 17 level reached the Ahmeek boundary. On No. 18, 19, 20 and 21 good ground was opened, especially on No. 18. Electric locomotives have been installed.

Machinery equipment includes a Nordberg hoist with 32x72" duplex cylinders and 18' double-conical drum for No. 1 shaft, and No. 2 has a 20x30" engine good for depth of 5,000'. No. 1 engine house, of mine rock, with redstone trimmings, has 12-drill and 18-drill air compressors, and No. 2 engine house has a 60-drill Laidlaw-Dunn-Gordon air compressor. The stone boiler house has five 125 h. p. boilers and a 120' self-supporting steel smokestack. Buildings include a redstone machine shop and smithy, and a large warehouse. There is a very considerable mine location, with numerous dwellings, some remaining from 40 years ago, and some new. The mine is reached by a spur of the Mineral Range railroad.

Recent production has been as follows:

	Tons R'k	Lbs. Min.	Lbs. Cu.	Mine Cost	Lbs. Cu.	Total Cost	Rec'd
	{Treated	Produced	per Ton	per Ton	Produced	per Lb.	per Lb.
			R'k Stpd.	(a)		Cts.	Cts.

(a) Includes mining, transportation, stamping and taxes.

The strike, called July 23, 1913, by the Western Federation of Miners and declared off April 12, 1914, interfered with production during that time. After the European war broke out in 1914 the property was operated on a three-quarter time basis from Sept. 1, 1914, to Feb. 1, 1915.

The Allouez, a considerable disappointment in earlier years, earned a net profit of \$171,264 in 1912, turning a deficit of \$77,700 of former years

into balance of assets of \$93,564 over all liabilities, and in 1914 net profits were \$114,530. Earnings in 1916 were \$1,524,511, so that with a working capital of \$963,810, the company is now on a sure dividend paying basis. Is regarded as a good investment.

ARNOLD MINING CO.

MICHIGAN

Idle. Office: 78 Devonshire St., Boston, Mass. Mine office: Copper Falls, Keweenaw Co., Mich.

Officers: Francis L. Maguire, pres.; John Brooks, sec.-treas.; Capt. Wesley Clark, supt.; preceding officers, Edw. F. Newton and John E. Fitzgerald, directors. Annual meeting, second Tuesday in May.

Inc. 1864, in Michigan. Cap., \$2,500,000; shares \$25 par; issued, \$1,550,000.

Property: 3,323 acres, in T. 58 N., R. 31 W., in 2 tracts, including the Old Copper Falls mine and the Arnold mine proper, with frontage of about 3 miles on Lake Superior. The Copper Falls mine, worked 1850, until Aug., 1893, made 25,686,429 lbs. fine copper, mainly from the Owl Creek fissure, and paid dividends of \$100,000. The Arnold mine proper, developed on the Arnold ashbed, was opened 1863, reopened 1897, closed 1901, rock stamped averaging under 0.8% copper. Has a stamp mill and 2½-mile narrow-gauge railroad, known as Arnold & Eagle Harbor, rolling stock of which has been sold. No. 1 shaft of the Arnold is about 1,000' deep, sunk at an angle of 26° with the horizon. Total production, 1899 to 1911, inclusive, was 2,065,817 lbs. fine copper.

ASHBED MINING CO.

MICHIGAN

Office: 78 Devonshire St., Boston, Mass. Mine office: Copper Falls, Keweenaw Co., Mich.

Officers: Francis L. Maguire, pres.; John Brooks, sec.-treas.; Cap. Wesley Clark, supt.; preceding officers, Edward F. Newton and Charles G. Lund, directors.

Inc. 1880, in Michigan. Cap., \$1,000,000; shares \$25 par. Annual meeting, second Tuesday in March.

Property: 1,143 acres, Petherick mine, in vicinity of Copper Falls, adjoining the Arnold mine. The last mining work was done 1905-1906. Described Vol. II of the Copper Handbook.

BALTIC MINING CO.

MICHIGAN

Dissolved. Property now owned by Copper Range Co., which see.

BOHEMIA MINING CO.

MICHIGAN

Office: 85 Devonshire St., Boston, Mass. Mine office: Lake Mine, Ontonagon Co., Mich. Operating office: Dee Bldg., Houghton, Mich.

Officers: Wm. A. Paine, pres.; Chas. A. Snow, v. p.; Robt. H. Gross, sec.-treas.; preceding officers, John H. Rice, Thos. S. Dee, Richard M. Edwards and F. Ward Paine, directors.

Inc. Jan. 29, 1910. Cap., \$2,500,000; shares \$25 par; assessable; paid in, \$8; issued, \$1,875,000. Of the 75,000 shares issued, 30,000 were given for lands, and 45,000 were sold to the public, at \$8. Boston Safe Deposit & Trust Co., transfer agent. Stock is listed on the Boston curb, 1916 quotations around \$2. Annual meeting, third Wednesday in April.

Property: 960 acres, originally known as the Piscataqua, in very early days, and later as the Henwood. It is hoped that the property is traversed by the cupriforous amygdaloidal bed of the Lake Copper Co. Diamond drilling was done 1910. Drill holes have yielded a number of cores, from various amygdaloidal beds, with copper in fair quantities, but with nothing remarkably promising or that would justify sinking a shaft. Suspended operations March, 1911.

Annual report, Feb., 1917, shows cash in bank, \$131,088 and states that as soon as sufficiently important developments are made on adjoining properties, development work will be resumed.

BOSTON & LAKE SUPERIOR MINERAL LAND CO. MICHIGAN

Office: Leopold Bldg., Houghton, Mich. Fred W. Nichols, resident agt. Property is mineral land in the Lake Superior copper district. No mining work ever done.

CALUMET AND HECLA MINING CO. MICHIGAN

Subsidiaries of the Calumet & Hecla Mining Co. are listed under their respective titles: Ahmeek, Allouez, Centennial, Cliff, Gratiot, Isle Royale, La Salle, Lake Superior Sm., Laurium, Osceola, Superior, Tamarack and White Pine C. Co.

Address: 12 Ashburton Place, Boston, Mass. **Mine office:** Calumet, Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; Francis L. Higginson, Robt. F. Herrick and W. Hunnewell, directors; John F. Perkins, sec.-treas.; Chas. A. Hall, asst. treas.; A. J. Garceau, asst. sec.; W. M. Gibson, asst. supt.; E. S. Grierson, chief engr.; John Knox, chief mg. capt.; Ocha Potter, chief efficiency engr.; Fred S. Eaton, chief clerk; E. D. Johnson, purch. agt. **Mill office:** Lake Linden, Mich. Henry Fisher, supt.; C. H. Benedict, mill metallurgist. **Smelter offices:** Hubbell, Mich. H. D. Conant, supt.

Inc. 1871, in Michigan. **Cap.,** \$2,500,000; shares \$25 par; paid in, \$12. Charter renewed, 1900, for 30 years, and amended, 1905, under the new laws of Michigan, making the corporation a securities-holding company, as well as a mining and smelting company. Was organized as a consolidation of the Hecla, Calumet, Portland and Scott mining companies. Stock is listed on the Boston Stock Exchange, and traded in on the unlisted department of the New York Stock Exchange. Annual meeting, second Thursday in April. Old Colony Trust Co., Boston, transfer office; American Trust Co., Boston, registrar of stock.

Balance sheet, of Dec. 31, 1916, gave cash and quick assets of \$17,497,865, with liabilities of \$6,739,263, leaving a balance of quick assets of \$10,758,602, including notes outstanding at this date, which were \$4,134,000 at 4%, called and payable Feb. 18, 1917. Surplus, \$45,284,378.

Dividends: \$5,000,000 in 1905; \$7,000,000 in 1906; \$6,500,000 in 1907; \$2,000,000 in 1908; \$2,700,000 in 1909; \$2,900,000 in 1910; \$2,400,000 in 1911; \$4,200,000 in 1912; \$3,200,000 in 1913; \$1,000,000 in 1914; \$5,000,000 in 1915; \$7,500,000 in 1916, and \$8,500,000 in 1917. Total to Dec. 20, 1917, \$145,250,000, or \$1,450.25 per share, being the largest dividends ever paid by any incorporated mining company, and, in addition, the Hecla Mining Co. and Calumet Mining Co., before their amalgamation under the present title paid dividends aggregating \$950,000. Dividends received from other mining companies amounted to \$2,226,930 in 1916.

During 1917, C. & H. paid three dividends of \$25 per share and one of \$10, the last being reduced to conserve cash resources for heavy Federal taxes, estimated at between \$2,000,000 and \$3,000,000 for 1917.

Since the change in charter, 1905, permitting the acquisition of stock in other corporations, the Calumet & Hecla has secured control of various other mines and mineral tracts, by organizing subsidiary corporations, and also by acquiring stock in companies previously organized. In 1905 the company bought the following stocks, at a cost of \$8,592,129.99 in cash and notes; 9,600 shares of Osceola; 19,400 shares of Tamarack; 24,796 shares of Ahmeek; 27,507 shares of Isle Royale; 10,316 shares of Seneca; 25,000 shares of Laurium. The attempt to secure physical control of the Osceola Consolidated Mining Co., at the annual meeting, March, 1917, was met by determined opposition, which took the fight into the Michigan legislature and the Federal courts. After nearly 2 years of strenuous litigation, the Calu-

met & Hecla assured control of the Osceola and other Lake Superior mining companies formerly under the management of A. S. Bigelow, through a bargain with Mr. Bigelow, by which his entire stock interests were sold to the Calumet & Hecla.

In 1916 Calumet & Hecla offered to purchase the remaining shares of Tamarack Mining Co.; but owing to a dispute as to a fair price the matter was not consummated until June 25, 1917, when the C. & H. Co. agreed with Tamarack shareholders and the former acquired the assets of the latter. The Tamarack mine now belongs to the C. & H. Co.

The share holdings of the Calumet & Hecla in subsidiary companies were as follows on Dec. 31, 1916: 41,000 shares of Allouez Mining Co.; 41,500 shares of Centennial Copper Mining Co.; 19,400 shares of Cliff Mining Co.; 50,100 shares of Gratiot Mining Co.; 152,977 shares of La Salle Copper Co.; 32,750 shares of Osceola Consolidated Mining Co.; 50,100 shares of Superior Copper Co.; 39,288 shares of Laurium Mining Co.; 32,910 shares of Isle Royale Copper Co.; 98,048 shares of Ahmeek Mining Co.; 19,400 shares of Tamarack Mining Co.; 34,259 preferred shares and 42,602 common shares of White Pine Copper Co.; 3,482 shares Calumet Transportation Co., and 2,000 shares in Great Lakes Transportation Corp. The Frontenac, Manitou, Dana and St. Louis companies have been completely absorbed.

On Dec. 23, 1916, the company sold its 11,207 shares of Seneca Mining Co. for \$60 per share, a total of \$672,420. The C. & H. has no further interest in the Seneca.

Property: the landed holdings of the Calumet & Hecla, including property owned outright, property controlled through subsidiary corporations, mining lands under options, and timber and miscellaneous lands, in Houghton, Keweenaw and Ontonagon counties, Michigan, amounts to approximately 209,051 acres, of which 102,804 acres are in Keweenaw county. The company, with its subsidiaries, has a water front of more than 34 miles, on the shores of Lake Superior, Lac La Belle and Torch Lake, and approximately 60,000 people are supported by the operations of the company and its allied interests.

The Calumet & Hecla mine proper, about 2,750 acres, lies in a compact tract in Secs. 11, 13, 14, 15, 22, 23 and 24, T. 56 N., R. 33 W., in addition to which the company owns considerable tracts, west of the Tamarack mine, carrying the underlay of the Calumet conglomerate at such stupendous depth that opening would require a 2-mile vertical shaft, and it is very doubtful whether these lands ever will become available for mining on the Calumet conglomerate. The lands west of the Tamarack were explored, 1904, by diamond drill, in search of a supposed cupriferous conglomerate, but nothing of promise was found.

The original Calumet & Hecla mine is opened on the Calumet conglomerate bed, and a parallel mine has been developed on the Osceola amygdaloid, while a third parallel mine has been partly developed on the Kearsarge amygdaloidal bed.

The Calumet conglomerate has proven unprofitable both to the north and south of the Calumet & Hecla, though workable at the Tamarack mine, which has developed the underlay by vertical shafts. The conglomerate has an average strike of N. 33° 30' E., with average dip of 37° 30' with the horizon. The bed is of 5' to 26' maximum width, with an average of 13', giving about 2,400 fathoms of stoping ground, or about 43,200 tons of stamp rock, per acre. As a rule, the richer portions of the conglomerate are in the central part of the Calumet & Hecla tract. The walls of the conglomerate carry considerable copper, especially the amygdaloidal footwall, and much of the adhering trap rock formerly rejected is now milled. Pillars

of 75' and even up to 150' width, left on either side of every conglomerate shaft, contain stamp rock equivalent to about 18% of the stoping ground available before the robbing of the pillars. The conglomerate mine is opened 6 to 8 years in advance of immediate requirements, and has upwards of 200 miles of shafts, drifts, crosscuts and winzes.

About 18,000,000' of timber, board measure, is used in the mine annually, and to the end of 1916, over 900,000,000' of timber had gone underground. Iron pillars are used as supports, in crosscuts connecting the Red Jacket shaft with drifts on the bed, and in various incline shafts to support the hanging wall. Iron, mainly scrap material, such as worn out skip rails, cut to 10' lengths and placed above I-beams, is used for lagging, to some extent. The conglomerate bed in the lower workings is not up to its average value above, being wide, but low in copper contents, and it is evident, from the results secured by the deep shafts in the district, that while the cupriferous stratified beds of Lake Superior may descend to tremendous depth, copper values decrease below 4,000'.

The conglomerate mine, which, until a few years ago, was the entire Calumet & Hecla, has a life, at the present rate of production, of between 8 and 12 years, followed by 5 to 10 years of scrambling, with greatly decreased output. The conglomerate has decreased in average copper contents with depth, but output averaged in 1915, 3.36 lb., and in 1916, 3.59 lb. more than in 1914, partly because old pillars, etc., were robbed. The mine works normally 175 power drills on the conglomerate, and 125 drills on the amygdaloid.

During 1916, there were 78 drills at work removing shaft-pillars, cleaning up arches and backs of stopes. This yielded 476,310 tons of ore.

The Calumet & Hecla has suffered severely from underground fires. The rock carrying native metal cannot burn, like sulphide ore, but the old timbering eventually becomes nearly as inflammable as tinder. The really serious mine fires, 5 in number, occurred in 1884, July and Nov., 1887, Nov. 30, 1888, and May 27, 1900. All possible precautions are taken against mine fires, these including the partial fire-proofing of all mine timber with zinc chloride solution, regular sprinkling of all shafts, the maintenance of water pipes and hydrants, fire hose, chemical engines, an electric alarm system and 18 telephones at various pump stations, from the 8th to the 51st levels, inclusive, in 5 different shafts, so distributed as to be most readily accessible from all part of the mines. From the first 4 fires the Calumet & Hecla suffered aggregate losses of several millions of dollars, while a number of lives were lost, and 3 valuable shafts were drawn so badly that they were abandoned. The fifth and last fire, in May, 1900, severely tested the mine's fire system, the fire breaking out on Sunday evening, when the mine was deserted by all but a few employees, and gaining great headway before it was discovered. The burning portion of the mine was shut off by closing the fire doors, and the mine was sealed at surface, by covering the mouths of the shafts with heavy timbers, with dirt tamped tightly into the crevices between. Wherever gas escaped through holes in the earth, dirt was tamped in and luted with water. The fire was extinguished in 3 weeks, and the South Hecla portion of the mine continued working without interruption. All fires have been of mysterious origin, and there seem reasons for suspecting incendiarism. Great precautions are taken to prevent unauthorized persons entering the mine, and permission to go underground is given only by the president, in writing, each pass being for a single trip.

Equipment: the conglomerate property of the Calumet & Hecla is worked as 2 separate mines, known as the Hecla and Calumet branches, the South Hecla being a southerly continuation of the Hecla branch, and

the Red Jacket vertical shaft a part of the Calumet mine. The Calumet to the north, the Hecla in the center, and the South Hecla at the south, form one continuous mine, developing the Calumet conglomerate by incline shafts, the Red Jacket shaft opening the same bed vertically. The conglomerate, opened for 2 miles along the outcrop, has 11 shafts, 8 being known as single compartments, which means a single hoisting compartment, with 2 shafts having 2 hoisting compartments and 1 vertical shaft having 6 compartments. The blind shaft has an electric hoist and the mine has electric station pumps for forcing water to surface with steam pumps actuated by compressed air for short lifts, but it is planned replacing these latter by electric pumps also.

The conglomerate shafts on the outcrop are as follows, from north to south: Nos. 6 and 5, Calumet, latter a 2-compartment shaft, bottomed at the 57th level, 6,155' from surface. There is a considerable stretch of lean ground from No. 6 shaft to the Centennial boundary.

No. 4 Calumet, with 1 hoisting compartment, has a vertical depth of 4,748' and an actual depth of 7,995' on the incline of $37^{\circ} 30'$, with a 200' winze from the bottom, giving a total depth of 8,290' from the collar of the shaft to the bottom of the winze. No. 3 Calumet shaft has been abandoned.

No. 2 Calumet shaft with 1 compartment, is 6,186' deep, practically at the boundary, and the shaft pillars and arches are being removed above the 55th level.

No. 2 Hecla shaft, 4,400' deep, and No. 3 Hecla shaft, 4,000' deep, are bottomed at the Tamarack boundary. Stopes are exhausted and the shaft-pillars are being taken out.

No. 4 Hecla shaft has been abandoned for some years. No. 6 Hecla shaft, with 1 compartment, is 7,875' deep, in good ground, and can be sunk to 8,500' depth. Nos. 7 Hecla and 8 South Hecla shafts of 1 compartment each, are 7,978' and 6,102' deep, respectively. Sinking was permanently discontinued at the 63rd level in South Hecla No. 8, and shaft pillars and arches are being removed.

Nos. 9 and 10 South Hecla, a double shaft with 2 compartments, is 8,132' deep and can be sunk to 8,500' depth. Openings south below the 72nd level have shown a marked improvement.

No. 11 Hecla, 2,400' deep, showed very poor ground at the bottom, and has been robbed by the removal of all pillars from the bottom up.

No. 12 Hecla shaft, at the company's southern line, is 5,643' deep, bottomed in poor ground, disclosing a formation nearly barren of copper at depth. This shaft is practically abandoned.

The Red Jacket vertical shaft, of 1,800 tons daily capacity, permanently bottomed at 4,900' depth, cuts the bed at 3,287'. Rock temperature was 87° F., reduced to about 70° by connection with No. 4 Calumet shaft, exhaust air from the power drills aiding in cooling the mine. The Red Jacket shaft is 14' 6" x 24' 6" within timbers, and is built of brick and cement from collar to the solid rock, and timbered below with Georgia pine. There are 6 compartments, 2 used for hoisting, 2 for water, and 2 for men and supplies. The 2 hoisting compartments, at the eastern end, have cages with 9-ton Kimberly self-dumping skips swung under. The 2 western compartments have double-deck cages for men and material, and the 2 middle compartments have large cylindrical steel bailers, for raising water. Timber for the Red Jacket shaft is lowered through No. 4 Calumet, with which the Red Jacket is connected by a crosscut. The Red Jacket shaft hoists rock from all of the northern shafts below the 56th level, at which point the conglomerate is intersected. There are 9-ton steel storage bins at the various productive levels, which aid in maintaining the uninterrupted hoisting service

that is absolutely essential in a shaft of a mile depth. The shaft rock house of the Red Jacket is 100x100' on the ground, and 110' high with 4 crushers, 1 for poor rock.

During 1916 shaft-pillars and arches were being removed from No. 58 to 62 level in this shaft.

The "Five Forties" is a tract of 200 acres, a quarter-mile wide and $1\frac{1}{4}$ miles long, lying between the Tamarack and Tamarack Junior mines, carrying the underlay of the conglomerate at great depth and, to obviate sinking a deep and costly vertical shaft, this tract is opened by a blind shaft 1,588' deep, starting from the 57th level, 2,750' N. E. of the Red Jacket vertical shaft. The blind shaft is sunk 40' under the footwall, at the same angle as the dip of the conglomerate, thus assuring solidity of walls while saving long and expensive crosscuts to the bed on each level. A foot-wall lateral on the 57th level parallels the regular drift, at a distance of 40' in the footwall, between the Red Jacket vertical shaft and the blind shaft, offering an avenue for operation that obviates the confusion certain to result were the regular mine drifts given double duty. The blind shaft starts in the footwall drift, under and parallel with the 57th level, and eventually will be about 1 mile in depth, opening four of the five 40-acre tracts, leaving the 5th and last to be opened by a sub-shaft from the blind shaft, which doubtless will be sunk on the same system. The necessity for this peculiar method of development arose from the fact that the boundary lines of the property run north and south, while the strike of the bed is N. 33° - $30'$ E., giving a plane of dip of N. 56° - $30'$ W. Owing to the incline shafts being sunk on the dip of the bed, while the blind shaft must follow the section lines, the latter descends diagonally on the dip of the bed, giving the blind shaft an average dip of about 22° only, although the bed dips at 37° - $30'$. This unusually flat incline permits the hoisting of rock in tram cars, by an electric hoist on the 57th level, cars being hauled through the blind drift and dumped into the steel bins of the Red Jacket shaft for hoisting, thus saving a transfer at the mouth of the blind shaft. The workings of the "Five Forties" show the conglomerate bed to average about 14', with about 10' carrying stamp rock, the bed as a whole being very lean at this great depth. The abandoned workings of the Tamarack Junior mine of the Osceola Consolidated, which adjoins the "Five Forties" are drained by holes bored by diamond drill from the boundary stopes.

A drainage drift is driven, at depth of about 5,000', measured on the incline, 250' from the conglomerate, with a length of 5,100', extending from No. 10 South Hecla shaft to No. 7 Hecla and from the Tamarack boundary to Nos. 5 and 6 Calumet. This drift drains water to shafts Nos. 7, 5 and 6, from which it is lifted to surface by centrifugal electric pumps.

The Amygdaloid mine of the Calumet & Hecla is opened on the Osceola amygdaloidal bed, which outcrops 730' east of the Calumet conglomerate, with parallel strike and average dip of about 38° , underlying the entire main tract of the Calumet & Hecla mine. There are 6 shafts in the Amygdaloid mine, Nos. 13 to 18 inclusive, numbered from south to north. Shafts are duplicate in size, each having 3 compartments, of which 2 are used for hoisting and 1 for pipes and ladder-ways. The Amygdaloid mine has over 35 miles of workings and has frequent connections with the conglomerate by crosscuts. The Amygdaloid mine was closed 1901, and reopened 1904. In this mine the Osceola bed runs about 35' in width, with principal values along the foot and hanging, the middle third being lean, as a rule. Laterals in the Osceola workings are carried as drift stopes of 12' height along the hanging wall. The Calumet & Hecla owns, on its main tract, about 11,000' of the strike of the Osceola bed. Developed ore reserves of the Amygdaloid

mine were estimated Jan., 1916, at 6,000,000 tons, and the Osceola bed has been found to carry fair copper values, at a vertical depth of nearly 1 mile, in the Tamarack property.

16 to 17.....	1,800'
17 to 18.....	1,600'

The Kearsarge amygdaloid bed outcrops about 2,200' east of the Osceola amygdaloid and 2,900' east of the Calumet conglomerate, with parallel strike and dip of about 38°, underlying the entire main tract. Work of development was begun Aug., 1903, and there are 3 shafts, numbered from north to south, each having 3 compartments and being practically duplicates of those on the Osceola amygdaloid. The shafts above the ledge are "timbered" with steel, brick and concrete, the hanging wall being lined with 3 arches of brick, laid in 3 to 5 courses, thickness being increased with depth, supported by 2 rows of I-beams, which serve also as dividers for the shaft. The Kearsarge bed, as opened by these shafts, is erratic, though showing stretches of ground that probably will yield 18 to 22 lbs. fine copper per ton, with reasonable selection. No work has been done on this lode since the beginning of the strike, July 23, 1913.

No. 19 shaft, about 1,000' south of the Centennial boundary line, is 1,350' deep, and was closed down Dec., 1907. No. 20 shaft, next south of No. 19, is about 1,350' in depth, and idle also.

No. 21, the southernmost shaft on the Kearsarge bed, is 8,000' south of No. 20, and, at shallow depth, showed well in copper, but deeper workings were not so promising, the rock yielding only about 12 lbs. of copper per ton of rock mined. The shaft is 2,291' deep; not working since July, 1913.

The Calumet amygdaloid, lying between the conglomerate and the Osceola amygdaloid, has been little opened, but might prove payable, as it shows some good ground in a crosscut on the 900' level.

The shaft rock houses at the conglomerate incline shafts, of uniform pattern accommodate 40-ton railroad cars. Rock is hoisted to the top of each shaft rock house, passing thence over grizzlies that allow the finer rock to fall through, the larger masses being reduced in 24x36" crushers. Crushed rock falls by gravity into storage bins, whence it is dumped into cars that take it to the mills, railroad tracks running underneath each rock house. The standard equipment includes a 50-h. p. induction motor at each shaft, for driving crushers.

Owing to labor scarcity in 1917, underground haulage is done as far as possible by storage-battery and trolley-type locomotives.

Equipment: on surface at the Calumet & Hecla is probably the most complete installation to be found in the world. With few exceptions everything is duplicated, to prevent possible delay or suspension, by reason of fire or accident.

The power plants at the main mine, on the Calumet conglomerate, include 4 large boiler plants and 6 hoisting plants. The hoists of the conglomerate mine are very powerful, ranging in capacity from 1,000 to 5,600 h. p. each. Miners are carried to and from work, in the incline shafts, by man cars, these being long trucks having tiers of circus seats, replacing skips when needed, being shifted quickly on or off the skip tracks by large

cranes. This method has proven the safest, quickest and cheapest for moving men in and out of deep incline shafts.

At No. 4 Calumet shaft there is a group of the most powerful mining machinery in existence. Engine house contains the 2,500-h. p. Corliss engine "Superior," with 40" cylinders and 72" stroke; the auxiliary engines "Baraga" and "Rockland," of 1,000 h. p and 600 h. p. respectively; 2 Rand air compressors, of 25 and 40-drill capacity, and the engine "Mackinac," a 4,000-h. p. quadruple-cylinder triple-expansion steel giant, operating 4 Nordberg air compressors with a combined capacity of 500 drills. There also are four 35-drill auxiliary compressors. In the old Riedler compressor, water was injected into the compression cylinders, while the Nordberg machines deliver the compressed and greatly heated air to a cylindrical steel cooler, 12' in diameter and 30' high, into which water is sprayed from above and drawn off at the bottom, this cooling the air to 80° F. Power is supplied by batteries of boilers in 2 boiler houses adjoining. Locomotives haul the coal into the boiler houses, where it is fed to the grates by stokers.

The Hecla engine house, flanked by a large boiler house, contains the 1,200-h. p. compound hoisting engine "Frontenac" and 2 auxiliary engines, of 600 h. p. each, also a 30-drill Rand air compressor and a pair of water-plunger air compressors, with combined capacity of 144 drills, being the largest machines of this type ever constructed.

South of the Hecla plant is the "G. H. & S." engine house, having the "Houghton" and "Seneca" engines, of 1,300 h. p. each. The Hecla boiler house has 5 large boilers and a 200' smokestack, of 9' 6" internal diameter.

The engine house operating Hecla shafts Nos. 7 and 9 contains the engines "Hancock" and "Pewabic," each of 1,400 h. p., which operate 25' drums by spur gearing, and two 600 h. p. vertical compound engines for man cars. Boiler house has 5 boilers and a 250' smokestack of 12' 6" internal diameter.

The South Hecla engine house at shaft No. 11 has a 1,000-h. p. Lidgerwood hoist.

The Red Jacket shaft has two 2,850-h. p. triple expansion hoists, and in an adjoining building are five 300-h. p. boilers. In raising 10-ton loads perpendicularly from a depth of 1 mile, the weight of the cage and steel cable nearly equals that of the cargo of rock, but with the aid of counter-balance the engines can hoist 10-ton loads at a speed of 40 miles per hour, the regular hoisting time being about 90 seconds for the vertical distance of nearly a mile, including time taken for starting and stopping, an achievement no locomotive could duplicate on a horizontal plane. The engine operates on a system devised by S. B. Whiting, formerly manager of the company. To overcome the dangerous strain caused by unequal wearing, Walker differential rings are placed on the sheaves, the cables taking 4 complete turns around the driving sheaves.

Equipment at the Amygdaloid shafts on the Osceola bed is practically the same at shafts 13, 14, 15 and 16, the new shaft No. 18, having a combined engine and boiler house, with a small Lidgerwood hoist. Shafts 13 and 16 have Nordberg first-motion double conical-drum hoists, operating 7½-ton skips in balance, good for 5,000' depth each. No. 14 and 15 have Corliss hoists with 25' cylindrical drums, good for 5,000' depth. Shafts 17 and 18 are equipped with small Lake Shore and Lidgerwood hoists and single 5 and 2½-ton skips. All the shafts have permanent shaft rock-houses, similar to those of the conglomerate workings. All engine-houses have air connections with the main compressor-plants at the old mine.

The machine shop has an equipment excelled by only a few of the largest shops in the country, including a 25-ton electric traveling crane and

mammoth planers, with electric power throughout. These shops are capable of handling anything and everything in the line of repair work, and also have complete manufacturing facilities for the making of mining, milling and smelting machinery, and have turned out hundreds of Wilfley tables, and other special machinery, under agreement with the owners of the patents.

The foundry has 2 iron cupolas, and a brass foundry, with a 20-ton electric traveling crane. The pattern shop has 2 departments, one for the shop proper and one for storing patterns.

The carpenter shop is equipped with as complete a line of labor-saving machinery as can be found in any general woodworking establishment.

The blacksmith shops are as large as those of the largest manufacturers of machinery, and are fully equipped. The Calumet shop alone sharpens upwards of 50 tons of steel drills daily. The Hecla shop does blacksmithing and forging for the entire mine. The various shops employ upwards of 150 blacksmiths.

The main electric plant of 12,000 h. p. capacity is at the mills, in Lake Linden, with a substation at the mine.

The office building is a large and handsome stone structure, housing the various executive departments and the engineering force of the mine. The company's private telephone system has an exchange with about 220 instruments, including a number of deep underground stations, with local and long-distance connections.

The Calumet & Hecla public library had 45,000 volumes in 1917; ranks third in point of circulation in the state of Michigan, with an attendance in reading rooms of 88,040 in 1917. In addition to books in English, there are works in German, French, Italian, Swedish, Norwegian, Slavonian, Polish, Hungarian, Finnish and Croatian, with periodicals and newspapers in a score of languages, about 30 different nationalities being represented on the company's payroll. There also is a branch library and reading room at Lake Linden, for employees of the stamp-mill and smelters.

The company maintains a hospital, for employees solely, with complete surgical and laboratory apparatus and a dozen physicians.

The company owns about 1,200 dwellings, furnished to employees at an average rental of 6% on actual cost, plus cost of maintenance, and upwards of 1,200 dwellings are owned by employees on lands leased from the company at low yearly rentals. This low rent is equivalent to an increased wage, compared with Western mines.

There are 15 school houses on the lands of the Calumet & Hecla, most of which were built by the company, including a fine manual training school, and a truly magnificent high school building at Calumet.

On Calumet & Hecla lands there are upwards of 30 churches, of a dozen different denominations. All of these sites were donated by the company, and in most cases substantial aid has been given in their erection and maintenance, entirely regardless of creed.

The company built a \$50,000 bath house containing tubs, showers and a 26'-40' swimming pool. A charge of 2½ cts. per bath is made, except in the women's department, which is free to women and children. The charge covers merely the cost of washing the towels and in no way compensates for the operation of the bath house proper.

In 1904 the Calumet & Hecla Mining Co. started a pension fund. Certain employees who had attained the age of sixty years or more and who had been in the company's employ twenty years or more, were retired on a pension proportionate to their length of service and their wages. These pensions have run from \$9 per month to \$38 per month.

On July 15, 1916, the C. & H. celebrated its 50th anniversary. Long-service medals were given to 1,371 employees; of these, 169 were for men who had worked over 40 years, 380 for between 30 and 40 years, the remainder for between 20 and 30 years. During 1916 the men received a 10% premium, plus 25c for each day worked from July 1 to Dec. 31. At present the bonus is 10% plus 50c daily.

The company maintains 3 distinct systems of waterworks, one at the mines in Calumet, one at the mills in Lake Linden, and one on the shore of Lake Superior, 4 miles N. W. of Calumet. The Lake Superior plant pumps water for domestic uses at Calumet against a head of 733', with an electric centrifugal pump of 3,000,000 gals. daily capacity. This plant also furnishes water to the mill and smelter boilers, on Torch lake. At the Calumet dam and mine there are 7 pumps, having a combined daily capacity of upwards of 45,000,000 gals.

The company maintains a fire department, affording protection to the mine buildings and location, and responding to calls from Red Jacket, Laurium and the other towns that go to make up the mining camp of Calumet, with 40,000 population.

The Hecla & Torch Lake standard gauge railroad, owned by the company, connects the mines, mills, smelter and shops by upwards of 20 miles of main tracks, spurs and sidings. Equipped with 150 forty-ton steel rock cars and several locomotives.

The 2 stamp mills, known as Hecla and Calumet, are at Lake Linden, 4 miles from the mine, on a tract of 998 acres, having several miles of frontage on Torch Lake.

The mills have steel frames, with concrete foundations, spaced 20' apart, with 2 and 3 tiers driven to bed-rock, and topped with 6x12" square timber, capped by a 4"x6" bed of concrete. The mills have 27 Leavitt heads and 1 Nordberg steeple-compound head; 17 heads treating conglomerate ore and 11 crushing amygdaloid rock. Stamps are actuated by steam power, but the other milling machinery is operated electrically. The Leavitt heads have a daily capacity of about 350 tons of conglomerate, and 500 tons of Osceola amygdaloid.

The mill equipment below the stamps, includes Woodbury-Benedict jigs; 4-deck Evans-Rawlings round-tables, from which slimes are treated by Wilfley tables; Chilean regrinding mills. The 220 Wilfleys effect a considerable saving of the very fine copper formerly lost, and greatly reduce the water consumption.

As the mills stand on the flat western shore of Torch lake, but little above water level, tailings speedily filled the shallow lake for some distance off shore, and to deposit the sand it became necessary to secure a considerable initial elevation, which is gained by sand wheels. The material entering the mills as conglomerate rock leaves as coarse sand to the extent of fully 6,000 tons daily. The sludge is washed through launders to the sand-houses, where it is scooped up by the buckets of the wheels and dumped, high above, into launders running on trestles far out into the lake, these spouting forth miniature brick-red Niagaras. There are two wheel houses, one for each mill. The Calumet wheel house has sand wheels of 50' diameter, and the Hecla 50' and 64' diameter. The sand wheel is to all appearances a gigantic bicycle wheel, fitted with spur gearing where the rubber tire should be. The complete wheel weighs 500 tons, and is mounted upon massive concrete masonry. Four 25-ton iron bed plates support the pillars carrying the 21-ton Krupp forged steel axle, which is 27' long and 32" in diameter with a hollow core of 26" diameter. Radiating from axle to rim are 2" steel spokes 32' long. The completed wheel is 10' wide and 64' in

diameter, driven by gear and pinion, power being furnished by a 700-h. p. dynamo, and has a capacity of 55,000 gals. per revolutions. Nearly 2 years were required to build and adjust this monstrous wheel.

During 1916 there were no important changes at the stamp-mills. A year's tests on flotation in the laboratory were encouraging and two 50-ton Mineral Separation machines have been installed. Company will pay 1c royalty per lb. of copper recovered.

The No. 1 regrinding plant, built 1908-09, and in full commission Jan., 1910, occupies a 195x340' building. The frame is of structural steel, resting on concrete foundations, the floor being of stamp sand, with a concrete capping, no particle of wood entering into the construction of the building. Power is furnished by eight 250-h. p. induction motors, giving about 100% excess capacity, to provide against delays through overhauling and repairing. The plant has cost about \$400,000. Equipment, built almost exclusively in the shops and foundries of the company, consists of 48 Chilean mills, resting on concrete piers, in 2 parallel rows, each pier being a hollow octagon 6' high and 7' in diameter, with a 10" wall, the hollow being filled to a height of 10' with stamp sand, capped by 4' of concrete. All piers are joined by concrete ribs, in which a heavy steel cable is embedded, passing through each pier connection. The Chilean mills are being replaced by Hardinge mills. There are 200 Wilfley tables, each section of the plant having 6 grinders, 18 tables for roughings, 4 tables for middlings, and 12 tables for slimes. Product from each set of 2 grinders goes to a settling tank, from whence the roughings go to the first 3 tables, and the slimes to 2 other tables, the middlings from each 15 tables going to 2 additional tables. The coarse sands from the Calumet mill go to sand wheel No. 2, and waste sands to wheel No. 1, the coarse sand elevated by wheel No. 2 running to the regrinding plant, where the amount going to each mill is regulated by feed gates, an overflow tank at the end of the launder caring for the surplus, in case of stoppage of the mill. A Hardinge conical tube mill, crushing coarse tailings, is 8' in diameter at the larger end, the pulverizing of sands being accomplished by the use of Danish pebbles on a lining of hard brick. Re-modeling of No. 1 plant is expected to be completed in 1917.

The regrinding mill has traveling cranes, and every piece of machinery is duplicated, so that breakages can be repaired quickly. The mill is fed with tailings from the stamps, sands carrying up to 12 lbs. copper per ton. No slime goes to the regrinding plant, which treats exclusively coarse gravel and sand from the jigs and tables. The product is clean mineral, of good average tenor, which is pumped into bins, and thence loaded into cars for shipment to the smelter. Labor costs are very low, the plant being automatic throughout, and the force is only 12 men and boys per shift.

The management figured on an extraction of about 5 pounds copper per ton from the tailings reground, at a cost of about 6 cts. per lb., on a basis of about 2,000,000 lbs. yearly production. Production, to end of 1916, from the tailings plant was 13,751,310 lbs. fine copper. Comparative results in No. 1 regrinding plant for several years are as follows:

Year	Tons Coarse Tailings	Lbs. Cu. Crushed per Ton	Lbs. Cu. Rec.	Lbs. Copper Produced	Cost (a) per Lb
1911.....	477,794	12.66	4.50	2,152,110	5.01c
1912.....	481,320	12.86	4.48	2,155,292	4.99c
1913.....	388,164	11.92	3.94	1,529,097	5.87c
1914.....	351,929	11.52	3.74	1,316,704	7.38c
1915.....	337,243	13.14	4.01	1,352,869	6.52c
1916.....	364,581	13.98	3.79	1,380,344	6.32c

(a) Exclusive of smelting and refining.

The regrinding plant has proven its ability to treat fresh tailing at a substantial profit. The tailings at the Lake Linden mills are the most extensive in the world, containing about 40,000,000 tons of stamp sand, carrying an average of 8 to 10 lbs. of copper per ton in the newer sands, and 12 to 20 lbs. in the older sands, these tailings carrying about 500,000,000 lbs. of copper—an amount greater than the total production of any but the largest copper mines of the world.

The No. 2 regrinding plant, begun 1912, operations started in 1914, is practically a duplicate of No. 1. The mill is equipped with 64 Hardinge conical mills and will retreat tailings in Torch Lake. These are obtained by means of a specially designed dredge, which will dig to a depth of 100' below the surface of the lake.

The reclamation plant (the dredge) worked continuously in spite of zero weather and 18" of ice on Torch lake. It treated 545,727 tons of tailing, containing 21.06 lb. copper per ton, saving 9.92 lb., or a total of 5,412,610 lbs., at cost of 4.586c per lb. in 1916. The treatment included leaching.

Results have been as follows:

	Tons Coarse Tailings Crushed	Lbs. Cu. per Ton	Lbs. Cu. Rec. per Ton	Lbs. Cu. Produced	Cost (a) per Lb.
1914.....	75,630	11.84	4.59	347,363	5.66c
1915.....	168,461	13.14	4.73	796,858	4.36c
1916.....	182,705	13.98	4.98	909,453	4.30c

(a) Exclusive of smelting and refining.

A leaching plant was completed in summer of 1916 to retreat tailings from the regrinding plants by leaching with an ammoniacal solution, the ammonia being reclaimed, and is taking 6 lbs. of copper from the tailings. The cost was 6c per lb. of copper produced, exclusive of smelting and selling charges.

The capacity of 2,000 tons daily is being doubled in 1917.

Water for the mills is supplied by 4 pumps, of which the "Michigan" is the most powerful in the world, having a daily capacity of 60,000,000 gals. Auxiliary pumps are the "Huron" and "Ontario" of 20,000,000 gals. capacity each, the "Erie" of 10,000,000 gals., and an I. P. Morris pump of 22,000,000 gals. daily capacity.

The electrification of the Calumet & Hecla was begun in 1904, and eventually will be completed, at mines, mills and smelters, except for some of the big compound hoists and air compressors at the mine, where a change from steam to electricity would be doubtful economy, as well as necessitating enormous initial outlays.

Machinery at the power plant includes the old engines "Saginaw" and "Gratiot," the former an Allis-Chalmers twin vertical tandem compound-expansion engine having 17x40x48" cylinders, each engine being direct connected to a 1,000 k. w. alternating current generator, and the Leavitt engines "Owego" and "Ontonagon," of 3,000 h. p. each, built originally for hoisting purposes, direct-connected to 2,000-k. w. generators. The electric equipment of the mills includes 15 motors, of 20 to 250 h. p. each.

Another 10,000-k. w. turbo-generator is being installed. This will make the total capacity of the power-plant 22,500 k. w.

The boiler house has twenty 500-h. p. Babcock-Wilcox tubular boilers. There are coal crushers, feeding an endless link-belt system with 308 steel link buckets, of 60 tons hourly capacity, taking coal to overhead bins, whence it is fed to the grates by Roney automatic stokers. Water requirements at the boiler plant are about 750,000 gals. daily, obtained from a 750,000-gal. reservoir, fed from Lake Superior via the Calumet pipe line.

The Torch Lake smelter is at Hubbell, about a mile south of the mills, on a 30-acre site having ample frontage on Torch lake, with deep water in front and 3 railways at the rear. The smelter has 4 stone furnace buildings, and a 50x70' furnace building, both blast furnaces and reverberatories having been rebuilt within the past few years. There are 18 reverberatories, which are top-charged, having platforms above on which the mineral is thoroughly dried before charging. The blast furnace is 40x128" at the tuyeres, its comparatively small size being due to the use of reverberatory furnaces for the bulk of the smelting work. A new steel-frame smelter building houses three 150-ton reverberatory-furnaces, of so-called Jumbo pattern, modeled after the furnaces of the Lake Superior Smelting & Refining Co. The practice of the smelting plant is fully abreast of the times, in all essentials.

Another furnace was blown in during November, 1916.

The electrolytic plant, 155x270', at Hubbell, has superseded the Buffalo reduction plant, which has been abandoned. It is built of steel and brick, contains four 7½-ton traveling cranes and 512 lead-lined wooden tanks, 3'x11'x3' 9" deep, in 4 sets of 128 tanks. Each set is arranged in 4 sections of 32 tanks, and each section in two tiers. The electric current is furnished by four 125-volt direct current generators driven by alternating current motors operating on current transmitted at 13,000 volts from the power plant at Lake Linden, transformed to 2,300 volts. There is a continuous circulation through the deposition tanks of the electrolyte which contain about 3 to 4% copper and 10 to 12% sulphuric acid. The plant has a capacity of 65,000,000 lbs. copper per year. Company markets its own copper. This plant also recovers several hundred thousand ounces of silver yearly, an item that is mentioned now in the balance-sheets.

There is 1 concentrate or mineral house, with a storage capacity of 18,000 tons, at Hubbell. Calumet & Hecla concentrate, locally called mineral, carries less than 60% copper.

The power plant at the smelter has three 125-h. p. boilers, and each of the two large reverberatory furnaces has a 300-h. p. boiler attached through which the waste gases pass.

The smelting works have an assay office and-laboratory, office and large warehouse for supplies.

The dock system of the Calumet & Hecla is extensive, including a series of very large coal sheds at Lake Linden and a series of docks at the mills and smelters on Torch lake. The 750' coal wharf has 11 Hunt hoists, and three 52' movable derricks.

The Calumet & Hecla owns and operates the ship canal connecting Torch lake with the government waterways on Portage lake, this canal being 21' deep and accommodating the largest vessels plying the great lakes. Tolls, ranging from 10 cts. on soft coal to 50 cts. per ton on package freight, are charged by the company, on independent cargoes entering Torch lake through this canal.

A saw mill, at the head of Torch lake, receives logs by rafts, and ships sawed lumber and timber by a branch of the Hecla & Torch Lake railway. The company owns extensive tracts of pine, hemlock and hardwood timber along the southern shore of Lake Superior, this land carrying between 400,000,000' and 500,000,000' of standing timber. The company also has a long-term timber contract with the Keweenaw Association, Ltd., and buys extensively of jobbers, the requirements for underground timbering alone being 18,000,000' annually, in addition to the many million feet of timber and lumber used on surface at the mines, mills and smelters.

The conglomerate rock from the old Calumet & Hecla workings has

shown a strongly declining tendency in values for many years past, and a rather alarming decline within the past few years. Net returns were almost 5%, or 100 lbs. of fine copper per ton in 1873; 4.75%, or 95 lbs. fine copper per ton, in 1880; 3.012%, or 60.24 lbs. per ton, in 1889; 59.93 lbs. in 1900; 52.44 lbs. in 1902; 39.68 lbs. in 1907; 35.96 lbs. in 1908; 33.14 lbs. in 1909; 30.12 lbs. in 1910; 30.38 lbs. in 1911; 29.73 lbs. in 1912; 27.85 lbs. in 1913; 26.38 lbs. in 1914; 29.74 lbs. in 1915, and 29.97 lbs. in 1916.

Rock from the Osceola amygdaloid returned 18.45 lbs. per ton in 1907; 17.67 lbs. in 1908; 16.40 lbs. in 1909; 15.82 lbs. in 1910; 15.89 lbs. in 1911; 15.08 lbs. in 1912; 14.31 lbs. in 1913; 13.62 lbs. in 1914; 13.32 lbs. in 1915, and 13.60 lbs. in 1916.

Average for all rock milled, during the calendar year 1912, was 24.18 lbs. fine copper per ton; 22.11 lbs. in 1913; 20.70 lbs. in 1914; 22.38 lbs. in 1915, and 22.53 lbs. in 1916.

Detailed figures, by years, of both production and dividends, from the organization of the company, in 1871, may be found in the statistical chapter.

Production has shown a steady decline since 1906, in which year the high mark of 100,023,420 lbs. fine copper was reached, and in 1913 was only 45,016,890 lbs. copper, climbing to 53,691,562 lbs. in 1914 and 71,030,518 lbs. in 1915. Production in 1913 and 1914 was seriously affected by the labor strike, called by the Western Federation of Miners on July 23, 1913, and declared off on April 12, 1914, and by the extraordinary conditions prevailing in the copper market in 1914, due to the European war. The mine was operated on a $\frac{3}{4}$ -time basis from Sept. 1, 1914, until Feb. 1, 1915, when work was resumed on full time.

Production and costs since 1910:

	Tons R'k Treated	Lbs. Cu. per Ton R'k	Mine Cost per Ton Exc. Cons.	Copper Produced Lbs.	Cost per Lb. for Cons.	Net Cost per Lb.	Rec'd per Lb.
1917**	60,000,000
1916	3,166,274	22.53	\$2.03	71,349,591*	0.60c	11.03c	25.48c
1915	3,188,583	22.28	1.71	71,030,518	0.47c	9.33c	18.11c
1914	2,592,462	20.70	1.85	53,691,562	1.00c	11.35c	14.01c

Kearsarge Lode, Amygdaloid—

1913.....	18,203	233,915
1912.....	19,050	228,985

Reviewing the 52 years' career of this company, several features deserve attention. To the investor, the total dividends, \$145,250,000 paid on an investment of \$1,200,000 is not only remarkable for its amount but because dividends have been continuous.

To the technical man this record is particularly noteworthy, when the mining record is considered. Beginning in 1866, with a small production from the rich native copper ore of the Calumet conglomerate, the company's present daily production of 10,000 tons now comes from 3 separate lodes, mined by 17 shafts, several of them a mile deep. The yearly production of copper is from 65 to 75 million pounds, with a record amount, 100 million, in 1906.

This production comes from very low-grade ore—lower, in fact, than that of the Utah Copper or other great porphyry deposits. The ore originally mined, carried nearly 5% or 100 lbs. of copper per ton, but the grade of ore decreased from year to year as depth was gained until it is now only 1½% or 30 lbs. copper per ton of ore. The maintenance of dividends despite this decrease in value is due to the ability of the management to steadily reduce costs from \$10 per ton to the present cost of \$2 per ton, so that a pound of copper is now produced as cheaply from the lean ore as it was from the richest ore. The company is also saving over 5,000,000 lbs. of copper annually by retreating the old waste or tailings made many years ago at its mills and dumped into the lake, and has installed a leaching plant which promises to give a new youth to the entire district, by its treatment of ore carrying flake copper.

In 1906 the company, realizing that the Calumet conglomerate lode, on which the company was started, would eventually be exhausted, began the purchase of other properties and of shares in other Lake Superior companies. Controlling interest in six companies, bought for \$8,592,000 by issue of company notes (all paid-off by February, 1917), has proved very profitable, these stocks returning \$6,156,124 in dividends, and meanwhile increasing in market value.

With its White Pine property and its new leaching plant, it looks as if a new era of prosperity had begun.

CASS COPPER CO.**MICHIGAN**

Address: Houghton, Mich.

Officers: Fred Smith, pres.; John T. Reeder, v. p.; John W. Black, sec.-treas., with John H. Rice and Jas. P. Corgan, directors; A. H. Meuché, supt.

Inc. 1916, in Michigan, to take over the Norwich mine, owned by the Copper Crown Mining Co. **Cap.**, \$3,750,000; shares \$25 par; 40,000 shares were paid for the property and 20,000 issued to the public at \$3 per share, to pay for diamond drill campaign. Operating expenses for 1916 totaled \$33,079; cash in treasury, May 31, 1917, \$11,779. Annual meeting, last Monday in June.

Property: 1,980 acres, in Ontonagon county, T. 49 N. R. 41 W., near the Mineral Range R. R., has several well-known lodes crossing the ground.

Development: by 9,550' of diamond drilling, which discovered an unidentified lode of shot and mass copper. This will probably be developed by an old 1,000' tunnel. Work has stopped temporarily until materials and men can be had.

CENTENNIAL COPPER MINING CO.

MICHIGAN

Subsidiary of Calumet and Hecla Mining Co.

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Calumet, Houghton Co., Mich. Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; preceding officers, H. F. Fay, Dudley S. Dean, F. L. Higginson, E. B. Dave and E. V. R. Thayer, directors. C. H. Bissell, sec.-treas.; G. L. Osgood, jr., asst. sec.-treas.; J. H. Chynoweth, mg. capt.

Inc. 1896, in Michigan, as successor of Centennial Mining Co. **Cap.**, \$2,500,000, shares \$25 par; issued, \$2,250,000; paid in, \$19.50. Last assessment, 1905, was \$4. Calumet and Hecla owns 41,500, or 46%, of the 90,000 shares outstanding.

American Trust Co., Boston, transfer agent; Old Colony Trust Co., Boston, registrar. Annual meeting, first Tuesday in April.

Profits were \$6,046 net in 1911, \$50,511 net in 1912, \$31,397 in 1913, \$3,213 deficit in 1914, \$142,440 in 1915, and \$276,546 in 1916.

Balance sheet for 1916 shows assets of cash and accounts receivable \$454,858, supplies \$30,344; total, \$485,204. Liabilities for accounts payable \$36,835; excess of assets over liabilities, \$448,368. Dividend No. 1, Sept. 21, 1916, \$90,000; No. 2, Mar. 20, 1917, \$90,000.

During 1916 the Centennial and Wolverine companies exchanged rights to mine on about 1 acre of ground each.

Lands: 670 acres, Sec. 12, T. 56 N., R. 33 W., and a triangular patch of about 30 acres, at the S. E. corner of the main tract, bought to secure the outcrop of the Kearsarge lode, and including about 10 acres, bought 1905, of the Old Colony, for the surface plant. The first work was done, 1863, by the Schoolcraft Mining Co., which failed to open a paying mine, and was reorganized, 1876, as the Centennial Mining Co., and again reorganized, 1896, with present title. Expenditures of upwards of \$1,500,000 were made by the old company in unsuccessful efforts to open a paying mine on the northern extension of Calumet conglomerate. Seven shafts, 3 of considerable depth, were sunk on this bed, No. 3, the deepest, being bottomed at 3,200'. The Centennial lands are in the great mining area of Calumet, and are available for building purposes. Two additions have been platted, and surface rights sold at good prices, mineral rights being reserved.

The present company did a little work, 1897, on the old conglomerate shaft, then turned attention to the Osceola bed, deepening 2 shallow shafts to 1,050' and 1,150' depth, respectively. The Osceola bed, where opened on the Centennial tract, averages about 15' in width, but is lean.

Work on the Kearsarge bed was begun Sept., 1899. Owing to the outcrop of the Kearsarge occurring on the 30-acre tract bought of the Osceola, with only a 100' right-of-way connecting it with the main tract, it was necessary to open the mine on the Kearsarge bed in a peculiar manner, by 2 shafts. These are but 90' apart, on surface, and continue parallel, on the dip of the bed, until the 13th level, when the main tract is reached, after which No. 2 shaft diverges from No. 1 at an angle of 15° on the plane of the bed, 300' being taken by the curve. This method of opening gives short drifts until the shafts enter the main Centennial tract. Each shaft is 17x18' inside of timbers, with 3 compartments, sunk at an angle of 39° with the horizon, through an overburden of about 100' depth. The Kearsarge bed averages about 16' in width, and showed fair copper values in the upper levels, followed by a comparatively barren zone until the 14th level, when there came a gradual improvement, which unfortunately has not been maintained, the mine as a whole proving disappointing. New openings, made during 1916, amounted to 2,208', all contributory to the No. 2 shaft.

No. 1 shaft was raised in the north compartment from the 37th level, a distance of 169', making a total depth of 4,000'. No other work has been

done here since 1910. No. 1 has a steel shaft rock-house, with 3,000-ton bins and a 32x72" Nordberg duplex hoist, with double-conical drum, good for depth of 6,000', operating 5-ton skips.

No. 2 shaft, 4,293' deep, shows fair ground from the 18th to the 31st levels, inclusive. This shaft shows poor ground to within 50' of the South Kearsarge boundary, where drifts were stopped. The South Kearsarge drifts are in rich ground up to the boundary, which seems strange.

Openings north of the shaft on 35th and 36th drifts have been extended to the Wolverine boundary. The 38th level has been driven north 250', but shows no copper.

Equipment: includes a cylindrical steel shaft rock-house, with 1,000-ton bins, and a 32x60" Sullivan duplex straight-face hoist, with 2 drums of 14' diameter and 15' 6" winding face, grooved for 1½" cable. The hoist is fitted with devices to prevent overwinding, and is calculated to raise 5-ton skips at the rate of 4,000' per minute, operating under 150-lb. steam pressure.

Trammers were scarce during 1917 so a rope-haulage system was installed on No. 37 level. This will handle ore sent from the 4 levels above.

The mine is served by the Copper Range and Mineral Range railroads, and has a private line connecting the shops and shafts.

Rock is stamped by the mill of the Lake Milling, Smelting & Refining Co., which is separately described. At No. 2 mill, Hubbell, two new stamps were installed in summer of 1917.

Production was seriously curtailed for a time in 1913 and 1914 by the Western Federation of Miners' strike, called July 23, 1913, and declared off on April 12, 1914. Conditions prevailing in the copper market after the European war started were the cause of the mine operating on three-quarter time from Sept. 1, 1914, to Feb. 1, 1915. In Aug., 1915, the rock-house of No. 1 shaft was gutted by fire and production suffered for a month at that time. Centennial at best is a small producer and this series of misfortunes has worked an extra hardship on it.

Production:

Year	Tons R'k Treated	Lbs. Min. Produced	Lbs. Cu. per Ton R'k Stpd.	Mine Cost per Ton (a)	Lbs. Copper Produced	Total Cost per Lb.	Rec'd per Lb.

Note.—Production for first 4 months, 1917, averaged 154,000 lbs. copper.

(a) Includes mining, transportation, stamping and taxes.

CHAMPION COPPER CO.

MICHIGAN

Office: 82 Devonshire St., Boston, Mass. **Mine office:** Painesdale, Houghton Co., Mich. **Mill office:** Redridge, Houghton Co., Mich.

Officers: Wm. A. Paine, pres.; Chas. J. Paine, Jr., v. p.; F. W. Paine, sec.-treas.; Frederick W. Denton, gen. mgr.; preceding, with Samuel L. Smith, Geo. P. Gardner, W. Cameron Forbes, F. W. Denton and Hon. Richard Olney, directors; H. Schacht, asst. gen. mgr.; John Jolly, underground supt.; Edw. Koepel, mill supt.; M. L. Cunningham, asst. mill supt.; H. F. Mercer, chief engr.; E. W. Kruka, chief clerk; W. J. Richards, master mechanic.

Inc. Dec., 1899, in Michigan. **Cap.**, \$2,500,000; shares \$25 par, all issued, full paid in. Is controlled jointly by Copper Range Consolidated Co. and St. Mary's Mineral Land Co., through equal ownership of stock, and owns \$110,000 stock in the Michigan Smelting Co.

Balance sheet of Dec. 31, 1916, showed a net profit of \$5,870,606, and a surplus of \$1,671,933. Receipts from ore sales in 1916 were \$8,494,367.

Dividends: \$3 in 1903; \$2 in 1904; \$10 in 1905; \$12 in 1906; \$10 in 1907; \$5 in 1908; \$8 in 1909; \$9 in 1910; \$5 in 1911; \$11 in 1912; \$9 in 1913; \$31 in 1915; \$60.14 in 1916; \$51.20 in 1917, to Jan., 1918; a total of \$226.34 per share, or \$22,634,000.

Property: 1,240 acres, being the S. $\frac{1}{2}$ of Sec. 30, W. $\frac{1}{2}$ and N. $\frac{1}{2}$ of N. E. $\frac{1}{4}$ and S. W. $\frac{1}{4}$ of N. E. $\frac{1}{4}$ of Sec. 31, T. 54 N., R. 35 W., practically all on the mineral belt. Neighbors are the Copper Range and Trimountain on the north, lands of St. Mary's Co. and Hussey, Howe & Co. on the east; Hussey-Howe lands and the Globe tract on the south, and Copper Range lands on the west. The tract carries 9,047' on the strike of the bed, and, at the present angle of dip, the deepest shaft could go down to the impossible depth of 18,950' before reaching the western boundary.

Geology: development started in 1899, under direction of Dr. L. L. Hubbard, and 3 parallel amygdaloidal beds were uncovered by trenching, one of which, the Baltic, showed phenomenal copper values. The 2 amygdaloids paralleling the Baltic bed showed copper in sufficient quantities to render their future exploration advisable. A fourth amygdaloidal bed, about 15' wide, discovered 1901, east of the Baltic bed, carries heavy copper to an encouraging extent, and there also is a fissure vein of arsenical ore, apparently algodonite (copper arsenide) near "C" shaft. The width of this vein at surface is slight, and mineral contents variable, but on the second level the fissure is 2' wide, and well mineralized.

The dip of the Baltic bed at the Champion is about 70° and strike same as at the Trimountain, not the easterly trend of the Baltic mine. The bed runs 13 to 45' and averages 24' width, carrying more epidote than at the Trimountain and Baltic. The surface of the tract is very hilly, but the overburden is less than is found either to the northward or southward. The stretches of lean ground in the mine are few, and the bed carries heavy copper in profusion, mostly in barrel size, but running up to masses of 10 tons in weight. Only about 60% of the rock broken is hoisted, waste rock being sorted out and used for dry walling, packing itself.

All shafts are connected on numerous levels and about 2 miles of new workings are made yearly. The bed shows so little poor ground that nearly every level will be opened from end to end of the mine, eventually giving the longest average drifts of any Lake Superior property. The only really poor ground found in the mine was shown in "E" shaft, between the 3d and 4th levels, and the mine shows some stopes of phenomenal width and richness. The ground opened, 1914, was of average value. A large area of good ground was opened between Nos. 2 and 3 shafts in 1915.

Development: by 4 shafts, named from north to south: "B" shaft, the northernmost, 1,835' south of the Trimountain boundary, is 2,356' deep; "C" shaft, 1,050' south of "B," is 2,334' deep; "D" shaft, 1,300' south of "C," is 2,168' deep; "E" shaft, 1,300' south of "B" and 3,900' north of the Globe boundary, is 2,388' deep. The third level of "E" shaft has been driven 3,000' toward the Globe boundary. "F" shaft, started 1,300' south of "B," was abandoned on account of treacherous overburden, but the Baltic bed was located, 1907, by diamond drill at a new site, 1,800' south of "E," and 2,100' north of the Globe boundary.

New work in 1916 was: 11,791' of drifting, 722' of cross-cutting, 3,511' of raising and 27' of shaft sinking.

Equipment: the shafts are practically duplicates in all essential particulars, having 40x50' shaft rock houses, with 90-ton ore bins, enlarged, 1908, by the Wisconsin Bridge & Iron Co. Equipment at each rock house includes a steam hammer for heavy copper, and one 12x15" rock crusher, taking everything hoisted from the mine direct from chutes. The shafts have duplicate first-motion Nordberg hoists with 24x60" duplex cylinders and double conical drums of 14' diameter, with capacity for two 3,000' cables each, hoisting 6-ton skips. The boiler houses have Bradley and Burt boilers, with coal trestles connecting. Water for boilers is furnished from a 12,000,000-gal. dam.

Very extensive use is made of electric power on surface, and there are some underground electric pumps. The electric plant at "F" shaft has a 250-k. w. General Electric generator, direct connected to an Allis-Chalmers cross-compound vertical engine.

The main steel compressor building at "F" shaft has a 100-drill Nordberg quadruple expansion 2-stage air compressor, with capacity to compress 9,120 cu. ft. of free air per minute to a pressure of 70 lbs. per inch. The compressor operates at a steam pressure of 280 lbs., and has a regenerative feed-water system. Power is furnished by three 250-h. p. Geary water-tube boilers. At "B" shaft there is a 40-drill Ingersoll-Sergeant cross-compound 2-stage air compressor with vertical receiver inter-cooler. The electric plant, with a 100-k. w. generator, is in the main compressor building.

Buildings at the mine include a change house, dwellings and machine shop, with traveling crane and trolley rail for its entire length, with a 30-h. p. electric motor.

The stamp mill is at Freda, on Lake Superior, 2 miles west of Redridge. Lower-pressure turbine and accessories were installed in 1915. The mill has 6 Nordberg stamps, there being 4 compound stamps, with 15½" cylinders, each treating about 700 tons daily, and 2 simple stamps, with 28" cylinders, of about 660 tons daily capacity each, giving the mill a total capacity of fully 4,000 tons daily.

The concentration department was remodeled, 1908, and given additional tables and larger settling tanks. The wash for the heads has Hodge graduated adjustable-speed jigs, with plungers working simultaneously or alternately, in pairs, Woodbury jigs and Deister concentrating tables. Raggings are reground by Allis-Chalmers crushing rolls having 1 roll fixed and the other in a spring bearing. The preliminary discharge from the stamp heads is treated on very large jigs, having 30x48" sieves, of punched steel, with one-eighth inch openings, installed in connection with the head. Each head has a V-shaped settling tank, 40' long, 9' deep, 12' wide at the top and 6" wide at the bottom, slimes being drawn from spigots at the bottom. The flow of water through the settling tanks does not exceed 6' per minute.

The mill is heated by hot water from a Green fuel economizer.

The steel boiler house has four 200-h. p. Stirling boilers, 5 Dutch oven Scotch marine boilers and 2 Hawley down-draft furnaces. In 1916 a 235' concrete stack, 100" dia. at top, was constructed, and a new boiler installed. Coal is brought to the boilers by tram, and reduced to uniform size by a grinder before feeding to the grates, and ashes are washed into the lake through a launder. Exhaust steam passes through dry condensers, thence to a hot well, from which water is fed to the boilers. Power for the mill is supplied by a 500-h. p. Nordberg cross-compound engine and a turbine, with a 180-h. p. engine in reserve.

The steel pump house, with truss roof and traveling crane, has a 20,000,000-gal. Nordberg triple-expansion pump. Water for the mill and boilers comes from the lake through a 1,020' tunnel, the shore end having

a well with bottom 8' lower than the lake level, this being the longest tunnel ever driven under Lake Superior. The intake crib has an area of 45 sq. ft. and, with a second crib, the tunnel could furnish water for 10 stamps. Water cost is less than 1½ cts. per ton of rock stamped. Screens have been installed in the tunnel, obviating the trouble formerly caused by sand and wood pulp in the water. A sand loading plant was erected in 1915. During the year 173,170 cu. yds. of stamp sand were run into the mine for fill. In 1916, \$225,567 was spent for additional equipment which included locomotives, changehouse, additional dwellings, etc., at mine and at the mill, a concrete stack, a boiler, steel railway trestles, turbine, mill equipment and fire proofing of mill.

The Champion is one of the largest and richest of Lake Superior mines and has been admirably managed.

CHEROKEE COPPER CO.

MICHIGAN

J. A. Thomas, supt., Houghton, Mich. **Mine address:** Winona, Houghton Co., Mich.

Officers: W. A. Hodgson, pres.; Linus Stannard, 1st v. p.; Deen L. Robinson, 2nd v. p.; Wm. D. Calverly, sec.-treas.; preceding, with J. H. Rice, B. F. Sparks and F. W. Nichols, directors.

Inc. April, 1910, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; issued, \$1,750,000, of which 49,000 shares were given for lands, 5,000 shares went to the promoters, and 16,000 shares were sold to the public at \$5. An assessment of 50c a share was levied and was due March 26, 1917. Cash on hand Feb. 9, 1917, was \$14,990.

Property: 800 acres, Sec. 2 and S. E. ¼ of Sec. 3, T. 51 N., R. 57 W., lying between the Bohemia and King Philip, 1 to 2 miles S. W. of the latter, formerly were owned by the Penn Mining Co., and later by the ill-starred Belt Mines Co., Ltd. Land, entirely on the mineral belt, formerly included what is now the Lake mine of the Lake Copper Co., and carries upwards of a mile of the copper-bearing formation, presumably carrying the Evergreen belt. In 1913 diamond drilling began. No. 6 drill hole cut a cupriferous amygdaloidal bed of 32' width, of which 5' carried good copper.

The vein is amygdaloid to epidotal amygdaloid in character with general N. E. strike and dip of 62°, having barrel and shot copper in surface workings, and a width of 30' to 45'.

Development: by shaft, down 250', with openings at 110'. At 220' there is a station with drifting underway. At 110', vein showed a width of 26'.

Equipment: hoist, compressor, pumps, etc.

CLARK MINE**MICHIGAN**

Idle. **Office:** care Dr. Léon Estivant, owner, 47 Ave. de l'Alma, Paris, France. **Mine office:** Copper Falls, Keweenaw Co., Mich. Fred W. Nichols, agent.

Property: 2,433 acres, includes mines formerly known as the Clark, Bell and Montreal, about 3 miles south of Copper Harbor, between Lake Fannie Hooe on the north and Breakfast Lake on the south, including Lake Mangane. Mine, opened 1858, for copper, also carries a promising 2' vein of pyrolusite, average of assays, 1900, by Duparc, of Geneva, giving 55.73% manganese and 1.36% copper. Has shipped about 1,200 tons of high-grade managanese ore. Was tested, 1905, and again, 1910, by diamond drills. Was under option, 1910, to United States Smelting, Refining & Mining Co. Fully described Vol. II.

CLIFF MINING CO.**MICHIGAN**

Subsidiary of Calumet and Hecla Mining Co.

Office: 12 Ashburton Place, Boston, Mass. **Operating office:** Calumet, Mich. **Mine office:** Phoenix, Keweenaw Co., Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; preceding with Geo. A. Flagg, R. C. Grew, W. E. L. Dillaway, Francis L. Higginson and Walter Hunnewell, directors; C. H. Bissell, sec.-treas.; Geo. L. Osgood, asst. sec.-treas.

Inc. Jan., 1910, in Michigan. **Cap.,** \$2,500,000; shares \$25 par; issued, \$1,500,000, \$13 paid in. Is controlled through ownership of 19,400 shares, by Calumet & Hecla Mining Co. Ended 1916 with \$21,445 cash, and accounts receivable; and accounts payable of only \$110. State Street Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, first Wednesday in April.

Property: includes the Cliff mine proper, and the South Cliff, connected underground on the 3d level. The Cliff mine, 2 miles N. E. of the Ojibway, is the oldest mine in the Lake Superior district, opened 1846, closed 1870, again reopened 1872, and abandoned 1878, paying dividends, 1849-79, of \$2,518,620. The old mine was opened on a fissure vein crossing the bedded formation at practically right angles, and was pretty thoroughly worked out before the property was abandoned. The main fissure vein had several feeders, and a number of independent fissure veins, including the West vein, which was rich in copper near surface, and the East Cliff vein, about an eighth of a mile east of the main vein. The Cliff was notably rich in native silver.

The Cliff carries the Kearsarge amygdaloidal bed for about 2 miles, and for practically unlimited depth, the shaft being a trifle less than 2 miles from the most northerly shaft of the Ojibway, which is the nearest opening on the Kearsarge lode. The Tamarack Mining Co., which owned the Cliff until 1910, secured a complete geological cross-section of the tract, by diamond drilling, 1903-07, the Kearsarge bed being located by 12 drill holes, the majority of which were said to show commercial values, and, in addition, the property carries about 20 other amygdaloidal beds, under the greenstone bluff, which is such a prominent feature of the landscape, rising to a height of several hundred feet. A temporary vertical shaft, with a single compartment, started Aug., 1910, was sunk 217', entering the bed near the hanging wall of the Kearsarge, the ground being considerably disturbed at this point. Work in this shaft was abandoned during the first half of 1913, as the Kearsarge vein at this place proved narrow, dry and barren.

Five diamond drill holes were put down during 1914 and 1915 to explore the beds eastward in the hope of finding a profitable vein towards the Eastern sandstone. The cross-section crossed the horizon of the Old Col-

ony, Mayflower and St. Louis amygdaloid lodes and the Bohemia and St. Louis conglomerate lodes, but very little copper was disclosed by this work.

The Cliff was the first mine ever opened on native copper, and production, 1845, was 19,903 lbs., which was the first commercial output of copper from Lake Superior. Total production, 1845-82, was 38,054,340 lbs. fine copper.

Equipment: includes a power house, with boilers, duplex hoist, and a 5-drill air compressor. Buildings include a smithy, changing house, combination office and warehouse, boarding house and a number of dwellings. The mine is reached by the Keweenaw Central railway.

Owing to the unsatisfactory results of the drill-holes, property has been idle during the past year.

CONTACT COPPER CO.

MICHIGAN

Office: 70 State St., Boston, Mass. **Mine office:** Houghton, Mich.

Officers: Harry F. Fay, pres.; C. J. Morrissey, sec.-treas.; preceding, with W. A. Mosman, W. S. B. Cram and John G. Stone, directors. G. S. Goodale, supt.

Inc. May, 1910, in Michigan. **Cap.**, \$5,000,000; shares \$25 par; paid in \$2.50; issued 111,125 shares. Annual meeting, third Thursday in March.

Company is a reorganization of the Elm River Copper Co., whose shareholders were given the privilege of exchanging their stock for shares in the Contact Copper Co. on the basis of share for share, on condition that they subscribed for additional shares at \$2 each, to the extent of 50% of their holdings in Elm River. Practically 75% of Elm River stock was exchanged and the Contact Co. has now acquired title to all the real estate and personal property of the former company, which has been dissolved and is now in process of liquidation.

{ Report Jan. 1, 1917, showed cash on hand, \$5,922. Company should receive \$6,500 in Sept., 1917, further payment on timber contract.

Property: 2,360 acres, in one continuous tract, within the limits of the copper-bearing formations in Houghton Co., Mich. Within these limits the property has a maximum distance along the strike of 16,900', a width of cross-section of 11,600' and embraces the horizons of all the copper-bearing beds of the Keweenaw formation, between the Eastern Sandstone and the upper part of the Ashbed series.

Nearly a complete cross-section has been secured by upwards of 11,600' of diamond-drill borings, despite the heavy overburden on nearly all of the tract. Borings have given cores carrying copper from a number of different beds, but not in commercial quantities. On July 1, 1915, drilling was resumed in the S. E. $\frac{1}{4}$ of Sec. 11, to investigate the horizon believed to contain the so-called No. 8 Amygdaloid opened on the neighboring Wyandot property and correlated with the Baltic lode on which all the mines of the Copper Range Co. are located. Up to March, 1916, about 5,271' of drilling had been done and the lode definitely located at depths of 450' and 950', respectively, from the outcrop. In hole No. 20, 2,518' of drilling was accomplished between March 1 and Jun 29, 1916. In hole No. 20 the lode was located between 1,878' and 1,958'; in No. 21 between 641' and 671'. In these 4 holes, a formation has been indicated of about 35' average thickness showing a uniformly favorable character of rock.

Equipment: includes a duplex hoist good for 1,000', 2 Burt marine boilers and a 4-drill air compressor. Water is taken from a dam by a Blake pump. Buildings include a carpenter shop, two-story warehouse, boarding house with accommodations for 100 men, school house and a number of dwellings.

In order to protect the company's cash, work was suspended in 1916, to await the result of active diamond drill work on the ground north and south of the company holdings.

COPPER CROWN MINING CO.

MICHIGAN

Inc. July 18, 1902, in Michigan. **Cap.**, \$2,500,000; increased about 1911, to \$3,000,000; shares \$25 par; issued, 66,200 shares. Company in July, 1916, sold its property to the Cass Copper Co., for 40,000 shares of latter company's stock, which see.

COPPER RANGE COMPANY

MICHIGAN

Office: 82 Devonshire St., Boston, Mass. **Mine office:** Painesdale, Houghton Co., Mich. **Sales Dept.:** 32 Broadway, New York.

Officers: Wm. A. Paine, pres.; F. W. Denton, v. p.; F. W. Paine, sec.-treas.; above with Chas. J. Paine, Jr., J. R. Stanton, S. L. Smith and R. H. Gross, directors; William H. Schacht, gen. mgr. W. Parsons Todd, sales mgr., New York; John M. Wagner, purch. agent, Houghton, Mich. American Trust Co., Boston, transfer agent; State Street Trust Co., Boston, registrar. Annual meeting, 1st Wednesday in May.

Inc. 1899, in Michigan. **Cap.**, \$2,500,000, increased 1915 to \$10,000,000; shares \$25 par; issued, 390,336 shares; reserved for exchange 4,664; treasury stock, 5,000 shares. The company is now the successor of the Copper Range Consolidated, which Dec., 1901, took over 99,699 shares of the company's stock. On Oct. 18, 1915, this holding company was formally dissolved and the shares exchanged for those of the Copper Range Co.

Dividends: \$1,536,086 in 1905; \$2,304,810 in 1906; \$2,304,810 in 1907; \$1,536,740 in 1908; \$1,536,930 in 1909; \$1,537,340 in 1910; \$1,357,104 in 1911; \$788,428 in 1912; \$1,084,498 in 1913; \$1,182,003 in 1915; \$3,941,648, or \$10 per share, in 1916; \$2.50 per share quarterly in 1917; total dividends to Dec. 31, 1916, \$19,110,397.

The balance sheet shows:

Assets:	1916	1915	1914
Cash at Boston.....	\$2,647,943	\$853,641	\$177,249
Cash at Mine and supplies.....	813,945	615,559	627,460
Copper on hand.....	2,053,758	1,934,027	1,053,733
Copper Range R. R. Bonds.....	870,000	890,000	876,000
Accounts receivable.....	89,917	82,414
Michigan Sm. Co. stock.....	340,000	76,470	340,000
	<hr/>	<hr/>	<hr/>
	\$6,815,564	\$4,689,697	\$3,146,036
Liabilities:	1916	1915	1914
Notes payable.....	\$1,200,000
Mine indebtedness.....	\$194,319	\$189,949	237,400
Accounts payable.....	226,817	201,949
One-half Champion.....	835,966	907,934	603,410
Excess of assets.....	5,558,460	3,390,464	1,105,226
	<hr/>	<hr/>	<hr/>
	\$6,815,564	\$4,689,697	\$3,146,036

Net income for 1916 from operations of all the subsidiary companies before deducting dividends was \$6,078,189, or \$15.40 per share. The dividend was but \$10, the difference being added to surplus.

Holdings consist of the entire assets of the Copper Range Consol. Co., namely: 50,000 shares of Champion Copper Co., which is one-half the total

issue; 99,990 shares Baltic Mining Co.; 96,920 shares Atlantic Mining Co., and 42,443 shares of Copper Range Railroad Co. stock.

Trimountain Mining Co. and Baltic Mining Co. have been dissolved, as they are owned entirely by the Copper Range Co.

In 1917, the entire property of the South Range Mng. company was bought for \$50,000, consisting of 7,000 acres undeveloped mineral lands in Houghton and Ontonagon counties.

Property: 16,467.64 acres, mainly in Houghton County. Mining companies controlled own an additional 12,240.4 acres. Company secured an option on 3,500 acres lying to the south from the St. Mary's Mineral Land Co. and bought for \$50,000 scattered lands to the extent of 5,000 acres. Average yield of copper per ton of rock was 22.90 lbs. in 1914, 32.50 lbs. in 1915, and 33.07 lbs. in 1916, the highest figure yet obtained. The company's original tract of 9,360 acres mineral and 441 acres non-mineral land, lies between the Baltic mine (800 acres) on the south and the Trimountain (1,351 acres) on the north. The Champion lies between the Baltic and the St. Mary's Mineral Land property. The Atlantic mine has been idle since the mine was wrecked by air blasts in 1911. The Baltic mine, a highly mineralized amygdaloid bed 15'-60' wide, mined through three shafts, 2,500' deep. The Champion works three separate amygdaloid beds mined by four 2,000' shafts. The Trimountain output comes from the Baltic bed mined by 4 shafts, one 2,800' deep.

The company is the second largest producer of the Lake Superior district.

The total 1916 production of copper from which this company's profits are derived, that is, Baltic, Trimountain, and one-half of Champion, was 37,946,930 lbs., as compared with 37,035,642 lbs. in 1915. The average yield was 33.07 lbs. of copper per ton from 1,655,447 tons stamped.

Costs and Profits—1916

	Production Lbs.	Cost per Lb.	Profits	Price Rec'd
Baltic.....	12,425,804	10.85c	\$1,792,667	25.28c
Trimountain.....	8,720,558	11.1c	1,236,048	25.28c
Champion, one-half.....	16,800,568	7.8c	2,935,303	25.28c
	<hr/> 37,946,930	<hr/> 9.56c	<hr/> \$5,964,019	<hr/> 25.28c
Copper Range Co.:				
1915.....	37,035,642	8.06c	3,459,236.44	17.4c
1914.....	19,953,854	10.66c	541,961.06	13.38c
1913.....	18,767,359	11.71c	595,958.01	14.89c
1912.....	28,967,428	10.51c	1,631,676.10	16.16c
1911.....	29,310,579	9.74c	817,879.86	12.54c

The above table shows the effect of improvements in mining and of new mining and milling machinery. These improvements give assurance that operating results similar to those of 1916 may be expected to continue under average conditions.

Development: for 1916 totaled 39,665' and in addition there was 6,264' of raising.

Ore reserves: a satisfactory tonnage was developed in 1916, which was about equal in amount to that extracted. Tons of rock stamped in 1916 were 1,655,447. The new selling department of the company effected a substantial saving in commissions and proved an unqualified success. Copper Range is an assured success and worthy of all that has been said about it.

Copper Range Consolidated Co.

Company dissolved Oct. 18, 1915, shareholders receiving an equal number of Copper Range Co. stock in exchange.

Copper Range Railroad Co.

Office: 82 Devonshire St., Boston, Mass. Operating office: Houghton, Mich.

Officers: Wm. A. Paine, pres.; F. W. Paine, v. p. and sec.-treas.; preceding officers, John H. Rice, Frederick W. Denton, Thos. S. Dee, Wm. D. Calverley, Samuel L. Smith, F. R. Bolles, gen. mgr., directors.

Inc. 1899 in Michigan. Cap., \$5,000,000; shares \$100 par; issued, \$4,244,300. Debentures outstanding, \$2,280,000 first-mortgage 5% bonds. Company is authorized to issue bonds to extent of \$20,000 per mile of completed main line, and \$15,000 per mile of completed branch lines and side-tracks. Is controlled by Copper Range Company. Balance sheet of Dec. 31, 1916, gave cost of road at \$6,173,016, with equipment inventoried at \$871,500. Earnings were \$601,643 gross and \$186,979 net in 1914; \$811,346 gross and \$326,895 net in 1915; \$930,606 gross and \$324,131 net in 1916. Credit balance as carried to balance sheet, \$712,948. About 75% of the gross income is derived from transportation of ore, mineral and freight.

The railroad has upwards of 100 miles of trackage, the 65-mile main line running from Calumet to McKeever, and connecting with the Keweenaw Central at Calumet; the Duluth, South Shore & Atlantic, Hancock & Calumet and Mineral Range railways at Hancock and Houghton, and the Chicago, Milwaukee & St. Paul railway at McKeever. The company also has trackage rights over 19 miles of the Chicago, Milwaukee & St. Paul railway, between McKeever and Ontonagon, and operates a daily passenger service between Calumet and Ontonagon, with additional trackage rights of 73 miles over the same line, over which fast freights are operated between Calumet and Channing, Mich. Trackage rights have been given the Chicago, Milwaukee & St. Paul over the Copper Range between McKeever and Houghton, and a direct passenger service, with exceptionally good equipment, is operated jointly by the Chicago, Milwaukee & St. Paul and Copper Range lines, between Chicago and Houghton. Spurs connect the main lines with all of the principal mines along the right-of-way.

The company owns a half-interest in a bridge crossing Portage lake, between Houghton and Hancock; also extensive water frontage on Portage lake, in the western part of Houghton, with general office building, shops, roundhouse, warehouses and wharves for merchandise and coal. The coal wharf is equipped with modern unloading machinery, and has deep water alongside, capable of accommodating the largest freighters plying the great lakes. The Copper Range railway is a model small road.

Baltic Mining Co.

Company has been dissolved. Its properties are owned entirely by the Copper Range Company, including \$80,000 stock in the Michigan Smelting Co.

Paid dividends of \$7.950,000 to end of 1913, dividends being \$12.50 in 1905; \$14 in 1906; \$10 in 1907; \$9 in 1908; \$10 in 1909; \$10 in 1910; \$5 in 1911; \$7 in 1912; \$2 in 1913. Net earnings, 1916, were \$1,792,667, and company ended the year with a surplus of \$3,233,184. Total assets were given as: \$3,314,564, with total liabilities of \$81,380.

Lands: 800 acres, near the eastern limit of the Michigan copper belt, about 75 acres being on the eastern sandstone and non-mineralized. Hold-

ings comprise all of Sec. 21 except the S. E. $\frac{1}{4}$, and W. $\frac{1}{2}$ of Sec. 20, T. 54 N., R. 34 W. Lands are bounded on the north by the Wheal Kate and Sec. 16 of the Atlantic; on the east by St. Mary's Mineral Land Co.; on the south by St. Mary's lands, lands of Hussey, Howe & Co., and the Trimountain mine; on the west by the Trimountain. Exchanged 39 acres, 1905, with the Atlantic mine, which will enable the Baltic to sink No. 5 shaft to much greater depth than otherwise possible. To the southward the Trimountain and Champion mines are opened on the same bed, which has a strike of N. 63° E., from Baltic shafts 2 to 5, and to the northward is the Superior mine, on the same bed. The dip of the bed averages about 73°, being the sharpest of any developed cupriferous bed in the Lake district.

The Baltic amygdaloidal bed is exceptionally strong, ranging 15 to 60' in width, and so well mineralized that at most points it can be more or less thoroughly stoped from wall to wall. The great width of the stopes has brought about the use of a walling system, by which waste rock is built into dry walls along the drifts, thus saving timbering, while giving stronger walls than any timber could supply, and saving the cost of hoisting lean rock. The walling system of the Baltic has proven a success under actual test, and is now in general use in the Lake district, the credit being due Mr. Denton. A little melaconite is found in narrow fissures crossing the lode, these being too small to follow, but the black oxide ore mined in the stopes is saved in the milling, carrying 35 to 40% copper as dressed, and smelts readily with the native copper mineral. The native copper of the Baltic is arsenical, and it is probable that some copper arsenides are mined and milled, as narrow arsenical fissure veins occur occasionally in the district south of Portage lake. While the finished copper is arsenical, it makes wire of great tensile strength.

Development: shafts are numbered from south to north. In 1916, 20,143' of new openings and 584' of shaft sinking was done.

No. 1, the discovery shaft, located between Nos. 2 and 3, was sunk at a wrong angle, and was abandoned at depth of 219'.

No. 2, the southernmost shaft, is 2,773' deep, began production 1906 and furnished about half of the 1916 production. The surface plant at No. 2 includes a boiler house with two 250 h. p. Stirling boilers, and an engine house with a Nordberg air compressor reducing 4,000' of free air per minute to a pressure of 70 lbs. per square inch, and a Nordberg hoist with double-conical drum. The shaft rock house has a crusher operated electrically, and the shaft has concrete stringers.

No. 3 shaft, 1,170' northeast of No. 2 and 3,103' deep, has a steel shaft rock house of the circular type, with 1,200-ton bins, equipment including a 16x18" engine, two 18x24" Blake crushers and a large crusher operated electrically.

No. 4 shaft, 900' northeast of No. 3 and 2,867' deep, has a frame shaft rock house sheathed with steel, 36x71', with 17x31' wing, 88' high, with 1,400-ton rock bins and two 18x24" Blake crushers.

No. 5 shaft, the northernmost, 885' N. E. of No. 4 and 1,624' deep, has a rock house duplicating that at No. 4. Stoping was done on the 9th and 14th levels, inclusive, and drifts run to the Atlantic boundary. The ground was considerably disturbed in the upper levels, but is growing more settled at the bottom, and good showings are reported on the West lode. Hoist is a duplex Nordberg, good for 1,500' depth. Shaft has been abandoned and ground tributary thereto is mined and ore hoisted through the No. 4 shaft.

Hand power cranes for handling mass copper have been installed at all shafts, and the mine has electric pumps. In 1915 installation of addi-

tional dynamo for underground haulage and construction of transformer house for new transmission line from stamp mills was completed.

The compressor house, between shafts Nos. 3 and 4, is 36x58' in size, with concrete foundations, stone walls and steel roof, housing a compressor with capacity to reduce 4,000 cu. ft. of free air per minute to a pressure of 70 lbs. per inch. Adjoining is a boiler house of similar material, 49x76', with wing 2x62', having four 250-h. p. Stirling boilers and a 140' self-supported steel smokestack. This boiler plant supplies steam for shafts 3 and 4. A new boiler plant was constructed in 1916. Adjoining the boiler house is a 360' coal trestle, of 5,000 tons capacity, underneath being a 5x8' concrete tunnel, through which coal is hauled in tram cars, on a down grade, by endless cable. The mine has a complete electric light plant. A considerable town has grown up about the mine with well-built dwellings for employees, on lands owned by the company. The property is served by the Painesdale branch of the Coper Range railroad, under the same control as the mine.

The mill, on Lake Superior, one-half mile west of the Atlantic mill, went into commission Dec., 1901, and was enlarged, 1907. The building is of structural steel, on stone foundation, equipped with 4 Allis simple heads of 500 to 625 tons daily capacity each, and 2 Nordberg compound heads of about 800 tons daily capacity each, giving the mill a capacity of about 4,000 tons daily. Equipped with Wilfley tables, Woodbury jigs and Deister concentrating tables for treating the finer slimes. The mill has crushing rolls and a Huntington mill for regrinding, and a settling tank for slimes. Mineral carries about 60% fine copper. Power is furnished by a 500-h. p. 14x32" Nordberg cross-compound engine, and a 180-h. p. auxiliary engine.

Adjoining the mill is a boiler house with five 250-h. p. Stirling boilers and a Green fuel economizer. Draft is secured by a set of duplex fans, driven by the mill engine, with a concrete smokestack 226' high and 8' in diameter. Behind the boiler house is a 25,000-ton coal storage yard, for the joint use of the Baltic and Atlantic mills, coal being brought to the boilers, through tunnels, by gravity. A 1,250 k. w. electrical plant, installed 1912, at the Baltic mill, supplied power for number of regrinding mills at this and other stamp mills of the parent company.

Water for the Baltic and Atlantic mills is furnished by a \$150,000 gravity dam across the mouth of Salmon Trout river. The entire steel structure is anchored to a 2" steel base plate, at the bottom of the concrete, by a large number of 1½", 2", and 2½" steel rods of 15 to 30' length. Water is taken from the dam about 20' below the crest by three 38" riveted steel pipes, one on the Atlantic and two on the Baltic side. Surmounting this structure is a trestle of the Copper Range railroad.

Production:

	Rock Stamped Tons	Copper Produced] Pounds	Yield per Ton, Lbs.	Cost per Pound	Price Received

1915.....	378,443	12,028,947	31.79	09.50c	17.40c
1916.....	369,287	12,425,804	33.65	10.85c	25.28c
Total.....	5,875,764	137,734,552	23.44	09.54c	15.40c

The ultimate productive capacity of the mine cannot be predicted with safety, but the present milling capacity is equal to making nearly 25,000,000 lbs. fine copper yearly, and ultimately this output, or even a greater production, should be reached.

Trimountain Mining Co.

Company was dissolved Jan., 1917, by Circuit Court, County of Houghton. Entire properties owned by the Copper Range Co.

Officers: John Jolly, supt.; Edw. Koepel, mill supt.; H. T. Mercer, engr.; Benj. D. Noetzel, clerk; Richard Bowden, mg. capt.; Wm. J. Richards, master mechanic.

Dividends: \$3 in 1903, \$5 in 1908, \$1.50 in 1910, \$3 in 1912, and \$2 in 1913.

Balance of assets Jan. 1, 1917, \$2,600,231, including \$1,946,358 cash and copper on hand amounting to \$94,572. Liabilities amounted to \$108,142, leaving a surplus of \$2,492,088 for the year.

Property: 1,120 acres, the E. $\frac{1}{2}$ of Sec. 19, W. $\frac{1}{2}$ of Sec. 20, N. $\frac{1}{2}$ of Sec. 29, and N.-E. $\frac{1}{4}$ of Sec. 30, all in T. 54 N., R. 34 W. The Baltic mine lies to the N. and the Champion to the S., with undeveloped lands to the E. and W.

Owing to a very heavy sand overburden the mine was opened by drop-shafts sunk through alluvium, with raises to surface on the angle of the dip of the stratified formation. The Baltic bed runs 15 to 50', with an average width of 25', on the Trimountain property. Heavy copper is found near the walls, and masses upwards of a ton in weight have been found, but values occur mainly disseminated in stamp rock.

The Trimountain shafts enter lean streaks or shoots, sometimes 500' in horizontal length, with flat northerly pitch or rake, underlain by copper ore. Lying parallel with and about 65' W. from the Baltic bed, is a wide amygdaloid, carrying some heavy copper and considerable stamp rock. This bed has not yet been worked, but may be made available for production at some time in the future. The great width of the lode has led to a dry-wall-ing with waste rock, which is used also for building underground chutes, which are roughly circular, with inner diameter of about 5' and are filled about with waste, as stopes are carried upward, three chutes being built at a sharp pitch, the wedging of the surrounding waste rock serving to hold the walls immovable. The saving in timbering brought about by dry-wall-ing and building chutes of mine rock is very great.

Development: No. 1 shaft, 210' north of the Champion boundary line, is sunk at an angle of 68°, with 1st level opened 168' below the collar, levels thereafter at 100' intervals. The upper levels tributary to No. 1 shaft have been worked out, and the shaft abandoned at depth of 2,284'. It now serves as a waste sand chute.

No. 2 shaft, 1,023' N. E. of No. 1, was 2,859' deep at the end of 1915, and a considerable improvement has been noted in ground below the 14th level, with the bottom levels the best opened in this shaft. The shaft rock house, has 2,000-ton rock bins, and is equipped with an engine, steam hammer and two crushers. Rock is raised by a 2,500-h. p. Nordberg direct-connected duplex hoist, with double-conical drum of 18' maximum diameter, capable of raising 6-ton skips from 1 mile depth.

No. 3 shaft, 1,027' N. E. of No. 2, sunk at an angle of 68°, was 2,563' deep at the end of 1915. Beneath 60' of sand, the rock was found to be badly fractured and barren down to the 2nd level, only becoming solid and payable below the 14th level.

No. 4 shaft, the northernmost, 2,715' deep at the end of 1916, is the best shaft of the mine.

During the year 9,084' of openings were made and 167' of shaft sinking was done. Tons of rock hoisted were 394,909, of which 45,405 tons were waste.

Equipment: the mine buildings near shafts Nos. 2 and 3, include machine and carpenter shops, smithy and warehouse. There is a 35-drill Rand air compressor at No. 2 shaft, with a Deane condensing plant in a separate building. The power plant at No. 3 shaft includes a battery of Stirling water-tube boilers and a 4,500' Nordberg air compressor. The mine has electric pumps and works about 60 drills. The property is served by the main line of the Copper Range railway, which reaches all the shafts and principal shops. Mine has underground electric haulage, on several of the levels.

The mine property has macadamized roads, a large boarding house, upwards of 100 dwellings, general store, hospital and a nurses' home.

Mill: The mill, at Beacon Hill, 2 miles west of Redridge, was destroyed by fire. It has not been decided, up to present time, to rebuild the mill. Output of mine is being treated in Baltic mill.

The mill boiler house has six 250-h. p. and two 200-h. p. Stirling boilers, the later maintaining a steam pressure of 180 to 200 lbs. per sq. inch.

The pump house at the mill has a 20,000,000-gal. Nordberg pump, taking water from a well connected with a tunnel running 1,960' to an intake crib in Lake Superior.

Production was begun Jan. 4, 1902, with 1 leased head at the Arcadian mill. The Trimountain began production with a return of 37 lbs. fine copper per ton, but fell off later to 27 lbs., and, when the present management secured control, the production fell sharply to 18 lbs. fine copper per ton.

Production:

	Rock Stamped, Tons	Copper Produced, Lbs.	Yield per Ton, Lbs.	Cost, c. per Lb.	Price, c. Rec.	Net Profits
1916	349,504	8,720,558	24.94	11.01	25.28	\$1,236,048
1915	349,684	8,302,896	23.75	09.53	17.40	654,746
1914	277,251	5,048,306	18.21	12.21	13.38	58,639
1913	229,149	4,990,938	21.78	12.62	14.89	113,363
1912	366,663	6,980,713	19.04	11.73	16.16	308,472

(d) Deficit.

Champion Copper Co.

Owned jointly by St. Mary's Mineral Land Co. and Copper Range company, is described under its own title.

Atlantic Mining Co.

Office: 82 Devonshire St., Boston, Mass. **Mine office:** Painesdale, Houghton Co., Mich.

Officers: Wm. A. Paine, pres.; F. W. Paine sec.-treas.; preceding offi-

cers, John R. Stanton, S. L. Smith, Frank P. Son, F. W. Denton and J. H. Blodget, directors.

Inc. Dec., 1872, in Michigan; reincorporated, 1901, for 30 years. **Cap.**, increased, 1902, to \$2,500,000, shares \$25 par; fully issued; paid in, \$11.80. Last assessment was \$2, Oct. 11, 1909, the first in 30 years. Has paid dividends of \$990,000, last in 1905. Owns \$40,000 stock in Michigan Smelting Co. Boston Safe Deposit & Trust Co., registrar; American Loan & Trust Co., Boston, transfer agent. Annual meeting, second Tuesday in March. The Atlantic Co. is controlled by Copper Range Consolidated Co., through ownership of 96,920 shares of the capital stock. Balance sheet of Dec. 31, 1916, shows surplus of \$259,657.

Lands: 8,217 acres, including 1,351 acres of mineral lands, 4,760 acres of timber lands, and 2,106 acres miscellaneous lands, latter including the mill site, and a valuable frontage on Portage lake. Mineral lands are S. $\frac{1}{2}$ of Sec. 4, except S. E. $\frac{1}{4}$ of S. E. $\frac{1}{4}$; N. $\frac{1}{2}$ of Sec. 9; N. W. $\frac{1}{4}$ of Sec. 10 and Sec. 16, all in T. 54 N. R. 34 W. Principal holdings are the old Atlantic mine, 640 acres, including the mines known before 1872 as the South Pewabic and Adams, located about 2 miles south of Portage lake and 4 miles southwest of Houghton, and the Sec. 16 tract of 640 acres. The mines, idle since 1911, are very fully described, Vol. X.

DETROIT & LAKE SUPERIOR COPPER CO.

MICHIGAN

Waterbury, New Haven Co., Conn. Is a half owner of the stock of the Lake Superior Smelting Co., which bought the plants of the Detroit & Lake Superior Copper Co. at Hancock and Dollar Bay, Houghton Co., Mich. Built a smelter at Detroit, 1850, and shortly after built another at Hancock, being the pioneer in Michigan smelting.

DOUGLASS COPPER CO.

MICHIGAN

Office: 705 Sears Bldg., Boston, Mass. Property north of Allouez and west of Ahmeek holdings in Allouez township, Keweenaw county, Mich.

Officers: Charles J. Paine, Jr., pres.; George P. Gardner, v. p.; Arthur E. Coe, sec.-treas.; preceding with R. S. Sheldon, C. C. Douglass, W. A. S. Chrimes and A. S. Knight, directors. Inc. 1912, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; assessable; 50,000 shares given for land, marked \$10 paid in value.

Property: 440 acres in a compact tract, being E. $\frac{1}{2}$ of Sec. 30 and W. $\frac{1}{2}$ of Sec. 29, embracing eleven 40-acre tracts formerly owned by the Sheldon Douglas and the Northey estates, and the St. Mary's Mineral Land Co. This tract covers the underlay, or deep extension of the Kearsarge lode into which the rich oreshoot now worked in the Ahmeek, pitches. To open this ground a 3,300' vertical shaft must be sunk.

Management plans selling treasury stock to raise necessary funds for development work.

EVERGREEN BLUFF MINING CO.

MICHIGAN

In liquidation. Property owned by Mass Consolidated Copper Co.

FEDERAL SYNDICATE COPPER CO.

MICHIGAN

Office: Hosking Blk., Calumet, Mich.

Officers: A. C. Stielow, pres.; H. E. Murray, v. p.; Harry Olson, 2nd v. p.; Dr. P. D. MacNaughton, sec.-treas.; John D. Kerr, asst. sec., with P. L. de Voist, Ernest Le Duc and John R. Ryan, directors; Mortimer North, engr.

Inc. Oct. 12, 1916, in South Dakota. **Cap.**, \$1,000,000; shares \$1 par. 152,272 issued on organization. The initial offering of stock May, 1917 was at 50c, changed June, 1917, to \$1 a share.

Property: approximately 360 acres in T. 57 and 58, N. R. 31 W., being the Salem tract, formerly owned by the Federal Copper Co., south of the

Phoenix shaft of the Keweenaw Copper Co. Lands cover a $1\frac{1}{2}$ mile stretch across the strike of the copper lode and near the Phoenix, St. Clair and Eagle River properties of the Keweenaw Copper Co., with Ojibway lands on west and east. Lands are crossed by Kearsarge amygdaloid which dips 30° N. W., giving 292.5 acres underlaid by this lode, whose copper content in this part of the range is as yet unprospected. Diamond drilling on this tract is planned for 1917-18.

FRANKLIN MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. **Mine office:** Demmon, Houghton Co., Mich. **Mill office:** Point Mills, Houghton Co., Mich.

Officers: R. M. Edwards, pres.-gen. mgr.; Henry D. Forbes, v. p.; Henry Tolman, treas.; preceding, with C. W. Van Law, C. A. Hight, Sidney J. Jennings and Harry M. Howard, directors. Albert L. Wyman, sec. Enoch Henderson, supt.

Inc. April 3, 1857, in Michigan. **Cap.**, \$500,000, and reincorporated, 1887, for 30 years; cap. increased, 1899, to \$2,500,000, and again increased, Nov., 1908, to \$5,000,000; shares \$25 par; issued, 166,473; paid in \$16.20, to Dec. 1915. Unissued stock has been set aside for the purpose of acquiring the total capitalization or 100,000 shares of the Rhode Island Copper Co. Has paid dividends of \$1,240,000, and has levied assessments of \$1,753,000, including a \$2 assessment called Aug., 1914. Federal Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, third Wednesday in April.

Balance sheet of Dec. 31, 1916, showed a cash surplus of \$192,094, as compared with \$30,022 in 1915. The revenue in 1916 totaled \$834,616. All notes payable, amounting to \$155,000 on Jan. 1, 1916, have been paid from earnings, so the company has no indebtedness save current expenses.

Property: 3,280 acres of mineral property, and a 217-acre mill site, with 1 mile of frontage on Portage lake. The old Franklin mine (described Vol. VIII), 160 acres, was sold, July, 1908, to the Quincy Mining Co., for \$170,000, and Sec. 6, T. 55 N., R. 33 W., 640 acres, lying directly north of the Franklin Junior and west of the Rhode Island, was bought from St. Mary's Mineral Land Co., 1909, for 33,333 shares of stock.

Property carries 2 miles of the strike of the Pewabic amygdaloid and other cupriferous beds of the Keweenawan series. In addition to the main tract, there are 3 other tracts of mineral lands, of 160, 480 and 640 acres. The company also controls, and is absorbing, the Rhode Island Copper Co., which has 800 acres immediately north of the Franklin Junior mine.

Development: early work was on the Franklin Junior property, where two parallel lodes, the Allouez conglomerate and the Pewabic amygdaloid, 500' apart, have been worked. The amygdaloid worked prior to 1902, gave but 9.65 lbs. copper per ton, and was abandoned in favor of the conglomerate until the latter, decreasing in width and value on the 2,000' to 2,400' levels, was abandoned and work resumed on the Pewabic in the Franklin, Jr., shaft (No. 1), sunk about 20' in the footwall. The values being extremely low, mining was stopped, and only exploratory work done. In 1913, a crosscut was started eastward from the shaft at the 3,200' level to explore the entire eastern part of the company's holdings. At 550' from the amygdaloid this crosscut entered payable ore in the Allouez conglomerate, in the Autumn of 1913. Drifts were at once started to prove the extent and copper content of the orebody. Work continued until August, 1914, and was resumed in July, 1915, the orebody now being developed for 1,100' on the 32nd level. It is opened for stoping on each level from the 27th down to the 36th, an average of 700' on each level,

or a total of 7,043' of drifting, with a continuous raise, used as an ore chute from the 2,700' to the 3,700' level, where ore is gathered by electric motor trains and carried to the shaft. Besides this main raise there is another for men and supplies, the new raises in 1916 aggregating 391'. The shaft is down to the 37th level, and shows considerable improvement below a depth of 2,000'. Shaft is equipped with a steel circular rock house (Edwards design), formerly used at No. 2 conglomerate shaft. On the 28th level a crosscut driven in 1915 connects the lode with the shaft, and a similar crosscut has been driven on the 37th level. The old conglomerate shaft, bottomed at 2,400' on the incline, has not been connected.

The most important development in 1916 was the extension of No. 27 and 22 levels S. from No. 1 shaft to a point under No. 2 shaft. The lode here is richer and wider than the average of the conglomerate. This ground, up to No. 17 level, is untouched. No. 2 shaft which had caved, is being reopened and equipped. The work is difficult, but No. 14 level had been reached in June, 1917.

Underground costs were considerably reduced by mechanical haulage on No. 29, 30 and 31 levels.

Having cut the Allouez conglomerate, the exploration crosscut on the 32nd level was continued to a total distance, Dec. 31, 1916, of 4,542' from the Pewabic lode. The crosscut encounters and passes for 25' through the Calumet conglomerate at 2,150', the 10' Osceola amygdaloid at 2,820' and the Kearsarge conglomerate, 40' wide, at 3,380' from the shaft, but all three lodes were devoid of any copper. Twenty-two other amygdaloids were also cut, 9 of them copper bearing, but only 2 rich enough to warrant exploratory drifts and raises; the remaining 13 were barren.

The long crosscut on No. 32 level was driven through the Kearsarge lode and stopped on the footwall side of the Wolverine sandstone, 4,542' from the Pewabic amygdaloid. Ore of sufficiently good grade to warrant further exploration was found on the footwall side of the Kearsarge amygdaloid.

Production in 1916 came from drift-stopes and stopes so placed as to need short tramming. Total openings, development and exploratory, amounted to 8,577' in 1916. Company employs 340 men at mine and 80 men at mill.

Equipment: includes a Nordberg hoist at No. 1 shaft hoisting a 10-ton skip, and has special air-compression cylinders, storing up energy, otherwise wasted, in compressed air, the compressed air being mixed with steam, in the cylinders, as a prime motive force.

The mill is reached by the Mineral Range railroad. Equipment includes 5 Allis-Chalmers 2-way heads, with 20x24" cylinders, each capable of crushing 350 tons of conglomerate or 500 tons of amygdaloid rock daily. Each stamp is fed from a 1,000-ton rock bin, and equipped with hydraulic separators, which remove considerable heavy copper. The washing plant includes 8 Woodbury classifiers, 20 roughing jigs, 15 finishing jigs, 32 Wilfley and 10 Overstrom tables. The jigs are of the Hodge eccentric type, with centershield copper discharges, obviating skimming.

All stamp mortars are now on concrete foundations.

Power for the mill is furnished by a 16x32" Allis-Chalmers engine, and steam is supplied by two 500 h. p. Stirling boilers. The boiler house has a self-supporting brick-lined smokestack of 7' diameter, 165' high, on a 52' brick foundation. Water is furnished by a 15,000,000-gal. Allis-Chalmers vertical compound pump, having 12x42" high-pressure and 42x42" low-pressure cylinders, with 47" stroke and plungers of 37½" diameter. Water is drawn through a 36" pipe line, running 200' under the rock to a crib

protected by quarter-inch screens. The mill has a 5x12" duplex fire pump with fire hose, and electric light. There is a 267' wharf at the mill site, equipped with coal hoist and sheds, with 18' of clear water alongside. The mill site has about 20 dwellings for employees.

Production: in 1903 the recovery of copper was 15.25 lbs. per ton of rock stamped and in 1907 was only 11.48 lbs., falling, 1909, to 9.47 lbs. per ton of rock stamped. The largest production ever secured by the mine was 5,259,140 lbs. fine copper in 1902. Recent production has been: 4,206,085 lbs. in 1905; 4,228,650 lbs. in 1906; 4,401,248 lbs. in 1907; 3,703,421 lbs. in 1908; 1,615,556 lbs. in 1909; 966,353 lbs. in 1910; 820,203 lbs. in 1911; 1,710,651 lbs. in 1912; 1,021,440 lbs. in 1913; 93,283 lbs. in 1914. 1916 production was 286,603 tons hoisted, 19,317 being discarded and balance, 267,286 stamped, yielding 3,116,566 lbs. refined copper, equal to 11.7 lbs. per ton. The daily output 1917 is 1,100 to 1,400 tons of ore.

In 1918 company will attempt (once more) to develop the Pewabic or Quincy amygdaloid lode, as good rock was found in it on the 30th level.

Property is now on a profitable basis and management excellent.

GLOBE MINING CO.

MICHIGAN

Office: 15 William St., New York.

Officers: L. P. Yandall, pres.; R. D. Rickard, v. p.; J. R. Stanton, sec.-treas.; preceding officers, and W. H. Leggett, of Detroit, directors.

Inc. May, 1911, in Michigan. **Cap.**, \$78,250; shares \$25 par; fully paid and fully issued.

Property: 3,200 acres, Secs. 1, 2, 3, 4 and 5, T. 53 N., R. 35 W., extending entirely across the Keweenaw trap formation, from the eastern to the western sandstone, lies next south of the Champion, and immediately north of the Challenge, carrying about 6,000' of the strike of the Baltic and all parallel beds. Mine was developed by the Copper Range Consolidated Co., under option, but option was relinquished, Feb. 1, 1909, after expenditure of upwards of \$500,000.

Development: diamond-drill borings, to locate the Baltic bed, gave some cores with excellent values, but disclosed a heavy overburden of sand and boulders, rendering it necessary to reach the solid rock by a vertical shaft. Work was begun early 1905, but the first shaft was abandoned, owing to quicksand, and was replaced by a new vertical shaft, about 700' south of the Champion boundary. The shaft is telescopic, inside measurements of timbers at the collar being 13' 3"x23' 3", with a second section below of 9x19' 6", and a third section of still smaller size.

The shaft is 1,040' deep, with first level 356' below surface, and plats were cut thereafter at 100' intervals. The Baltic amygdaloidal bed was tested by some diamond-drill boring, and about 900' of drifting on the seventh level, which is about 1,000' from surface, and showed a little copper, in patches, but on the whole was unpayable, and work was suspended Jan. 31, 1909, and property has been idle since. Notwithstanding the unfavorable results secured by the work done so far, the property is by no means devoid of promise.

GRATIOT MINING CO.

MICHIGAN

Idle. Office: 12 Ashburton Place, Boston, Mass. **Operating office:** Calumet, Mich.

Officers: Rodolphe L. Agassiz, v. p.; Geo. A. Flagg, sec.-treas.; Jas. MacNaughton, gen. mgr.; Walter Hunnewell and Francis L. Higginson, directors.

Inc. Feb. 16, 1906, in Maine. **Cap.**, \$300,000; shares \$3 par, fully paid. Is controlled, through ownership of 50,100 shares, by the Calumet & Hecla Mining Co. Ended year Dec. 31, 1914, with debit balance of \$400,833.

Property: 600 acres, the N. W. $\frac{1}{4}$ of Sec. 26, N. E. $\frac{1}{4}$ of Sec. 27, S. E. $\frac{1}{4}$ of Sec. 23, and S. E. $\frac{1}{4}$ of Sec. 22, except the N. W. $\frac{1}{4}$ of the N. W. $\frac{1}{4}$, T. 57 N., R. 32 W. Property lies S. and E. of the Seneca and N. and E. of the Mohawk, carrying the Kearsarge amygdaloidal bed under about 175 acres, to a maximum depth of about 2,700'. Extensive drill borings were made before the shafts were started. The Kearsarge bed averages about 12' in width, with strike of N. 42° E., and average dip of 33 to 36° with the horizon, and its copper contents are painfully low.

Development: by two 3-compartment shafts, exact duplicates, sunk at an angle of 36° on the Kearsarge bed. Levels are opened at 100' intervals.

No. 1 shaft, about 1,500' from the Seneca boundary, is 1,900' deep, having a bed up to 18' in maximum width. Drifting has been done on the alternate odd-numbered levels, from the 1st to 9th, inclusive.

No. 2 shaft, 1,475' S. W. of No. 1, and 1,800' N. of Mohawk No. 1, is 1,520' deep, and drifting has been done on the 2nd, 3rd, 5th and 7th levels, the best showing being on the 5th.

Property is served by a $2\frac{1}{4}$ -mile spur of the Mineral Range railway, built north from the Mohawk mine.

Production: begun July, 1910, was 28,552 tons of rock, yielding 265,-869 lbs. fine copper, and in 1911, was 1,347 tons rock, yielding 14,275 lbs. fine copper, or about 9.3 lbs. copper per ton of rock milled. The mine was shut down April 3, 1911. It is obvious that, owing to its comparatively small size and shallow depth, the Gratiot cannot work the Kearsarge bed profitably at the average price of copper, except on a very large scale, and it could be operated much more advantageously in connection with the Seneca than alone.

HANCOCK CONSOLIDATED MINING CO.

MICHIGAN

Hancock, Mich.

Officers: John D. Cuddihy, pres.; Capt. Thos. Hoatson, v. p.; John H. Hicok, sec.-treas.; preceding, with Allen F. Rees, Capt. Samuel B. Harris and Capt. Jas. Hoatson, directors; C. E. Weed, gen. mgr.; Richard Coombs, mg. capt.; Daniel Fisher, clerk; C. W. McDougall, engr.; Fred G. Schubert, master mechanic.

Inc. June 11, 1906, in Michigan. **Cap.**, \$5,000,000; shares \$25 par; issued, \$2,500,000; fully paid with \$3 assessment levied March, 1915, payable \$1 each, in May and Sept., 1915, and Jan., 1916. Old Colony Trust Co., Boston, Mass., registrar; State Street Trust Co., Boston, transfer agent. Stock listed on Boston Exchange. Annual meeting, third Wednesday in June.

Company began business with \$1,000,000 and paid \$552,623 for its property. Disbursements for year ending Dec. 31, 1916, were \$771,515, made up of \$705,778 for mining expenses, including smelting, freight, marketing, etc.; \$22,445 interest on notes; \$30,823 taxes and \$12,467 for Lake Milling, Sm. & Ref. Co. stock.

Profits for 1916 were \$103,688. Receipts were \$875,202 in 1916, made up of \$755,946 from 2,690,859 lbs. copper marketed at 28.093c; \$117,016 from assessments; \$2,240 interest.

Property: consists of 840 acres of mineral territory, immediately west and south of the old Quincy mine, in T. 55 N., R. 34 W., including the original Hancock mine, 136 acres, set aside, 1859, by the Quincy Mining Co., which reserved the mineral rights to the Pewabic bed. The Pewabic bed, on lands other than the original Hancock tract of 136 acres, is owned by the Hancock Consolidated. Lands carry the Pewabic, Quincy, West and Hancock of Sumner copper-bearing beds

Perhaps the best part of the Quincy mine is tributary to No. 7 shaft, which is immediately north of the Hancock boundary.

In June, 1916, approximately 75 acres were sold to the Quincy Mining Co. for \$226,000. In part payment therefor the Hancock was granted the right to use Quincy No. 7 shaft and 1 stamp of the Quincy mill. Company also owns lots 6 and 7, Sec. 28, for a mill site.

The old Hancock mine, opened 1859, was closed June 1, 1885, on account of the low price of the metal, after producing 5,709,384 lbs. fine copper. The Hancock or Sumner amygdaloidal bed averaged about 12' in width below the fifth level, to a depth of 1,052', where the mine was bottomed.

The property carries the upper half of the Michigan series of cupriferous traps and conglomerates, and has 4 known copper-bearing beds, the Pewabic being the most important. The property also carries the underlay, but not the outcrop, of the 3 copper-bearing beds of the Quincy, these being the Quincy to the eastward, apparently of little value, followed by the Pewabic, which is the main bed of the Quincy and the so-called West lode of the Quincy. The known copper-bearing beds outcropping on the Hancock property are the Hancock or Sumner, mined in the old Hancock mine, and now known as No. 1 lode, lying about 1,100' west of the Pewabic; the old West bed, now known as No. 2 lode, lying about 300' west of No. 1, and the New West bed, now known as No. 3 lode, lying about 75' west of No. 2.

Development: No. 1 shaft is the old main 3-compartment shaft of the Hancock mine. It has a remodeled wooden shaft rock house, with a Lake Shore hoist good for 2,000' depth.

The new and main 5-compartment working shaft known as No. 2 is 2,200' N. W. of No. 1. It is vertical, with dimensions 9'6"x29'6", being the second largest in the Lake Superior district, and is 4,001' deep. This shaft intersects No. 3 bed at a depth of 2,038', the bed here showing a pitch of 37°, compared with 47° in the upper workings, this flattening of 10°, at depth, corresponding to a similar flattening shown to the northeast in the No. 7 shaft of the Quincy. The No. 4 lode is intersected by the shaft at a depth of 3,105'; it is 17' thick and carries payable ore.

Ground below the 53rd level, 4,000' below the surface, is reached by 2 subsidiary shafts sunk from the 49th level, connecting with the No. 2 shaft through chutes on the 53rd level and through drift connections on the 49th level.

Considerable drifting has been done on both No. 2 and No. 3 beds, No. 3 being opened by a winze from the 10th to 18th levels, with drifts on the 9th to 18th levels, inclusive, several of which are more than 1,000' long. No. 2 shaft has loading stations on the 13th, 18th, 23rd, 27th, 34th, 39th, 44th, 49th and 53rd levels, to which rock broken will be sent by chutes from the levels above.

No. 2 shaft has a shaft rock house that is the most modern in the Lake Superior district. The building has a total height of 128', with working floor 60' above the ground. The bins are of 1,000 tons capacity each.

Work in 1916 was confined to blocking out ground for mining in the lower workings tributary to No. 2 shaft and in extending levels south from Quincy No. 7 shaft into Hancock ground from the 66th to 71st levels. Stopping was done principally on No. 4 vein, on the west veins and on No. 8 lode, all between the 34th and 53rd levels. Total amount of work done was 7,615'.

Equipment: includes two 50-ton Farrel crushers and a smaller crusher to treat waste rock. The 2 large crushers are fed by 2 steel traveling-belt picking tables; crushers each have a 50 h. p. induction motor and each pick-

ing table has a 10 h. p. induction motor. Two men per shift are expected to do all work on the crushing floor.

The main engine house at No. 2 shaft is equipped with 2 hoists, main engine being a Sullivan Corliss direct-connected hoist, operating 2 skips in counterbalance, with capacity to hoist 8 tons of rock from a depth of 4,000', at a steam pressure of 150 lbs. There also is a Sullivan first-motion hoist.

The steel compressor house has an electric traveling crane, 13-drill and 16-drill air compressors and a new 35-drill tandem-compound air compressor. The boiler house has 2 batteries of 4 return tubular boilers, each 72" in diameter and 18' long.

Buildings at No. 2 include a machine shop, smithy, office, changing house and a number of dwellings. The main plant at No. 2 shaft is reached by a spur of the Mineral Range railway. Company employs about 200 men when running full time.

Electric haulage installed in lower levels of No. 2 shaft, 1917.

Production: in 1916 was 203,112 tons rock milled, producing 2,824,934 lbs. copper, or 13.9 lbs. per ton. Costs are estimated at 20c per lb. Output, 1,100 tons daily, October, 1917.

The mine has been developed very extensively and given a thoroughly modern and complete equipment. The ground opened, while by no means as rich as some in the Lake Superior district, is of fair average value and with exceptionally good equipment and an able and experienced management, the Hancock promises to make a successful low-grade mine.

HOUGHTON COPPER CO.

MICHIGAN

Office: 199 Washington St., Boston, Mass. **Mine office:** Houghton, Houghton Co., Mich.

Officers: Chas. J. Paine, Jr., pres.; Geo. P. Gardner, v. p.; A. E. Coe, sec.-treas.; preceding, with W. Cameron Forbes, Jas. P. Edwards and Frederick W. Nichols, directors; Rex R. Seeber, supt.

Inc. Jan., 1910, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; assessable; 67,000 issued; \$8 paid. Is controlled by St. Mary's Mineral Land Co., through ownership of 37,228 shares of the 67,000 shares outstanding. Old Colony Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent.

Annual report for year ending Dec. 31, 1916, shows: total receipts, \$78,351, of which \$3,520 was from assessments and \$46,361 is due on copper sold. Expenditures for 1916 totaled \$78,694. Balance of assets was \$24,419, and 7,580 lbs. copper.

Property: 23 acres of surface rights, with mineral rights to 160 acres owned in fee, being the N. W. $\frac{1}{4}$ of Sec. 14, T. 54 N., R. 34 W., lying E. of the Isle Royale mine and adjoining the Superior mine. Diamond drilling was begun March, 1910, in the horizon of the Baltic-Superior bed, showing 2 cupriferous amygdaloidal beds, the Superior and East lodes, 17' and 20' wide respectively, with dip of 51°, separated by about 83' of trap and conglomerate, the lower bed overlying another conglomerate at a distance of about 150', these strata corresponding exactly with the Baltic formation. Maximum operating depth is figured at 2,800'.

Development: by 620' shaft, sunk about 60' in the footwall, and a winze sunk 513' below the 620' level, disclosing rich copper rock in the Superior lode. The ground penetrated by the shaft is soft and badly broken, necessitating close timbering and occasional concreting; the shaft has been lined with a concrete collar for depth of 300'. Work in 1916 included 1,312' of drifts and crosscuts on the 4th and 12th levels. Winze was sunk 113' to 1,133' cutting the Superior vein which is 40' wide at this

point and shows good rock on foot and hanging wall with about 10' of poor rock between.

The crosscut on the 12th level encountered the west lode which showed a little copper, but conditions do not warrant the sinking of the main shaft from the 6th level to this depth. On the 450' level drifting on the vein showed some copper, but not in commercial grade or quantity.

Equipment: includes a small power plant, and a 16-drill Nordberg electric air compressor. There are necessary buildings, including an office, changing house and warehouse, all of wood.

Due to the outbreak of the European war the mine was closed down from Sept., 1914, to July, 1915.

Production:

	Tons Rock milled	Lbs. Min. prod.	Lbs. Min. p. t.	Lbs. Ref. Copper	Lbs. Cu. p. t. Rock
1916	19,444	365,880	18.8	204,274	10.55
1915	14,656	258,900	19.5	156,766	10.69

Sale price for 1915 was 22.2c per lb.; for 1916, 29.21c.

The property, though small, for the Lake Superior district, is considered promising and management good. Company employs about 35 men.

The mine is almost paying expenses from ore shipped, but management is waiting for development in the adjacent Superior mine (31st level) before sinking shaft to the 8th level. In October, the Houghton company was cleaning out the 19th level of the Superior mine preparatory to extending it 300' or so into Houghton ground.

Is a promising proposition.

HULBERT MINING CO.

MICHIGAN

Idle. Albert S. Bigelow, pres., 199 Washington St., Boston, Mass. W. A. S. Chrimes, sec.-treas.; Fred W. Nichols, agt., Houghton, Mich.

Inc. about 1865, in Michigan. **Cap.**, \$1,000,000; shares \$25 par; all issued.

Owns 1,640 acres of mineral land, in Houghton and Keweenaw counties, Michigan, undeveloped; part of the surface rights have been sold, but mineral rights reserved. Property valued at \$21,862. Gross receipts for 1912 were \$403. No mining done since organization.

HUMBOLDT COPPER CO.

MICHIGAN

Idle. Copper Falls, Keweenaw Co., Mich. Thos. Hoatson, pres.; C. A. Wright, sec., Calumet, Mich.

Inc. 1863, in Mich. **Cap.**, \$1,000,000; shares \$25 par. Amount paid in, \$100,000 in real estate, and \$240,986 cash. Annual report of Dec. 31, 1915, shows \$2,281 cash on hand. Is controlled through ownership of 5/6 of the outstanding stock by the Keweenaw Copper Co. Annual meeting, fourth Tuesday in March.

Property: Secs. 16 and 21, the former fractional, T. 58 N., R. 31 W., all on the mineral belt, about midway between the Arnold and Phoenix mines, lying north of the greenstone, with the Eagle River and Natick mines to the south. The mine, opened 1853, though never a producer, has a single shaft about 300' deep, sunk on the ashbed, which shows the same characteristics as at the Arnold, carrying occasional bunches of rich ground.

In May, 1914, diamond drill holes numbered 12, 13 and 15 were bored through a portion of the hanging wall and across the lode. Holes 12 and 13 intersected the copper bearing part of the lode at 489 feet and 364 feet respectively from surface. Hole number 15 cut this same formation at 713 feet from surface, and disclosed vein matter of good width with good values in both the upper and lower portions of the amygdaloidal flow in each of the holes.

Equipment: includes an engine house, compressor building, smithy, warehouse and 4 dwellings.

No work was done, 1915-1917.

HUSSEY-HOWE MINING CO.

MICHIGAN

Address: care C. A. Senecal, Lake Linden, Mich.

Officers: Wm. H. Rea, prés., with Geo. W. Guthrie, Geo. W. Howe, C. G. Hussey, F. B. Nimick and G. H. Childs, all of Pittsburg, directors.

Inc. 1911, in Michigan. **Cap.**, 100,000 shares; \$25 par; 54,000 shares issued, fully paid; 45,000 going to owners for property; 9,000 sold for development.

Property: 320 acres, bounded by Indiana and Bohemia ground, includes N. E. $\frac{1}{4}$ Sec. 22 and N. W. $\frac{1}{4}$ Sec. 23, T. 51, R. 37 W., in Ontonagon county. Property shows outcrop of the Eastern sandstone and 100' west of it an amygdaloid vein supposedly the Baltic lode of 2 veins. It shows copper carbonates and oxides over a width of over 100' resembling the Baltic outcrop of Champion, 25 miles N. E. As the dip is 60 to 65°, the property contains a valuable area for working.

INDIANA MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. **Mine office:** Dee Bldg., Houghton, Mich.

Officers: R. M. Edwards, pres. and gen. mgr.; Sidney J. Jennings, v. p.; Henry Tolman, treas.; preceding officers, Carlos W. Van Law and C. A. Hight, directors; Albert L. Wyman, sec.; Thomas Bennett, supt.

Inc. Aug. 11, 1909, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; issued \$2,000,000; paid in \$12.50. State Street Trust Co., Boston, transfer office; Federal Trust Co., Boston, registrar. Annual meeting, third Thursday in April. Company gave 60,000 shares to owners of lands for its property and offered 36,000 shares, Aug., 1909, for public subscription. Receipts, 1916, were \$15,942, of which \$14,574 was from 1915. Expenditures, 1916, totaled \$46,179, accounts showing balance of liabilities at end of year of \$30,234, as compared with balance of \$14,574 in 1915.

Property: 1,200 acres bought 1909 from the Indiana Copper Co., the tract lying N. E. of the Lake and N. of the North Lake, in Secs. 21, 27 and 28, T. 50 N., R. 37 W. The property was worked on a small scale previous to the burning of the mill, 1864, but the old openings are inaccessible and no work has been done thereon by the present company. The lands are heavily timbered and can supply all mining timber for a considerable time. Ample water is available from the Fire Steel river. Transportation is furnished by a spur of the Copper Range railway, and the Mineral Range line is within a short distance.

The lands are traversed by the Evergreen belt of copper-bearing amygdaloidal beds and by a number of unidentified cupriferous beds lying between the Evergreen belt and the eastern sandstone. The southeastern part of the tract is in the hypothetical horizon of the Lake amygdaloidal bed. The Indiana is covered with a heavy overburden of sand, hampering drilling operations. The ground has been tested by extensive diamond-drill borings.

No. 2 drill hole disclosed phenomenally rich copper rock from a bed immediately under a 400' conglomerate. The nature of this ore is a subject of dispute, it having been called sandstone, conglomerate and felsite, but there is little question that it is an altered felsite; the rock consists essentially of quartz and light colored mica, with secondary infiltrations of calcite and small irregular grains of disseminated native copper. The even size of the quartz grains, with their interlocking texture, indicates an igneous origin. There are indications that the 40' of rich felsite rock and

a second zone of about 25' width, are parts of a single bed of approximately 265' width, the second zone of 25' being near the center of the wide bed. No. 5 hole and No. 9 hole both cut felsite carrying heavy copper, apparently a continuation of the same orebody.

Ground was broken, Jan., 1911, near No. 2, the discovery hole, for a vertical shaft, the overburden at this point being about 110'. The shaft is cylindrical, of 17' outside diameter, lined with steel and concrete, with inner dimensions of 8x12', and is 1,415' deep.

During 1916 new work totaled 1,029'; 379' on the 1,150' level and 644' on the 1,400' level, done to find the ore cut by No. 2 drill-hole at 1,450'. Rock of similar character-felsite was found on both levels, also copper at several places in the felsite near the felsite-trap contact, but not in commercial quantities. No. 2 hole was not found, but No. 9 was found 100' from its theoretical position. The conclusion is that the deposit cut by No. 2 hole cannot be of any great size, or have a regular trend. Although this has not been proved, it was decided to explore in the South Lake amygdaloid lodes, an incline shaft being sunk for this purpose. In July, 1917, at 150', the shaft passed through an amygdaloid lode 25' wide, but not containing commercial quantities of copper. Work will proceed to 300' depth.

Equipment: includes a steam hoist good for 2,500' depth, compressor and necessary mine buildings.

ISLAND COPPER CO.

MICHIGAN

Office: 1400 Alworth Bldg., Duluth, Minn.

Officers: Thos. F. Cole, pres.; Geo. C. Stone, v. p.; Frederick W. Nichols, sec.; preceding, with M. H. Alworth, Oscar J. Larson, Henry Nolte, Geo. G. Barnum, Geo. A. Tomlinson and Julius H. Barnes, directors; Edw. J. Maney, treas.

Inc. March 9, 1909, in Michigan. **Cap.**, \$1,000,000; shares \$25 par; \$6.00 paid; issued, 26,735 shares at \$6 each, or \$160,410. Annual meeting, first Tuesday in June.

Property: on Isle Royale, over 92,000 acres out of the 125,000 acres comprising the island, includes the former holdings of the Isle Royale Land Corporation, Ltd., and the Island Mining Co. Idle. See Vol. XI, Copper Handbook.

ISLE ROYALE COPPER CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Houghton, Mich.

Officers: E. V. R. Thayer, pres.; Rodolphe L. Agassiz, v. p.; E. B. Dane, Chas. O. Whitten, F. L. Whitcomb, E. C. Lewis, E. V. R. Thayer, G. R. Whitten and Chas. N. King, directors; James MacNaughton, gen. mgr.; Clarence H. Bissell, sec.-treas.; G. L. Osgood, asst. sec.-treas.; Jas. E. Richards, mine supt.; A. G. Andrews, Jr., mill supt.; Harry Reeder, engr.; John T. Reeder, chief clerk and purch. agt.; Harry E. Lukey, clerk; Edward Colenso, chief mg. capt.

Inc. March, 1899, in New Jersey, as a merger of the Isle Royale Cons. Mining Co. and Miners' Copper Co. **Cap.**, \$3,750,000; shares \$25 par. Is controlled through ownership of 32,910 shares of outstanding stock, by the Calumet & Hecla. Old Colony Trust Co., Boston, transfer agent; State Street Trust Co., Boston, registrar. Company owns a one-sixth interest in the Lake Superior Smelting Co. Annual meeting, first Wednesday in April, at 243 Washington St., Jersey City, N. J.

Company ended 1916 with balance of current assets, \$923,551. Net profits 1916 were \$1,396,655, as compared with \$498,277 in 1915, and \$24,374 in 1914.

Dividends: \$1 per share was paid March 31, 1913; and \$5 in 1916, equal to \$750,000. The dividend rate for 1917 is higher than in 1916, due to extra distributions.

Property: 3,520 acres and an 80-acre mill site. Mineral lands include the old Isle Royale, Grand Portage and Huron mines, the Dodge and Frue prospects, the mineral rights in the Montezuma tract of about 200 acres purchased, 1913, for \$100,000, and sundry undeveloped tracts. The Hussey-Howe tract of 280 acres, lying N. E. of the Superior, supposed to carry the extension of the Baltic bed, was bought, 1907, for \$220,000. Lands include all of Secs. 1, 2 and 11, and parts of Secs. 3, 9, 10 and 15, T. 54 N., R. 34 W.; also 160 acres in Sec. 6, T. 54 N., R. 33 W., 40 acres in Sec. 31, T. 55 N., R. 33 W., and 160 acres in Sec. 36, T. 55 N., R. 34 W., giving a compact tract carrying about 2½ miles of the strike of the system of copper-bearing beds.

The Isle Royale has 3 parallel amygdaloidal beds, with strike of N. 32° E. and average dip of 56°, of which 2 have been extensively opened, these being the Isle Royale and Portage beds, the latter lying approximately 200' W. of the former. The shafts are on the Isle Royale, but the Portage bed is opened on many levels by crosscuts. East of the amygdaloids is the "Mabbs vein," lying near the Eastern sandstone, 4 to 7' wide and rich in mass and barrel copper, but deficient in stamp rock. It was opened to a depth of about 250' by John and Austin Mabbs, about 1875, and has been tested to some extent by the present owner. There also are unidentified and unexplored copper-bearing amygdaloids lying W. of the Portage bed and occasional narrow fissure veins carrying arsenical copper ores.

The 3 old mines included in the present Isle Royale tract produced 48,452,590 lbs. fine copper, under primitive conditions, at a net aggregate loss of about \$2,500,000. The old Isle Royale and Grand Portage mines were opened in 1853 and the Huron in 1855. The history of these 3 mines is given in detail in Vol. II.

Development: considerable diamond drilling has been done. Underground openings were 19,106' in 1912; 13,626' in 1913; 9,694' in 1914; 14,446' in 1915; and 17,455' in 1916. About 75 rock-drills are used.

No. 1 shaft, near the northern boundary, was completely gutted by fire, Dec., 1903, and was abandoned. This shaft had 3 compartments and is 1,614' deep, opened on the Isle Royale bed, with crosscuts driven on the 11th to 15th levels, inclusive, to the Portage bed, lying 150 to 220' W., with about 2 miles of drifts opened thereon, stoping having been about equally divided between the 2 beds, which were found markedly similar in characteristics and copper values. Concrete dams have been built across the south drifts of No. 1 at the 13th and 14th levels, holding back the mine water. Surface water is collected on the 8th level and sent to No. 2 shaft for taking out. The surface plant at No. 1 was dismantled, 1908, machinery going to No. 4 shaft.

In May, 1914, work was started to retimber the shaft, preparatory to sinking and exploring the Portage lode. In Feb., 1916, the work had been finished down to the 16th level and hoisting was being done from the upper levels.

No. 2 shaft, with 3 compartments, 2,280' S. W. of No. 1, is 3,467' deep. This shaft produces less mass copper than formerly, and the north drifts have not looked especially well for several years, the average of ground being below that of the mine as a whole, about half of the ground opened carried copper.

No. 2 shaft has a combination shaft rock house, with Portage Lake

crushers. The engine house is equipped with a hoist capable of raising 6-ton skips from a depth of 6,000'.

No. 3 is merely a site for a shaft, to reopen the old Huron mine.

The new shafts, Nos. 4, 5, 6 and 7, are all on the Isle Royale bed, at the southern end of the property, and have several miles of workings showing considerable heavy copper. These shafts are unconnected with the former workings, in shafts Nos. 1 and 2, at the northern end of the property. Shafts 4, 5 and 6 are connected by drifts on the upper levels.

No. 4 shaft, about 3,100' S. of No. 2, is 2,244' deep, developing stamp rock of very fair average grade. Equipment includes a Nordberg duplex-cylinder hoist, good for 1 mile depth and a 35-drill air compressor, both taken from No. 1 shaft. There is a cylindrical steel shaft rock house, built by the Wisconsin Bridge & Iron Co., having cylindrical rock bins 42' in diameter and 32' high.

A skip-road was constructed in the N. compartment. No. 1 to 11 level. North drifts are connected with the Huron workings. There were 22 drills operated, 1916, and 75% of the ground opened shows ore equal to the average of the mine.

No. 5 shaft, about 5,100' S. of No. 2, on Sec. 2, was started Oct., 1906, and was 1,965' deep, Jan., 1917. The shaft is sunk in the footwall, and is equipped with a hoist, good for a depth of 3,000'. There were 15 drills operated.

No. 6 shaft, about 7,300' S. W. of No. 2, near the center of Sec. 11, has 3 compartments and was 2,084' deep, Jan., 1917, developing very good average ground, the bed showing much epidote. The levels are opened at 100' and 120' intervals. On surface there is a circular steel shaft rock house, similar to that at No. 4. The plant at No. 6 includes a brick engine house, with hoist and 45-drill air compressor, and a steel boiler house. Drills used totaled 25 and 66% of the ground opened contains copper.

No. 7 shaft, 2,400' S. of No. 6, was started in 1913. Work was stopped on account of the strike and was not resumed until late in 1915. During 1916 it was sunk 820', making bottom 946' deep. Ore is good.

"A" shaft, started Sept., 1908, on the Hussey-Höwe tract, is 972' deep, with the first plat cut at depth of 350'. A 205' crosscut, at depth of 474', discloses only the bed in which the shaft is sunk. On the 3rd level, at depth of 714', a drift was run S. to within 50' of the Houghton Copper Co. boundary, disclosing a fair amount of amygdaloidal rock, not carrying copper in promising quantities. "A" shaft is supposed to be sunk on the Baltic bed, but there is very great doubt as to whether the shaft really is opened on the northern extension of the Baltic, and failure to locate the twin Baltic bed, within a distance of 205' in the crosscut on the 474' level, accentuates this doubt.

The Sec. 12 shaft, begun Oct., 1905, and discontinued Jan., 1908, at depth of 812', also was sunk in search of the Baltic bed and drifts and crosscuts were opened in 4 directions, without securing satisfactory results. The shaft was sunk in a badly disturbed amygdaloidal bed, practically barren of copper.

A shaft was started, 1904, on Sec. 10, but was discontinued because of the heavy overburden, and a diamond drill substituted, the drill cores showing an amygdaloidal bed of which about 5' in width carried stamp-copper in fine grains.

The main plant, at No. 2 shaft, includes No. 2 engine house, a compressor house having a 35-drill Nordberg 2-stage air compressor; a 44x72' boiler house, with a 16x72' coal-storage addition and a 3,000-ton coal trestle, having three 150 h. p. 84" Burt horizontal boilers, taking water from a dam

300x500x6'. The machine shop is of steel, on stone foundations. Shaft houses and rock houses are lighted by electricity, commercial current being taken from the Houghton County Electric Light Co. The company has a private telephone system. There are about 150 dwellings on the company's lands. At No. 2 shaft in 1916 a new collar house, skip dumps in ore house, 100' stack and flues were built.

At No. 5 shaft a new ore house was erected and 2 Farrell crushers installed, also 2 C. & H. sorting pans.

The Isle Royale railway, owned by the company, connects the mine and mill with about 5 miles of main line, having easy grades. Equipment includes 35-ton, 55-ton and 60-ton locomotives, and 40 forty-ton steel rock cars, equipped with air brakes. A 3,700' spur was laid in 1916.

The mill site, at the mouth of Pilgrim river, has nearly 1 mile of frontage on Portage lake. The old mill, insured for \$100,000, was burned Dec. 24, 1914. Work on a new 2,000-ton mill was started immediately and in June, 1915, the first stamp head was operating. By the end of August the 3 heads were working. The mill cost \$220,000 and has three 300-ton rock bins and 3 Nordberg stamps having circular mortars and $\frac{5}{8}$ " screen openings. The stamps rest on concrete bases, 20' thick, and are fitted with steeple-compound steam cylinders. Each stamp has a maximum capacity for 700 to 750 tons daily. The dressing floor has 78 rough jigs, 6 finishing jigs and 55 Wilfley tables to treat slime. There are rolls with fixed bearings to grind coarse gravel from the mortars.

The mill has a complete machine shop on the second floor, power being furnished by a 600 k. w. mixed pressure G. E. Curtis turbo-generator; taking steam from five 200 h. p. boilers in a boiler house at the rear of the mill.

There is a 32x600' wharf, with deep water alongside, at the mill site, with appliances for unloading coal and general freight and for the dispatch of mineral, in scows to the Dollar Bay smelter, 2 miles across Portage lake.

Water is furnished the mill by a 16,000,000-gal. Nordberg Corliss pump, especially designed to handle muddy water, having a triple discharge into a 30" riveted steel water main, running 2,200' from pump house to mill, the pump being located some distance from the mill, to obviate stamp sand clogging the intake. Three 100 h. p. boilers furnish power for the pumps, fuel being taken from a large coal trestle at the rear of the pump house boiler rooms. A dam near the mill supplies feed water for the boilers.

Recent production: has been as follows—

Year	Tons R'k Treated	Lbs. Min. Produced	Lbs.	Mine	Lbs. Cu. Produced	Total	Rec'd per Lb.
			Cu. per Ton R'k Stpd.	Cost per Ton (a)		Cost per Lb.	
1916....	925,419	13.4	\$1.53	12,412,111	15.75c	25.86c
1915....	680,270	13,727,832	13.7	1.45	9,342,106	14.94c(b)	18.36c
1914....	474,349	9,451,115	13.9	1.49	6,601,235	13.05c	13.16c
1913....	314,679	5,887,000	13.2	2.12	4,158,548	18.81c	15.29c
1912....	531,105	11,461,410	15.4	1.54	8,186,957	11.89c	16.66c
1911....	457,440	10,339,171	16.4	1.47	7,490,120	10.85c
1910....	520,860	10,433,060	14.5	1.42	7,567,399	11.84c

(a) Includes mining, transportation, stamping and taxes.

(b) Includes nearly 2c per lb. extraordinary expense of rebuilding stamp mill, reopening No. 1 shaft, and No. 7 shaft expense.

Isle Royale's production in 1914 was greatly restricted by the Lake Superior labor strike; normal production was again resumed in June, 1914,

to be soon followed by the demoralized copper market due to the outbreak of the European war; the property operated on a three-quarters time basis until Feb., 1915.

Operations in 1916 were affected adversely by a general scarcity of labor.

The Isle Royale is a low-grade mine, but shows itself capable of earning substantial profits. In 1915 the property made amends for its shortcomings of the previous 2 years; and at present more men are employed and more rock is being hoisted than ever before in its history. The output in May, 1917, was 86,000 tons of ore, yielding at the rate of 1,300,000 lbs. of copper per month. Large ground reserves are maintained and necessary, and with a still larger output in prospect, profitable operations for many years to come are confidently anticipated.

"**The Isle Royale** is one of the instances of low-grade copper production in this district. When it had become evident that there was only one hope for a mine that produced an ore that averaged but 12 or 13 lb. of copper per ton, and that was by the output of an enormous tonnage of rock, there was little to the future for the Isle Royale except hope. Now the Isle Royale is running on an average of better than 15 lb. of copper per ton. The average for July, 1917, was 15 lb. and for August, 16 lb. The output of rock is keeping its own stamp-mill running to capacity and sending 450 or 500 tons daily to the Point Mills plant, and it could send 1,000 tons daily to the custom-mill if the miners could be secured. The property is operating profitably. The seventh shaft is down to the ninth level and the most southerly openings are in rock which runs a little better than was anticipated and as good as anything recently opened in any of the Isle Royale shafts."—M. & S. Press, Aug. 25, 1917.

KEWEENAW COPPER CO.

MICHIGAN

Office: Calumet State Bank Bldg., Calumet, Mich. Mine near Mandan, Keweenaw Co., Mich.

Officers: Thos. F. Cole, pres.; Spencer R. Hill, v. p.; Capt. Thos. Hoatson, 2nd v. p. and mining director; F. W. Taylor, sec.-treas.; W. J. Uren, gen. mgr., and G. G. Hartley, directors; John C. Shields, railway supt.

Inc. March 11, 1905, in Michigan. **Cap.;** \$10,000,000; shares \$25 par; issued \$4,062,884; paid in \$20. Last assessment was \$1, Sept., 1915. Stock listed on Boston and Duluth Stock Exchanges. Controls, through stock ownership, the Phoenix Consolidated Copper Co., Meadow Mining Co., Humboldt Copper Co., Keweenaw Central Railroad Co. and Washington Copper Mining Co. Has about 2,300 shareholders. American Trust Co., Boston, registrar; Old Colony Trust Co., Boston, transfer agent. Annual meeting, second Monday in March.

Balance sheet, Dec. 31, 1916, shows: assets, \$4,070,746, which includes real estate, \$1,405,227, securities, \$1,545,291; cash, \$63,254; development account, \$706,818; accounts receivable, \$344,607; current liabilities include accounts payable, \$5,152; misc. revenue, \$118; interest, \$2,592.

The Keweenaw Central Railroad Co. is a reconstruction of the old Lac La Belle & Calumet railway. The entire capital stock issue, \$730,000, is owned by the Keweenaw Copper Co. The railway company has \$500,000 bonds, not issued, and ended 1915 with accounts and bills payable of \$197,046, owing mainly to the Keweenaw Copper Co., and a deficit of \$11,627. The railway, with about 40 miles of main line, spurs and branches, cost \$856,935, and runs from Centennial, a northern suburb of Calumet, where connection is had with the Copper Range line, to Lac La Belle. Service is discontinued from Nov. to May.

Property: 25,195 acres, mainly mineral lands, heavily timbered, in

3 main groups, carrying the strike of the Keweenaw mineral belt for about 14 miles, including practically all of the amygdaloidal and conglomerate cupriferous beds of the district, as well as numerous copper-bearing cross fissures. Lands are in T. 58 N., of Rs. 27, 28 and 29 W., and include the tracts formerly owned by the Aetna Copper Harbor, Empire, Girard, Hanover, Keweenaw, Mandan, Medora, Pennsylvania & Boston, Resolute and Vulcan companies, in addition to lands controlled through stock ownership in subsidiary corporations.

The company's lands carry nearly 2 miles of water frontage on either side of the Montreal river, including Fish cove, 1 mile east of the river's mouth, which might be made a fair harbor at comparatively small expense. The lands include 5 miles of the course of the river, on both banks, and, with other holdings, give the company the entire water-frontage of Mosquito lake, making possible the development of a great water power, with a hydro-electric installation at the mouth of the river. There is a mill site on Bete Gris bay, at the mouth of the Montreal river, having about 5 miles of water frontage.

The company also owns the Lac La Belle, or Mendota, ship canal, 1 mile long, connecting Lac La Belle with Lake Superior. This canal has a 14' channel, and leads to a splendid haven that should be made a harbor of refuge.

The Medora mine, opened about 1860, had 3 old shafts, about 100' apart, deepest 140'. The Medora amygdaloidal bed, traversing lands of the company for about 4 miles, lies immediately under the Allouez conglomerate, and outcrops several hundred feet north of the Montreal river bed. The Medora, about 12' in average width, is a soft chocolate-colored amygdaloid, carrying considerable prehnite, calcite and quartz, in connection with fine stamp copper and occasional heavy copper, a 30" paystreak along the foot-wall carrying some barrel work, the bed as a whole being bunchy.

The Medora tract also carries other copper-bearing beds, among these being the Medora fissure vein, outcropping about 225' E. of No. 1 shaft, but making into the shaft at depth. About 100' S. of the Medora amygdaloid is another bed carrying copper in small quantities, and to the northward are the Wolverine amygdaloid, of about 15' width, and the Allouez conglomerate, lying about 280' N. of the Medora bed, at surface.

The Medora mine was reopened on a considerable scale to depth of 1,700' and length of 1,800', with about 2 miles of workings. All work in the mine was stopped Sept., 1909. The Medora workings are fully described in Vol. VIII.

The Empire mine also carries the Medora bed, about 3 miles E. of No. 1 shaft, and some trenching and test pitting, done 1906-07, on the Empire tract, showed a bed of about 15' width, carrying some copper at surface. The Empire also carries the Montreal river amygdaloid, on which the Manitou did considerable work.

The Medora-Mandan-Resolute tract of 2,440 acres carries the Kearsarge bed under practically its entire territory. The shaft on the Kearsarge bed, known as No. 2, is about a mile S. of the old Medora workings, and was 1,355' deep when abandoned, 1911.

The company owns a diamond drill outfit and has made extensive borings, securing a cross section of the Medora, Mandan, Resolute and Empire tracts. Operations, 1912-1914, were confined to exploratory work in the horizon of the Ashbed lode, and the first drill hole located a copper deposit of considerable promise, early 1913, at a depth of about 500'. Mine has been idle since May 28, 1914.

Development: reported satisfactory results on No. 7 and 14 levels of

Phoenix mine, on the Ashbed lode, in charge of C. A. Wright. Commenced treatment in Oct., 1916, at the old Phoenix mill, of ore from the Ashbed lode. In Aug., 1917, 4,170 tons was stamped, yielding 12.64 lbs. refined copper per ton, giving a 72% recovery, which is to be increased by improvements.

KEWEENAW LAND ASSOCIATION, LTD.

MICHIGAN

Office: Room 33, No. 87 Milk St., Boston, Mass. **Operating office:** Marquette, Mich.

Officers: A. B. Emmons, chairman; Nathaniel Wilson, sec.; Dudley S. Dean, treas.; John M. Longyear, gen. agt.

Is a land corporation, holding 400,000 acres, mainly timber lands, but with some mineral lands, partly on the Keweenaw copper belt, in the upper peninsula of Michigan, taken over from the Lake Superior Ship Canal, Railway & Iron Co.

LA SALLE COPPER CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Calumet, Houghton Co., Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; preceding, with W. Hunnewell, F. L. Higginson, T. N. Perkins, D. S. Dean and Lindeley Loring, directors; G. G. Endicott, sec.-treas.; H. L. Bennett, asst. sec.-treas.; Ole Hallingby, supt.; Wm. Skewes and Josiah Bartell, mining captains.

Inc. Dec., 1906, in Michigan. **Cap.**, \$10,000,000; shares \$25 par; issued, 302,977 shares. Company absorbed the Caldwell Copper Co. and controlled the Tecumseh Copper Co., through ownership of practically the entire issue, giving $1\frac{1}{2}$ shares of La Salle for 1 of Tecumseh, and bought the entire property of the Tecumseh, May 11, 1910, for \$1,648,000. Is controlled, through ownership of 152,977 shares, by the Calumet & Hecla Mining Co. The Calumet & Hecla contributed \$1,000,000 cash to the company's treasury, taking pay in stock, and agreed to loan \$750,000 additional cash, as needed. Operations for 1916 show total receipts, \$368,253; total expenses, \$289,398, leaving a profit of \$78,855, against a deficit of \$15,522 in 1915. Balance of assets, Dec. 31, 1916, \$173,492. Annual meeting, second Wednesday in June.

Property: 2,360 acres, also the Gregory mill site, on Torch lake, nearly opposite the Calumet & Hecla mills. The Tecumseh and Caldwell contributed 560 acres each and 540 acres were furnished by the Calumet & Hecla, St. Mary's Mineral Land Co., Sheldon & Douglass Estate, and other interests, these lands being put into the company at a novel basis of valuation, figured upon zones of 2,500' depth on the dip of the Kearsarge bed, allowance being made for decreased land values on zones carrying the underlay at increase depths. There are 4 shafts, 2 on the Tecumseh and 2 on the Caldwell tract, with room for 3 additional shafts, to give a total of 7 shafts, at intervals of about one-third mile. The property carries the strike of the Keweenaw formation for about $2\frac{1}{2}$ miles.

Development: property has been prospected by diamond drilling, more than 30 diamond-drill holes having been bored on the Tecumseh and Caldwell tracts, a few years ago.

The first work at the Tecumseh mine was done on the Calumet conglomerate, many years ago, when a 1,000' shaft was sunk that found no payable ore. During the second era of activity, 1889-1902, a shaft was sunk 2,300' on the Osceola amygdaloid, but this bed, being found practically barren of copper, work was abandoned Nov., 1902. It is probable that the old Osceola shaft will eventually be reopened, as the southern drifts of the No. 6 shaft of the Osceola, below the 4,000' level, near the Tecumseh boundary, are among the best in that mine.

An arrangement was made in 1916 with the Osceola Consolidated, whereby No. 42 level S. of No. 6 shaft, Osceola mine, was extended into La Salle ground 692'. The result was encouraging. The drift was stopped in June, 1917, as the cost of tramming was so high. For 1,100' the ground opened was good; the last 400' was poor. The total length was 3,350'. No. 45 level is also to be extended into La Salle ground.

La Salle No. 1 shaft, formerly known as No. 1 Tecumseh, sunk on the Kearsarge bed, has 3 compartments, 2,146' deep, and shows the Kearsarge lode to be 8' to 12' thick, but is characterized by irregularly distributed values. The workings have encountered large areas of good ore, some of it with very rich patches of coarse copper that is rather showy though the average value has been, on the whole, somewhat disappointing in the mill. Equipment includes a 250 h. p. boiler and a hoist.

Operations in 1916 were confined to Nos. 11, 12, 13, and 15 levels. The stopes were generally rather lean.

La Salle No. 2 shaft, formerly known as No. 2 Tecumseh, is located about 1,700' S. of No. 1 and is of the same size; it is 2,079' deep, and shows a bed of workable thickness but not carrying much copper. The power plant has a 125 h. p. boiler, a hoist good for 2,500' depth, and a 15-drill air compressor. Buildings include a changing house. A branch of the Mineral Range railroad was built to the shaft in 1913. Development at this shaft during 1916, revealed both fair and poor ground.

Hoists at No. 1 and 2 shafts are now of 18x24" Lidgerwood types

No. 5 shaft, originally known as No. 1 Caldwell, and later as No. 1 La Salle, is 1 mile S. of No. 1 shaft; is 1,450' deep, shows a poorly-defined bed, with unsatisfactory copper contents, and work was discontinued Nov., 1910.

No. 6 shaft, known as No. 2 La Salle, sunk at a point 1,500' S. W. of No. 5, was abandoned, June, 1909, at depth of 882', because the lode showed little or no copper; the surface equipment was removed to No. 2 shaft.

The Kearsarge bed is comparatively thin in the Tecumseh tract, ranging from 7 to 11', with an average thickness of about 9'. It is estimated that approximately 1,000,000 tons of stamp rock were blocked out in the No. 1 Tecumseh, to the end of 1912, the greatest length of lateral opening being on the 12th level, where a stretch of about 1,000' of good stoping ground has been developed.

Development: in 1913 No. 1 shaft was unwatered down to the 17th level and stoping started in July. The big labor strike started on the 23rd of the month and the mine was closed down. Operations, started in Jan., 1914, continued until Aug., at the time of outbreak of the European war. Work was again resumed in June, 1915. Total development work amounted to 141' in 1913; 1,123' in 1914; 1,127' in 1915, and 3,323' in 1916. At the present time daily shipments are 600 tons of rock, while development work is also being pushed.

Production:

Year	Tons R'k Treated	Lbs. Cu. per Ton R'k Stpd.	Lbs. Cu. Produced
1916.....	144,829	9.53	1,380,352
1915.....	80,959	9.67	782,493
1914.....	45,509	11.88	540,731
1913.....	2,221	19.76	43,906
1912.....
1911.....	18,970	14.77	280,598

Both the Ahmeek and Franklin mills are treating La Salle ore.

Price received for copper in 1916 averaged 25.68c per lb. Net cost per pound was 19.96c and cost of mining, etc., \$1.79 per ton of ore. Copper output in first four months of 1917 averaged 180,000 lbs. per month.

Property has improved considerably of late.

LAKE COPPER CO.

MICHIGAN

Office: 85 Devonshire St., Boston, Mass. Mine office: Lake Mine, Ontonagon Co., Mich.

Officers: Wm. A. Paine, pres.; John H. Rice, v. p.; Robt. H. Gross, sec.-treas.; preceded with Wm. F. Fitzgerald, Reginald C. Pryor, Wm. S. Rooney, F. Ward Paine, directors. Elton W. Walker, mgr.; James McKie, supt.

Inc. Nov. 27, 1905, in Mich. Cap., \$2,500,000; shares \$25 par; \$5 paid, fully issued. Shares are listed on the Boston Stock Exchange. Federal Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agt. Annual meeting, third Tuesday in June.

Report for fiscal year, ending April 30, 1917, shows: total receipts, \$450,-497, which includes: copper sold, \$442,696; miscellaneous, \$7,800. Expenditures total \$342,302, including mine expenses, \$247,000; smelter, freight and marketing copper, etc., \$31,357; shaft equipment and development, \$46,936; taxes, \$17,007. Surplus May 1, 1915, \$167,145; surplus April 30, 1916, \$254,164; April 30, 1917, \$362,359. Profit for year, \$108,194.

Property: 2,010 acres, including 1,150 acres of mineral land, 680 acres of timber lands and 180 acres of cutover lands. The company bought 20 acres immediately E. of the shaft from St. Mary's Mineral Land Co., to provide room for a surface plant, the purchase carrying with it mineral rights to a depth of 100' thus caring for the upper portion of the Lake shaft, collar of which is almost divided by the section line. Property includes the S. E. $\frac{1}{4}$ of Sec. 29, S. E. $\frac{1}{4}$ of Sec. 30, N. W. $\frac{1}{4}$ of Sec. 32, and E. $\frac{1}{2}$ of Sec. 31, T. 51 N., R. 37 W.

The first work of the company was done on the Knowlton and Butler beds, with a little work on what formerly was supposed to be the Evergreen, principal work being on the Knowlton amygdaloid, on which there were old shafts of 170' and 300', latter having been deepened to 600' by the present company. Considerable copper was taken from the Knowlton bed, but it was thought wise to transfer work to virgin territory, at the southern end of the property, and the wisdom of this move was demonstrated by the outcome. There also is a 90' shaft on the Tresidder bed, 1,000' E. of the Knowlton, which was sunk 1865, and is said to have paid for sinking from the copper extracted. Considerable diamond drilling has been done, and the borings of the Adventure, on adjoining lands, indicate that the Lake should have several other promising amygdaloid beds, in the same general horizon as the Lake bed now being opened.

Geology: the strike of the Lake amygdaloid in the immediate vicinity of the shaft is about N. 6° E., with dip of about 35° W. It was at first thought that the Lake bed was a fissure, but that this is not the case was proven conclusively by the disclosure of parallel strata, including a conglomerate lying about 400' thereunder. The Lake bed, which is a typical Lake Superior amygdaloidal trap flow, barring its unusual strike and dip, is exceedingly wide for a copper-bearing bed, ranging from 50 to 100'. The hanging-wall of trap is fairly well defined but the footwall is extremely irregular, there being no marked line of separation between copper rock and trap. The Lake bed appears to carry 3 well-defined shoots of enriched copper ground, raking northward with depth. An attempt was made to locate the northerly extension of the Lake bed by diamond drilling from surface, but without success, though 3 holes were bored and it is now

known that the lode turns W. and passes into South Lake ground. Thirteen diamond drill holes have been bored aggregating 1,628'. The northernmost bottom workings of the mine show a deflection to the westward, with a strike, at the extreme north, of N. 15° W., which corroborates the hypothesis of Dr. L. L. Hubbard, that the Lake bed is the third and the East lode, the fourth bed from the top in the series of 4 amygdaloid beds cut by the drill holes of the South Lake.

There are two other lodes only 50' W. of the Lake with commercial ore. The long crosscut on the South Lake proves Dr. Hubbard's theory.

The mine is operated by a 1,500' incline shaft, ore being extracted from all levels from the 2nd to the 11th. The lode is bunchy with very rich spots and some mass copper, but the general average is about 2%, which is equivalent to 25 lbs. of refined copper.

The Knowlton shaft was unwatered Aug., 1916, to mine ore from the Knowlton lode, which though narrow, shows good copper values where opened. The Butler and Evergreen lodes can be reached by an 800' crosscut from this shaft.

Development: the mine has about 30,000' of workings, a very large proportion of the drifts being in neither the footwall nor the hanging-wall, giving a rather indifferent line on the actual values in the bed. New work during last fiscal year totaled 4,196'.

Equipment: include a 32x72" Nordberg duplex-cylinder double-conical-drum hoist, capable of lifting 10-ton loads from depth of a mile; old 6-drill and 15-drill air compressors, taken from the equipment of the old Belt mine, and a new 50-drill 2-stage cross-compound air compressor, in a steel compressor house. Mine structures include a machine shop, smithy, changing house, office and boarding house. There are 9 dwellings and a number of old houses at the Belt location. The property is served by the main line of the Copper Range railway, which passes through the old Belt location, with a 1½ mile spur to the shaft, and a siding has been built to within 500' of the shaft by the Mineral Range railway, giving the mine the advantage of competitive railway rates. About 150 men are employed.

Production: fiscal year ending April. Work resumed in May, 1915, after a 2-year shutdown.

	Tons R'k Stmpd.	Mineral Lbs.	Lbs. Cu. per Ton R'k	Lbs. Cu. Produced	Cost per Lb.	Rec'd per Lb.
1917.....	70,440	2,346,970	21.14	1,489,247	20.00(c)	29.726
1916(a).....	59,848	2,511,216	26.42	1,581,071	15.622(b)	20.149
1914.....	14.95	275,647	15.074
1913.....	83,109	2,153,128	15.39	1,300,562	19.5(c)

(a) Did not produce during first 3 months. (b) Includes 1.036c charge due to resuming operations. (c) Approximately.

Shipping 300 tons rock daily, July, 1917, to the Baltic mill, carrying 25-28 lbs. copper per ton. Costs are too high to allow of much profit at normal metal prices.

The management is both experienced and capable, and the mine, though small, is most promising.

LAKE MILLING, SMELTING & REFINING CO. MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Operating office:** Calumet, Mich. **Works office:** Point Mills, Houghton Co., Mich.

Officers: R. L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; Geo. G. Endicott, sec.-treas.; preceding, with H. F. Fay and D. L. Dean, directors.

Inc. 1891, in Michigan. **Cap.,** \$2,500,000; shares \$25 par; fully issued;

\$11.85 paid in. Stock distribution is as follows: Allouez Mining Co., 36,164 shares; Centennial Copper Mining Co., 16,164 shares; Hancock Cons. Mng. Co., 10,000 shares; Isle Royale Copper Co., 18,836 shares; Superior Copper Co., 18,836 shares.

Owens 2 mills; one, called the Centennial-Allouez mill, is at Point Mills, on the shore of Portage lake, on land adjoining the Franklin mill site. The mill was built by the Arcadian Copper Co., and was bought, 1904, by the Centennial Copper Mining Co., and later transferred to the present corporation. The mill of 4,000 tons daily capacity is equipped with 6 Nordberg stamps and crushing rolls to treat oversize material. Power is furnished by a 600 h. p. Nordberg cross-compound engine, and water is supplied by a 15,000,000-gal Nordberg pump. A new boiler house containing 8 boilers was completed in 1915. The other mills, known as Lake No. 2 mill, is at Hubbell and has 4 stamps in operation. A wharf, running 675' into deep water, is equipped with a modern coal hoist and coal shed.

LAKE SHORE MINING CO.

MICHIGAN

Idle several years. **Office:** 990 West Kensington Road, Los Angeles, Calif. Mine near Green, Ontonagon Co., Mich. W. H. Garlick, pres.

Inc. in Michigan. Cap., \$500,000; shares \$25 par.

Property: 821 acres, patented, on the shore of Lake Superior, is reported to carry bedded deposits, between slate walls, of 5' and 12' width, showing copper oxides and chalcocite giving average assays of 2% copper, 0.5 oz. silver and 40 to 80c gold per ton. Apparently the orebody is of the secondary or Porcupine series of the Keweenawan formation, and ores may change to native copper at depth. A little prospecting has been done.

LAKE SUPERIOR DEVELOPMENT CO.

MICHIGAN

Office: care Clyde Mackenzie, sec., Houghton, Mich. Jos. Croze, pres.; Jos. W. Selden, treas.

Property: 400 acres, held under option, the N. $\frac{1}{2}$ of Sec. 25, and S. $\frac{1}{2}$ of S. W. $\frac{1}{4}$ of Sec. 24, T. 57 N., R. 32 W., about $\frac{1}{2}$ mile E. of the Gratiot and about $1\frac{1}{2}$ miles of the Ojibway. Lands are on the Keweenawan formation. Drill boring made 1910-11, gave much encouragement, and company hopes to resume operations.

LAKE SUPERIOR SMELTING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Works office:** Dollar Bay, Houghton Co., Mich.

Officers: R. L. Agassiz, pres.; C. H. Bissell, sec.-treas.; preceding with Geo. A. Flagg, F. L. Higginson, F. W. Hunnewell and Jas. MacNaughton, directors. Jas. MacNaughton, gen. mgr.; Harry B. Conant, supt.

Inc. July, 1891, in Michigan. Cap., \$1,200,000; shares \$25 par, fully paid and issued. Is controlled through ownership of 25,000 shares, by the Tamarack Mining Co., and by the Osceola Cons. Mining Co., which has 15,000 shares, and the Isle Royale Copper Co., which has 8,000 shares.

The smelter, closely connected with the plant of the Tamarack-Osceola Mng. Co., has 11 reverberatory furnaces and 3 refining furnaces. There is a mechanical ladling and casting device having a 1,100-lb. ladle, and a casting machine with molds linked into an endless belt, dumping over sprockets into cooling tanks, whence the ingots are delivered mechanically by cleat elevators to inspection and loading platforms. About 300 men are employed.

The smelter treats ore from the Tamarack, Osceola, Isle Royale, Ahmeek and Centennial mines. The company also owns the dismantled smelting plant at Hancock, Houghton Co., Mich.

LAURIUM MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Calumet, Houghton Co., Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; with W. Hunnewell, F. L. Higginson, G. A. Flagg, directors: G. G. Endicott, sec.-treas.; H. L. Bennett, asst. sec.-treas.

Inc. in Michigan. Cap., \$1,000,000; shares \$25 par; fully issued. Is controlled, through ownership, of 39,288 shares, by the Calumet & Hecla Mining Co. Has paid dividends of \$4 per share, through sale of town lots in the village of Laurium. Company ended 1916 with balance of liabilities of \$24,473. Annual meeting, second Tuesday in June.

Property: 575 acres with mineral rights, including 325 acres whose surface is also owned. Company originally owned 640 acres, lying next east of the Calumet & Hecla, but a triangular tract of about 65 acres, carrying both surface and mineral rights, was sold to the Calumet & Hecla, and about 250 acres of surface rights have been disposed of since as building lots, with reservation of mineral rights. The property carries about 1½ miles of the strike of the Kearsarge bed, with 280 acres of underlay, giving the Laurium a chance to develop this bed to a depth of about 4,400'.

Development: the Laurium shaft, started Aug. 7, 1909, as a result of previous diamond-drill borings, is about 2,200' from the S. W. corner of Sec. 26, and about one-half mile N. of No. 1 Tecumseh shaft. The shaft is 1,661' deep, with about 7,000' of workings. The mine was closed July, 1913, at the time of the strike and has not been reopened since. When operations were suspended workings on the 12th, 14th and 15th levels were in poor ground, showing very little copper.

Equipment: includes a boiler house, engine house with a large hoist and air compressor, and a changing house.

MASS CONSOLIDATED MINING CO.

MICHIGAN

Office: 79 Milk St., Boston, Mass. **Mine office:** Mass, Ontonagon Co., Mich.

Officers: John W. Linnell, pres.; Theo. O. Nicholson, v. p.; Wilfred A. Bancroft, sec.-treas.; Elton W. Walker, supt.; preceding with Francis L. Maguire, Wm. F. Fitzgerald, Jas. B. Hill, D. Allison Carrick and Fred J. Schultheis, directors. E. Fenner Douglass, mill supt.; A. P. Bennetts, mg. capt.; Jos. Bice, master mechanic.

Inc. 1899 in Michigan. Cap., \$2,500,000; shares \$25 par; issued, 97,317 shares; paid in, \$24; \$8 paid on organization, balance in installments. Old Colony Trust Co., Boston, transfer agent. Annual meeting, 2nd Thursday in March.

Balance-sheet for 1916 shows receipts, \$1,255,896; net profit, \$430,528; balance of cash assets, \$449,255. Construction in 1916 cost \$94,556.

Dividends: initial dividend paid, Aug., 1916, with total for 1916 of \$194,634. In 1917, \$2 per share was paid to mid-year, equal to \$194,634. Dividend payments suspended, Oct., 1917.

Property: about 5,500 acres, lying in a very irregular but fairly compact tract, in Secs. 33, 34 and 35, T. 51 N., R. 38 W., in Secs. 4, 5, 6, 7, 8, 9 and 16, T. 50 N., R. 38 W., and in Sec. 1, T. 50 N., R. 39 W., holding being bounded on the N. by the Union, Adventure and farm lands, on the E. by the Adventure and Toltec, and on the S. by various farm lands, and on the W. by the Flint Steel, Adventure and St. Mary's Mineral Land Co. Holdings include 4 old mines, the Ridge, Evergreen, Mass and Ogima, also 2 old prospects, the Merrimac and Hazard, joint production of which, under previous managements, was 11,131,023 lbs. fine copper. These 5 properties are described, in detail, in Vol. II, Copper Handbook.

The Mass tract carries 6 of the 7 cupriferous amygdaloidal beds of the Evergreen belt, these varying greatly in width from point to point but averaging about 10', with a sharp bend in their strike, which varies from N. 32°

E., on the north, to N. 37° E. at the southern boundary. The dip of the beds varies from 38° at the Ridge to 47° at the old Mass mine. The copper-bearing beds of the Evergreen belt on the lands of the Mass Consolidated are as follows, from north to south:

1. Knowlton. Carries heavy copper and stamp rock.
2. Mass. Lies 140' south of the Knowlton, and carries a little heavy copper and stamp rock.
3. North Butler. Lies about 75' south of the Mass bed, is wide and fairly mineralized in places.
4. Butler. Lies about 200' south of the North Butler, is 12' to 35' wide, carrying mainly stamp copper with occasional heavy copper.
5. Ogima. Lies about 100' south of the Butler. Carries mainly stamp copper with some barrel-work, being 5' to 10' wide and showing some good ground.
6. Evergreen or Ridge. Lies about 250' south of the Ogima and is one of the best beds of the property, ranging 4 to 40' in width and usually being richest where widest. Is very bunchy but shows some excellent stopes yielding mass copper and stamp-rock of good grade.
7. New Mass. This bed which is the lowest of the series of the Evergreen belt and brings the number of cupriferous beds to 7, corresponding with the number in the adjoining Adventure property, lies about 120' under the Evergreen bed and was opened by crosscuts from "A" shaft on the 15th and 18th levels. The bed averages about 12' in width carrying considerable epidote and is very showy, but the copper is exceedingly fine, most of it being of a flaky nature, very deceptive to the eye. A mill test of the rock from this bed, 1909, gave a recovery of only 18 lbs. of mineral per ton.

Development: the Mass has openings on all its copper-bearing beds, and rock is hoisted through the nearest shaft, workings on each level being connected by crosscuts. The Mass carries the outcrop of the copper-bearing beds of the Evergreen belt for about 1½ miles. Shafts "A" and "B" are connected on the Butler lode down to and including the 10th level. The mine as a whole is notably rich in mass copper and carries silver values, but the ground is exceedingly bunchy, ranging from very rich to absolutely barren. Considerable rock selection is made underground, bringing the average contents of stamp rock to 16.51 lbs. per ton. About 50% of the rock broken is hoisted, and about 25% of the recovery is in mass copper.

"A" shaft, 1,757' deep, with two compartments, sunk on the Evergreen bed has been abandoned.

"B" shaft, 875' S. W. of "A" has 3 compartments, and is bottomed at 1,857'. Levels are at variable intervals; those at considerable intervals permit a larger saving in drifting through poor ground and sub-levels can be run where needed.

"C" shaft, 2,148' S. W. of "B" and bottomed on the 14th level, is the old Ogima shaft, sunk on the Butler bed, but the Evergreen bed is opened by a 400' crosscut on the 3rd, 5th and 7th levels. Some high-grade ground was opened on these and on the 9th levels west on the Butler bed during 1912. The company has concentrated work upon the Butler though work was also done on the Ogima and Knowlton beds, tributary to "C" shaft, in 1910, results on the whole being promising.

"D" shaft, 150' deep, is idle.

Considerable diamond drilling has been done south from the Evergreen bed into the horizon traversed by the so-called Adventure lodes, cut by diamond drills on the Adventure property, and also north of the Knowlton bed. Diamond drilling was done, 1910, in the N. E. ¼ of Sec. 5, to test amygdaloidal and conglomerate strata outcropping at that point, which is

quite a distance under the hypothetical horizon of the so-called Adventure lodes, with distance to the eastern sandstone undetermined.

Development during 1916 totaled 2,931'. Results were satisfactory, the quantity of ore opened more than equalled that extracted. The grade increased from 14.35 lbs. in 1915 to 16.51 lbs. in 1916. The Evergreen lode on No. 5 level is well mineralized as far West, as "C" shaft in virgin ground. This lode yielded 61,580 tons, and the Butler lode 219,965 lbs.

The shaft rock house at "B" is equipped with a steam hammer, Good Roads crusher, and a 50x24" Nordberg engine; "C" shaft has a steel shaft rock house; both have been equipped with devices permitting automatic handling of rock.

The central power house has a 24x48" Allis-Chalmers duplex hoist good for one-half mile depth. The power plant includes a 50-drill Rand 2-stage cross-compound air compressor, a 75-k. w. dynamo for electric light, and three 335-h. p. Babcock & Wilcox water-tube boilers.

In addition to the usual mine buildings, there are about 80 good dwellings. The company also has a town site, Mass City, which is the terminus of the Mineral Range railroad, and a station on the C., M. & St. P. railway; the village having a considerable population, with a number of hotels and business houses.

The Mass mill is at Keweenaw bay, on an arm of Lake Superior, at the junction of the Mineral Range and Duluth, South Shore & Atlantic railway, 16 miles S. of Houghton and 34 miles N. E. of the mine. Equipment includes 2 Nordberg stamps, 1,350 tons daily capacity.

The mill boiler house contains 6 Stirling water-tube boilers. Ashes and cinders are washed into the lake through a launder.

The pump house has a 16,000,000-gal. Nordberg vertical pump, connected with a tunnel running 300' under the bed of the bay to the intake.

Production: begun 1899, with an output of 42,800 lbs. fine copper, gradually increased to 2,576,447 lbs. in 1903, decreasing thereafter, through loss of the Evergreen bed. Recent production has been as follows: 2,007,950 lbs. fine copper in 1905; 2,106,738 lbs. in 1906; 2,078,677 lbs. in 1907; 1,766,930 lbs. in 1908; 1,723,436 lbs. in 1909; 1,321,885 lbs. in 1910; 1,326,898 lbs. in 1911; 2,045,006 lbs. in 1912; 1,213,545 lbs. in 1913; 2,955,952 lbs. in 1914; 4,638,452 lbs. in 1915; 4,752,588 lbs. in 1916.

Ore treated in 1916 totaled 287,900 tons. In June, 1917, the monthly rate was 22,000 tons, a falling-off due to labor shortage.

Cost of refined copper in 1916 was 15.37c and price received 26.27c per lb.

The Mass Consolidated has had every sort of misfortune that befalls mines, but through the acquisition of the Evergreen Bluff property, has been placed in better mining position than ever before. The experience of 14 years has given a thorough knowledge of the vagaries and possibilities of the 7 cupriferous beds of the Evergreen belt; though bunchy, two of the number are of real promise, the Evergreen and Butler. It is probable that other beds can be worked occasionally, but the future of the mine rests on the Evergreen and Butler beds. There also is the possibility of locating and developing other and richer beds to the southward of the main workings, in the horizon of the Lake and Adventure beds.

Management is both progressive and experienced.

MAYFLOWER MINING CO.

MICHIGAN

Office: 705 Sears Bldg., Boston, Mass. **Mine office:** Houghton, Houghton Co., Mich.

Officers: Chas J. Paine, Jr., pres.; Geo. P. Gardner, v. p.; preceding, with Harry F. Fay, Geo. E. Clarkson, A. L. Dickerman, F. W. Nichols, directors. Arthur E. Coe, sec.-treas.; Geo. S. Goodale, supt.

Inc. 1899 in Michigan. **Cap.**, \$2,500,000; shares \$25 par; \$10 paid. St. Mary's Mineral Land Co. owns 25,000 shares of the capital stock. American Trust Co., Boston, transfer agent. Old Colony Trust Co., Boston, registrar. Annual meeting, third Wednesday in March.

In March, 1917, company was consolidated with the Old Colony Copper Co., under title of Mayflower-Old Colony Copper Co. (which see), on a share for share basis.

Balance-sheet for 1916 shows receipts \$63,043, including \$52,991 from 1915 and \$7,081 from assessments, and expenditure \$17,729. Balance of assets at end of 1916 was \$45,314.

Property: 840 acres, near Calumet, Mich., between the Kearsarge and Old Colony mines and east of the South Kearsarge and Wolverine mines. Lands comprise Secs. 7 and 8, T. 56 N., R. 32 W. Prospecting, begun in 1899, was continued 5 years. No. 1, or Faull shaft, 400' deep, has considerable drifting on the 1st and 2nd levels and a crosscut opens 2 parallel cupriferous amygdaloids, showing occasional patches of copper, but nothing of promise.

Development: four shafts. No. 2, or Isle Royale shaft, 160' deep, has several hundred feet of drifting and shows a bunchy amygdaloid, 10 to 12' wide, carrying more or less copper in a 2' streak next to the hanging wall. No. 3, 60' deep, in a badly broken amygdaloid. No. 4 shaft, 580' deep, starts from surface on an unnamed amygdaloid, lying approximately 2,000' east of the Kearsarge bed and at a depth of 425' runs into a parallel amygdaloid lying 90' to the eastward of the first bed. The copper showing is poor.

A fairly complete geological cross-section has been obtained by diamond-drill borings and exploratory work was resumed July, 1909, after 3 years' idleness. Up to date 42 holes have been put down which, together with the holes on the Old Colony tract, prove up a big and well mineralized amygdaloid bed, called the Mayflower lode, for a distance of 6,000' and a depth of 1,500'. The lode lies on the extreme eastern side of the copper range, near the Eastern sandstone. In 1915 only 800' of drilling was done. Hole No. 2 started N. E. of No. 41, was stopped at 2,697' in Oct., 1917. To a depth of 2,100', where it showed St. Louis conglomerate, the hole indicated a uniformly favorable condition of the strata. From 2,100 to 2,653' many zones of crushed and highly-decomposed ground were encountered, making drilling difficult. Conditions were similar to No. 41 at 2,635', and work on No. 42 was stopped on account of the sandy material. In all, 2,763' of drilling was done in 1916.

Earlier drill-holes were sufficiently promising for shaft-sinking, provided the Old Colony Copper Co. agreed to share the expense. This suggested consolidation of the companies was agreed to in Feb., 1917.

Thirteen holes on the Mayflower and 10 on the Old Colony ground showed commercial ore; hole No. 20 showed 101' of 1.65% rock; hole No. 22, nearby, showed 100' of 1.2% copper ore, 60' of which carried 1.9%; holes Nos. 16 and 17, in this locality, showed 87' and 95' widths.

MAYFLOWER-OLD COLONY COPPER CO.

MICHIGAN

Address: 70 State Street, Boston, Mass. **Mine office:** Houghton, Mich.

Officers: H. F. Fay, pres., with R. L. Barstow, G. E. Clarkson, G. P. Gardner, W. A. Moseman, C. J. Paine, Jr., and F. W. Nichols, directors; C. J. Morrissey, sec.; A. E. Coe, treas. G. S. Goodale, supt.

Inc. March 5, 1917, in Michigan, as a consolidation of the Mayflower Mining Co. and Old Colony Copper Co., which see. **Cap.**, \$5,000,000; shares \$25 par; \$12 paid in. American Trust Co., Boston, transfer agent. Old Colony Trust Co., Boston, registrar. Annual meeting third Wednesday in March. Shares listed on Boston Stock Exchange.

Property: about 2,040 acres near Calumet, Mich. Diamond-drilling to 1917 amounts to 42 holes in the Mayflower and 25 holes in the Old Colony. These were carefully studied, and it was calculated that on an assumed dip of 50°, there is 32,000,000 tons of ore. The lode is continuous for one mile, is of unusual width, and good grade. Results warrant sinking a shaft, for which there is ample equipment. An assessment of 50c per share provided \$100,000 for exploration.

Development: shaft was 50' deep in Aug., 1917.

MEADOW MINING CO.

MICHIGAN

Idle. Office: c/o C. A. Wright, sec., Calumet, Mich. Mine near Copper Falls, Keweenaw Co., Mich.

Inc. 1898 in Michigan. **Cap.**, \$1,500,000; shares \$25 par; \$252,813 outstanding; 37,500 shares were given in payment of property. Is a reorganization of the Meadow Mng. Co., inc. 1863, under special Michigan charter. Is controlled by the Keweenaw Copper Co.

Property: 364 acres, adjoins the Humboldt and Phoenix mines and carries the Ashbed lode, which was first opened 1851, with a little mining previous to 1860. Where the Ashbed is crossed by transverse fissures, bunches of ore occur and such places usually show pits of prehistoric miners. Fully described Vol. II, Copper Handbook.

MICHIGAN COPPER MINING CO.

MICHIGAN

Office: 15 William St., New York. **Mine office:** Rockland, Ontonagon Co., Mich.

Officers: J. R. Stanton, pres.; Geo. W. Drucker, sec.-treas.; preceding officers, Jas. S. Dunstan, Alfred M. Low and L. P. Yandell, directors. Samuel Brady, supt.; Henry Stubensky, clerk.

Inc. Jan. 5, 1899, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; fully issued; \$22 paid in. Last assessment levied Feb. 15, 1917, was \$1 per share, equal to \$100,000. Old Colony Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, first Tuesday in May. Listed in Boston.

Balance sheet for 1916 showed receipts, \$42,036; \$16,075 from copper and \$25,961 from assessments. The year ended with a deficit of \$40,590, making total deficit \$158,497. Sum of \$66,819 was spent on development.

Property: The Minnesota, Rockland and Superior mines, 4,870 acres of mineral territory, 1,466 acres of timber and miscellaneous lands and a 150-acre mill site, giving total holdings of 6,686 acres, mineral lands being in Secs. 1, 2, 3, 9, 10, 11, 13, 14, 15, 16, 17, 21, 22, 23, 24, 25, 26 and 27, T. 50 N., R. 30 W.

The main tract is 3 miles east and west by 4½ miles north and south, in addition to which there are 4 scattering tracts to the westward, 1 of 40 acres, 2 of 80 acres each and 1 of 160 acres, all carrying the outcrop of the Calico amygdaloid. The Superior mine produced 567,331 lbs. fine copper, 1856-69 and 1876-79. The Rockland, lying next east of the Minnesota, was operated 1853-70, making 6,210,309 lbs. fine copper from the Minnesota contact vein which averaged about 2' width and carried considerable silver in that mine. The old Minnesota mine, opened 1847, closed 1870, made 34,704,668 lbs. fine copper and paid dividends of \$1,820,000. The Minnesota mine is fully described Vol. II, Copper Handbook.

Geology: the Michigan tracts carry the following known copper beds of the Evergreen belt: Calico, Contact, Minnesota, Branch, North Contact, Knowlton, Mass, Butler, Ogima, North Amygdaloid and South Amygdaloid, and presumably the other parallel beds, in addition to various other unidentified copper-bearing beds of the Keweenaw series. The Knowlton, or northernmost of the Evergreen belt of parallel beds, lies about 1,000'

south of the old Minnesota shafts and the 7' amygdaloidal bed supposed to be the Butler, opened to some extent in Peninsula bluff 2,000' south of "B" shaft, shows some heavy copper and stamp rock. There are 3 old shafts on the Butler bed and a tunnel cutting several parallel copper-bearing strata. There also are cupriferous amygdaloidal outcrops north of the Calico bed on which no work has been done.

Development: mine has 3 shafts on the Calico bed and about 10 miles of workings. "A" shaft is 2,133' deep; "B" is bottomed at the 14th level and "C" at the 11th level. The lode grew steadily poorer with depth and showed a tendency to pinch, being only about 5' wide on the 16th level of "A" shaft, though well charged with copper. The mine was closed down Oct., 1909, continuing about 25 men in exploratory work until the end of 1910, when the property was turned over to tributors, who continued to scam the mine with some profit to themselves and the company until May, 1913, when all work was stopped.

In July, 1915, work was resumed in the old "E" shaft, 265' deep, on the Butler lode; it was sunk 30' below No. 6 level, a total of 630'. At 550' mass and mill copper was exposed, and continued to 615'. Fair to rich ore was opened for 275' contiguous to this shaft.

Generally, results in 1916 on the Butler, Ogima, and Evergreen lodes were highly encouraging.

Ore reserves at end of 1916 were 4,200 tons of stamp rock.

Buildings include a machine shop, smithy, carpenter shop, warehouse, office and changing house.

The mill, construction of which was begun April, 1906, is about 1 mile north of the Mass mill, on Keweenaw bay, with ample water frontage. Construction was suspended, 1907, though perhaps no more than \$10,000 would be required to complete the mill, on which about \$175,000 has been expended.

In 1916 the water-supply was completed, bins lined, and tables overhauled, and plant is ready for operation.

Production: 1900-1905, 6,113,500 lbs. copper; 2,875,341 lbs. copper in 1906; 2,665,404 lbs. in 1907; 3,000,206 lbs. in 1908; 1,979,305 lbs. in 1909; 36,682 lbs. in 1910; 327,773 lbs. in 1911; 162,590 lbs. in 1912, and 90,000 lbs. in 1916.

The mine in the past has proved a disappointment, and untoward financial conditions have restricted the exploratory and development work that are clearly called for. Recent developments have been rather promising and the mill is to be started at an early date. Shaft sinking underway, 1917.

The property is very fully described in Vol. X, Copper Handbook.

MICHIGAN SMELTER CO.

MICHIGAN

Office: 82 Devonshire St., Boston, Mass. **Works office:** Houghton, Houghton Co., Mich.

Officers: Wm. A. Paine, pres.; John R. Stanton, v. p.; F. W. Paine, sec.-treas.; Frederick I. Cairns, supt., and Chas. A. Snow, directors; John Mugford, asst. supt.

Inc. 1903 in Michigan. **Cap.**, \$500,000; shares \$25 par. The entire stock issue is owned by 6 mining companies, the Copper Range group holding 12,000 shares and the Stanton companies 8,000 shares, holdings in shares being as follows: Champion, 4,400 shares; Trimountain, 4,400; Baltic, 3,200; Mohawk, 3,200; Wolverine, 3,200; Atlantic, 1,600. No dividends have been paid, profits having been turned back into improvements. Annual meeting, second Monday in January.

Company owns and operates the Michigan smelter, 3 miles west of Houghton, near the old Atlantic stamp mill, with frontage on Portage lake. It was designed by Frank Klepetko and is the largest and most modern

smelter in the Lake Superior district, with a capacity of 90,000,000 lbs. fine copper yearly.

The plant is terraced throughout, permitting automatic handling of material. The copper ore (locally mineral) is delivered in 40-ton bottom-dumping steel cars by the Copper Range railroad, which also hauls away the refined copper for shipment from the Copper Range wharves in Houghton.

The 3,000-ton storage bins hold 10 days' supply for the works. Mineral is dehydrated in rotary dryers by water gases from the furnaces, taken to the furnaces in tram cars and dumped into hoppers on the charging floor. Coal trestles, on an upper level, hold 15,000 tons of hard and soft coal, with tunnels underneath through which fuel is taken in tram cars, descending by gravity to the furnaces and boiler rooms. There also are separate storage bins for charcoal, sand and limestone.

The reverberatory furnace buildings has three 5-ton traveling cranes and 6 furnaces. Alternating with the larger reverberatories are one 300-h. p. and two 200-h. p. Stirling water-tube boilers, heated by waste gases from the furnaces. After leaving the boilers the gases are drawn through a 6x8' subterranean flue, with arched roof, up the hill to a 150' smokestack, with base 100' above the furnace building.

The blast-furnace building has 2 blast furnaces. Blister copper is cast, mechanically, in moulds upon a circular casting table, cooled in water, and carried by a link elevator to the loading platform. Slags are carried mechanically to the sampling mill and reduced in a 30-ton crusher of 1,000 tons daily capacity for resmelting. The slag from the final fusion is granulated by water and discharged through launders to low ground northward for grading.

The combination machine shop and power house has a complete equipment driven by an independent engine, and a 300-h. p. Nordberg horizontal tandem-compound engine, driving a 200-k. w. generator, actuates the rotary blowers for the blast furnaces. Electric power is used for operating the drying plant, cranes, casting machinery and lighting. There are 3 specially designed Jeffrey electric locomotives.

Miscellaneous buildings include office, laboratory, warehouse, barn, etc. Water is obtained from the old Atlantic dam, on Cole's creek, through a 4,300' flume with capacity of 5,000 gals. per minute, leading to a 50,000-gal. storage tank, 100' above the works, giving good pressure at all points. The plant is well planned and well handled.

MINONG COPPER CO.

MICHIGAN

Office: 122 Winder St., Detroit, Mich. **Louis O. Broadwell**, pres.; **Hugh A. McPherson**, sec.

Inc. Dec. 16, 1874. **Cap.**, \$1,000,000; shares \$25 par.

Property: 1,455 acres in Secs. 22, 23, 26, 27, 34 and 35, T. 66 N., R. 35 W., lying at the head of McCargo's Cove on the Isle Royale, shows a line of ancient pits, largest 400' and about 1½ miles long. Idle since about 1881.

MOHAWK MINING CO.

MICHIGAN

Office: 15 William St., New York.. **Mine office:** Mohawk, Keweenaw Co., Mich. **Mill office:** Gay, Mich.

Officers: J. R. Stanton, pres.; G. W. Drucker, sec.-treas.; above with W. A. Paine, J. S. Dunstan and F. W. Denton, directors.

Inc. Nov., 1898, in Mich. **Cap.**, \$2,500,000; shares \$25 par; all issued; assessable; paid in \$18. Stock listed on Boston Exchange. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agt. Annual meeting last Tuesday in March.

Profit in 1916 was \$2,270,054. Dividends absorbed \$1,700,000. Surplus at end of 1916 was \$2,333,839.

Dividends: (paid semi-annually, Feb. and Aug.) \$5 in 1906; \$9 in 1907; \$2.50 in 1908; \$3 in 1909; \$2 in 1910; \$1.75 in 1911; \$3.50 in 1912; \$5 in 1913; \$1 in 1914; \$6 in 1915; \$17 in 1916; \$20.50 in 1917; a total of \$7,625,000.

Property: 800 acres, in an irregular tract, having its axis on the strike of the Kearsarge amygdaloidal bed, in Secs. 27, 28, 33 and 34, T. 57 N., R. 32 W., about 4 miles N. E. of Calumet, with the Ahmeek and Seneca mines on the north and Ahmeek to the west. In May, 1916, purchased 900 acres near Dollar Bay, lying between Torch and Portage lakes, with a long strip of shore on each side, thus acquiring an excellent millsite on Torch lake.

Geology: property carries the Kearsarge amygdaloidal bed, which ranges from 15' to 18' in average width, or about the same as at the Wolverine, and the upper workings carry about the same percentage of copper as in the Wolverine mine, but the lower workings are by no means so rich. The Kearsarge bed is crossed at approximately right angles by a number of narrow fissure veins, with nearly vertical dip, that are yielding a considerable amount of mass copper and in addition there are 3 cross-fissures carrying copper arsenides, including mohawkite, keweenaawite, mohawk-whitneyite, and stibio-domeykite, the first two being peculiar to this district and first found in this mine. The fissures carrying mohawkite range 3" to 3' in width, are well mineralized where crossing the amygdaloidal bed and for an indefinite but usually short distance on either side, the mohawkite and allied arsenides occasionally occurring massive, but commonly being disseminated in an arenaceous gangue. Values in the arsenides decrease with depth and recent production has been small. There also are other cupriferous amygdaloidal beds in the stratified series that may be given attention later.

Development: 6 shafts, numbered from north to south, of uniform size, 8x18' inside of timbering, with solid cribbing through the overburden and with identical equipment. No. 5 shaft has a concrete collar 10½'x23'x100' deep, and No. 6 is concreted for a depth of 90'. The skipways are laid with concrete stringers, which prove very satisfactory. The mine is equipped with Richmond electric signals and operates about 65 power drills. New work in 1916 totaled 15,224'.

No. 1 shaft, about 1,500' south of the northern boundary, is bottomed at the 22nd level and is 2,598' deep. No. 1 hoist, in the central power-plant at No. 2 shaft, operates two 4-ton skips in counterbalance. No. 1 shaft has a combination shaft rock house, equipped with a 12x24" Nordberg engine and crushers. In 1916 new openings showed less mineralization than in 1915.

No. 2 shaft is 2,364' deep. Like No. 1, it had good ore near surface with impoverishment at depth, followed by improvement below the 12th level. The power plant at No. 2 shaft, serving both Nos. 1 and 2, includes an engine house and boiler house. Hoists are Nordberg double-conical-drum duplex-cylinder engines, good for 6,000' depth, each handling two 4-ton skips in counterbalance. The boiler house has 2 locomotive firebox boilers, with foundations for 3 additional boilers, and the engine house has 2 Ingersoll-Sergeant air compressors, of 40 drills aggregate capacity.

No. 3 shaft is 1,600' deep, and has been abandoned, as the ground tributary to No. 3 can be reached to better advantage through shafts Nos. 2 and 4. No. 4 shaft is 2,302' deep, developing good average ground from surface. Equipment includes a steel shaft rock house with 3 crushers and a steam hammer. The engine house has a Nordberg double-conical-drum hoist, good for 6,000' depth. A compressor plant, at No. 4 shaft, has a 60-

drill Nordberg and a 60-drill Ingersoll-Sergeant cross-compound 2-stage compressor.

No. 5 shaft is 1,709' deep. Equipment includes a new all-steel shaft rock house and a Bullock hoist good for 2,000' depth.

No. 6 shaft, the southernmost and newest, is about 2,600' south of No. 5 and 2,600' from the Ahmeek boundary, commanding about three-fourths of a mile of the strike of the Kearsarge bed under about 160 acres, or approximately as much ground as the entire Wolverine mine. This shaft, located about 60' in the footwall rock, is 1,307' deep, and can be sunk to a maximum of 4,000'.

New openings at No. 4, 5, and 6 shafts in 1916 showed ore of fine quality. Mechanical haulage was installed on No. 8 level of No. 6 shaft.

The mill, near the mouth of the Tobacco river, on Traverse bay, Lake Superior, opposite the mill of the Wolverine, is 178x206' in size, of steel frame sheathed with iron, on foundations of sandstone. A steel trestle, 350' long and 50' high, leads into the mill, loaded cars being pulled up the incline by a winding engine. The mill has 4 stamps, all compounded, giving a daily capacity of 2,800 to 3,000 tons. The mill has a Chilean mill and 3 sets of auxiliary crushing rolls, with fixed bearings, to reduce oversize material from the mortar boxes of the heads, this averaging 20 to 25% of rock stamped. Mineral from the wash discharges automatically and is sluiced into the basement, where shoveled into 1½-ton mineral cars, having 14-mesh perforated steel bottoms that allow the drainage out of water, after which the cars are weighed, then lifted by a cage elevator and dumped into bins. The bin house has 4 compartments, each with cement floor and steam-pipes underneath, for drying the remaining moisture from the wash. The mineral is taken from the bin house, in self-dumping steel mineral cars to the Michigan smelter at Houghton for reduction. Tailings from the mill are dewatered, then raised by bucket elevator, and stacked by belt conveyor, some distance from the mill. To utilize exhaust steam from stamps a 1,250-k. w. turbo-generator has been installed.

Water for both the Mohawk and Wolverine mills is furnished from a joint pump house, standing near the Tobacco river, from which water is taken. The pump house has a 20,000,000-gal. triple expansion Snow pump, supplemented by a 9,000,000-gal. Nordberg pump, giving an ample water supply for both mills.

A 30x300' wharf, on Traverse bay, a short distance from the mill, with 14' of clear water alongside, is fitted with coal hoists and storage sheds, ample for the needs of both mills. Employs about 700 men.

Yield of fine copper, per ton of rock stamped, averaged 15.79 lbs. for the decade ended 1912.

Production:

	Cost		Cost							Sell.
	Tons Rk.	per Ton	Tons Rk.	per Ton	Lbs. Cu.	Mineral	Ref. Cu.	Cost per Lb.		Price

(a) Includes construction. (b) Includes strike expense.

The mine was closed from July, 1913, to April, 1914, due to the Western Federation of Miners' strike. Toward the close of 1915 recovery amounted to over 21 lbs. copper per ton of rock, and costs were down to about 7½¢ per lb. Production, 1917, is at the rate of 1,100,000 lbs. per month.

Finlay in 1911 estimated 176,000,000 lbs. extractable copper, and a life of

15 years further. Our present estimate is 250,000,000 lbs. and a life of 22 years.

The Mohawk, while a much lower grade mine than was anticipated at the beginning, is a fine property with an assured future and has the benefit of a strong, honest and thoroughly economical and competent management.

MULOCK MINE

- MICHIGAN

Idle. **Office:** care R. P. Mulock, owner, Colfax, Ia. Mine near Matchwood, Ontonagon Co., Mich.

Property: 240 acres, the N. W. $\frac{1}{4}$ of Sec. 9 and the N. W. $\frac{1}{4}$ of N. W. $\frac{1}{4}$ and S. W. $\frac{1}{4}$ of S. W. $\frac{1}{4}$ of Sec. 15, T. 49 N., R. 41 W., one-half mile N. W. of the Norwich mine. Exploratory work, 1903-05, showed 4 cupriferous amygdaloidal beds, of which two, about 400' apart, averaging 6' and 15' in width, were opened by several pits, showing copper.

NATICK COPPER CO.

MICHIGAN

Office: Leopold Bldg., Houghton, Mich. Mine near Copper Falls, Keweenaw Co., Mich. F. W. Nichols, resident mgr.

Property: 200 acres, the N. E. $\frac{1}{4}$ and E. diagonal $\frac{1}{2}$ of E. $\frac{1}{2}$ of N. W. $\frac{1}{4}$ of Sec. 28, T. 58 N., R. 31 W., surrounded by holdings of the Frontenac Copper Co. Property slightly explored in early days, has been idle many years.

NATIONAL MINING CO.

MICHIGAN

Idle. **Office:** 6 Beacon St., Boston, Mass. **Mine office:** Rockland, Ontonagon Co., Mich.

Officers: B. T. Morrison, pres.; Harry Highley, sec.-treas.; Chas. M. Baker, Harry M. Howard and W. S. Warn, directors.

Inc. 1848, in Michigan; rechartered 1878, cap. increased later to \$2,500,000; shares \$25 par; issued, \$1,875,000, and rechartered 1908. Paid dividends, 1861-72, of \$320,000, and levied a 40c assessment 1909. The company has no debts.

Property: 1,852 acres, having the Michigan on the north and east and the Victoria on the south and west, carries the western continuation of the contact vein of the old Minnesota mine, now owned by the Michigan Copper Mining Co. The property showed, when work was begun, the relics of ancient mining operations, including a shaft of 50' depth, timbered and scaffolded, with a nearly continuous sheet of copper extending down one side. The company had considerable litigation with the old Minnesota company over the title to 115 acres of land, the National finally winning. The company stopped work 1893.

NATIVE COPPER CO.

MICHIGAN

Idle since 1855. **Office:** 68 Devonshire St., Boston, Mass. Mine at Delaware Mine, Keweenaw Co., Mich.

Officers: Ashley Watson, pres.; Chas. E. Adams, sec.-treas.; Ashley Watson, Frederick Hoitt and Frank L. Van Orden, directors.

Inc. 1849, and reincorporated March 29, 1880, in Michigan. **Cap.**, \$1,000,000; shares \$25 par; fully issued. Annual meeting, first Wednesday in March.

Property: 480 acres, being the S. $\frac{1}{2}$ of Sec. 3 and N. W. $\frac{1}{4}$ of Sec. 10, T. 58 N., R. 30 W., all on the Keweenaw trap belt. A little work was done, 1852-55, on a fissure vein crossing the Ashbed, the company levying assessments of about \$39,000.

NAUMKEAG COPPER CO.

MICHIGAN

Office: 61 Broadway, New York. **Mine office:** Houghton, Mich.

Officers: J. Parke Channing, pres.; Sam A. Lewisohn, v. p.; E. H. Westlake, sec.-treas., with Adolph Lewisohn, I. J. Sturgis, F. L. Van

Orden, Theo. L. Herrmann, J. H. Susmann and Chas. J. Paine, Jr., directors; Sidney S. Lang, supt.

Inc. March 21, 1912, in Michigan. **Cap.**, \$5,000,000; shares \$25 par; \$10 paid in; issued 102,000 shares. U. S. Mortgage & Trust Co., registrar. Annual meeting, third Wednesday in March.

Company ended 1916, with a cash balance of \$6,074; investments, \$126,250; development expenses, \$118,240, or \$150,532 since 1912.

Property: 1,200 acres, in Secs. 34 and 35, T. 55 N., R. 34 W., and Sec. 3, T. 54 N., R. 34 W., just west of Houghton, on the south shore of Portage lake, carries practically all of the Ashbed amygdaloidal beds, including the Atlantic and the Quincy-Pewabic lodes.

Development: property was slightly explored under former owners, but efforts were sporadic and altogether unimportant. Operations by present owners were begun July 10, 1912, in the horizon of the Hancock lodes. Drill borings yielded good showings of copper at depth of 513' in what is presumed to be an extension of Hancock No. 3 lode, and again at a depth of 1,301' where a 6" streak of coarse copper was encountered.

In 1914, the main, or Dakota Heights adit on the old Pewabic lode was extended 126', encountered the lode at 100', and drifts No. 2-A north and south were continued for 70' and 63'. A total of 1,936' of drifting was done during the year. This work indicated a lode, 6-8' wide, for 700', showing copper ore, but not of commercial value. During 1915 exploratory work was confined to the workings from the Dakota Heights, or No. 4 adit; a total of 1,172' of drifting on the Pewabic lode showed considerable copper on the No. 2 North drift. A 200' winze was sunk from this drift and 1,602' of drifts and crosscuts driven from the lower level. About 1,000' of drifts and crosscuts were driven in crosscuts No. 4 East, No. 3 West and drift No. 2 South. No beds of value were found in the southern part of the property.

In 1916 all exploration was confined to workings from No. 4 adit at N. end of property. No. 2 drift was put out 352' on the old Pewabic lode, showing no copper. Work from No. 4 E. crosscut disclosed nothing worth further exploration, save the bed in which the breast of crosscut is in.

An electric hoist was installed near top of main winze, and the winze sunk 220' to 410' level. Some small lenses of fair ore were opened during this work. Possibilities of 400' level are better than at 190'.

Equipment: includes hoist, compressor, pump and electric power.

The property is considered promising and the management is excellent.

NEW ARCADIAN COPPER CO.

MICHIGAN

Houghton, Mich.

Officers: Robt. H. Shields, pres. and gen. mgr.; Col. Sylvester T. Everett, v. p.; Wm. F. Miller, sec.-treas. **Directors:** Wm. B. Anderson, John Merton, John C. Shields, L. W. Killmar, Jas. W. Shields, Allen F. Rees, R. H. Shields, S. T. Everett and Herman W. Fesing, engr.; Otto Lieber, mg. capt.

Inc. April 27, 1909, in Michigan. **Cap.**, \$3,750,000; shares \$25 par; assessable; paid in, \$12.50. Last assessment levied in July, 1917. This company succeeded the Arcadian Copper Co., a corporation organized in New Jersey that had non-assessable stock, and exchanged shares, *pari passu*, levying an assessment of \$1 per share, 1909. Property was transferred, by deed, from the old company to the new, May 30, 1909. Company owns 24,000 shares of stock of the New Baltic Copper Co. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Annual meeting, first Tuesday in May.

Revenue in 1916 totaled \$139,731; including \$7,384 from sales of copper, \$24,141 from assessments, \$40,000 from sale of land, and \$66,743 from 1915 balance. Cash at end of 1916 amounted to \$21,316.

Property: 3,500 acres, includes 5 old mines worked at various periods in the past. The Arcadian Copper Co., predecessor of present company, operated the property with great vigor, 1898-1901, and equipped it with machinery, and a 3-stamp mill at Grosse Point. Operations on the Isle Royale bed proving unsatisfactory, all work was suspended June 15, 1903; the hoist, machinery and shaft houses were sold to the Trimountain Mining Co., the stamp mill to the Centennial Copper Mining Co., and the property dismantled. The floating debt of the old company was liquidated by the sale of 800 acres of land, for \$750,000, to the Quincy Mining Co. The old mine and equipment were fully described in Vols. I and II of the Copper Handbook.

Development: exploratory work was resumed Oct., 1905, by the old company, on an amygdaloidal bed about one-fourth mile east of the Isle Royale amygdaloid previously worked, and crosscutting from the 200' level of the exploratory shaft disclosed 5 cupriferous beds in a distance of 110'. Work was suspended March, 1908, until organization, and was resumed Aug., 1909, by diamond-drill boring from the bottom of the 200' exploratory shaft, which is in the S. W. $\frac{1}{4}$ of Sec. 29. Exploratory work, 1910-13, included considerable trenching and test pitting, but was devoted mainly to securing 3 cross-sections, nearly 1 mile apart, by diamond drilling, and 26 holes, aggregating over 26,000', have been drilled. Drill hole No. 22 cut a promising amygdaloid lode, in the north area. A shaft started June, 1912, on this lode, was 1,660' deep in Aug., 1917, and is to be sunk to a depth of 2,500 to 3,000'.

Crosscutting was done on the 750' level to explore the 2 copper-bearing amygdaloid beds disclosed by diamond drilling, one 300' east, the other 150' west of the shaft. On this level an amygdaloid vein of great promise has been opened up 150' east of the shaft. Crosscuts and drifts have also been driven on the 250', 600', 900' and 1,050' levels and disclosed good copper contents. The 600' level has 600' of drifting on this lode. On the 900' level, No. 8, conglomerate was cut and found to be well mineralized at this point. During 1916, 2,114' of drifting was done and 747' of crosscutting.

Ore crushed at the Franklin mill last year, totaled 1,391 tons, yielding 23 lbs. refined copper per ton. Several thousand tons ore to be treated.

Equipment: includes a steam plant, with boilers, a hoist good for 2,500', a 15-drill air compressor, necessary mine buildings, and a fully equipped rock-house with an 18x24" crusher.

New openings in 1916 were of generally favorable nature. On the 1,500' level the vein is up to 20' wide, has been opened for 270', and is of good grade.

Owing to its immense acreage on the mineral belt, the property is considered promising and management is good.

NEW BALTIC COPPER CO.

MICHIGAN

Houghton, Mich.

Officers: R. H. Shields, pres. and gen. mgr.; Herman W. Fesing, v. p.; John Edwards, sec.-treas.; other directors, S. T. Everett, J. W. Shields and John Merton; Herman Fesing, engr.

Inc. Dec. 14, 1909, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; assessable; issued, \$2,175,000; \$10 paid. Beacon Trust Co., Boston, transfer office; American Trust Co., Boston, registrar. Company succeeded the New Baltic Exploration, giving stockholders therein share for share, giving 30,000 shares to the Edwards estate and 10,000 shares to the New Arcadian

Copper Co., for lands, and selling 20,000 shares to the public, at \$8. Company began operations with \$120,000 cash. Two assessments realized a total of \$116,254. All officers with exception of general manager serve without pay. Annual meeting, third Wednesday in April.

Statement for 1916 shows receipts, \$82,531, of which, \$60,659 was from assessments and \$20,361 from 1915 balance. Development cost, \$18,101, and land purchased, \$40,000. Cash on hand at end of 1916 was \$21,648, plus \$55,595 due for assessments called.

Property: 800 acres, Sec. 16, T. 55 N., R. 33 W., with mineral rights to the N. W. $\frac{1}{4}$ of the N. W. $\frac{1}{4}$ reserved by the New Arcadian Copper Co. Exploratory work, begun June 10, 1909, included extensive trenching in the horizon of No. 3 conglomerate, supplemented by boreholes put down by a Calyx shot drill, cutting a $3\frac{1}{2}$ " core, considerable trouble having been experienced in getting down stand pipes. No. 3 borehole, at a depth of 330', cut 2' of exceptionally good copper-bearing rock, with 6" of heavy copper, and a drill core fairly charged with copper was taken, Sept., 1909, from what was thought to be the western Baltic bed, at depth of 300'. In Nov., 1909, a drill hole pitched at an angle of 60°, cut an amygdaloidal bed estimated to pitch at 60° in opposition, giving cores of 105' aggregate depth, showing copper at various points, the final 7' being well charged with fine stamp copper and a considerable amount of very coarse stamp copper. The drilling also disclosed an unidentified amygdaloidal bed of about 75' width, carrying considerable copper in masses approaching barrel-work size. Deepest hole bored was 1,200'.

Ground was broken June, 1910, for an exploratory shaft, which was started about 35' in the footwall trap, and sunk to a depth of 500'. Although the shaft was started in the foot, the formation rolls so that the bed was cut at 3 points in the depth of 310'. At 200' the shaft cut the footwall of the amygdaloidal bed, carrying much calcite but devoid of copper. At depth of 310' the bed was cut again, carrying extremely heavy copper of a grade materially better than the average of the payable mines of the district. Drifts on the 350' and 500' levels disclosed exceedingly buncy ground, with occasional pockets of rich copper, and a crosscut on the 500' level showed further copper ground in an unidentified amygdaloidal bed underlying No. 4 conglomerate bed, distant about 1,500' from the shaft. This crosscut was continued to a point over 1,900' from the shaft. Facts concerning this vein were obtained from work done on it by the New Arcadian, the adjoining property.

The drilling campaign ended with No. 7 hole at a depth of 1,235' in 1916. No. 8 conglomerate was 41' thick at depth of 1,192'. Hole passed through good-looking amygdaloid veins, with copper in beds at 329', 493', 652', 792' and 1,192'. The New Arcadian vein is probably that cut at 792'. A shaft was started to cut the N. extension of this vein, and was down 250' in Aug., 1917. At 60' it cut the vein sought, well charged with copper.

Equipment: in 1916, a new hoist, compressor, boiler-house, etc., were erected. Management, which is good, considers that property offers great possibilities.

NEW YORK CONSOLIDATED MINING CO. MICHIGAN

Charter expired and corporate existence of company being wound up by F. W. Nichols, receiver, Houghton, Mich.

Property sold to J. H. Rickard, trustee and final proceedings taken to dissolve company, 1917.

NORTH LAKE MINING CO. MICHIGAN

Office: 60 Congress St., Boston, Mass. **Operating office:** Sheldon Bldg., Houghton, Mich.

Officers: R. M. Edwards, pres. and gen. mgr.; Arthur C. Paine, v. p.; Henry Tolman, treas., with H. D. Forbes and S. L. Powers, directors; A. L. Wyman, sec.

Inc. Aug. 26, 1908, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; fully issued; \$10 paid in.

Company paid \$144,000 for 360 acres of land, bought of St. Mary's Mineral Land Co., one-half in cash and one-half in 9,000 shares of stock at \$8, beginning business with \$300,000 cash in the treasury. The company suffered heavily by the failure of S. R. Dow & Co., Sept., 1912, losing \$160,188 in cash and interest unlawfully borrowed by its former president, S. R. Dow, and at the end of 1912 was \$19,000 in debt. This indebtedness was wiped out by an assessment of \$1 per share, levied April 18, 1913. Federal Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, third Thursday in April.

Annual report for 1916 shows total receipts of \$100,333, and expenses, \$71,745, leaving a balance of \$28,587. Cash on hand, \$26,683, accounts payable, \$6,520. An assessment of \$1 per share, in June, 1916, made \$100,000 available for development, of which \$38,487 was spent.

Property: 1,120 acres, in Secs. 28, 29, 32 and 33, T. 51 N., R. 37 W., lying immediately north and east of the Lake Copper Co. Property was supposed to carry about 7,000' of the strike of the Lake amygdaloidal bed, but apparently the Lake bed curves to the westward, rather than to the east. Property also carries the copper-bearing series of the Evergreen belt of amygdaloidal beds, and various other unidentified cupriferous strata. The company's lands are crossed by the Fire Steel river, and are traversed by both the Mineral Range and Copper Range railways.

Exploratory work has been planned thoroughly and systematically, the preliminary work consisting of diamond drilling to give 2 complete cross-sections, of about 8,500' and 9,500', respectively, to determine the strike and dip of all the strata on the property. These sections are about 1,000' apart, and the contact of the Keweenaw series with the eastern sandstone has been definitely located by drilling. Numerous drill holes have been bored, with depth ranging from 200' to more than 2,000'.

Diamond drilling was begun 1909, and ended 1911, with the No. 15 hole. Several cupriferous amygdaloidal beds were disclosed, and 2, underlying Nos. 6 and 8 conglomerates, have been correlated as extensions of Nos. 1 and 2 of the Adventure series of lodes. No. 1 bed, of about 33' width, showed 10' fairly charged with copper and No. 2 bed was lean. The formations above No. 8 conglomerate bed are practically unexplored, and excepting the work done in holes Nos. 3 and 7 remain entirely untouched. The results obtained from holes 3, 7 and 13, below this conglomerate bed, were very promising and a vertical shaft was therefore started July, 1913, in the vicinity of No. 3. At a depth of 300' a crosscut to the N. W. was started. This cut through No. 8 conglomerate at 210' from the shaft. At 730' the crosscut broke through into overburden. A 200' winze, 30° incline, was sunk and 100' gained in depth. On the 400' level exploratory work for the lodes developed on South Lake property was continued, but with little success in finding commercial rock. At a distance of 1,050' N. W. of the shaft the crosscut broke through into the overburden. In the summer of 1915 shaft sinking was resumed, and by June, 1916, had been bottomed on the 800' level.

Crosscuts at right angles to the general trend of the formation were driven in both directions from the shaft on the 800' level. In July, 1917, the S. E. crosscut was in 1,800'. Progress in each direction is 110' monthly.

A lode found at 765' in has been opened by 400' of drifts. The S. E. crosscut will continue through the copper bearing amygdaloids found by drilling.

Equipment: includes a Nordberg hoist good for depth of 1,200', a small air compressor, boarding house and other necessary mine buildings.

The North Lake is an exploration company, but in view of the encouraging results secured by diamond-drill borings on this and adjoining properties, is considered promising and the present management is good.

OJIBWAY MINING CO.

MICHIGAN

Office: Suite 3300, 120 Broadway, New York City. **Mine office:** Calumet, Mich.

Officers: Thos. F. Cole, pres.; Thos. Hoatson, v. p.; Jos. B. Cotton, v. p.; Frederic R. Kennedy, sec.-treas.; Henry B. Paull, auditor; above, with G. A. Tomlinson, Walter B. Congdon, E. R. Grochau and Sam'l Brenner, directors; Wm. J. Uren, mgr.

Inc. June 8, 1907, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; assessable; issued, \$2,100,000, \$15 paid. Levied a \$2 assessment Jan., 1910, payable \$1 March and \$1 Oct. and a \$1 assessment Dec. 10, 1912. Balance sheet, May, 1917, shows: assets, mining property, \$459,919; due on calls, \$42,953; cash, \$24,593; accounts receivable, \$4,381; supplies and suspense items, \$8,356; deficit, \$719,797. Liabilities, capital stock, \$1,260,000.

Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, first Tuesday in June.

Property: 1,560 acres, bounded on the north by the Cliff and on the south by the Seneca, includes the old Manhattan tract, Bacon & Jacob lands, bought of the Union Copper Land & Mining Co.

The Kearsarge bed was located, 1904, on the Miskwabik tract, about 4 miles N. E. of Mohawk No. 1 shaft, and was proven by 5 bore holes drilled across the formation at intervals of 1,200'. Four of these holes gave good cores, being especially rich well toward the northern limits of the tract. The drill holes showed the Kearsarge amygdaloidal bed to be divided into 7 alternations of amygdaloid and trap, immediately above the geological horizon of the Wolverine sandstone, the different cores each showing copper from either one or more of four horizons. Drilling indicates that copper values alternate from bed to bed, or layer to layer, if the cupriferous zone of the Ojibway be considered a single strata; only two of the amygdaloidal layers being well mineralized in a given cross-section, as a rule.

Development: by two 3-compartment shafts. No. 1, or north shaft, 1,500' from the northern boundary of the property, is 2,051' deep, disclosing copper from grass roots. Developments in this shaft show that the Kearsarge stratum is split in two, having distinct beds of 20' and 13' respectively, separated by 13 to 15' of trap. The 1,600' and 1,700' levels show good ore.

No. 2 shaft, 1,116' S. W. of No. 1, is sunk about 90' in the footwall, and is 1,954' deep, disclosing very little copper ground above 800', though a material betterment is noted below that depth, and a very marked improvement is noted below 1,500' depth. This shaft is sunk in unusually firm ground, requiring very little timbering. Work was suspended June 30, 1913, for lack of working capital.

The mine is equipped for development to a depth of 2,000'. Development has been systematic, but the former management planned making a mine upon 5-drill cores, which, as development has proven, gave rather too favorable an indication of the richness of the lode.

OLD COLONY COPPER CO.**MICHIGAN**

Office: 70 State St., Boston, Mass. **Mine office:** Houghton, Mich.
Inc. 1898 in Michigan.

By vote of stockholders, Feb. 26, 1917, company was consolidated with the Mayflower Mining Co., on a share for share basis, under the title of Mayflower-Old Colony Copper Co., which see.

Property: about 1,200 acres on the Mineral Range, Houghton Co., Mich., in Sec. 17-18, T. 56, N., R. 32 W., east of the Calumet & Hecla, and south of the Mayflower mines.

Development: a cross-section was secured, 1899-1901, by a tunnel driven about 3,000' and by diamond drill borings eastward to the western end of the tunnel; this cross-section showed upwards of 75 amygdaloidal and conglomerate beds, a number of which carried a little copper in the drill cores and where cut in the tunnel. There are 5 shafts, aggregating about 2,200' in depth, and over 6,000' of drifts and crosscuts, all of which have shown indifferent results. Work was discontinued in 1909, and resumed again in 1911 by diamond drilling. In April, 1912, having finished the first and second sections of the original plan to drill the southern and eastern part of company's lands, the drills were moved to the north, and hole No. 14 was located between 400' and 500' S. E. of Mayflower hole No. 16, which has been called the "discovery" hole, and in which the so-called Mayflower lode was first cut on that property, disclosing a lode of unusual width and a high degree of mineralization. Two drills have been employed continuously in this work which has progressed in a general S. W. direction along the strike of the strata.

This diamond drilling campaign was an entirely original exploration of an unprospected territory, and met many puzzling geological problems but the work was thoroughly and scientifically performed and the lode has been located within an area of 3,000' N. and S. by 2,000' E., and the general average of values is good.

ONECO COPPER MINING CO.**MICHIGAN**

Office: 78 Devonshire St., Boston, Mass. **Mine office:** Hancock, Mich.

Officers: John D. Cuddihy, pres.; John Brooks, sec.-treas.; preceding, with F. L. Maguire, J. E. Fitz Gerald, Jr., directors; John L. Harris, gen. mgr.

Inc. Dec., 1898, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; \$5.50 paid in; issued, \$1,750,000 June 9, 1913. Levied a 50c assessment, Jan. 15, 1906, a \$1 assessment, Feb. 21, 1910, and a \$1 assessment, Oct. 10, 1912. Annual meeting, third Thursday in March. Stock traded on Boston curb. Company its own transfer agent; Federal Trust Co., Boston, registrar.

Property: 800 acres in Houghton county, all on the Keweenaw copper formation, in Secs. 2, 10 and 11, T. 56 N., R. 33 W., forming a main tract of 640 acres, and a smaller tract of 160 acres, adjoining diagonally, on the N. E. corner. The property lies east of the Franklin Junior and Rhode Island mines, but is separated therefrom by a quarter mile of intervening lands.

Development: the mine was opened 1862, and exploring was done 1890 and 1898. Work was begun by the company June 26, 1899, on a 2-compartment shaft that was sunk 500'. Drifting on the upper levels showed a bed of fair width, carrying a little copper, and the shaft cut a narrow fissure, rich in copper, this being of interest because it is one of the few productive crossveins found in the Portage Lake district. The bed on which the shaft was sunk has been variously identified as the Isle Royale, Grand Portage and Kearsarge amygdaloids, but is now termed the Oneco amygdaloid.

Work was suspended 1900 until Aug., 1909, when diamond drilling was begun, 10 drill holes being bored, cutting the Oneco bed on which the shaft is sunk, and an unidentified amygdaloidal bed, called the Torch Lake or Tomahawk lode, about 1,200' west of the Oneco, cores from both beds showing more or less copper. Drill holes were bored to depth of 1,000' to 1,700', locating the eastern sandstone and giving 2 complete cross-sections, 2,700' apart.

The mine was reopened Nov., 1910, and drifting resumed on the 4th level. The shaft has been sunk to a depth of 1,250' and extensive drifting on the 9th, 10th, 11th and 12th levels, both north and south, has shown the vein to be 10 to 20' wide and well mineralized. Mine has been idle since 1914, due to lack of funds.

ONONDAGA COPPER CO.

MICHIGAN

Houghton, Mich.

Officers: Reginald C. Pryor, pres., treas. and gen. mgr.; C. H. Lang, v. p.; Wm. Duffney, sec., with Ward B. Smith and D. L. Robinson, directors.

Inc. April 22, 1912, in Michigan. **Cap.**, \$3,750,000; shares \$25 par; \$4 paid; issued, 99,955. Stock listed on the Boston Curb Exchange. State Street Trust Co., Boston, transfer agent; Commonwealth Trust Co., registrar. Balance, Dec. 31, 1916, \$33,130.

Property: 10,230 acres in Ontonagon Co., Mich., near the White Pine mine of the Calumet & Hecla Co. The formation, a fine-grained sandstone, has been exposed by surface trenching at several points and found to carry flake copper in considerable quantity. The values appear to be patchy, but as the ore frequently averages 10% where cross-faults occur, a commercial average may reasonably be expected.

Development: is confined to diamond drill work. The first hole completed in Jan., 1913, has a depth of 1,912' and is apparently in the horizon of the Isle Royale-Arcadian lode. Hole No. 2 is 1,500' deep. Hole No. 5 driven in 1913 to 2,000' depth; failed to reach the contact. In 1914 holes Nos. 6, 7, 8 and 9 were drilled, making a complete cross-section from the S. E. corner of Sec. 14 to the N. W. corner of Sec. 4. None of the lodes cut in the holes gave cores showing copper in commercial quantities. Owing to unsettled conditions work was discontinued Sept. 21, 1914. Drilling near the northern boundary was started July, 1915, each hole exploring the territory farther south. In the extreme S. E. corner the lode was located at 1,100' depth, but revealed no copper values. In 1916, drilling gave cores from the lode in several places, but revealed no commercial values, so operations were stopped, Aug., 1916, and management will await results of development on neighboring properties.

OSCEOLA CONSOLIDATED MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Osceola, Houghton Co., Mich.

Officers: E. V. R. Thayer, pres.; Rodolphe L. Agassiz, v. p.; Wm. H. Dwelly, E. V. R. Thayer, J. M. Longyear, Wm. D. Calverly, D. S. Dean, Benj. Joy and Guy W. Currier, directors; C. H. Bissell, sec.-treas.; G. L. Osgood, asst. sec.-treas.; James MacNaughton, gen. mgr.; Frank H. Haller, supt.; A. Lincoln Burgan, mill supt.; Chas. D. Hohl, chief engr.; Jas. Rowe, mng. capt. **Osceola branch:** Jos. Discombe, mng. capt. **North Kearsarge branch:** Frank Lands, mng. capt. **South Kearsarge branch:** John T. Reeder, purch. agt.; Wm. Veale, chief clerk.

Inc. 1873, in Michigan, and reincorporated 1903 for a term of 30 years. **Cap.**, \$2,500,000; shares \$25 par; issued, \$2,403,750. State Street Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Shares

are listed on the Boston Stock Exchange. Annual meeting, second Thursday in March. Company is controlled by the Calumet & Hecla Mining Co., through ownership of 32,750 shares.

Balance sheet of Dec. 31, 1916, shows net earnings of \$2,776,160, and a surplus of \$2,677,547.

Dividends: company has paid 87 dividends, beginning 1878, to August, 1917, aggregating \$16,217,975. Recently dividends have been \$2 in 1904; \$4 in 1905; \$16 in 1906; \$7 in 1907; \$2 in 1908; \$14 in 1909; \$8 in 1910; \$7 in 1911; \$12 in 1912; \$7.50 in 1913; \$3 in 1914; \$8 in 1915; \$19 in 1916; \$12 to Aug., 1917.

Net earnings were: \$677,105 in 1908; \$1,070,645 in 1909; \$758,586 in 1910; \$664,628 in 1911; \$1,163,288 in 1912, equivalent to \$12.09 per share; \$381,967 in 1913; \$353,677 in 1914; \$1,610,860 in 1915; \$2,776,160 in 1916.

Property: 2,120 acres, in 4 separate tracts, also an extensive mill site, in Houghton Co., and miscellaneous lands in Houghton and Keweenaw Counties, Michigan. Company's property includes the Osceola, North Kearsarge, South Kearsarge and Tamarack Junior mines.

The **Osceola** mine proper, 720 acres, lying next south of the Calumet & Hecla, was opened, 1873, on the Calumet conglomerate; this bed proving unremunerative, work was begun on the Osceola amygdaloidal bed, parallel and 730' east of the Calumet conglomerate. The Osceola amygdaloid has a strike of approximately N. 39° E., and is opened by six shafts numbered from north to south. Crosscuts have been sent from the Osceola workings to the Calumet conglomerate, at various depth, without encouragement, and diamond drilling was done, 1904, to locate and test the Kearsarge amygdaloid on the old Osceola tract, but the results were not encouraging. It is said that the company ceded the right to mine the Kearsarge bed on its property to the Laurium Mining Co., in exchange for certain surface rights.

The 4 northernmost shafts of the Osceola mine proper are abandoned. No. 5 Osceola shaft, 700' S. E. of No. 3, is 4,667' deep. No. 6 Osceola shaft, formerly known as the Opechee, 1,300' S. W. of No. 5, is 4,734' deep. This shaft shows some good stopes, especially on the lower levels in the southern drifts, toward the Tecumseh mine.

Some work was done at No. 3 shaft in 1916, but stopped 1917, until labor and mill arrangements improve. Mining was limited to No. 6 shaft, where, on No. 38 and 39 levels S. the ground was rich. No. 42 was driven into La Salle ground (which report see). An auxiliary shaft was started 1,800' S. of No. 6, and is operating between No. 43 and 45 levels. Rope-haulage was installed on No. 45 to tram ore from this new shaft.

Osceola contributed 225,030 tons of 14.89 lb. copper ore in 1916.

The compressor house is equipped with a 50-drill Nordberg 2-stage cross-compound air compressor.

Water is secured from Lake Superior through a 1½-mile line of 6" pipe, connecting with a stand pipe at the Tamarack mine, leading to a 130,000-gal. concrete reservoir between Osceola shafts Nos. 5 and 6.

The **Kearsarge** or **North Kearsarge** mine, 1,120 acres, lies north of the Wolverine, with which it has underground connections. Extensive diamond drilling, 1905-1907, showed considerable good stamp rock in the foot and hanging walls, at points where the main bed was impoverished. Diamond-drill boring costs were \$2 to \$3 per foot, as against \$6 to \$8 per foot for drifting. The Kearsarge amygdaloidal bed ranges 16 to 20' in width, in this mine, and has proven very bunchy, though with very good average values. The southern workings, approaching the Wolverine, have shown improve-

ment, but the mine is richest near the Ahmeek, to the north. About 60 power drills are used in this branch.

No. 1 North Kearsarge shaft is 4,092' deep and has a Nordberg hoist good for 6,500' depth, operating two 6-ton skips in balance. No. 2 North Kearsarge shaft was abandoned at depth of 2,400', some years ago.

No. 3 North Kearsarge shaft, 1,825' N. E. of No. 1, is 3,403' deep and develops a large area of good ground, especially in the northern drifts. No. 4 North Kearsarge shaft, begun 1907, sunk 75' in the footwall, is 1,622' deep. The shaft is lined with concrete for 185' from surface, and has large loading bins just below the 10th and 13th levels, to which rock is milled through chutes, from the levels above. Equipment of the rock house includes two 40-ton crushers, driven by a special Nordberg engine.

Shaft No. 3 was repaired during 1915 and 1916, and is producing 450 tons daily, all from above No. 20 level. Copper-content of ore from No. 1 and 4 shafts improved over previous years.

The steel frame boiler house at No. 4 has three 84" Pratt boilers, with room for 2 additional.

The North Kearsarge surface plant includes a stone compressor house and a 30-drill compressor at No. 1 shaft, where are located also the combination machine and carpenter shops, warehouse and office, all of wood.

North Kearsarge contributed 651,079 tons of 14.23 lb. copper ore during 1916, which was considered a profitable period for the mine.

The **South Kearsarge** mine, 160 acres, lying south of the Wolverine and east of the Centennial, was known formerly as the Iroquois. Development was begun Sept., 1899, and the best stopes are toward the Centennial line, the Kearsarge bed averaging about the same width as in the North Kearsarge and Wolverine mines, and being remarkably uniform in copper values. This mine is completely developed, both shafts and all but a few of the drifts having reached the boundaries of the property, and the mine is officially stated to have a life of but 2 years, at the present rate of extraction, without taking into account about 700,000 tons in the pillars and arches; the mining of these will be a slow operation and costs higher than at present.

Mining pillars continued in 1916 to a limited extent. Over 33% of the ore treated from this mine (408,572 tons of 17.06 lb. copper) came from footwall work, cleaning up finished stopes, and a surface dump. When these are finished the 1917 yield will be lower.

No. 1 South Kearsarge shaft, the northernmost, is 2,820' deep, and practically at the boundary. The shaft rock house cares also for rock from No. 2 shaft, with which it is connected by an 1,100' trestle. Two skips are operated in balance. No. 2 South Kearsarge shaft is 1,992' deep.

A 350-gal per min. motor-driven pump was installed in 1916 to handle the water coming through caved workings.

The **Tamarack Junior** mine, 120 acres, lying between the Centennial and Calumet & Hecla, has 2 vertical shafts, on the Calumet conglomerate, No. 2 being 3,360' deep, with 12 levels opened. The Tamarack Junior has been idle since 1903, and apparently is dead, so far as the conglomerate is concerned, with indifferent prospects of finding other workable cupriferous beds on the tract.

Rock is transported from the various mines to the mills by the Hancock & Calumet railway, a branch of the Duluth, South Shore & Atlantic system.

Mill: is built in 2 sections, the main section being 176x213', of steel frame, with 4 Nordberg steeple-compound stamps. These stamps, which are now in very general use in the Lake Superior district, were invented by

B. Nordberg as the result of some years of experimentation. The stamps have circular mortars, with $\frac{5}{8}$ " screens, and hydraulic separators, about 20% of the copper secured in milling coming from the mortar discharges and separators. The older section has 3 stamps with circular screens having $\frac{3}{8}$ " openings, and is otherwise a duplicate of No. 2 mill.

The wash department of the 2 mills are equipped with Woodbury classifiers and jigs with 6 round tables and 1 Wilfley table for each stamp, the Wilfleys taking headings from the round tables. An Allis-Chalmers Chilean mill reduces over-size material from the stamp mortars and there are crushing rolls and Hardinge mills. Stamping costs were 16.95c per short ton in 1905, and only 11.71c in 1907, the latter figure being the lowest ever reported by any mill for this work, and milling costs were 13.36c per ton in 1908. No figures of stamping costs have been made public since the change in management.

Mill improvements in 1916 amounted to \$24,645. The fire-protection system was connected with the Calumet & Hecla.

The steel boiler house, adjoining the mills and furnishing power for both, has three 250- h. p. 72" boilers, delivering steam at 150-lbs. pressure, and nine 250 h. p. 84" boilers operated under 105-lbs. pressure, all of the locomotive-firebox type.

The power plant has an Allis-Chalmers Corliss engine, operating a 100 k. w. Morgan-Gardner d. c. generator, furnishing current for 220-volt incandescent enclosed arc lamps.

The joint pump house of the Osceola and Tamarack mines has two 40,000,000-gal. triple-expansion Nordberg pumps having 22", 40" and 60" cylinders, with three 30" horizontal plungers of 52" stroke and 42" discharge. Water is taken through an 8' tunnel, running 1,275' under Torch lake, with 3" intake holes, guarding against clogging by ice.

Production:

	Tons R'k	Lbs. Min.	Lbs. Cu. per Ton	Mine Cost per Ton(a)	Lbs. Cu. Produced	Total Cost per Lb. Cts.	Rec'd per Lb. Cts.

1910.....	1,217,720	25,669,913	15.9	1.28	19,346,566	9.37

(a) Includes mining, transportation, stamping and taxes per ton of rock.

(b) 63,449 tons No. Kearsarge rock stamped at Tamarack mills at a cost of 27.28c per ton.

(c) 77,937 tons No. Kearsarge rock stamped at Tamarack mills at a cost of 24.32c per ton.

(d) 13,379 tons No. Kearsarge rock stamped at Tamarack mills at a cost of 27.88c per ton.

In 1916 the mine costs per ton at the different mines operated by the company were as follows: Osceola, \$1.84; North Kearsarge, \$1.30; South Kearsarge, \$1.18.

Strike conditions and inefficiency of green labor in 1913-14 and the outbreak of the European war later in 1914 contributed to low production and high costs during that time. From Sept. 1, 1914, to Feb. 1, 1915, the

mines were operated on a three-quarters time basis. Osceola is a low-grade mine whose profitable operation is ensured by the efficient management of the Calumet & Hecla control.

Copper yield for the first 4 months of 1917 averaged 1,519,000 lbs. per month; nearly 40,000 tons of ore was treated in June, 1917.

PACIFIC COPPER CO.

MICHIGAN

Office: 705 Sears Bldg., Boston, Mass. **Mine office:** Leopold Bldg., Houghton, Houghton Co., Mich.

Officers: Geo. P. Gardner, pres.; Chas. J. Paine, Jr., sec.-treas.; preceding, with W. Cameron Forbes, Chas. E. Perkins, Nathaniel H. Stone, E. V. R. Thayer, T. N. Perkins, Walter Hunnewell and R. R. Goodell, directors; F. W. Nichols, agent.

Inc. Aug., 1890, in Michigan. **Cap.**, \$1,250,000; shares \$25 par; issued, \$1,000,000, \$2 paid. Is controlled, through ownership of about 20,000 shares, by St. Mary's Mineral Land Co. Paid a \$1 dividend Nov. 18, 1910. Ended 1916 with \$7,706 cash on hand.

Property: 820 acres, the N. W. $\frac{1}{4}$ and the S. W. diagonal half of the S. W. $\frac{1}{4}$ of the N. E. $\frac{1}{4}$ of Sec. 4, and Sec. 5, T. 54 N., R. 34 W. Land lies just N. W. of the Atlantic mine, and supposedly carries the northern extension of the Atlantic ashbed, on which a little exploratory work was done previous to organization. Has done no mining work since 1890.

Of the \$40,000 originally raised by sale of 20,000 shares, one-half was spent in prospecting work. The timber on the lands has been sold at various times and 140 acres sold to the Naumkeag Copper Co. From these sales and interest on funds, company has distributed \$40,000 cash and 4,000 shares of Naumkeag Copper Co. stock to its stockholders.

PHOENIX CONSOLIDATED COPPER CO.

MICHIGAN

Controlled by Keweenaw Copper Co.

Office: Calumet, Mich. **Mine** near Phoenix, Keweenaw Co., Mich.

Officers: Thos. F. Cole, pres.; Spencer R. Hill, v. p.; F. W. Taylor, sec.-treas.; preceding, with G. G. Hartley and Thos. Hoatson, directors; W. J. Uren, gen. mgr.

Inc. April, 1899, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; \$14.50 paid in. Is controlled by the Keweenaw Copper Co., through ownership of about 90% of the share capital, acquired by an exchange of shares on the basis of 10 shares of Phoenix for 1 share of Keweenaw.

Report for year ended Dec. 31, 1916, showed assets of \$1,804,842, which includes: real estate, \$505,213; development and exploration expense prior to 1916, \$1,065,785; exploration and development during 1916, \$74,988; cash, \$15,980.

Liabilities: Keweenaw Copper Co., \$112,995; mine accounts and liabilities, \$41,847. Last assessment was \$2 per share, July, 1915.

Property: 2,505 acres, carrying 5 different fissure veins, on which more or less mining has been done, at various times. The old Phoenix mine, included in the present consolidation, is famous for having produced the largest mass of native copper ever found, weighing upwards of 500 tons. The Phoenix fissure, on which work was begun 1846, was opened to a depth of only about 90', yielding considerable mass copper and silver. There also are possibilities on the Ashbed lode, which has been slightly developed by an exploratory tunnel. The mine has extensive openings and a modern equipment, and was worked for 6 years without success, until closed down, June 15, 1905.

Diamond drilling on the Ashbed lode, 1910, gave encouraging results and a resumption of this work late in 1913, after several years of idleness, showed fair copper values. In 1916, 32 holes were drilled, aggregating 1,824',

on the 4th, 6th, 8th, 10th and 12th levels, all the cores showing copper either in the drifts or towards the walls.

New work in 1916 totaled 5,426'. Shaft sunk 201' to 1,616' in depth and good copper ground was found on the 6th, 7th, 8th and 10th levels. The "Old Phoenix" fissure was explored by a crosscut northwards to hanging wall of the Ashbed lode and found not mineralized, excepting where it cuts the lode.

Equipment: at power plant at No. 1 shaft includes 3 boilers, 2 air compressors, hoisting engine and pumps. The mill contains 7 Wilfley tables. Company plans to make tests with the Mineral Separation process, 1917.

QUINCY MINING CO.

MICHIGAN

Office: 32 Broadway, New York. **Mine and works office:** Hancock, Houghton Co., Mich.

Officers: Wm. Rogers Todd, pres.; W. Parsons Todd, v. p.; Jas. L. Bishop, Chas. J. Devereaux, Isaac H. Meserve, Wm. M. Belcher, John M. Longyear, Walter P. Bliss and Otto Kirchner, directors; W. A. O. Paul, sec.-treas.; F. J. McLain, asst. sec.-treas.; Chas. L. Lawton, gen. mgr.; Alex. Laist, smelter supt.

Inc. March 30, 1848, under special charter from the state of Michigan. **Cap.**, \$3,750,000; shares \$25 par; issued, \$2,750,000. Original cap., \$500,000; reincorporated March 6, 1878, for 30 years more with cap. \$1,000,000, increased, 1889, to \$1,250,000, again increased, 1896, to \$2,500,000, and once more increased, 1906, to \$3,750,000. Reincorporated 1908 for a third term of 30 years. Old Colony Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, first Wednesday in June.

Comparative Statement: Assets and Liabilities exclusive of real estate, mine plant and supplies in use.

	Cash, Cu, Invest's	Accounts Rec.	Total	Accounts Pay.	Add. Supplies At Mine	At Smelt.	Total

(a) After deducting \$226,250 paid Hancock Cons. Mining Co. for mineral land purchased.

(b) Balance, Jan. 1, 1913, \$1,233,278; also, deduct \$150,000 paid note given St. Mary's Canal Mineral Land Co.

Dividends: Quincy paid its first dividend in 1862, and profits have been disbursed to shareholders in every succeeding year except 1866 and 1867, giving the company a continuous dividend record of 49 years, from 1868 to date, rendering it the oldest dividend-paying American copper mine, and second only to the Tharsis Sulphur & Copper Co., Ltd., which has a record of continuous dividends since 1867, or 1 year longer than the Quincy's record. Recent dividends, by years, have been as follows: 1900-1, 36%; 1902, 28%; 1903, 22%; 1904, 20%; 1905, 24%; 1906, 50%; 1907, 54%; 1908, 18%; 1909, 16%; 1910, 20%; 1911, 16%; 1912, 21%; 1913, 15%; 1914, 2%; 1915, 32%; 1916, 64%; 1917, 60% to September. Total dividends to Sept., 1917, \$25,187,500.

A table of statistics, production, costs, etc., 1864-1905, is given in Vol. X., Copper Handbook.

The year 1917 marked Quincy's 69th anniversary. During this period it has paid its stockholders \$25,187,500 in dividends and still had \$2,663,615 cash surplus, equivalent to a profit of 4½c on each of 571,452,080 lbs. copper produced, and sold at an average price for the entire 69 years of 15.3456c, equal to \$87,765,820.

Production in 1916 was 1,204,020 tons of rock, averaging 17½ lbs. copper. Outlook for 1918 is good for continued production and a new hoist suitable for 10,000' in depth will permit deep exploration. A noteworthy fact was the find of a great body of mass copper 40' long and 70% pure, on the 6,500' level of No. 2 shaft, early in 1917.

Property: is very extensive, the management having adopted the policy, many years ago, of expansion of territory as opportunities offered. Acquisitions include a purchase of the Arcadian Copper Co., 1907, at a price of \$750,000; the old Franklin mine, 1908, at a cost of \$170,000, and the acquisition, 1910, of Sec. 14 and the N. E. ¼ of Sec. 22, of 800 acres, from St. Mary's Mineral Land Co. bought for \$600,000; 80 acres under and to the S. of shaft No. 2 were bought from Hancock Mining Co., July, 1915, for \$226,250.

The holdings of the Quincy now include lands formerly held by the Pewabic, Franklin, Mesnard, Pontiac, Arcadian and St. Mary's, in order named, from south to north.

Geology and Development: property carries the Pewabic bed and a number of parallel copper-bearing amygdaloids, from the Hancock mine, on the northern shore of Portage lake, to the boundary of the Franklin Junior mine, or about half way from Hancock to Calumet. Through the acquisition of new territory, shafts Nos. 2, 6 and 8 can be sunk to practically unlimited depth.

The mine was opened 1848, on the Quincy amygdaloid, a bed lying some distance west of the Pewabic, but the Quincy bed was abandoned 1856, when the Pewabic amygdaloid was opened. There is a footwall branch, known as the Pewabic East lode, underlying and parallel with the main bed, which occasionally yields good returns. The so-called West branch, about 300' west of the Pewabic bed, has been opened by shafts Nos. 4 and 7 through crosscuts on the 30th, 39th, 40th, 44th and 49th levels, and considerable stamp rock has been stoped therefrom. About 1,000' west of the Pewabic bed is the Hancock amygdaloid, which is narrow but fairly mineralized, and which yielded an average of 21 lbs. fine copper per ton, after reasonable selection, when worked in the old Hancock mine, this figure being materially above the present average return from the Pewabic bed.

The Pewabic amygdaloidal bed, on which all shafts are sunk, has a strike of about N. 30° E., with an average dip of 52 to 54° at surface, flattening in the lowest workings at depth of more than a mile to approximately 37° 30', the shafts following the dip of the bed on catenary curves. The Pewabic averages about 20' in width in the upper workings, but is materially narrower at the bottom. The lower workings show decreased copper values with much less heavy copper than above, but the ore is more uniform in value. Part of the decrease in copper returns is due to mining rock that formerly would have been left as worthless and practically the entire Pewabic bed is now mined. There are copper courses, or shoots, that rake to the north with depth.

The Pewabic bed has good walls and the mine requires comparatively little timbering. Dry-walls are built of waste rock, in wide stopes, saving the expense of hoisting waste and also the cost of timber. Shafts are sunk mainly in the footwall. The Pewabic rock now runs 17 lbs. fine cop-

per per ton, with some silver values. Previous to about 1890, about 40% of the copper was secured in masses. In 1912 the proportion of mass copper was about 15%. The southernmost drifts of the Quincy are about 3,000' below mean water datum of Portage lake, while the northernmost workings at No. 8 shaft are fully 2 miles from the southern breasts.

New work totaled 27,340' in 1915, and average about 6 miles yearly, the mine having over 100 miles of workings. Fire doors have been installed and every precaution is taken against fire. Miners are carried to and from work in man cars holding 30 men each, and hoisting cables are inspected frequently, with every care taken to prevent accidents.

The electric underground traction plant was installed by the General Electric Co., tram lines averaging about 1,800' each in length with gradients of 1.5% towards the shafts. The equipment includes 20 electric locomotives, each hauling 4 or 5 three-ton rock cars at a speed of 6 to 8 miles per hour, 1 man caring for each train. Tram cars are unloaded into 500-ton storage bins, built on the hanging-wall side of the shafts. This system of storage obviates the loss of time by either the tram lines or skips, and adds about 25% to the hoisting capacity of the mine, the property being equipped with hoisting and rockhouse capacity for a production of over 4,000 tons daily. About 200 rock drills are used in sinking, drifting and stoping, and extensive use is made of the diamond drill for exploratory and preliminary development work.

The Quincy has been much troubled by air blasts, violent disturbances brought about by the settling of superincumbent rock in the scores of miles of worked-out openings, causing violent compression of the air elsewhere throughout the mine. The most serious disturbances from air blasts, which are practically artificial earthquakes, felt for only a few miles distance upon surface, were experienced in Feb., 1906, and March, 1914, and there seems reason to fear that these troubles will prove intermittently continuous for the balance of the mine's life. The air blasts, while unpleasant, have caused more alarm than damage.

Owing to the absorption of adjoining mines, the Quincy shafts are numbered irregularly and are described hereinafter in order of occurrence, from south to north, rather than in order by number.

No. 7 shaft: the southernmost, planned and sunk by John L. Harris, leaves surface at an angle of 53° and is bottomed at an angle of 37° 30'. The shaft was sunk 4,000', in 18 months, through very refractory rock, this speed being rendered possible by sinking and raising in 5 sections simultaneously. The shaft is bottomed at the 71st level, at a depth of about 6,500'.

No. 7 shaft has a steel shaft rock house, with 750-ton bins, a steam hammer and two 24x36" crushers.

No. 7 shaft has an 8,000-h. p. Allis-Chalmers Corliss hoist, with 52x84" cylinders and winding drums 28' in diameter by 11' 9" face, carrying 8,000' of 1½" steel cable, the main shaft weighing 120,000 lbs. This hoist can raise 6-ton skips from a depth of 1½ miles at a speed of 3,000' per minute, hoisting being limited to this rate by an automatic cutoff which also prevents overwinding. Starting a load of 6 tons from a depth of more than a mile, the hoist, if untouched, will check without damage after raising the skip only a few feet higher than the appointed place in the shaft house. There is a 1,300-gal. bailer in addition to skips.

No. 4 shaft is closed down.

No. 2 shaft: 585' next north of No. 4, is below the 75th level. Equipment includes a 1,300-gal. bailer for raising water and 30 to 40 power drills are operated normally.

No. 2 shaft has a shaft rock house, built 1908, by the American Bridge

Co. Stamp rock from the shaft is dumped onto grizzlies, with wide bars, smaller material falling into circular bins, whence it passes by gravity to the crushers and thence into the main rock house bin. The smaller mass copper passes through the grizzly bars, is picked out by workmen and dropped into a chute carrying it to a steam hammer, there also being a chute for waste rock. The grizzlies allow large pieces of rock to fall into a bin of reinforced concrete in front of the steam hammer, where broken and sent to the main rock house bin through a chute, while mass copper is dropped into a steel tube leading to a circular steel bin, which loads into railroad cars through chutes with pneumatic gates.

No. 2 shaft has a special crushing plant for waste rock, between the collar of the shaft and the rock house. Poor rock is dumped into a circular bin and drawn by gravity to a crusher, going thence to circular storage bins, from which it is drawn off into wagons or railroad cars for use in railroad ballasting, road building and concrete work. There are similar crushing plants at the other main shafts, except No. 7.

The surface equipment of No. 2 shaft is very heavy, being practically a duplicate of that at No. 7, including a powerful hoist and two 60-drill cross-compound 2-stage Corliss air compressors.

No. 6 shaft 1,928' north of No. 2, is below the 73rd level. Equipment includes an Allis-Chalmers duplex hoist, with a 22' 6" straight-face drum, raising 8-ton skips; a 1,300-gal. bailer, a centrifugal feed-water heater being attached to one cylinder of the hoist, and a 100-drill 2-stage compound air compressor. The boiler house has four 250-h. p. Wickes water-tube vertical boilers, nine 100-h. p. locomotive firebox boilers, and a powerful fire pump.

The Franklin mine lies next north of No. 6. The Quincy bought the old Franklin mine, 160 acres, for \$170,000, taking possession Dec., 1908, and closing the mine immediately. It is doubtful if the old shafts ever will be used by the Quincy.

No. 8 shaft: the Mesnard, 4,168' north of No. 6, is at the 64th level. Levels in this shaft were opened at 135' intervals and former numbering made the 24th level of No. 8 correspond with the 42d level of No. 6. This lode was poor in the upper levels, but the lower workings, while by no means up to the Quincy average of some years ago in quality of ore developed, show a bed wider and better mineralized than above, and the ground is of very satisfactory and profitable average, the improvement that began on the 10th level being very marked below the 20th level. The present average of the lode at the Mesnard shaft is nearly up to the present average of the older workings. This shaft is connected with the workings to the south, which at this depth are at 200' intervals, from the 41st, which was the first to pass under the old Franklin mine, to the 63rd inclusive. Production, begun 1907 from this shaft, was 1,600 tons daily. The power house at No. 8 has a Nordberg 32x72" duplex-cylinder engine with double conical drum, of 12' 6" minimum and 18' 6" maximum diam., good for 6,000' depth, and a 65-drill Nordberg 2-stage cross-compound air compressor. The boiler room has ten 250-h. p. Parker and Burt boilers. There is a large changing house of reinforced concrete at this shaft, and many well-built houses for employees.

No. 9 shaft: 2,600' north of No. 8 is the old 100' Pontiac shaft, given a concrete collar and cut down to 3-compartment size. The shaft is 2,900' deep, and at 2,600' cuts a drift from No. 8, giving ventilation; it is not in operation.

To the north of the Pontiac shaft there is a long stretch of ground, bought of the Arcadian Copper Co. and St. Mary's Mineral Land Co., carrying the extension of the Pewabic bed and available for later development.

The surface plant of the Quincy is very complete. Miscellaneous buildings at the mine include a large warehouse, general office, several hundred dwellings at the mine location and a considerable number of houses at the mills.

Water for boilers and potable use at the mine location is taken from Portage lake, the pumps forcing water for a mile against a static head of 640'.

The company's private rail line, the Quincy & Torch Lake, built 1890, is 6 miles long, touching at all shafts and shops at the mine and at the boiler house, wharves and coal sheds at the mill. This line is connected with the Mineral Range, Hancock & Calumet and Copper Range railways. Equipment includes several locomotives, freight cars and nearly 150 hopper cars for rock, the latter having automatic couplers and air brakes.

Stamp mills: at Mason, on Torch lake, 6 miles from the mine, have 8 stamps, with combined capacity of about 5,500 tons daily, the stamps giving an average duty of about 700 tons. Two 36"x8' Hardinge ball mills were added in 1916. In 1917 steel balls were substituted for pebbles in these mills. The results secured at the Quincy mills reflect great credit upon Superintendent Shields.

No. 1 mill, of wood, has 5 Allis-Chalmers 2-way stamps, taking steam at 100 lbs. pressure. There is an Allis-Chalmers Huntington mill for re-grinding raggings, and the dressing machinery includes 92 Hodge jigs, and 32 Wilfley tables.

No. 2 mill, 630' north of No. 1, has 3 Allis-Chalmers heads, each set on foundations of heavy timbers and concrete, surmounted by a bottom plate of 22 tons, a middle plate of 18 tons and a top plate of 18 tons, all of solid iron castings, above which are the mortar boxes of the stamps. The stamps have 1" revolving screens for the mortar boxes, with hydraulic discharges, as have the launders leading from the mortars, these yielding about 60% of the copper secured. Finishing jigs and slime tables have been replaced by 24 Wilfley tables, 8 for each stamp, assisted by 3 Standard concentrators. Each stamp has 12 rough jigs, 6 Wilfleys for finishing and 2 Wilfleys and 1 Standard table for slimes. There is a settler from which slimes are taken to the Wilfley tables. Re-grinding is done by a Trent Chilean mill, with 3 jigs and 3 Wilfleys as auxiliaries. By the adoption of hydraulic discharges and other improvements the capacity of the stamp-heads has been increased about 25%, while changes in the wash have given an increased capacity of 30%, with labor costs reduced 25% and loss in tailings cut down 40 to 50%. About 35% of the present product of the mill is No. 3 grade mineral, carrying very fine copper.

The mill power house at No. 2 mill, has four 250-h. p. Wickes vertical water-tube boilers. There is an electric light plant.

The mill and pump house has a 20,000,000-gal. centrifugal pump, and a 20,000,000-gal. Allis-Chalmers vertical triple-expansion pump, and the old pump house has 3 pumps with combined capacity of 21,000,000 gal. daily. Water is taken from a 7x7' 6" tunnel, driven 100' under the bed of the lake. A 6x6' 6" tunnel 440' long, connecting mills, boiler houses and pump houses, carries both water and steam pipes.

The tailings at the mills are very extensive, including millions of tons of stamp sand, and various experiments on reconcentration have been conducted by different interests at intervals since 1902. The companies that have attacked this proposition have bankrupted themselves with monotonous regularity, notwithstanding which, the successful results being secured at the re-grinding mills of the Calumet & Hecla offer promise that the Quincy sands also may be retreated profitably at some future time.

Smelter: blown in Dec. 1, 1898, is at Ripley, on the shore of Portage lake, opposite Houghton, just east of Hancock and only a half mile from the mine.

One building has four 40-ton reverberatory furnaces, and a second building has 60-ton and 120-ton reverberatories, the latter having an automatic casting machine. On arriving at the reverberatory building the trucks carrying mineral are lifted by electric cranes and contents dumped into the furnaces, which are top-charged. An overhead trolley in the main building permits handling large bars and cakes, and a trolley dipping system is used for casting. Slags are trammed, in 3,000-lb. pots, to a 30' hydraulic elevator which raises the ladles and dumps their contents over the end of a trestle. The cupola building has 1 blast furnace only, for reverberatory slags. A briquetting plant has 2 boiler-iron retorts for briquetting low-grade mineral before smelting. Miscellaneous buildings at the smelter include an engine house, casting house, cooper shop, office, laboratory, machine shop, 50x100' warehouse, and a coal shed.

Production has remained nearly constant for several years but was seriously lessened by the labor strike of 1913. Silver production averages about 100,000 oz. yearly.

Recent Production:

	Tons	Lbs.	Ref.	Lbs.	Cost	
	R'k	Mineral	Copper	Cu. per(a)	per	Sell.
		Produced	Lbs.	Ton R'k	Lb.	Price
1916.....	1,204,026	33,864,280	21,065,612	17.5	12.4c	25.5c
1915.....	1,269,000	34,251,765	22,054,813	17.38	9.42c	18.01c
1914.....	22,612,460	15,356,380	11.51c	13.29c
1913.....	804,645	18,161,575	12,184,128	15.11	13.65c	15.59c
1912.....	1,309,258	30,040,360	20,634,800	15.76	11.09c	16.24c
1911.....	1,382,524	32,550,440	22,252,943	16.1	10.17c	12.72c

(a) Includes mining expense, smelting transportation, etc., and taxes paid in Michigan.

Management is entitled to credit for following unswervingly a policy of expansion. Finlay in 1911 estimated a life of 7 years and a further production of but 200,000,000 lbs. of copper. Additional acreage purchased since that year makes the probable production 1,000,000,000 lbs. of copper and a life of 50 years. The company has the longest record of continuous annual dividend payments of any American copper mine and bids fair to continue disbursing large profits for at least another generation or two.

RHODE ISLAND COPPER CO.

MICHIGAN

Subsidiary of the Franklin Mining Co.

Office: 60 Congress St., Boston, Mass. **Mine office:** Demmon, Houghton Co., Mich.

Officers: R. M. Edwards, pres.; Henry Tolman, treas.; Albert L. Wyman, sec.; preceding, with S. J. Jennings, H. M. Howard, Carlos W. Van Law and C. A. Hight, directors.

Inc. Dec. 9, 1898, in Michigan. **Cap.,** \$2,500,000; shares \$25 par; paid in, \$10.50. Assessment No. 2, of \$1, was payable Jan. 14, 1907, and assessment No. 3, of 50c, was payable June 15, 1910. The Franklin Mining Co. owns 99,030 shares, or 99%, acquired by exchange of 3 shares Rhode Island for one of Franklin. Annual meeting, second Wednesday in April. No bonded debt. American Transfer Co., Boston, transfer agent.

Annual report for 1914 shows rents and cash on hand, \$320; borrowed

from Franklin Mining Co., \$8,980; insurance, total receipts, \$10,322. Expenses amounted to \$127 at mine, \$1,436 taxes, balance being interest and incidentals.

Property: 800 acres, immediately north of the Franklin Junior mine. The ground has been explored by extensive diamond-drill work, showing cores from the Mesnard epidote, Allouez conglomerate, Pewabic amygdaloid, Kearsarge amygdaloid, and other copper-bearing beds. All the formations lying between the Kearsarge amygdaloid and the Calumet conglomerate were drilled by a series of holes, the Calumet bed showing traces of copper. The first cores from the Kearsarge bed showed copper in somewhat encouraging quantities from a bed of about 19' width.

No. 1 shaft, 500' deep, is sunk on the Pewabic amygdaloid. This lode is 8 to 10' thick, of which 2 to 3' near the hanging wall is well mineralized but spotty in the 4 levels opened.

No. 2 shaft, 1,227' deep, has 10 levels, with a 125' winze below the 10th. The workings are north of the shaft, except on the 8th, 9th and 10th levels, the latter 2,400' long. The 8th level south develops a fair stretch of copper ground toward the Franklin Junior, and a 1,400' drift on the 8th level north showed 25 to 75' stretches of payable ground. The Rhode Island property is being developed by the Franklin Mining Co., at a depth of about 2,000', where the Pewabic bed averages 8 to 10' width.

The Albany & Boston, or Allouez conglomerate, has been opened by crosscuts on the 500' and 1,000' levels, but the showing secured was discouraging. A crosscut of about 250' length on the 10th level, about 1,100' south of No. 2 shaft, has disclosed an amygdaloidal bed of some promise. The east crosscut on the 8th level, at depth of 1,000' cut 2 apparently valueless beds, one being the Mesnard epidote. The East lode, about 5' wide, carries a little copper, but nothing of promise. The West lode, 96' from the Pewabic, is 7 to 9' wide, carrying occasional bunchy copper. The 4 amygdaloidal beds lying between the West lode and the Allouez conglomerate have been tested by N.-S. drifts, 3 proving barren.

Equipment: includes a frame shaft house at No. 2, with an engine house having a Nordberg hoist capable of raising 2-ton skips from a quarter mile depth, and a 12-drill Rand air compressor. Buildings include a machine shop and smithy, warehouse and 15 dwellings.

The Rhode Island is idle and the plan of developing at greater depth through the north drifts of the Franklin is a good one, since the Pewabic bed to the south of the Rhode Island has shown great improvement below a depth of 2,000' in both the Mesnard shaft of the Quincy and the main shaft of the Franklin.

ST. LOUIS COPPER CO.

MICHIGAN

Out of business. Assets transferred to Calumet & Hecla Mining Co. For description, see Vol. XII.

ST. MARY'S MINERAL LAND CO.

MICHIGAN

Office: 705 Sears Bldg., Boston, Mass. **Mine office:** Houghton, Houghton Co., Mich.

Officers: Geo. Peabody Gardner, pres.; Walter Hunnewell, v. p.; Chas. J. Paine, Jr., sec.-treas.; preceding, with E. V. R. Thayer, W. Cameron Forbes, Albert S. Bigelow, Thos. N. Perkins, Charles E. Perkins, Richard Olney, N. S. Stone and Chas. N. King, directors; A. E. Coe, asst. treas.; Fredric W. Nichols, resident agent; Dr. Lucius L. Hubbard, cons. geologist.

Inc. March 4, 1901, in New Jersey. **Cap.,** \$5,000,000; shares \$25 par; issued, \$4,000,000. Controls, through ownership of entire stock issue, except founders' shares, the St. Mary's Canal Mineral Land Co., a corporation inc. 1863, in New York, to acquire 180,000 acres of land given by the

state of Michigan for the construction of the first ship canal at Sault Ste. Marie. These lands in Houghton, Ontonogan and Keweenaw counties, Mich., formerly included the tracts on which the Calumet & Hecla, Baltic, Trimountain, Champion, Ojibway and other mines have been developed. Company has about 400 shareholders. Shares are listed on the Boston Stock Exchange. Old Colony Trust Co., Boston, registrar. Annual meeting, first Wednesday in March, in Jersey City, N. J.

Income of the company consists mainly of dividends from the Champion Copper Co., with a small but steady income from sales of lands, timber and wood, and occasional but irregular large receipts from sales of mineral lands. The balance sheet of Dec. 31, 1909, gave quick assets of \$4,489,273, and on Dec. 31, 1916, the company had \$56,104 cash on hand, with notes receivable, \$24,381, and was without liabilities.

Receipts for the year ending Dec. 31, 1916, were \$572,963.

Share assets of the company Dec. 31, 1916, were: 50,000 shares Champion Copper Co.; 25,000 shares Mayflower M. Co.; 20,165 shares La Salle Copper Co.; 79 shares Hancock Cons. Mng. Co.; 20,000 shares Pacific Copper Co.; 37,222 shares Houghton Copper Co.; 1,571 shares Franklin Mng. Co.; 2,000 shares Ojibway Mng. Co.; 56,778 shares Winona Copper Co.; 208 shares Copper Range Cons. Copper Co.; 640 shares St. Mary's Mineral Land Co.; 80 shares Old Colony Copper Co.; 8,340 shares Naumkeag Copper Co.; 17,902 shares Douglass Copper Co.; 10 shares Amphridrome Co.; 100 shares D. A. Stratton Co.

From 1863 to 1900 the old company paid cash dividends of \$2,200,000, and also paid stock dividends of 1 share of Tamarack, 1884; 1 share of Iroquois, 1890; 1¼ shares of Baltic and one-half share of Winona, 1898; 1 share of Old Colony and 1½ shares of Trimountain in 1899.

Dividends: (of the present company)

1903.....	\$1	1911.....	\$3
1904.....	1	1912.....	3
1905.....	2	1913.....	3
1906.....	4	1914.....	0

1909.....	1	1917.....	14(a)
1910.....	1(c)		

(a) Including dividend declared Aug. 30, 1917. (b) Not including North Lake and Hancock stock distributions equivalent in cash to \$2.59 a share.

(c) Not including Franklin stock distribution equivalent to \$4.

Property: Jan. 1, 1917, consisted of 93,011.69 acres freehold, with mineral rights to 14,133.69 acres additional, property being scattered along the Lake Superior copper belt, with principal holdings on the South Range, S. W. of Houghton, in Houghton and Ontonagon counties.

The company, since its reconstruction, in 1900, has refused to sell its mineral lands outright, preferring to join with other land holders in the formation of new companies, taking pay for its lands in shares, on a pro rata basis, or partly in shares and partly in cash. This policy involves heavy outlays for exploratory and development work, but has resulted in giving the company a half interest in a new mine, the Champion, which is capable, alone, of furnishing funds to St. Mary's company for both dividends and development work elsewhere, and a continuance of this policy must result in time in making St. Mary's Mineral Land Co. the part or sole owner of a number of fine mines. Owing to the great extent of its lands, located mainly on the Keweenawan copper belt, stretching along the mineral range

for scores of miles, the landed holdings of the company are of great potential value. The management is vigorous and far-seeing.

In August, 1917, it was reported that W. E. Hopper, of the Michigan College of Mines, was making a geological examination of the St. Mary's lands.

SENECA COPPER CORPORATION

MICHIGAN

Offices: 11 Broadway, New York; and W. J. Uren, 3 Calumet State Bank Bldg., Calumet, Mich.

Officers: Frederick Lewisohn, pres.; Walter Lewisohn, v. p.-treas.; E. J. Macnamara, sec.; with Hamilton Fish, Jr., T. F. Cole, F. deC. Sullivan, P. A. Clarke and W. F. Bartholomew, directors.

Inc. Dec. 26, 1916, in New York. **Cap.**, 200,000 shares. Company owns 11,960 shares of the 20,000 in the Seneca Mining Co.

Balance sheet of Jan. 4, 1917, shows assets totaling \$2,420,000, including 13,926 Seneca M. Co. shares at \$60 each, or \$835,560; cash at banks, \$1,564,440; and debit balance, \$20,000. Liabilities include 200,000 shares without par value, \$1,400,000 capital surplus and \$20,000 accounts payable.

SENECA MINING CO.

MICHIGAN

Subsidiary of the Calumet & Hecla Mng. Co.

Office: 11 Broadway, New York. **Operating office:** Calumet, Mich. Mine near Mohawk, Mich.

Officers: Frederick Lewisohn, pres.; Walter Lewisohn, treas.; E. C. Westervelt, sec.; E. J. Macnamara, asst. treas.; W. J. Uren, gen mgr.

Inc. March 23, 1860, in Michigan. **Cap.**, \$500,000; shares \$25 par; fully issued, \$10 paid. Is controlled, through ownership of 11,960 shares, by the Seneca Copper Corporation (which see), a concern organized to take over shares owned by the Calumet & Hecla. The company had a debit balance, Jan. 1, 1917, of \$179,703. American Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agt. Annual meeting, fourth Monday in March.

Property: 1,880 acres, just north of the Mohawk and Ahmeek mines, is a swampy tract, somewhat irregular in outline and heavily covered with drift. The property carries the Calumet, Keweenaw and Allouez conglomerates and the Osceola, Kearsarge and other amygdaloidal beds, this statement being based mainly upon the outcrop of the Kearsarge lode seen in the N. E. corner and extending for 1¾ miles across the property. The mine is on the Keweenaw Central railway.

Development: The property was diamond drilled, 1907-08, giving some good cores from the Kearsarge amygdaloidal bed. This was followed by the sinking of a single 3-compartment shaft, located about 3,000' north of No. 1 shaft of the Gratiot mine. The shaft is sunk in the footwall, being 60' from the Kearsarge bed on the 1st level, 250' on the 3rd level, and 220' on the 5th level. The shaft is 957' deep, with 5 levels. Development shows little or no copper values above the 4th level, but the bed has been opened by crosscuts and drifts on several levels, with about 2,000' of laterals. On the 5th level the Kearsarge bed is about 15' wide and for a distance of 150' carries a 4' pay-streak having fair copper values. No. 1 shaft has a temporary frame shaft rock house, with crusher.

There is room for a second shaft on the outcrop of the Kearsarge bed, but this lode must be reached by vertical or sharply inclined shafts on the balance of the property as the lode outcrops outside the holdings, though the underlay extends under the entire tract.

In June, 1917, sinking No. 2 shaft with 3 compartments was started near Mohawk No. 2. A hoist of 4,000' capacity has been erected.

Equipment: includes a small power house, Lake Shore duplex hoist, good for 2,000', a 15-drill air compressor and 2 locomotives firebox boilers.

Buildings include a boarding house and bunk house. Operations were suspended April, 1911.

Property is considered promising.

SHELDEN & COLUMBIAN COPPER CO.

MICHIGAN

Idle. Address: care J. H. Rice, Houghton, Mich.

Property: lies next north of the Isle Royale mine and includes mineral rights under many private residences, near Portage Lake. An important discovery of sheet copper was made Sept., 1915, in an unidentified lode opened in excavating a cellar in this tract. Described in Vols. I and II of Copper Handbook.

SOUTH LAKE MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. **Mine office:** Houghton, Mich.

Officers: R. M. Edwards, pres.-gen. mgr.; Arthur C. Paine, sec.-treas.; preceding, with Thos. S. Woods, E. C. Robinson and Geo. E. Davis, directors.

Inc. Feb. 25, 1880, in Michigan, as the Aztec Copper Co.; reincorporated Aug. 12, 1909, under present title and corporate existence extended for 30 years from Feb. 25, 1910. **Cap.**, \$1,000,000; shares \$25 par, increased to \$5,000,000, Dec., 1917; assessable; all issued; \$6.60 paid in. Last assessment, \$2, payable June 3, 1912. Of the issued stock 40,000 shares were given to the old stockholders share for share, 20,000 were offered the same stockholders at \$2 per share and nearly all taken by them; 10,000 shares were offered to holders of record May, 1913, at \$6.60, but were largely taken by the underwriters; 10,000 shares were offered in March, 1915, and 10,000 more in Oct., 1915, at \$5. The last two offerings were practically all taken by the shareholders. In April, 1916, the last installment of 10,000 shares was offered to the stockholders, at the rate of \$7.75 per share.

Balance of assets Dec. 31, 1916, was 2,212, including \$1,774 cash on hand. Expenses at mine were \$157,646, including \$88,334 for underground work and \$37,125 for construction. American Trust Co., Boston, registrar; Federal Trust Co., Boston, transfer agt. Annual meeting, 1st Tuesday in March.

In Nov., 1917, company announced it had secured an option on S. W. $\frac{1}{4}$ of Sec. 30 immediately north of its property. A special stockholders' meeting to be held Dec. 11, 1917, for purpose of voting on an increase of capital stock to provide funds for above purchase.

Property: 334 acres of mineral lands, being the W. $\frac{1}{2}$ of Sec. 31, T. 51 N., R. 37 W., adjoining the Lake mine on the east, and the Adventure on the west. In Dec., 1917, 160 acres, with dip of the North Lodes were acquired.

History: work was begun on the property in 1862, though the name Aztec was originally taken because the remains of extensive workings by a prehistoric race were thought, in those days, to have been the work of the Aztecs. A 16-lb. stone hammer was taken from the old workings.

The mine had a stamp mill in early days, and produced 756,853 lbs. fine copper, of which 100 tons was secured in a single mass. Exploratory work was done, 1905-06, on the Knowlton bed, of the Evergreen series, by the Aztec-Algomah Development Co., and diamond-drill borings were begun Sept., 1909, continuing until March, 1911, when suspended by reason of adverse financial conditions. Borings were begun at the base of Evergreen bluff, near the foot of the Evergreen belt, thence working southward toward the eastern sandstone. Eight drill holes were put down at various points on the property.

Exploratory drilling having shown copper rock in five holes, four of them at the corners of a 200' square, actual mine development work was determined upon. The holes showed that the beds run N. 70° W. and dip at about 56°. The drill cores and recent underground work were carefully

studied by A. C. Lane in 1916, who reports that of the four lodes cut by this work, No. 2 lode, or possibly, a combination of No. 1. and No. 2 lodes, is the Lake lode, mined by the Lake Copper Co., and that the lodes dipping north in the 300' crosscut, north of the South Lake shaft, are identical with, and the same as those dipping south on the 600' crosscut south of the shaft. This means that the veins fold over, dipping both N. W. and S. E., and that a vertical shaft can reach both limbs of the Λ shaped fold.

The vertical shaft, begun May, 1912, and now 600' deep, has opened up lodes Nos. 1 and 3, and the Butler lode, north of the shaft, in all of which ore is being mined, 1917. For 400' along the Butler lode, the rock is said to be spectacular in character. The South lodes will not be stoped until November, when a connection with the Lake mine by a drift on No. 3 lode on the sixth level will be completed, giving good ventilation. Drifting on an amygdaloid in the 600' South crosscut at 1958' to 1965' from the shaft is said to carry heavy copper. A north crosscut on this same level shows 51' of ore in No. 3 lode, 64' from the shaft.

New work in 1916 amounted to 3,702'. Total openings are 10,626'. drifts on lodes being 5,119'. In Sept., 1917, No. 6 level was connected with that of the Lake mine on South lode No. 3 by a 1,650' drift ending in a 75' raise; this improves ventilation and also makes available the 4 South lodes.

The South Lake installed all machinery, including a 15-drill air compressor in 1915, and completed its new steel shaft and rockhouse.

Production: commenced May, 1916, and to end of 1916, 20,057 tons was sent to the Franklin mill, yielding 285,600 tons of refined copper. By Sept., 1917, production was at the rate of 10,000 tons of ore per month. Company has a decidedly promising property upon which to work.

SOUTH RANGE MINING CO.

Out of business. Property sold, 1917, to Copper Range Cons., which see.

SOUTH SIDE MINING CO.

MICHIGAN

Office: 68 Devonshire St., Boston, Mass.

Officers: Ashley Watson, pres.; Frederick Hoitt, sec.-treas.; preceded with Harry F. Fay, John C. Watson and D. C. Forbes, directors.

Inc. 1859 in Michigan, and reincorporated Nov. 2, 1898; charter expires by limitation in April 11, 1919. **Cap.**, \$1,000,000; shares \$25 par; fully issued; \$9.70 paid in. The company levied assessments of about \$90,000, to 1872, and April, 1912, paid a cash dividend of 25 cts. per share and 1,935/10,000 of a share of stock of the Naumkeag Copper Co., received in payment for lands sold to that company. A final liquidation dividend of 7c. per share was declared Nov. 6, 1916. Annual meeting first Monday in March.

Lands: were about 200 acres, lying west of the Dacotah and north of the old Naumkeag properties, immediately west of Houghton, sold, with the exception of about 31 acres of surface rights surrounding the water supply of the village of Houghton, for \$22,515 cash and 7,740 shares of the remaining stock of the Naumkeag Copper Co. Surface rights to the village of Houghton were sold in July, 1916.

SUPERIOR COPPER CO.

MICHIGAN

Controlled through ownership of 50,100 shares, bought 1906, by the Calumet & Hecla Mining Co.

Office: 12 Ashburton Place, Boston, Mass. Operating office: Calumet, Mich. Mine address: Houghton, Mich.

Officers: Rodolphe L. Agassiz, pres.; James MacNaughton, v. p. and gen. mgr.; with C. F. Ayer, F. L. Higginson, Benj. Joy, directors; G. G. Endicott, sec.-treas.; H. L. Bennett, asst. sec.-treas.; Ocha Potter, supt

Inc. July 23, 1904, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; fully issued and \$1 paid.

Report for 1916 showed a net profit from mining operations of \$331,933, and balance of assets of \$434,313. In 1915 the company acquired 18,836 shares of the Lake Milling, Sm. & Ref. Co.'s stock for \$240,000. Shares are listed on the Boston Stock Exchange. Old Colony Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, second Tuesday in April.

Dividend No. 1 of \$1 per share, amounting to \$100,000, was paid in Oct., 1916. A like amount was paid in April, 1917.

Property: 400 acres, carries about 6,000' of the strike of the Baltic amygdaloidal bed, between the Isle Royale and Atlantic mines. It embraces Sec. 15, of T. 54 N., and R. 34 W. The tract has room for 3 or 4 shafts, and has a light overburden, the bed being proven by trenches at intervals of 1,000', showing an amygdaloid of 35 to 40' average width, with extensive carbonate stains, due to weathering, and a little fine copper near surface. The property has been trenched to the eastern sandstone.

The mine has 2 workable copper lodes, the Baltic, locally known as the Superior, and the West lode, discovered in 1911, a formation independent of the Superior, 14 to 30' thick, which, however, cannot be stoped until the Superior lode is mined. On the Superior lode all ground above No. 15 level has been stoped out. Reserves in the west lode at end of 1916 were estimated at 250,000 tons.

Development: by 2 shafts, sunk in the footwall of the lode, insuring solid ground, but necessitating crosscuts at each level. Owing to the great width of the copper-bearing stratum, it is necessary to crosscut along the bed at 100' intervals. The Superior mine is opened on the northern extension of the Baltic amygdaloid bed, though some call this the Superior lode, not being satisfied that the correlation is correct. The Baltic bed, in the Superior mine, carries copper impregnations in the footwall, always an evidence of strong mineralization, and there is a conglomerate bed under the foot that carries a small amount of copper. The stamp rock is remarkably deceptive in appearance, as the copper oxidizes readily, and when it has been broken a few weeks, appears lean, unless a fresh fracture shows its true nature. As a triangular tract of land intervening between shafts Nos. 1 and 2 is owned by others, they cannot be connected above the 12th level. The mine had about 10 miles of workings at the end of 1916. Underground work for 1916 totaled 5,136', compared with 4,199' in 1915, and 2,654' in 1914.

No. 1 shaft, about 1,200' south of the northern boundary of the property, is 2,906' deep and develops the Superior and West lodes, the first opened on all levels, and the second lode from the 12th to 26th inclusive. Both lodes carry copper in exceptional quantity. Improved values have been encountered with depth, and the workings of No. 1 shaft give a good showing. The ground, especially in the upper levels, is very treacherous, and requires careful attention and close timbering.

This shaft was sunk 437' during 1916. Bad ground retarded progress. Further sinking, from No. 29 to 33rd level is contemplated.

No. 1 shaft has a frame shaft rock house, of the Calumet & Hecla type, equipped with Westinghouse engine and two 23x36" crushers. The hoist is good for 4,000'.

The equipment at No. 1 shaft includes a combination boiler and engine house, with 90" Belpaire boilers, a hoist, and 10-drill and 18-drill air compressors. No. 1 shaft is connected with the main line of the Atlantic railway by a 7,000' spur, and also with the Isle Royale railway.

No. 2 shaft, 2,540' S. W. of No. 1 and 2,400' from the southern boundary, sunk 40' in the footwall, at an angle of 53°, is 1,628' deep. Equipment at No. 2 includes a steam hoist, formerly used at No. 1, and a shaft rock house having 2 crushers and a Westinghouse engine, with rated capacity of 1,000 tons daily.

Exploration on the West lode in 1916 totaled 4,377', from No. 19 to No. 25 level. Only about 20% of the ground opened is profitable to mine.

Buildings include an office, warehouse, smithy, change house, and a number of dwellings for employees at a small town site lying between the shafts.

Production: (begun Jan., 1909)

	Tons R'k Stpd.	Lbs. Cu. per Ton	Cost p. Ton(b)	Lbs. Cu. Produced	Cost per Lb.	Rec'd per Lb.
1916.....	185,315	16.38	\$2.07	3,034,656	14.61c	24.67c
1915.....	212,051	18.23	1.88	3,866,484	12.29c	18.125c
1914.....	191,628	16.79	1.75	3,217,635	12.43c	12.645c
1913.....	130,826	22.87(a)	2.36	2,992,765	12.86c	15.387c
1912.....	172,322	22.76(a)	2.33	3,921,974	12.75c	16.45c

1910.....	140,514	22.64	2.69	3,181,041	14.29c	12.63c
1908-09.....	16,835	22.22	374,077

(a) An excellent return, and materially above the average secured from the good amygdaloidal mines of the Lake Superior district. (b) The high cost of mining is largely accounted for by the comparative newness of the mine; costs include mining, transportation, stamping and taxes.

Production was lessened in 1913 and 1914 by the strike of the Western Federation of Miners, lasting from July 23, 1913, to April 12, 1914, and from Sept. 1, 1914, to Feb. 1, 1915, the mine operated on a three-quarter time basis on account of the condition of the copper market following the outbreak of the European war. Superior has thus far been a disappointment; the copper yield per ton rock is lower than originally calculated, and production remains below the 4,000,000-lb. mark. It cannot reasonably be expected to do much better.

Copper production in the first 4 months of 1917 averaged 214,000 lbs. per month, ranging from 143,614 in April to 318,798 lbs. in January. The financial position of the company is improving satisfactorily.

TAMARACK MINING CO.

MICHIGAN

Out of business. Property sold for \$3,600,000, equal to \$60 per share, to Calumet & Hecla Mining Co., on April 1, 1917. For history and description of property see Vol. XII. No report published for 1916.

TOLTEC-MINE

MICHIGAN

Idle many years. **Office:** care J. M. Longyear, Marquette, Mich. Owners, Gogebic & Ontonagon Land Co. and Galen L. Stone.

Mine at Greenland, Ontonagon Co., Mich., 960 acres, carries the underlay of the Evergreen belt and the Calico and adjacent beds of the Michigan.

Production: 1851-1860, was 413,443 lbs. fine copper. Some diamond drilling was done, 1908.

TORCH LAKE MINING CO.

MICHIGAN

Idle. **Office:** 4-24 Exchange Place, Boston, Mass. **Mine office:** Leopold Bldg., Houghton Co., Mich.

Officers: Thacher Loring, pres.; Chilton Cabot, sec.; F. W. Nichols, agt.

Inc. in Michigan. Cap., \$500,000; shares \$25 par; assessable.

Property: 1,280 acres, Secs. 35 and 36, T. 56 N., R. 33 W., lying east

of the Tecumseh mine of the La Salle, and about midway between Calumet and Lake Linden. The property was slightly prospected, 1899-1900, by diamond-drill borings. Reported that exploration work will soon be resumed.

TREMONT & DEVON MINING CO., LTD.

MICHIGAN

Office: First National Bank Bldg., Hancock, Mich. Mine at Victoria, Ontonagon Co., Mich.

Officers: H. L. Baer, pres.; W. M. Gibson, v. p.; Chas. D. Hanchette, sec.-treas., with Claude Cooper, W. M. Gibson and Robt. T. Dunstan, directors.

Inc. Dec., 1908, in Michigan. **Cap.**, \$250,000; shares \$25 par; 6,000 issued; two 10c assessments levied to date.

Property: 680 acres, freehold, including the old Tremont and Devon mines, adjoining and directly W. of the Victoria, carrying about 1¼ miles of the strike of the Keweenaw copper formation, and apparently in the horizon of the western extension of the Lake bed. The Victoria has a vein of some promise, outcropping about one-half mile from the Tremont & Devon line. A little work was done, in olden days, on shallow shafts near the center of the property, from which rock was taken, said to have yielded 500 lbs. fine copper per fathom of ground broken, which was better than 25 lbs. of finished copper per ton.

In Feb., 1916, the E. J. Longyear Co. began diamond drilling. Three holes were put down; the first cut an unidentified lode lying above the Forrest lode; the third is said to have shown good values in the Victoria lode.

UNION COPPER LAND & MINING CO.

MICHIGAN

Office: 70 State St., Boston, Mass.

Officers: Harry F. Fay, pres.; Harold H. Anthony, Ezra H. Baker, Samuel Carr and Albert B. Merrill, all of Boston, and John G. Stone, of Houghton, Mich., directors; C. J. Morrissey, sec.-treas.

Inc. 1863 in Michigan; charter extended in 1893. **Cap.**, \$2,500,000; issued, \$2,000,000; shares \$25 par, \$2.06—2/3 share, paid in. Old Colony Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Stock listed on Boston Stock Exchange. Annual meeting, fourth Thursday in March. Books close 20 days before, and reopen day following.

Dividends: in 1899 company paid 50c per share and 1/8 share of stock of Old Colony Copper Co. and in 1907 and 1908 dividends of \$2 and of 50c per share respectively were paid; none since.

Property: 5,323 acres of land, carrying both surface and mineral rights, and 1,043 acres additional of mineral rights only, divided into 200 or more tracts in Keweenaw, Ontonagon and Gogebic counties, Mich. Company is primarily a land-holding corporation, although its charter empowers it to carry on mining operations as well, and it has from time to time investigated various tracts to determine their mineral value. Greater part of the land is heavily timbered and is valued at \$125,000.

In 1910-11, exploratory work was done by diamond drill on 320 acres of land, lying W. of the Allouez and North Kearsarge mines, with satisfactory results, especially on the Quincy-Pewabic amygdaloid, which showed well in copper. The Allouez conglomerate was cut; also several other beds carrying copper.

VICTORIA COPPER MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. **Mine office:** Victoria, Ontonagon Co., Mich.

Officers: Fred H. Williams, pres.; Chas. D. Hanchette, v. p.; Jas. P. Graves, treas.; preceding, with Willard S. Martin and A. W. Chesterton,

directors; Sydney S. Millet, sec. and transfer agent; George Hooper, supt.; Chas. D. Hooper, mill and power supt.; G. A. Braun, Jr., engr.; A. R. Penberthy, clerk and purch. agt.

Inc. Jan 16, 1899, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; all issued; paid in, \$15. Last assessment \$1, April 15, 1914. Shares listed on the Boston Stock Exchange. First National Bank, Boston, registrar. - Annual meeting, fourth Monday in February.

Statement for 1916 shows receipts totaling \$470,229, and expenditures, \$384,898. Including previous balance the surplus was \$197,611. Since organization, the revenue totaled \$3,979,129, of which, \$2,311,963 was from copper sales. Mining expenses were \$1,769,484; equipment, \$584,156; real estate, \$387,862; surface, \$240,085; general, \$137,414; crushing, \$200,372; and smelting, etc., \$234,961.

Property: 2,389 acres mining lands, in Secs. 19, 20, 29, 30 and 31, T. 50 N., R. 39 W., and Secs. 24, 25 and 36, T. 50 N., R. 40 W. This tract has an extreme E.-W. width of 2 miles, and a N.-S. length of $2\frac{3}{4}$ miles, lying just W. of the Ontonagon river. It is practically all on the mineral belt, only about 100 acres lying on the eastern sandstone. The tract may carry the western extension of the amygdaloidal bed under development by the Lake Copper Co. Neighboring mines, all idle for many years, are the West Minnesota on the N., National on the E., and Tremont-Devon on the W. The lands are well timbered, with an inexhaustible supply of good sandstone for building purposes. Nearest railroad is the C. M. & S. P., at Rockland, 3 miles distant.

The first known attempt at Lake Superior copper mining was made in the winter of 1770-71, on what is now Victoria property. In 1849, the property, known then as the Cushin, was opened on a line of prehistoric pits containing masses of native copper, one weighing upwards of a ton. The name was changed, 1850, to Forrest, and property reorganized, 1858 as the Victoria Mining Co. Under these titles the property made 373,279 lbs. fine copper at a loss of about \$180,000. The mine was operated regularly, on a small scale, 1849-55, and thereafter spasmodically. It was unwatered 1883, but remained idle until work was begun March 1, 1899, by the present company.

Geology: the mine is located on a high and steep hill, notwithstanding which the solid rock is covered with heavy sand and clay drift. The Forrest amygdaloid bed, on which the mine is opened, is 5 to 80' wide, averaging about 12', but of very irregular width and dip, and very buncy in contents. The average strike is N. 66° E., and dip 61° N. W., the lode having about 2 miles of outcrop on Victoria lands. The formation is much disturbed at surface, the bed being irregular in dip, but widening at depth, with more regular walls. The lode is low in average grade, but fairly regular in copper contents, carrying low-grade stamp rock, with best values near the hanging wall.

Development: the old mine was opened by 5 shafts, deepest, 300', located at irregular intervals, with levels spaced at 55 to 65'.

The Victoria, or, No. 2 shaft, which was chosen for new operations, was enlarged to 2 compartments, and a third compartment was added, 1916, 16' E. of the skipway. The two skips will work in balance. The shaft is 2,716' deep, bottomed below the 27th level. Levels between the 4th and 24th have been opened at regular intervals of 100', below the 23rd at intervals of 150', with drifting on all levels. The total driftings on the Forrest bed, tributary to No. 2 shaft, was 45,270' at the end of 1915, and in addition there are 8,068' of crosscuts.

Short drifts have been opened from these crosscuts on various beds, but

without much encouragement. The total openings tributary to No. 2 shaft are 60,647'.

The productive part of the mine tributary to Victoria or No. 2 shaft, is on the Forrest bed, an epidotal amygdaloid having an average width of 4' to 12', widening to 80', at one point. Walls are quite regular, but where crush zones occur, the mineralization extends into the walls, giving an occasional maximum of 50' width of ore. The footwall bed underlying the Forrest, at a depth of 2 to 12', is well mineralized in places, carrying occasional masses from 100 lbs. to 3 or 4 tons in weight, but is very bunchy, copper occurring mainly on the foot, with considerable epidote on the hanging. Underlying this epidotal bed, at a distance of 60', is a 6' amygdaloid showing much epidote and allied minerals, with a little stamp rock. Stopes opened on all levels from the 4th to the 22nd inclusive, give fairly uniform results.

The copper shoot developed by this shaft is 1,000 to 1,500' wide, with a slight rake to the S. W. The ore stoped is low in average grade, but fairly regular in contents, with main values in stamp copper. All levels down to the 17th are connected by winzes, giving ventilation and safety.

Development: 1916, included 1,350' of drifts, with a total of 3,806' of new work and 10,755 cubic fathoms stoped. The mine uses 35 power drills.

No. 6 shaft, 3,455' E. of No. 2, was started Dec., 1909, to develop the eastern end of the property, previously explored by diamond-drill borings. This shaft has three compartments with 2 skipways, designed for 6-ton skips and is 1,172' deep. There are 1,490' of drifts and crosscuts, showing broken and faulted ground, barren of copper, excepting for about 100', a short distance W. of the shaft.

The mine also has 419', 150' and 724' crosscut tunnels, the latter showing the contact between the Keweenaw trap beds and the eastern sandstone with several amygdaloidal beds exposed on which 176' of drifting gave a little encouragement.

Considerable diamond drilling has been done N. of the Forrest bed, a total of 15,292' of holes having been drilled, in 2 cross-sections, disclosing several beds that may warrant future attention.

No. 2 shaft has a new shaft house, equipped with a duplex 32x72" cylinders, with conical drum, Nordberg hoist, good for 5,000', and a 5-ton traveling crane for handling skips, man cage and timber.

Equipment is now sufficient to take care of exploration to a depth of 5,000', the present depth being 2,716'.

The rock house has storage bins for stamp rock and waste, with chutes, loading gates and air lifts, and there is a pneumatic hammer for mass copper.

The boiler house is for heating purposes only. A steam power plant is being added to use as a reserve when water supplying the hydraulic plant is low.

Buildings at No. 2 shaft include machine and carpenter shops, smithy, changing house, hospital, warehouse, general store, mine office, boarding house, 76 dwellings, sawmill, lathe, shingle and planing mill. Water for domestic use and fire protection is pumped from a well having a storage tank about one-half mile from the mine.

Hydraulic Plant: a large water power has been developed from Glenn Falls, on the W. branch of the Ontonagon river, about 1 mile from the mine. at a cost of \$250,065, to Dec. 31, 1916. This is the best natural water power of the Lake Superior copper district, the stream dropping about 110' on the company's property, by a series of small falls, between which are numerous rapids, with sandstone bottoms. The company utilizes 72'

of this drop. Power is developed by means of a dam, canal and hydraulic air compressor.

The dam is 225' between abutments, has an extreme height of 24', is 14' wide at the bottom and 8' at the top, and has a 320' main section with wings of 100' and 160', giving a total length of 580', built with an arch upstream. It is provided with two 44" flush gates, for drainage and flushing out silt, a log chute, waste weir and sand fence.

The canal diverting water from the dam is 4,800' long, 10' deep at the head gates, with a bottom slope of 1" in 100'. At the end the canal opens out in a forebay, at the extreme end of which the compressor shafts are located. The canal is equipped with drainage gates, slush gates, overflow weirs and submerged measurement gates.

The 3 intake shafts of the compressor are 5' in diameter, spaced 19' from center to center. The shafts were sunk through solid sandstone, by means of 5" preliminary holes, bored to the required depth of 343', then enlarged from 5" to 5' in diameter.

The shafts, lined throughout with concrete, formerly drew air through 5,000 special $\frac{3}{8}$ " tubes. This proved unnecessary as the water falling down each shaft sucks air with it and this air is carried through 280' of air chamber cut in the rock at the bottom of the shaft. A water seal at the intake end is formed by $\frac{3}{8}$ " steel shells, firmly concreted into the bottom of the shafts. The air chamber is 281' 6" long, and 18' wide, with minimum of 21' and maximum of 26' height, having a maximum capacity for 80,264 cu. ft. of compressed air. The water seal at the upflow end is formed by an arch of rock, 40' long, below which a tunnel 10' high leads to the upflow shaft, which is 16x18' in section, sunk at 72°, with a vertical depth of 271', leading to surface, where the water is again discharged into the river. The power head developed is 72', and the pressure head 271', giving a maximum air compression of 117 lbs. per sq. inch. Imprisoned air, carried down the shafts by suction and swept along the tunnel in bubbles, by the rushing water, is released in the chamber where the constant accession of bubbles causes compression, escape backwards being prevented by the $\frac{3}{8}$ " steel shells connected in the shafts. The chamber, known as the compressor, is connected with a 12" pipe line to mine and mill. Extra pressure is relieved by a safety or blow-off pipe.

The Taylor hydraulic-pneumatic plant was completed, March 1906, furnishes 4,000 to 5,000 h. p. under a full head of water, and has shown an efficiency of 82% under test. It is the largest single-unit air compressor in existence and the fifth installation of the sort in the world. It is possible to operate 1, 2 or 3 of the inlet shafts if so desired, with corresponding variation of energy developed, but only 1 unit is in regular use. The compression is automatic, practically isothermal, and the air as delivered is unusually dry.

- An extensive topographical and hydraulic survey of the company's lands and the watershed made 1909, by the J. G. White Co., of New York, shows that an average of 15,000 h. p. can be developed on the western branch of the Ontonagon river, but the expense of development necessarily will be large. During the drought of 1910, the water supply fell far below normal and additional storage for water was secured on the western branch of the Ontonagon river, near the outlet of Lake Gogebic.

The mine and mill are connected by a 4,800' tram line, in 2 sections, the upper with 6%, and the lower with a 12% grade. A stationary double-sheave hoist, at the top of the incline, serves to pull the empty cars up the steeper grades, but otherwise trains are operated by gravity, in counter-balance.

Mill: the stamp mill, on the bank of the river, near the hydraulic works, has a single 24x24" Allis-Cuyahoga stamp. The stamp of 650 tons daily capacity, has $\frac{5}{8}$ " mortar screens, and all oversize above $\frac{3}{16}$ " is run to a set of 16x36" Traylor rolls. The washing floor contains 22 Hodge jigs, 5 Wilfley tables, 6 Card tables, 1 Standard table, hydraulic separators and settling tanks. Machinery is driven by a 12x12" piston-valve engine. The mill went into commission June, 1906, tailing losses running only 0.1 to 0.15% copper. Extraction is about 81%. Mineral (concentrate) formerly smelted by the Calumet & Hecla Co. is now smelted by the Quincy smelter at Ripley, thereby effecting an appreciable saving in transportation.

Production:

Year	Ton R'k Stamped	Lbs. Cu. per Ton	Cost per Ton(a)	Copper Produced Lbs.	Cost per Lb. Cts.
1916.....	146,690	11.3	\$2.16	1,661,832	18.40

1906.....	39,185	13.9	546,334	18.7

(a) Mining and Milling. (b) High cost due to the labor strike and high footage, 7,428', of development.

Tonnage costs are low, but finished copper costs are high, owing to the exceedingly low average tenor of the rock stamped which is only about 0.65%, and returns would be absolutely ruinous, and the mine hopeless, were it not for the great advantage that the property enjoys through the cheapest power that is had by any copper mine in this or any other district. It is obvious that the Victoria needs 15 cent copper to break even on its present basis of production. With the larger ore supply procurable through the new skipway in No. 2 shaft, even the present phenomenally low average cost will be bettered, and the Victoria placed in a position to handle rock of lower average grade than perhaps any other mine in the Lake Superior district. The company's holdings are extensive, exploratory work is being conducted with vigor, and the management has displayed both courage and good judgment in its operations.

WASHINGTON COPPER MINING CO.

MICHIGAN

Office: Calumet, Mich. Mine near Delaware, Keweenaw Co., Mich.

Officers: Chas. A. Wright, Jr., sec.-treas.; Thos. F. Cole, Spencer R. Hill, G. G. Hartley and Thos. Hoatson, directors.

Inc. in Michigan. **Cap.**, \$2,500,000; shares \$25 par; issued \$1,500,000. Is controlled, through ownership of a majority of issued stock, by the Keweenaw Copper Co. Annual meeting, fourth Tuesday in March.

Property: 1,050 acres, on the western shore of Mosquito lake, on which desultory work has been done at intervals in the past. Idle since 1901.

WEST MINNESOTA MINING CO.

MICHIGAN

Defunct. John Coughlan, receiver, 68 Devonshire St. Boston, Mass. **Inc.** about 1854 in Michigan. **Cap.**, \$500,000; shares \$25 par. Was an old and long inactive company owning 550 acres lying mainly W. of the Ontonagon river. Property sold May, 1916, to F. W. Nichols of Houghton, presumably for T. W. Cole. Sale ordered because company's charter had expired.

WETTERHORN LAND CO.**MICHIGAN**

Idle. W. H. Garlick, agt., 990 W. Kensington Road, Los Angeles, Cal., agent.

Lands: 760 acres, in Secs. 21 and 22, T. 51 N., R. 42 W., Ontonagon county shows 14 copper-bearing beds of 4 to 9' average widths, the most important being an 8' bed of cupriferous sandstone, carrying native copper and silver said to have given assays of 2.6 to 6% copper and 1 to 6 oz. silver per ton. An amygdaloid opened by 84' shaft shows a small amount of copper.

WHEALKATE MINING CO.**MICHIGAN**

Address: R. C. Pryor, mgr., Houghton, Mich.

Officers: N. F. Leopold, pres.; R. R. Goodell, v. p.; R. C. Pryor, sec.; A. F. Leopold, treas., with J. H. Rice, directors.

Inc. 1902 in Michigan. **Cap.**, \$50,000; \$25 par; all issued and paid.

Property: 240 acres in and adjoining village of South Range, Mich. Company only conducts a real estate business. Part of its mineral rights were sold to the South Range Copper Co.

WHITE PINE COPPER CO.**MICHIGAN**

(Subsidiary of Calumet & Hecla Mng. Co.)

Office: 12 Ashburton Place, Boston, Mass. **Mine address:** Ontonagon, Ontonagon Co., Mich.

Officers: R. L. Agassiz, pres.; Jas. McNaughton, v. p.-gen. mgr., preceding with D. S. Dean, Benj. Joy, F. L. Higginson, J. M. Longyear and E. V. R. Thayer, directors.; G. G. Endicott, sec.-treas.; H. L. Bennett, asst. sec.-treas.; Thos. H. Wilcox, supt.

Inc. 1909. **Cap.**, \$5,000,000; shares \$25 par; in 150,000 common shares and 50,000 5% cumulative preferred shares; issued 85,320 common and 34,759 preferred. Is controlled by the Calumet & Hecla Mng. Co., through ownership of 34,259 shares of preferred stock and 42,602 shares of common stock.

Preferred stock, numbering 4,759 shares, was retired by purchase at \$25 a share on Jan. 2, 1917.

Annual report for 1916 gives balance of quick assets, \$613,908, compared with \$139,786 in 1915. Mine expenses were \$534,137 and receipts \$1,124,934.

A dividend on preferred shares, equal to \$116,676, was paid Jan. 2, 1917.

Property. the White Pine mine and surrounding lands, formerly owned by the Keweenaw Association and others. The White Pine mine, 80 acres, is in Sec. 5, T. 50 N., R. 42 W., 3 miles E. of the Nonesuch mine at the extreme south end of the Keweenawan mineral belt. The other property was paid for by stock. A 9 mile railroad line connecting the property with the Chicago, Milwaukee & St. Paul R. R., was completed in Dec., 1915.

Geology: property as a whole shows eruptive rocks with interbedded sandstone and conglomerates of the secondary Keweenawan series. It also holds what F. E. Wright called epidote veins which are epidotal melaphyrs crossing the face of the cliffs parallel to the sandstones, but showing evidence of faulting and crushing. There is also a second set of minor, nearly vertical epidote veins which, unlike the first, are barren of copper. The sandstone beneath the melaphyr is a fine-grained, dark red, almost quartzitic rock that is jointed and has numerous calcite veins and occasional threads of malachite which extend down a few feet from the contact. The rock is, however, usually concealed by talus from the cliffs. Native copper also occurs in a very fine-grained sandstone-conglomerate, which is said to run from 5 to 10%. The dip of the bedded formation is

towards the S. E., varying from 8 to 35°. The so-called Nonesuch formation consists of 2 parallel beds of sandstone running from 4 to 8' in thickness and separated by a 5' bed of slate. The entire copper-bearing ground has a width of about 40'. The beds carry considerable finely disseminated native copper which is as a rule very flaky. This formation is badly faulted and ground is said to have been thrown so that the payable lode abutted directly against the unpayable one. Besides the 2 veins described, there is a third which lies about 45' back in the footwall.

Development: includes 4 shafts; No. 2 temporary shaft was 324' deep and had 3,501' of openings, Jan. 1, 1917. It connects with the old White Pine shaft. The main working shaft (called No. 3), located between the two temporary shafts (Nos. 1 & 2), is an incline 1,090' deep, with 6,744' of underground workings, Jan. 1, 1917. It is equipped with 5-ton skips.

The No. 4, an inclined shaft west of No. 1 shaft, is sunk in the hanging at a considerable distance above the lode. On Jan. 1, 1917, it was 977' deep and had 10,783' of underground workings. It is also equipped with 5-ton skips. New workings totaled 5,288' in 1916, 8,605' in 1915, and 4,721' in 1914. The rock is soft and can be mined and crushed cheaply. The property has been extensively diamond-drilled, more than 110 holes having been made since work was begun in 1907. Considerable drilling was done in 1916, showing that the lodes S. of the fault lie from 600' to 700' lower than those immediately N. of it. Generally, exploration in 1916 revealed only fair ground.

Equipment: includes a power plant and compressor at the mine. A 750-k. w. electric turbine on Iron River, 1½ miles from the mine and mill, supplies water for the mill.

In 1915 a 1,000-ton mill was completed and put in operation. Instead of the steam stamps common in the Lake Superior copper country, it is equipped with gyratory crushers, rolls and Hardinge mills. Concentration is effected on Wilfley tables and the tailing saved, as future regrinding and leaching will undoubtedly be used in reclaiming the copper content. The mill is near the working shafts and connects with them by means of trestles over which rock is transferred from the shaft rockhouses to the crushing plant at the mill. An extraction of but 67% is being made at present, the copper lost in the tailing consisting partly of sulphides, but mostly of fine flaky particles of native copper.

A 50-ton flotation plant, Minerals Separation type, was erected in 1917, to try and save fine copper.

Production:

	Tons R'k	Lbs. Cu.	Mine Cost	Lbs. Cu.	Cost	Rec'd
	Treated	p. T.	p. T.	Prod.	per Lb.	per Lb.
1916.....	188,890	22.27	\$2.082	4,207,449	12.70c	25.26c
1915.....	114,039	24.76	2.182	2,824,145	16.64c	18.353c

1915 production is for 8 months only.

Mine costs include mining, transportation, stamping and taxes per ton of rock treated.

Property is decidedly promising and a long life assured by discovery in diamond drill work of high-grade rock at 2,100' depth; at the same time, development in 1916 might only be termed fair.

Costs showed a drop of nearly 4 cts. during 1916. Copper output in 1917 is averaging 335,000 lbs. monthly.

WHITE PINE EXTENSION COPPER CO.

MICHIGAN

Offices: 15 William St., New York, and Pinex, Ontonagon Co., Mich.

Officers: J. R. Stanton, pres.; F. L. Smith, v. p.; G. W. Drucker, sec-treas.; foregoing with Angus Smith, Gerrit Smith, L. P. Yandell, Theo.

Dengler, and J. H. Hurley, directors. Theodore Dengler, mgr.; Wm. R. Bolly, supt.; John Jacka, mine capt.

Inc. June, 1915, in Mich. **Cap.**, \$3,750,000; shares \$25 par; assessable; in treasury, 65,000 shares. American Trust Co., Boston, transfer agent; Boston Safe Deposit and Trust Co., registrar.

Annual meeting first Tuesday in March.

Financial: revenue from June, 1915, to Jan., 1917, amounted to \$851,073, from 85,000 shares sold at \$10 each, and interest. Property purchase absorbed \$600,000, development in 1915, \$71,603, and in 1916, \$113,834. Surplus at end of 1916 was \$48,233, and in March, 1917, further financing was being considered.

Property: 1,440 acres mineral land in the White Pine district, Ontonagon Co., 5 miles west of the White Pine property of the C. & H. Mng. Co. The company owns the leases and exclusive mining rights for 50 years, paying a sliding scale royalty. These leases were purchased from F. L. Smith of Detroit, and associates, who received 60,000 shares of stock in payment for their lands and the development work done prior to June 1, 1915.

The property is similar to that of the White Pine Copper Co. in that it shows sandstone and soft shales and slates. Considerable copper glance was found during diamond drill exploration work the copper in the core of one hole showing glance only, no native copper being present.

Development: little underground work has been done, but thorough diamond drill development has been completed. It consists of one line of holes, spaced 1,000' apart, which cut the copper-bearing beds about 400' below the surface and on their dip; a second line of holes, similarly spaced, cut the beds about 600' in depth; the third line of holes, also 1,000' apart, cut the beds at a depth of 1,100'. The second line was located half way between the holes of the first; the third line holes were put down 250' from those of the second line. Drilling has disclosed very uniform values for a distance of 4,000' along the strike of the formation and at an average depth of 300'.

The first of the five shafts planned, 1,495' from the E. boundary, was sunk 242' in 1916. It has 4 compartments, 21' 14"x11' outside timbers, with ultimate hoisting capacity of 1,500 tons per day. Driving and cross-cutting, 1916, totaled 900'. This work reveals that the ground carries a shale (No. 1), 5' on the foot-wall assaying 15 lb. copper per ton; then 6' of barren sandstone; followed by shale (No. 2) 4½' wide, containing 22 to 30 lb.; 9' below this is 18 to 24" of fine-grained sandstone, returning up to 60 lb. per ton. Work indicates that these veins will outcrop on the property for 2½ miles.

Concentration will undoubtedly be by means of the flotation system, experimental work showing possibilities of an 85% extraction. Plans for a 100-ton testing mill were being considered during early part of 1917. Slime tables and flotation are the main features.

In Feb., 1917, the N. drift was 532' long, and the S. drift 556'. Shaft-sinking continues.

Equipment: 60' head-frame, 329' trestle, shaft-house, hoist of 500-ton daily capacity to 1,000' depth, 12-drill compressor, 3 boilers, machine-shop, saw-mill, fire system, water-supply, 26½-mile telephone line, and dwellings, etc., for 67 men. A 9-mile railway is to be constructed.

Possibilities of this mine are good, and exploration is in capable hands.

WILMOT MINING CO.

MICHIGAN

Office: 990 W. Kensington Rd., Los Angeles, Cal. Mine near Ontonagon, Mich. W. H. Garlick, pres.; W. B. Goucher, sec.

Inc. in Michigan. **Cap.**, \$500,000; shares \$25 par. Paid dividends of

\$17,000, from sale of timber lands, with mineral rights reserved, and has received \$1,500 from assessments. Owns mineral rights to 3,520 acres in Ontonagon county. No mining done.

WINONA COPPER CO.**MICHIGAN**

Office: 705 Sears Bldg., Boston, Mass. **Operating office:** Houghton, Mich. **Mine office:** Winona, Houghton Co., Mich.

Officers: Chas. J. Paine, Jr., pres.; Geo. P. Gardner, v. p., with W. A. Paine, Walter Hunnewell, Jas. H. Seager and W. Cameron Forbes, directors. A. E. Coe, sec.-treas.; Rex. R. Seeber, supt.

Inc. 1898, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; increased 1911 to \$5,000,000; issued 166,667 shares, fully paid. Last assessment of \$1 was paid July 2, 1914. The company 1911 acquired the property of the King Philip Copper Co., issuing 166,667 shares of Winona stock therefor. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting last Tuesday in March.

Report for 1916 shows receipts totaling \$712,407, including \$473,583 from copper and \$223,324 balance from 1915. Expenditures totaled \$545,202, including \$472,769 mine expenses. Balance of assets at end of 1916 was \$330,045.

Property, 2,608 acres, with timber rights to 1,768 acres additional, lying 3 to 5 miles S. of the mine.

Geology: the main tract carries the outcrop of the Winona amygdaloid bed for about 2 miles. The mine was discovered 1864, by a line of old Indian pits along the outcrop, and a single shallow shaft was sunk, but owing to entire lack of transportation facilities little was accomplished. The property was leased in 1880 and worked for mass copper, but did not pay and was closed, until the present company began work April, 1898, when the old shaft was cut down, retimbered and deepened, and 3 new shafts sunk. The Winona bed is an amygdaloid of 12' minimum, 20' average and 46' maximum width, striking N. 59° E., and having an average dip of about 70°. The Winona amygdaloid greatly resembles both the Baltic bed and the Knowlton bed of the Evergreen belt, carrying considerable epidote, calcite and quartz, with a limited amount of both mass and barrel copper, though the bulk of the metal occurs in stamp rock. Diamond-drill borings have located several other cupriferous beds on the Winona tract, all lean where cut. The mine is on a spur of the Copper Range railway.

The older workings show mineral of the lighter grades, with somewhat heavier copper at depth.

Development: No. 1, the discovery shaft, has 3 compartments, is 400' deep, with 4 levels opened, which shows a little heavy copper and some stamp rock in the northern drifts, but is of little promise and has been idle since 1901.

No. 2 shaft is 1,000' deep, with 9 levels opened, showing good copper at depth of about 200', but with poor ground below, and has been idle since early 1906.

Old No. 3 shaft, 750' deep, has been idle for years.

New No. 3 shaft, 1,650' S. W. of No. 2, is bottomed at the 13th level. The 3d to 10th levels, inclusive, have been extended to No. 4 shaft at depth of 1,272' showing alternations of good and poor ground. The openings, as a whole, show rock carrying 12 to 15 lbs. fine copper per ton, allowing for judicious stoping and reasonable selection of ground broken.

Equipment at N. 3 shaft includes a steel shaft rock house, equipped with two 18"x24" crushers, pneumatic steel gates, and pneumatic trolley cranes.

No. 4 shaft, about 1,700' S. W. of No. 3 is down to the 15th level. The shaft is sunk in the footwall and was opened by sinking and raising simultaneously. Underground work has been confined to stoping for the past year. Connection is had with the King Philip workings on the 5th, 7th, 8th, 9th, 10th and 12th levels.

No. 4 shaft is equipped with a modern steel shaft rock house, having a cylindrical main bin of about 40' diam., built of heavy steel plate and a 24x36" Portage Lake-Farrell crusher.

The hoist at No. 4 shaft, about 1,700' from the central plant, and good for 1,500' depth, operates two 3-ton skips, working in counterbalance, at a speed of 1,200' per minute.

King Philip No. 1 shaft, about 1,400' S. of Winona No. 4 shaft, is 14x25' in size, sunk about 85' in the footwall, at an angle of 70°, and is temporarily bottomed at the 14th level. The lode shows a width of 20 to 25', and carries considerable epidote.

King Philip No. 2 shaft is 2,780' S. of No. 1, on the southern side of Sleeping river, and 3,400' from the southern boundary of the tract. This shaft, temporarily idle, also sunk in the footwall, is 1,108' deep, with crosscuts on the 6th, 8th and 10th levels, to the Winona bed, which gives a fair showing, about the same as in No. 1, with which it has underground connection on the 8th level.

Development in 1916 amounted to 879', openings showing about the usual run of ground, those at No. 1 King Philip being the best.

King Philip No. 1 has a wooden shaft and rock house completed in May, 1916, which allows a 35% increase in output. No. 2 shaft has an isolated steam hoisting plant. It contains a motor driven 18x24" Hodge crusher, and a mass hammer of drop type.

The power plant equipment at No. 3 shaft includes an Allis-Chalmers 250-kw. 3-phase 60-cycle 2,300-volt cross-compound a. c. generator. The equipment at No. 4 shaft includes a motor-generator set which has a 450 h. p. 3-phase 60-cycle 2,080 volt variable speed induction motor, at 600 r. p. m., connected on either side by flexible couplings, to two 20-ton fly-wheels, 10' in diam. The motor-generator set has 2 bearings of 11x33", and 2 bearings of 9x27" with oil pumped through them at the rate of 16 gals. per minute, automatically filtered and water-cooled, insuring perfect lubrication. A 150-kw. motor-generator operating the electric locomotives, transforms a 2,200-volt alternating current into a 500-volt direct current. There is a 25-drill Nordberg air compressor in the central power house, and steam is provided by three 270 h. p. water-tube boilers, operated at 175 lbs. initial steam pressure.

The King Philip boiler house has a battery of two 300 h. p. Parker tubular boilers. The 34x40' power house has a 50-drill Nordberg 3-stage air compressor.

Mine buildings include a carpenter shop, machine shop, smithy, warehouse, office buildings, 2 boarding houses and about 150 dwellings for employees. There also is a sawmill, with wing for boilers, and a wing containing a shingle mill, the plant having a daily capacity of 20,000' of sawed lumber.

The mill, built at a cost of about \$300,000, is near No. 4 shaft, thus saving about 13c per ton in transportation charges. The mill secures its water from the Sleeping river, across which a dam has been built, with a storage capacity of 150,000,000 gals. Careful hydrographic surveys for 3 years show that the watershed tributary to this river yields about 3,000,000 gals. per day, which is enough for the mill. The item of 13c per ton transportation charges saved by the new mill may seem small, at first sight, but it actually means about 1c per lb. on the cost of finished

copper, and may mean the difference between success or failure, so closely are costs and income adjusted in a low-grade Lake Superior copper mine. The custom for many years past has been to put Lake Superior mills some miles away from the mines, on large bodies of water, but in the case of the Winona, the management has had to consider costs rather than the easier solution of its milling problem.

Rock, brought to the mill by electric locomotives, is crushed in 2 Allis-Chalmers stamps, 1 a simple head having a 24" cylinder, and 1 a steeple-compound head with 16" and 32" cylinders. Equipment includes 6 Hardinge conical tube-mills, 60 Wilfley tables and 12 settling tanks. Under the wash floor there are 6 large settling tanks for the wash water, which is reused after clarification. Tailings are carried by belt-conveyor for a distance of 321' from the mill, and delivered at a height of 123' above the ground, forming a great hill of waste at hand for retreatment at some future time. Slimes are delivered by a 1,200' steel launder to a ravine beyond the sand discharge. Company employs about 300 men.

In Aug., 1914, the mine was shut down on account of the low price of copper. In Oct. work was started by lessees, the rock being shipped to the Centennial-Allouez mill, until Jan. 1, 1915, and after this date to the Trimountain mill, and continued until the Spring of 1915. In June, the company started work, sending the mine output to its own mill.

The Winona has made various separate campaigns of production; on several occasions the percentage of copper extracted ran down to unpayable figures, returns averaging 18.95 lbs. fine copper per ton of rock stamped in 1904, 14.34 lbs. in 1906, and 12.59 lbs. in 1907. The average yield in 1914 was only 10.96 lbs. fine copper per ton of rock stamped.

Winona's rock averages 20 lbs. of copper per ton, but the copper is light and flaky and the mill has never been able to make adequate recovery. A great deal of experimental work has been done in an attempt to solve the problem. The method finally determined upon, and being tried out at present, is the Slater ferric-chloride process. Results indicate that when it is made continuous instead of treating the ore in batches it will be the solution of the problem. Flotation was also tried but nothing definite has been decided.

Development: underground is much better to the S. of the property than in the original workings to the N., and the mine has been extensively opened, with a large tonnage of rock available for stoping. Notwithstanding the unsatisfactory results secured thus far, the Winona is considered to have very fair chances of making a successful low-grade mine, with profits depending upon copper selling at 15 cts. or over. The management is efficient and resourceful.

Production: 1902, 101,188 lbs. copper; 1903, 1,036,944 lbs.; 1904, 646,024 lbs.; 1905, no production; 1906, 278,182 lbs.; 1907, 1,285,863 lbs.; 1908, 1909 and 1910, no production.

Recent production:

	Tons R'k Stmpd.	Mineral Lbs.	Lbs. Copper per Ton Rock	Rec. per Ton R'k	Ref. Copper Produced Lbs.
1916.....	161,829	3,700,180	22.85	13.39	2,167,255
1915.....	102,594	3,032,045	29.55	16.79(a)	1,722,638
1914.....	123,339	2,239,170	18.15	10.96	1,352,085
1913.....	120,806	2,467,460	20.42	11.99	1,448,737
1912.....	181,148	3,586,520	19.79	12.738	2,307,237
1911.....	97,445	2,533,870	26.00	13.091	1,275,675

(a) Higher recovery due to closer selection of rock stamped. Copper was sold at 17.4c per lb. in 1915, and 28.03c in 1916.

During the first 9 months of 1917 the mine yielded an average of 166,000 lbs. copper monthly at a cost of 27c per lb. With copper selling at 23½c fixed price a loss would be made, so the mine was let on tribute to the superintendent and others on a royalty basis in October, 1917. The daily production is now 450 tons.

WOLVERINE COPPER MINING CO.

MICHIGAN

Office: 15 William St., New York. **Mine office:** Kearsarge, Houghton Co., Mich.

Officers: R. Stanton, pres.; Geo. W. Drucker, sec.-treas.; preceding with Jas. S. Dunstan, L. P. Yandell, and Theo. Dengler, directors. Theo. Dengler, supt.; F. W. Hartmann, asst. supt.; Chas. L. Noetzel, clerk; David L. Vivian, mill supt.; Arthur Williams, mine capt.; A. Floetter, engr.; A. B. Holtenhoff, master mechanic.

Inc. 1890 in Michigan. **Cap.**, \$1,500,000; shares \$25 par. The company owns \$80,000 stock in the Michigan Smelting Co. Old Colony Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, first Monday in August.

Financial statement for fiscal year ending June 30:

	Receipts	Tot. Exp.	Profit	Div.	Tot. Sur.
1917.....	\$1,707,441	\$681,036	\$1,026,405	\$780,000	\$1,108,933
1916.....	1,369,286	634,068	735,218	660,000	862,529
1915.....	929,193	610,991	318,201	360,000	787,311
1914.....	484,061	402,936	81,075	829,109
1913.....	1,326,501	724,987	601,514	600,000	748,034
1912.....	1,327,030	713,840	613,180	540,000	746,520

Surplus at end of last financial year was \$1,108,933, including cash \$313,000, Liberty bonds, \$355,000; copper \$360,000; equal to \$18.48 per share.

Dividends: the first dividend was paid Oct. 1, 1898 and 38 dividend disbursements, to Oct. 1, 1917, aggregated \$9,930,000.

Property: 320 acres, 280 acres freehold, and 40 acres mineral rights, carries 3,100' of the strike of the Kearsarge amygdaloidal bed, on which the mine is opened. Neighboring properties are the North Kearsarge on the N., Mayflower on the E., Mayflower and South Kearsarge on the S., and Centennial on the W.

The Kearsarge bed averages about 16' in width on the Wolverine property, and this mine was for many years the richest amygdaloidal mine in the Lake Superior district, second in richness only to the Calumet & Hecla among all Lake Superior copper mines. All shafts are sunk at an angle of 41°, and skip tracks have been given crossties, in place of longitudinal stringers, following the plan introduced in the Calumet & Hecla, which permits the use of a cheaper grade of timber and allows quicker repairs. All levels, except some of the very upper ones, are opened at 100' intervals. Owing to the uniformity of the cupriferous bed, all levels from the 1st to the 23d, inclusive, are opened through the entire property, connecting all 4 shafts to the bottoms of No. 1 and 2 and connecting Nos. 3 and 4 only below the 17th level. With production at the rate of 6,500,000 lbs. fine copper yearly, the life of the mine is estimated at about 12 years. The new lease on life is due to the reworking of the footwall rock of supposedly worked out stopes, throughout the mine. The total width of the lode is 15' to 20'; in the original work only 12' was mined, so there remains 3' to 5' of rock which contains about 18 lbs. copper per ton.

Development: several parallel lodes have been prospected, an exploratory crosscut being driven for 2,000' across the formation on the 14th level, reaching the Kearsarge conglomerate on the W., where it was barren.

Another exploratory crosscut, 1,600' long, driven E. on the 28th level, intersects the Old Colony lode 1,489' E. of the Kearsarge amygdaloid and cuts other cupriferous beds. A little drifting on the Old Colony lode failed to disclose payable ground. The West lode lying 80' W. of the Kearsarge has been opened by several levels, with some payable ore on the 13th and 14th.

The Wolverine lands also carry the Osceola amygdaloid, but it proved non-commercial in a 631' shaft with drifts on 5 levels.

No. 1 shaft near the Kearsarge line, was abandoned years ago. No. 2 shaft, next S., is bottomed at 1,700' and is used for handling men and supplies.

No. 3 shaft sunk in the footwall, is bottomed at the 39th level, total depth 4,005'. Sinking was stopped at the 39th level as the hoist had reached the limit of its rope capacity. It is proposed to open and mine the remaining 100' below the 39th level by means of a winze 600' S. of the shaft. This inclined winze will eventually attain a depth of 700' in order to reach the boundary of the property. It will take 5 years to reach this point and 15 years to exhaust the ground. Shafts No. 3 and 4 are connected by drifts down to and including the 33rd level.

No. 4 shaft sunk 45' in the foot, to guard against drawing, has reached the 43rd level, total depth 4,500', the bottom of the mine.

Development in 1916-1917 amounted to 1,924'. New openings exposed good ore, and indications for No. 41, 42 and 43 levels are also good.

Equipment: at No. 3 shaft duplicates that of the Mohawk mines. That at No. 4 includes a 14"x60" Nordberg duplex-cylinder hoist with double conical drum having a maximum diam. of 18', capable of raising 4-ton skips from 1 mile depth, with a 1¼" steel cable. There are 20-drill and 22-drill compressors, and 3 Stirling water-tube boilers, with American automatic stokers and a Green fuel economizer.

Mine has Knowles electric pumps, 3 at No. 2 shaft, and one at shafts Nos. 3 and 4, three pumps having an average lift of more than 1,000' each.

The principal mine buildings are at No. 4 shaft, but there is a model changing house at No. 3 shaft. A telephone system connects underground pump stations and all buildings. The company maintains a 6-ward hospital and staff, and owns a large number of substantial dwellings, the location being exceptionally prosperous in appearance.

Rock is transported between the mine and mill by the Mohawk & Traverse Bay railroad, with a down-grade haul of 13 miles.

Mill is near the mouth of Tobacco river, on Traverse bay, Lake Superior, and adjoins the Mohawk mill, both being served by a single pump and managed by a joint superintendent. The mill has 2 Nordberg heads and uses Wilfley tables. Mineral from the heads and wash is sluiced to the basement through iron pipes, going to the works of the Michigan Smelting Co. at Houghton. A Jackson tailings plant provides for settling out the water and stacking the tailings 800' from the mill by belt conveyor.

The boiler house houses a battery of 200 h. p. Stirling water-tube boilers, equipped with American automatic stokers.

The pump house, owned jointly by the Wolverine and Mohawk, has a 20,000,000-gal. Snow horizontal triple-expansion pump, with 18", 33" and 54" steam cylinders and 22" water plungers, with 36" stroke, besides an auxiliary 8,000,000-gal. Nordberg triple expansion water-end pump, with 3 plungers. The pump house is located on the river, near its mouth, the intake being protected by timber cribs running 300' into the lake to prevent clogging from floating bark and anchor ice.

Average number of men employed at mine and mill is 370.

Recent Production: (fiscal year ending June 30).

	Tons R ⁷ Hoisted	Cost per Ton	Tons R ⁷ Stamped	Cost per Ton	Lbs. Cu. per Ton	Mineral Lbs.	Ref. Cu. Lbs.	Cost per Lb.(b)
1917.....	354,899	\$1.54	352,845	\$1.63	16.59	8,753,945	5,856,889	11.62(c)

1910.....	405,790	1.55	390,837	1.61	24.96	12,359,000	9,757,101	7.413

(a) Mine was closed from July, 1913, to April, 1914, on account of the Western Federation of Miners' strike.

(b) Cost per pound includes construction.

In July, 1917, the output was 363,888 lbs. from 27,557 tons of ore, or 14.12 lb. per ton, a decided decrease on a few months ago.

With a 12-year life, as estimated by the directors, and an annual yield of 6,500,000 lbs. of copper figured at a total of 78,000,000 lbs., the profit with 15c copper and 9.4c cost would be \$4,368,000, equivalent to \$72 per share, or \$6 per year.

WYANDOT COPPER CO.

MICHIGAN

Office: 68 Devonshire St., Boston, Mass. **Operating office:** Houghton, Mich. **Mine office:** Winona, Houghton Co., Mich.

Directors: Ashley Watson, pres.; Jos. Dorr, v. p.; Chas. E. Adams, sec.-treas. and Frank L. Van Orden, mgr. Louis La Rochelle, mg. capt.

Inc. Feb. 3, 1899, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; paid in, \$13. Has levied assessments of \$700,000 since organization. Shares are listed on the Boston Stock Exchange. State Street Trust Co., Boston, registrar; Federal Trust Co., Boston, transfer agent. Annual meeting, second Monday in May.

Property: 1,065 acres, adjoins the Winona, in Secs. 16, 20 and 21, T. 52 N., R. 36 W. Exploratory work, begun Feb., 1899, was done in search of the Winona bed; later to locate the southern extension of the Baltic amygdaloid, after which attention was turned again to the Winona bed, and latterly to development of an amygdaloidal bed, the No. 8 lode, lying about 2,300' E. of the Winona lode. The average strike of the Keweenaw formation on this land is N. 53° E., with an average dip of 65°, and the Wyandot lands carry the strike of the Keweenaw bedded series for about 1½ miles.

Development: by several shafts, No. 1, 1,000' deep, located in the S. E. ¼ of Sec. 21, T. 52 N., R. 36 W., is sunk in the footwall of the Winona bed.

No. 11 exploratory shaft is sunk 710' on a stratum paralleling the Winona bed, at a distance of 1,200'. This bed looked good when first opened, and diamond-drill cores were rich, but the bed proved poor under development. A crosscut driven S. E. from the bottom of No. 11 shaft for 2,640', intersects 13 distinct amygdaloidal beds, Nos. 3 and 8 showing copper. Drifting done on No. 3 bed disclosed considerable mass and barrel copper, but No. 8 is the more promising.

Miscellaneous work of the past includes a 102' vertical shaft, sunk on a lean amygdaloidal bed, known as the Misery river bed, in Sec. 16, T. 52 N., R. 36 W., but nothing of value was developed. Some years ago a vertical shaft was sunk on lands held under option, near the W. quarter post of Sec. 28, T. 52 N., R. 36 W., to depth of 250', and crosscuts driven both E. and W. with about one-half mile of workings. This work crossed the horizon of the Baltic bed, but what was deemed the Baltic amygdaloid was found highly altered, and worthless, as was the whole country in the neighborhood.

Extensive diamond drilling has been done on the property and a core, taken 1904, from the horizon of the Lake bed, showed a little copper, but was not considered important at that time. The ground has been carefully prospected again by diamond drill, in Secs. 16 and 21. Holes Nos. 21 and 22 showed beds offering encouragement, and some trenching was done

on 1 bed, 48' wide, carrying a little copper from foot to hanging. Another trench, 1,500' N. E. disclosed the bed under only 16' of overburden, and a shaft known as the Sec. 16 shaft, was sunk to a depth of 65'. A crosscut at this depth shows the bed to be 38' wide, carrying finely-disseminated copper for about 10', with small masses along the footwall.

Recent activity has been centered in development work in the No. 8 lode, 1,100' S. E. of the No. 11 shaft. This lode is opened by the long crosscut on the 700' level, and below this depth by a 115' winze, with about 800' of drifts on the 815' level, 400' of drifts on the 900' level and drifts have been started on the 1,000' level, the bottom of the winze. The showing on these levels has been varied and sufficient work has not been done to fully demonstrate the value of the lode.

Equipment: includes a steam plant with Lidgerwood hoist, good for 1,000' and compressors of 12 drills aggregate capacity.

Work at present is confined to drift-stoping, preparatory to regular stoping, both N. and S. of the winze on the 800' level. Gratifying results have been obtained and if present developments are indicative of the general mineralization of the lode, the future of the property looks good. About 25 men are employed. Two drills were working on No. 10 level in August, 1917.

The Wyandot company has worked faithfully and with skill for more than a decade to make a profitable mine, and, though not yet successful, has not exhausted the possibilities of its holdings.

Two mill tests have been made, the second of 654 tons being completed in Sept., 1917. This averaged 21.62 lbs. copper per ton. Another lot of 500 tons is to be milled. Operations are kept going by assessments, one of \$1 per share being called for Sept. and March (50c each).

IRON MINES OF MICHIGAN

Arranged alphabetically and embracing the important mining companies operating in Gogebic, Menominee and Marquette ranges.

BREITUNG IRON CO.

MICHIGAN

Office: 11 Pine St., New York.

Officers: E. N. Breitung, pres. and gen. mgr.; Wm. A. Hamilton, sec.-treas.; the preceding, and H. H. Seaman, Norman Merriman and R. M. DeVoe, directors; C. B. Dunster, mgr.

Inc. May 4, 1917, in Delaware. **Cap.**, common stock, \$15,000,000; par value, \$100; authorized and outstanding; pfd. 7% cumulative; convertible, \$3,000,000. Redeemable at option of corporation at \$110 per share and accrued dividends. Convertible share for share into common stock at the option of the holders. Quarterly dividend payable on the first day of Jan., April, July and October. Privilege of conversion up to thirty days, prior to date fixed for redemption. No bonds.

The various subsidiary companies and their locations are given below, together with the percentage of capital stock of each one held by the B. I. Co., other than directors' qualifying shares.

Names of Subsidiary Operating Companies	Location	Iron Ore Range	% Capital Stock Owned
Mary Charlotte Mng. Co.....	Negaunee, Mich.	Marquette Range	95
Breitung Hematite Mng. Co.....	" "	" "	95
Juliet Iron Co.....	" "	" "	100
Lucky Star Mng. Co.....	" "	" "	70
Washington Iron Co.....	Humbolt, "	" "	51
Hopkins Mng. Co.....	Ironton, Minn.	Cuyuna Range	100
Clifford Ext. Iron Co.....	Iron Mtn., Mich.	Menominee Range	80
Loon Lake Mng. Property.....	Wilde, Ont., Can.	Algoma Range	80

Under date of April 1, 1917, the American Appraisal Co., of 120 Broadway, appraises the properties of the subsidiaries at \$8,631,073, including in permanent equipment and development, \$1,227,563; mineral lands and leases, \$7,078,250; investments in ships, \$325,260; current assets, \$3,620,648, and the liabilities as, \$1,622,978. The Appraisal company notes that these values are very conservative. The B. I. Co. estimates that net earnings for 1917 will be \$800,000 and in next 3 years about, \$1,750,000 annually.

A Surplus Fund is to be created from earnings remaining after payment of preferred dividends in each year, up to Jan. 1, 1920, to be maintained at an amount equal to that existing on that date, either in property or otherwise, so long as any of the preferred stock is outstanding. No dividends can be paid on the common stock until Jan. 1, 1920, and after that, 25% of all surplus earnings remaining after payment of preferred dividends in each year shall be applied to the redemption of preferred stock at \$110 and accrued dividends.

Property: over 1,300 acres in one solid group in the Negaunee district of the Marquette Iron Range in the Lake Superior region, and properties in other districts. The company operates a boat line from Superior ports to lower Lake ports.

Subsidiary Properties

Mary Charlotte Mining Co. holds leases on 120 acres of iron ore lands estimated to contain over 4,000,000 tons of high-grade Bessemer and Mary ores, disclosed by development work and drilling; and large tonnage of lower grade ores. Mine has operated since 1903.

Breitung Hematite Mining Co., Ltd. has 50-year leases on more than 175 acres of iron ore lands estimated by development and drilling to contain 4,000,000 tons of high grade Bessemer and non-Bessemer ores. Company has recently spent \$400,000 for new shaft and development to permit steady production. Has produced since 1906.

Juliet Iron Co. holds fifty-year lease on 960 acres in the Negaunee Basin iron formation and adjoins and almost surrounds the Breitung Hematite No. 1 mine; practically undeveloped except by shallow workings that show promising prospects. From one tract of 80 acres, known as the Milwaukee-Davis, 700,000 tons were produced.

Lucky Star Mining Co. owns 150 acres northeast of Breitung Hematite; property is crossed by a very rich orebody. Drill holes show more than 4,000,000 tons. A shaft has been sunk to within 200' of the ore, and company reports that it should be producing within two years.

Washington Iron Co. owns in fee and operates the Barron mine in the Humboldt district of the Marquette range. Since 1908 property has produced 350,000 tons. There are 1,120 acres situated in the iron formation with known ore developed to present time of 400,000 tons.

Hopkins Mining Co. holds 46-year lease on 80 acres in Cuyuna range near Iron-ton, Minn. Drilling in 1914 showed 468,566 tons of Bessemer and manganiferous ore. Later work in that section indicated a larger tonnage. At present time shaft has been sunk 145'.

Clifford Extension Iron Co. holds a 24-year lease on 80 acres in the Menominee range where ore bodies are known to go to great depth. Above the 135' level 2,500,000 tons are estimated with large reserves below that level. Property is being opened up by a shaft and ore will be mined by open pit milling method. Ore is Bessemer grade of specular hematite.

Loon Lake Mining Property is held in fee by a subsidiary company. There are about 1,000 acres in the Algoma Iron Range, 20 miles north of Sault Ste. Marie, Ontario. Property is being prospected.

BRISTOL MINING CO.**MICHIGAN****Office:** E. W. Hopkins, mgr., Wade Bldg., Cleveland, Ohio.**Property:** on the Menominee range, Mich. **Ore:** hard, brown, non-Bessemer hematite, containing 49.48% iron, 3.96% manganese, 0.6% phosphorus and 7.25% silica.**Mining method:** by stoping to 1,060'.**Production:** 462,559 tons in 1916 and 4,606,922 tons to date.**CASCADE MINING CO.****MICHIGAN****Address:** 728 Security Bldg., Minneapolis, Minn.**Officers:** Fred B. Snyder, pres.; J. F. VanDerlip, v. p.; R. M. Bennett, treas.; O. B. Warren, gen. mgr. T. J. Nicholas, supt., Palmer, Mich. Pickands, Mather & Co., Cleveland, Ohio, sales agents. Operated as a close corporation.**Property:** Isabella mine, Marquette county, developed by shafts and tunnels to vertical depth of 940', showing an iron ore deposit in jasper-diorite and quartzite. The ore is mined by the square set and stoping systems.**Production in 1916:** 134,938 tons, the product being a Bessemer and non-Bessemer hematite.**CLEVELAND-CLIFFS IRON CO., THE MINNESOTA-MICHIGAN****Office:** Cleveland, Ohio. M. M. Duncan, mgr.**Officers:** W. G. Mather, pres.; M. M. Duncan, v. p.; R. C. Mann, treas.; S. L. Mather, sec., with T. H. Newberry, C. W. Bingham, Samuel Mather, J. H. Wade and B. F. Bourne, directors; C. G. Heer, asst. treas.; E. H. Jaynes, asst. sec.; and C. D. Mason, aud.**Inc. in W. Virginia. Cap.,** \$10,000,000; shares \$100 par; 995,740 issued. Funded debt outstanding, \$1,575,000 1st collateral trust gold 6s.**Statement for 1916 shows an income from all sources of \$5,827,787, of which \$1,645,374 was profit. Cash assets at end of year were \$6,624,320 and current liabilities, \$3,387,715.****Dividends:** 2½% per quarter.**Property:** iron mines in Michigan and Minnesota that yielded 2,275,-796 tons in 1916. The principal ones are:

Mine	Range	Mining System	Ore	Iron Content, Per Cent	Shipments, 1916, Tons	Total Tons

Stephenson	"	"	"	51.88	355,166	1,480,615

The Maas is worked to a depth of 1,290'.

The above figures represent the season's shipments, May 1 to December 1, or the season of Lake navigation. Actual production goes on all the year, and the ore is stocked at the mines. It frequently happens that in one year production figures are considerably larger than shipments; and in other years the reverse.

DAVIDSON ORE MINING CO.**MICHIGAN**

Office: 403 White Bldg., Buffalo, N. Y. Mine office: Iron River, Mich.

Officers: F. N. Beagle, pres.; Geo. Davidson, v. p.; T. F. Hildreth, sec.-mgr.; L. R. Davidson, treas. Rudolph Ericson, supt.

Inc. 1910 in Michigan. Cap., \$500,000; shares \$25 par; \$400,000 shares outstanding.

Property: 120 acres, includes the Davidson No. 1 and No. 2 mines, near Iron River. Ore is a non-Bessemer hematite.

Development: by 550' vertical and 252' incline shafts.

Equipment: includes 3 hoists, 2 compressors and a Marion steam shovel.

HANNA & CO., M. A.**MICHIGAN-MINNESOTA**

Office: Leader-News Bldg., Cleveland, Ohio.

Officers: L. C. Hanna, R. L. Ireland, M. Andrews, H. M. Hanna, Jr., F. B. Richards, Wm. Collins, R. F. Grant. Operated as a close corporation and does not furnish reports for publication.

Controls the following operating companies: Virginia Ore Mining Co., Virginia, Minn.; Consumers Ore Co., Mountain Iron, Minn.; La Rue Mining Co., Nashwank, Minn.; American-Boston Mining Co., Diorite, Mich.; Richmond Iron Co., Palmer, Mich.; Hollister Mining Co., Crystal Falls, Mich.; Wakefield Iron Co., Wakefield, Mich. Also operates 32 vessels of 8,915 average tonnage on the Great Lakes.

Company is sales agents for the following:

INDIANA MINE**MICHIGAN**

John M. Thomas, owner, Milwaukee, Wis.; G. A. Richards, supt., Iron Mountain, Mich.

Is an iron property producing ore carrying 40.4% iron and .007% phosphorus. Uses electric hoist, pump, tram and steam driven compressor.

JUDSON MINING CO.**MICHIGAN**

Alpha, Mich. M. E. Richards, gen. mgr.; T. D. Held, pres., Chicago; Carom Hartly, v. p., Duluth, Minn.; A. H. Anderson, sec.

Inc. 1912 in Mich. Cap., \$750,000; shares \$10 par; all issued.

Property: Judson mine with 80 acres iron ore land having 2,000,000 tons hematite ore with 50% iron and 0.5% phosphorus content, blocked out.

Development: by 450' incline shaft and 5,000' of workings.

Equipment: includes Lake Shore hoist, 2,200 cu. ft. Ingersoll compressor, 1,000 gal. pump and motor tramway. Also a Bucyrus steam shovel.

Production: from 100,000 to 500,000 tons annually.

LAKE SUPERIOR IRON & CHEMICAL CO.

MICHIGAN

Address: W. H. Matthews, mgr., Bessemer, Mich., E. W. McRandle, supt.

Property: the Yale mine on Gogebic range, Michigan. **Ore:** 3 grades, all soft red, one a Bessemer, the second non-Bessemer and the third silicious hematite. The best ore contains 52.6% iron, 0.043% phosphorus and 5.43% silica. Ore is mined by caving to depth of 1,780'.

Production: 149,155 tons in 1916 and 1,013,486 tons to date.

LORETTO IRON CO.

MICHIGAN

Office: 1400 Fulton St., Chicago, Ill.

Officers: Wm. A. Amberg, pres.; D. F. Bremner, v. p.; T. J. Amberg, sec.; J. W. Amberg, treas.; C. H. Baxter, supt., directors.

Inc. in Ills. Cap., \$400,000; shares \$10 par; all issued. Is a close corporation and makes no figures public.

Property: 280 acres leasehold on Menominee range at Loretto, Dickinson Co., Mich., opened up in 1892. Main orebody averages 10-40' in width and is about 1,000' long with an overburden of above 25'. Ore varies greatly in iron content.

Development: to vertical depth of 800'.

Production: 174,173 tons in 1917. Total output to date, 1,912,453 tons.

MINERAL MINING CO.

MICHIGAN

Office: 910 Wells Bldg., Milwaukee, Wis. **Mine office:** Iron River, Mich.

Officers: G. D. Van Dyke, pres.; W. D. Van Dyke, v. p. and treas.; E. F. Brown, mgr. and sec.; above are directors.

Inc. May 7, 1904, in Wisconsin. Cap., \$100,000; shares \$100 par; 90,000 issued. Annual meeting, first Tuesday in May. Company is a close corporation.

Property: the Osana, Wauseca, Nanaimo and Breen iron mines near Iron River, Mich., first two being worked at present.

Production: capacity 500,000 tons yearly. Output of "James" ore averages 55.3% iron and 0.45% phosphorus.

NEGAUNEE MINE.

MICHIGAN

Address: M. M. Duncan, mgr.; G. R. Jackson, supt., Ishpeming, Mich. **Sales agents:** Cleveland-Cliffs Iron Co., and Pickands, Mather & Co., Cleveland, Ohio.

Property: in Marquette Co., Mich., has been worked since 1887.

Development: ore mined by caving system to vertical depth of 1,180'.

Ore: two grades: Negaunee, a soft, red, Bessemer hematite, containing 52.04% iron, 0.083% phos., and 6.72% silica; and Negaunee Bessemer, assaying 53.59% iron, 0.053% phos., and 6.72% silica. Moisture is 12% in both. Cargo analyses in 1916 averaged 59.20 to 60.90% iron, 0.094 to 0.060% phos., 7.65 to 7.12% silica, and 0.31 to 0.27% manganese.

Production: 523,736 tons in 1916, and total of 6,176,287 tons to date.

NEVADA MINING CO.

MICHIGAN

Address: M. E. Richards, gen. mgr., Alpha, Mich.

Inc. 1916 in Michigan. Same directorate as Judson Mining Co.

Property: about 80 acres, in Iron county, Michigan, includes the Amasa Porte mine, carries a typical replacement deposit in slate, that is reported to average 55% iron.

Developed by shaft to 550' vertical depth with 3,000' of underground workings, said to contain 700,000 tons of ore, with 200,000 tons blocked out.

Equipment: includes Sullivan hoist, compressor, Prescott steam pump and 600-ton mill.

Production: to date amounts to 150,000 tons.

NORRIE-AURORA MINE.

MICHIGAN

Address: Oliver Iron Mining Co., Ironwood, Mich. J. H. McLean, mgr.; O. C. Davidson, gen. supt.

Property: in Gogebic county, Mich., was first opened in 1885, and developed to 2,034' vertical depth.

Production: 1,885,863 tons in 1916, making 33,522,636 tons to date. Ore is of 5 grades, all soft, reddish brown, Bessemer hematites, and one grade of non-Bessemer hematite. Average in mine is 54.31% iron, 0.036% phosphorus, 6.21% silica, and 10.86% moisture.

PENN IRON MINING CO...

MICHIGAN

Address: Vulcan, Mich.

Officers: A. C. Dinkey, pres.; H. F. Black, v.-p.; D. H. Gehly, sec.-treas., with Wm. Kelly, directors. Wm. Kelly, mgr.

Inc. in Michigan. Cap., \$1,000,000; shares \$100 par, all issued.

Property: in Menominee range, Dickinson county, includes the Cyclops, Norway, West Vulcan, Brier Hill and Curry mines. Developed to depth of 1,600' by vertical shafts. **Ore:** Bessemer and non-Bessemer hematite, 56.77% iron. Reserves estimated at 1,200,000 tons, August, 1917.

Production: the rate of 425,000 tons iron ore per year, a total to date of 11,109,692 tons.

PEWABIC CO.

MICHIGAN

Office: 910 Wells Bldg., Milwaukee, Wis.

Officers: G. D. Van Dyke, pres.; W. D. Van Dyke, sec.-treas., with N. P. Hulst, J. H. McLean and D. G. Kerr, directors. E. F. Brown, mgr.; W. G. Monroe, supt.

Inc. Jan. 1, 1887, in Wis. Cap., 8,000 shares; \$25 par, all issued. Is a close corporation.

Owens the Pewabic, Walpole and Millie iron mines at Iron Mountain, Dickinson Co., Mich. Ore carries from 38% to 63% iron and from .007 to .012% phos. Ore reserves: estimated at 50,000 tons in the Walpole and 500,000 tons in the Genoa.

REPUBLIC IRON & STEEL CO.

MICHIGAN

See same title under U. S. section of this book at beginning of Chapter VI.

SPRING VALLEY IRON CO.

MICHIGAN

Address: E. H. Willis, mgr., Wellston, Ohio. J. E. Looney, supt.

Property: on the Menominee range, Iron Co., Mich., opened in 1907. **Ore:** a soft, red, non-Bessemer hematite, assaying 51.75% iron, 0.461% phosphorus, and 6.3% silica. Ore is mined by top slicing system to depth of 350'.

Production: 145,716 tons in 1916, and 916,661 tons to date.

VERONA MINING CO.

MICHIGAN

Office: C. H. Munger, mgr., Cleveland, Ohio.

Property: 3 mines on the Menominee range, Mich. **Ore:** hard, red, non-Bessemer hematite.

Mine	Depth, ft.	Tons in 1916	Tons to date
Baltic.....	553	110,965	1,788,651
Bengal.....	280	140,960	208,923

WAKEFIELD IRON CO.**MICHIGAN****Address:** J. D. Ireland, Wakefield, Mich. W. C. Hart, supt.**Property:** Andrews and Duane mines on Gogebic range, Gogebic Co., Mich.; first opened in 1913. **Ore:** a soft, red, non-Bessemer hematite and soft dark brown non-Bessemer hematite, carrying, respectively, 52.06 and 47.93% iron, 0.08 and 0.09% phosphorus and 4.25 and 5.31 silica.

Mining is by open pit and by underground work to depth of 400'.

Production: 1,061,730 tons in 1916 and 2,041,343 to date.**WASHINGTON IRON CO.****MICHIGAN****Address:** W. B. Pattison, supt., Negaunee, Mich.**Property:** the Washington mine, opened in 1860, on Marquette range, Mich. Has 4 grades of hard, gray non-Bessemer specular and magnetite ores, which are concentrated before shipment. No. 2 ore assays 56.83% iron, 0.136% phosphorus and 15.47% silica. Ore is mined by stoping to 730' depth.**Production:** 6,631 tons in 1916 and 360,322 tons since 1908.**WICKWIRE MINING CO.****MICHIGAN****Address:** E. C. Bowers, Buffalo, N. Y. H. Duff, supt.**Property:** the Virgil and Wickwire iron mines on the Menominee range, Iron Co., Mich. **Ore:** yellow-brown and red-brown non-Bessemer hematite, the former containing 51.04% iron, 0.396% phosphorus and 6.32% silica. Ore mined by sub-stoping, to 273' in the Virgil and slicing and caving to 313' in the Wickwire.**Production:** (tons)

MINNESOTA COPPER MINES**GREAT NORTHERN COPPER CO.****MINNESOTA**Idle since 1911. **Office:** 504 Globe Bldg., Minneapolis, Minn. Mine at Hinckley, Pine Co., Minn. Fully described Vol. XI, Copper Handbook.**J. BENNETT SMITH MINING CO.****MINNESOTA**

Company now entirely in hands of R. D. Lacoe of Oceanside, San Diego Co., Cal., who advanced most of the money for development. Former office Kingston, Pa. Mine address: Pine City, Pine Co., Minn.

Property: 500 acres of copper-bearing ground, along Snake river, a mile below Cross lake, in Pine county, Minn. The lands show the western extension of the Keweenawan copper-bearing beds of Lake Superior, the bedded formation having a strike of about N. 20° E., with dip of about 72° S.-E., showing the beds to be on the northern fold of the syncline.**Development:** includes 560' shaft; also several shallow pits and shafts. Several of the amygdaloidal and conglomerate strata, showing native copper, have been proven by test pitting and diamond-drill borings. Company reports having expended about \$50,000 on exploratory and development work since 1879.**LYCOMING CO.****MINNESOTA****Office:** 708 Lonsdale Bldg., Duluth, Minn. Was a securities-holding company. Inactive and no assets.**IRON-MANGANESE MINES OF THE CUYUNA RANGE****ALGOMA MANGANESE CO.****MINNESOTA****Address:** Ferguson Bldg., Duluth, Minn. W. A. McClaren, mgr.; A. A. MacKay, supt.

Property: Algoma mine, in Sec. 33, T. 47, R. 29, Crow Wing county, is developed to vertical depth of 100', the ore averaging 29.13% iron, 19.50% mang. and 0.81% phos. Shipments begun in 1916 amounted to 24,035 tons.
AMERICAN MANGANESE MFG. CO. **MINNESOTA**

Address: W. H. Locker, mgr., Bullitt Bldg., Philadelphia, Pa.

Property: the Mille Lacs mine, Cuyuna range, Minn. **Ore:** is a hard, manganiferous, non-Bessemer hematite carrying 37.31 to 40.02% iron, 8.96 to 21.22% manganese, 11.46 to 22% silica and 0.051 to 0.096% phosphorus. Ore is mined by underground methods to 205' vertical depth.

Production: 90,564 tons in 1916 and 203,137 tons to date.

CUYUNA DULUTH IRON CO.

MINNESOTA

Address: Duluth, Minn. **Officers:** W. H. Socker, pres.; O. J. Windlandt, v. p.-sec.; W. H. Socker, treas.

Inc. 1911 in Minnesota. **Cap.**, \$1,000,000; shares, \$1 par, 756,000 outstanding.

Property: iron-ore leases in Crow Wing Co., Minn. Producing 52% iron ore in 1917.

GORHAM-GARBETT CO.

MINNESOTA

Office: 627 First Ave., Minneapolis, Minn.

Officers: J. Pye, pres.; S. H. Wood, v. p.; C. F. W. Carlson, sec.-treas.; above with F. Bailey, W. F. Fruen, J. C. Heritage and R. W. McGarry, directors.

Inc. Jan., 1908 in Minn. **Cap.**, \$1,000,000; shares \$1 par; 925,000 issued.

Dividends: 2% paid Aug. 1, 1917.

Gross earnings, 1916, \$16,870 from royalties; expenses \$4,500. **Cash on hand** Feb. 1, 1917, \$8,973.

Property: 360 acres of iron and manganese ore land on Cuyuna range, Crow Wing Co., Minn., all leased on royalty plan. Lessees are the Iron Mtn. Mng. Co., Onahman Iron Co., Chas. W. Potts and associates.

Development: by 149' and 109' vertical shafts.

HELMER IRON MINE.

MINNESOTA

Address: Swallow & Hopkins, owners, Duluth, Minn. **Mine address:** Kinney, St. Louis Co., Minn. J. S. Rayburn, mgr.; F. N. Gleason, supt.

Mine produced 375,000 tons of iron ore in 1916; total production to 1917, 675,000 tons. **Claims** 500,000 tons ore reserves.

HILL MINES CO.

MINNESOTA

Office: Hill Bldg., Saginaw, Mich. **Mine address:** W. Van Evera, supt., Ironton, Minn.

Officers: Roger R. Hill, pres.-treas.; E. L. Beach, v. p.; Peter Drummond, sec.

Inc. Jan. 14, 1914, in Maine. **Cap.**, \$500,000, increased 1917 to \$5,000,000; shares \$10 par; non-assessable; \$1,100,000 issued. Nine dividends paid to date.

Property: 7 iron mines, 670 acres, at Ironton, Minn., on Cuyuna Iron Range, also near Aurora, on the Eastern Mesabi Iron Range. Ore is hematite in schist, in a deposit reported to be 200' wide. Average assays, 58% dry, 50.58% natural.

Development: by 1,000'x400' open pit, mining with steam shovels. Pit to be extended 700' east. Also one shaft mine. In 1916, 193,272 cu. yd. of overburden was removed.

Equipment: includes 2 Ingersoll-Rand compressors, Layne & Bowler pump, 2 steam shovels, electric power and 2 Baldwin locomotives.

Production: total to 1917, 19,430 long tons. Approximate production for 1917, 250,000 tons.

HOCH MINING CO.**MINNESOTA**

Office: 227 Fergusson Bldg., Duluth, Minn. C. A. Lanigan, asst. sec.

Initial dividend of \$10 per share paid Feb., 1917.

Operates the Hoch mine, known as Iron Mountain mine, formerly worked by the Iron Mountain Co., in Cuyuna range, Minn. Developed by 2 shafts, one 160' deep.

Ten cars of ore shipped reported to average 20% manganese.

JOAN MINING CO.**MINNESOTA**

General office: 106 Providence Bldg., Duluth, Minn. Mine office: Iron-ton, Minn.

Officers: G. M. Fay, pres.-supt. S. J. Fay, v. p.; Marcus Fay, sec.-treas., directors.

Inc. 1916 in Minnesota. Cap., \$50,000; shares, \$100 par.

Property: 2 mines in the Cuyuna range, Crow Wing Co., Minn.

Development: by shafts and tunnels. Ore contains from 20 to 35% manganese. During 1917, management expects to ship 60,000 tons of ore, and probably 200,000 tons in 1918, as two additional mines will be producing.

ONAHMAN IRON CO.**MINNESOTA**

Office: 208 Fergusson Bldg., Duluth, Minn.

Officers: W. P. Mars, pres.; W. A. McClaren, v. p.; C. A. Lanigan, sec.; M. A. Dunning, treas.; A. A. MacKay, supt.; above with O. P. McDonald, W. H. Squier, O. M. Moore, and G. H. Lyons, directors.

Inc. 1913 in Nev. Cap., \$1,000,000; shares \$1 par; non-assessable; 530,000 issued.

Gross earnings, 1916, were about \$75,000, all from ore sales. Earnings to April, 1917, about \$28,000.

Property: 160 acres of manganiferous iron ore land in Crow Wing Co., Minn. Ore said to carry an average of 29% iron and 20% manganese.

Development: by 150' shaft in the total underground workings of 3,000', estimated to block out 500,000 tons of ore.

Equipment: includes electric hoist, 700 cu. ft. compressor and centrifugal pump.

Production: total to 1917, 14,000 tons.

PROVIDENT IRON CO.**MINNESOTA**

Office: Duluth, Minn.

Officers: W. D. Edson, pres.; Herbert Warren, v. p.; T. A. Gall, sec.-treas.; with W. B. Dunlop and D. J. Curry, directors.

Inc. 1913 in Maine. Cap., \$150,000; shares \$10 par; non-assessable; 11,700 outstanding.

Property: company holds a lease on 280 acres of iron lands on the Cuyuna range, Minn. The deposit of 58% ore, estimated to contain 1,500,000 tons, lies in slate and schist. Examined by Dwight E. Woodbridge, who is consulting engineer for the Big Ledge Co.

ROGERS, BROWN IRON CO.**MINNESOTA**

Address: W. C. Agnew, mgr., Buffalo, N. Y.

Property: the Kennedy, Meacham and Susquehanna iron mines; first on the Mesabi and others on Cuyuna range, Minn. Opened in 1906, 1907 and 1909 respectively.

Mine	Mining System	Ore	Iron Content, %	Prod., 1916, Tons	Total Tons
Kennedy.....	Slicing and caving	Non-B.	50.32	166,915	907,539
Meacham.....	" "	"	50.60	25,207	25,207
Susquehanna.	Stripping	B. and non-B.	48.78 to 50.08	764,249	4,685,741

SULTANA MINES CO.**MINNESOTA**

Address: H. H. Bradt, mgr., Sellwood Bldg., Duluth, Minn. A. R. McGuire, supt.

Property: an iron mine on Cuyuna range, Crow Wing Co., Minn., opened up in 1915.

Ore: hard and soft, dark brown non-Bessemer, manganiferous hematite, limonite, etc. Average analysis in natural state is 33.8% iron, 0.146% phos., and 7.34% silica. Dried samples of cargo shipments assay 39.3% iron, 0.17% phos., 8.54% silica and 13.43% manganese. Mining by sub-level slicing method to 130' depth.

Production: 35,169 tons in 1916.

*IRON MINES OF THE GOGEBIC RANGE***BROTHERTON IRON MINING CO.****MINNESOTA**

Office: C. H. Munger, mgr., Cleveland, Ohio.

Property: the Brotherton on the Gogebic range, Minn.

Ore: Bessemer and non-Bessemer hematite, carrying 51.65 to 53.26% iron, 0.023 to 0.091% phosphorus and 11.65 to 12.73% silica.

Mining by underground method to depth of 1,342'.

Production: 107,813 tons in 1916 and 2,401,926 tons to date.

COLBY MINE**MINNESOTA**

Address: Corrigan, McKinney & Co., Cleveland, Ohio.

Ore: soft, blue, Bessemer and non-Bessemer hematites, assaying 53.70 to 53.98% iron, 0.039 to 0.047% phosphorus and 5.89 to 6.05% silica. Mined by underground method.

Production: 423,553 tons in 1916 and 4,269,083 tons to date.

MONTREAL MINING CO.**MINNESOTA**

Office: E. W. Hopkins, mgr., Wade Bldg., Cleveland, Ohio.

Ore: soft, red Bessemer and non-Bessemer hematites, assaying 55.36% iron, 0.041% phosphorus and 6.48% silica. Mined by slicing and caving method to 2,300'.

Production: 530,813 tons in 1916 and 4,662,938 tons to date.

NEWPORT MINING CO.**MINNESOTA**

Office: E. L. Cullen, mgr., First Natl. Bank Bldg., Milwaukee, Wis.

Property: on the Gogebic range, Minn. Ore: soft, red, Bessemer and non-Bessemer hematites, carrying up to 55.45% iron, 0.08% phosphorus and 10.58% silica. Ore is mined by sub-slicing method to 2,274' depth.

Production: 1,315,980 tons in 1916 and 12,570,584 tons to date.

PLYMOUTH MINE**MINNESOTA**

Address: Coates & Tweed, Duluth, Minn. C. A. Myers, supt.

Property: iron mine on the Gogebic range, Gogebic Co., Minn., carries soft, non-Bessemer hematite, containing 53% iron, 0.069% phosphorus, and 4.34% silica.

Development: by open pit system.

Production: started in 1916, and totaled 330,427 tons.

*IRON MINES OF THE MESABI RANGE***ADRIATIC MINING CO.****MINNESOTA**

Office: R. M. Sellwood, mgr., Cleveland, Ohio.

Property: on Mesabi range, St. Louis Co., Minn.; opened in 1906.

Ore: soft, red, non-Bessemer hematite, containing 49.31% iron, 0.067% phosphorus and 10.48% silica. Ore is mined by underground slicing to depth of 180'.

Production: 220,818 tons in 1916 and 1,041,268 to date.

ARTHUR IRON MINING CO.**MINNESOTA**

Office: E. E. Hunter, supt., St. Paul, Minn.

Property: the Leonard mine on the Mesabi range. Ore is a non-Bessemer averaging 51.61% iron, 0.057% phosphorus and 5.51% silica. Mined by open pit and underground methods to 253' depth.

Production: 316,468 tons in 1916 and 9,598,827 tons to date.

BALKAN MINING CO.**MINNESOTA**

Office: C. H. Munger, mgr., Cleveland, Ohio.

Property: Belgrade mine on Mesabi range, opened in 1908. Ore: soft, red, Bessemer and non-Bessemer hematite, containing 47.54 to 52.27% iron, 0.062 to 0.037% phosphorus, and 7.01 to 8.04% silica. Ore is mined by underground slicing system to 260' vertical.

Production: 180,532 tons in 1916, and 1,157,214 tons to date.

BANGOR MINING CO.**MINNESOTA**

Office: C. H. Munger, Cleveland, Ohio.

Property: Bangor mine on Mesabi range, opened in 1910.

Ore: soft, red, non-Bessemer hematite, assaying 49.39% iron, 0.059% phosphorus, and 9.10% silica. Ore is mined by underground slicing to 307' vertical.

Production: 223,576 tons in 1916, and 998,057 tons to date.

BENNETT MINING CO.**MINNESOTA**

Is controlled by Pickands, Mather & Co., Cleveland, Ohio.

Property: the Bennett mine, formerly owned by the Keewatin Mining Co., in Sec. 24, T. 57, R. 22, Itasca county, Minnesota, developed to 137' depth. The mine was opened in 1912. Product is a Bessemer hematite, non-Bessemer hematite, and a manganiferous non-Bessemer hematite.

Production: 88,931 tons in 1913; 25,868 tons in 1914; 50,475 tons in 1915; 672,572 tons in 1916.

CLEVELAND-CLIFFS IRON CO., THE**MINNESOTA**

See same title under Michigan Iron mines.

COMMODORE MINE**MINNESOTA**

Address: Corrigan, McKinney & Co., Cleveland, Ohio.

Property: on Mesabi range, Minn., opened in 1893. Ore: soft, blue Bessemer and non-Bessemer hematite, carrying 51.83 to 57.32% iron, 0.048 to 0.032% phosphorus, and 7.67 to 6.01% silica. Ore mined by open pit system.

Production: 579,285 tons in 1916, and 2,860,349 tons to date.

CORSICA IRON CO.**MINNESOTA**

Office: C. H. Munger, Cleveland, Ohio.

Property: on Mesabi range, Minn., opened in 1901.

Ore: soft, red, Bessemer and non-Bessemer hematite, assaying 52.74 to 47.47% iron, 0.043 to 0.056% phosphorus, and 7.76 to 7.27% silica. Mined by underground slicing system to 248' vertical.

Production: 292,228 tons in 1916, and 1,951,477 tons to date.

CRETE MINING CO.**MINNESOTA**

Office: C. H. Munger, mgr., Cleveland, Ohio.

Property: Albany mine on Mesabi range, opened in 1903.

Ore: soft, yellow, non-Bessemer, soft, red Bessemer, and soft, blue, non-Bessemer hematite, assaying from 46.81 to 53.52% iron, 0.015 to 0.047% phosphorus, and 6.65 to 3.71% silica. Mined by milling and underground slicing systems to 260' vertical.

Production: 468,291 tons in 1916, and 3,734,109 tons to date.

GREAT NORTHERN IRON ORE PROPERTIES.**MINNESOTA**

Offices: 1st Nat'l Bank Bldg., St. Paul, Minn., and 32 Nassau St., New York.

Inc. Dec. 7, 1906. Is a trust created by directors of and approved by shareholders in the Great Northern Railway Co.

Trustees: Louis W. Hill, James N. Hill, Walter J. Hill and E. T. Nichols.

The Lake Superior Co., Ltd., which held securities and properties in the interest of the Great Northern Ry. Co. shareholders, turned over to the trustees of the Great Northern Iron Ore Properties, stocks in 10 iron ore mining companies, worth \$1,738,400. Any dividends declared by the Allouez Bay Dock Co., or by Duluth, Superior & Western Terminal Co., up to Dec. 31, 1912, were to be paid to the trustees, to be applied by them to the uses of the trust.

When the trust was created, the trustees issued certificates of beneficial interest, amounting to 1,500,000 shares to holders of the Great Northern Ry. The trustees' income has come from dividends from stocks held and from interest earned. From this revenue, organization expenses are deducted, the balance being available for distribution on certificates of beneficial interest.

Income: in 1916, from Proprietary companies (the West Missabe, Arthur, Fillmore, Harrison, Jackson, Polk, Tyler, Van Buren, North Star, and Leonard iron mining companies), totaled \$2,100,000. Other revenue made a total of \$2,178,548. Total income to 1917, \$17,472,901. Administration of the Trust cost \$89,663.

Dividends: to holders of certificates of beneficial interest were 50 and 75c per share, or \$1,875,000 in 1916; total to 1917, \$12,375,000. The surplus at end of 1916 was \$4,340,183.

Assets: \$20,413,233, including \$8,124,380 cash (trustees and Proprietary companies); lands and leases, \$1,513,545; mine expenditures, \$4,065,170; and securities, \$2,301,483. Liabilities include total surplus of Proprietary companies and trustees, \$17,566,957; current expenses, \$929,912; and capital stock, \$1,738,400.

Property: 65,091 acres of iron-ore land in the Mesabi district, Minn. In June, 1917, the trustees leased 3 mines to Jones & Laughlin of Pittsburg, the yearly output for 20 years being reported as worth \$6,000,000.

Production: shipments in 1916 were 3,207,091 tons, of which 2,202,359 tons were from the Mahoning mine. The average royalty was 17.5c per ton, giving a total of \$562,706.

General: the trustees contemplate the coming year with hopefulness for the metal trade. Prices of ore increased in 1916 to \$4.20 per ton at Lake Erie ports for Bessemer, \$3.55, for non-Bessemer, against \$3.45 and \$2.80 per ton, respectively, in 1915. Prices in 1917 were \$5.70 and \$5.05 for the two grades. On the other hand, production costs have risen considerably.

M. A. HANNA CO.

See same title under Michigan iron mines.

HANNA ORE MINING CO.

MINNESOTA

Office: Duluth, Minn. J. D. Ireland, gen. mgr.; E. E. Hunter, asst. mgr.; F. H. Cohoe, supt. Company is a newly organized subsidiary of the M. A. Hanna Co., to operate a lease on Great Northern ore lands at Buhl, Virginia, Hibbing and Crosby, Minn.

HOBART IRON MINING CO.

MINNESOTA

Office: C. H. Munger, mgr., Cleveland, Ohio.

Property: Elba mine on Mesabi range, Minn., opened in 1898. **Ore:** soft, red, Bessemer hematite, containing 53.79% iron, 0.04% phosphorus, and 6.24% silica.

Mined by underground slicing to 316' vertical.

Production: 130,384 tons in 1916, and 2,819,760 tons to date.

INLAND STEEL CO.

MINNESOTA

Office: Room 1105, First Natl. Bank Bldg., Chicago, Ill.

Officers: A. W. Thompson, pres.; E. M. Adams, sec.

Inc. Feb. 6, 1917, in Delaware, as successor of an Illinois corporation of same name. Cap., \$30,000,000; \$100 par; \$25,000,000 issued. Bonded debt: \$1,650,000—6% gold bonds of old company being balance of 3,000,000 issue, due 1928. Also 4,380,000, due July 1, 1942. The 1916 report shows, total assets, \$36,352,599; surplus, \$16,359,410; current assets, \$10,861,080; net working capital, \$9,113,800. Earnings for 1916 were \$11,365,477, compared with \$4,493,024 in previous year.

Property: valuable ore leases on 5 producing mines in Minnesota; two on the Mesabi range near Hibbing, three on the Cuyuna, at Crosby, Minn., with 30 years' ore reserves at each mine. Furnaces are at Indiana Harbor, Ind., and Chicago Heights, Ill.

In 1917, company purchased 2,000 acres of coal land near Dorseyville, Pa., and a lease on further ore lands from the Great Northern Iron Ore Co.

INTER-STATE IRON CO.

MINNESOTA

Office: Mark Elliott, supt., Jones & Laughlin Bldg., Pittsburgh, Pa.

Property: the Lincoln mine on the Mesabi range. Ore, both Bessemer and non-Bessemer containing 45.75 to 56.60% iron, 0.025 to 0.053% phosphorus and 6.94 to 9.20% silica. Ore mined by top slicing and caving to 237' depth.

Production: 286,128 tons in 1916 and 3,894,178 tons to date.

LEETONIA MINING CO.

MINNESOTA

Office: Mark Elliott, supt., Jones & Laughlin Bldg., Pittsburgh, Pa.

Property: the Leetonia mine, opened in 1902 on the Mesabi range. Ore: soft, red, non-Bessemer hematite assaying 50.3% iron. Ore mined by top slicing and caving and steam shovels to 182' depth.

Production: 656,876 tons in 1916 and 5,905,849 tons to date.

MACE IRON MINING CO.

MINNESOTA

Address: O. B. Warren, mgr., 710 Security Bank Bldg., Minneapolis, Minn. J. A. MacKillican, supt., Hibbing, Minn. Pickands, Mather & Co., Cleveland, O., sales agents. Operated as a close corporation.

Property: Mace No. 1 and No. 2 mines in St. Louis county, Minnesota, carry a chamber shaped deposit of iron ore in taconite. Developed by shaft and open pits to 120' depth. Underground workings total 6,000'.

Equipment: includes steam hoist and Cameron pump.

Production: Mace No. 1, 1914, 160,815 tons; 1915, 120,906 tons; 1916, 163,353 tons. Mace No. 2, 1916, 307,496 tons.

MAHONING ORE AND STEEL CO.

MINNESOTA

Office: W. C. Agnew, Hibbing, Minn.

Property: Mahoning mine on Mesabi range, Minn.

Ore: soft, blue Bessemer, and soft, brown, non-Bessemer hematite, containing 57.18% iron, 0.037% phosphorus, and 2.39% silica. Mined by open pit system to 200' vertical.

Production: 2,215,788 tons in 1916 and 23,832,886 to date.

NORTH HARRISON MINE.

MINNESOTA

Address: Butler Bros., St. Paul, Minn. Cooley Butler, mgr.

Property: an iron mine on Mesabi range, Itasca county, Minn., developed by open pit system. Total shipments since 1914 amount to 592,773, of which 422,825 tons were produced in 1916. Both soft Bessemer and non-Bessemer hematite is mined, assaying from 51 to 54% iron, 0.075 to 0.036% phosphorus, and 8.6 to 9.01% silica.

Same concern operates the Harrison mine, which yields similar ore. Production: in 1916 was 32,876 tons; total since 1914 is 426,683 tons.

OLIVER IRON MINING CO.**MINNESOTA**

Office: Eveleth, Minn. J. H. McLean, gen. mgr.

One sixth interest in stock owned by U. S. Steel Corporation; remainder owned by Carnegie Steel Co. Is a close corporation, owning, controlling and operating mines in Michigan, Minnesota and Wisconsin. Has interests in the following mining companies: Lake Superior, Regent, Great Western, Braddock, Homestead, Duquesne, Alleghany, Hope, Neville, Monongahela, Lorain, Agawain, Ambridge, Morewood, Pencoyd, Munhall, Monessen, Somerset and Lebanon.

Production: in season of 1916 was 647,132 tons from Marquette range, Mich.; 996,983 tons from Menominee in Mich.; 2,369,460 tons from Gogebic in Mich.; 1,314,002 tons from Vermilion in Minn., and 24,928,039 tons from Mesabi range in Minn.; a total of 33,355,169 tons. In 1915 the quantity was 23,669,676 tons, 17,34,981 tons in 1914 and 28,738,451 tons in 1913.

Some of the mines are as follows:

Mine	Range	Mining System	Ore	Iron Content, %	Production, 1916, Tons	Total Tons

ORIENTAL GRANITE & IRON CO.

MINNESOTA

Office: 30 N. La Salle St., Chicago, Ill.

Officers: Edw. Romberg, pres.-treas.-mgr.; S. Romberg, v. p.; G. A. Hail, sec.; above with G. Silverman, L. B. Lehman and H. J. Grannis, directors.

Inc. April, 1887, in Minn. Cap., \$80,000; shares \$2 par, 38,000 issued.

Owens the Spring iron mine, in St. Louis Co., Minn., and other unexplored iron lands. Ore of the Spring mine reported to assay 50% iron, .034% phosphorus and 22% silica.

PITT IRON MINING CO.

MINNESOTA

Address: G. B. Levan, mgr., Steubenville, Ohio.

Property: Miller and Wacootah mines on Mesabi range, St. Louis county, Minn. Ore: soft, brown, non-Bessemer hematites, containing 48.73 and 48.43% iron, 0.065 and 0.071% phosphorus, 6.05 and 5.45% silica. Ore is mined by shafts to 212' at Miller and stripping to 200' at the Wacootah.

Production: in 1916, 354,374 tons; total to date, 3,712,222 tons.

QUINN MINING CO.

MINNESOTA

Office: New York Life Bldg., St. Paul, Minn.

Property: the Quinn mine in Sec. 31, T. 57, R. 22, Itasca county, is worked by steam shovel and open pit systems. The product is Bessemer and non-Bessemer hematite.

Recent production: 49,251 tons in 1914; 91,007 tons in 1915; 226,360 tons in 1916.

REPUBLIC IRON & STEEL CO.

See same title in U. S. section.

SHADA MINING CO.**MINNESOTA**

Address: 1107 Alworth Bldg., Duluth, Minn. C. K. Quinn, mgr.

Property: iron mine on Mesabi range, Itasca Co., Minn., carries a soft, red Bessemer hematite, containing 54.01% iron, 0.036% phosphorous and 7.28% silica. The washed product from concentrators assays 59.35% iron, 0.04% phos., and 8% silica.

Development: by steam shovel methods. Will produce in 1918.

SHENANGO FURNACE CO.**MINNESOTA**

Address: E. J. Maney, Pittsburgh, Pa.

Property: Shenango, Tioga and Webb iron mines on Mesabi range, St. Louis Co., Minn., opened in 1904, 1916 and 1905, respectively.

Ore: all three produce soft, brown Bessemer and non-Bessemer hematites, containing 53.23, 50, and 53.52% iron; 0.041, 0.039, and 0.051% phosphorus and 4.75, 10.97, and 6.13% silica, respectively. Ore is mined by underground and open pit methods to 300' in the Shenango, underground to 200' in the Tioga, and underground and stripping to 250' in the Webb mine.

	Production in tons:		
	Shenango Mine	Tioga Mine	Webb Mine
1916.....	979,658	4,275	140,279
Total.....	8,102,906	4,275	980,049

TOD-STAMBAUGH CO., THE**MINNESOTA**

Address: C. A. Thompson, mgr., Cleveland, Ohio. Sales agents for the following iron mines:

Property	Range	Mining System	Ore	Iron Con- tent, %	Production,* Tons
Biwabik.....	Mesabi	Bessemer and non-Bessemer	55.09 to 50.75	428,944
Dean-Itasca....	"	Open pit	Bessemer and non-Bessemer	51.51 to 50.10	687,878

Pennington....	Cuyuna	Open pit	"	51.11	206,085
Warren.....	Mesabi	"	"	New mine

*In 1916.

The Biwabik, opened in 1893, has produced 11,559,883 tons; the Dean-Itasca in 1915, 1,048,250 tons; the Morton in 1912, 139,430 tons; and the North Eddy in 1915, 107,369 tons.

WISCONSIN STEEL CO.**MINNESOTA**

Office: B. W. Batchelder, supt., Nashwauk, Minn.

Property: Agnew mine on Mesabi range, Minn., opened in 1902.

Ore: soft, red Bessemer hematite, containing 53.19% iron, 0.03% phosphorous, and 5.76% silica, which is concentrated to 61.44% iron. Mined by open pit system to 230' vertical.

Production: 102,150 tons in 1916 and 1,643,894 to date.

**IRON MINES OF THE VERMILLION RANGE, MINNESOTA
CONSOLIDATED VERMILLION AND EXTENSION CO.**

MINNESOTA

Office: 609 Sellwood Bldg., Duluth, Minn.

Officers: T. J. Wash, pres.-treas.; J. M. Christie, v. p.; A. M. Oullette, sec.; the president, M. C. Williams and Angus Cameron, directors.

Inc. Sept. 1911, in Minnesota. **Cap.**, \$900,000; \$2 par; \$620,000 outstanding, no bonds. Stock transferred at company's office. No dividend.

Property: consolidation of the Vermillion Steel and Iron Co. and the Extension of the Vermillion Steel and Iron Co. Operates under 50 year leases.

Company estimated, June, 1917, 20,000 tons of iron ore in stockpile with production of about 200 tons a day. Developed tonnage is claimed to be 600,000 tons at a depth of 440'. A sample from stockpile is said to assay 69.85% iron and 0.76% manganese.

SECTION THIRTY MINING CO.

MINNESOTA

Address: Sellwood Bldg., Duluth, Minn.

Officers: G. A. St. Clair, mgr.; H. G. St. Clair, supt.

Property: iron mine in the Vermillion range, Lake Co., Minn. Ore is a hard, blue Bessemer and non-Bessemer hematite, containing 59.85 and 55.67% iron, 0.044 and 0.080% phosphorous and 7.13 and 11.14% silica, respectively. Ore is crushed, and cargo analyses show 63% iron in Bessemer and 58.6% in non-Bessemer.

Development: by open pit and sub stoping methods to 650' vertical.

Production: 868,826 tons since 1909, including 226,089 tons in 1916.

SOUTH CHANDLER MINE

MINNESOTA

Address: B. M. Pattison, lessee, Sellwood Bldg., Duluth, Minn. W. J. Nicholls, supt.

Property: iron mine on Vermillion range, St. Louis Co., Minn. Worked in 1888, abandoned 1905 and reopened 1913, mainly re-using ground already worked.

Ore: hard, red Bessemer hematite, containing 54.08% iron, 0.042% phos., and 8.3% silica. This is crushed and shipped, assaying 58.78% iron.

Mining by slicing system, to 800' vertical.

MISSOURI

The State contains two distinct metalliferous districts, viz., the Joplin and the Southeastern regions. These are described independently in two sections.

JOPLIN DISTRICT

Joplin, in southwestern Missouri, is the center of a district, covering 3,000 sq. miles, partly in Oklahoma and Kansas. The ore deposits are found at comparatively shallow depths in chert and limestone, the ore carrying both zinc and lead. Over 4,000,000 tons of 2.25% ore treated yearly, mostly by small companies, the metal output for 1916 having a value of over \$35,000,000. The geology of this region is described by H. A. Buehler, and ore treatment by C. A. Wright, in Bull. 130 of the A. I. M. E., 1917. The average mine's total costs for 1917, are \$1.32 per ton, a rise of 28c in two years.

ADIRONDACK MINING AND MILLING CO.

MISSOURI

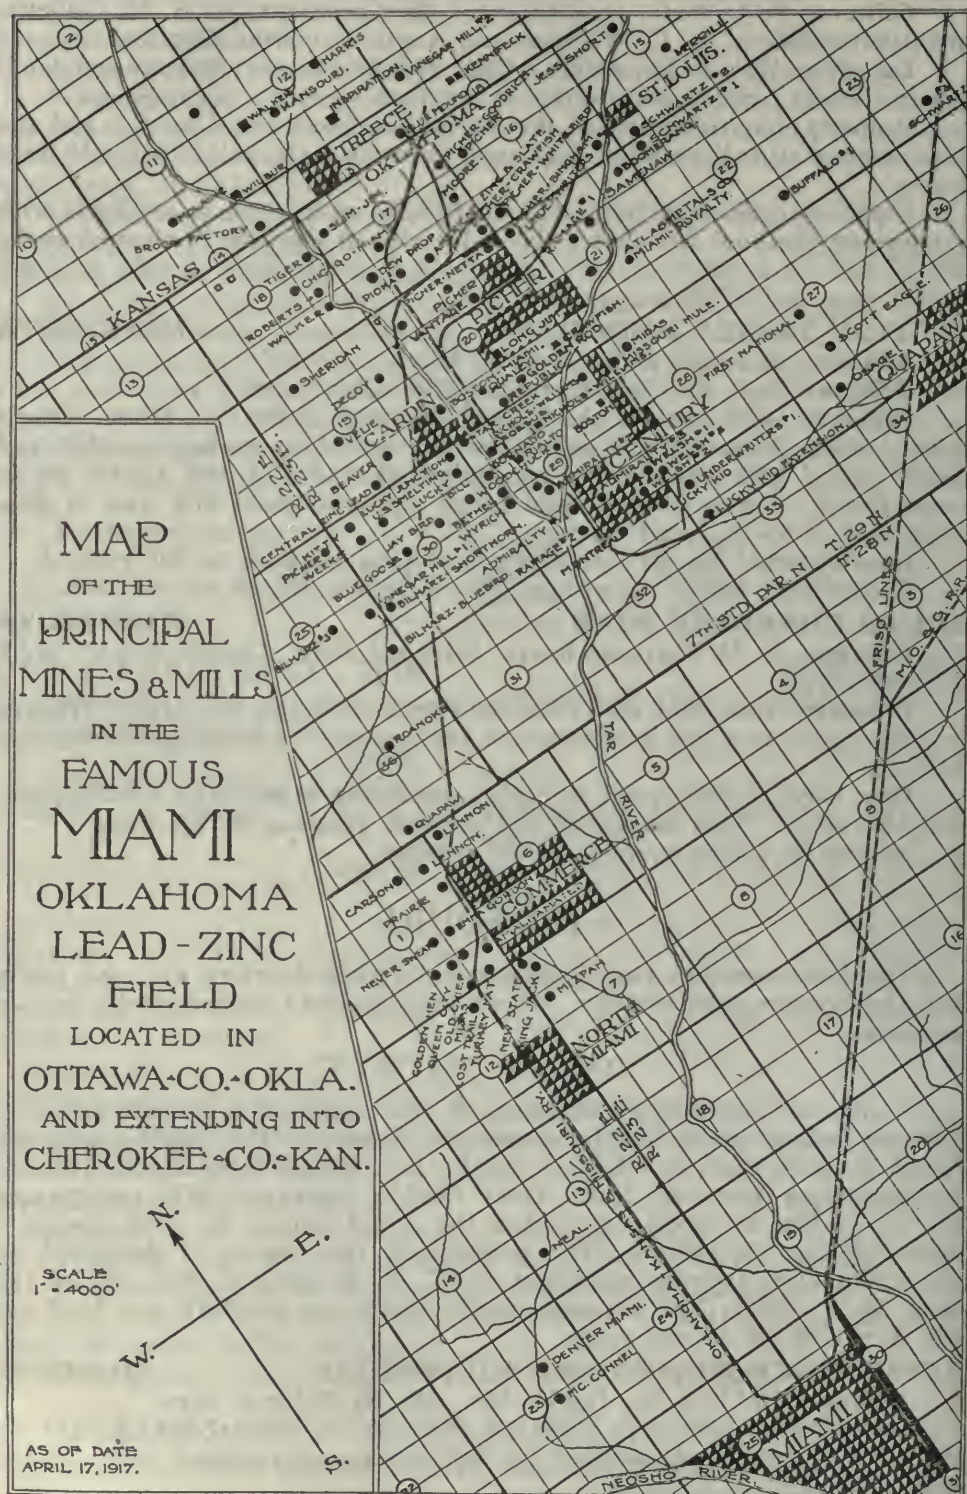

Address: W. 11th St., Joplin, Mo. W. H. Roberts, mgr.

Inc. 1916, to operate a lease on 20 acres of mineral land owned by the City of Joplin. Developed by 200' shaft, and equipped with 300-ton mill.

AMALGAMATED ZINC & LEAD CO.

MISSOURI

Inc. in New Jersey. **Cap.**, \$200,000. Operates on land of the Granby

NOTE: Above properties described under Oklahoma, page 1255.

Mining & Smelting Co., in Jasper County. Has 5 shafts, average depth 186', and a concentrator with daily capacity of 250 tons. Product is zinc concentrate.

ANDAYER MINING CO.

MISSOURI

Office: Joplin, Mo. Harry L. Ayer, treas., 8 Hawley St., Boston, Mass. Is a close corporation, consisting of four stockholders, with mines at Joplin, Mo. Company has no stock for sale and refuses to furnish a report.

In Sept., 1917, company completed its fifth churn drill hole on a 40-acre lease, $3\frac{1}{2}$ miles S. W. of Galena. A new shaft has been sunk to open the 9' of lead and zinc ore disclosed.

The New Market mill was purchased, 1917, moved, and was in operation, November, 1917.

ANNA LEE MINING CO.

MISSOURI

Inc. in Ariz. Cap., \$100,000. Operates on 120 acres of land of J. W. Allen in Newton Co., Mo. Has 7 shafts, average depth 100', and a 200-ton concentrator. Output is zinc concentrate.

ATHLETIC MINING & SMELTING CO.

MISSOURI

Address: Webb City, Jasper Co., Mo. Charles T. Orr, pres. and gen. mgr.; James B. Millar, treas. Is under same control as Bertha A and Wingfield Companies. Property bought in 1915; purchase price said to be \$150,000. Formerly operated under name of Gopher M. & M. Co.

Property: 100 acres of the Jasper Co. Royalty Co.'s land at Duenweg. Lead-zinc ore occurs in "sheet ground" at depth of 240'.

Development: by seven 240' shafts.

Equipment: includes a 1,500-ton concentrating mill. Company plans to build a second mill. Smelter located at Fort Smith, Ark.

A. T. S. MINING CO. (Not Incorporated)

MISSOURI

Formerly known as the A. B. C. mine. Owned by A. T. Swan, Joplin, Mo. Property is the A. B. C. zinc-lead mine at Joplin, Mo. Equipped with 90 h. p. gasoline engine, hoist, Ingersoll-Rand compressor and 175-ton mill.

A. W. C. MINING CO., INC.

MISSOURI

Address: W. 7th St., Joplin, Mo.

Officers: W. O. Cragg, pres. and mgr.; Bert Lease, mine supt.; Jason Scott, mill supt.

Inc. in Maine. Cap., \$500,000.

Property: 160 acres at W. 7th St., Joplin, in center of sheet ground district. Ore carries $2\frac{1}{2}\%$ zinc and lead. The deposit is 12' thick. Five shafts are down 195'.

Equipment: includes three mills of 850 tons capacity per 24 hours; 2 on A. W. C. land and 1 on Expansion Co.'s land on the south end.

Production: in 1916, company is reported to have sold 2,435 tons of zinc concentrates, assaying 62% zinc for \$245,520 and 477 tons lead ore for \$40,914. The plant was closed down during 3 months. Lead concentrate assays 75% metal.

BEN B. MINING CO.

MISSOURI

Address: Box 271, Joplin, Mo.

Officers: D. Longacre, pres. and mgr.; B. W. Brice, v. p. and supt.; P. B. Butler, sec.-treas.

Inc. Oct. 25, 1917, in Missouri. Cap., \$30,000.

Property: 80 acres, $2\frac{1}{2}$ miles W. of Joplin, on 7th Street.

Ore: deposit is 20' thick, opened to 145' depth and carries 8% zinc.

Equipment: 150-ton mill with crusher, rolls, 2 Cooley jigs, Arbuthnot tables and Chicago Pneumatic Tool Co.'s gas engines.

BERTHA A MINING CO.**MISSOURI**

Address: Chas. T. Orr, pres. and gen. mgr., Webb City, Mo.; Jas. B. Millar, treas.

Inc. in Missouri. **Cap.**, \$10,000. Operates a lease on 160 acres of mineral land, owned by the Newell-Morse Royalty Co., in S. 12, T. 28, R. 33, Webb City, Jasper Co., Mo. Company is one of the largest producers of zinc and lead concentrates in the district.

Developed: by 8 shafts to a depth of 221' and equipped with 1,500-ton concentrator, electric hoist, pump, air compressor and drills. Company employs 125 men.

This company, together with the Athletic M. & S. Co., of Webb City, and the Wingfield Mining Company near Picher, Okla., are operated jointly by Mr. Orr and associates. The three mills vary from 1,000 to 1,200 ton capacity per 24 hours, and their joint production in 1916, was 32,000,000 lbs. zinc and lead of a value of \$1,250,000.

The zinc smelter is at Fort Smith, Arkansas.

B-G-M. MINING CO.**MISSOURI**

Address: J. B. Gibson, mgr., Carthage, Mo.

Officers: Z. A. Metzler, pres.; J. B. Gibson, v. p.; S. C. Boggess, sec.-treas.

Inc. in Missouri. **Cap.**, \$100,000.

Property: 60 acres N. of Webb City, Mo. Ore carries 2% zinc and lead and is opened to depth of 180'.

Equipment: 800 ton mill (24 hours), containing crusher, rolls, jigs and sludge tables. Concentrate assays 59 to 61% zinc. Cost of mining and milling is \$1.25 per ton.

BOSTON DUENWEG MINING CO.**MISSOURI**

Owens the property being operated by the Wilson Mines Co., and the O. F. & L. Mng. Co., Jasper Co., Mo.

BRADLEY LEAD & ZINC CO.**MISSOURI**

723 Frisco Bldg., Joplin, Mo. Owns a lease on the St. Louis-Joplin Lead & Zinc Co.'s land, comprising a part of the A. B. C. Mining Co. ground and the Martha Ball mine, in the Chitwood district, near Joplin, Jasper Co., Mo.

Ore: lead-zinc occurs in disseminated deposits in the A. B. C. and as sheet-ore, 20' thick at depth of 200', in the Martha Ball.

Development: by shafts.

Equipment: 250-ton mill on Martha Ball ground. Active operations began March, 1915. Company operating a second 250-ton mill in the West Joplin district, at last accounts.

BURTON MINING CO.**MISSOURI**

Inc. in Missouri. **Cap.**, \$10,000. Operating two 20-acre tracts of J. I. Walker land in Jasper Co., Mo. Has \$160,000 invested. Developed by 5 shafts, averaging depth 150' and equipped with one 150-ton concentrator. Output is zinc concentrate.

CACTUS HILLS MINING CO.**MISSOURI**

Address: Box 201, Joplin, Mo.

Officers: Herman Schmelzer, pres.; J. H. Estes, v. p.; H. F. Hoffman, sec.-treas.; J. H. Moreland, mgr.

Inc. 1913, in Missouri. **Cap.**, \$10,000.

Company operates the Lone Elm 150-ton custom mill. In 1916 its expenses were \$49,000, including about \$10,000 paid in dividends.

Ore treated contains 7% zinc and lead and is treated by one 16" crusher, 3 sets of 30" rolls, 3 Cooley jigs, and 2 Dunham tables. About 150 tons

treated in 10 hours. Monthly concentrate shipments are 200 tons, carrying 55 to 63% zinc and 77 to 83% lead. Costs are 55c per ton.

CARMEAN & SQUIRES MINING CO.

MISSOURI

Office: Room 14-16, Wagner Bldg., Webb City, Mo.

Inc. in Missouri. **Cap.**, \$2,000.

Operates 5 properties in S. W. Missouri, including Gwinn land, 2 tracts, one 20, the other 40 acres of Kelly Land, all located in Jasper Co. Is reported to have bought the old John L. mine, 20 acres, in the north Webb City sheet ground district, for \$30,000, in Nov., 1915, and the Old Virginia mine, near Cartersville in 1916. A new concentrator was built and is now in operation. The Gwinn tract has 2 shafts, depth 186', and a 250-ton concentrator. The 20-acre Kelly tract is opened by 200' shaft, and has a 150-ton concentrator; the 40-acre tract is opened by 180' shaft and has a 200-ton concentrator.

Production: lead-zinc concentrates, not reported.

CAVE SPRINGS LEAD & ZINC CO.

MISSOURI

M. Grundler, supt. Operates a lease on 50 acres of land owned by the Kansas-Missouri L. & Z. Co., including the Grass Roots and Cave Springs mines, both old-time producers, at Cave Springs, west of Joplin, Jasper Co., Mo.

Ore: contains zinc and lead as sulphides. Developed by several shafts, deepest 260', with levels at 130' and 240'. This shaft was unwatered to the 240' level in 1915. Ore in Grass Roots mine is taken out by open-pit work.

Equipment: 100-ton concentrating mill, centrifugal pumps, hoist, electric power and surface buildings.

CENTER CREEK MINING CO.

MISSOURI

Office: O'Neill Bldg., E. Daugherty St., Webb City, Mo. Robt. F. Stewart, sec.-treas.

Inc. 1889. **Cap.**, \$1,000,000; shares \$10 par. Dividends to 1917, amounted to \$625,000. Company does not carry on active mining operations, but leases its land to operators among whom are S. Y. Ramage, C. D. & R. Mng. Co., Incline Mng. Co., J. R. Wisby, Twin Cities Mng. Co., Nearby Mng. Co., Rogey Mng. Co., Jewel Mng. Co., Carlatt Mng. Co., and the Good Shepherd Mng. Co., receiving royalty on all ore produced.

Property: 200 acres and mill site between Webb City and Cartersville, Jasper Co., Mo., developed by 13 shafts from 110' to 165' deep, producing both lead and zinc ore. Five mines are operated.

Production:

Year	Zinc, Pounds	Lead, Pounds	Value
1916.....	10,529,930	920,480	\$454,111
1915.....	15,250,870	1,107,547
1914.....	6,823,320	1,993,180
1913.....	11,223,690	4,438,410

Total output from start of operations is valued at \$13,000,000.

CENTRAL LEAD CO.

MISSOURI

Entire capital stock owned by American Smelters Securities Co.

Property: 1,603 acres in Flat River mining district, Saint Francois Co., Mo.

CHICAGO MINES CO.

MISSOURI

Address: 301 Miners Bank Bldg., Joplin, Mo.

Operates 10 acres land owned by the Conner Investment Co. Property in Sec. 28, T. 28, R. 32, Webb City, Jasper Co., is opened by two 200' shafts. Equipped with a 200-ton mill.

C. M. & H. MINING CO.**MISSOURI****Address:** 4th and Gray Ave., Joplin, Mo.**Property:** leases on the Jones and Weymann tracts, at Joplin. Drilling showed good disseminated ore at 86 to 165' depth. A 150-ton mill is to be erected.**COAHUILA LEAD & ZINC CO.****MISSOURI****Mill office:** Carthage, Mo.**Officers:** C. F. Jennings, pres.; S. B. Cohn, v. p.; W. E. Parker, sec.-treas.; C. D. Smith, supt.**Cap.,** \$100,000.

Company operates 120 acres land owned by Horton & Horton, in the Duenweg-Porto Rico district, Jasper Co., Mo. Ore occurs in "sheet-ground."

Development: by 3 shafts, 240' deep.**Equipment:** includes 3 mills; No. 1 and No. 3 at Duenweg; No. 2 at Carthage.**CONNECTICUT ZINC CORPORATION****MISSOURI****Office:** 500 Fifth Ave., New York.**Officers:** Ross M. Turner, pres.; Geo. Tracy, v. p.; preceding, with P. W. Brooke, A. R. Turner, J. J. Coyle, A. H. Lippincott, W. S. Hallowell, W. H. Lyon, A. S. Raymond, D. L. Robertson and G. P. Smith, directors; E. H. Van Wyck, treas.**Inc.** June, 1914, in N. Y., to hold securities of Oronogo Circle Mining Co., of which it owns the entire capital stock, and to operate zinc properties. **Cap.,** authorized and outstanding, \$1,000,000; \$25 par. Fidelity Title & Trust Co., transfer agt., Stamford, Conn. Annual meeting, second Monday in July.**Bonded debt:** \$350,000 sinking fund gold 6% bonds, dated July 1, 1914, due July 1, 1924; int. Jan. and July 1, at Logan Trust Co., Philadelphia, Trustee. Coupon \$500, principal may be registered. At least \$35,000 of the bonds are callable on July 1 each year, commencing in 1915. Sinking fund equal to 40% of net earnings is provided. Secured by pledge of the entire stock and leases of the Oronogo Circle Mining Co. Authorized and issued \$350,000, of which \$175,000 has been paid off to June 30, 1916. Interest paid without deduction for normal Income Tax.**Dividends:** paid quarterly, Jan., at rate of 6% per annum.**Property:** the Oronogo Circle mine near Joplin, Mo., that has been a producer for 60 years. Mill has a daily capacity of 1,000 tons, and yields up to 9,000 tons of blende (60% zinc) per annum.**CONQUEROR ZINC CO.****MISSOURI****F. H. Houk, sec.,** Joplin, Mo.

In liquidation at last reports.

CONSUMERS MINING CO.**MISSOURI****Address:** W. 7th Street, Joplin, Mo.**Cap.,** \$10,000.

Has lease on 15 acres of mineral bearing land near Joplin, formerly worked by Otis Mng. Co.

Development: by 2 shafts to 185' level.**Equipment:** includes 300-ton concentrating mill, crusher, 8 tables, 11 air drills, 2 hoists and pump. Employs 80 men. Producing since 1914.**CONTINENTAL ZINC CO.****MISSOURI****Office:** 87 Milk St., Boston, Mass. **Mine office:** 7th and Harlem St., Joplin, Mo.**Officers:** Jere A. Downs, pres.; J. B. Hardon, v. p.; F. H. Baird,

sec.-treas., Boston; preceding, with F. T. Rubidge, Chas. Hayden, Galen L. Stone and R. F. Hoyt, directors.

Inc. April 4, 1902, in Maine, as successor to Continental Zinc Mng. & Sm. Co. **Cap.**, \$550,000; shares \$25 par; all outstanding. Reduced, 1916, to \$110,000; shares \$5 par. No bonded debt. Hayden, Stone & Co., Boston, transfer agent; Old Colony Trust Co., Boston, registrar. Annual meeting, first Tuesday in April. Listed on Boston Stock Exchange.

Dividends: formerly 8% per annum, quarterly, reduced to 2% in 1908; 1909 and 1910 none; since 1910 to 1916 at the rate of 4% payments semi-annually, J. and J. 1; Dec. 31, 1915, \$10 per share, in part liquidation. Further dividends in liquidation of about \$2 per share may be expected, with further small cash distributions as the real estate is gradually sold.

Balance sheet as of Dec. 31, 1916, showed assets: \$523,402, which included real estate and property, \$350,000; Litteral tract, \$63,900; Litteral mining and milling plant, \$63,899; notes receivable, \$1,500; cash, \$43,991; accounts receivable, \$111. Liabilities: included depreciation reserve, \$143,000; Empire & Cont. First Addition, \$19,627; depletion, \$59,760; surplus was, \$190,967. The year's profit from the Kohinoor tract amounted to \$13,205; from the Litteral tract, \$30,824. Temagam had a loss of \$1,047.

Property: 2 tracts of land, 200 acres, at Joplin, Mo., the orebodies of which are fast becoming exhausted; the old Kohinoor tract upon which there are no mining operations at present and upon which the company is gradually selling house lots, and the Litteral tract which is leased on a royalty basis. Royalties for 1916, from the Kohinoor and from the Litteral properties, were \$50,246. Life of Litteral property figured in 1915 as 2 years.

Continental Zinc must be considered a liquidating proposition.

CYGNI MINING CO.

MISSOURI

A. J. Burnham, mgr., Joplin, Mo.

Operates a lead-zinc property near Prosperity, that is a veteran sheet ground producer, yielding 1,000 tons per day of 2% blende ore. Mine has 3 shafts, operating one shift daily.

DALLAS MINING CO.

MISSOURI

H. Wells, Joplin, Mo., mgr. of Little Bess mine.

Property: Little Bess mine, on the Knight land at Carl Junction, Jasper Co., Mo.; also 20 acres of the Nilson land.

Development: on the Knight land, 2 shafts, deepest 170'. The Nilson land has a 195' shaft.

Equipment: 300-ton concentrating mill and sludge mill for treatment of sand and slimes from large mill.

DELTA LEAD & ZINC CO.

MISSOURI

Inc. in Missouri. **Cap.**, \$3,000. Has a lease on 40 acres of land belonging to the McCown estate, in the Spring City-Beef Branch district, Mo.

Development: 3 shafts with average depth of 200'. Has 2 concentrators with a daily capacity of 250 tons. Output consists of galena concentrates and mixed blende and silicate concentrates, averaging 48-50% zinc.

No report for 1917.

DUENWEG LEAD & ZINC CO.

MISSOURI

Webb City, Jasper Co., Mo.

Inc. in Missouri. **Cap.**, \$3,000. Has \$12,000 invested in land and plant.

Operates a lease on 20 acres of J. I. Walker land; has one 180' shaft and a 200-ton concentrator. Output is lead and zinc concentrates.

EAGLE-PICHER LEAD CO.

MISSOURI-OKLAHOMA

Mine address: Edward M. Johnson, supt., Picher, Mo. **Office:** Continental & Commercial Nat'l Bank Bldg., Chicago, Ill.

Officers: O. S. Picher, pres., Joplin, Mo.; R. W. Evans, v. p.; S. M.

Evans, v. p.; Jos. Hummel, Jr., sec.; T. S. Brown, Jr., treas.; above, with J. B. Swift, chairman, F. L. Perin, J. E. Webb and Fred Hertenstein, directors.

Inc. June, 1916, in Ohio. **Cap.**, \$9,000,000 com., and \$1,000,000 6% non-cumulative pfd.; \$100 par; \$7,000,000 com., and \$1,000,000 pfd. outstanding. Pfd. dividends payable quarterly; initial dividend of 1½% paid July 12, 1916. Central Trust & Safe Deposit Co., Cincinnati, transfer agent. Annual meeting in January.

Company is a consolidation of the Eagle White Lead Co., of Cincinnati, Ohio, and the Picher Lead Co.

The Eagle Picher Lead Co. is the third oldest corroder of white lead by the old Dutch process in the United States, having been established in 1843 as the Eagle White Lead Co., and in continuous operation ever since.

The Picher Lead Co. is one of the oldest concerns in the Joplin district, having been chartered in 1867. To-day it is one of the largest lead producing companies in the State. For many years the product was white lead and oxides of lead. During last 3 years company has entered the mining field, taking over extensive leases in Oklahoma.

In 1917 erected "G" plant at Picher, a 300-ton mill, having sand jigs with 6 cells, each 32x42', a 12-table sludge house, and two 50' Dorr thickeners.

EAST HAMPTON DEVELOPMENT CO.

MISSOURI

Office: Carthage, Mo. **Mill office:** Wentworth, Mo. S. B. Matlack, pres. and treas.

Company is developing 160 acres of land, ½ mile south of Wentworth, Mo., and has sunk 3 shafts. Ore is zinc and is said to occur at 70', 90' and 135' in depth.

Mill built by company can handle 350 tons and is counting on enough ore from the property to keep it busy several years.

EDGAR ZINC CO.

MISSOURI

Office: Boatmen's Bank Bldg., St. Louis, Mo. Company has large zinc smelting works at Cherryvale, Mo. O. F. Garrison, mgr.

From 1907 to 1917, one furnace with 600 retorts, was in continuous operation, producing 29,136 tons of spelter.

EIGHT FRIENDS MINING CO.

MISSOURI

Reported to have taken over the Denver-Miami mine, near Miami, Mo., in 1917.

Mine said to have a large body of zinc ore.

FLANNERY ZINC CO.

MISSOURI

Pittsburg, Pa., and Sarcoxie, Mo. Acquired the Boyd zinc properties at Sarcoxie, 1915, and spent \$40,000, rehabilitating the mine and mill.

Equipment: includes a 1,000-ton concentrator and a Diesel engine. The ore is blende, but some calamine is also mined.

FRANKLIN MINING CO.

MISSOURI

Webb City, Mo. Owns a tract of "sheet ground," carrying zinc ore at depth of 200'. Is equipped with 880' air-compressor and a 600-ton mill.

GEORGETTE MINING CO.

MISSOURI

Address: Wentworth, Mo.

Property: 400 acres in Newton Co., Mo. Thirty-five drill holes have been put down, showing ore 60' thick. Three shafts are in ore. A modern mill yields 63% zinc concentrate from 7 to 10% ore.

GILT EDGE MINING CO.

MISSOURI

Company held lease on ore lands, 2 miles E. of Tipton Ford, near Joplin, Mo. Lease was transferred, June, 1916, to Wade Mining & Milling Co. (which see), operating ½ mile from Gilt Edge mine.

GOLDEN RULE MINING & MILLING CO.**MISSOURI**

Fred Kincannon, mgr., Granby, Mo.

Inc. in Missouri. Cap., \$8,000.

Company leasing and operating 30 acres land at Granby, developed by 5 shafts, 100' deep.

Equipment: 100-ton concentrating mill, compressor and steam power. Produces zinc-lead concentrates.**HARTFORD MINING CO.****MISSOURI****Address:** 305 Miners Bank Bldg., Joplin, Mo.**Officers:** L. A. Barbour, pres., Hartford, Conn.; H. H. White, sec-treas., Joplin, with S. B. Griswold, Carthage, Mo., and C. C. Spencer, Joplin, directors; H. H. White, gen. mgr., Joplin, Mo.; Geo. Elliott, supt., Galena, Kan.**Inc.** 1906, in Missouri. **Cap.**, \$100,000; shares \$100 par; all outstanding.**Output:** zinc-lead concentrates; production not available.**HURRY-UP MINING CO.****MISSOURI**

Webb City, Jasper Co., Mo.

Property: in the North Webb City sheet-ground district, said to show lead-zinc ore occurring at depth of 200'. A 300-ton mill on the property, operating almost continuously for 10 years, is to be dismantled and replaced with one of 400 tons capacity in 10 hours. Company hoisting ore from the Florence shaft, 1,000' N. E. of the mill.**ICE PLANT MINING CO.****MISSOURI**

Webb City, Mo.

Inc. in Missouri. **Cap.**, \$50,000. Has a lease on 40 acres of mineral land belonging to the Guinn Investment Co., in Sec. 7, T. 28, R. 32, Jasper Co., Mo.**Property:** developed by 3 shafts to depth of 180'.**Equipment:** includes 300-ton concentrating plant, a 200-gal. per minute pump, 8 drills, hoist, crusher, compressor, boiler and steam power.**INCLINE MINING CO.****MISSOURI**

Controlled by Tom Walker & Co., Webb City, Mo. Has a lease on part of the lands belonging to the Center Creek Mining Co., in Sec. 17, T. 28, R. 32, between Webb City and Carterville. Developed by 5 shafts to depth of 150', showing lead and zinc ore.

Equipment: includes 2 concentrators of 500 tons capacity, pump, boiler and steam power.**JASPER COUNTY LAND & MINING CO.****MISSOURI**

Frank Dangle, supt., Webb City, Mo.

Property: the McKinley mine, near Carterville, Jasper Co., Mo., developed by 2 shafts, mining a large body of zinc blende and lead ore at depth of from 190-210'. A 350-ton concentrating mill, erected in 1914, started operations in April, 1915.**JOPLIN-KENTUCKY LEAD & ZINC CO.****MISSOURI**

Joplin, Mo.

Inc. in Kentucky. **Cap.**, \$50,000. Operates a lease on 33 acres of mineral land owned by the St. Louis-Joplin L. & Z. Co., in Sec. 32, T. 28, R. 33, at Joplin.**Development:** by 3 shafts to depth of 150'.**Equipment:** includes 125-ton concentrating plant, 2 pumps, 3 drills, steam power, 3 hoists, Carterville crusher and 2 Wilfley tables.**JOPLIN ZINC METALS CORPORATION****MISSOURI****Offices:** 74 Broadway, New York, and Joplin, Mo.**Officers:** E. P. Hoyt, pres.; Geo. Neighbor, v. p.; C. W. Gould, sec.; W. V. Le Count, treas., with E. M. Farrier, Albert Higson and J. F. Dexter, directors; Austin Allen, mgr., at Joplin.

Inc. Feb. 9, 1916, in New York. **Cap.**, \$1,500,000; in \$750,000 com., and \$750,000 pfd. 7% shares; all the former issued and \$250,000 of the latter; shares \$10 par.

Property: six 40-acre leases at Spring City, near Joplin, Mo., that have produced over 30,000 tons of blende and lead during 25 years. A 300-ton mill is to be erected.

KANSAS CITY-JOPLIN MINING CO.

MISSOURI

Office: West Fourth St., Joplin, Mo. Is reopening the Red Lion mine zinc at Joplin, Mo. Has a 200-ton mill on the property.

KENEFICK ZINC CORPORATION

MISSOURI

Controlled by United Zinc Smelting Corporation, which see.

Office: 99 John St., New York.

Officers: R. H. Cowles, pres.; Arthur Day, v. p., with C. Bucknam, C. L. Graff, A. L. Davis and P. H. Easby, directors; Gustave Ross, sec.; T. C. Davidson, treas.

Inc. Feb. 2, 1916, in New York. **Cap.**, \$5,000; 7% preferred shares at \$100 par and 200,000 shares of common stock of no par value; all issued. Stock listed on New York Curb.

Dividends: five of 10c each were paid on common stock to Aug., 1916. After payment of a 7% dividend on preferred and \$1.20 annually on common stock, 50% of net earnings are to be applied to the retirement of the preferred stock at par. Empire Trust Co., New York, transfer agents. Bankers Trust Co., New York, registrar.

Property: includes 5 producing zinc mines; the Airedale and Coyote mines at Joplin, the Media, Milan and Electrical at Webb City, and the Coronet mine at Baxter, Kan. Company also owns and operates 5 mills with total daily capacity of 4,200 tons.

Production: in 1915 was 30,000 tons of high-grade zinc concentrates, assaying 60% zinc with only a small percentage of lead.

Apparently no change of operating capacity during 1916.

LARSH LEAD & ZINC CO.

MISSOURI

Address: Commerce, Mo.

Property: N. E. of Commerce. Company is erecting a 750-ton mill, including an 18" crusher, 36x30" rolls, 4 jigs, 8 concentrators, compressor and steam plant.

LITTLE MARY MINING CO.

MISSOURI

Webb City, Jasper Co., Mo.

Cap., \$100,000. Operates a lease on 40 acres of mineral land, owned by D. S. Weaver, in S. 6, T. 29, R. 32. Developed by 3 shafts to depth of 175'.

Equipment: includes 500-ton concentrating mill, pumps, 3 drills, 2 hoists, steam power and Ingersoll compressor. Employs 25 men. No record of production received.

LONE ELM DEVELOPMENT & MINING CO.

MISSOURI

Address: N. of E. St., Lone Elm Road, Joplin, Mo. Holds a lease on 240 acres of Granby M. & S. Co.'s land and 80 acres of Picher Lead Co.'s land, N. of Joplin, Mo. Company unwatered the ground, sub-leases its holdings in small tracts and operates a 150-ton custom mill.

LONGACRE-CHAPMAN MINING CO.

MISSOURI

Address: 14 Unity Bldg., Webb City, Mo.

Inc. in Missouri. **Cap.**, \$56,250.

Company operates a lease on 10 acres of mineral land owned by the Reliance Mng. Co. in Sec. 8, T. 29, R. 32, Jasper Co., Mo. Developed by 2 shafts to depth of 185'.

Equipment: includes 200-ton concentrator, pumps, 2 air-drills, steam

power, Carterville crusher, and compressor. Employs 25 men. Production figures not available.

LOWER LEVEL MINING CO.

MISSOURI

Sarcoxie, Mo. Is a reorganization of the Bearcat Mining Co.

Directors: J. W. Boyd, J. J. Stephenson, Geo. Spiva and Sam Tamblyn.

Property: the Cameron mine on J. W. Boyd land, at Sarcoxie, 20 miles E. of Joplin, Jasper Co., Mo., is a zinc producer. Developed by 278' and 200' shafts.

Equipment: includes compressor, boilers and 400-ton mill. Company plans deep development work.

LUCKY MINING CO.

MISSOURI

Address: J. G. Marcum, sec. and mgr., Joplin, Mo.

Company states that it has 8 active mines in the district with the best equipment and costs lower than the average.

LUCKY TIGER MINING CO.

MISSOURI

Property transferred, 1916, to Utah-Missouri Mines Co., which see.

MEDIA MINING CO.

MISSOURI

Address: N. Allen St., Webb City, Mo.

Has a lease on Guinn land, north of Webb City, covering the site of the old Hold Out mine.

Ore: zinc sulphide, in sheet ground formation at a depth of 230', with ore faces 9' high. Company recently completed one of the largest mills in the Missouri-Kansas-Oklahoma district, capacity 600 tons per ten hours.

Equipment: mill includes two 18" crushers, 3 sets of 42" rolls, two 48"x96" trommels, jigs and tables. Mill can treat 2% ore profitably. Concentrates assay about 59% zinc, with only a trace of lead. Steam power is used.

MISSOURI ZINCFIELDS CO.

MISSOURI

Office: 805 Chambers Bldg., Joplin, Mo. W. L. Chambers, mgr. Inc. in Missouri.

Property: 1,100 acres in Joplin, Jasper Co., Mo. Ore carries blende, calamine and galena.

Development: by shafts from 40' to 200' deep.

The property is operated by lessees. There are three mills on the ground owned by the Fifteenth St. Mng. Co., Yellowstone Mng. Co. and Mary L. Mng. Co.; also a custom mill owned by the Gager M. & M. Co.

MISSOURI ZINCFIELDS CO.

MISSOURI

Address: Geo. J. Kusterer, mgr., Webb City, Mo.

Officers: J. N. Smith, pres.; W. E. Colley, sec.-treas., Boston, Mass. Inc. 1898 in Maine. **Cap.,** \$400,000.

Gross returns from ore sales in 1916, totaled \$500,000.

Property: 400 acres at Webb City and Carterville, Mo. Company does not operate any mines but owns the fee title and leases properties to others.

Ore: assays 3% zinc and lead. Shafts are 100 to 200' deep.

In 1916 output of concentrates was 6,000 tons, containing 60% zinc and 80% lead, respectively.

MISSOURI ZINC MINES CO.

MISSOURI

Office: 608 Sellwood Bldg., Duluth, Minn.

Office: 422-23 Frisco Bldg., Joplin, Mo. Albert M. Plumb, manager, Platteville, Wis.

Officers: E. A. Lamb, pres.; H. J. Kruse, v. p. and gen. mgr.; B. F. Osborne, sec.; W. W. Fegan, treas.; Guy E. Neault, mine supt.; David Shoemaker, mill supt.

Inc. July, 1916, in Delaware. **Cap.,** \$500,000.

Ore sales in 1916 amounted to \$155,000 and operating expenses to \$55,000. Dividends earned in 1916 and 1917 were 30% and total, \$500,000, from the Quick Seven, 1909, and Teximo mines.

Property: 78 acres at Neck City, Mo., including the Quick Seven Teximo and 1909 mines.

Ore: carries high-grade zinc blende and no lead. The deposit is 900x400' and is opened by 8 shafts to 160' depth.

Equipment: includes three 250-ton mills using Blake crushers, Cornish rolls, jigs, screens, etc.

Production: from one mill is 500 tons of 60% zinc concentrate per month. Cost of mining by open pit is 50c per ton.

NAPOLEON MINING CO.

MISSOURI

Joplin, Mo.

Inc. in Missouri. **Cap.**, \$10,000. Operates a lease on 40 acres of mineral land owned by E. N. Perry in S. 22, T. 28, R. 33, Joplin, Jasper Co., Mo. Developed by 2 shafts to depth of 200'. Production in 1915 came from the 180' level.

Equipment: includes 250-ton concentrating plant, 450' aerial tram, steam power, pump and hoist. Output is lead-zinc concentrate. About 35 men employed.

NATIONAL ZINC & LEAD CO.

MISSOURI

Offices: 53 State St., Boston,, and 420 Main St., Joplin, Mo.

Officers: W. R. Brown, pres.; F. G. Wright, sec.; J. J. Hammers, treas.

Cap., \$500,000; shares \$1 par; 300,000 shares issued. Stock is listed on New York and Boston Curbs. Company has paid dividends of 42%, or \$126,000, from Nov., 1915, to May, 1917.

Properties at Dixie, Neck City, and Webb City, Mo., are developed by shafts, 85'-225' deep, sunk in pay ore. Company operates four large mills on ore from its mines.

Company is operating the Slim Jim zinc mine in the Picher district of Oklahoma, showing rich ore at 227'. One of the mills was moved from Missouri to this mine. For week ended Aug. 11, 1917, mine produced 32 tons of concentrate.

NEW ENGLAND ZINC CORPORATION

MISSOURI

Address: Belle Center, Joplin, Mo.

Inc. in Connecticut. **Cap.**, \$100,000.

Operates a lease on 160 acres of mineral land owned by C. W. Edwards in S. 23-24, T. 28, R. 34, Joplin, Jasper Co., Mo. Developed by 3 shafts to depth of 150'.

Equipment: includes 150-ton concentrating plant making a mill recovery of from 20-25% zinc; pumps, air drills, steam hoists, and compressor. Employs 11 men. Company also reported operating a lease on the Leckie land at Klondike, Mo. Output is lead-zinc concentrate.

NORTH AMERICAN ZINC CO.

MISSOURI

Officers: Dr. J. W. Boyd, pres., Sarcxie, Mo.; Geo. Saunders, sec.-treas., with M. C. Goodwin, J. B. Gorman, directors. Operates a lease on 40 acres of mineral land at Wentworth, Newton Co., Mo., said to show a 30' deposit of zinc ore at 100'. Developed by 3 shafts to depth of 114'.

Equipment: includes electric power, 250-ton mill, office and change room.

NYMO ZINC & LEAD CO., INC.

MISSOURI

Office: 34 Wall St., New York.

Officers: Benj. L. Love, pres.; John L. Morrison, principal owner, v. p. and sec., Germantown, Phil., Pa.; above with W. H. Johnson, Douglas Fenwick and Hugh T. Halbert, directors; E. R. Cowan, treas.

Inc. Feb. 25, 1916, in New York. **Cap.**, \$100,000; shares \$5 par; outstanding, \$50,000. Douglas Fenwick & Co., 34 Wall St., New York, transfer agent. Franklin Trust Co., New York, registrar. Listed on New York Curb. Dividends: 1%, paid April, 1916.

Financial statement of April 21, 1916, shows cash, \$1,865. Gross receipts from ore sales, \$7,004; cost of production, \$3,523.

Property: formerly known as the Brattleboro mining lease, 6 acres, in East Joplin mining district, has lead-zinc ore occurring at 65'-86' in depth, said to be proven by 6 drill holes.

Development: a shaft with drifts east and west for only 30'.

Equipment: includes hoist and 2 boilers.

OANAMENA MINING CO.

MISSOURI

Address: Box 71, Webb City, Mo.

Officers: Geo. J. Kusterer, pres. and mgr.; Thos. H. Noonan, v. p. and supt.; C. G. Talcott, sec.-treas.

Inc. 1913 in Missouri. **Cap.**, \$40,000.

Gross returns in 1916 were \$422,000, and operating expenses \$313,387.

Property: 150 acres at Duenweg, Mo., which carries a 3% zinc and lead ore in a blanket deposit 20' thick. Shafts are 210' deep.

Equipment: 400 ton mill (10 hours) using Webb City crusher, rolls, rougher and cleaner jigs, and Arbutnot tables. Concentrate contains 62% zinc. All costs are \$1.30 per ton.

O. F. & L. MINING CO.

MISSOURI

Duenweg, Jasper Co., Mo.

Inc. in Missouri. **Cap.**, \$30,000. Operates a lease in S. W. $\frac{1}{4}$ of N. E. $\frac{1}{4}$ of Sec. 5, T. 27, R. 32, Duenweg.

Development: by two 200' shafts. **Equipment:** includes 250-ton concentrating plant, boiler, pump, steam power, Freeman crusher. One hundred men employed. It is a steady producer

Company's former holdings in Sec 3 were sold to the Baltic Mining Co.

ONCE MORE MINING CO.

MISSOURI

Office: 119 W. 4th St., or Box 299, Joplin, Mo.

Officers: J. A. Cotton, pres.; Jno. Cowell, v. p.; H. Connelly, sec.-treas.

Inc. July, 1915, in Missouri. **Cap.**, \$24,000.

Property: is a tract in the sheet-ground district of West Joplin, carrying an ore deposit of 16' to 18' thick, opened by shafts 145' and 182' deep. The ore has an average zinc and lead content of 3%.

Equipment: Sullivan angle-compound compressor; Freeman first-motion hoist, 250-ton mill (10 hours), one 25 and two 100 h. p. G. E. motors.

Concentrate assay 62% zinc and 83% lead.

ORONOGO CIRCLE MINING CO.

MISSOURI

Entire stock issue owned by Connecticut Zinc Corp'n., which see.

ORONOGO MUTUAL MINING CO.

MISSOURI

Guy H. Waring, mgr., Oronogo, Jasper Co., Mo.

Property: 40 acres of zinc bearing land, includes the Old Judge mine on the Elliott land, the Hockaday tract, purchased from the American Z. L. & Sm. Co. and mining rights of city lots at Oronogo. The Old Judge is developed by 2 shafts, 165' and 170' deep.

Equipment: includes 16 air drills, 2 electric hoists, 2 compressors, Carterville crusher and a new 500-ton electrically driven concentrating plant with 2 sets of jigs, slime tanks and 11 tables.

Installed \$70,000 steam power plant, 1917, consisting of 2 boilers, condensing engine and 2,600' Corliss compressor.

Production of concentrates was begun the latter part of 1914, and was at the rate of 45 tons of lead concentrate (80% metal) per week in Oct., 1917. About 85 men employed.

OTIS MINING CO.**MISSOURI**

Sold its property to the Consumers Mining Co., which see.

OWOSSO MINING CO.**MISSOURI**

H. H. Culver, mgr., 1409 Wall St., Joplin, Mo. The mine is owned by J. L. Harris, Daniel Fisher, Jas. Fisher, Jr., T. G. Shubert, all of Hancock, Mich., and H. H. Culver.

Property: a 10-year lease on 1 claim, 40 acres, on Baker land, in S. E. $\frac{1}{4}$ of Sec. 33, T. 28, R. 32, Jasper Co., Mo., carrying lead and zinc ore in sheet ground formation. This is a virgin mine in the sheet ground field in Duenweg between the Lincoln and Coahuila mines.

Development: by 2 shafts deepest 242' in sheet ground, with 20' ore face, 1917.

Equipment: includes compressor, 8"x8" steam hoist, 3 Gardner pumps and 200-ton concentrating mill with jigs, crusher, rolls and tables. Is reconstructing 200-ton mill at Duenweg which will double capacity.

Production: for 1915, begun in Sept., 1915, amounted to 4,240 tons of ore, or \$9,872. Concentrates averaged 58% zinc and 78% lead.

PHOENIX MINING CO.**MISSOURI**

Not incorporated. E. N. Cunningham, mgr., Joplin, Mo.

Property: 40 acres in S. W. $\frac{1}{4}$ N. W. $\frac{1}{4}$ Sec. 22, T. 28, R. 33, Jasper Co., Mo., carries lead-zinc ore in a soft limestone formation.

Development: by 176' vertical shaft and total workings of 600'.

Equipment: includes steam power, hoist, pump and 150-ton concentrating mill.

Production: in 1913 was 3,222,450 lbs. zinc and 1,003,450 lbs lead; in 1914, 5,524,310 lbs. zinc and 428,080 lbs. lead.

Mine was idle from Oct., 1914, to Dec., 1915. Diamond-drill exploratory work in progress in 1916.

PICHER LEAD CO.**MISSOURI**

Merged, June, 1916, with the Eagle White Lead Co., of Cincinnati, and a new company organized called the Eagle Picher Lead Co., which see.

PLAYTER BROS. MINING & REALTY CO.

Office: 315 Wall St., Joplin, Mo. C. C. Playter, pres.; G. H. Playter, sec.-treas.

Inc. 1914, in Missouri. **Cap.** \$30,000. Company engages in prospecting and development and when ore is opened and mining started, operations are then controlled by separate organizations.

PROSPERITY MILLING CO.**MISSOURI**

Prosperity, Mo. Operates a lease on 40 acres of mineral bearing land belonging to W. E. Saum, in Sec. 21, T. 28, R. 32, at Prosperity, Jasper Co., Mo.

Development: by 5 shafts to depth of 175'. **Equipment:** includes 150-ton concentrating plant, 3 air drills, steam power, Carterville crusher and air compressor. About 25 men employed.

QUICK SEVEN MINING CO.**MISSOURI**

Alba, Mo. **Inc.** in Mo. **Cap.**, \$105,000.

Operates a lease on 78 acres of mineral bearing land owned by J. Richardson, in Sec. 6, T. 29, R. 32, Jasper Co., Mo. Is reported to be the largest producer of zinc concentrate in the Alba district.

Development: by 3 shafts to depth of 150'. Equipped with 200-ton concentrator, pumps, drills, compressor and steam power. About 45 men employed.

ST. REGIS MINING AND SMELTING CO.**MISSOURI**

Duenweg, Jasper Co., Mo. E. R. McClelland, pres.-treas. **Inc** in Sept., 1915. **Cap.**, \$100,000.

Company took over the 40-acre lease of the old American Beauty mine, N. W. of Duenweg, which had been idle for some time owing to low price of spelter. The company unwatered the property which is developed by two 208' shafts in sheet ground formation; said to have a 20'-25' ore face, and built a 350-ton concentrator.

Equipment: includes 4 gas engines, 2 compressors, two 100-h. p. boilers and a change house.

SCHOOL HOUSE MINING CO.

MISSOURI

Joplin, Jasper Co., Mo.

Inc. in Mo. Cap., \$100,000. Operates on 40 acres lead-zinc land near Cartersville.

Development: by 3 shafts, average depth 167'. Equipped with 800-ton concentrator. Does not reply to requests for information.

SHORT CREEK ZINC & LEAD CO.

MISSOURI

F. A. Hornaday, mgr., Joplin, Mo.

Inc. April, 1916, in Missouri. Cap., \$100,000; \$1 par.

Dividends: paid 1½c per share, regular May, July and 2% extra, or 8½c in three months. Stock dealt in on New York and Boston Curbs.

Property: lease on 115 acres of zinc land, 2 miles from Joplin, Mo. Mines have been in active operation since 1914, producing concentrates, returning \$107,000 October, 1914, to Dec., 1915.

SPIRAL LEAD & ZINC CO.

MISSOURI

Chas. Dudley, supt., Joplin, Mo. J. S. Mullen, pres., Ardmore, Okla.

Property: the Martha Ball mine, bought for about \$30,000; a sheet-ground mine W. of Chitwood, S. W. of Sparkler mine and E. of La Nora B mine, with ore 195' deep.

SULLIVAN ZINC MINING CO.

MISSOURI

Inc. by Harry Kingsbury, Allen Dorsey and R. D. Talmadge, Jan., 1916, to take over a 20-acre lease at Joplin, Mo., on sheet ground. The workings are 180-205' deep. Company has a new 150-ton mill.

Letters returned in May, 1917.

TENNESSEE ZINC & LEAD CO.

MISSOURI

Office: 220 Miners Bank Bldg., Joplin, Mo.

Officers: P. H. Corbett, pres.; R. H. Allen, v. p.-treas.; W. V. Fox, sec.-gen. supt.

Inc. 1916, in Missouri. Cap., \$100,000. Gross income from Jan. 1, 1917, to Oct. 31, 1917, was \$100,426; expenses were \$41,325.

Property: 62 acres, 8 miles N. W. of Joplin, Mo. Ore: carries zinc blende from 3 to 20%, the average in 1917 being 7.15%. The deposit is 12' thick, 600' long and is opened by 92 and 123' shafts.

Equipment: includes 100-ton mill, using Rogers rolls, crusher, jigs, screens and Arbuthnot tables.

Production: 70 to 335 tons of 63% zinc concentrate, with up to 0.16% lead per month. Costs are \$1.90 for mining, 32.9c for milling, a total of \$2.23 per ton.

TWIN CITIES MINING CO.

MISSOURI

Address: Geo. Moore, mgr., Webb City, Mo.

Inc. in Mo. Cap., \$50,000. Is a merger of the Laura Alice and Ben Franklin mining companies.

Operates lands leased from Daugherty & Davey, in Jasper Co., on Center Creek, between Webb City and Cartersville, using the 175-ton Davey No. 1 mill. Developed by two shafts, steam power being used.

UNDERWRITERS LAND CO.

MISSOURI

Address: Joplin, Mo.

Officers: G. H. Worthington, pres.; A. Good, sec.; F. N. Bendelari,

treas.; F. R. Harrington, gen. mgr.; with J. W. Gibbons, A. E. Bendelari, directors.

Inc. 1901. **Cap.**, \$1,000,000; shares \$1 par; outstanding \$1,000,000; non-assessable. Annual meeting in February. No bond issues. **Transfer office:** 812 Hippodrome Bldg., Cleveland, Ohio. **Registrar:** Delaware Trust Co., Wilmington, Del. Dividends in 1916 were 6%.

Property: 240 acres, leased and 232 acres, in fee, in Jasper Co., Mo., and Ottawa Co., Okla. The blende ore is hoisted by vertical shaft, total depth of working, 250'. Two concentrating mills yield 62% zinc concentrates.

U. S. LEAD & ZINC CO.

MISSOURI

Promoted by C. L. Glass & Co., Vandergrift Bldg., Fourth Ave., Pittsburgh, Pa.

Directors: P. S. Chambers, D. A. Rees and W. S. Maxey.

Inc. in Delaware. **Cap.**, \$600,000; shares, \$1 par; non-assessable.

Property: one 20-acre lease in Joplin district, opened by 190' shaft and several drifts, and one 24-acre lease opened by two 120' shafts, two 50' shafts, and drifts, all in high-grade ore.

Equipment: each mine has a 150-ton mill for concentrating the zinc-lead ore.

UNITED ZINC SMELTING CORP.

MISSOURI

Office: 99 John St., New York.

Officers: R. A. Cowles, pres.; Arthur Day, v. p.; with M. M. Pearlman, Otto Proelss, A. L. Davis, G. M. Pynchon, B. Lissberger, W. E. Reis, and Harry Raymond, directors; Gustave Ross, sec.; T. C. Davidson, treas.; M. M. Pearlman, mgr. at Clarksburg; Otto Proelss, mgr. at Moundsville; and J. A. Skinner, mgr. at Joplin.

Inc. April, 1916, in New York. **Cap.**, 600,000 shares without par value, but offered for subscription at \$12.50 per share; 565,684 outstanding. No funded debt. Bankers Trust Co., New York, transfer agent. Equitable Trust Co., New York, registrar. Listed on New York Curb.

Statement for the first year's operations, ended April 30, 1917, show gross earnings of \$807,026, less \$51,342 for operating and \$116,727 for depreciation, leaving \$638,957 net. Dividends are expected in the near future.

Controls through stock ownership all of the assets of the Pearlman Co., Inc., and the Clarksburg Zinc Co., and a substantial majority of the common shares of the Kenefick Zinc Corporation.

The Pearlman Co., Inc., owns a large zinc mill and refining plant at Clarksburg, W. Va., comprising 3,648 retorts with capacity of 30,000,000 lbs. of spelter per year; a pottery plant with a capacity of 500 retorts per day; a power plant and a refining plant with a capacity of 15,000,000 lbs. of spelter per year; all the capital stock of the Clarksburg Zinc Co.; owns patents, controls brands and trade-marks.

United Zinc has at Moundsville, W. Va., one Hegeler roaster, 1,728 retorts, pottery, gas producers, nitric acid works, plant producing 50 tons of 60° sulphuric acid daily, and power plant. These works were ready in Sept., 1917.

The Kenefick Zinc Corporation is the largest producer of zinc concentrates in the Joplin, Mo., district, the capacity of its mines and mills being 25,000 to 30,000 tons of concentrates per year. The United Zinc Corporation offered to exchange $1\frac{1}{4}$ shares of its stock for each common share of the Kenefick Zinc Corporation.

Properties operated by the Kenefick Corporation, Electrical Zinc & Lead Mining Co. and Milan M. Co., north of Webb City; the Coyote Mining Co., and Airedale Mining Co., west of Joplin, and the Coronet mine at Baxter, Kansas.

At the Media mine, ore occurs in 17 acres of land, and the mill treats 1,500 tons daily. The Milan produces the highest grade ore in the district and treats 600 tons daily. The Electrical yields 600 tons of ore daily, and since 1904 has not varied 0.25% in its zinc recovery. At the Coyote the ore deposit is 18' thick, supplying 800 tons daily. In 8 acres the Airedale has 18' of ore, yielding 700 tons daily.

UTAH-MISSOURI MINES CO.**MISSOURI**

Address: Neck City, near Joplin, Mo.

Property: the Big Four and Lucky Tiger mines, the latter transferred from a Utah company early in 1916.

Development: at Big Four by 2-shafts to 315', yielding sphalerite; and at Lucky Tiger by 2 shafts to 276'.

Equipment: at the Lucky Tiger is a 250-ton mill, etc., which treats ore from both mines. Property is fully equipped.

VACATION MINING CO.**MISSOURI**

Address: Duenweg, Mo. Has a 40-acre lease with Miami field 2 miles E. of Duenweg. Seventeen drill holes cut ore from 90 to 123' depth, averaging 15% blende and lead. A mill may be erected if development warrants it.

VESUVIUS MINING CO.**MISSOURI**

Address: M. V. Eardley, mgr., or S. Drake, supt., Carthage, Mo.

Officers: C. W. Lambourne, pres.; W. H. Eardley, v. p.; M. V. Eardley, sec.-treas.; with Chas. Lange and Geo. Blood, directors.

Inc. 1916, in Utah. **Cap.**, \$75,000; shares \$1 par; all issued; 50,000 assessable.

Gross earnings in 1916 were \$45,000, and expenses \$44,000.

Property: lease on 54 acres, 4 miles N. W. of Carthage, Mo. **Geology:** dissemination of zinc blende in blue flint, or chert. Ore yields 3% blende.

Development: by 200' shaft and 2,000' of workings. Reserves blocked out are given as equal to 36,000 tons of concentrate, containing 60% zinc.

Equipment: small Freeman hoist, 12x16" Norwalk compressor, 8" Pomona pump, electric power (purchased), and 500-ton mill.

Production: in 1916, 18,000 tons of 'dirt' (ore) yielded 650 tons of concentrate containing 60% zinc.

Is a new mine that should be very profitable under present conditions.

WACO MINING CO.**MISSOURI**

Address: 319 Frisco Bldg., Joplin, Mo.

Officers: Robt. Law, Jr., pres.; Jas. A. Dunn, sec.; P. B. Butler, mgr.; R. S. Butler, mine supt.; W. S. Estes, mill supt.

Inc. in Missouri.

Property: 346 acres in 8 leases at Waco in the Lawton district. **Ore:** carries 8% blende. The deposit is 400x600' in area, and is opened by shafts, 160, 138, 90, 128 and 127' deep.

Equipment: No. 1 mill, started work in August, 1917, has 600-ton capacity, while No. 2 of 800 tons was under construction in November. Crushers, rolls, jigs, trommels and tables are used.

Production: 500 tons of 63% zinc concentrate monthly. Costs are \$1.75 per ton for mining and 25c. for milling, a total of \$2 per ton.

WADE MINING & MILLING CO.**MISSOURI**

Offices: St. Louis and 620 Joplin St., Joplin, Mo.

Officers: C. E. Brenton, pres.; Frank Boehm, v. p., St. Louis; and E. W. Buskell, treas., Joplin.

Property: a lease formerly held by Gilt Edge Mng. Co., on the Wade farm, 120 acres, 3 miles W. of Diamond and 3 miles E. of Tipton Ford, Mo.

Is a lead and zinc mine, the proportion being 33% lead and 66% zinc,

of the metallic contents of the ore. Two shafts, drifts and drill holes have been opened. Ore is treated in a 150-ton mill.

WALLOWER MILL**MISSOURI**

Built in 1914 by F. C. Wallower, 100 Neill Bldg., Joplin, Mo., to treat lead and zinc ores of Prosperity Camp, Joplin district. Capacity, 300 tons per 10-hour shift.

Equipment: includes 100-h. p. electric motor, 16" crusher, rolls, screens, jigs, classifiers, Deister tables and slimers. Operated steadily in 1916-7, and opened another shaft in order to supply the mill with ore.

WASHINGTON LAND & MINING CO.**MISSOURI**

Address: W. Maclay, mgr., Bliss, Mo.

Officers: A. L. Shapleigh, pres.; J. D. Filley, v. p.; R. W. Shapleigh, sec.; the foregoing are directors.

Inc. about 1880 in Missouri. **Cap.**, \$50,000; \$100 par; all issued.

Owens 6,250 acres lead and baritic lands in Washington Co., operated on royalty basis.

WILSON MINES CO.**MISSOURI**

Address: Webb City, Mo.

Cap., \$10,000. **Dividends:** 10% in April, 1916, 5% May 1. Stock held mainly in Milwaukee, Wis.

Operates under lease, 150 acres of land of the Boston Duenweg Mining Co., Webb City, Jasper county. Has developed extensive ore bodies by drilling, operating 2 shafts and producing the bulk of the output of Boston-Duenweg holdings. Has invested \$30,000 in plant, capacity 500 tons daily.

WINGFIELD MINING CO.**MISSOURI**

Address: Webb City, Mo.

Inc. in Missouri. **Cap.**, \$32,000; investment, \$48,222.

Operates, under lease, 50 acres sheet-ground lands of Scott, Bowman & Ware, working through 3 shafts. Capacity, 1,000 tons daily. Mill equipment includes Webb City crusher and 4 tables.

WINNIE-LAWSON ZINC CO.**MISSOURI**

Highly advertised in the Joplin papers January, 1916, as an "investment offering of great significance and importance." The company claims to have under lease, 270 acres of land in the "most promising portions of the southwest lead and zinc district," and that it has let a contract for a 400-ton mill. Edward Lawson is the promoter. No reports of big undertakings on the part of this company have come from other sources.

Letters returned unanswered in July, 1917.

LEAD & ZINC MINES OF SOUTHEASTERN MISSOURI

The mining region in St. Francois county is the most important lead producer, not only of the United States, but of the world.

In 1915 the output was 183,906 tons of lead, a little more in 1916 and probably a considerable gain will be shown in 1917. The area is 70 miles south of St. Louis, with Bonne Terre and Flat River as the principal centers. Over 20,000 tons of ore is treated daily. Deposits consist of ore in dolomite averaging 4% to 6% lead. All concentrating mills employ flotation methods.

Geology is described by H. A. Buehler and ore treatment by A. P. Watt, in Bull. 130 of the A. I. M. E., 1917, while mining was discussed by H. A. Guess in the A. I. M. E. Transactions of 1914.

BAKER LEAD CO.**MISSOURI**

Address: Leadwood, St. Francis Co., Mo.

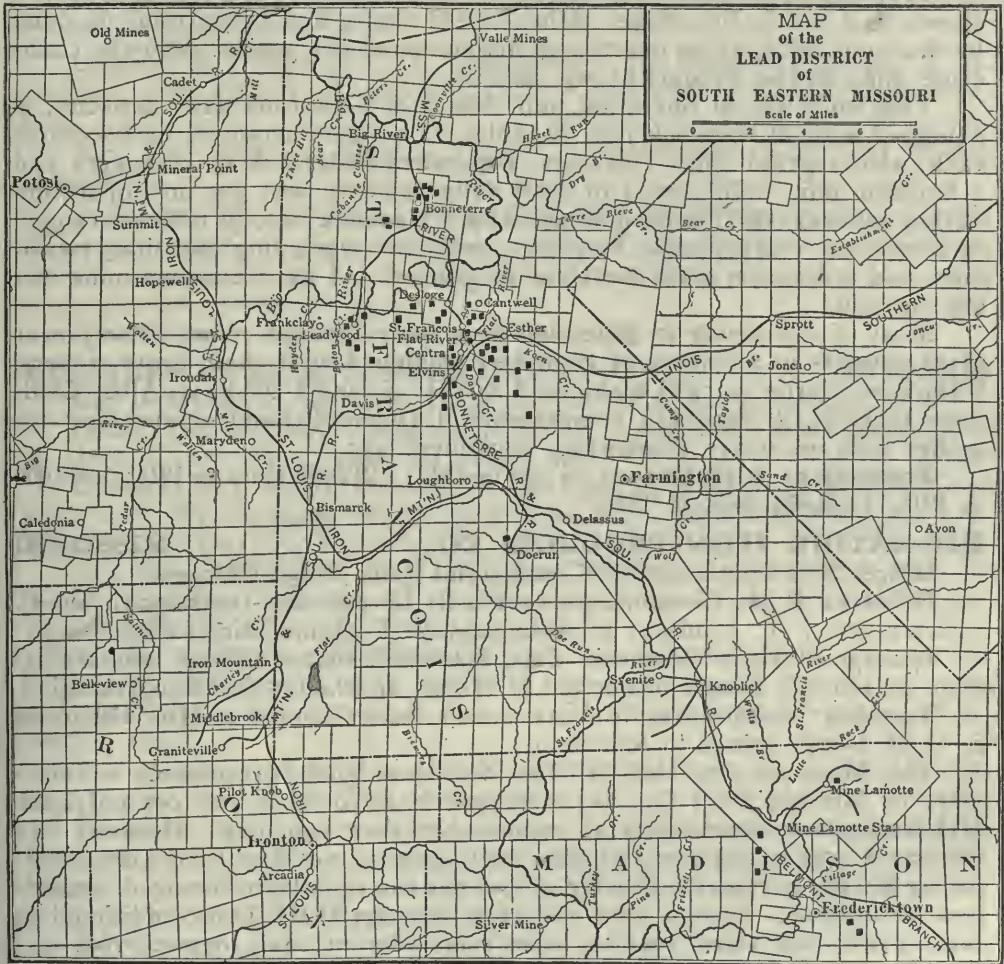

Property: the old John Day tract of the St. Francois Lead Co., at

Leadwood, and the Jones tract at Elvino. Company has no mill, but ships ore to the St. Louis Sm. & Ref. Co.'s plant at St. Francois.

BOSTON-ELVINO LEAD CO.

MISSOURI

Address: Elvino, St. Francois Co., Mo. Ore shipped to the St. Louis Sm. & Ref. Co.'s plant at St. Francois.

DESLOGE CONSOLIDATED LEAD CO.

MISSOURI

Address: Desloge, St. Francois Co., Mo.

Inc. in Missouri. Cap., \$1,000,000, with almost \$2,000,000 invested in land and plant.

Property: 4,704 acres, developed by several shafts, 2 of which are 300' deep and another 500' deep. Two of the shafts are near Desloge, but No. 4 is near Leadwood.

Equipment: a 1,700-ton concentrator equipped with Wilfley tables, Frue vanners, rolls, Chilean mills, and a 780-k. w. steam turbine; also a smelter equipped with Flintshire-Tarnowitz reverberatory furnaces. Flotation is employed in the mill. Employs about 500 men.

DOE RUN LEAD CO.

MISSOURI

Absorbed in 1916 by the St. Joseph Lead Co.

FEDERAL LEAD CO.**MISSOURI**

Flat River, Mo.; H. G. Washburn, mgr. Subsidiary of American Smelters Securities Co.

Inc. in Delaware. **Cap.**, \$2,000,000; shares \$10 par. The lead-smelting and refining plant, at Federal, Ill., near Alton, comprises 302.5 acres. The plant is a custom smelter.

Property: 13,690 acres in the Flat River districts, southeastern Missouri, shows lead ore in limestone. Mine has 12 shafts and prospecting is done by diamond drills, as no outcrop of disseminated ore occurs. Also the Catherine mine in the Fredericktown district.

Two mills are in operation, mill No. 3 of 5,000 tons daily capacity, is equipped with 12 Hancock jigs, 72 tables, 18 vanners arranged in 2 sections each; also regrind rolls, elevators, Esperanza-Federal drag classifiers and a flotation unit. Mill No. 4 of 3,000 daily capacity was put into operation during January, 1917; it is equipped with 6 Hancock jigs, 40 tables arranged in 2 sections, regrind rolls, elevators, mills for regrinding and drag classifiers, and a flotation plant for slime treatment. At the Catherine mine is a 600-ton mill.

Most of the power is generated at a central power plant. The power plant consists of a battery of 12 boilers, equipped with chain grate stokers, 2 750-k. w. Curtis vertical turbines, 2 2,000-k. w. and 1 800-k. w. Allis-Chalmers turbines, 3 Nordberg compressors, 1 Ingersoll-Rand compressor, together with necessary condensing equipment, etc.

Production: 1,163,000 tons of ore in 1913; 1,212,000 tons in 1914; 1,355,000 in 1915; 1,328,474 tons in 1916.

MID-NATION IRON PRODUCTS CO.**MISSOURI**

Office: 2082 Continental & Commercial Bank Bldg., Chicago.

Officers: E. A. Clemons, pres.; W. R. Leeper, sec.-treas., with W. C. Groetzinger, J. F. Lindsay, E. Abby and F. J. Quinn, directors.

Inc. Jan., 1917, in Missouri. **Cap.**, \$2,000,000; shares \$10 par, non-assessable; all issued. Bonds authorized \$1,000,000, of which \$160,000, outstanding.

Property: 88,000 acres in Wayne and Butler counties, Mo., 150 miles S. of St. Louis, owned in fee simple.

The Missouri Ore Co., 14 Wall St., New York, presumably a subsidiary of Midvale Steel Co., has a 99-year lease to mine iron ore only, the Mid-Nation retaining rights to mine other than iron ore. Missouri Ore Co. has 1 year to explore and take up 1 lease on not less than 5,000 acres; to pay \$40 per acre and a royalty of 25c. per ton on all ore removed, regardless of analysis. Second year calls for lease on 10,000 acres additional at same price; and third year to lease remainder at same figure. Not less than 300,000 tons per annum to be extracted. All ore that will concentrate 48% or over can be removed.

Development: property contains brown hematite and limonite, assaying 53.48% metallic iron. Estimated that 50,000,000 tons are available. Four drills at work. Mining will be by steam-shovel. Output in last 15 years was 1,500 carloads; no production at present.

MINE LA MOTTE CO.**MISSOURI**

Name changed Nov. 1, 1916 to Missouri Metals Corp., which see.

MISSOURI COBALT CO.**MISSOURI**

Address: Thos. J. Mateer, mgr., Fredericktown, Mo.

Officers: M. J. O'Brien, pres.; J. A. O'Brien, v. p.; C. T. Smith, sec.-treas.; with S. F. Kirkpatrick, directors; R. F. Taylor, mine and mill supt.

Inc. in Missouri.

Property: that of old North American Lead Co. at Fredericktown.

Ore: occurs in limestone and contains sulphides of copper, iron, cobalt, nickel, and lead. Developed by shafts.

Equipment: includes 500-ton mill completed in August, 1917, employing flotation as part of the process.

MISSOURI COPPER MOUNTAIN MINING CO. MISSOURI

Office: Room 4, Pehl Bldg., Sedalia, Mo. **Works office:** Sullivan, Franklin Co., Mo.

Officers: S. Urban, pres.; F. Maerschel, v. p.; Peter Pehl, treas.; J. W. Graham, sec., with H. H. Graham, C. C. Kelly, and F. T. Mulcahy, directors.

Inc. Jan., 1903, in Arizona. Cap., \$1,500,000; shares \$1 par; issued, \$1,396,000.

Property: about 7,000 acres in Crawford and Washington counties, Missouri, including some farm lands. The Copper Hill mine, 32 acres, worked in a small way before 1850, shows an orebody with a good gossan in magnesian limestone.

Development: by a 50' shaft and about 200' of tunnels.

MISSOURI METALS CORPORATION MISSOURI

Inc. in Maine. as the Mine La Motte Co., 1914; name changed, 1916.

Office: 1945 Railway Exchange Bldg., St. Louis, Mo. **Mine office:** Wm. G. Dooley, asst. treas., Mine La Motte, Mo.

Officers: A. J. Meier, pres.; A. W. McLimont, v. p.; F. E. Butcher, sec.; with W. S. McCall, G. G. Moore, A. J. Drexel, Jr., Hamilton Fish, and J. E. Liggett, directors; R. Morrison, Jr., treas.

Inc. Nov. 1, 1916, in Missouri. Cap. \$5,000,000; shares \$100 par; all issued. Security Transfer & Registrar Co., New York, transfer agent. Equitable Trust Co., New York, registrar.

Bonds: \$1,000,000 1st refunding gold 6s, due Nov. 1, 1926. Coupon, \$1,000. Empire Trust Co., New York and S. H. West, St. Louis, Mo., trustees. Is first lien. subject to \$330,000 prior lien, retired by this issue. Offered Feb., 1917, at 96½.

Net earnings (applicable to interest) \$169,432 for year ended June 30, 1916; quarter ended Sept. 30, 1916, \$53,438.

Property: 37,614 acres of mineral and farm lands in Madison and St. Francois counties, Mo. Lands have produced since 1723, over \$20,000,000, mostly lead. For geology, see Kemp's "Ore Deposits," p. 228, also Mo. Geol. Survey, Vol. IX, Report 4, p. 48.

Development: by a number of shafts, average depth 125'. The shallow surface diggings, which were first worked, were followed down 100-125' and from this level the ore has been coming that for 50 years has supplied the mill and smelter. In recent years the copper and nickel-cobalt sulphide ores, which occur in bunches and masses in the lead ore, have not been mined, owing to the difficulty of smelting them. In 1915 four shafts were operated, and much of the ground was reworked with steam shovels. Much carbonate of lead is recovered.

Production: figures cannot be given, as the company gives out no information, but the plants were treating 2,000 tons daily in 1917.

Reserves are reported to be equal to 3,000,000 tons yearly for 60 years, half of which can be mined by open cut methods.

Equipment: 19 miles of railway, 1,000-ton ore concentrator with 350-ton flotation unit, 1,000-ton tailing plant, etc.

SAINT FRANCOIS LEAD CO. MISSOURI

Property sold to the Baker Lead Co., which see.

ST. JOSEPH LEAD CO.**MISSOURI**

Offices: 61 Broadway, New York and Bonne Terre, Mo.

Officers: Clinton H. Crane, pres. and chairman Ex. Comm.; Hugh N. Camp, Jr., v. p. and treas.; Irwin H. Cornell, v. p. and sales mgr.; L. H. Besson, sec.; preceding are directors, with Daniel C. Catlin, Firmin Desloge, Max Kotany, M. F. Watts, all of St. Louis, Gust. Setz, San Antonio, Charles M. Chapin, F. W. Shibley, New York, and E. C. Smith Vermont. C. J. Adams, gen. mgr., W. A. Smith, mgr. of Herculanum plant.

Inc. March 25, 1864, in New York. **Cap.**, \$20,000,000; shares \$10 par; outstanding \$14,647,798. Annual meeting, third Monday in Feb. Transfer office: 61 Broadway. Registrar: New York Trust Co. Stock traded in on New York Curb. Bonded debt retired Jan. 1, 1916.

Dividends: 1885-1912, 6%; 1913, 5%; 1914, 2½%; 1915, 4%; 1916, \$1 regular and \$1.50 amortization; 1917, \$2.75 in 1917 up to Sept. 20, including 50c special, from amortization reserve, equal to a total of \$4,028,195 for the year. Total to date, 72%, or \$10,253,458.

Comparative General Balance Sheet:

Assets—							
	Property & Equip.	Invest's	Working Assets	Cash and Accts. Rec.	Deferred Accounts	Other	Total
1916...	\$9,744,246	\$7,689,854	\$3,779,037	802,979	\$4,192	\$22,020,309
1915...	10,712,066	8,641,497	\$413,951	\$721,307	318,204	31,381	20,838,406

Gold notes of the Miss. River & B. T. Ry. amounting to \$154,588 have been taken up.

Summary of Operations 1914-1915 (as reported in the Mining & Scientific Press):

	Lead Output Tons	Value per Ton	Net Profit	Total Income	Net Income	Surplus after Dividends	Previous Surplus	Final Surplus
1916	91,073	\$4,674,467	\$3,265,001	\$7,789,996	\$11,054,997
1915	84,356	\$90	4,283,425	4,392,360	3,489,964	1,993,883	9,416,629	11,415,512
1914	77,404	74	2,317,040	2,427,686	1,547,275	1,273,580	8,237,190	9,416,629

Subsidiary bonds: Miss. River & Bonne Terre Ry. 1st M. 5%, sinking fund gold bonds, due Oct. 1, 1931, \$2,394,922. During 1915, the company reduced its indebtedness by \$2,428,313; this reduction in debt saves the company about \$130,000 per year in interest charges, exclusive of sinking fund.

The company is the largest independent lead producer in America and the second largest after the A. S. & R. Co.

Property: 20,000 acres of land in the Southeastern Mo. lead district, in St. Francois and Jefferson counties, power plants, mill, smelting plants, the entire \$3,000,000 capital stock and \$323,000 par value additional bonds of the Miss. River & Bonne Terre Railway; also \$483,940 of the \$500,000 capital stock of the Bonne Terre Farming & Cattle Co. and all of the capital stock of the Doe Run Lead Co.; the Miss. & Bonne Terre Ry. owns the St. Francois Co. R. R. Co.

The holdings are in the disseminated lead ore region of S. E. Missouri, where production from ores in the lower Bonne Terre dolomite began in 1869. The producing area is within 5 miles of the towns of St. Francois and Desloge. There are six companies operating and seven concentrating mills in commission, those of the St. Joe Co. and its subsidiary handling 8,600 tons out of a total of 20,000 tons daily output.

Concentration was described by A. P. Watt in Bulletin 130 of the A. I. M. E.

In 1915, ten shafts were operated that furnished the ore for the old 1,500-ton mill at Bonne Terre, for the 1,500-ton mill at Owl Creek, and for the 4,200-ton Doe Run mill at Rivermines in the Flat River district. The flotation process has been extensively adopted by the company.

In 1914, the company finished reconstructing its smelting plants at Herculanum, Mo., and now has one of the most modern lead smelters in the country, capable of treating 12,000 tons of concentrates per month. Materials treated are lead concentrates from the company's mills at Bonne Terre, Leadwood and Doe Run; concentrates said to assay from 65 to 74% lead, 14% sulphur, and 1 to 5% zinc.

The baghouse and matte granulation plants at Herculanum were described in the Engineering and Mining Journal of Feb. 17 and Dec. 16 last.

Equipment: includes 8 Dwight-Lloyd sintering machines, 42x264", and 4 blast furnaces 42x192". Recovery of the plant is over 98%. Concentration practise at company's mills and in neighboring plants is fully and well described in Metallurgical and Chemical Engineering, July 15, 1916, p. 93

New construction at all mills included additional flotation machines, Oliver filters, and ball-mills; at the smelter a double roasting plant equipped with 4 Dwight-Lloyd machines, a Scotch hearth building with 12 Newman mechanical hearths, 1,000 kw. G. E. turbo generator, and Cottrell precipitation for roaster gases. Company has licenses from the patentees of these processes.

The power plants of the St. Joseph and Doe Run Lead companies on a basis of 34,359,458 kw.-hr., showed a cost of 0.77 cts. per kw.-hr. Power consumption was equivalent to about 16.3 kw.-hr. per ton of ore mined and milled. The new power-plant at Rivermines has two 3,000 kw. G. E. turbo generators, Heine boilers, and coal handling plant.

Production:

Year	Ore, tons	Concentrates, tons	Lead, tons
1916.....	2,431,939	169,302	91,073
1915.....	2,127,333	136,379	90,120
1914.....	1,989,047	120,710	81,716

In 1916, company produced 182,000,000 lbs of lead. The 1917 output will exceed 200,000,000 lbs.

During 1916 the company set up an amortization reserve, based on a capital of \$20,000,000; an estimated life of 20 years; an annual ore production of 2,000,000 tons; and an annual lead production of 80,000 tons. Whenever the company's monthly average sale price of lead exceeds \$60 per ton (3c. per lb.) a charge of 2c. per ton of milled ore for each dollar of such excess is charged to profit and loss surplus and credited to reserve for amortization.

ST. LOUIS SMELTING & REFINING CO.

MISSOURI

Subsidiary of National Lead Co. Wm. W. Lawrence, pres.

Address: J. A. Caselton, sec., St. Louis, Mo.

Inc. in Mo. Cap., \$2,000,000.

Property: 1,295 acres at St. Francois, Southeastern Missouri. Ore carries lead in dolomite. Six shafts are in operation, deepest 565'.

Equipment: complete with a 4,000-ton concentrating plant. Flotation is employed with gravity concentration. Besides treating its own ore, company treats that from the Baker Lead Co. at Leadwood and the Boston-Elvino Lead Co. at Elvino.

MONTANA

Butte is the one great mining center of Montana, and the companies of this camp, less widely known as the Summit mining district, Silver Bow county, are grouped under that title. All others are arranged by counties, the Helena region, following Lewis & Clark Co., although it embraces parts of other counties and several mining districts.

BEAVERHEAD COUNTY

ARGENTA-DILLON MINING CO.

MONTANA

Idle. Property taken over by Montana Mines Co., which sec.

BANNACK GOLD MINING CO.

MONTANA

Office: 809 Kearns Bldg., Salt Lake City, Utah. Mine address: Bannack, Beaverhead Co., Mont.

Officers: F. B. Stephens, pres., Salt Lake City, Utah; W. C. Ebaugh, sec.-treas., Salt Lake City; G. T. Hansen, managing director; above, with W. S. McCornick and B. Binnard, both of Salt Lake City, directors. C. W. Stallings, supt.

Inc. April, 1915, in Montana. **Cap.**, \$1,000,000; shares \$1 par. Title Guarantee & Trust Co., New York City, transfer agt. and registrar. Stock listed on New York Curb, Salt Lake City and Butte Exchanges.

A \$125,000 bond issue, secured by a mortgage on the property, was issued at a special stockholders' meeting, Jan. 30, 1917, to cover all outstanding obligations and to provide working capital until the mill could start operations.

The first discovery of gold in Montana was made in the Bannack district in 1862, and in that year the placers are reported to have produced \$600,000 in gold. "Quartz" mining began very shortly after. In 1863 a 6-stamp mill was in operation. A reasonable estimate from available data puts the total production of the district to 1905 at not less than \$4,000,000. From 1905 to 1913 the production reported is approximately \$2,000,000. The ores have been of value almost wholly on account of their gold, but they contain also some silver, lead and copper. The district has been comparatively inactive during the last twelve years. The Bannack property has been operated in the past in a desultory manner by owners and lessees.

Property: adjacent to the town of Bannack, at an altitude of 5,935', consists of the Golden Leaf group of 8 patented claims, part interest in 2 claims, the Junction millsite, with underground rights, also an additional area of 200 acres, besides the underground rights in Excelsior and Horace Placer millsites. Nearest shipping point is at Grant, 12 miles from Bannack, on the Pittsburgh-Gilmore Railroad, which connects with the Oregon Short Line at Armstead.

Geology: the rocks of the Bannack district consist of Paleozoic limestone intruded by a nearly circular shaped boss of syenite about $1\frac{1}{4}$ miles in diameter. Around the edges of this intrusive is formed the irregular contact deposit on which the company's claims are located. The orebodies are along the contact or in irregular masses in the limestone, and vary in width from 1' to 30' and even 40', averaging about 10'. The high-grade bodies vary in length from 50' to 100'; the milling orebodies are of much greater extent. The best ore is usually in the widest parts of the vein, and is for the most part very soft, requiring little blasting, though the ground stands well without timbering. A large tonnage of shipping ore, estimated at over \$1,300,000, has been removed from the property, leaving in the mine large reserves of milling grades of ore. See U. S. G. S., Bull 574, pp. 72-75.

Development: approximately 17,000' of underground workings to a depth of 600'. The Priscilla tunnel, the main working adit, was driven 800' to the contact at an elevation of 90' above creek level, and cuts the contact 250' below surface, though the highest point of contact on the surface will be 800' above the Priscilla tunnel.

Ore reserves: estimated Feb. 1, 1917, as 130,700 tons, averaging \$7.34

per ton, with a net realizable value of \$632,750. There are also 100,000 tons of probable low-grade ore at \$6, 5,000 tons medium grade at \$20, and 1,000 tons high grade at \$100 per ton, a total of 106,000 tons of a net value of \$535,000. Values are principally in gold, the silver contributing 50c to \$1 per ton. No account has been taken in above estimate of ore below the Priscilla tunnel level.

Equipment: a well-equipped surface plant, also a reduction plant; the first unit of the cyanide plant has a daily capacity of 150 tons. The plant, which started operations May 5, 1917, uses the continuous counter-current decantation process. Power for mine and mill is furnished by a hydro-electric plant at the mill; water being obtained from Grasshopper Creek, $2\frac{1}{2}$ miles above the mill, furnishing a net working head of 39'. During the winter, when water is not available, a Diesel oil engine will furnish the power.

Milling costs estimated not to exceed \$2 per ton; mine and overhead costs not to exceed \$1 per ton. Average mill-heads are estimated at \$10 per ton, with an extraction of over 90%.

Mine is well developed and ore reserves, as estimated, are sufficient for 4 years' operation. The possibility of developing new orebodies seems good, since less than $\frac{1}{8}$ of the mineralized contact area owned by the company has been prospected, and no work goes below the water level. Using modern methods and under an efficient management, the Bannack mine has great possibilities and is very favorably regarded.

Owing to insufficient water supply the mill was obliged to shut down in July, 1917, until after the irrigation season was over.

Mr. McCornick is arranging for the purchase and installation of a Diesel engine power plant to obviate the power shortage that has closed down the mill and mine. To provide funds for this, an assessment of 10c per share has been ordered.

BEAVER MINING CO.

MONTANA

Office: 1501 Alworth Bldg., Duluth, Minn.

Officers: M. H. Gannon, pres.; W. L. Harnan, Butte, Mont., v. p.; Morgan M. Pattison, Duluth, v. p.; Dr. J. B. Sullivan, Butte, Mont., treas.; J. W. Neukom, Duluth, sec.

Inc. 1917. **Cap.**, \$950,000. Treasury stock being offered, 1917, at 40c a share.

Property: 320 acres, 7 miles from Brown, on O. S. L. R. R., in Beaverhead Co., Montana, about 50 miles from Butte, said to show several copper-bearing veins. A shipment of about 1,200 tons is reported to have averaged 4% copper and over 3 oz. in silver.

Development: work has only been done on 2 veins, and management plans to drive 650' tunnel with raises, winzes, etc., to open up the orebody at a depth of 400' from surface.

BEAVERHEAD MONTANA COPPER MNG. CO.

MONTANA

Argenta, Beaverhead Co., Mont. Property taken over by the Montana Mines Co., which see.

BOSTON & MONTANA DEVELOPMENT CO.

MONTANA

Offices: Daly Bank Bldg., Butte, Mont., and 35 Congress St., Boston, Mass. Mines at French Gulch, Deer Lodge Co., Mont., and Elkhorn, Beaverhead Co., Mont.

Officers: Hon. W. R. Allen, pres.; W. C. Siderfin, v. p.; L. P. Benedict, sec.; W. H. Coade, treas.; preceding with exception of L. P. Benedict, J. G. Brown, Helena, Mont., C. M. McCoy, Butte, Mont., Chas. E. Miller, Wisdom, Mont., Geo. Gallup and Joseph J. Wall, Boston, directors.

Inc. 1913, in Montana. **Cap.**, \$15,000,000; shares \$5 par; 1,661,000 issued April, 1916; no bonded debt. U. S. Corporation, New York, transfer agent; Equitable Trust Co., New York, registrar. Stock listed on Boston and New York Curbs.

Balance sheet, Jan. 1, 1917, shows cash and available cash on notes and contracts, \$223,243; bills and accounts payable, \$29,763.

Property: is extensive, covering two entire mining districts, including

27 lode claims and 6 placer claims in the French Gulch district, Deer Lodge Co., Mont., and 89 lode claims in the Elkhorn district, Beaverhead Co., Mont. Company will practically control all these districts.

Both French Gulch and Elkhorn were opened in 1865, in the rush which followed the discovery of gold at Bannack, a few miles to the south, in 1862.

The French Gulch group of claims includes 1,100 acres, patented, water rights to 5 streams and 15 miles ditches and flumes. About \$750,000 is said to have been spent in development work. The claims have been opened up by shafts and tunnels, principally upon the Spain, Lucky Strike, Golden Crown and Leo. The work on the Spain consists of a 900' tunnel and 200' shaft, with 800' of drifting on the 200' level. The drift tunnel is about 350' below the apex and shows the vein to carry from a few inches to 4' of sulphide ore, averaging \$17 a ton, according to estimates made by James E. Beveridge, E. M. Ore is said to be blocked out to the value of \$500,000.

The Lucky Strike has a 200' tunnel following a contact vein reported to be 20' to 40' wide, and 100' shaft with 300' of drifting on the vein whose thickness is reported to be 35', with a paystreak of ore running from \$41.50 to \$80 gold, 5 to 7 oz. silver and 2½% copper.

The vein has been opened to the west by another 100' shaft, with 600' of drifting, showing an orebody 12' wide averaging \$18 a ton, according to the management. Eight hundred feet of tunneling on the Golden Crown claim shows a 1' to 3' vein said to carry \$8 to \$20 ore.

Besides these there are numerous smaller shafts and tunnels on the various claims in the French Gulch group.

The Elkhorn property consists of the Central and other groups, including the Idanha, Park, Aspen, Blue Eyed Annie and other mines, about 1,500 acres, all adjacent, either owned or held under bond and lease. This tract is crossed by numerous big, strong, well-mineralized quartz veins, cutting quartz monzonite and showing narrow zones of alteration adjacent to the veins. In the western part of the estate the veins are silver bearing and were opened, and high-grade ore extracted many years ago, a mill being erected on one property. The ore contains gray copper and high-grade silver sulphides and occurs in shoots whose size and extent is as yet undetermined, since the workings are shallow, seldom exceeding 100' in shafts or tunnel backs. The veins appear to belong to two distinct systems, one E. W., the other N. E.-S. W., the latter having a southerly and flatter dip and being the larger veins.

The eastern claims include the Park, a large N. E.-S. W. vein, 20' to 30' wide and dipping 75° N. W., traceable across four claims. It is formed of hard white brecciated quartz with altered granite streaks and carries shipping ore with copper and lead sulphides, having gold-silver values. Samples from a number of open cuts for a distance of 250' along the vein average 1.7% copper and 13.6 oz. silver, and the lead ore from these cuts carries 7.5% lead, 3% copper and 11 oz. silver for 4' across, the full width of the vein not being disclosed. An old 250' shaft sunk to develop this vein, encountered a fault and did not reach the vein. High-grade ore has also been found in several shallow shafts and cuts to the S. W., but the development does not permit a definite estimate of amounts.

Copper ore occurs in the Idanha or Mono vein, a great lode 20' to 30' wide with a dip of 55° to the south. This vein is parallel to the Park and ⅓ of a mile N. W. of it. It is a copper-bearing quartz pyrite vein, which resembles the older veins of the Butte district. It is developed by a 900' tunnel, giving a 250' back at the face. This tunnel cuts the ore at a point 600' from the portal and crosses the vein at a slight angle, crosscuts exposing its full width. Eight samples show an average of 2.9% copper and 6 oz. silver per ton for 10', there being a persistent hanging wall band and two other bands of sulphide ore.

The Aspen is an E.-W. cross vein, and is said to be faulted by the other system. It is 2' to 5' thick and has been exposed for 600' by a drift tunnel, showing for this distance a 12" pay streak of silicious ore carrying bornite, chalcopyrite and gray copper. This ore shows values of 0.9% copper, 40 to 60 oz. silver and \$10 gold per ton.

The Mary-Montreal vein, developed by a 250' tunnel; the Red Sky vein, opened by a 100' shaft and long drift tunnel, and the Elkhorn vein, with half a dozen shallow shafts close together, all show high-grade oxidized silver ore. The Blue Eyed Annie vein is said to carry 15' of \$15 ore on the 200' level. There are also half a dozen other veins of promising outcrop, but slight development.

The main working tunnel intersects the veins from 1,000' to 1,200' beneath their outcrops. This tunnel is 2,065' long with branches east and west from near its face that intercept the Park and Idanha veins, the total tunnel workings aggregating 5,637'. High-grade ore was cut in one vein and milling ore in the other in September, 1917.

Reports from property Dec., 1917, state that high grade ore has been cut in the Park vein.

Company controls the Southern Montana Railway, now being built as a narrow gauge line from Divide on the Oregon Short Line (Union Pacific system) to the mine on Wise river.

The company's plans are daring and ambitious and the properties long known, but heretofore unworkable for lack of cheap transportation. The property is regarded as promising and the management competent.

BOSTON & MONTANA MILLING CO.

MONTANA

Sub. of Boston & Montana Dev. Co.

Inc. in Oct., 1916. Cap., \$250,000; \$25 par; divided into 5,000 shares 7% preferred, and 5,000 shares common stock; preferred stock all sold.

Boston & Montana Dev. Co. will hold B. M. M. Co. stock in treasury, agreeing to redeem the preferred stock on Jan. 1, 1919, at \$27.50 a share, and to give one share of B. & M. D. stock as a bonus.

Company was formed to provide money for the erection of a concentration-flotation mill, to handle the ore developed in the big haulage tunnel.

BUTTE-ARGENTA COPPER CO.

MONTANA

Probably dead. See Vol. XII.

BUTTE & VIPOND GOLD MINING & MILLING CO.

MONTANA

Office: 34 Owsley Bldg., Butte, Mont.

Officers: Jas. M. Hinkle, pres.; Thos. P. Manley, v. p.; Wm. Worth, treas.; preceding officers are directors; Wm. E. Carroll, sec.

Inc. May 14, 1910, in Montana. Cap., \$600,000; shares \$1 par; outstanding 363,412 shares. Annual meeting 3d Tuesday in May.

Property: 5 claims, unpatented, at Vipond Park, Beaverhead Co., Mont., said to show free milling gold ore in fissure veins 4' to 7' wide in granite. Ore is said to have an average assay of \$10 per ton.

Development: 200' vertical shaft and 400' tunnel, with total underground workings of 680'.

Equipment: includes boiler, hoist and pumps. Little work was done in 1915. Company expects to resume operations at an early date and will then connect the tunnel with shaft workings. Value of property remains to be proven.

HECLA (CONSOLIDATED) MINE.

MONTANA

Glendale, Beaverhead Co., Mont. Mine worked by lessees until 1912, when it was taken over by the Longmaid Bros. of Helena, who installed electric power.

Property: the Atlantis, Cleves and other mines, formerly owned by the Hecla Consolidated Mining Co., which for 20 years was a large producer of silver and lead, with considerable gold and copper, latter reaching 100,000 lbs. fine copper yearly. Property paid dividends of \$2,250,000 on an original investment of \$40,000, but was bought, 1906, at sheriff's sale, for \$28,000. About 65 men employed for a year or two, but the little ore found was low grade, and the mine was again closed down, and abandoned, after some \$300,000 had been spent.

INDIAN QUEEN MINING & SMELTING CO.

MONTANA

Idle. Office: Butte, Mont. Mine near Apex, Beaverhead Co., Mont.

Officers: Thos. F. Stephens, pres., treas. and gen. mgr.; Wm. Robertson, v. p.; Thos. W. Ellis, sec.; A. H. Stephens and T. J. Ellis, directors.

Inc. July, 1904, in Montana. **Cap.**, \$450,000; shares \$1.50 par; non-assessable; issued, \$228,000.

Lands: 2 claims, 40 acres, and a 3-acre millsite, in the Utopia district, known as the Indian Queen mine. Owned jointly by this company and the Anaconda Copper Mining Co. The property shows granite, quartzite and dolomite, having 2 contact deposits between granite and limestone, of 8 to 10' average width, carrying malachite, azurite and chalcocite, estimated by management to average 8% copper, 10 to 12 oz. silver and \$1 to \$4 gold per ton. Mine was opened 1867, and has been worked intermittently by lessees.

Development: by shafts of 150' and 220', and 820' tunnel, with about 1,600' of workings.

LOST RANCH & TUNNELSITE MINE.

MONTANA

Address: Harvey Sullivan, Grant, Beaverhead Co., Mont.

Property: 9 claims in the Bloody Dick section, in Upper Horse Prairie, 5 miles from Brenner, shows gold, silver, lead, copper ore in narrow fissure veins (2" to 3') in porphyry. The ore carries brittle silver, argentite and mixed sulphides in streaks 8" to 12" thick, the ore as shipped carrying 44 to 1,300 oz. silver, 4 to 20% copper, 60% lead.

Development: totals 1,300', including 420' tunnel, with 300' back, blocking out 100 tons of ore with 39 tons stoped.

MONTANA MINES CO.

MONTANA

Formerly the Beaverhead Montana Copper Mining Co. holdings were taken over, share for share.

Ray A. Cobban, Butte, Mont., sec.-treas.

Cap., \$100,000; shares \$1 par. Company obtained a lease and bond on the old Jack Rabbit mine, in Argenta, Beaverhead Co., Mont.

Developed: by a shaft 100' deep.

Equipment: includes a gasoline hoist.

Company shipping, 1917, from the Jack Rabbit mine, shipments in April said to have returned 10% copper and 12 oz. silver.

MONTANA OREWAY MINING CO.

MONTANA

No recent returns.

Office: 522 Postal Telegraph Bldg., Chicago. **Mine office:** Briston, Beaverhead Co., Mont.

Officers: W. P. Jahnke, pres.; J. B. Scott, v. p.; Fred W. Scott, sec.; J. D. Rankin, treas.; preceding, with Frank Kimball and B. F. White, directors.

Inc. 1909 in Arizona. **Cap.**, \$1,000,000; shares \$1 par; issued, 950,000.

Property: 5 claims, patented, 100 acres, and a 25-acre millsite, known as the Straight Tip group, in the Big Hole basin. Claims show several fissure veins averaging 10' thick in quartzite and contact deposits between quartzite and serpentine. Opened by a 3,025' tunnel driven to cut a mineralized diorite dike carrying copper oxide ores, with lead and small silver and gold values.

Equipment: includes a 35-h. p. steam plant, with 1-drill air compressor. These are 6 small buildings. Mill to be erected, at last accounts.

ORIGINAL BANNACK MINING CO.

MONTANA

Office: 302 D. F. Walker Bldg., Salt Lake City.

Officers: Lorenzo Price, Jr., pres.; A. J. Bruneau, v. p.; E. F. Mobley, sec.-treas.; with W. L. Smith and Ambrose Nord, directors.

Inc. in Utah. **Cap.**, \$1,000,000; shares \$1 par; assessable; 600,000 shares outstanding. Listed in Salt Lake City.

Property: 9 patented claims in the Bannack mining district, Bannack, Beaverhead Co., Mont., adjoining the Bannack Gold Mining Co., and said to have the extension of the latter's ore zone. Credited with a production of \$350,000. Management claims there is an ore-shoot 1,800' long and from 50 to 125' in width, containing "hundreds of thousands of tons of ore, that will average \$11 per ton," values mainly in the gold content, with some copper, a statement that is considered to be a gross exaggeration.

Reported that property has been equipped with new machinery, including a 325 cu. ft. compressor and a 25-h. p. gasoline hoist.

Development work under way and shaft down 300'.

SAGINAW COPPER CO.

MONTANA

Jackson, Beaverhead Co., Mont.

Officers: Geo. North, pres.; E. M. Frank, sec.-treas.; with Elmer North and Kenneth Campbell, directors.

Inc. Jan., 1916, in Montana. **Cap.**, \$125,000; shares \$25 par.

Property: 5 claims, including the Saginaw mine, in Beaverhead Co., shows fissure veins in porphyry, with E.-W. strike, dip 35° and '3' average width. Developed by a 300' incline shaft.

Equipment: includes steam hoist. Shipped 19 cars ore in 1915, average assay, 11% copper.

SELWAY-BOND COPPER GROUP

MONTANA

Address: Herbert B. Selway, or H. A. Bond, Armstead, Beaverhead Co., Mont.

Property: 12 claims, 240 acres, situated 1½ miles from Armstead, Mont. Claims cover 4,000' on the course of several E.-W. fissure veins, 3' to 3½' wide that cross beds of quartzite, schist and limestone. The ore carries 3%-9% copper.

Development: by 130' shaft and several shallow openings, all said to show ore. Two shafts at water level show 3½ to 10% ore. An open cut has yielded 250 tons of ore.

SILVER FISSURE MINING CO.

MONTANA

Idle. Sec., A. W. S. Cochrane, 30 Broad St., New York. Mine near Polaris, Beaverhead Co., Mont., known as the Polaris mine, formerly operated by F. Aug. Heinze, carries silver, gold and copper ores, latter produced in small quantities as a byproduct.

Equipment: includes steam and electric power, and a 100-ton smelter. Shut down 1915, 1916 and 1917.

BROADWATER COUNTY

BROADWATER COUNTY MINING CO.

MONTANA

Idle. Offices: J. J. Fisher, pres., Harlowton, Mont.; Len Jobb, sec.; John A. Matthews, treas.

Inc. 1910. **Cap.**, \$225,000; shares \$1 par.

Property: 7 claims, includes the Evening Star, Copper Glance and Lombard, about 5 miles west of Townsend, on the Radersburg road. Claims show good outcrops and development is said to disclose veins 4' to 12' wide, with chalcocite assaying up to 60% copper, 6 oz. silver with gold and lead values. Management plans having property prospected and reported on with a view to resumption of operations in near future.

CASTLETON COPPER CO.

MONTANA

Address: Helena, Mont. **Mine office:** Canyon Ferry, Mont.

Officers: O. W. McConnell, pres.; F. M. Bowers, sec.; W. A. Castleton, mgr.

Inc. 1916, in Montana. **Cap.**, \$50,000; shares \$1 par. Gross earnings to Jan. 15, 1917, given as \$141,073, all from ore sales.

Mine optioned to Furnace Creek Oxide Copper Co., et al., for \$225,000 in January, 1917, and property operated by that company, which see.

Property: 5 claims, 2 patented, in Hell Gate Canyon, Broadwater county, shows a fissure vein in shale and limestone, running N. 70° E. with dip of 80° N. Ore occurs in shoots, said to be 12" wide and to average 25% copper for the 1st class ore and 2% for the 2nd class.

Development: by 3,000' of underground workings, including shafts and tunnels.

Equipment: includes compressor, hoist, pump, steam power and 50-ton concentrator.

Production: about 2,000,000 lbs. copper from 1903-1907. Inactive until

1916. During 1916 the mill treated 1,307 tons, producing 680,424 lbs. copper, concentrates stated to have averaged 27%.

Reported on by F. A. Linforth, Butte.

EAST PACIFIC MINING CO.

MONTANA

Address: Box 122, Helena, Mont.

Officers: R. A. Bell, pres.; O. N. Kessler, v. p.; W. A. Dickinson, sec.; A. L. Smith, treas.; above with N. Gage, directors.

Inc. in Arizona. Cap., \$1,000,000; \$1 par; 556,118 shares issued. Annual meeting 1st Saturday in April.

Property: 8 patented claims, 139 acres, and a millsite, $5\frac{1}{8}$ miles from Winston, Broadwater Co., Mont., and 20 miles S. E. of Helena. Claims reported to show a fissure vein in andesite, carrying gold, silver, lead values. Ore said to run \$7-\$10 a ton.

Development: by 4 tunnels, longest 3,300', and by a 134' winze. Equipment includes 75-ton mill, pump and compressor.

Property closed down several years and only worked by leasers.

ECLIPSE ARGO MINING CO.

MONTANA

Address: E. G. Hoffman, sec.-treas., New Britain, Conn. Mine near Argo, Broadwater Co., Mont. Bondholders foreclosed and in April, 1913, deeds were given to trustee for entire property. Eclipse-Argo mine sold, 1917, to Furnace Creek Oxide Copper Co., for \$300,000.

KEATING GOLD MINING CO.

MONTANA

Office: care Jesse B. Roote, Lewisohn Bldg., Butte, Mont. Mine near Radersburg, Mont.

Officers: Julius H. Barnes, pres. and treas., Duluth, Minn.; Jesse B. Roote, v. p.; A. P. Barnes, sec.; preceding with Ward Ames, Jr., and A. T. Banning, Jr., directors.

Inc. 1908, in Mont. Cap., \$2,000,000; shares \$5 par; 375,000 issued. No dividends to date. Superior State Bank, Superior, Wisc., registrar and transfer agt. Annual meeting 1st Tuesday in June. Listed on Butte Stock Exchange.

Property: 19 patented claims, about 300 acres, contains the Keating gold vein in andesite with a number of other veins, two of which have been worked. The Keating is a strong fissure vein with well defined walls and quartz-pyrite filling with more or less calcite. The ore is pyrite, frequently very coarsely, but massively crystalline, with some chalcopyrite and no visible gold, only occasionally showing gray copper, lead or zinc sulphides. The pay ore varies from a few inches to 8' in width, the average stoping width being about 3'. The value cannot be estimated from the amount of pyrite present, nor from its physical character but must be determined by assay. The ore shipped for several years past has averaged about 1% copper.

Development: to the 1,200' level has been by an inclinal shaft on the vein with a vertical southerly shaft, now idle, down to the 600' level. Cross-cutting to adjacent veins has disclosed ore but not in large amounts. The geology is described by Stone in Bull. 470, U. S. G. S., p. 93-96.

Equipment: ample for an output of 100 tons a day. As the mine is wet and the water from the old stopes very acid the pumping item is a large one.

Production: for 9 years has aggregated about \$4,500,000, but without profit to the stockholders, heavy teaming charges with freight and smelter treatment costs aggregating over \$7.00 a ton, having absorbed temporary profits. Lack of railway transportation and failure to mill the ore is therefore responsible for the present financial position of the company.

The mine was examined by Walter Harvey Weed, Jan., 1916.

In 1917, management considered the developed ore insufficient to warrant erection of a mill. A large sum would be necessary to open additional ore. The outlook is unfavorable. If the investment is a total loss, J. H. Barnes has offered to personally refund \$1 per share to those holders who desire it.

MONTANA RADERSBURG MINING CO.**MONTANA**

Townsend, Broadwater Co., Mont.

Officers: A. E. Spriggs, pres., Helena; Fred Allen, v. p. and supt., Townsend; B. E. Mathews, sec.-treas., with Hugh Broderick, C. A. Whipple, Sol. Genzberger and L. A. Sarecky, directors.

Inc. Nov., 1914, in Montana. **Cap.**, \$300,000; shares \$1 par; \$100,000 stock donated to treasury. Annual meeting, in November. Operating expenses in 1914-1915, \$10,000; receipts, none.

Property: 5 claims, unpatented, 100 acres, in Broadwater county, said to show gold, silver, lead, zinc ore in a fissure vein in lime and quartzite. Vein has a N.-S. strike, dips 20°, and is said to be 12' wide, with average assays per ton of \$2 gold, 50 oz. silver, 20% lead, 2% zinc.

Development: 500' incline shaft with 1,500' underground workings.

Equipment: includes a 40-h. p. electric hoist. Management states the company is preparing to erect a mill.

Ore reserves: management claims 200,000 tons with 100,000 tons already blocked out.

Production: said to have been \$300,000 in gold and silver produced up to the close-down of the property in 1908.

OHIO KEATING GOLD MINING CO.**MONTANA**

Address: P. O. Box 1711, Butte, Mont. Mine at Radersburg, Broadwater Co., Mont.

Officers: J. E. Oppenheimer, pres.; J. S. Cohen, v. p.; C. H. Smith, sec.-treas., with B. E. Calkins and W. M. Tuohy, directors.

Cap., \$800,000, increased Dec., 1910, from \$500,000. Company had \$113,924 debts, July, 1914, and property closed down, pending decision of stockholders to change the stock from non-assessable to assessable and payment of an initial assessment of 15 cts. per share.

Property: a promising, though small gold mine, producing some copper from pyrite ores found as shoots in strong fissure veins in igneous rocks.

Development: to 500' level, with about 3,800' of drifts and crosscuts.

Equipment: includes electric and steam pumps, electric hoist, mining cars and tools.

Fred T. Green examined the property in 1914 and estimated probable ore in mine at \$486,151, about \$116,914 worth of ore blocked out (6,680 tons) and \$90,000 worth of \$4 ore on the dump.

SUMMIT GOLD MINING CO.**MONTANA**

Succeeded by the Polaris Mining Co. (which see). Transfer made share for share, June, 1916, with payment of 25c per share.

THREE FORKS COPPER MINING CO.**MONTANA**

Copper City, Broadwater Co., Mont. Herbert G. Dunbar, supt., Three Forks, Mont.

Property: a group of claims, at Copper City, 7 miles north of Three Forks. Operations resumed Feb., 1916, shaft deepened to 400' and vein shown to dip at 45°. As shaft is in lead material from top down, the lode is said to be 200' wide. Sulphide copper ore appears at 325', or 25' above water level. Company planned extensive prospecting on 400' level.

The ore is somewhat bismuthiferous, assaying up to 20% copper, with small gold and silver values.

Equipment: includes steam power and an air compressor.

BUTTE DISTRICT**ALICE GOLD & SILVER MINING CO.****MONTANA**

Office: Salt Lake City, Utah. Former mine office was Butte, Silver Bow Co., Mont.

Officers: John D. Ryan, pres.; Wm. D. Thornton, v. p.; J. W. Allen, sec.-treas.; preceding officers, Arthur C. Carson and E. S. Ferry, directors.

Inc. May 16, 1880, in Utah. **Cap.**, \$10,000,000; shares \$25 par. Total dividends paid, from March 15, 1881, date of first, to March 15, 1888, date of last, were \$1,500,000. Control was purchased, 1906, by Butte Coalition

Mining Co. Stockholders voted, May, 1910, by a large majority, to sell the property to the Anaconda Copper Mining Co. at the ratio of 15 shares of Alice for 1 of Anaconda, and deed to property was given May 31, 1910, the company receiving in return 30,000 shares of Anaconda stock.

A suit by minority stockholders to set aside the sale, resulted in a decree annulling the sale and ordering a public resale, Nov. 10, 1915, no bid to be less than \$1,904,391. No bid being made, the sale was declared off, which under the decree confirmed the previous sale. The U. S. Circuit Court upheld this decree on Oct. 1, 1917.

Property: The Alice, Magna Charta, Curry, Valdemere, Rooney and many other claims on the Rainbow lode and its neighbors.

The mine had a 1,500' shaft, and was operated actively, 1880-1893, and intermittently thereafter. The mine was worked for its zinc ore in 1917, but closed down in October owing to scarcity of labor and because the Emma mine (Butte Copper & Zinc) could supply the demand for zinc ore.

Minority stockholders will appeal the case to the U. S. Supreme Court.

ALLIANCE COPPER CO.

MONTANA

Idle several years. **Mine office:** 3 Lewisohn Bldg., Butte, Silver Bow Co., Mont. Donald Campbell, pres.

Inc. May 19, 1906, in Montana. **Cap.**, \$400,000, fully issued, shares \$2 par. **Statement of Dec. 31, 1914,** gave debts of \$129.19.

Property: is very small acreage in the northeastern portion of the Butte district, with surface rights to sundry town lots.

Development: is by shaft, sunk jointly by the Alliance and Farrell companies, and a little ore of good grade was shipped, 1907, from the 200' level.

Stock listed on Butte Exchange.

ANACONDA COPPER MINING CO.

MONTANA

Office: 42 Broadway, New York City. **Mine office:** Hennessy Bldg., Butte, Mont. **Smelting works:** Anaconda, Mont., Great Falls, Mont., Tooele, Utah, and Miami, Ariz.

Officers: John D. Ryan, pres.; B. B. Thayer, v. p.; C. F. Kelley, v. p.; A. H. Melin, sec.-treas.; R. D. Cole, asst.-sec.; J. T. Roberts, gen. aud.; D. B. Hennessy, asst. treas. **Directors:** John D. Ryan, B. B. Thayer, George H. Church, Nicholas F. Brady, Wm. Rockefeller, C. F. Kelley, J. Horace Harding, Andrew J. Miller and H. H. Rogers.

Inc. June 18, 1895, in Montana, as successor of Anaconda Mining Co. **Cap.**, \$150,000,000, shares \$50 par, 2,331,250 issued. **Funded debt:** \$16,000,000, 2-year 5% gold notes, due March 1, 1917, were paid off in cash at maturity. Company has a very broad charter, permitting it to acquire, mortgage, lease, assign and transfer the capital stock, bonds or securities of any other corporation. National City Bank, N. Y., transfer agt.; Bankers Trust Co., N. Y., registrar. Pogson, Peloubet & Co., auditors. Annual meeting, 3rd Wednesday in May at Anaconda. Stock listed New York, Boston, London.

Dividends paid quarterly; 13% in 1901, 4% in 1902, 1903, 1904; 11½% in 1905, 19½% in 1906, 26% in 1907, 8% in 1908 to 1911, inclusive; 9% in 1912, 12% in 1913, 10% in 1914, 6% in 1915, 14% in 1916, and 12% to Sept., 1917.

Assets total \$224,013,841, and excess of current assets over liabilities, \$39,810,110. Surplus at end was \$48,395,863.

Early in 1916 the following companies were organized under the laws of Delaware, the Anaconda owning 78% of the stock of the first named and all that of the other two companies:

Andes Copper Mining Co., **cap.**, \$50,000,000; shares \$100 par; Andes Copper Co., **cap.**, \$50,000,000; shares \$25 par; and Potrerillos Railway Co., **cap.**, \$5,000,000; shares \$100 par. These companies are operating in Chile, and development so far shows 100,000,000 tons of 2¼% copper ore.

Anaconda's investments in sundry companies, not entirely owned, are valued at \$18,936,376. During 1916, \$7,968,836 was spent in purchasing 20,740 shares of Alice Gold & Silver Mining Co., making the holding 382,912 shares out of 400,000 issued; 26,100 shares of Greene Cananea Copper Co., making 56,900 held; 50,000 shares of Inspiration Consolidated Copper Co., making 200,000 held, and 188,300 shares of Butte Copper & Zinc Co.

Finances of the company are well diagnosed by W. R. Ingalls in the Engineering and Mining Journal of June 16, 1917:

Net earnings, 1905-1916, were: \$146,480,402, or \$62.83 per share, and divi-

dends paid \$35.29 per share, averaging \$2.94 annually. Earnings for 1916 were \$58,892,980, or \$25.26 per share; while those for 1917 are expected to be about \$26,000,000.

Gross Revenue: \$61,258,755 in 1913; \$51,533,659 in 1914; \$87,273,886 in 1915; \$150,540,688 in 1916.

Assets, Dec. 31, 1916, amounted to \$224,013,841, or \$96.90 per share of stock compared with \$75 in 1915.

Production—	Copper lbs.	Silver oz.	Gold oz.	Zinc lbs.
1917**.....	258,000,000
1916.....	331,893,273	11,837,769	92,099	20,906,439
1915.....	254,311,574	9,005,618	106,702
1914.....	223,720,292	8,314,116	99,651
1913.....	270,303,644	10,321,296	64,898
1912.....	294,474,161	11,014,737	61,314
1911.....	259,407,092	9,731,561	48,950
1910.....	266,608,461	9,534,888	57,260

** 233,000,000 lbs. for 11 months, and December estimated.

Production and operating costs can be summarized as follows:

	Tons Ore Mined	Mining Costs p. t.	Reduction Costs	Trans- portation
1916.....	5,589,157	\$4.420	\$3.430*	\$
1915.....	4,383,339	3.930	2.440	0.235
1914.....	3,904,883	4.134	1.612	0.274
1913.....	4,651,445	4.124	1.679	.320
1912.....	4,579,957	3.912	1.749	.308
1911.....	3,848,673	3.766	1.820	.331

* Reduction and transportation not given separately.

Copper content in 1915 averaged 2%, and costs are estimated at 17c per lb. of metal sold.

Smelting operations of company are shown in the following table:

Smelteries						
Plant:	Ore Smelted tons	Copper lbs.	Silver oz.	Gold oz.	Lead tons	Zinc lbs.
Washoe..	5,193,573	287,082,079	10,624,727	81,393	8,320,522
Great Falls..	813,496	44,811,194	1,213,022	10,706	12,585,917
Tooele...	863,952	20,041,089	5,549,777	41,009	58,988
Miami....	332,966	181,518,396	257,543	2,882
Total...	7,203,987	533,452,758	17,645,069	135,990	58,988	20,906,439

The zinc produced was from the electrolytic treatment of 196,680 tons of ore and concentrates, 54,456 tons being from other companies.

Of the 6,007,069 tons treated in Montana, 724,355 tons were from other companies. Precipitate amounting to 7,081 tons was also smelted.

Tonnage treated by the four plants in 1915 totaled 5,559,050, 320,352,417 lbs. copper, 14,165,773 oz. silver, 155,545 oz. gold, 56,501 tons lead, and no zinc save that from experimental work.

Production in 1917 was at the rate of 27,000,000 lbs. monthly, but after June, labor troubles curtailed this considerably, the works being closed for several weeks.

Refineries					
Plant:	Copper lbs.	Silver oz.	Gold oz.	Lead tons	Zinc lbs.
Washoe	8,320,522
Great Falls.....	127,620,000	1,213,022	10,706	12,585,917
East Chicago....	4,468,775	20,580	54,100
Raritan	462,666,262	18,606,866	167,024
Total	590,286,262	24,288,663	198,310	54,100	20,906,439

The East Chicago works also yielded 15,682,151 lbs. of antimonial-lead.

The figures for the refineries duplicate to a large extent those of the smelteries, the difference representing bullion that was refined for other smelters.

As company reports do not give details of operating costs, the actual cost of producing a pound of copper can only be calculated from the figures given, which gives an apparent cost of 10c per lb. of copper produced.

This cost was obtained by dividing 331,893,273 lbs. of copper into expenses of mining and depreciation, ore transport, treatment and depreciation, metal transport, refining and selling and administration, a total of \$52,266,097. But there is included in this the cost of reducing purchased ores, credits from gold, silver, and zinc. A mere study of the published figures cannot reveal the actual cost of producing copper, which is thought not to exceed 9c per pound.

In the first six months of 1917, the output was usually large, that of March being 31,300,000 lbs., and of May, 28,400,000 lbs. A disastrous fire in June lowered the output.

After June, operations were seriously curtailed by labor strikes and consequent shortage of workers, and greatly reduced production, culminating on August 25 in a complete shut down from that date to September 27. The production for the year, 1917, will not, therefore, be more than 70% of that of 1916.

The Anaconda properties for years produced 1/3 of the copper output of the United States, and 1/6 of the world's production. The splendid technical force and equipment of the company, and the excellent showing of its mines, indicated that it will maintain its pre-eminence for years to come.

Property: Company owns 1,168 acres mineral claims at Butte, including all the property formerly held by the following companies: (1) Boston & Mont. Cons. C. & S. Mng. Co.; (2) Butte & Boston Cons. Mng. Co.; (3) Red Metal Mng. Co.; (4) Washoe Copper Co.; (5) Parrot Silver & Copper Co.; (6) Alice Gold & Silver Mng. Co.; (7) Trenton (formerly Colorado) Mng. & Dev. Co.; (8) Big Blackfoot Lumber Co.; (9) Diamond Coal & Coke Co.; (10) Original Cons. Mng. Co.; (11) Colusa Parrot Mng. & Sm. Co. It acquired the International Smelting Co. in 1914, together with its subsidiaries, the Tooele Valley R. R., a lead refinery at East Chicago, the Raritan Copper Refinery. In 1915 it acquired the United Metals Selling Co., 150,000 shares Inspiration Copper, 30,800 shares Greene Cananea and 1,100 shares Mountain Trading Co. It owns the Southern Cross Gold Mines near Anaconda. In 1915 it bought the Alex Scott mine at Butte, and in 1916 the Pilot Butte mine, the latter purchase ending all existing apex litigation at the camp. Company owns 1,100,000 acres lumber land (Big Blackfoot Lumber Co.) and sawmills at Bonner and St. Regis, Mont., and 13,280 acres coal lands at Diamondville, Wyo.; Washoe, Belt and Sand Coulee, Mont. The Raven mine was bought Aug. 4, 1915, for \$65,000. Company has a 5-year lease on the Emma mine (Butte Copper & Zinc Co.) and owns 88,300 shares of the stock thereof, operated as a zinc producer and bought the Czaroma claim fraction, containing the continuation of the Emma vein for \$225,000 late in 1915. Company stopped work on the low-grade gold property, called the Porphyry Dike, near Rimini, Mont.

Options were secured on several placer claims in the S. W. part of Butte. The E. portion of the Alex Scott claim, and the Little Annie claim, were purchased for \$750,000.

The reduction plants at Great Falls and Anaconda, including the new zinc plant, are described later. The Anaconda plant produces fire and building brick and sulphuric acid, as well as copper, zinc, gold and silver, with a small amount of arsenic, and in the future probably bismuth. Through ownership of the International Smelting Co., the Anaconda owns the Tooele, Utah, and Miami, Ariz., smelters, the East Chicago and Raritan refineries (described under International Smelting Co.)

By the merger of the Anaconda and Boston & Montana, both among the six largest copper producers of the world, and the addition of a num-

ber of other mines of second and third rank in productive capacity, the Anaconda became the largest copper company in the world, employing about 12,000 men, at high wages, and with a payroll in Butte alone of over \$1,000,000 monthly, with very large additional payrolls, at its works in Anaconda and Great Falls. Since the absorption of the other mines of Butte has practically eliminated property lines, so far as underground work is concerned, and workings have been so connected as to permit the most economic mining regardless of claim boundaries, the property can be most usefully described in sections called by the familiar names used under former ownership, or by the names of the 22 operating shafts of the company.

The mines of the company produced in 1916, 5,582,077 tons of ore and 7,081 tons of copper precipitate, compared with 4,376,556 tons ore and 6,783 tons precipitate in 1915. The 1917 output is much less, owing to labor strikes and the partial shut down of the mines.

The Anaconda mine was opened, 1880, as a silver producer, but at about 150' depth the oxidized silver ores were succeeded by high-grade copper ores, mainly chalcocite and bornite, while at depth there is a large amount of enargite. Net earnings of the mine, during the 15 years, 1880-1894, are unknown, but may be safely estimated at not less than \$50,000,000. At a depth of about 1,600' quartz pyrite veins of the Anaconda showed impoverished values, there being considerable pyrite, but the fault veins showed large ore-bodies at depths of 1,200' to the deepest levels yet reached in mining which is 3,400' in the High Ore mine. The various mines of the Anaconda have immense reserves of ore of all grades.

The Anaconda mine proper has a 3-compartment shaft, 2,800' deep, connected underground with the Never Sweat, St. Lawrence, Bell, Belmont and Moonlight mines. Considerable trouble has been had, at times, with gases, from the adjoining St. Lawrence mine, and the fire has crept from the St. Lawrence into several of the upper levels of the Anaconda. The mine has electric locomotives for tramping, installed 1907, on several levels. Hoisting is by 8-ton skips, swung under double-deck cages and worked in counter-balance.

The St. Lawrence mine has a 2,600' three-compartment main shaft, connected underground with the Anaconda, Never Sweat, Mountain View and Pennsylvania mines. The St. Lawrence has been on fire since 1889, in an extensive area above the 1,100' level. The fire has been fought constantly, and walled off by cement bulkheads wherever possible, but cannot be extinguished, and must be allowed to burn itself out, though it is possible to control its progress to a considerable extent. While the fire is troublesome, it does not result in the loss of copper, as the sintered ore remaining after the burning of the sulphur can be mined later, and the mine waters are strongly charged with copper, much of which is recovered by precipitation on surface where it is run over scrap iron and "cement" copper made. The hoist has 32"x72" cylinders, raising 5-ton skips swung under single-deck cages.

The Never Sweat mine has a 2,500' three-compartment main shaft. Square-set timbering is used in stoping, as well as back filling. Some trouble has been had with fire from the St. Lawrence. The surface plant includes a 28"x48" double drum Nordberg hoist, raising 3-ton skips swung under single-deck cages.

The Belmont mine, about 1 mile south of the main shaft of the Anaconda, and 375' lower, has a new 2,400' four-compartment working shaft, the largest in the district. Connections have been made with other mines and a 1,500-ton ore bin erected. Equipment includes a powerful new hoist, with capacity of 3,500', taken from the Corra mine.

The Diamond mine has a 3,400' three-compartment shaft, developing the Corra vein and other veins to the bottom level. Equipment includes a 34"x72" Risdon hoist, operating single-deck cages with 5-ton skips.

The High Ore mine is one of the deepest in Butte, having a 3,400' three-compartment shaft, producing high-grade chalcocite. The High Ore does

the pumping for a number of connecting mines of the Anaconda, handling all water from the Anaconda, Washoe and Parrot properties. The mine has 9 electric pumps, each good for 600 gals. per min., with 1,200' lift. These are located on the 1,200', 2,200' and 2,800' levels. Relief pumps to run by steam or air are also installed on different levels.

The Modoc mine has a 2,500' three-compartment shaft, connected with the 2,800' level of the High Ore mine. The Modoc has several veins besides the one of this name, its chief ore supply coming from the veins, which are stoped up to the North Butte Co.'s boundaries on the north and to the Ballaklava mine on the south.

The Mountain Chief mine, area 1.15 acres, lies next north of the Butte-Ballaklava, and is said to have produced about \$1,500,000 worth of ore from a shallow shaft. The Mountain Chief is developed to 500' by its own shaft, but its deeper levels are worked through the High Ore mine.

The Parrot group of properties includes the former holdings of the Parrot Silver & Copper Co., 19 fractional claims, area 40.6 acres, embracing the Parrot, Little Mina, Bellona, Original No. 6 and the Oro Butte, Champion and Copper Reef mines, and various other small properties. Main shaft of the Parrot mine is now used as an air shaft, and the ground is worked from the West Steward and Never Sweat shafts.

The Little Mina 1,200' shaft is now used for air only.

The Original, Steward and Gagnon shafts are on a western continuation of the Anaconda and Steward veins, and in 1912 a continuous ore shoot of good grade, over 2,700' long, was opened in the bottom level of these mines.

The Original mine has a 3,100' shaft with three compartments below 1,100'. The mine was located, 1864, in the first stampede to the new Silver Bow diggings and was the first mine patented in Butte.

The Steward mine has a 3,200' vertical shaft, showing, in the bottom workings, a 30' vein, carrying ore of good copper tenor, with fair silver values. Equipment includes a 120' steel headgear and a 34"x72" first-motion duplex hoist, good for 3,500'.

The Pilot mine, purchased for \$1,125,000 cash, in 1916, is now part of the Badger State mine.

The Gagnon old 2,800' three-compartment incline shaft, sunk at an angle of 74°, is now used as an auxiliary shaft, all ore being hoisted through the Original shaft. The new vertical 2,800' shaft, near the west end of the property, is as yet used for ventilation only. Equipment includes a 22"x48" Dickson hoist.

The Gagnon is the westernmost of the productive copper mines of Butte. Its ores have carried more silver than those of the mines farther east and have held a number of minerals, such as hübnerite, unusual elsewhere in the camp.

The Moonlight mine, once the principal producer of the Washoe Co., has ore averaging about 1 oz. silver for each unit of copper. The Moonlight has a 1,700' three-compartment shaft, connected underground, with the Blue Jay, Never Sweat and Anaconda.

The Poulin mine, formerly owned by the Washoe Co., has a 1,200' shaft, but is operated through the 1,500' Buffalo shaft, and is to be operated for zinc ore.

The Silver Bow No. 1 mine has a 1,000' shaft, connected with the Pennsylvania, Berkeley and No. 3 mines. It has been a good producer for many years.

The Berkeley 1,500' three-compartment shaft has a 28"x48" double drum Nordberg hoist, handling 3-ton skips in each compartment.

The Rarus mine has a 2,800' three-compartment shaft, connected with the Tramway mine. The veins have divergent branches, and constitute a sort of stockwork, with an ore zone up to 300' in width, in places.

The Tramway mine, lying between the Minnie Healy and Rarus, formerly owned one-third by Butte Coalition and two-thirds by Butte & Boston, has a new shaft that is being made the central shaft for the Minnie Healy-Rarus group. The Tramway shaft, 2,800' deep, has 3 compartments,

each 5'x4'x2" in the clear. The first of the new levels in the Minnie Healy is the thirteenth, about 50' below the old 1,500' level, in which fire was burning, 1908-1909. The Tramway has numerous bodies of ore, of 5 to 6% copper tenor, with good gold and silver values, the really great orebodies coming in between the 1,300' and 1,400' levels, and on the 1,700' level there is an orebody up to 75' in width, averaging nearly or quite 7% copper.

Equipment: at the Tramway mine includes a 92' steel headgear with 12' sheave wheels. A 34"x72" Allis-Chalmers 2-cylinder Corliss hoist, with 12' drums, using 1½" round wire cables, has capacity to raise 7-ton skips from a depth of 3,500'. Each compartment has 5-ton skips changeable to 4-deck cages, for lowering men, an auxiliary hoist being used for sinking and handling supplies through the third compartment. The main surface plant of the department, at the Tramway shaft, includes a boiler house, engine house, carpenter shop, machine shop, office buildings, warehouse and changing house with hot and cold water and shower baths.

The Nipper mine of the Red Metal group, includes the Nipper, Chief Joseph, Balm and L. E. R. claims. The Nipper mine, area 15.18 acres, has 2 shafts, of 1,000' and 1,200' depth, with 12 exits, being connected underground with the Parrot, Never Sweat and Little Mina mines, and has been operated to some extent through the Parrot shaft.

The Green Mountain mine has a 2,200' three-compartment shaft, not deepened for several years.

The Mountain Consolidated mine has a 2,500' three-compartment shaft, with a good ore showing on the 1,400' level and below, and an especially good showing on the bottom level, at 2,500'. The mine has a 28"x72" Union Iron Works hoist, operating 2 four-deck cages. The East Grey Rock shaft is used for ventilation only.

The West Grey Rock mine, producing ore carrying values mainly in gold and silver, with a small percentage of copper, has a 1,826' shaft, the 1,800' being the deepest level open in 1916. The veins, though small, carry good ore, rich in silver. The Corra shaft is kept open for ventilation.

Coal mines of the company in Montana produced 325,300 tons of coal, and those in Wyoming 638,821 tons. Of this, 282,417 tons were sold. The lumber department cut 105,495,846' in 1916, and bought 30,005,910'. Of the total, 80,800,144' were sold. Stocks amount to 50,971,698'.

The Leonard has an old 1,800' shaft, used for men and supplies, and the main, or No. 2, a new shaft of 4 compartments, 2,800' deep. Mine is timbered with 12x12" and 14x14" square sets, requiring monthly an average of about 1,000,000' of mine timber, board measure. The 2,000' level shows equally large and good orebodies. Water from the Mountain View, Pennsylvania, Tramway, East Colusa and West Colusa mines drains to the 1,200' level of the Leonard and is forced thence to surface by 4 electric pumps. Valves are of pot form, and the entire water end is phosphor-bronze, columns being lined with wood, thoroughly soaked in oil, to withstand the corrosive action of the mine waters.

The Leonard surface equipment is the show plant of Butte, and is very complete, including a 152' steel headgear and 2,000-ton ore bins. The power plant has ten 250-h. p. boilers, and a 34x72" Nordberg hoist, good for 3,500' depth, raising cages with 5-ton skips swung under, with 1½" round cable. There also is a 12x14" Risdon sinking engine. Plant includes 3 air compressors, of 3,000, 4,000 and 5,000 cu. ft. capacity per minute, respectively, and 2 of 7,500 cu. ft. each.

The West Colusa mine has a 2,200' three-compartment shaft, with levels 100' intervals to depth of 1,200', and thereafter at 200' intervals. Shaft was retimbered, early in 1910, and cut down to 3 compartments, being given false sets, to obviate squeezing, which caused much trouble in the past. Mine is timbered with 10x10" and 12x12" square sets, and shows vein matter up to 400' in width. Connection is had underground with the Mountain View and Leonard mines. Surface equipment includes a 23x60" Nordberg hoist, operating 2 double-deck cages, a tramway and a 28x48" Nordberg single drum auxiliary hoist.

The East Colusa mine has a 2,000' three-compartment shaft with levels opened at 100' intervals from 300' to 700'. The mine has a vein of about 65' width, formerly averaging 3 to 4% copper, but mine is now an important producer of zinc ore for the new electrolytic zinc plant. Production is about 200 tons daily.

The Pennsylvania mine has a 2,800' three-compartment shaft, with levels at 100' intervals from 100' to 1,000', and at 200' intervals below. This property has extensive stopes above the 600' level, ore lying nearer surface than in most of the Butte mines. Equipment includes a 350-gal. electric pump on the 1,800' level, forcing water to a crosscut to the Leonard mine, whence it goes to the precipitation plant. Surface equipment includes 2,000-ton ore bins, a 34x72" Allis hoist, operating 2 1/2-ton skips and a 28x48" single drum Nordberg hoist sinking engine.

The Badger State mine in the northwestern part of the camp, develops the Badger State, Jessie, Edith May, Emily and several other veins. Mine has a 2,800' four-compartment shaft with extensive orebodies opened up on the 1,100', 1,300', 1,400', 1,600', 2,000' and 2,200' levels. The Emily shaft, auxiliary to the Badger, was deepened from 400' to 917', or 1,000' level of the Badger and connection made in 1912. Property is now an important producer of copper-and-zinc ore.

The Mountain View mine has a 2,249' three-compartment shaft, and a 2,000' air shaft. The Mountain View shows 6 veins of 8' to 60' width, ore averaging nearly 5% in copper tenor, being among the richest mines in the camp. Equipment includes 4,500-ton ore bins, a hoist good for 3,000' depth, and a 28x48" single drum auxiliary hoist.

The Tropic shaft on one of the most easterly claims of the company is 900' deep and mine is now a producing property.

The Greenleaf mine, located east of the proven ore zone of Butte, has a 1,000' shaft, with about 800' of lateral workings. Work was suspended, July, 1908, but the property is by no means devoid of promise.

The Southern Cross mine, situated in the Georgetown district, west of Anaconda, purchased 1912, for \$370,800, is a gold property developed by a 500' shaft, equipped with electrical machinery. Is extensively worked because its oxidized ore is good iron flux.

Butte hill is a network of metalliferous veins, the older with nearly east and west strike being displaced by a number of northwest fault veins cut in turn by still later northeast fault veins and these all cut by the Rarus fault. The geology is fully described in Prof. Paper 74 of the U. S. Geol. Survey, which can be had free of charge from that bureau. The matter of clearly defining apex and extra-lateral rights, under the present Federal mining laws, is one of the greatest possible difficulty, and in the past had led to litigation costing millions of dollars, all of which ultimately had to be paid out of the profits from copper produced. In 1916 the mines now owned by the Anaconda were developed by 42.06 miles of new openings, of which 2,879' was shaft-sinking.

The mine waters are highly charged with copper, and precipitation tanks have been built at practically all of the big mines merged in the Anaconda. Old scrap iron, tin cans and wire rope are used as precipitating agents, these articles commanding a standard price of 1 ct. per pound. The flow of the water in the precipitation tanks and launders is much more rapid than is the case in the large Spanish lixiviation plants. The principal plant, at the Leonard mine, cost about \$20,000, and treats water from all of the Boston & Montana mines. It has a building for drying and shipping the copper precipitate.

The air-compression plant at the High Ore mine has 8 1,200-h. p. Nordberg air compressors, each with a capacity of 7,500 cu. ft. of free air per minute. The air is compressed to 90 lbs. and is used in the hoisting engines in place of steam. A building 300' long, contains 25 receivers, each 10x30' on the ground, for the compressed air, this air-storage plant having reserve power for 8 hours. In connection with this plant is the largest steel water-tank in the world, 100' in diameter.

Electric power, supplied by the Montana Power Co., is brought from Great Falls, 130 miles, and from Canyon Ferry, near Helena, 70 miles distant, current being wired to the mine with a primary voltage of 50,000 volts, reduced to 2,000 volts in a transformer station, just outside of Butte, power being distributed to the various workings from a main station at the Never Sweat mine, the current being used at 440 volts.

The Washoe Smelter: At present this plant can treat 16,000 tons of ore per day using 500 tons coke, 900 tons coal for reverberatory furnaces, 3,000 tons limestone flux and 260 tons coal for power and heating. Sixty million gals. of water are used each day and 42,000 gals. per minute. 3,200 men are employed at a monthly wage of \$400,000 in and around the works.

The accompanying illustration shows the course of the ore through the plant. From the storage bin the ore passes through an automatic sampler; thence to the concentrator plant of 2 great buildings, each housing 4 units comprising Black crushers, Harz jigs for coarse and Evans jigs for medium and fine concentrates, 4 sets of 55x24" rolls, 8 Wilfley tables using Butchart riffles, six 8' Anaconda classifiers, six 7½"x72" Hardinge mills, each with 225-h. p. motors and using steel linings and steel balls; 6 Dorr classifiers, 4 Mineral Separation flotation machines, each having 15 agitators and 14 spitzkasten with 150-h. p. motors.

No. 1 section differs from the other 7 in having Hancock instead of Evans jigs, and 8x12' tube mills using Forbes liners and pebbles.

The coarse concentrate goes to the blast furnace; the fine to settling tanks, the flotation concentrate to Dorr thickeners, 12x50', discharging 60% solids to Oliver filters.

The slime treatment is very fully described in the *Mining World*, Mar. 4, 1916, and in *Transactions of A. I. M. E.* for 1916.

There are 2 roaster divisions, one having Evans-Klepetko type of McDougal roasters, each handling 215 tons per day of fine concentrate, fine lime rock and first-class screenings. A Ruggles-Coles dryer prepares concentrate for the acid plant and for converter. Roaster No. 2 contains 28 Anaconda roasters, a modified Wedge-McDougal furnace and treats material from the Tank house and Oliver filter cake.

The reverberatory furnace plant is in 2 buildings, each with 4 furnaces and 5 boiler sets. Each furnace is 143x23' and handles 700 tons material per day when burning 100 tons coal in 24 hours. The coal previously ground in Raymond Bros. 5-roller pulverizer to 100 mesh, is blown into furnaces through Warford burners under 16 ounces pressure. Coal dust firing is much more efficient than grate firing and each furnace develops 6½ boiler h. p. per ton coal burned, hot gases passing through Sterling boilers. Furnaces are fed from top, banking concentrates against side walls. Slag flows off continuously instead of being intermittently skimmed and matte is tapped at intervals, running into 10-ton ladles trammed direct to converters.

The blast furnace building contains two 51' furnaces, and one 87' long, each 56" wide at tuyeres. The latter handles 3,000 tons per day, the others 1,600.

Converter building contains 7 stands for Great Falls type converters. Latter are 20' diam., 17' high and weigh 450,000 lbs. with magnesite brick lining. The charge for each converter is 85 tons matte, 35 tons ore, blown to blister copper in one converter. Blister copper is poured into 2 casting furnaces, each of 140 tons capacity, with one in reserve. Air at 15 lbs. pressure oxidizes copper which is then skimmed and poled and poured into a casting machine. All handling of material is done by electricity.

The Sand leaching plant, 2,000 tons capacity, recovers the copper from sands of the old tailings dump. These sands are roasted in McDougal furnaces, cooled in a rotating drum, wetted to lay dust and conveyed to tanks 50' in diam. and 14' deep, each holding 1,050 tons, where it is leached by hot solution of salt and sulphuric acid and copper precipitated from solution by scrap iron.

The arsenic plant treats flue dust in Howell White rotary furnace, the dust-laden gas going to a Cottrell electrical treater for removal of dust, then

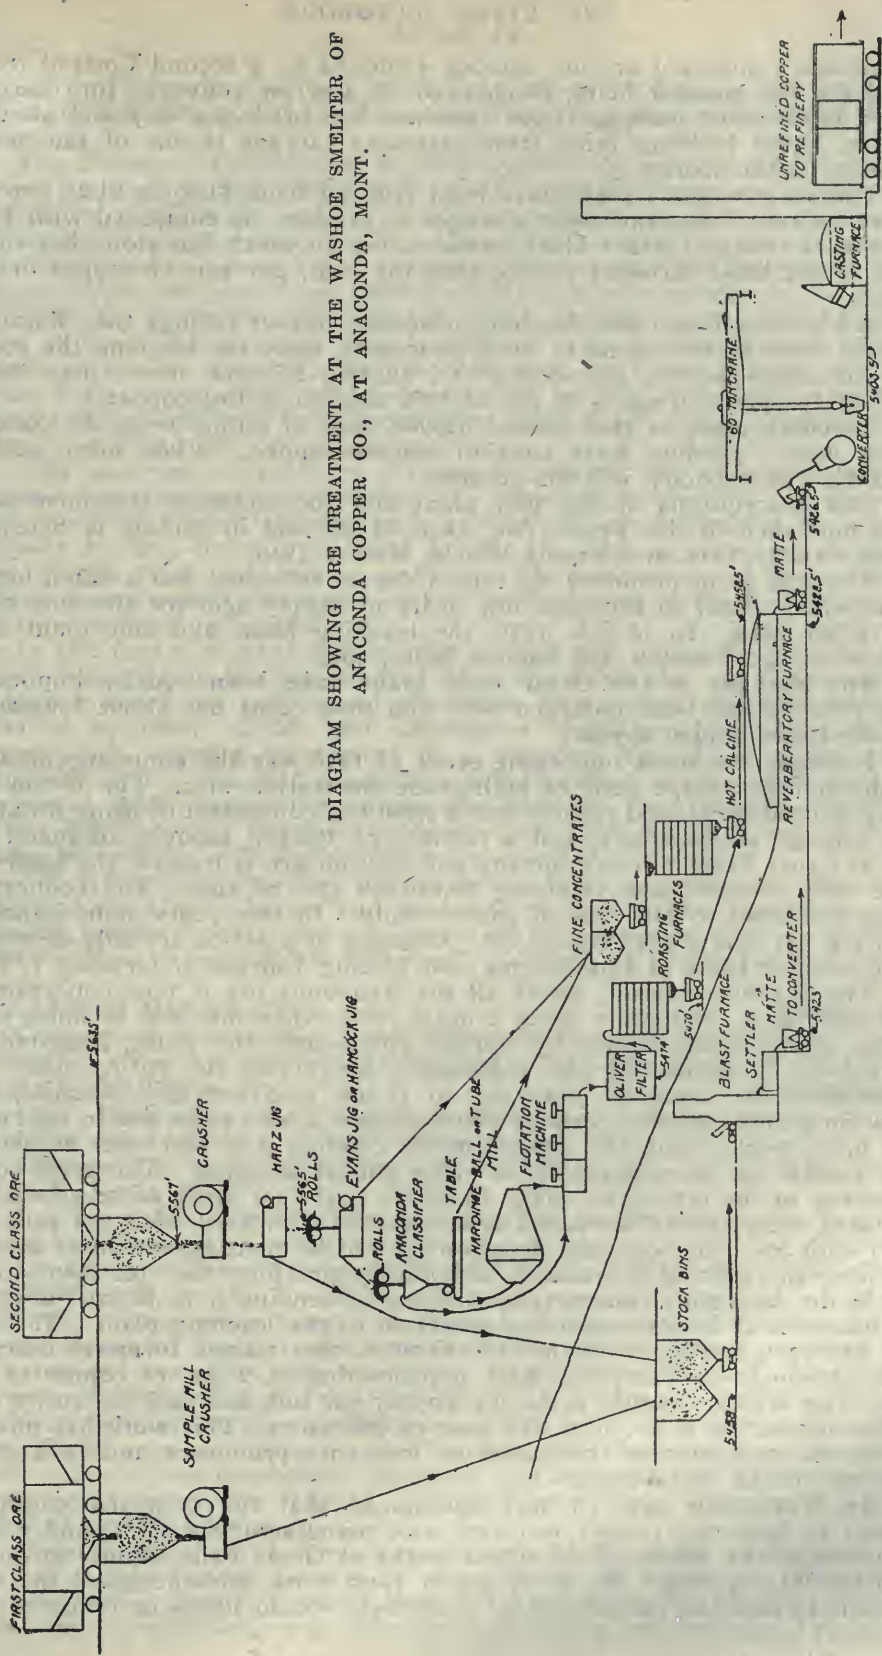

DIAGRAM SHOWING ORE TREATMENT AT THE WASHOE SMELTER OF ANACONDA COPPER CO., AT ANACONDA, MONT.

cooled and condensed arsenic trioxide removed by a second Cottrell treatment, the fine powder being discharged by a screw conveyor into barrels.

A brick plant making 11,000 standard fire brick per day and another making 15,000 building brick from retreated tailings is one of the newer features of the works.

The reverberatory costs have been reduced from \$1.75 to \$1.25 per ton of ore by coal firing and other changes in practice, as compared with \$1.35 per ton of charge for the blast furnaces, but so much limestone has to be used in the blast furnaces charge that the cost, per ton of copper ore, is higher.

It has been found that leaching produces cleaner tailings than flotation, though other factors equalize the 2 processes, since for leaching the roasting costs are 25c-30c, excavating 14c, hauling 8c, and other costs 33c, a total of 80c per ton, using 65 lbs. of 60% acid for 9 lbs. copper.

Leaching plant in 1916 treated 525,501 tons of tailing from the concentrator dump, yielding 3,648 tons of cement-copper. When more acid is available the capacity will be greater.

Full descriptions of the new plant and the technical treatment have been published in the *Trans. Am. Inst. M. E.* and in *Mining & Scientific Press*, Feb. 26, 1916, and *Mining World*, Mch. 4, 1916.

The acid plant produces 150 tons a day of 60% acid, but a much bigger plant will be built in the next few years to supply acid for the zinc plant and other uses. In March, 1916, the leaching plant and zinc plant used 75% of the acid output, the balance being sold.

The changes in the Great Falls plant have been equally important. The refinery has been enlarged 50% and now turns out about 200,000,000 lbs. of refined copper a year.

Probably the most important event of 1916 was the commencement of production on a large scale of high-grade electrolytic zinc. The 10-ton test plant showed such good results that a 2,000-ton concentrator, using flotation, was erected at Anaconda, and a refinery of 100-ton capacity of metal per day at Great Falls. Both company and custom ore is treated, the total last year being 196,680 tons, yielding 20,906,439 lbs. of zinc. The refinery is being increased to 150 tons of spelter daily. In two years plant improvements at all points cost \$13,645,908. Changes in practice are ably described by Frederick Laist in *Engineering and Mining Journal* of October 7, 1916.

The Washoe smelter, where all the Anaconda ore is now concentrated and most of it smelted, is about 2 miles from Anaconda and 26 miles from Butte, all ore being hauled by electric power over the Butte, Anaconda & Pacific R. R., owned by the company. In 1914-15 the entire plant was remodeled, the capacity increased to 15,600 tons per day, leaching and flotation plants installed, an acid plant erected, a zinc plant put in operation and brick works built, the improvements costing, it is said, over \$6,000,000. The results are so remarkable as to be almost startling. The great items of saving of the remodeled plant comprise coal dust firing of reverberatory furnaces with greatly increased capacity (583 compared with 239 tons per day) with less slag loss; the abandonment of briquetting and blast furnace smelting in favor of the new reverberatory practice; the treatment of all ore in the Anaconda concentrator, instead of sending it to Great Falls; the introduction of flotation and the operation of the leaching plant. The saving has been increased from 75% to 96%, the tailings formerly carrying 0.62% copper now carry but 0.1% copper—that is, 2 lbs. of copper to the ton. The savings amount to 8.4 lbs. copper per ton, and paid the entire cost of reconstruction in the first half year of operation. This work has put the Anaconda company in the ranks of low cost producers and is a great triumph for its metallurgists.

In November, 1917, it was announced that the company engineers expect to have the copper rod and wire manufacturing plant, under construction at the Boston & Montana works at Great Falls, Mont., in operation by May 1, 1918. W. A. Wood of New York, who designed the mill, announces that the installation of machinery would begin in January.

This will be the first rod and wire plant to be built in the west, and will mark the entrance of the Anaconda Co. into a new field, that of manufacturing.

The Chicago, Milwaukee & St. Paul system will require large quantities of wire and rods in connection with future electrification plans, as will other northwestern railroads, and to meet this demand was one of the reasons promoting the construction of the Great Falls plant, the manufacture of rods and wire at Great Falls obviating the expense incident to shipping refined copper products from eastern plants to northwest points.

With the proposed 25% increase in the capacity of the zinc reduction plant at Great Falls, which now is capable of producing around 7,000,000 pounds of spelter monthly, the proposition of establishing brass works at Great Falls is expected to be considered by the Anaconda, as freight charges east would cost the Anaconda no more than a brass product, which is made up of an alloy of copper and zinc.

This cost was obtained by dividing 331,893,273 lbs. of copper into expenses of mining and depreciation, ore transport, treatment and depreciation, metal transport, refining and selling and administration, a total of \$52,266,097. But there is included in this the cost of reducing purchased ores, credits from gold, silver, and zinc. A mere study of the published figures cannot reveal the actual cost of producing copper, which is thought not to exceed 9c per pound.

In the first 6 months of 1917, the output was unusually large, that of March being 31,300,000 lbs., and of May 28,400,000 lbs. A disastrous fire in June lowered the output and after that time operations were seriously curtailed by labor strikes and consequent shortage of miners, until on August 25th, matters culminated in a complete shut-down which lasted until Sept. 27th. The 1917 production will therefore not be more than 70% of that of 1916. September output was 2,800,000 lbs., compared with 11,175,000 lbs. in Aug.; October followed with 22,360,000 lbs., and 21,600,000 lbs. in November, with 25,000,000 lbs. expected in December.

The Anaconda properties for years produced one-third of the copper output of the United States and one-sixth of the world's production. The splendid technical force and equipment of the company and the excellent showing of its mines indicate that it will maintain its pre-eminence for years to come.

ATLANTIC MINES CO.

MONTANA

Company dissolved, May, 1916, and properties sold to Anaconda Copper Mining Co., Nov. 1, 1916. Fully described, Mines Handbook, Vol. XII.

BAMAR COPPER CO.

MONTANA

Idle. Mine office: 410 Daly Bank Bldg., Butte, Mont.

Mine office: 410 Daly Bank Bldg., Butte, Mont.

Officers: Dr. M. J. Scott, pres.; F. H. Butler, v. p.; J. B. Frisbee, sec.; M. A. R. Scott, treas.

Inc. Sept. 24, 1910, in Montana. Cap., \$1,500,000, shares \$1 par, non-assessable. Annual meeting, 1st Tuesday in June.

Lands: 12 claims, 230 acres, in the Summit Mountain district, near Buxton Switch, in the foothills of Fleecer mountain, 13 miles southwest of Butte. Claims were bought of Butte & Buxton Copper Mining Co. for 150,000 shares of Bamar stock. Lands carry several veins, of which 1, of 50' estimated average width, opened on surface for 6,000', was mined 1890, by several shallow shafts, for silver-lead ores. Country rock is granite, markedly similar to that at Butte, covered by 1' to 8' of wash, with a mineralized zone of about one-half mile width carrying 4 veins, with a diorite dike to the northward. Shallow pits and trenches show continuity of the veins, which are leached at surface, carrying a little carbonate ore below commercial tenor.

Development: a 180' two-compartment Linda shaft, connecting with the 700' Linda tunnel, a total of about 1,000' of workings. The tunnel shows a ledge, carrying a mineralized 10' streak along the footwall showing mainly pyrite, with some argentiferous chalcopyrite and occasional carbonate

stains and a highly silicious gangue. Property has yielded ore carrying 1 to 36% copper and 43 oz. silver per ton, with up to \$2.50 gold, also galena assaying 11% lead, 24 oz. silver and \$1 gold per ton.

Equipment: includes a 40 h. p. boiler, 20 h. p. hoist good for 500', 2-drill air compressor and several mine buildings. Company plans deepening shaft, drifting and crosscutting.

BLUEBIRD COMPANY (THE)

MONTANA

Office: 706 Sears Bldg., Boston, Mass.

Officers: W. B. Dickerman, v. p.; Clarence W. McGuire, sec.-treas.; with F. M. Stone and H. K. McHarg, directors.

Inc. 1893, in New York. **Cap.**, \$500,000; shares \$5 par; 66,667 shares issued.

Property: 237 acres, in Butte, Mont., shows silver, copper and zinc ores. Company has never operated its property. See W. H. Weed, U. S. G. S. Prof. Paper 74 for geology, etc.

Reported Nov., 1917, that property had been bonded by the Lee Higginson interests to a syndicate which proposed immediate reopening of the mine.

BLUE VEIN COPPER MINING CO.

MONTANA

Office and mine: 17 Owsley Blk., Butte, Silver Bow Co., Mont.

Officers: F. L. Melcher, pres.; Lewis A. Smith, sec.; W. F. Noyes, treas.

Inc. June 21, 1906, in Montana. **Cap.**, \$1,000,000; shares \$1 par.

Property: 9 claims, patented, being the Little Boulder, Valentine, Bunker Hill, Blue Vein, Blue Vein No. 1, Myrahl, North Star No. 1, the Ozone and Columbia lode claims in the southern part of the Butte district. Idle since Nov., 1909.

BONANZA-BUTTE MINING CO.

MONTANA

Care: John Kenoffel, 111 S. Main St., Butte, Mont.

Inc. June, 1915, in Montana, with Chas. H. Lane, Wm. Youlden, J. J. McCarthy, H. H. Walrath, Wm. Meyer, John and Geo. E. Johnson, directors. **Cap.**, \$500,000; shares \$1 par. Mine is under lease and bond to a syndicate of Butte people, who have already made one substantial payment on the property.

Property: the Bonanza, Bonanza Extension, and Ruth claims. 4 miles north of Butte. The Bonanza vein is opened by a 55' shaft and 300' cross-cut tunnel. A new tunnel being driven, 166' lower than old tunnel, is now over 1,000' long and has exposed 5 different but parallel E.-W. tourmaline veins, showing stringers and spots of galena. This tunnel cut (Sept. 1917) the downward extension of the oreshoot exposed in the winze sunk below the upper tunnel. The shoot shows bunches of high-grade silver-lead ore, as fine grained and dense galena, with no copper. Selected samples carry quite high silver values, but average samples are too low-grade to work even for mill feed. The known ore-shoot is too low-grade to be profitably worked. The vein is in a granite area surrounded by rhyolitic rocks, near the B. & M. reservoir, on the road to Lowland Creek. The ore carries a little gray copper, but the bulk of the black material seen in it is tourmaline and not copper glance.

BOSTON-BUTTE COPPER & ZINC CO.

MONTANA

Hon. W. W. McDowell, pres., Butte, Mont.; W. E. Reynolds, sec.-treas.

Inc. 1913, in Montana. **Cap.**, \$1,000,000; shares \$1 par.

Property: 12 patented claims at Butte, adjoining the Anaconda Copper Mining Co. property on the N. E. and South. Idle and undeveloped.

BULLWHACKER COPPER CO.

MONTANA

Reorganized as Butte Bullwhacker Mng. Co., which see.

BUTTE-ALEX SCOTT COPPER CO.

MONTANA

Dissolved. **Property:** 4½ acres at Butte, Mont., sold to Anaconda Copper Mining Co., for \$750,000 cash, on Feb. 10, 1916. Stockholders received dividend of \$10 a share, and a further small dividend is expected. There were 79,311 shares outstanding and \$80,000 in the treasury. See Copper Handbook, Vol. XI.

BUTTE & BACORN MINING CO.**MONTANA**

Owned by Great Butte Copper Co., which see.

Office: 53 Silver Bow Block, Butte, Mont. **Pittsburgh office:** 331 Fourth Ave. Chas. Hyde, treas.

In June, 1916, company was reorganized and sold its property to the Great Butte C. Co., which company paid indebtedness and exchanged 400,000 shares of its stock in ratio of 4 to 1. Stock being distributed. See Vol. XII.

BUTTE-BALLAKLAVA COPPER CO.**MONTANA****Office:** 510 Sellwood Bldg., Duluth, Minn. **Mine office:** Butte, Mont.

Officers: Gust Carlson, pres.; I. Freimuth, v. p.; with J. G. Williams, M. W. Lee, F. J. Pulford, P. A. Lignell and J. C. Morrell, directors; C. J. Zachow, sec.-treas.; J. H. Manwaring, supt.

Inc. Mar. 15, 1907, in Arizona. **Cap.:** \$2,500,000, shares \$10 par; non-assessable; fully issued. Bond issue of \$200,000, 7%, dated Jan. 1, 1916, authorized with \$95,200 issued. Listed on Boston and Butte Stock Exchanges. Paid a 50c dividend Aug. 1, 1910. Boston Safe Deposit & Trust Co., transfer agt.; Federal Trust Co., Boston, registrar.

Interest on bonds due June 1, 1917, delayed because company had no money on hand. The directors have under consideration the reorganization of the company and taking in of a new property.

Property: the Burke and Ballaklava claims, about 6½ acres in eastern part of Anaconda hill, adjoining Mountain Chief, Modoc and High Ore mines of the Anaconda Copper Co. Property willed to Bishop Carroll of the Catholic Church, who sold it for \$400,000 cash to this company.

Claims form a narrow tract 1,860' long running with the veins on the northeastern slope of Butte hill. The Burke vein crosses the claim of that name and has been worked in the Modoc mine. There are 4 veins, but one of which is generally workable. This vein is generally correlated with the Jessie, but complex geologic conditions led to a lawsuit with the Anaconda Co. for ownership of the rich orebody mined on the 800' level. This suit was settled by a division of the orebody, Nov. 28, 1913.

Development: 1,625' three-compartment shaft with 12 levels. The mine has been connected on the 800' level, for ventilation and safety, with the Modoc mine of the Anaconda, and on the 1,200' level with the West Colusa. This crosscut is used for drainage.

The veins on the 100' and 300' levels show ore carrying 5 to 8.5% copper and 45 to 60 oz. silver per ton, from which small shipments were made. The 500' level shows pyrite and a little high-grade silver ore, and the 700' level shows stringers of massive bornite, pyrite, glance and some chalcopyrite, all argentiferous. Principal ore production has come from the 800 to 1,600' levels, inclusive, ore being mainly chalcocite, carrying good silver values. The vein ranges up to 34' in width, carrying rich ore on the 800' level; the 1,200' level shows the vein up to 20' in width, with ore averaging 4 to 4.5% copper, and the 1,400' level carries 9' of chalcocite and bornite of about 7.5% average copper tenor. This vein has been stoped westward to the workings of the High Ore mine, whose stopes are continuous with those of the Butte-Ballaklava mine.

Development: by a drift from the High Ore mine, run by the Anaconda Co., opened up a fine body of commercial ore, but inability to reach it with its own shaft and a crowded capacity at the High Ore has retarded ore extraction. Above the 1,680' level the mine has been practically worked out and the proceeds used to pay off current debts without keeping up development work, with the result, that the company must now be content with a smaller production while new ore is opened up.

The 2,200' and 2,400' levels are worked from the Modoc shaft of the Anaconda Co., satisfactory arrangements having been made.

Early in 1916 a winze was sunk from the 1,600' to the 1,800' level and a crosscut run to the vein. It was reported that 24' of 3% copper ore had been found and drifting started.

Electric power is used throughout, an auxiliary steam plant being held in reserve for emergencies.

Equipment: includes a double-drum Lake Shore hoist, operated in counterbalance, driven by a 300-h. p. General Electric motor, designed to hoist an unbalanced lead of 5 tons, at a speed of 800' per minute, from a depth of 3,000'. There also are a 165-h. p. auxiliary double-drum hoist, good for 1,500', and a 10x12" auxiliary steam hoist, 2 Ingersoll-Rand air compressors, with cross-compound air cylinders, each driven by a 100-h. p. General Electric motor, and an electric station pump. The auxiliary steam plant includes a cooling tower for water.

Buildings include an engine house, office with warehouse on the ground floor, carpenter shop, smithy, and steam-heated changing house.

Production: begun April, 1910, was continued until stopped by injunction, granted the Anaconda Copper Co., in Aug., 1910. During this period shipments to the Pittsmtont smelter were about 125 tons daily, of ore assaying about 8% copper and 12 oz. silver per ton, this being the highest average grade of ore produced by any Butte mine for that year. Producing about 250 tons daily, 1916, mainly from 800', 1,000', 1,200' and 1,600' levels.

Company has had a checkered career, being successful at first, then involved in bitter litigation with the Anaconda C. M. Co., which was finally compromised; succeeded by operations which paid expenses until stopped by the big fire in the Modoc-High Ore mines in 1917.

BUTTE BULLWHACKER MINING CO.

MONTANA

John E. Corette, sec.-treas., Hennessy Bldg., Butte, Mont.; Wm. F. Love, pres.; Henry Meloy, v. p.; G. A. Lauzier and P. W. Clark, directors.

Inc. Oct. 24, 1914, in Washington. **Cap.**, \$1,000,000, \$1 par; assessable; all issued. Annual meeting 2nd Monday in Jan., at Butte. Security Transfer & Registrar Co., New York, transfer agents and registrar. Listed on New York Curb. Dividend of 1c per share declared payable, Oct. 25, 1917.

Property leased for one year to East Side Mining Co., inc. by I. A. Heilbronner and Patrick Wall, April, 1916. Lease calls for royalty of 25% and shipments of not less than 1,000 tons a month. Controlling stockholders also gave an option on 51% of entire stock at 50c a share, payments in 30 and 90 days and at intervals for 18 months.

Company is a reorganization of the Bullwhacker Copper Co., whose stockholders received share for share in the new company on payment of 15c a share in six months' installments. This wiped out a debt of \$121,200 due the sons of Patrick Clark (Clark Bros. & Klein) and put \$20,000 in the treasury. Mine was profitable when leased, but ran into debt for an experimental leaching plant. The Mines Operating Co. secured control by buying three-fifths of East Side stock at 75c per share.

Property: one claim, 20 acres, on the east side of the Butte district, near the Pittsmtont smelter. Easterly part of claim covers a zone of granite impregnated with oxidized copper ores, mined in an enormous open pit 275' across and 75' deep, from which 30,000 tons of 4.07% copper ore were extracted by lessees in 1912-13. It is a highly siliceous ore.

Development: by an old 300' shaft with crosscuts beneath the orebody at that level, also several new shafts, proving an extension of the orebody beyond the open pit.

Equipment: includes hoist, compressor plant and a 75-ton leaching plant, which as yet has not been successfully operated (described in detail by P. E. Peterson in *Mining & Engineering World*, Oct. 4, 1913, p. 584).

The orebody is extensive and, though probably not deep, has a large tonnage from which much money should be made. Deep development is expected to show veins carrying sulphide copper ore.

BUTTE CENTRAL COPPER CO.

MONTANA

Austin M. Pinkham, trustee in bankruptcy, 27 State St., Boston, Mass. Holdings sold to Wm. G. Burns and transferred to Butte Central Mng. & Mfg. Co., the operating company for the Butte-Detroit Copper & Zinc Mng. Co., which see. Company was a raw promotion, fully described Vol. XI, *Copper Handbook*. Judgment of \$50,000 in favor of D. W. Strong, Butte, Mont., had not been satisfied on July 16, 1917, as there was an appeal from the District Court, and case is pending in the Supreme Court.

BUTTE CENTRAL MINING & MILLING CO.**MONTANA**

See Butte Central Copper Co. and Butte Detroit Copper & Zinc Mining Co.

BUTTE-CONCORDIA MINING CO.**MONTANA**

Inc. Sept. 8, 1915, in Montana. Cap., \$50,000; shares 25 cts. Directors: G. F. Pitman, G. W. Deniger, G. Widmer, S. V. Wilking, 615 Phoenix Blk., Butte, Mont. E. C. Schwardner, O. J. Olson, Geo. W. Wall, F. A. Kean and Alfred Pearson, all of Butte, Mont.

No further details obtainable.

BUTTE COPPER CO.**MONTANA**

Address: care James H. Rowe, pres., 120 West Granite St., Butte, Mont. E. T. Lawlor, v. p., Brookline, Mass.; W. M. Hanson, sec.; preceding officers, R. L. Rhule and B. J. Keenan, M.D., directors.

Inc. March 20, 1906, in Montana. Cap., \$1,500,000; shares \$1.50 par; fully paid and non-assessable.

Company owns two-thirds interest in the Robert Emmet claim Nos. 1 and 2; the remaining third being owned by the Anaconda Mining Co. Company also owns approximately one-half of the Anselmo, Anselmo No. 2 and Trifle claims, balance being owned by the Hauswirth family. Property lies directly west of the Gagnon mine and is supposed to carry the extension of the rich veins mined in that property. The group has produced about \$700,000 worth of gold and silver ore, the principal development being the 700' Trifle shaft in which a large vein carrying copper ore was cut at a depth of 375'. The Robert Emmet shaft, 375' deep, is reported to show 7% copper ore.

The company has been dormant for several years and its relations to the Butte Copper Mining Co. and Butte Copper Montana are not fully understood, though the latter company is supposed to control this one through stock ownership. The president reports, May, 1917, that the property is under lease and bond to Eastern interests who are now operating and developing the ground through the Trifle shaft.

BUTTE COPPER CZAR MINING CO.**MONTANA**

Address: Butte, Mont. C. F. Murphy, pres.; R. M. Green, mgr. Cap., \$300,000.

Property: in the Butte district, developed by 300' tunnel reported to have cut the main vein at 100' depth, containing 4' of 1-6% copper ore.

Equipment: includes hoist and air compressors.

Management plans sinking 300' two compartment shaft and installing leaching plant, 1917-18. Property reported on by Arthur V. Corry.

BUTTE COPPER KING MINING CO.**MONTANA**

Address: care Beebe Grain Co., Butte, Mont. C. E. Beebe, pres.; A. P. Henningsen, sec.

Inc. April 19, 1906, in Montana. Cap., \$1,500,000; shares \$1.50 par.

Property: 3 fractional claims, 28 acres, known as the Frenchman No. 2, Rare Steak and Missouri Girl, west of the Jennie Dell mine. Idle since organization.

BUTTE COPPER & ZINC CO.**MONTANA**

Office: 61 Broadway, New York. Mine at Butte, Mont. Control of company is vested for a period of 5 years in the following trustees: A. J. Seligman, Albert Fries, J. Oppenheim. Additional directors, Chas. Wimpfheimer, A. S. Bailey and I. N. Spiegelberg.

Inc. 1904, in Maine. Cap., \$2,500,000; shares \$5 par; 411,700 outstanding; fully paid and non-assessable. Shares listed on New York Curb.

Property: known as the Emma mine, about 16 acres, is in the Butte district, 1½ miles from the main properties of the Anaconda Copper Mng. Co. Mine was formerly developed to 800' level, but due to low copper and relatively high zinc content of the ore, was idle for several years. Development resumed by Anaconda C. M. Co. by virtue of an option and lease, dated July 8, 1915, given to that company. Terms of lease are as follows: the Anaconda Co. acquired an option for 9 months on all or part of the 88,300 shares of Butte Copper & Zinc Co. stock remaining in the treasury

of the latter company, at a price of \$1 per share. The A. C. M. Co. takes a lease on the Emma mine for 5 years with privilege of renewal for an additional 5 years, and agrees to install equipment and to unwater mine to the 800' level. For expenditures actually made by the A. C. M. Co. in developing the Emma mine, the Butte Copper & Zinc Co. agrees to make payment in its capital stock in lots of 10,000 shares or fractional parts thereof, but total payment to the A. C. M. Co. for work and equipment shall in no case exceed 50,000 shares of Butte C. & Z. Co. stock. The A. C. M. Co. shall have a right to abandon the leased premises if it finds working them impractical, or impossible, in which event all machinery or equipment installed and permanently attached to the Butte property shall belong to that company. Any profits arising from sale of the output of the leased property shall be divided equally between the two companies. Further stipulations are provided in the event of a renewal of the lease.

The A. C. M. Co. has fulfilled the terms of this lease and taken up the shares optioned to April, 1916. An additional option which expired July, 1916, on 100,000 shares, has also been exercised.

Development: aggregates several thousand feet from a 1,000' shaft with levels at 200', 400', 500', 800' and 1,000'. The vein for a width of 21' on the 200' level is said to show 11% zinc ore containing fair values in gold, silver and lead. The 400' level has nearly 1,000' of workings, and a strike of 10' of 18% zinc ore reported, Oct., 1917. There is a 150' crosscut on the 523' level which does not reach the vein. The so-called 800' level (720' deep) has 795' of work with 465' in ore. The vein is 125' wide and is said to show a 20' width of 18% zinc ore. Two bands of ore were developed by drifting, an 8' band at 60' from the footwall with 185' of drifting, said to show an average of 22% zinc, 8% lead, \$2.20 gold and 12 oz. silver. The 1,600' level, which is being developed through workings of an adjacent property cut, early in May, 1917, a body of ore 8' wide, assaying 29% zinc, 12% lead and 23 oz. silver, at a place several hundred feet from where the main vein should be. This orebody is supposed to be a spur from the Emma orebody on the 1,200' level. Up to May 1, 30,000 tons of ore averaging about 16% zinc, 6% lead, 7 oz. silver, had been shipped.

With the completion of a crosscut to the Gagnon 1,800' level and development of the Emma in depth, there is reason to believe it will be a great zinc producer.

The mine now supplies the Anaconda Co. with the bulk of the ore needed by its zinc department.

BUTTE-CURTIS & MAJORS COPPER MINING CO. MONTANA

Idle. Address: Geo. D. Curtis, 35 W. Granite St., Butte, Mont.

Company organized upon a lease and bond to purchase the surface and mineral rights of the Curtis and Majors addition to the City of Butte, the bond price being \$125,000. The company went bankrupt and still owes about \$700 labor claims. There are no legal assets and having defaulted on bond payment past due, the company has no rights thereunder, save the sentimental courtesy extended by John Curtis and associates who would like to see the company rehabilitated and refinanced.

BUTTE DETROIT COPPER & ZINC MINING CO. MONTANA

Office: Dime Bank Bldg., Detroit, Mich. Is a promotion of Davison Co., 27 State St., Boston, Mass.

Officers: J. F. Austin, pres., Detroit; Louis A. Codorette, sec., Montreal; J. S. Pishon, treas., Boston; W. L. Creden, managing director, Butte, Mont.; other directors, Col. Sir Henry M. Pellatt, Toronto, Can.; Ellery C. Wright, Brockton, Mass.; Walter Coulson, Lawrence, Mass.; Jos. Renihan, of Grand Rapids, Mich.; J. E. Simpson, and Chas. A. Wilcox. Federal Trust Co., Boston, transfer agent; State Street Trust Co., registrar.

Inc. March 7, 1916, in Delaware. Cap., \$2,500,000; shares \$1 par; with 900,000 shares paid for stock control of the Butte Central M. & M. Co. This stock control, amount not stated, is the only holding of the company. As the Butte Central has a bond issue of \$300,000 outstanding as a prior lien secured by a mortgage filed in 1914 for this amount covering all

minerals, mill and surface in the entirety, of the Ophir property, besides an unsatisfied judgment of \$50,000, it is easy to see that this one claim must develop ore in large amount and great value to pay off the bonded debt and be worthy of the 900,000 shares of stock paid for control. Should the mine make good, the Butte Central M. & M. Co.'s bonds being convertible will be changed to stock, and if Butte Detroit owned all the remaining stock of its subsidiary, the Butte Central, it would get but 60% of this theoretical profit. In other words, if the Ophir mine should be lucky enough to make the extraordinary profit of \$1,000,000 a year, the owner of a share of stock in the Butte Detroit Co. would get 24 cents.

The subsidiary or operating company is known as the **Butte Central Mining & Milling Co.** W. R. Macdonald, pres., 50 Congress St., Boston, Mass.; W. G. Burns, v. p. and sec.; R. H. Gallagher, treas., 96 Franklin St., Alliston, Mass.; W. L. Creden, mgr., Butte, Mont.

Inc. Aug. 11, 1914, in Delaware. **Cap.**, \$750,000; shares \$5 par; \$450,000 issued, balance held for conversion of \$300,000 bond issue, all outstanding.

Property: the Ophir claim, 20 acres in Butte, Mont., formerly owned and developed by the Butte Central Copper Co., a rank promotion in which nearly \$700,000 was obtained from the public by near-fraud methods. Possibly one-half of this amount was spent on the property, the mill being financed by separate funds derived from a bond issue.

The Ophir lode is a big quartz and replacement vein, carrying fair silver values for several hundred feet below the surface and irregular, bunchy bodies of impure zinc and lead ore at greater depth. Some 40,000 tons of siliceous silver ore said to average \$7 per ton are reported to exist in the upper levels.

Development: by a 3-compartment shaft 1,065' deep on the Ophir with levels at 100', 200', 300' and 500', upon all of which mining has been done and on each of which considerable ore is now blocked out. Company plans to sink shaft to a depth of 2,500'; a station hoist will be put in at 1,500', and later a new surface hoist will be installed. The company expects zinc as well as copper, as a body of zinc ore running 14% was encountered on the 500' level of the mine. The owners of the mine hope the Ophir may repeat the performance of the Butte & Superior and the Emma, which latter property is distinctly a zinc mine, located a short distance north of the Ophir, and being developed by the Anaconda company. There are said to be several known veins in the 20 acres of the Ophir claim, including the two main veins known as the north and south veins, and a cross-fissure vein called the Blue vein. The mine is said to have about $3\frac{1}{2}$ miles of workings; on the 300' level two parallel veins have been opened for a combined distance of 1,100', and on the 500' level for 700'. Drifting has started on the 1,000' level to the Ophir vein.

Equipment: mine has full equipment, including 200-ton mill, a hoist good for 2,000' depth, a 330-h. p. steam plant and a seven-drill Rand air-compressor. There are seven buildings, including engine house, carpenter shop, smithy and office.

The concentrating mill, designed to treat 200 tons zinc ore daily by water concentration and oil flotation, has been altered to handle manganese ore exclusively. Mineral Separation process is used. A Sullen gyratory crusher and tube mills are used for crushing. Mill treating ore from Davis Daly Copper Co. and other custom ore.

The manager, W. L. Creden, whose experience and reputation ensure confidence, has unwatered the mine and will sink the shaft to the 2,500' level where the full extent of the ground will be explored in hopes of finding large orebodies near the Rarus fault or in the veins cut by it.

The manganese ore treated in the mill comes from various sources, the heads averaging 25% manganese; the concentrate carries 46.2 to 48% manganese with 10% silica. Extraction is about 80%. Concentrate is to be briquetted. Product is handled by Rogers, Brown & Co., New York.

BUTTE-DULUTH MINING CO.

MONTANA

Chas. M. Everett, receiver, Lewisohn Block, Butte, Mont. Mine at

Butte, Mont. Capt. A. B. Wolvin, pres.; C. M. Everett, sec.-treas.; Meyer Genzberger, Al Green, John W. Neukom, directors.

The property is under lease to Mines Operating Co., of Butte, controlled by Alfred Frank and associates, for 5 years, and has been in active operation since July, 1917.

Inc. in Minnesota. **Cap.**, \$2,500,000; shares \$10 par; 200,000 issued, balance held for redemption of \$500,000 bond issue, on which interest is overdue since Dec., 1914, and sinking fund provision not fulfilled. Company went into receiver's hands on friendly suit, March 16, 1915. Receiver's report shows \$42,368 liens ahead of bonds and a floating debt of about \$190,833 unsecured. The prior lien is mostly for labor certificates (\$39,000) issued in half payment of wages in 1914. Bankruptcy proceedings instituted in March, 1915, were set aside by the Federal Court, Sept. 29, 1915.

In May, 1916, the Court ordered the company's personal property at the mine sold to satisfy labor liens, and the receiver petitioned the court for authority to sell the entire property to satisfy bondholders and other creditors.

Property: Brundy group, at the base of the mountains east of Butte, includes the Macarona, Montgomery and portions of the Altona, Colleen Bawn and Amazon claims. These claims aggregate 67 acres and are crossed by the Columbia Gardens street car line and adjoin the Pittsmont mine on the southeast.

The ore thus far mined has come from open-cut work on the hillside back of the mill. This ore is an altered granite stained green and impregnated with silicate of copper with carbonate and oxide of copper in nests and bunches. As mined in the cut it has carried a little over 1.5% copper and with a mechanical loader can, it is said, be put in the mill for 15c a ton.

Development: underground is mainly on the Montgomery claim on which there is a tunnel 1,200' long and a 200' shaft, the latter with extensive workings at 100'. The main ore body on Altona hill, to the east of the street car line, has several tunnels, proving the downward extension of the ore on the property.

Equipment: is electrical throughout and includes a 75-h. p. Nordberg hoist and 750-cu. ft. Nordberg compressor at the Montgomery shaft.

The Butte-Duluth mill is fully described by C. F. Sherwood in the Salt Lake Mining Review, Nov. 30, 1915. Its total cost was \$725,000.

The property has merit, and aside from its leachable ores has a decided prospective value in the veins at depths of 1,000' below the surface.

In bankruptcy proceedings the former superintendent, Mr. Sherwood, said the mill ran on ore averaging 1.52% copper for 4 months before it was shut down, and that drill cores to a depth of 202' from the bottom of a 23' pit ran 0.98% to 2.70% copper. With acid at \$12.50 per ton, a saving of 38c per ton could be made in leaching costs.

Production in Feb., 1915, 120,000 lbs. electrolytic copper, 30,000 lbs. cement copper.

BUTTE EXEMPTION COPPER CO.

MONTANA

Idle. P. O. Box 143, Butte, Mont.

Inc. May 20, 1906, in Maine. **Cap.**, \$2,500,000; \$1 par; supposedly reduced to \$100,000 in 1913. Owned by Spokane capitalists, who sold control to parties represented by Chas. Mattison, attorney, Butte, Mont., the representative of the North Butte Copper Co.

Company owns Colleen Bawn, Canyon, Exemption and Mountain Spruce claims on hillside above Bullwhacker and Butte-Duluth properties and crossed by Horse Canyon and street railway to Columbia Gardens, Butte, Mont.

BUTTE & GREAT FALLS MINING CO.

MONTANA

Address: Box 1393, Butte, Mont.

Officers: E. Bryant Crump, Bloomington, Ill., pres; R. M. Green, Butte, v. p. and gen. mgr.; Allen Pierse, sec.-treas.; preceding officers, Ira N. Honnold, L. G. Diehl, J. Cohan, Wm. Richardson, J. W. Beckwith, Louis Lauritson, R. M. Sutherland, J. P. Mondloch, Walter A. Kinney and C. F. Murphy, directors.

Inc. Nov. 28, 1911, in Mont. **Cap.**, \$500,000; shares \$1 par; assessable; \$400,000 outstanding; \$32,000 was expended on development work during 1914-15. In Dec., 1916, an assessment of 5c per share was made.

Property: closed down and hoist sold, Sept., 1917. Was developing the Genevieve group of 8 claims, patented, 134 acres, in the Lost Child mining district, 3½ miles N. E. of the Butte & Superior property, Butte, Mont. Claims show Butte monzonite cut by aplite and traversed by wide, rusty veins carrying tourmaline and occasional specks of chalcopyrite. The Genevieve vein runs S. W.-N. E., with dip of 35° and reported width of 30'. It is mainly decomposed granite with clay and quartz streaks and one 3' band of quartz and tourmaline carrying occasional sulphides. Has a 1½ compartment shaft, 500' deep. The Genevieve is said to have a good showing in a 2' vein on 200' level, but average of assays is small. The Silver King claim has a 200' tunnel. Property reported on by Paul Billingsley, Jesse Cohan & Peterson, 1914.

Equipment; includes electric hoist, good for 1,500', pump, 10-drill compressor, mine buildings and dwellings.

Property regarded as a prospect of doubtful merit.

BUTTE HERCULES MINING CO.

MONTANA

Address: Geo. de Snell, sec., No. 1 North Montana St., Butte, Mont. Stock listed and quoted at 1c a share on Butte Public Stock Exchange. Is a dormant corporation, fathered by Passmore & Co. of 25 W. Granite St., Butte.

Owens 4 patented claims in the zinc-silver area on the western edge of the Butte district, near Rocker.

BUTTE HILL COPPER MINING CO.

MONTANA

Address: Harry A. Frank, sec., Daily Bank Bldg., Butte, Mont.

Officers: Maurice Eisenberg, pres., 61 Broadway, New York City; J. W. Murphy, v. p.; preceding officers, J. W. Murphy, Duncan MacRae, W. P. Cary, W. H. Hall, Thos. Driscoll and John S. Davics, directors.

Inc. April 18, 1906, in Montana. **Cap.**, \$5,000,000; shares \$5 par; \$2,950,000 issued. Annual meeting, fourth Saturday in January.

Property: 11 claims, 173 acres, in an undeveloped district in granite area, north of Walkerville. Has a 200' shaft, cutting a vein of 40' estimated width, showing stringers and bunches of ore assaying up to 4% copper and 19 oz. silver per ton. Has not been worked for several years and power plant is dismantled. Property is well located, has strong veins and is much nearer developed ground than it was when operating.

BUTTE LODGE EXTENSION MINING CO.

MONTANA

Idle. Address: care C. J. Kelly, treas., 805 W. Broadway, Butte, Mont.

Officers: Chas. S. Warren, v. p.; John M. Murphy, sec.

Inc. April 28, 1906, in Mont. **Cap.**, \$500,000; shares \$1 par.

Property: 4 claims, known as the St. Angus group, 12 miles N. E. of Butte, has a 150' shaft with a crosscut showing 2 veins.

BUTTE & LONDON COPPER DEVELOPMENT CO.

MONTANA

Office: 46 East Broadway, Butte, Silver Bow Co., Mont.

Officers: W. W. McDowell, pres.; John D. Haines, v. p.; W. E. Reynolds, sec.; E. S. Passmore, treas.; preceding officers, Fred Whiteside, Guy W. Stapleton, H. B. Byrne, W. S. Cairns, J. A. Sheldon and Maurice Eisenberg, directors.

Inc. Jan. 1906, in Arizona, as Butte & London Copper Co. **Cap.**, \$5,000,000; shares \$5 par; non-assessable; \$4,973,990 outstanding. Annual meeting, third Tuesday in January.

Property: 113 acres, known as the Greendale placer claims, lying immediately north of the Pittsburgh & Montana in the valley of Silver Bow Creek, east of Butte. Property claimed by the management to carry the possible extension of the Rainbow lode. Forty acres of the property is said to be valuable for townsite purposes.

Development: 1,350' three-compartment shaft, 2 crosscuts on the 1,100' level cutting 9 veins, none carrying ore of commercial value, except a streak that gave assays of 2% copper, 50 oz. silver, and \$2 gold, per ton.

The company agreed Dec. 24, 1912, to accept a contract with Thos. F. Cole, for the transfer of all its property to a new company, the Greendale Exploration Co., with a capitalization of \$200,000, to be organized by him. The terms of the contract provide that in consideration of sinking the shaft to 1,600' level, running crosscuts north and south 2,500' the entire width of the property, and doing other stipulated development work, Mr. Cole is to receive 51% of the stock of the new company, one-half to be paid as the work progresses, the balance remaining in escrow until the work is finished. Mr. Cole spent \$300,000 on this development, and contract was completed. Failing to find shipping ore in commercial quantities the property was closed down.

BUTTE MAIN RANGE COPPER MINING CO.

MONTANA

See Tuolumne Copper Co., which controls and operates the Butte Main Range property.

BUTTE-MILWAUKEE COPPER CO.

MONTANA

Assets sold 1914 to Butte & New York Mng. Co. a Butte & Superior subsidiary, for \$500,000. Stockholders were obliged to exchange their stock at the rate of 2½ old for 1 new share, or 30c cash per share. Company paid a liquidating dividend of \$0.3278 per share in July, 1914, and is now in course of liquidation. Fully described under Butte & New York Mining Co.

BUTTE MINE EXPLORATION CO.

MONTANA

Officers: Clinton C. Clark, pres., 408 West Granite St., Butte, Mont.; C. P. Connolly, sec., at last accounts.

Inc. 1901. **Cap.**, \$250,000; shares \$1 par.

Is no relation to the company of same title formerly holding the Six O'Clock property, in Butte, or to the Butte Mines Exploration Co., formerly having property at Tecoma, Box Elder Co., Utah. Property is the Pacific quartz lode claim, on which considerable work was done, 1901-02. Company practically defunct, but property reported under option to the North Butte Mng. Co.

BUTTE-MINNESOTA MINING CO.

MONTANA

Officers: Peter E. Peterson, pres.; Angus McLeod, Butte, Mont., William Vuoti, J. E. Porthan, A. W. Havela, John Kukko, Emmanuel Autio, John Lampi, Ade Herranen, directors. Mines near Butte and Helena.

Inc. June, 1912. **Cap.**, \$750,000; shares \$1 par.

Owens 6 claims, about 1 mile south of Rocker, at the western end of the Butte district. Ground shows well-defined veins, 1 of which is traceable for 3,000' across the surface. The country rock is granite and part of the same mass as that in which the mines of Butte occur.

Development: 400' tunnel on the vein and an incline shaft 35' deep sunk on the vein disclosing well-defined walls, 6' apart, from which ore has been taken carrying 0.5% copper, 8% lead, 12 oz. silver, and \$28 gold, per ton. The property is equipped with a gallows frame, boilers and hoist.

Late in June, 1913, the company bought a group of mining claims in the Wolf Creek district, 40 miles east of Helena, Mont. Reports state that development on these claims shows more than 100,000 tons of ore assaying 4 to 25% copper blocked out. A mill was to be built, but company has not reported any recent work.

BUTTE MONITOR TUNNEL MINING CO.

MONTANA

Idle. Address: care C. J. Kelly, Daly Bank & Trust Co., Butte, Mont.

Inc. in Montana. **Cap.**, \$3,750,000; shares \$1 par; 1,013,000 in treasury; 2,736,500 issued.

Lands: 8 claims, the Monitor, Sunlight East, Fraction, Alta, Emporium, Ironside No. 1 East and Burner patented claims in the eastern section of the Butte district. The usual Butte monzonite is cut by a great quartz porphyry dike on this group; the veins run E.-W. and are of the quartz vein type with wall alteration.

Development: by the 1,412' Monitor tunnel, which passes for 445' through other property. In the Sunlight claim 2 veins, the No. One, 5', and No. Two, 4' wide, are cut; the 4' Sunlight discovery vein is cut 250'

beyond. A winze on the vein at 700' from the portal showed 12' of ledge matter, and according to John R. Ryan, assays 6% copper and 4.2 oz. silver per ton.

A 230' crosscut tunnel on the Burner claim cuts a 12' vein, said to carry 10" to 20" band of shipping ore in a 30' winze, from which 22 tons shipped returned 8% copper, and 8½ oz. silver, per ton. The remainder of the vein is reported to average 1.5% copper, and 1.4 oz. silver, per ton.

BUTTE & NEW YORK COPPER CO. . . MONTANA

Subsidiary of the Butte & Superior Mng. Co., which see.

BUTTE RAMSDELL MINING CO. MONTANA

Address: Care Patrick Wall, Hirbour Block, Butte, Mont.

Inc. 1917, in Montana.

Owens the Maud S., or Ramsdell, claim, and has lease on ½ of Lizzie and the Red Chief claims of the Davis Daly Co. The Ramsdell claim has apex of vein on which a new shaft, 150' deep, Oct. 30, cut 9' of ore.

BUTTE & RED EAGLE COPPER CO. MONTANA

Officers: Fayette Harrington, pres., Missoula, Mont.; Jas. A. Canty, sec.-treas., Butte, Mont.

Inc. May, 1907, in Montana. Cap., \$5,000,000; shares \$5 par.

Lands: 7 claims, patented, S. E. of the Butte & Bacorn and N. E. of the Butte and Superior, the Red Eagle claim having a 400' tunnel, showing a little ore. Shut down since 1907, but company still alive.

BUTTE STANDARD COPPER MINING CO. MONTANA

Address: Care H. G. Klenze, Box 377, Butte, Mont.

Officers: H. G. Klenze, pres.; A. M. Stephens, v. p.; J. W. MacLane, sec., Butte, Mont.; with J. L. Templeman and H. H. Griffith, directors.

Inc. in Montana. Cap., \$1,000,000; shares \$1 par; 350,000 shares in treasury. Stock being offered at 12½c, August, 1917.

Owens 2 claims in the northern outlying section of the Butte camp and 2 patented claims at Amazon, Jefferson Co., Mont., both partially developed and said to carry commercial orebodies. Selling stock in 1917.

BUTTE-SUMMIT COPPER CO. MONTANA

Address: Supt. Hornet Mine, Hornet St., and Excelsior Ave., Butte, Mont.

Officers: Ed. A. Blomgren, Geo. P. Arnold and Wm. H. Smith, all of Lewistown, Mont., directors.

Inc. April, 1916, in Montana. Cap., \$3,000,000; shares \$10 par.

Property: the Hornet claim on the Yellow Jacket vein and a second vein 180' to the south.

Development: by 200' shaft, with levels at 100' and 200'. Oreshoot on 100' level. Yellow Jacket 13½' wide, with 4' of ore assaying high in lead and silver, with over 20% zinc. On the 200' level 7' of commercial ore was opened Oct., 1917, on downward extension of shoot cut on 100' level.

BUTTE & SUPERIOR MINING CO. MONTANA

Office: 25 Broad St., New York. Mine office: Butte, Mont.

Officers: N. Bruce MacKelvie, pres.; D. C. Jackling, v. p. and managing director; K. R. Babbitt, v. p. and gen. counsel; A. J. Ronaghan, sec.; C. W. Peters, treas.; N. Bruce MacKelvie, K. R. Babbitt, D. C. Jackling and F. L. Ames, directors. J. L. Bruce, gen. mgr. Angus McLeod, mine supt. J. T. Shimmin, mill supt. C. Bocking, asst. mgr. and cashier.

BUTTE & SUPERIOR MINING CO.

HAYDEN, STONE & CO.

Members New York, Boston and Philadelphia Stock Exchanges.

25 Broad Street, NEW YORK

87 Milk Street, BOSTON

Inc. Oct., 1906, in Arizona. **Cap.**, originally \$6,000,000; shares \$5 par; reduced Dec. 3, 1910, to \$2,500,000; shares \$10 par; non-assessable; increased Sept., 1912, to \$3,500,000. Outstanding Dec. 31, 1916, \$2,901,872. Outstanding bonds, Dec. 31, 1915, none. Stock listed on Boston, New York and Butte Exchanges and on the Paris Bourse. Name changed May, 1916, and new stock issued.

Controls the North Butte Extension Development Co., through ownership of 80% of the stock; also controls the Butte-New York Copper Co., through ownership of more than 55%. Equitable Trust Co., New York, and Old Colony Trust Co., Boston, transfer agents; Guaranty Trust Co., New York, and National Shawmut Bank, Boston, registrars. Annual meeting 3rd Friday in April, at New York.

Comparative General Balance Sheet: Years ending Dec. 31:—

Assets—	Prop.,	Invest's.	Current	Deferred	Total.
	Equip. & Devel.			Charges	
1916.....	\$5,245,260	\$692,063	\$4,393,668	\$542,163	\$10,882,153
1915.....	4,458,133	574,295	5,267,080	486,129	10,785,638
1914.....	4,190,872	338,567	1,269,633	274,330	6,073,402
Liabilities—	Prem. on Sales Undiv.				Total
	Cap. Stock	Current	Cap. Stock	Profits	
1916.....	\$2,901,872	\$1,155,337	\$1,214,222	\$5,610,722	\$10,882,153
1915.....	2,726,970	606,317	1,214,386	6,237,965	10,785,638
1914.....	2,726,089a	111,384	1,213,985	2,021,944	6,073,402

(a) Includes \$5,900 first mortgage bonds.

On September 30, 1917, net quick assets were \$2,425,268, of which \$1,078,341 was cash.

Dividends: in 1914, \$611,908; in 1915, \$4,908,115, in 4 quarterly payments of 75c each and extra payments of \$15 per share; in 1916, \$9,490,472 in quarterly payments, 2@75c, 2@\$1.25, ea. and extra of \$30.00 per share; 1917, paid \$1.25 quarterly, for first three quarters, \$1.25, extra for first two, and Red Cross of 40c, a total of \$6.65 for the year. No further dividends can be paid until litigation with Minerals Separation Co. is concluded.

Property: 27 mining claims, 164.90 acres, about 2 miles N. E. of the business section of Butte, with the exception of 4 claims, Peake, Parker, Prescott and Pardee, which lie about 3 miles N. W. of Butte. In addition, fractional interests equivalent to 8.88 acres are owned in 11 claims, 60.3 acres, and surface rights only for 34.15 acres. The North Butte Extension Development Co. owns 4 claims and a fractional interest in a fifth, amounting in all to an equivalent area of 29.48 acres.

Geology: ore consists of zinc blende, galena and small quantities of pyrite and chalcopyrite occurring with gangue material, mostly quartz, silicified granite, rhodochrosite and rhodonite as vein replacement of the granite. The ore occurs in parallel or branching ore shoots ranging in thickness from narrow stringers up to orebodies as much as 100' wide within the limits of a broad general zone of mineralization known as the Rainbow Lode. Near the surface the commercial ore consisted principally of silver ore, which was mined in the early days of Butte mining. The commercial zinc ore shoots as developed during recent years occur downward from approximately the 500' level, and as far as disclosed by present development increase in horizontal area and in importance as greater depth is gained. Ore actually blocked out ready for mining is maintained at about one million tons, greater development than this being inadvisable owing to the difficulty in maintaining developed drifts and crosscuts for any considerable period before actual mining operations are to be conducted.

The ore carries from 10% to 30% zinc, averaging about 18% zinc, 1.25% lead, 0.2% copper, 8 oz. silver and 30c gold. The small amount of iron, lead and copper contents permits of the production of a good grade of zinc concentrates, but the very fine dissemination of the mineral requires fine

grinding for efficient concentration, and most of the zinc mineral is afterwards recovered by oil flotation.

Development: to end of 1916 was chiefly from the Black Rock shaft. Considerable work was done on the Sellers claim of the Butte-New York and fair bodies of ore developed. All concentrating operations subsequent to June, 1912, have been conducted in the mill of the company, located upon its property immediately adjoining the mine. The Black Rock shaft is now 1,900' deep, with considerable openings down to that level. Work in 1916 totaled 21,838', making 102,445' in all.

The October, 1917, reports show that on the 1,800' level the Rainbow orebody in the Black Rock mine continues into the Four Johns claim, the drift on that level extending in the latter property about 700' east of the end line of the Black Rock, the shoot maintaining a width of about 55' with the grade around 17% zinc with from 8 to 9.5 oz. silver.

The mill has been developed from an originally designed capacity of 1,000 tons per day to the present capacity of 1,800 tons per day, and zinc recoveries range from 93% to 96%, depending upon the tonnage treated and the character and grade of ore and concentrates.

Part of the concentrates are sold under contract to the American Metal Company for treatment at their smelters in the Oklahoma gas fields. The balance of the concentrates are treated in plants of the American Zinc, Lead & Smelting Co. in the Kansas gas fields under a toll basis, though small quantities have been disposed of by sale to various zinc retort smelters throughout the country or to the Anaconda Copper Mining Co. for treatment at its electrolytic plant at Anaconda, Mont.

Figures for the production of the property prior to 1913 are not available, but the results of operations since that time are as follows:

	Tons Milled	Oper. Cost	Tons Concts.	Assay Concts.	Lbs. Zinc Concts.	Zinc Rec.	Aver. Price	Net Total	Profit per share
1917(a)	275,672	\$7.25	80,191	46.82%	75,101,771	88.57%	\$9.60c	\$4,316,549	\$7.08
1916...	627,370	6.34	171,747	52.87%	181,624,842	93.10%	12.63	8,873,446	30.57
1915...	522,300	5.10	158,171	53.61%	165,382,921	93.00%	12.34	9,125,947	33.47
1914...	327,210	5.33	101,383	53.16%	108,644,120	88.71%	5.04	1,417,128	5.21
1913...	296,940	5.70	106,443	49.00%	102,997,916	88.43%	5.52	942,988	3.47

(a) First half of year.

The suit against the company over the use of the flotation process of concentration is still in the courts. An adverse decision by Judge Bourquin in September, 1917, has been appealed, but the Court enjoined the company from disposing of its assets, excepting ordinary current business expenditures, until termination of the suit. The order prevents further distribution of dividend payments.

The apex controversy with the Elm Orlu Mining Co., owned by Hon. W. A. Clark and his son, was decided by the U. S. District Court in the latter's favor, but giving the Butte & Superior Co. all rights to the Rainbow lode east of the point where it enters the Black Rock claim; the company thus loses only the westernmost 301' along the vein claimed by it, but subject to the prior rights of the Pyle vein of the Elm Orlu company below its junction with the Rainbow. This will be argued in 1918.

In 1912 the controlling interests of the company passed into the hands of Hayden, Stone & Co., who have been closely identified with the Utah Copper Co., Chino, Ray and other of our greatest and most successful mining companies, thus ensuring ample finances and competent direction.

Labor conditions at Butte resulted in a large decrease for the third quarter of 1917. From 60,106 tons treated, the net profit was only \$95,320, against \$947,901 in the same period of 1916. In November, the output was 45,000 tons of ore, yielding 12,000 tons of 49% zinc concentrate. Operations were 88% of normal.

In Nov., 1917, a syndicate, known as J. L. Bruce Trustees, was formed to acquire for the Butte & Superior 200 acres of zinc-lead ground W. of the Emma mine of the Butte Copper & Zinc Co.

Butte-New York Copper Co.

Controlled through stock ownership by Butte & Superior Mining Co.

General office: 25 Broad St., New York.

Officers: M. M. Ferguson, pres.; R. J. Schaefer, v. p.; W. G. Sargent, sec.-treas., New York; M. M. Ferguson, L. B. Holloway, Philip Lawrence, G. M. Minton, A. J. Ronaghan, W. G. Sargent and R. J. Schaefer, directors. Annual meeting 2nd Monday in January.

Inc. Oct. 17, 1906, in South Dakota. Previously a holding company controlling over 95% of the capital stock of the Butte-Milwaukee Copper Company. In 1914 it purchased all the assets of that company, comprising four claims in the Summit Valley mining district, Silver Bow Co., Mont., adjoining the property of the Butte & Superior Mining Co., and three claims in the Argenta mining district, Beaverhead Co., Mont. Claims aggregating 53 acres. **Cap.**, authorized, \$1,000,000; outstanding, \$582,172; par value \$1. The former authorized capital stock was \$4,000,000, consisting of 800,000 shares of par value of \$5 each; the stockholders, however, voted April 16, 1915, to change the par value from \$5 to \$1 per share, and to increase the amount of stock by 300,000 shares, making \$1,100,000 authorized. The Butte & Superior Mining Co. owns \$323,655 of the stock. Stock transferred at company's office. Registrars: Empire Trust Co., New York. No dividend paid.

Bonded Debt: \$150,000 First Mortgage Convertible Income Gold 6s; dated June 1, 1916; due June 1, 1925; int. J & D 1 (up to and including June 1, 1920, interest is payable only out of income at rate of 6%, but is cumulative for that period; thereafter interest will be paid unconditionally). Coupon, \$100, \$500, and \$1,000. Authorized, \$500,000. The unissued bonds are reserved for future requirements. Convertible at any time prior to maturity into stock of the company at par. Subject to call on and after June 1, 1918, at 105 and interest. First offered (\$150,000) to stockholders of record April 19, 1915, at par, on the basis of \$100 bond for each 400 shares of stock held. Normal Income Tax deducted from interest.

Holdings consist of 4 claims, patented, known as the Pollock, Colonel Sellers, Florence and Bird, lying immediately north of the Butte & Superior, and 3 lode mining claims in the Argenta district, Beaverhead Co., Mont.

The Colonel Sellers claim has a promising surface showing with strong, persistent quartz veins in granite. The Butte & Superior completed the sinking of the 1,200' Milwaukee shaft on Colonel Sellers claim and connected it by crosscutting with 1,200' level of Black Rock mine. This work was continued beyond the Colonel Sellers shaft so as to open the Mastodon vein on the Florence claim. The Milwaukee shaft is well equipped with power plant and hoist. The Butte & Superior Co. has spent \$24,000 in development work on the Butte-Milwaukee property and in return received 205,000 shares of the capital stock of the Butte & New York Co. Development work said to have proved good zinc orebodies.

Surface outcrop on Bird claim is 100' wide and resembles outcroppings of the typical fault veins of the district.

The Pollock mine has 4 veins, 2 more or less developed by a short tunnel and a 730' three-compartment shaft. A silver vein was opened on the 300' level and mine is said to have produced, years ago, about \$400,000 worth of ore, with values mainly in silver and gold, from above the 200' level. A little ore running 2% copper and 15 oz. silver per ton, with small gold values was produced, 1906.

BUTTE & ZENITH CITY MINING CO.**MONTANA**

Office and mine address: 30 E. Broadway, Butte, Mont.

Officers: I. Freimuth, pres.; G. T. Paul, v. p.; Sol. Genzberger, sec.; John Killorin, treas.; preceding officers, W. D. Gibson, C. O. Baldwin and L. S. Loeb, directors. Wm. D. Gibson, supt.

Inc. Oct., 1912, in Montana. **Cap.**, 300,000 shares; \$10 par, issued. In 1915, 50,000 shares of treasury stock were offered for sale at \$3 per share to provide funds for further development work.

Property: 320 acres patented ground, all in a compact group in Secs. 18 and 19, T. 3., R. 8 W., about 2 miles west of the developed section of the Butte district and a short distance south of Silver Bow junction, where 4 railroads meet. Ground shows Butte granite and aplite cut by numerous strong and persistent quartz veins and also the later fault veins which in the copper district of the Butte camp have proven so productive.

Development: by shaft, 1,500' deep, Oct., 1917, with a crosscut at 460' and crosscuts at 1,000' level showing good indications, with all surface veins in place. Shaft is being sunk to 1,500' level before developing the veins by drifting. Company hopes to finish this work in 1917. The veins show occasional values at the surface, but not in commercial quantities. The quartz veins are of the silver type, but the cross veins are similar to the copper veins of Butte. Samples taken from the shaft are said to assay 2% copper and 4 oz. silver. Equipment includes electric hoist, air compressor, and new electric pump of 400 gal. capacity and 1,000' head, which has been installed on the 1,000' level.

Property considered promising, and the work a meritorious mining venture.

CAYUGA DEVELOPMENT CO.

MONTANA

Office: 616 Lyceum Bldg., Duluth, Minn. **Mine office:** Divide, Silver Bow Co., Mont.

Officers: C. T. Fitzsimmons, pres.; Nels Anderson, v. p.; E. J. O'Rourke, sec.; Max P. Shapiro, treas.; John Helehan, gen. mgr.; preceding officers, Jacob Stein and Jas. L. Norman, directors.

Inc. April 4, 1910, in Minnesota. **Cap.**, \$150,000; shares \$1 par, non-assessable; issued, \$65,000.

Lands: 4 claims, 80 acres, in the Fleecer district, 15 miles southwest of Butte, near the Oregon Short Line railway. Property shows granite, with dikes of porphyry, aplite and quartzite, carrying veins with a generally E.-W. strike, main vein being estimated to range 50 to 125' in width, traceable for 2,000', carrying cuprite, melaconite, malachite, azurite, chrysocolla, chalcopyrite, chalcocite and bornite.

Development: by 100' tunnel, and shafts of 45', 125' and 150', showing ore assaying up to 30% copper, and from a trace to 70 oz. silver per ton. The 125' shaft has crosscuts of 150' and 180', cutting the vein for an apparent width of 30'. The vein at this depth is nearly vertical. Idle, and no work reported done since 1912.

CLARK MONTANA REALTY CO.

MONTANA

Address: 20 Exchange Place, New York City.

Is a close corporation, controlled by Hon. W. A. Clark, as a holding company for the Ophir mine, Utah; $\frac{1}{2}$ interest in the Elm Orlu mine, Butte; $\frac{1}{2}$ interest in the Timber Butte Milling Co., Butte, Mont.; Sunset mine, Wallace, Idaho, and in general all the Clark properties in the north-western States.

COLUSA-LEONARD EXTENSION COPPER CO.

MONTANA

See Tuolomne C. M. Co.

Officers: W. W. McDowell, pres., 804 W. Park St., Butte, Mont.; Guy Stapleton, v. p.; Meyer Genzberger, treas.; W. E. Reynolds, sec.; preceding and J. Kaufman, directors.

Inc. Oct. 1, 1906, in Arizona. **Cap.**, \$5,000,000; shares \$5 par.

Property taken over May, 1916, by the Tuolomne C. M. Co. under an agreement whereby the T. C. M. Co. acquires a 51% interest in the C. L. property for sinking shaft from present depth of 800' to 1,600' and driving crosscuts on the latter level to the N. and S. boundaries of the group.

Property: 5 claims, patented, 42 acres, consisting of the Maggie placer, Golden Hematite, Little MacQueen, Undine and Snow Bird placer, about a mile east of the Colusa and Leonard mines, and near the Pittsmtont shafts of the East Butte Copper Co. There is an 800' three-compartment shaft on the Little MacQueen claim lying about the center of the group, that has cut several small stringers of ore assaying up to 9% copper, but none of commercial size, and there is a 7' vein of 2% ore carrying a

14" paystreak said to range 8 to 10% in copper tenor, with small gold and silver values and some lead and zinc.

Equipment: includes a good air compressor, a temporary hoist and a 400-gal. electric pump.

Property reopened August, 1916, and operated as a unit of the Tuolomne Co.

COLUSA-PARROT MINING & SMELTING CO.

MONTANA

Office: 503 Miner Bldg., Butte, Silver Bow Co., Mont.

Officers: Hon. Wm. A. Clark, pres.; Wm. C. Siderfin, v. p.; W. C. Messias, sec.

Inc. Nov. 26, 1897, in Washington. **Cap.**, \$500,000; shares \$50 par. Company is practically out of business, its only present property being lands, platted as an addition to the city of Butte. Has an asset of considerable value in a million-ton tailing dump at the Butte Reduction Works, which is being treated at the present time.

CONSOLIDATED CENTRAL BUTTE COPPER CO.

MONTANA

Office: care R. M. Cobban, sec., Butte, Mont.

Officers: R. R. Jones, pres.; R. H. Wearing, v. p.; D. J. Charles, treas., and E. E. Hershey, directors.

Inc. Oct. 29, 1906, in Montana. **Cap.**, \$1,200,000; shares \$1 par, assessable; issued 446,000 shares. Has levied 3 assessments, aggregating $6\frac{1}{4}$ cts. per share, or about \$28,000. Annual meeting, second Thursday in January.

Owens a one-third interest in the North Star, South Star and January claims, patented and mineral and mining rights in about 110 acres of patented placer claims. The North Star, South Star and January claims are developed by a 225' shaft, said to show an orebody 3 to 6' wide. Idle several years for want of working capital.

CRYSTAL COPPER CO.

MONTANA

Office: 85 Devonshire St., Boston, Mass. **Mine office:** 74 Hirbour Block, Butte, Mont.

Officers: W. W. Clarke, pres.; Bowdoin S. Parker, v. p.; Eugene H. Walker, sec.; Walter Harvey Weed, managing director, with Geo. W. Clement, Louis H. Goddu and John E. Allen, directors.

Inc., 1916, in Maine. **Cap.**, \$1,000,000; shares \$1 par; 610,000 shares outstanding, May 31, 1916. Stock listed on New York and Boston Curbs. Federal Trust Co., Boston, Security Transfer & Registrar Co., New York, transfer agents; Old South Trust Co., Boston and Security Transfer & Registrar Co., New York, registrars. Annual meeting, April 1.

Property: the Goldsmith mine, 16 acres, at Butte, Mont., held under bond and lease. Mine has shaft 367' deep developing 3 veins from which about \$1,500,000 worth of silver ore has been produced. Mine covers the western split of the Rainbow lode and lies west of the Moulton, Alice, Magna Charta mines on Butte's richest silver belt. Company will deepen shaft and develop veins on the 450' and 550' levels.

Also owns an undivided half interest in the Commerce, Crystal, Jack Fraction and St. Lawrence claims and all of the Mammoth claim, total of 84.59 acres, in Cataract district, Jefferson Co., Mont., 8 miles N. of Basin, on the Great Northern R. R., located about 25 years ago. It lies within the quartz monzonite area extending northward from Butte to Helena, which contains many old mines, notably the Comet, with a production of several millions, only a few miles N. of the Crystal and the Alta, which produced \$17,000,000, still further N., at Wickes.

The Crystal vein is a typical compound fissure vein 30' to 40' thick between granite walls; it extends for about 4,650' through the property, and where exposed for 1,200' in the mine workings contains footwall ore shoots that yield 3 to 6% copper, \$8 to \$9 gold, and \$6 to \$13 silver, per ton. The nature of the vein appears to indicate persistence of its present character in depth and along its course. Developed by 1,200' Crystal tunnel and the 890' Mammoth crosscut tunnel, 200' below the upper tunnel level.

The lower Mammoth tunnel cuts the vein at 871' from the portal and follows it for 600'. Low-grade material was encountered for the first 250', and at 400' from the crosscut ore carrying $1\frac{1}{2}\%$ copper, 14.6 oz. silver, and \$3.40 gold, was cut. It appears that the ore shoots dip W.

For geology, see Eva May and Bullion mines, Bull. 527, U. S. Geological Survey, pp. 122 and 124, 1913.

In the block of ground above the Crystal tunnel for 50 to 150' there is ore available for milling. The real value of the property can only be determined by deeper development and an extension of the two tunnels west to prove vein below the other claims.

Shipments up to June 1, 1917, representing a year's development work and extraction from a small stope above the upper tunnel, aggregated over \$24,000 net smelter returns, values running between \$13 and \$22 per ton for the copper ore. About 150 tons of lead ore was also produced from an ore band parallel to the copper ore and about 5' from it.

It is planned to erect a rope tramway to eliminate 2 miles of steep wagon haul for the ore and if development warrants it, to put up a concentration mill.

In September, 1917, all the copper ore above the upper tunnel had been stoped out, but zinc ore was exposed in considerable amount and shipments of this and of silver lead ore were begun. Shipments of zinc ore in October aggregating about 400 tons, yielded \$3,965 net, smelter returns.

DAVIS-DALY COPPER CO.

MONTANA

Office: 79 Milk St., Boston, Mass. Mine: Butte, Mont.

Officers: H. M. Burton, pres.; Wm. Bloom, v. p.; Charles G. Schirmer, sec.-treas.; preceding with F. M. Kimball and F. A. Schirmer, directors. W. L. Creden, gen. mgr. Wm. Frazier, mine supt. Federal Trust Co., Boston, transfer agt.; State Street Trust Co., Boston, registrar.

Inc. Sept. 14, 1908, in Maine, as successor of Davis-Daly Estates Copper Co. Cap., \$6,700,000; shares \$10 par, assessable; issued, \$6,000,000; paid \$8.50. Annual meeting 4th Tuesday in September.

For the earlier chapters in the history of the company, readers are referred to description of the Davis-Daly Estates Copper Co., in Vol. VIII, and to a spicy account by Stevens in Vol. X, of the Copper Handbook.

Comparative Balance Sheet: June 30, 1915 to June 30, 1916, shows: Assets, mining property, \$4,106,680 in 1915; \$4,106,671 in 1916; construction and equipment, \$110,159 in 1915; \$108,083 in 1916; development, \$1,359,366 in 1915; \$1,404,392 in 1916; investments, \$14,800 in 1915 and 1916; accounts receivable, \$12,867 in 1915; \$31,986 in 1916; cash, \$66,236 in 1915; \$93,831 in 1916. Liabilities: capital stock, \$4,800,000 in 1915; \$5,100,000 in 1916; notes payable, \$65,000 in 1916; accounts, wages and taxes payable, \$20,475 in 1915; \$35,778 in 1916. Income and expense account for fiscal year ending June 30, 1916; total income accrued (ore sales, \$229,789), \$236,991; mining cost, \$194,667; development, \$62,460; misc. expenses, \$26,997; deficit for year, \$47,335.

In first quarter 1917, ore sales amounted to \$250,396; misc. income, \$2,817; total disbursements, \$179,547; profit for 3 months' operations was \$73,666, compared with a deficit of \$27,504 for same period in 1916. In second quarter, 1917, ending June 30, net profits were \$75,732. Treasury balance was \$160,000. In third quarter, 1917, there was a deficit of \$12,010, from a gross revenue of \$109,560 and expenses of \$121,750.

Property: a small surface area and mineral rights of 320 acres under the city of Butte, adjacent to, but south and west, of the known productive area.

Development: consists of the Colorado shaft, 2,542' deep, with drifts and crosscuts. Development work for fiscal year 1915-1916, amounted to 5,000'. The chief workings are on the 1,000', 1,200', 1,400', 1,500', 1,700', 1,900', and 2,500' levels, 60% of the ore mined during 1916 coming from the 2,500' level.

Geology: two main veins have been developed, running in N. W.-S. E.

direction corresponding to the Blue Vein system of which the Jessie, Edith May and other very productive fault veins belong. There are also several east and west veins on which but a small amount of development has been done until recently. The first ore developed was on the "Fisher stopes" on the 1,400' level, 350' west of the Colorado shaft, showing an orebody 400' long, $7\frac{1}{2}$ ' thick and 100' high, averaging 2.9% copper and 5.6 oz. silver per ton. The same vein was extensively developed down to the 1,700' level.

The veins are frequently faulted and a careful study of geological conditions is necessary to successful recovery of veins beyond the faults. The shaft was sunk to depth of 2,035' in 1912, and new crosscuts showed ore in several small fault veins, barren on the 1,700' level.

The Hesperus vein, the principal ore producer of the mine, was opened 1913 by a crosscut 85' south from the old Heinze workings on the 1,400' level, where it showed 12' of high-grade ore beneath the Hesperus claim. Drifting on this, together with crosscuts at other points, proved an orebody 12' to 14' wide, averaging 4.43% copper and 7 oz. silver per ton, for 325' in length. This ore shoot thinned out to a non-commercial width a few feet below the 1,200' level. Efforts made to find the faulted section of the vein beneath the Rarus fault, on both 1,400' and 1,500' levels have so far been unsuccessful. The Hesperus ore shoot was mined in V form for a height of about 300' and an average length of 150' and produced more than 60% of the total tonnage mined by the company since its organization to 1913.

Results of mining operations on upper levels, 1913-1914, being disappointing, the company decided to discontinue mining and to sink the shaft 500' deeper, for which a 50c assessment was levied. Shaft sinking started in May, and was completed to 2,500' level in December, 1914. During fiscal year ending June 30, 1915, no development of any consequence was done above the 2,500' level and the ore extracted from drift development, came from this level. While driving the crosscut to the No. 1 Hesperus vein on the 2,500' level a vein of good ore was reported to have been found. This vein was drifted on for 450' during 1916 and with exception of short stretches of faulting, the orebody has proved continuous throughout this distance, although of somewhat lower grade. No. 1 Hesperus vein was reached in August, 1915, 670' from the shaft. At this point, commercial ore, 10' wide, is said to have been cut and shipments made of ore coming from drift development work. Company owns 2,500' on the length of vein.

Shaft has recently been enlarged from 1,700' to 1,900' level, making it 3 compartments from the 2,500' level to surface.

The western half of the property is practically undeveloped. A long crosscut from the Original mine explored the ground, but failed to develop commercial ore. Upon the Silver King claim, 2,500' N. W. of the Colorado shaft, the Sutton shaft, 310' deep, developed ore, shipments of 489 tons carried 3% copper, $2\frac{1}{2}$ oz. silver, and 86 cts. gold. As this western half of the property was entirely undeveloped, an arrangement was made with the Anaconda Co., to drive a crosscut south from the West Gagnon mine at a depth of 1,900'. The result was disappointing.

Besides the 2 shafts already mentioned, there are several old openings on the company property. The Smokehouse shaft, across the street and south of the Thornton hotel, is 700' deep and lost the vein on the 500' level. The Mount Moriah mine has a 640' three-compartment shaft and the ground is explored by a crosscut 2,000' long from the 1,800' level of the Original mine. When seen by the writer, the veins cut in this crosscut showed no payable ore, but not a foot of drifting had been done to disclose conditions along the strike of these veins. Leasors at the Mt. Moriah shaft reported 7' of ore on the 250' level, assaying 28 oz. silver, 18% lead and 18.2% zinc, October, 1917. There are various other shallow workings on the property held by this company, which it must be remembered, is a tract $1\frac{1}{4}$ miles long by one-half mile wide. These old workings yielded considerably over \$1,000,000, principally in silver from the enriched surface ore.

Considerable work is being done at the Hibernia mine developing the manganese orebodies. The mine adjoins the Nettie of the Anaconda Co. Old workings being reopened are reported to have exposed silver ore at 400' depth, Oct., 1917.

Equipment: a new hoist was installed early in 1917, with a capacity of $3\frac{1}{2}$ tons per trip and speed of 2,000' per minute at depth of 4,000'. There is an electric-driven air compressor, and a large battery of boilers ready for action, in case electricity is cut off. The ground around the shaft being limited, the output at the mine is conveyed several blocks over a narrow-gauge surface tram to ore bins alongside the Northern Pacific railroad.

Production: the 1916 output amounted to 20,511 tons, averaging 4.04% copper and 5.366 oz. silver, and giving net smelter returns of \$11.20 per ton. Mining cost per ton was \$7.22. Shipments for first quarter, 1917, amounted to 12,503 tons, yielding 1,126,921 lbs. copper and 68,830 oz. silver. For second quarter ending June 30, produced 12,326 tons, yielding 1,158,356 lbs. copper and 71,535 oz. silver. For third quarter, 4,275 tons yielded 498,811 lbs. copper and 26,075 oz. silver.

The Davis-Daly ground has been generally considered to contain only low-grade and base zinc-pyrite ores and to be outside the copper section of Butte camp. Developments show, however, that good copper ores exist and that the extensive area of unexplored ground will make this property a profitable one. Under Mr. Creden's management the property will certainly receive proper exploration and development and it is believed the company will eventually be a dividend payer.

EAGLE MINING CO.

MONTANA

Idle. Care Harper McDonald Co., Lewisohn Block, Butte, Mont. Hon. Patrick Mullins, Arthur V. Corry and Thos. Bryant, directors.

Inc. March 10, 1906, in Montana. **Cap.**, \$150,000; shares \$1 par; is supposed to have increased capitalization, April 29, 1907, to \$250,000, shares 50 cts. par.

Property: north of Walkerville, has a 250' shaft, showing a 5' vein. Mine is dismantled, but worthy of further prospect work.

EAST BUTTE COPPER MINING CO.

MONTANA

Office: 85 Devonshire St., Boston, Mass. **Mine and works office:** Butte, Silver Bow Co., Mont.

Officers: Robt. H. Gross, pres.; Hon. Jas. H. Reed, v. p.; Wm. P. Everts, sec.; Frank P. Son, treas.; Oscar Rohn, gen. mgr.; preceded, with F. Ward Paine and Wm. A. Paine, directors; Andrew J. Ray, mine supt.; John E. Rothwell, mill supt.; Julius H. Warner, engr.

Inc. Oct. 14, 1905, in Arizona. **Cap.**, \$3,000,000; shares \$10 par; increased, May 11, 1909, to \$6,000,000, shares \$10 par, non-assessable; issued \$4,110,000. Has about 2,500 shareholders. State Street Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Stock is listed on the Boston Stock Exchange and N. Y. Curb. Annual meeting, 1st Monday in April. Initial dividend of \$1 a share paid Jan. 29, 1917.

The East Butte Copper Mng. Co. has no indebtedness. It owns all of the outstanding bonds and all preferred stock of the Pittsmont Copper Co., the latter amounting to \$1,000,000 par value; also four-fifths of the common stock, amounting to \$4,000,000 par value. East Butte Co. works the property of the Pittsmont Copper Co. under an operating agreement.

Annual report for year ending Dec. 31, 1916 shows net surplus on operations of \$1,565,769 as compared with \$782,997 in 1915, \$222,252 in 1914 and \$531,772 in 1913. It shows cash and copper, \$2,214,568, accounts receivable, \$11,928, with accounts payable, \$1,219,600.

The 1917 operations were curtailed by six weeks shut down due to labor strike. For the fiscal year ending June 30, 1917, net proceeds were \$1,257,213 compared with \$1,070,069 in 1916. Though ore extraction was 249,385 tons, or but 265 tons greater than in previous year, its gross value was \$6,064,418, or \$24.32 per ton, contrasted with \$4,505,700, or \$18.76 per ton in 1916.

Property: the Dutton group, 134 acres, held by placer patent, is in the S. E. part of the Butte camp near the Pennsylvania mine.

Miscellaneous holdings include the Swissmont group of 6 claims, near Elkhorn, Jefferson Co., Mont., and the Chamounix group near Austin, Lewis & Clark Co., Mont., including the Christina group of 6 claims and the Fannie Parnell group of 33 claims. The Swissmont group has developed a considerable tonnage of low grade oxidized gold ore carrying an excess of iron over insoluble material, which ore has had value from its combined fluxing character and gold content.

The Chamounix group has shipped some silver-copper ore in the past, but is now idle. Company also has timber operations at Feely, Mont.

A mill was erected at the Elkhorn property in 1917, but owing to scarcity of labor and increased cost of cyanide, operations were postponed until conditions become more favorable.

Geology: the Pittsmon claims cover 280 acres of flat valley bottom, about 1½ miles east of Butte and extending outward from the footslopes of the continental divide mountain ridge. The ground is a filled-in valley, the sandy wash and debris being in places several hundred feet deep, so that no outcrops of any kind exist on the ground. The underlying rock is the normal Butte granite (quartz monzonite) which is cut by 3 systems of veins: Northwest, corresponding to the Blue Vein series of Butte; Northeast, and an East-West vein series. Ore shoots occur in veins of each series.

Development: 2 shafts, Nos. 2 and 3, 1,830' and 1,240' deep, respectively. Shaft No. 2 in the working shaft. Levels are opened from it at 800', 1,000', 1,200', 1,500' and 1,800'. The 1,500' level is producing 25% of mine output, while some ore has been developed on the 1,800' level. The zone of oxidation and leaching of copper values extends from 500' to 700' below the surface. Underground workings amount to about 16 miles. There are some 12 principal veins on the property that have been productive. While these veins are not wide, usually under 5', the ore shoots are long and persistent. At least 2 veins on the 800' level have been stoped almost continuously for 1,500' in length. Though the 800' level has been the most productive level opened to date, due both to an increase primary mineralization and secondary enrichment which has affected the lower levels to a much lesser extent, the lower levels continue to yield strong ore shoots of commercial grade, though lower in values than ore from upper levels. Development for 1916 consisted of 12,027' of drifting and crosscutting.

Ore bodies between the 600' and 800' levels on number 6 vein were largely exhausted in 1916, and although development work is being done, prospects are not favorable for maintaining 1916 output in 1917. Below the 800' level the major portion of the strong E. W. vein from which principal production has come, will dip outside of East Butte property.

Equipment: consists of hoisting plant, milling flotation plant and smelter. The above includes a 2,000-h. p. steam plant, 2,000-h. p. electric plant, 600-h. p. steam hoist good for 2,000', and 50-h. p. steam hoist good for 1,500'; a 25-drill Nordberg and 25-drill Rand air compressor, and 50 power drills. Electric power is used for practically everything except hoisting. There are about 20 buildings, which include the smelter, sinter plant, 2 engine rooms, change house, boiler room, concentrator, flotation plant, carpenter, machine and electric shops, sampling mill, laboratory and office building. The smelter building contains one 600-ton blast furnace and one 300-ton furnace with 3 basic lined converters. The sintering plant contains one 42" Dwight-Lloyd sintering machine. Concentrator is equipped with crushers, jigs, tables, etc., and flotation plant is equipped with tube mills and Janney flotation machines. The capacity of concentrator is 600 tons and of flotation plant 800 tons, the additional capacity of flotation plant to be used in reworking tailings.

The Pittsmon reduction plant is the only operating smelter in Butte and does a considerable amount of custom business, treating ore from several independent mines.

Operations compare as follows:

	1916	1915	1914	1913
Tons ore mined	258,899	150,911	72,853	105,071
Av. assay value	3.67%	4.28%	4.72%	5.16%
Cost min. per ton, incl. develop....	\$5.46	\$4.37	\$5.39	\$5.08
Tot. tons ore tr'd	336,057	181,063	110,992	186,815

Less add. to equip., expl. & devel..	294,191	214,691	136,101	188,619
Net surplus	1,565,769	782,997	222,252	531,772
Price per lb. rec.....	28.1978c	19.3143c	13.5685c	15.085c
Cost prod. per lb.....	16.8878c	11.8538c	11.11c	11.04c

Average assay of ore mined in 1916 was 3.67% copper as compared with 4.28% in 1916. This is due to the fact that with increased metal prices, lower grade ore was mined.

Increased cost of production is due to abnormal labor and material charges which were 30% above normal in 1916.

Production for 11 months of 1917 totaled 17,749,348 lbs. copper, against 17,102,260 lbs. in that period of 1916. During July and August, 1917, the plant was closed for 6 weeks.

EAST BUTTE EXTENSION COPPER MINING CO. MONTANA

Idle. Office: 113 Hamilton St., Butte, Silver Bow Co., Mont.

Officers: Chas. J. Schatzlein, pres.; Philip A. Breen, v. p.; Frank H. Cooney, sec. and gen. mgr.; Dr. C. E. Blackburn, treas.; preceding, with Chas. N. Joyce, directors; A. F. Munroe, engr.

Inc. April 10, 1906, in Arizona. Cap., \$1,000,000; shares \$1 par; issued, \$550,000. Paid, Oct. 1, 1906, a 1% dividend, amounting to \$2,486.

Stock listed on Butte Exchange.

Property: various fractional claims, 4 acres, lying between the Belmont, Pennsylvania and Ground Squirrel mines of the Anaconda developed by 6 shafts, deepest the 250' two-compartment No. 6 shaft, begun 1909, with about 500' of crosscuts. The Westlake and Wall mines are said to have produced, under former ownership, about \$300,000 worth of ore. The two-compartment No. 1 shaft is 170' deep, and the 200' No. 2 shaft shows ore assaying up to 13% copper and 1 oz. silver per ton. No. 3, formerly known as the Westlake, has a small precipitation plant.

Lessees shipments of 40 tons daily, with net smelter returns of \$37,360.21, yielded the company a net royalty of \$12,881.83 in 1907. Company also owns a divided one-half interest in the Centerville claim, and undivided interests as follows: one-half in Malone; eleven-sixteenths in Little Evelyn; one-sixth in Valley Forge; one-half in Gregory; one-fourth in Simon; one-eighth in Eureka First; three-fortieths in Lost Fraction, and three-fortieths in Katy T.

Leasers operating in 1916 shipped several carloads of 8% copper ore from the 200' level. East Butte Extension is reported to receive 15% royalty on all ore shipments.

ELM ORLU MINING CO. MONTANA

Office: Miner Bldg., Butte, Mont. W. A. Clark, Jr., pres. and gen. mgr.; W. A. Clark, v. p., owners; W. D. Mangam, sec.-treas.; J. C. Pyle, cons. engr.

Inc. 1907. Cap., \$100,000; shares \$10 par. Statements filed with Assessor of Silver Bow County for years ending May 31:

	Ore Tons	Value per Ton	Costs				Net Profit
			Mining	Const.	Trans.	Reduct.	
1917....	175,236	\$22.65	\$846,568	\$199,439	\$492,375	\$1,563,745	\$867,333
1916....	200,752	18.52	1,011,537	18,029	408,823	1,783,352	495,751

Company owns the Elm Orlu mine and claim of that name adjoining the Butte & Superior holdings, the Badger State mine of the Anaconda Copper Co. and the Pilot Butte mine, all in the N. E. section of the Butte district. The Poser claim is owned by a separate company.

The Elm Orlu covers part of the Rainbow lode and several other veins containing large bodies of copper ore and immense bodies of zinc ore. Copper occurs as copper glance both in secondary fault veins and in veins of the Rainbow lode, and also as chalcopryrite mixed with zinc ore. The mine has a 2,100' shaft and several miles of workings, principally below the 900' level.

The output of the mine is handled in the mill of the Timber Butte Milling Co. (which see), also owned by Senator and W. A. Clark, Jr.; zinc concentrates go to the National Zinc Co.'s plants at Bartlesville, Okla., and Springfield, Ill. The copper ore is shipped direct to the Anaconda smelter, the mine yielding from 50 to 100 tons a day during 1915.

The apex controversy with the Butte & Superior Co. was decided by the U. S. District Court in favor of the Elm Orlu Co., giving this company the westernmost 301' along the vein and Butte & Superior all rights to the Rainbow lode east of the point where it enters the Black Rock claim (B. & S. Co.); subject, however, to the prior rights of the Pyle vein of the Elm Orlu Co. below its junction with the Rainbow.

Timber Butte Milling Co.

Affiliation of Elm Orlu Mining Co., Butte, Mont. Owners: W. A. Clark, Jr., pres. and gen. mgr.; W. A. Clark, v. p.; W. D. Mangam, sec.; J. K. Heslet and A. J. Johnston, directors; W. N. Rosenberg, supt.

Cap., 1,000 shares; \$100 par. A close corporation.

The mill was erected to concentrate zinc ores of the Elm Orlu mine. Capacity 750 to 1,000 tons daily. Process, gravity separation and flotation. Crushing is by rolls and Hardinge mills; separation by tables and Mineral Separation, Ltd., flotation machines. Electric power is supplied by the Montana Power Co. Mill began operations about May 1, 1914. Recovery over 93% and concentrates average 52% zinc.

FARRELL COPPER CO.

MONTANA

Idle. Mine at Butte, Mont.

Officers: W. C. Lewis, pres.; Carlton H. Hand, v. p.; J. D. Slemons, sec.-treas.; above, with A. T. Morgan, Walter C. Lewis, Donald Campbell, W. H. Hall and Daniel Tewey, directors.

Inc. July 24, 1906, in Montana. **Cap.**, \$1,000,000; shares \$2.50 par.

Property: 17 acres, in the S. E. part of the Butte district, has a 200' shaft, sunk jointly with the Alliance Copper Co. Crosscut on the 200' level shows a little ore carrying copper, lead, zinc and silver values.

GIRARD COPPER CO.

MONTANA

Idle. **Officers:** George J. Kirby, pres., Willimantic, Conn.; Geo. R. Grantham, sec., Kimball Bldg., Boston, Mass.; E. C. Denton, supt., Warm Springs, Mont.

Inc. 1912, in South Dakota. **Cap.**, \$10,000,000; shares \$10 par; 601,120 issued; 501,000 shares pooled. Admitted to quotation on Boston curb, for 91,020 shares, Jan., 1913. Annual meeting in Jan. First Nat'l. Bank, Boston, registrar; Ex. Trust Co., Boston, transfer agents.

Property: 20 claims, partly patented, 400 acres, 5 miles from Warm Springs and 10 miles N. W. of Butte. Ore occurs as a sulphide in 5' fissure-quartz vein, between monzonite and aplite, assaying 4-8% copper, 6 oz. silver and 2 oz. gold.

Development: by 60' Jack Pot shaft and 150' tunnel. Assessment work only done.

GREAT BUTTE COPPER CO.

MONTANA

(Successor of Butte & Bacorn Copper Co.)

Address: 53 Silver Bow Block, Butte, Mont.

Officers: F. W. Bacon, pres.; H. H. Robinson, sec.; C. Hyde, treas.; the

above (excepting C. Hyde) with J. B. Finley, W. B. Schiller, C. W. Brown, Henry Fownes, R. C. Patterson and C. G. McIlvain, directors.

Inc. 1916, in Montana. **Cap.**, \$1,000,000; shares \$1 par; 850,000 outstanding; non-assessable.

Is a reorganization of the Butte & Bacorn Copper Co. The Great Butte took over the property in July, 1916, paying 400,000 shares of its own stock, and liquidating the Butte & Bacorn debts.

Property: 23 patented claims, one mile N. of the Butte & Superior mine. Holds under-option the Calumet, Moonlight, and Jasper Lode claims of 46 acres. Shallow workings said to show profitable copper ore. Veins are large and numerous.

Development: on 1,500' level is now underway. Company has enough cash to do 5,000' of horizontal work.

GREENDALE EXPLORATION CO.

MONTANA

See Butte & London Copper Dev. Co.

Controlled by Rainbow Lode Development Co. When the Rainbow Lode Dev. Co. wished to acquire the Butte & London property at Butte, Mont., several years ago, it was not practicable to recall a majority of the outstanding stock of that company; the Greendale Exploration Co. was organized to meet the emergency. The property of the Butte & London was transferred to this company, the Rainbow Lode Dev. Co. receiving 51% of the stock in return for certain development work (see Rainbow Lode Dev. Co.); the remaining 49% is held by Butte & London Copper Dev. Co.

MINES OPERATING CO.

MONTANA

Office: H. A. Frank, sec., Daly Bank Bldg., Butte, Mont.

Officers: Alfred Frank, pres. and gen. mgr.; C. W. Whitely, v. p.; with John MacGinniss, and E. L. Newhouse, Jr., directors; G. D. Deshler, supt.

Inc. 1916, in Delaware. **Cap.**, \$100,000; shares \$1,000 par.

Operating the Butte-Duluth and Bullwhacker mines on E. side of Butte, under bond and lease. Ores average about 1.4% copper, and are treated by acid leaching at rate of 300 tons daily. See Butte-Duluth Mining Co.

NORTH BUTTE EXTENSION DEVELOPMENT CO. MONTANA

Office: 25 Broad St., New York. **Mine office:** O'Rourke Estate Bldg., Butte, Mont.

Officers: H. G. Bell, pres.; A. J. Ronaghan, sec., with I. A. Heilbronner, N. Bruce MacKelvie, Elbridge L. Adams, David Angus and C. W. Peters, directors.

Inc. Oct. 10, 1908, in Maine. **Cap.**, \$1,500,000; shares \$1 par; issued, \$1,349,036. Is a reconstruction of the North Butte Extension Copper Mng. Co., which was a reorganization of the North Butte Extension Mng. Co. A controlling stock interest of \$800,000 was sold, March, 1910, to the Butte & Superior Mng. Co. Annual meeting in September.

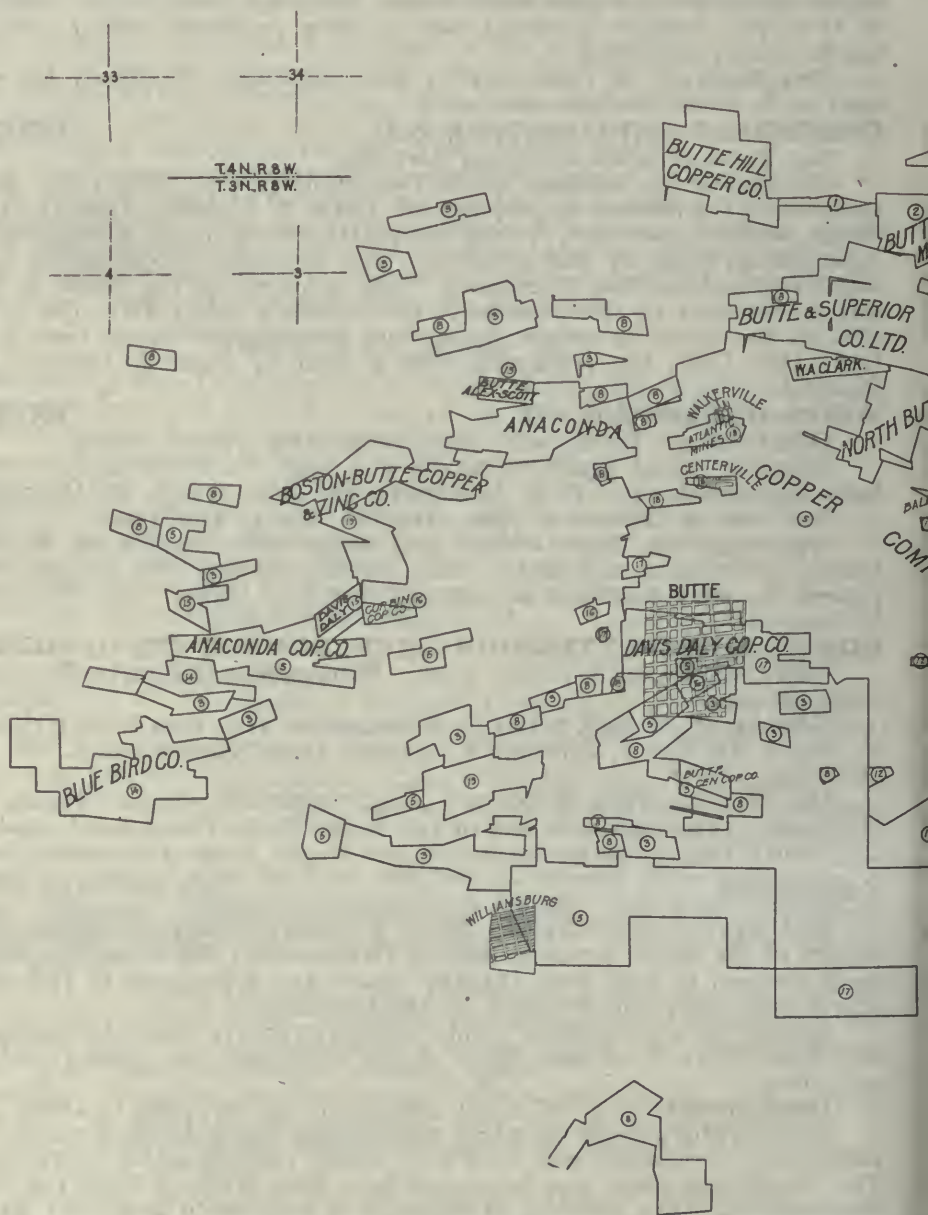

Suit was instituted by the Butte & Superior interests against the promoters of the North Butte Extension Development Co. to recover shares of stock claimed to have been illegally issued and a proposal to return 50,000 shares was made and accepted by the company.

Apparently the company's only present property is the Overman claim, the Black Crow fractional claim of 2½ acres and the Clipper and Assay mill sites.

Development: by a 700' shaft, planned to be deepened to 1,000'.

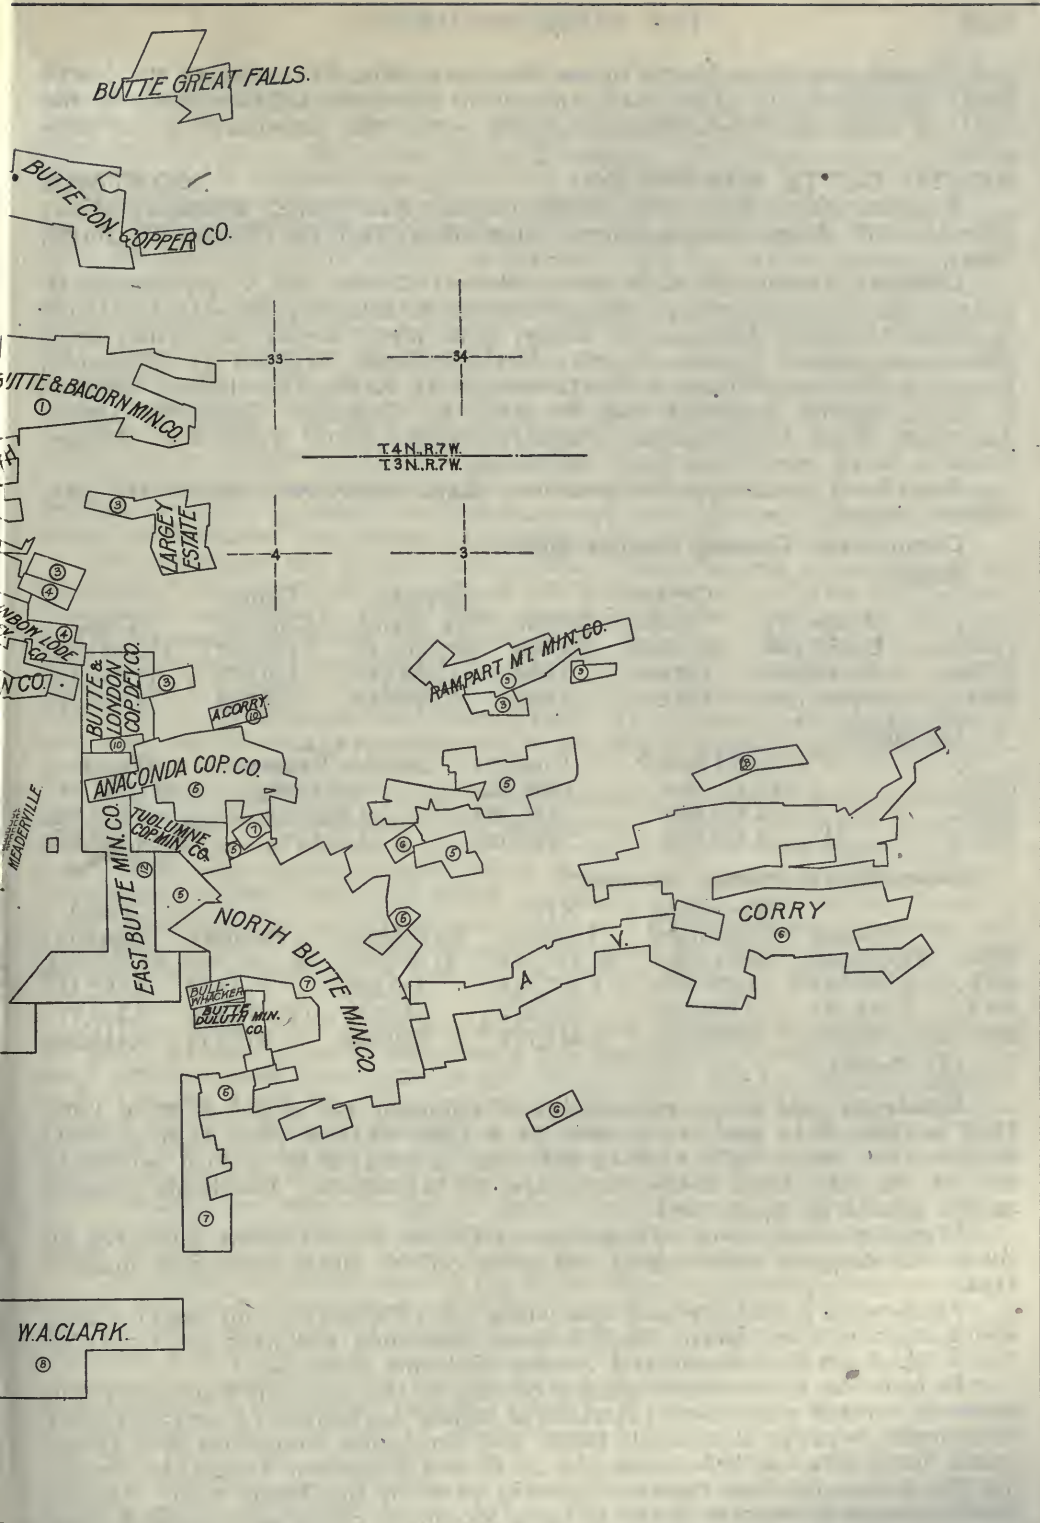

Most of the ground on which the various North Butte Extension companies were organized was held only under options which were forfeited. The Occidental claim was developed by a long crosscut from the Butte & Superior shaft, but nothing of importance was found and after payments of \$90,000 the claim was abandoned. Much of the original ground held by the company is now owned by the Rainbow Development and Butte & Superior companies.

According to the contract with the Butte & Superior, the latter company drove a crosscut on the 1,200' level through the Four Johns claim

PROPERTY MAP OF

Holdings are as follows: (1) Butte & Bacorn; (2) Butte Duluth; (3) Largey Estate; (4) Rainbow Lode Development; (5) Anaconda; (6) A. V. Corry; (7) North Butte; (8) W. A. Clark; (9) Rampart Mountain; (10) A. V. Corry; (12) East Butte; (13) Butte Alex-Scott; (14) Blue Bird; (15) Davis-Daly; (16) Corbin Copper; (17) Davis-Daly; (18) Atlantic and Raven; (19) Boston-Butte.

BUTTE, MONTANA

Metal production of Butte to the end of 1917 is approximately as follows: copper, 7,150,000 lb. worth \$1,020,000,000; gold, 1,600,000 oz. worth \$32,000,000; lead, 40,000,000 lb. worth \$2,000,000; silver, 310,000,000 oz. worth \$220,000,000; and zinc 610,000,000 lbs. worth \$65,000,000; the total value being \$1,342,000,000.

and through the entire length of the Overman claim belonging to the North Butte Extension Co. The total exploration E. of the 1,221' crosscut of the Butte & Superior was 3,318', after which work was abandoned at the property.

NORTH BUTTE MINING CO.

MONTANA

Business office: Suite 3300, 120 Broadway, New York. **Statutory office:** 1500 Alworth Bldg., Duluth, Minn. **Mine office:** 14 West Granite St., Butte, Mont.

Officers: Thomas F. Cole, pres.; Robert Linton, 1st v. p.; Joseph B. Cotton, 2nd v. p. and gen. solicitor; Frederic R. Kennedy, sec.-treas.; Henry B. Paull, auditor; Norman B. Braly, gen. mgr.; Leslie D. Frink, supt. **Directors:** Robert Linton, Francis DeC. Sullivan, William D. Thornton, Joseph B. Cotton, William F. Bartholomew, G. Ashley Tomlinson, Thomas F. Cole, Henry B. Paull and Frederic R. Kennedy. Transfer agent: American Trust Co., Boston. Registrar: Old Colony Trust Co., Boston. Stock is listed on Boston Stock Exchange.

Inc. April 5, 1905, in Minnesota. **Cap.**, \$9,000,000; shares \$15 par; 430,000 issued.

Dividends paid since organization of company per share: \$1.25 in 1905; \$7.25 in 1906; \$6 in 1907; \$3 in 1908; \$4 in 1909; \$1.10 in 1910; \$1.20 in 1911; \$1.70 in 1912; \$2 in 1913; \$1.50 in 1914; 90c in 1915; \$2.50 in 1916, and \$2.50 to Oct. 30, 1917; total \$34.90 per share, or \$14,226,500. Dividends reduced to 25c quarterly, Oct., 1917.

Property: consists of two groups of claims, one of about 220 acres on Butte Hill and the other about 790 acres on the Butte East Side mineral area.

Also owns a smelter site consisting of 1,376 acres, and water rights about 20 miles from Butte, 8 miles from Anaconda and near the tracks of the C. M. & St. P. Railway and Northern Pacific Railroad.

In order to give a more regular outline to the company's property and to avoid controversies over extralateral rights, exchanges of acreages have been made between the North Butte and Anaconda companies and agreements have been made between the N. B. and Tuolumne companies covering the ownership and rights to certain parts of the Jessie vein. An undivided one-half interest in the Granite Mountain claim was acquired from the Lewisohns, the company to sink at its own expense the existing shaft from the 500' to the 2,000' level and make certain connections and explorations, the title to the shaft remaining with the North Butte company. During 1912 and 1913 company purchased by cash payments and 20,000 shares of the company's stock, the entire and undivided interest in the lode claims

located in the Butte East Side mineral area. This area lies about 2 miles east of Anaconda hill, between the bed of Silver Bow Creek and the Continental Divide, and is adjacent to the A. C. M. Co.'s Tropic mine and the Pittsmont mine of the East Butte Company. Development is now in progress on the property by shafts and tunnels.

The Speculator group, or Butte Hill property is traversed by a number of fault veins, mostly belonging to the Blue vein series. These veins carry high-grade ores in shoots, which have thus far been remarkably persistent in depth. The ores carry much primary chalcocite, frequently massive, with considerable quantities of enargite and smaller proportions of other sulphides. All ores carry silver and lesser gold values. The veins are "heavy," requiring close attention and timbering with square sets, monthly timber used being about 1,000,000' board measure. No waste is hoisted, all being used for dry-filling. Waste is largely low-grade ore, a portion of which may be available for smelting at some future date and which can be extracted easily.

The exploration of the vein system has shown the necessity of thorough drifting along the veins at considerable depth and development on all levels down to the 3,000' has opened up profitable orebodies.

The principal ore supply comes from the following veins, named in their order of occurrence from the south boundary of the mine northward: Speculator, Adirondack, Edith May, Hancock, Jessie, Gem, South Croesus, North Croesus, Snowball and Berlin. Of these 9 veins the Speculator, Adirondack, South Croesus and Snowball belong to the older vein system, the Hancock possibly so, and the others are well known members of the Blue vein, or Northwest fault vein series. The Edith May and the Jessie vein were the principal ore producers of the North Butte in the early operations of the company.

The Edith May is 18' to 42' in width above the 2,600' level, opened at 200' intervals from the 800' level downward. Below the 2,000' level the width of ore in the vein is 8' to 12'. The vein was of little value until the 1,200' level was reached, after which there was a marked improvement, culminating in the 1,800' level, which developed a vein up to 42' wide, carrying a phenomenally high-grade ore, many of its stopes being practically all first-class ore for a distance of about 1,000' along the floor. The 2,000' level showed a slight decrease in average value, as well as in the length of the ore shoot.

Work on the 2,400' level has disclosed a 6' footwall band of 4.25% ore for 525'. Besides this the vein has a fine hanging-wall orebody which, on the 2,600' and 2,800' levels, shows $4\frac{1}{2}$ ' of 4 to 4.5% ore for several hundred feet. On the 3,000' level the hanging-wall side of the vein has been developed for 365', ore averaging 5' in width and assaying 5.1% copper. The footwall side is about $3\frac{1}{2}$ ' in width, assaying about 3.7% copper. The Edith May vein divides east of the shaft, showing no commercial ore in the south branch, but these branches unite some distance west of the shaft. On the 2,000' and 2,200' levels there are 2 fault planes, defining the limits of the better grade of ore, these faults diverging in their downward course.

The Jessie vein ranks next to the Edith May in production and promise. Where opened on the 700' level in the Gem crosscut, the Jessie showed a vein of about 10' width with bunches of 6% ore. The ore shoot found on the 1,200' and 2,200' level was high grade, 8' wide and nearly 1,000' long, changing in character below this depth and showing considerable sphalerite in the drifts to the west. On the 2,200' level, the vein is about 12' wide, showing some ore up to 5% in copper tenor, but averaging materially lower than the ore in the workings above. The west drift on the 2,000' level opened a 150' ore shoot, 6' wide, carrying 6% copper and 7.5 oz. silver. The 2,200' level shows low-grade ore only. The 2,600' drift west showed 4' of 3.5% ore displaced by a fault 15' from the crosscut and not yet recovered, while 300' of drifting east disclosed small bunches of high-grade ore. On the 2,800' level, vein where cut by a crosscut from the Granite Mt. shaft showed a total width of 6', with 3' high-grade ore assaying 11% copper and 10 oz. silver per ton.

The North Croesus vein is opened by drifts on all levels from the 1,600' to the 2,600', developing a large and important orebody. On the 1,800' level the ore shoot is $8\frac{1}{2}'$ wide, averaging 3% copper and 8 oz. silver per ton; on the 2,000' level the shoot is 300' long, averaging 10' thick, 3% copper, and 6 oz. silver. This shoot has been developed down to 2,200', and on the 2,400' level another shoot, 300' east of the one just mentioned, shows 2' of 3% ore with 7 oz. silver per ton. This shoot has been opened on the 2,600' level for a length of 400', varying in width from 3' to 5', and averaging $3\frac{1}{2}\%$ copper. The vein also contains considerable quantities of zinc ore from which shipments are being made regularly.

The South Croesus vein has been mined from the 1,600' to the 2,400' level, with the best showing at 2,200'. Here two shoots are developed, one 270' in length with an average width of 3', the ore containing 5.5% copper and 5.5 oz. silver; the other, 240' long, averaging $3\frac{1}{2}'$ in width and assaying 3.2% copper and 4 oz. silver. On the 2,400' level a 3' body of ore has been driven on for 200', averaging $2\frac{1}{2}\%$ copper.

The Gem vein showed no ore of commercial importance above the 1,600' level, and the 1,800' level had about 6' of 4.5% ore. It is developed to a small extent on the 18th, 20th, 26th and 28th levels, both value and width increasing with depth, the 2,800' level showing 12' of 5.3% ore carrying 2.2 oz. silver per ton. The vein is irregular in size and grade and where developed has been broken by cross faults.

Adirondack vein, like the Gem, shows no commercial ore above the 1,600' level, but has been mined from this point down to 2,800'. On the 2,400' level the ore has been opened for 600', varying in width from 2' to 12', and averaging 4% copper. On the 2,600' level the shoot is over 200' long, varying in width from 4' to 7' and containing 3% copper. On the 2,800' level there is a width of 4', averaging 3% copper. About 500' west on the 2,000' level a new shoot has recently been opened, which has been opened for 119', showing an average width of 5' of ore, assaying 4% copper and 2.1 oz. silver.

The Snowball vein has characteristically high silver contents. It was first cut on the 18th level in 1910, since which time it has been developed and worked from the 1,400' down to the 2,600' level. The shoot varies in length from about 800' to over 2,000'. On the 2,200' level it has been worked for a length of over 2,000', of which 740' averaged 5' of ore assaying 8% copper. On the 2,600' level the shoot is over 1,000' in length, varying in width from 2' to 4' and averaging about 4% copper.

A new ore shoot was opened in the Berlin vein in 1916 and has been developed on the 1,800', 2,000', 2,200' and 2,400' levels. On the 2,200' level the shoot is 400' long, averaging 4' of ore which assays 6.7% copper and 12 oz. silver per ton. On the 2,400' level the vein encountered in the crosscut shows 2' of ore assaying 9.2% copper and 30 oz. silver per ton.

Development: is extensive, aggregating many miles of workings. New development for 1916 amounted to 21,694', compared with 15,333' in 1915. The four-compartment Granite Mountain shaft, the principal working shaft, is 3,700' deep, and crosscuts have been started on the 3,200', 3,400' and 3,600' levels. A new electric hoist was put in operation in 1915; it is the largest electrically driven hoist in America, designed to handle 200 tons per hour from a depth of 4,000'.

Early in June, 1917, a disastrous fire occurred at the Granite Mountain shaft, starting at a depth of 2,400'. The cause was accidental, but the result was a terrible loss, as 162 men were killed and immense damage done. In Sept. work was begun lining it with steel and concrete from 3,000' depth to surface. Expected to be completed by Christmas, 1917.

The Speculator, the other operating shaft, has been deepened to 2,800' with levels at 200' intervals, from and below the 1,400' point, developing all the veins worked in the mine. The Speculator shaft has a 128' steel head-gear standing on a 41'x60' concrete foundation, equipped with self-dumping skips and pockets, with daily capacity of 1,500 tons of ore, no waste being hoisted, as it is used for underground filling.

The 500' Jessie and 500' Adirondack shafts are idle, and of no present

value. The Gem shaft, 1,600' deep, is used as a ventilating shaft, and a connection has also been made with the Rainbow shaft on the 2,000' level, for purposes of ventilation. These two shafts, as well as the Speculator shaft, are provided with reversible fans.

Hoisting from 350 to 400 tons of ore daily through the Speculator shaft, Nov., 1917.

Equipment: the main machinery plant and buildings are at the Speculator shaft. The engine house has a 20-ton traveling crane, and a 32"x72" Nordberg Corliss duplex-cylinder hoist, operating 2 cages in counterbalance, with two 8-ton Kimberly skips swung under, and good for depth of 3,500'. An 18"x36" duplex cylinder auxiliary hoist operates a double-deck cage, in a third compartment, for handling men, material and timber, and the shaft has a fourth compartment for ladders and pipes.

The compressor house has an air compressor with piston efficiency of 3,482' of free air per minute reduced to a pressure of 70 lbs. per sq. inch capable of operating 40 to 50 rock drills; also a 4,000 cu. ft. compressor. The boiler house has two 500-h. p. and five 100-h. p. boilers. Miscellaneous buildings include a machine shop, smithy, carpenter shop, planing mill and a plate shop for repairing skips.

Employed an average of 1,160 men in 1916. The North Butte ore is smelted by the Washoe works of the Anaconda under a contract by which the company pays the smelter charges to the Anaconda Co. and the copper is turned over to the North Butte Co. and sold by the United Metals Selling Co. for its account.

Production:	Ore	Copper	Silver	Gold	Copper per Lb.	
	Tons	Lbs.	Oz.	Oz.	Net Cost	Sell. Pr.
1916.....	560,673	24,498,181	1,049,574	1,712	15.57c	23.29c
1915.....	378,161	19,235,285	940,632	1,122	13.12c	16.70c
1914.....	337,372	18,421,761	1,092,300	1,107	11.50c	13.74c
1913.....	454,984	28,318,321	1,602,164	1,567	9.76c	15.08c
1912.....	425,248	26,480,123	1,377,468	1,367	9.65c	16.37c
1911.....	410,694	24,816,669	1,134,300	1,281	9.97c	12.56c
1910.....	408,528	25,267,092	988,190	1,196	10.36c	12.77c

Zinc production in 1916: 1,652 tons of ore for 412,953 lbs. spelter.

Although the grade of the ore mined is lower than that produced in the early years of the company's operations, the total amount of copper produced in 1916 was nevertheless little below the record year. The high price of copper made it possible to mine ores of a grade much lower than in previous years, and these ores will be continued to be mined as long as the price of copper will justify it, although by so doing the average grade of ore is obviously lowered and the cost of production raised.

PILOT BUTTE MINING CO.

MONTANA

Office: Daly Bank Bldg., Butte, Mont.

Property: sold to Anaconda Copper Mining Co. for \$1,125,000 in 1916, and cash distributed to stockholders. Company dissolved. Fully described in Vol. XI, Copper Handbook, p. 715.

PITTSMONT COPPER CO.

MONTANA

Controlled by East Butte Copper Co., through ownership of all the preferred and 4/5 of common stock.

Office: 1126 Farmers Bank Bldg., Pittsburgh, Pa. **Mine office:** Butte, Mont.

Officers: R. H. Gross, pres.; J. H. Reed, v. p.; F. Ward Paine, sec.-treas.; R. T. Rossell, asst. sec.-treas.; Oscar Rohn, gen. mgr.; preceding with Wm. A. Paine, directors.

Inc. April 21, 1906, in West Virginia, as Pittsburg & Western Copper Co., and changed name, Jan. 21, 1908, to present title. **Cap.,** \$6,000,000; par value \$5, divided into 1,000,000 shares common stock and 200,000 shares 6% cumulative preferred stock, all issued.

The East Butte Copper Co. owns \$4,002,800 of the common and all the preferred stock. \$910,716 bonds outstanding Dec. 31, 1915, were retired, Feb., 1917. Annual meeting, 1st Monday in April, at Pittsburgh.

The 1916 report showed \$136 cash; \$911,730 accounts receivable; supplies, \$265,388.

Company acquired the property of the Pittsburg & Montana Copper Co., under foreclosure proceedings, July, 1909, selling it to the East Butte Copper Mining Co., which agreed to purchase bonds enough of the Pittsmont Copper Co., to fund its floating debt, aggregating at that time \$2,300,000, and also agreed, until these bonds were fully paid for, to advance all funds necessary for development and operation of the property and interest on the company's indebtedness. In consideration of this agreement the Pittsmont Copper Co. contributed \$4,000,000 of its common stock to the East Butte Copper Mining Co., the latter purchasing \$1,000,000 of Pittsmont preferred stock and \$110,000 of demand notes, issuing its own stock therefor.

Under this agreement made April 8, 1909, and renewed subsequently the East Butte Copper Mining Co. operates the company's property and the net proceeds have been paid as rentals to apply, deducting interest, in payment of the outstanding Pittsmont Copper Co. bond issue. This debt is now entirely paid. See East Butte Copper Co.

RAINBOW LODGE DEVELOPMENT CO.

MONTANA

Office: 807 Lonsdale Bldg., Duluth, Minn. Mine office: 14 West Granite St., Butte, Mont.

Officers: Edward C. Congdon, pres.; G. A. Tomlinson, v. p.; James Wanless, sec.-treas.; preceding with Thomas F. Cole, Walter B. Congdon, directors. John D. Pope, gen. mgr.

Inc. Nov. 9, 1912, in Delaware. Cap., \$1,500,000, increased June 1, 1915, from \$800,000; shares \$10 par, issued \$800,000. Bonds: \$400,000, 1st mortgage 5-year convertible 6% due June 1, 1920, convertible into stock at par, and \$80,000 2nd mortgage authorized, \$47,000 issued. Annual meeting, 1st Tuesday in June.

Property: 10 claims, including the Third Sphinx, Michigander, Moral, Valley Queen, Carn Brea, Sarah, Wedge, Hidden Treasure and Wanda claims, with fractional interest in the Lone Star Claim. The group lies east of the Butte & Superior property and is supposed to carry an extension of the Rainbow lode.

Equipment: at Rainbow shaft includes a 300-h. p. double drum hoist good for 2,500', 2 electric hoists, air compressors, combined capacity of 1,650 cu. ft. per min., one 400 gals. and one 200 gals. pump, blacksmith shop, carpenter shop, change house and office.

During 1916 the company completed its Butte & London contract and now owns 51% of the Greendale Exploration Co. stock, which latter company owns the Greendale Placer claim and the Six O'Clock claim immediately south. It paid for this stock according to the contract by sinking the Butte & London shaft to 1,600' and crosscutting to the north and south boundaries of the Greendale Placer claim on the 1,500' level.

The crosscut at the 1,500' level of the Rainbow shaft was extended to the north boundary and a few feet of drifting done from it along veins which looked promising. The drainage drift on that level from the North Butte was completed.

While favorable indications of the possible proximity of ore chutes were found, according to the statement of engineers familiar with Butte camp, no ore of any commercial grade was discovered. The indications above mentioned consisted of quartz filled veins of various dimensions and in several parts of both the Rainbow and Butte & London cuts which gave trifling assays of gold, copper and zinc, nowhere running over 8% zinc or 2% copper or an ounce or so of silver.

In order to complete the Butte & London contract, it was found necessary to raise more money than was provided for in the first mortgage. Consequently, the second mortgage was authorized, and the amount outstanding on it, viz.; \$47,000, was advanced by two of the large stockholders so that the contract might be completed and the Rainbow company get control of the Glendale Placer claim.

The company is now idle, as it seemed best to await possible developments in the neighborhood of its property which might renew the interest of the stockholders of the company to an extent which would lead them to assist in further necessary financing.

While developments have been disappointing in that no ore has been found to a depth of 1,500' on the Rainbow group and 1,600' on the Greendale Placer claim, nevertheless, the officers seem to feel that still deeper development will reveal pay ore.

RAMPART MOUNTAIN MINING CO.

MONTANA

Office: 821 Security Bldg., St. Louis, Mo.

Officers: H. D. Laughlin, pres.; Felix Costa, v. p.; J. P. Meyer, sec.-treas.

Cap., \$500,000; shares \$1 par; \$250,000 outstanding.

Property: 10 patented claims, 125 acres, in Park Canyon, Silver Bow Co., Mont., about 4 miles east of Butte, said to show fissure veins in granite. Ore contains gold-silver-copper values. The Rocky Mtn. claim is reported to show a vein about 100' wide, supposedly the continuation of the "Spread Delight" vein of the Main Range.

Development: by 1,500' of workings to depth of 400'. Tunnel said to show copper ore assaying up to 7% with high silver values.

RAVEN COPPER CO.

MONTANA

Property sold, Aug., 1915, to the Anaconda Copper Co., for \$65,000, and company is in process of liquidation. Fully described in Vol. XI, Copper Handbook.

RELIANCE MINING & MILLING CO.

MONTANA

Officers: D. M. Adams, pres.; Box 386, Butte, Mont.; Frank Eichelberger, v. p.; P. H. Kenny, sec.; preceding, with J. C. Lane and J. W. Higgins, directors.

Inc. April 17, 1913, in Mont. Cap., \$150,000; shares 10c par; non-assessable; 1,325,000 issued. Control reported in hands of John C. Norvell, in 1916.

Property: 3 claims, in the Moose Creek section, Silver Bow County, 18 miles south of Butte, show a vein of copper-silver-lead-zinc ore in carboniferous limestone, opened by a 180' shaft. Has produced 22 tons to date; net returns, \$2,611. Plans to deepen shaft and crosscut on 175' level.

SMOKEHOUSE MINING CO.

MONTANA

Subsidiary of the Davis-Daly Copper Co., Butte, Mont.

SOUTH BUTTE MINING CO.

MONTANA

Butte, Mont. John G. Williams, M. E. Riley and Arthur Howell, directors, at last accounts.

Inc. May 25, 1906, in Minnesota. Cap., \$500,000; shares \$100 par. Company was organized by the Great Northern railway interests and has had much litigation, with various individuals and corporations, including the Butte Central Copper Co., East Butte Mining Co., P. D. Morgan and others, winning practically all of the suits. Property was leased to the Montana Consolidated Mining Co., but nothing of particular value was developed, and the latter-named company was liquidated.

Lands: include the Surprise placer claim, but company's chief asset consists of mineral rights to a narrow strip along the Great Northern right-of-way. Idle.

SYNDICATE COPPER CO.

MONTANA

Controlled by Tuolumne Copper Mining Co., Hirbour Block, Butte, Mont.

Officers: W. W. McDowell, pres.; G. W. Stapleton, v. p.; W. E. Reynolds, sec.-treas.; with J. W. Pratt and P. A. Gow, directors.

Cap., \$100,000; shares \$5 par; non-assessable; 9,800 shares held by Colusa-Leonard Extension Copper Mining Co., and 10,200 shares held in escrow for Tuolumne Copper Mining Co., for delivery as work progresses.

Property: 42 acres in Butte district, Mont.

TICON MINING CO.

MONTANA

Idle. Controlled by Jas. A. Murray and the estate of Silas F. King, of Butte, Mont.

Property: 1 fractional claim, about 2 acres, lying between the Bell and Wild Bill mines of the Anaconda and the Speculator and Edith May claims of the North Butte. Mine has a 700' incline shaft on the vein with levels opened at 300', 500', 550' and 600', said to show 4' of good ore in the bottom. Work was stopped by an injunction, secured by the Anaconda Copper Mining Co. in 1908.

TUOLUMNE COPPER MINING CO.

MONTANA

Mine office: 73 Hirbourn Bldg., Butte, Mont.

Officers: Ed. Hickey, pres.; W. P. Jahn and Ed. J. Hickey, v. p's.; J. J. Harrington, sec.; P. A. Gow, mgr.; with T. E. Murray and J. A. Canty, directors. L. S. Roscow, treas. Walter Harvey Weed, cons. engr.

Inc. June 4, 1906, in Arizona. **Cap.**, \$800,000; shares \$1 par, of which \$400,000 in stock was given for the property, and 210,000 shares were sold on the Butte market at par, increased May, 1916, to \$2,500,000; \$1 par. Shares are listed on the New York Curb, Boston, Spokane and Butte stock exchanges. State St. Trust Co., Boston, transfer office. Beacon Trust Co., Boston, registrar. Annual meeting, June 20.

Balance sheet: as of Dec. 31, 1916, shows assets of \$2,114,053; this includes, Tuolumne property and equipment, \$826,118; current, \$190,183; investments (capital stock "trust" exchanged and cash paid for Butte Main Range and Colusa-Leonard Extension, stocks, under options, etc.), \$192,846; Butte Main Range and Syndicate Copper stocks received and due for development done under options, etc., \$154,006; Butte Main Range and Syndicate Copper properties under options, etc., for which 500,900 shares of Tuolumne is still held in trust for further development and acquirement of these properties, \$750,900. Liabilities include capital outstanding, \$2,000,000; current, \$31,991; reserve, \$47,451; and suspense, \$31,460.

Profit and loss statement: for year ended Dec. 31, 1916, shows \$220,239 gross smelter returns, and a loss of \$17 for the period. There was \$47,451 placed to reserve for depreciation. The previous deficit of \$35,000 was wiped out.

Dividends: 15c per share in 1911; none in 1912, and two 10c dividends in 1913.

Property: the Tuolumne mine and a controlling interest in the Colusa-Leonard extension and Butte Main Range companies. Under terms of the agreement Tuolumne must do development work estimated at \$500,000. This work includes sinking the Colusa-Leonard shaft from 800' to 1,600' depth and crosscutting to the side lines of the claim about 1,500'.

Under the Colusa-Leonard Extension contract, the property of this company has been deeded to the Syndicate Copper Mining Co., and 51% of this stock is held in trust for delivery to Tuolumne as the prescribed development is done. Assets of Colusa-Leonard consist of 49% of the capital of Syndicate Copper. Main Range and Colusa-Leonard Extension mines were examined by W. H. Weed in March, 1917.

The Tuolumne mine contains the Jessie vein with large oreshoots. The mine has a main 3,000' shaft, developing an orebody of 12 to 15' width, which carried ore ranging from 5 to 12% copper with an average of about 7% down to 2,000', but in the lower levels the vein consists mainly of pyrite, with low copper values. In 1916-17 all development was confined to the 2,400' level, and mining done on the 800', 2,000', 2,200' and 2,400' levels.

Production: from the old Tuolumne mine in 1916 came from the Jessie vein above the 2,000', 2,200', 2,400' and 2,600' levels, and from filling in old stopes above 1,400'. The old levels were reopened and repaired. All ore has been extracted between 2,400' and 1,800'. Ore at 2,600' is bunchy, though of good grade, and better than at 2,400'. Eighteen to thirty-six inches of good ore was opened at 1,200'. The Jessie vein is being developed at 2,800' and 3,000' from the 2,600' winze. In Sept., 1917, 15' of 16.6 oz. silver ore was reported as having been cut on the 700' level.

Equipment: includes a steam plant with six 150-h. p. Erie City boilers delivering steam at 150 lbs. pressure per square inch. There is a powerful Nordberg hoist, good for 3,600' depth and a 20-drill compressor.

Comparative Statement of Production.

	Tons 1st Class Ore	Tons 2nd Class Ore	Lbs. Copper	Ounces Silver	Av. % Copper	Av. oz. Silver

(a) Last 5 mos. *Not reported.

The east holdings of the company embrace 10 claims, 80 acres, covered largely by wash, but containing several strong veins, proven by development work from the Sinbad and the Colusa-Leonard shafts to contain commercial orebodies. Moreover, the tract lies in line with the extension across the valley bottom of several of the known productive veins of the North Butte and Anaconda holdings, and the claims lie west of the big displacement known as the Continental fault. (See pages following.)

This tract is very favorably regarded, and development has already disclosed a large and profitable orebody.

With its new ground the company has started on an active campaign of development which will, it is believed, make it an important producer and dividend payer.

Butte Main Range Copper Mining Co.

Office: Hirbour Bldg., Butte, Mont.

Officers: J. J. Harrington, pres.; A. F. Rice, v. p.; Frank X. Giard, treas.; Geo. E. Palmer, sec.; with Chas. R. Leonard, Lyman J. Roscow, J. W. Pratt, C. C. Willis and P. J. Brophy, directors.

Inc. Aug., 1912, in Montana. Cap., \$1,500,000; shares \$1 par; 666,461 issued, divided as follows: Butte Main Range Copper Mining Co., stockholders, 292,953 shares; Tuolumne Copper Mining Co., 373,461 shares; set aside for T. C. M. Co. for delivery as work progresses, 833,586 shares.

In May, 1916, 2/3 of the stock of the company was optioned to the Tuolumne Copper Co. for \$650,000, to be spent in deep development of the company's property. The company therefore becomes a subsidiary of the Tuolumne, which at the same time takes over 51% of the Colusa-Leonard Extension. Under this contract 180,000 shares of Butte Main Range stock have been put in the Tuolumne treasury for \$92,173 advanced up to Dec. 31, 1916, which with 193,461 shares acquired by exchange of stock makes the Tuolumne Co. the owner of 56% or 666,461 shares of the Butte Main Range capitalization.

Property: 37 acres, includes the Sinbad Lode, Tentpeg, Spread Delight, Rory O'More, Kingstella and larger fractional part of the Lillie claim, at the mouth of Horse Canyon, Butte, Mont.

Work was begun June 1, 1916, the power and surface equipment being remodeled and the Sinbad shaft unwatered, retimbered and enlarged to a standard 3-compartment shaft. The 500', 600' and 700' levels were cleaned out and the 334' crosscut on the 700' level extended south, cutting the Spread Delight lode at 654' from the shaft. The lode is 125' across, showing a north or hanging-wall vein, 18' wide, containing 3½' of commercial ore, that is separated by 30' of altered mineralized "vein granite" from the main vein of the lode. This main vein is 30' wide and carried 3½% copper, with 6 oz. silver per ton across its entire width in the crosscut walls. Beyond this, the main vein of the lode, there is 39' of vein granite, carrying low copper and silver values, before fresh granite is reached.

The Spread Delight vein has been opened for 250' along its course by drifts from the crosscut and by stopes above it, where the ore has been mined 10' to 25' wide, the ore averaging 3½% copper, and 9 oz. silver per ton. This great vein resembles the Leonard of the Anaconda properties and is believed to ensure a long and profitable life to the mine.

The 700' crosscut, 1,151' long on April 5, 1917, is being extended southward to the property line, has already cut two small veins and should cut the Torrid and another large vein. The development work shows that the Main Range holdings include a length of 1,450' on the Spread Delight vein.

The cutting of these veins confirms the opinion expressed by both W. H. Weed and Paul A. Gow, that the Main Range tract is crossed by extensions of the Butte vein system and that the veins carry pay ore.

Shipments for 1916 amounted to 446 tons, dry weight, which contained 22,101 lbs. copper, 2,346 oz. silver, and 3,323 oz. gold.

Colusa-Leonard Extension Copper Mining Co.

Office: 73 Hirbour Bldg., Butte, Mont.

Cap., \$5,000,000; shares \$5 par; 930,280 issued, held as follows: 281,000 by Tuolumne Copper Mining Co., and 649,280 by Colusa-Leonard shareholders. Company holds 9,800 shares of Syndicate Copper Co., valued at \$49,000, Colusa-Leonard's total assets.

Property: adjoining Butte Main Range group on west. Examined in March, 1917, by W. H. Weed.

Development: by shaft, being sunk from 700' to 1,600', where N. and S. crosscuts will be driven to the property side lines. Mine was unwatered by April, 1917, the work being done by the Tuolumne Copper Mining Co.

WASHOE REDUCTION WORKS.

MONTANA

Owned by Anaconda Copper Mining Co., at Anaconda, Mont., and described under that title, with names of head officials of the operating staff.

The following list gives the names of the departmental heads:

Department.	Superintendent.
Conv. & Cast.....	{ Pat Dalton
	{ R. E. Howe, asst.
Carpenter Shop	Carl Johnson
Boiler Shop	John Casey
Blacksmith	J. A. McDonald
Laboratory	J. A. Root
Sampling Mill	Rod Munn
Local Trm. & Wg.....	W. H. Nutting
Concentrator	W. A. Estabrook
Blast	{ P. Barker
	{ G. Brolin, asst.
Surface	W. C. Cadwell
Power House	{ M. M. Adams
	{ P. J. Grush, asst.
Arsenic Plant	E. M. Dunn
Foundry	H. N. Blake
Testing Dept.	C. D. Demond
Research	F. F. Frick
Stock Bins	Thos. Marron
Leaching Plant	H. T. Maguire
Reverberatory	Ed. O'Brien
Briquette	H. S. Ware
Oil Flotation and Regrinding.....	B. S. Morrow
Acid Mill	M. R. Hoyt
Masons	A. N. Jette
Roaster No. 2 and McDougall.....	J. K. Murphy
Coal Dust	H. I. Silvester
Zinc Concentr.	S. S. Rodgers
Brick Plant	H. H. Coe
Electric Department	L. E. Jones
Machine Shop	Clarence Bardon
Pipe Shop	John Bills
Paint Shop	James Sweeney
Lead Burning	G. C. Detrich
Water Works and Street Ry.....	H. M. Johnson
Chief Clerk	Geo. C. Jackson

The Washoe reduction works at Anaconda will have an increasingly varied output in future years. Besides copper, zinc and arsenic, it has an experimental bismuth plant; the sulphuric acid plant turns out 150 tons of 60° acid per day, since July, 1916, part of it to be used in the new dynamite factory under construction at Browns Gulch and the rest for the zinc and copper leaching units of the Washoe plant itself, this output being insufficient to meet the outside demand.

Phosphoric acid will be manufactured from phosphate rock brought from the company's land near Melrose, if the experimental plant to be started in 1916 proves successful; superphosphate could be made but will not stand railway freight charges, whereas the phosphoric acid could go into eastern markets. The building and fire brick plants have already been mentioned.

In the treatment of tailings from the concentration plant, leaching has proven a trifle cheaper than flotation methods, owing to the fact that leaching tailings carry about 0.08% copper as compared with 0.13% in the flotation tailings. The difference, though it is only a pound of copper per ton, is important where 10,000 tons a day are treated.

CASCADE COUNTY

BIG SEVEN MINING CO.

MONTANA

Address: Neihart, Mont.

Officers: D. L. S. Neihart, pres., treas., mgr.; Violet Barker, v. p.; L. S. Barker, sec., with John Clover, directors.

Inc. 1893. Cap., \$3,000; shares \$2 par; assessable; all outstanding. Annual meeting March 10th. Gross earnings for 1916 amounted to \$12,497 and operating expenses totaled \$19,259.

Property: the Big Seven mine, an old-time producer, near Neihart, Cascade Co., Mont., which shows a fissure vein, 2" to 2' wide, in granite porphyry, said to carry high values in gold and silver.

Development: 3,600' tunnel.

Equipment: includes compressor and steam power. Total production to date, \$1,500,000. Management plans advancing tunnel and further development in 1917.

GREAT FALLS-BARKER MINING CO.

MONTANA

Address: Hughesville, Mont.

Officers: S. R. Jensen, pres.; H. H. Roberts, sec. and mgr.; W. M. Johnson, treas.

Inc. 1916 in Montana. Cap., \$250,000; shares \$1 par.

Property: Liberty group of claims in Barker district, Cascade Co., Mont., with past yield of \$30,000.

Ore: contains lead, zinc, gold, and silver values. Flotation plant is to be erected.

CHOUTEAU COUNTY

KING & QUEEN MINING CO.

MONTANA

Mine near Keystone (formerly known as Carter), Chouteau Co., Mont.

Officers: G. T. McCullough, v. p.; John F. Hinckley, sec.; H. A. Spangler, treas.; C. H. McHeffry, supt. in charge.

Inc. Feb. 22, 1905, in Montana, practically as a reconstruction of the Montana Mining & Development Co. Cap., \$1,000,000; shares \$1 par.

Property: 15 claims, partly patented, 188 acres and a 20-acre millsite, well timbered, 3½ miles from Keystone the nearest rail point, in the Spring Gulch district, 9 miles N. W. from Superior. Property carries limestone, quartzite and shale with contact deposits between quartzite and limestone. The deposit under development, of 8' estimated average width, shows copper, lead and silver ore with malachite, chalcocite, chalcopyrite and galena, reported to average 4.5% copper and 12-oz. silver per ton with gold content ranging up to 8 oz. per ton.

Development: by 1,200' crosscut tunnel opening up 4' of 4.6% copper ore that carries 9 oz. silver and 11% lead. This tunnel, planned to be

driven 1,600', has cut the vein 460' below the old workings and intersects several veins. A 200' raise gives ventilation with the upper workings now abandoned. The main workings total 5,000'.

Equipment: includes an 80-h. p. boiler, 25-h. p. hoist and 6-drill duplex air compressor. There are several small mine buildings and a sawmill. About 40 men are employed.

Production: in 1913 was 40 to 50 tons daily, shipped to Utah smelters. A new 125-ton lead-silver concentrator erected, 1914, and development work in progress, 1916-17.

DEER LODGE COUNTY

BOSTON & MONTANA DEV. CO.

MONTANA

See same title under Beaverhead County.

BUTTE-CABLE COPPER & GOLD MINING CO.

MONTANA

Idle.

Officers: Louis Feldman, pres.; Nicholas Bossonitz, v. p.; preceding officers, Wm. Henthorne, John Strasser, J. G. Kimball and Dan Kowsky, directors. G. W. Peterson, Anaconda, sec.

Inc. Nov. 21, 1906, in Montana. **Cap.**, \$1,000,000, shares \$1 par.

Property: 6 claims, 4 patented, 15 miles west of Anaconda, near Cable Consolidated Mining Co., show a 3 to 4' vein carrying about 2' of commercial ore, giving assays of 11.9% copper, 156 oz. silver and 0.6 oz. gold per ton. Property closed down. Sullivan & Peterson, of Anaconda, offered stock at 15 cts. a share, Feb., 1913, to raise money for patenting claims.

CABLE CONSOLIDATED MINING CO.

MONTANA

Office: 52 Silver Bow Blk., Butte, Mont. **Mine office:** Cable, Deer Lodge Co., Mont.

Officers: I. M. Fickeisen, H. Terheyden and S. Robinson, directors; Pittsburgh, Pa.

Property: 700 acres, 15 miles west of Anaconda, include the Cable gold mine, in vicinity of the Southern Cross mine. The Cable mine, worked since 1870, with varying success, has produced about \$4,000,000 worth of ore, with values mainly in gold, but has auriferous copper ore on the tunnel level.

Equipment: includes steam power, air compressor and a 30-stamp mill. In process of reorganization, successor will be Cable Mining Corp'n.

FERGUS COUNTY

ST. PAUL MONTANA MINING CO.

MONTANA

Office: Maiden, Fergus Co., Mont.

Officers: O. L. Taylor, pres.; Chas. W. Ames, v. p.; D. W. Taylor, sec.; W. K. Braden, treas.; with L. P. Ordway and E. B. Coolidge, gen. mgr., directors.

Inc. in Arizona. **Cap.**, \$50,000; shares \$100 par; 500 issued.

Property: 2 patented claims, at Maiden, said to show gold ore in contact deposits between porphyry and limestone. Developed by a 450' vertical shaft, with 5,000' of underground workings. Ore claimed to assay \$4 to \$30 per ton and property is said to have produced \$4,000,000. Has recently been under lease.

Equipment: includes hoist, air-compressor, and 50-ton cyanide mill in full operation.

FLATHEAD COUNTY

COMET MINING & MILLING CO.

MONTANA

Office: Coeur d'Alene, Idaho. **Mine:** near Whitefish, Flathead Co., Mont.

Officers: Dr. Max A. Dorland, pres.; Fred Eppinger, v. p.; J. H. Wigert, sec.; at last accounts.

Inc. 1909. Cap., 1,000,000 shares. Developed by a short tunnel. Presumably idle.

FLATHEAD DEVELOPMENT CO.

MONTANA

Address: Gen. Chas. S. Warren, 73 Hirbour Blk., Butte, Mont. **Mine:** at Coram, Mont.

Officers: L. O. Evans and John M. Murphy of Butte, Fred Oliver and V. D. Williamson of Spokane. Dr. W. H. Campbell and A. Ingraham of Kalispell, organizers.

Property: Big Copper, Nos. 1, 2, 3 and 4 and Noble Copper claims covering veins 10' to 20' wide, on Felix Creek, a tributary of South Flathead River, 30 miles south of Coram, a station on the G. N. R. R.

Claims practically abandoned in 1917, because of the great distance from a railroad and the high cost of opening up the property.

GREAT NORTHERN COPPER CO.

MONTANA

Owens the Great Northern mine, 1 mile north of Tava, Flathead Co., Mont.

Developed: by several tunnels, 200' to 500' long, on the strike of the vein.

Ore: principally gold and copper.

LUPFER MINING CO.

MONTANA

Whitefish, Flathead Co., Mont.

Officers: George Hoffman, pres. and mgr.; Mike Sullivan, v. p.; Pete Hoffman, sec.; with E. Boettcher and John Roeder, directors.

Inc. 1906 in Montana. Cap., 500,000 shares; par value 15c; 250,000 issued.

Property: 160 acres, about 14 miles W. of Whitefish. Developed by 150' shaft, showing a well defined vein of copper ore, 3' wide in porphyry and limestone, said to assay 2% copper, 3 oz. silver with a trace of gold. Has a small steam hoist and air compressor. Idle since 1911 owing to lack of funds.

GALLATIN COUNTY

INTERNATIONAL MINING CO.

MONTANA

Office: Bozeman, Gallatin Co., Mont.

Officers: J. W. Wilcox, pres.; S. J. V. B. Henderson, v. p. and treas.; Samuel F. Walker, sec. and gen. mgr.; preceding officers, Harvey M. Fariss and A. Badgley, directors, all of Bozeman, Mont.

Inc. Oct. 2, 1902, in Montana. Cap., \$600,000; shares \$100 par, fully paid and non-assessable.

Property: 12 claims, 240-acres, well timbered, in Springhill mining district, Gallatin Co., Mont., said to show gneiss, quartzite and shale, fissure and contact veins, opened by 380' to 1,800' tunnels, and 5 shafts of 80' to 800', showing sulphide ores.

Company developing an ore shoot, at last accounts, said to carry 26% lead, 8 oz. silver, and \$8 to \$67 gold per ton. The Lone Star group adjoining the International is practically under the same ownership. Letters neither answered nor returned, so it is safe to say company's affairs are not prosperous.

GRANITE COUNTY

BUENA VISTA MINES CO.

MONTANA

Officers: G. F. Russell, bus. mgr., 1303 Dean St., Spokane, Wash.; J. L. Magney, opr. mgr.; identified with the organization are W. P. Russell, J. D. Chickering, F. Leslie, J. Millspaugh, G. P. Larson, J. P. Boyd, G. F. Russell, D. K. McDonald, V. Rapp, Wm. Coleman.

Property: 3 patented claims, known as Buena Vista mine, Maxville, Granite Co., Mont. Has been idle for 20 years until present company secured bond and lease. Principal values in silver.

BUTTE & ANACONDA CONSOLIDATED M. & M. CO. **MONTANA**

Office: P. O. Box 138, Anaconda, Mont.

Officers: J. C. Keppler, pres.; J. Winterhalter, v. p.; Andrew Flieger, sec.; John J. Wegener, treas.; with W. R. Allen, directors.

Inc. 1908, in Montana. **Cap.**, \$1,500,000; shares \$1 par; assessable; 900,015 shares outstanding. Company is a consolidation of the Flint Creek Mining Co., and the Golden Eagle M. & M. Co.

Property: 9 patented quartz claims, 3 unpatented placer claims and 2 millsites, about 240 acres, in Flint Creek Gulch, Granite Co., Mont., 3 miles from a railroad. Claims show quartz veins with gold-silver values in part as tellurides. Average assays, said to run \$25 per ton. Developed to depth of 450' by 2 shafts and 2 tunnels, 900' long. Idle, owing to lack of necessary working capital.

GRANITE BI-METALLIC CONSOLIDATED MNG. CO. MONTANA

Office: 821 Security Bldg., St. Louis, Mo. **Mine office:** Philipsburg, Mont.

Officers: J. P. Meyer, pres.; E. S. Orr, v. p.; F. D. Fusz, sec.; G. J. Tansey, treas., with C. G. Ewing, J. P. Hartnett, C. D. McLure, L. M. Rumsey, Jr.; A. L. Shapleigh, W. C. Uhri, and F. Whitaker, directors. T. B. Holmes, supt.

Inc. April 6, 1898, in Montana. **Cap.**, \$10,000,000; shares \$10 par; non-assessable.

Property: over 2,500 acres at Philipsburg, Granite Co., Mont. Is a consolidation of the Philipsburg and Granite Bi-Metallic properties, which yielded over 4,000,000 oz. silver per annum in early days, total output being \$50,000,000, of which \$14,000,000 was distributed as dividends. Decline in price of silver resulted in practical suspension of work.

Geology: gold, silver, copper deposit in granite, overlying large area of limestone near west end. Best ore-shoot is said to be 4,400' long. Ore is mostly sulphide.

Development: by 3 shafts to 1,800' depth, and 2 tunnels, longest 8,800'. Greatest depth of workings, 2,250'. Considerable work contemplated for 1917.

Equipment: old mill dismantled and 300-ton plant proposed. Callow flotation system being tried.

Is a large property with good chances.

NANCY HANKS-MONTANA MINING CO.

MONTANA

Office: H. A. Bellows, 62 Broadway, New York. **Mine office:** P. M. McCree, supt., Garnet, Mont.

Officers: C. G. Grossman, pres.; J. O. Delamater and J. T. Thatcher, directors; W. E. Gourlay, sec.; H. A. Bellows, treas.

Inc. Oct. 28, 1916, in Maine. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; 954,009 issued.

Property: 8 claims, 3 patented, at Garnet, Granite Co., Mont., 12 miles from Bearmouth.

Geology: quartz vein in granite, from 1' to 8' wide, said to carry an oreshoot from 100' to 130' long. Ore has gold, silver and copper values, and is reported to average \$68 per ton, partly in free gold and partly as telluride of gold, associated with pyrite, etc.

Development: by 100' and 500' shafts. Total workings of 2,500' to 3,000'.

Ore reserves: estimated at 1,500 tons blocked out and 3,000 tons expected between No. 5 and 7 levels, all high-grade ore.

Equipment: 2 cylinder Anaconda hoist, 3-drill compressor, pumps, etc. Proposed to erect a 20-ton mill and machinery for 1,500' depth.

Production: The Nancy Hanks mine was opened 20 years ago, and yielded \$500,000 from workings to depth of 80'. After an 18 years' shut-down, a new company secured a lease and option on a large block of stock, sunk the shaft to a depth of 400', and mined ore yielding between \$150,000 and \$200,000. The present company purchased the lease and option on stock, Nov., 1916, sunk 100' deeper, extracted \$45,000, and expects to get \$300,000 more. At end of May, 1917, bins contained 425 tons of high-grade ore. In Jan., 285 tons yielded \$20,000. Total output is about \$700,000. Costs are \$15 per ton.

OLYMPIA MINING CO.**MONTANA****Office:** Princeton, Granite Co., Mont.**Property:** Owns Lillian and Banner claims in the Philipsburg district. Tunnel said to cut 3 veins, one 20' wide, carrying galena, silver and gold values.**Developing:** 1917.**PHILIPSBURG MINING CO.****MONTANA****Office:** 821 Security Bldg., St. Louis, Mo. **Mine office:** Philipsburg, Granite Co., Mont.**Officers:** John P. Meyer, pres.; John H. Dieckman, v. p.; Jos. P. Hartnett, sec.; F. D. Fusz, treas.; with John J. Taussig, Max Kotany, L. M. Rumsey, Jr., H. S. Rumsey, E. S. Orr, A. L. Shapleigh, Edw. Barklage, directors.**Inc.** 1910 in Missouri. **Cap.**, \$50,000; shares \$1 par; all outstanding. Annual meeting, 4th Friday in March.**Property:** 450 acres at Philipsburg, said to show ore in contact deposit and quartz fissure veins between limestone and granite. Ore carries gold, silver, copper, zinc, lead and manganese. Company is largest producer of manganese ore in Montana.**Development:** by several shafts, deepest 500', and a number of tunnels.

Company is successor to Hope Mining Co., one of the earliest companies formed in Montana. Mine is credited with past production of \$4,000,000 in silver. Also has a deposit of copper ore, but faulted segment has not yet been located.

Production: shipping about 100 tons of manganese ore daily, 1917.**ROYAL BASIN MINING CO.****MONTANA****Office:** Makeever Bros., 170 Broadway, New York, and Journal Bldg., Boston, Mass. **Mine office:** Maxville, Granite Co., Mont. Walter Neal, mgr.**Cap.**, \$2,000,000; shares \$1 par; fully paid and non-assessable. The Montana Phosphate Co., formed in 1915 to treat phosphate beds near Maxville, is controlled by same interests as Royal Basin.**Property:** the North Star mine of 2 lode claims, 90 acres, in Wymans Gulch, within the Missoula forest reserve and 3 miles east of the Drummond branch of the N. P. R. R. Also owns the Northern Bell mine, a silver property near Princeton. Claims show a fissure vein 15' to 40' wide, in 3 upper tunnels, 100' vertically apart. A new lower tunnel is being driven which cut the vein 800' in and at a depth of 700'. At this point the vein carries concentrating ore 12' wide with a paystreak of sulphide ore, assaying 7½% copper, and 5 to 70 oz. silver, per ton. The smelter returns for over 1,100 tons shipped showed 5.14% copper.

Mine is equipped with a leaching plant using sulphuric acid to get the copper into solution and depositing electrolytic copper as cathode plates in tanks direct from the solution, by electric current. This plant was designed by J. D. Fields, who built a similar plant for Capt. A. B. Wolvin at the Butte-Duluth mine in Butte, Mont; also one, a failure, in Arizona.

While we have no details of this plant, the process, though simple and doing all that is claimed for it in the production of electrolytic copper, is not a cheap one when acid and electric power have to be purchased. Property considered promising, but advertising matter of fiscal agents is not favorably regarded.

Reported leased for 5 years, from April, 1916, to Northwest Cons. Mines Co., Spokane, Wash., and shipping in July, 1916.

In July, 1917, owners refused to give any information, considering our remarks in Vol. XII unjustified.

SWASTIKA MINING CO.**MONTANA****Address:** Philipsburg, Granite Co., Mont. W. W. Williams, mgr.**Officers:** W. I. Power, pres.; F. R. Andrus, v. p.; C. E. Hansen, sec.; W. W. Kroger, treas.; the officers are the directors.**Inc.** April, 1913, in Montana. **Cap.**, \$500,000; shares \$1 par; 407,043 outstanding.

Property: 3 claims, 1 patented, known as the old Basin mine, and held under long term option, shows a 4' vein of argentiferous copper ore, oxidized to carbonates near the surface, exposed for 100' on the 150' level.

Development: consists of a 190' shaft, and 200' of drifts. Ore averages 4% in copper, 1½ oz. silver, 50c gold per ton.

Equipment: includes electric hoist good for 500', compressor and Cameron pump.

Mine was closed down in 1914, but efforts were being made at last accounts to increase capitalization and resume operations.

WASA (or Hollander) GROUP.

MONTANA

Is a property promoted by Makeever Bros., 170 Broadway, New York City, and Journal Bldg., Boston, Mass.

The public was asked to subscribe to shares in an Exploration Syndicate at \$1 a share, with bonus of 4 shares of pooled stock of a corporation to be formed to take over the Hollander, or Wasa group of claims near Hall, Granite Co., Mont.

In April, 1917, Walter Neal, chief engr., advised that he could not recommend further expenditure in developing the mine and it has presumably been relinquished.

See Mine Exploration Syndicate.

JEFFERSON COUNTY

ANGELICA MINING & DEVELOPMENT CO.

MONTANA

Address: Wickes, Montana.

Officers: C. d'Autremont, Jr., Duluth, Minn., pres.; Chas. D. Horton, v. p.; C. M. d'Autremont, sec.-treas.; preceding officers, T. T. Hudson and Geo. W. Wilson, directors. Geo. W. Wilson, mgr. Chas. D. Horton, supt.

Inc. Jan., 1915, in Montana. **Cap.**, \$200,000; shares \$10 par; non-assessable; outstanding, August, 1917, 14,320 shares.

Earnings: Gross income from ore sales in 1916 was \$49,556; operating expenses \$64,714.

Property: 6 claims, 110 acres, in Colorado mining district, 2 miles west of Wickes, Jefferson Co., show a contact vein in andesite and rhyolite, strike N. 80° W., dip 75° N. The ore, sulphides below the 400' level, contains lead, silver and gold, occurring in shoots 100' to 300' long, with average width of 3'. Average assay of shipping ore, \$20.00.

Property has been examined and reported on by E. J. Collins, T. F. Field and Reno Sales.

Development: 3,050' tunnel and levels at every 100' to 800' level; total underground workings, 5,100'.

Equipment: includes air compressor, capacity of 360 cu. ft. Work planned for construction of a 200-ton concentrating mill. Production in 1917 amounted to 6,711 tons, containing 1,012,176 lbs. lead, 65,526 oz. silver, 933 oz. gold.

The property was closed down June 1916, but operations were resumed March, 1917.

BALKAN BUTTE COPPER MINING CO.

MONTANA

Office: 13 N. Wyoming St., Butte, Mont.

Officers: Chas. Steele, pres.; Paul Germolgez, v. p.; Thos Tomich, sec.-treas.

Inc. Jan. 26, 1907, in Montana. **Cap.**, \$450,000; shares \$1 par.

Property: 4 patented claims, 80 acres, in Elk Park, Jefferson Co., Mont., shows gold, silver, copper, lead ore. Idle.

BALTIMORE COPPER MINING CO.

MONTANA

Office: 49 W. Park St., Butte, Mont.

Officers: R. L. Clinton, pres.; J. Maher, v. p.; T. J. Fenlon, sec.-treas.; the preceding with B. E. Calkins, D. J. Charles, P. H. Regan and E. H. Renisch, directors.

Inc. in Montana. **Cap.**, \$2,500,000; shares \$5 par; assessable; 197,520 shares outstanding. No bonds.

Property: five patented claims in Boomerang Gulch, near Boulder, Mont., showing an ore zone 40' wide, with silver-lead ore in lenticular shoots. Ore said to contain about 3% copper, 20 oz. silver, 12% lead and \$2 in gold. Recent shipments reported to have averaged \$20 per ton.

Development: by 5 tunnels, 100' vertically apart, longest 700'. Property under lease, yielded \$1,560 from royalties in 1916, with operating expenses of \$307.

BERNICE RED ROCK MINING CO.

MONTANA

Address: Bernice, via Basin, Mont.

Officers: H. D. Fagon, v. p.; N. B. Lewis, sec.-treas.; J. B. Anderson, agt., 1924 13th St., Washington, D. C.

Property: 4 claims located in Sec. 10, T. 6, N. R. 6 W., 3 miles from Bernice station on Gr. Northern Ry. 26 miles from Butte, shows a large vein with scattered mineralization of lead carbonate and sulphide ore, but low average values, containing gold, \$0.40 to \$1.60, silver 2 to 7 oz., 0.5% copper, lead 2%, and zinc 5%. Course of vein is N. 70° W. with dip 70° S., and where exposed has a width of 8' in the upper tunnel, and 23' in lower tunnel.

Development: 2 tunnels, upper one 150' long, the other 100' vertically below the upper, cut the vein at a distance of 200' from the portal. A 20' winze was sunk on the vein from the lower level. The ore can be cheaply mined and is capable of flotation, but value is low. Company officers and stockholders are all colored men.

BETTY ALDEN MINING CO.

MONTANA

Closed down and company probably dissolved. Fully described, Vols. XI-XII.

BIG FOOT MINING CO.

MONTANA

Inc. Sept., 1917, in Montana. **Cap.**, \$3,000,000; shares \$5 par.

Property: a group of 7 claims in the Big Foot district, Jefferson Co., Mont., about 12 miles from Boulder. Claims said to show ore carrying silver, lead and zinc values.

Development: by several shafts from 50' to 200' deep, all under water.

Mine has been closed down for many years and is now being de-watered and reopened.

BLUE BIRD-CORBIN GOLD, SILVER & COPPER M. CO.

MONTANA

Idle. **Address:** Wickes, Jefferson Co., Mont.

Officers: Wm. Q. Ranft, owner and mgr. John W. Johns, supt.

Property: about 4 miles west of Wickes, is one of the old mines of the district, taken over in 1911 together with the Penn Yan claim. Claims show 2 veins of 4' to 14' in width, carrying ore shoots averaging 5% copper, 5% lead, 25 oz. silver, and \$1.50 gold, per ton. Ore occurs in a tourmalinized vein in andesite tuffs and diorite along a contact with a 50' wide dacite dike that forms the footwall.

Developed: by 2,248' tunnel and 225' shaft, with levels at 100' and 200'. Equipped with electrical power. No recent returns secured.

BOSTON & ALTA COPPER CO.

MONTANA

Address: care Geo. H. Hill, Helena, Mont. **Mine:** near Corbin, Jefferson Co., Mont.

Officers: John Joyce, pres.; Marcus L. Hewett, v. p. and gen. mgr.; Chas. H. Innes, sec.-treas.; above with Walter Callender, Warren Curtis, Sr., Jas. G. Gregg, Archibald S. Spriggs, Wm. Tatham and Chas. B. Van Nostrand, directors; Richard M. Atwater, Jr., cons. engr.

Inc. Nov., 1909, in West Virginia. **Cap.**, \$3,000,000; shares \$10 par; as successor of Alta-Montana Copper Co. to take over and work the Alta mine, whose output of \$32,000,000 has made it one of the big mines of the world.

The Alta mine, passing from the original owners to the Hudson Mining & Reduction Co., was shut down, 1903. The Alta Montana Co., Kelly Mining & Reduction Co., Alta-Montana Copper Co., and Boston & Alta Copper Co., owned property successively. The New Mexican holdings of

the Kelly Smelting & Refining Co. were segregated holdings of present company being exclusively in Montana.

Property: 640 acres, including the Alta group of 8 claims, carrying about 7,000' of Alta or mother lode of the Corbin camp.

Property under bond and lease to Max W. Atwater, Basin, Mont., and is being reopened, 1917. Fully described in Vol. XII.

BOSTON & CORBIN MINING CO.

MONTANA

Office: 67 Milk St., Boston, Mass.; C. R. Jeffers, sec.-treas. **Mine office:** Corbin, Jefferson Co., Mont.

Officers: Harry M. Stonemetz, pres.; R. C. Grew, v. p.; preceding officers, Chas. H. Cole, E. S. Goulston, Ellis L. Dresel and Wm. M. Bradley, directors. Dan J. Courtney, mgr.

Inc. Aug., 1913, in Maine. Cap., \$1,000,000; shares \$5 par; non-assessable; issued, 198,042 shares. State Street Trust Co., Boston, registrar; Boston Safe Deposit & Trust Co., transfer agent.

Company was formed to take over the property of the Boston & Corbin Copper & Silver Mng. Co. and shares of the new company were exchanged for securities of the old company on basis of 75,200 shares for \$200,000 6% convertible bonds and 100,000 shares exchanged share for share upon payment of a subscription of \$1.50 per share for the old stock.

Balance sheet, Aug., 1916, showed: current assets, \$36,841; current liabilities, \$14,424. The first profit from operations in October when \$3,400 was made. Profits have been about \$2,000 monthly since.

Mine was closed down from Nov., 1913, to Jan., 1916. Expenses during shut-down were \$13,525 and cost of reopening property was \$12,483.

Property: the Bertha mine and 12 patented claims aggregating 157 acres, about 1 mile west of Corbin, having about 4,500' of the strike of the Bertha vein.

Geology: country rock is granite with intrusive porphyry rocks, carrying a vein system consisting of a number of parallel fissures. The geological conditions are often called similar to those of Butte, but ore is mainly chalcopryrite, instead of chalcocite, as in Butte, with some enargite and a little bornite of good grade, all argentiferous and slightly auriferous. Lands said to have 16 veins, of which 3 are under development. The Bertha vein is a well-defined, but narrow fissure in granite, varying from 2' to 5' wide with strong walls. The concentrating ore is pyritic and low grade, the concentrates running up to 7% copper, 8.6 oz. of silver per ton with \$2.38 for excess iron; a total value of nearly \$20 per ton. Former estimates proved too optimistic as to values, development being disappointing. Property examined by Frank H. Probert in March, 1913.

Development: mine is developed to a depth of 1,200' and has 15,000' of workings, not including 4 short discovery tunnels, the Boston Fraction crosscut tunnel, 1,500' Corbin crosscut tunnel and 880' Bertha drift tunnel.

An agreement was made with the Chicago & Alta Extension Mining Co., by which company will develop at depth the vein shown on the Corbin claim. Work was begun, November, 1916, on the 1,200' level.

A 200-ton concentrator, costing \$125,000, was finished and put in operation March, 1913, but operations of mine and mill were suspended Nov. 10, 1913, on account of the low grade of ore. Results obtained during the period the mill was operated are as follows: tons ore treated, 30,346; copper assay, 1.85% per ton; silver assay, 2.4 oz. per ton; cost per ton, mining, \$2.87; cost per ton, concentrating, \$1.11; production, 611,924 lbs. copper and 45,950 oz. silver. The mill should never have been built, as development of the mine did not warrant it, but directors acted on advice of their engineers and managers.

Results were unsatisfactory, only half the copper values being extracted. In 1916 the company made tests with the flotation process and in August a 100-ton unit was put into operation.

Ore reserves: at time of closing down were figured at 10,712 tons of presumably the same value as the ore milled.

Equipment: includes an electric hoist, capable of raising 5-ton loads

from a depth of 2,000', at the rate of 900' per minute, and a 15-drill Ingersoll-Rand air compressor, direct-connected to a 150-h. p. motor. Power is bought from the Montana Power Co. at a considerable saving over steam. There are 19 buildings, including a boiler house, engine house, compressor house, bunk house, boarding house, changing house, warehouse, office, laboratory, smithy and dwellings. Cost of wagon freight to railway is 75 cts. per ton on concentrates.

Production: for year ending July 31, 1917, amounted to 36,910 tons, yielding 8,945 tons concentrates, containing 810,677 lbs. copper and 48,254 oz. silver. Cost was 25.564c per lb. copper, and selling price was 29.512c per lb.

With present high price of copper and an 80% recovery of the metal contents of the ore, company should be able to make a fair profit.

BUTTE & BOULDER MINE.

MONTANA

See Shields & Ironsides Mining Co.

BUTTE CONSOLIDATED COPPER MINING CO.

MONTANA

Mine: at Corbin, Mont. Idle and apparently waiting for developments in the Bertha mine of the Boston-Corbin Co. to prove this property. See Vol. XI, Copper Handbook.

BUTTE & CORBIN CONS. COPPER MINING CO.

MONTANA

Idle.

Officers: J. L. Templeman, pres.; Lewisohn Block, Butte, Mont.; Lee Williams, v. p.; J. B. Fitzpatrick, sec.-treas.; at last accounts.

Inc. May 1, 1907, in Montana. **Cap.**, \$700,000; shares \$1 par; non-assessable; issued \$469,000. Annual meeting Feb. 4.

Property: 5-claims, 82 acres; also 10 acres timber lands in the Corbin, or Colorado district, on the eastern side of Valparaiso mountain. The ore is a complex mixture of lead, copper and zinc, occurring in short shoots in fissure veins in granite. Vein reported by company to average 8' 4" in width, and to carry 4% copper, 6% lead, 2% zinc, 8 oz. silver, and \$1 gold, per ton.

Development: by shaft and the 500' Rarus tunnel, which cut a 10' vein at 165' from the portal, assaying 2.5% copper, with paystreak carrying covellite, averaging 6% copper, 8 oz. silver, and \$6 gold per ton. A body of rich ore was reported found in June, 1912, and the Great Northern railroad asked to put a siding on this property. Amount of ore on dump, 7,000 tons of \$10 value, according to Ropes & McIntyre, of Helena, Mont., who reported on property.

CHICAGO & ALTA EXTENSION MINING CO.

MONTANA

Office: H. P. Skiles, pres.; 22 N. State St., Chicago, Ill. F. I. Foote, mgr., Helena, Mont. **Mine:** at Corbin, Mont.

Officers: Dr. H. P. Skiles, pres.; H. H. Ebert, sec.; Helena, Mont.; Sheldon Leavitt, treas.; with F. I. Foote, J. E. Smith, E. F. Rinear and Arthur Dole, directors.

Inc. Oct., 1907, in Montana. **Cap.**, \$600,000; \$1 par; \$10,000 in treasury.

Property: 2 claims, 36 acres, at Corbin, Jefferson Co., adjoining the Boston & Corbin Mng. Co. property on the E., shows fissure veins in granite. The veins are from 1' to 10' thick, averaging about 4', and carry lenticular shoots of copper, silver and lead ore, reported to assay \$48 per ton, as shipped.

Development: by 900' shaft with crosscuts and drifts cutting 4 ledges on 900' level. Also has a 1,200' tunnel. Underground workings total 2,000'. Has 50-h. p. electric hoist and compressor.

All work is being done through the Boston & Corbin shaft, crosscutting the entire claim and reported, Oct., 1917, to have cut 5 ledges and to have started drifting. Ore is milled in the B. & C. concentrator and flotation plant under contract with this company.

Property examined by L. S. Ropes.

CORBIN COPPER CO.

MONTANA

Office: 60 Congress St., Boston, Mass. **Mine office:** Butte, Mont.

Officers: R. M. Edwards, pres. and gen. mgr.; Henry Tolman, treas., Newton, Mass.; with S. L. Powers, Jos. C. Walker and H. B. Byrne, directors.; A. L. Wyman, sec.

Inc. Dec. 24, 1908, in Michigan. **Cap.**, \$3,750,000; shares \$25 par; assessable; amount issued, 130,000 shares; amount outstanding, 26,000 shares; amount in treasury, 124,000 shares; \$8 per share paid in. Company sold 15,000 shares of treasury stock, early 1910, at \$10. Federal Trust Co., Boston, registrar; American Trust Co., Boston, transfer agt. Stock is listed on the Boston Curb. Annual meeting, third Tuesday in April.

Three assessments levied: \$65,000 due Feb. 11, \$65,000 due April 22, \$130,000 due Nov. 14, 1913. Poor response was made to these and the company was forced to borrow \$95,000 on its notes, giving, as guarantee, the unpaid assessments. Owing to lack of funds all work was stopped on Corbin property early in 1914.

Property: company owns 57 mining claims, 45 patented, near Corbin in Jefferson County, explored under lease and bond, 6 claims at Rochester, Madison County, and the Gambrinus, Belcher and Welch claims at Butte, Mont.; \$150,000 was paid for the Butte claims.

The Corbin group lies at the head of Clancy Creek, a few miles west of Corbin, on the western side of an andesite hill across from the Boston & Corbin mine. This property carries several strong fissure veins in andesite on which considerable exploration work has been done with disappointing results. A vein opened for 800' in the Rosalie tunnel carries up to 20 oz. silver and 7% copper, but is only 18" wide.

The Montana tunnel shows a pyritized conglomerate with andesite, dacite and aplite cobbles, the matrix containing small silver values in the upper tunnel, while the winze in the lower tunnel shows considerable pyrite. The Bonanza tunnel is driven on a tourmalinized granite dike in andesite, and in places the tourmaline rock carries galena and chalcopyrite with small amounts of zinc-blende and pyrite. The Corbin property is not considered favorably.

Equipment: includes steam and electric power, commercial current being taken from the Missouri River Power Co. Buildings include a general office, laboratory, warehouse, three smithies, barn, boarding house, 6 bunk houses and 6 dwellings.

A 100-ton mill, near the portal of the Bonanza tunnel, at Wickes, planned as the first unit of a larger mill, was completed July, 1910, and is idle for lack of ore.

The Butte property lies about 800' west of the Gagnon shaft of the Anaconda Co. and is believed to carry the extension of the vein worked in that mine. A shaft, sunk on the Gambrinus, was 345' deep when the work was stopped in 1914. At a depth of 85', a crosscut was driven south 45' to prove the apex of the vein and found it to consist of 2' of quartz and 10' of vein matter, carrying silver-lead ore. On the 200' level N. and S. crosscuts were run. The south crosscuts cut the vein 7' wide here, 70' from the shaft. Better assays were obtained here than on the 80' level. The north crosscut at 180' from the shaft cut a 5' vein, which showed lead, zinc and copper. About 400' of drifting and crosscutting were done in the mine.

The Rochester group shows a strong quartz outcrop, the vein being developed by a 523' shaft in which a crosscut at the bottom level has encountered 2 parallel veins, 15' apart, that assay 3 to 7% copper. Property is locally known as the Blowout mine. No work has been done here for about two years. The company's most promising asset is the Butte property.

In 1917 it is reported that the company will sink the shaft to a greater depth as soon as the necessary funds are available.

CORBIN-COPPER KING MINING CO.

MONTANA

Office: State Savings Bank, Butte, Mont. **Mine address:** Corbin, Jefferson Co., Mont.

Officers: W. H. Hall, pres.; W. D. Gibson, v. p.; R. M. Depeu, sec.-

treas.; preceding officers, I. A. Heilbronner, Wm. Gemmell and M. H. Schultze, directors.

Inc. 1911, in Montana, as successor to the Montana-Corbin Copper Co. **Cap.**, \$1,000,000; shares \$5 par; issued, 199,994 shares. Stockholders of the Montana-Corbin Co. received a new share for old on payment of 25 cts. a share.

Property: 2 claims, 26 acres, about 1 mile from Corbin, in Picnic Gulch, shows 4 well-defined veins carrying bornite and chalcopyrite averaging about 10% copper, 20 oz. silver and 50 cts. gold per ton.

Development: consists of a 2-compartment shaft, 400' deep, with about 500' of workings on the Hidden Treasure claim, and several pits and shallow shafts on the Copper King claim. There are also several short tunnels.

Equipment: includes two 60 h. p. boilers, a 15 h. p. hoist, a 5-drill electric air compressor. Idle since organization.

A full report on this property was made, 1911, by Alfred Frank, E. M., supplementing earlier reports by E. P. Jennings, E. M., and L. S. Ropes.

CORBIN METAL MINING CO.

MONTANA

Office: Pittston, Pa. **Mine office:** Corbin, Jefferson Co., Mont.

Officers: J. H. Foye, pres.; John Hoy, v. p.; and gen. mgr.; Thos. McLaughlin, sec.; M. W. O'Boyle, treas.; at last accounts.

Inc. 1907 in Montana, as Corbin-Montana Copper Co., changing name, Jan., 1910, to present title. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; issued, \$400,000. Company apparently is a twin of the Jefferson-Montana Copper Mines Co. Windsor Trust Co., New York, registrar and transfer agt. Annual meeting, second Tuesday in April.

Property: 11 claims, 176 acres, known formerly as the Baldwin mine, 2 miles S. E. of Corbin, in the Colorado district, shows 5 fissure veins ranging from a few inches to about 8' in width, cutting granite. Ores carry chalcopyrite, bornite and galena, estimated by company to average 4% copper, 8% lead, 5 oz. silver, and \$2 gold per ton.

Development: by 500' 2-compartment incline shaft with considerable drifting on 500' level, cutting a small orebody carrying lead-zinc-copper sulphides, and by several short tunnels.

Equipment: includes electric hoist, good for 1,000' depth, and a 10-drill air compressor, taking current from the Missouri River Power Co. There are 6 buildings, including carpenter shop, smithy and change house. Idle several years.

CORBIN-VALPARAISO COPPER MINING CO.

MONTANA

Presumably defunct. See Vol. XI, Copper Handbook.

DAILEY COPPER MINING & SMELTING CO.

MONTANA

Idle. **Address:** Wickes, Jefferson Co., Mont. Wm. W. Dailey, pres.; A. R. Robertson, v. p.; C. H. Dailey, sec.

Inc. Feb., 1907, in Montana. **Cap.**, \$1,500,000, shares \$1 par; issued, \$870,000, of which amount \$800,000 is intact.

Property: the Atlas group of 4 claims, patented, 25 acres in town of Wickes, said to show well-defined fissure vein in andesite. Vein runs E.-W. and is of 12' estimated average width, carrying lenses of ore showing chalcopyrite, bornite and chalcocite, estimated by management to average 3% copper, 12 oz. silver, and \$1 gold per ton, 20% iron, 18% sulphur and 50% silica, without lead or zinc.

Development: a 340' shaft, with 2,000' of workings on vein, said to show 70,000 tons of ore blocked out.

Former owners shipped about \$30,000 worth of ore. An independent source estimates ore to average about 3% copper, 7 oz. silver and 80 cts. gold per ton. No shipments have been made for several years and management claims it needs a larger surface equipment and a concentrator.

Idle for several years, owing to inability to finance the erection of a concentrator.

Reports made and property endorsed by F. L. Sizer, and Potter, Bickman & McKenzie.

ELKHORN QUEEN MINING CO.**MONTANA**

Under lease, 1917, and shipping to East Helena smelter. Mine at Elkhorn, Jefferson Co., Mont., was idle many years.

Leasers are stoping ore from a drift on the 300' level; paystreak said to be 30' wide.

EVA MAY MINE**MONTANA**

Basin, Mont. Owned by Betty Alden Mng. Co., which see.

GOLDEN CURRY MINE**MONTANA**

Reported under option, 1917, to and operated by the Guggenheim interests, price being about \$160,000.

Property: the Sour Dough group, 9 claims, 162 acres, near Elkhorn, Jefferson Co., Mont. Orebody 100' wide is oxidized, lying between limestone and granite and dipping at 45°. Claims said to show 5 orebodies, 2 being developed. Ore is iron oxide carrying low values in gold and copper. It contains chalcopryrite and tenorite, such ore assaying 1.9% copper, 4 oz. silver and 0.35 oz. gold per ton, with 48% excess iron.

Development: by open cuts and tunnels, total underground work said to be 8,200'. Ore blocked out estimated at 20,000 tons; probable ore 100,000 tons. Average cost of mining \$2.20, smelting charges \$2.10. Mine was operated in 1917, shipping 100 tons daily.

Geology and history of property given in Bull. No. 527, U. S. G. S., "Helena Mining Region," by Adolph Knopf, pp. 136 to 139.

IRONSIDE MINE**MONTANA**

Owned by Sheils & Ironside Mining & Milling Co., which see.

JEFFERSON MONTANA COPPER MINES CO.**MONTANA**

Corbin, Jefferson Co., Mont. C. K. McCormick, pres.; P. A. Bell, supt.

Property: 16 patented claims, in Colorado mining district, 3 miles from Corbin, shows fissure veins, 3-5' wide in granite. The course of the orebody is N. E.-S. W., with dip of 60-70°. Developed to depth of 540' by vertical shaft. Electric power was installed in 1916.

No recent information available.

KING SOLOMON MINING CO.**MONTANA**

Clancey, Jefferson Co., Mont. S. N. Moreland, pres.; I. S. Moreland, mgr. and supt.

Property: on Clancey creek, 2 miles W. of Clancey, shows granite with aplite cut by a dacite porphyry dike that forms the hanging-wall of the lode. This lode or shear zone is 25' wide, consisting of slabs of rock alternating with bands 1½" to 3" thick of sulphides, mainly gray copper, (tetrahedrite) galena and zinc blende with chalcedonic quartz.

Development: consists of a 300' inclined shaft being sunk to 700', with levels at 100', 200' and 300' W. of shaft.

Equipment: includes hoist, skip and air compressor. Is a small silver property, which is not considered likely to become a dividend payer.

MONTANA CONSOLIDATED COPPER CO.**MONTANA**

Office: 51 Wall St., New York.

Officers: E. P. J. Burgess, pres.; E. P. Haas, v. p.; W. E. Doyle, sec.; T. F. Lee, treas.

Inc. 1906, in Maine. Cap., \$1,000,000; shares \$1 par; all issued.

Property: includes the Comet and Grey Eagle mines, Deerlodge and various placers, millsites, etc., comprising 699.73 acres. The first named mines about 7 miles N. W. of Boulder, Jefferson Co., Mont., have been idle several years, except for work done by lessees.

Ores: are mainly galena and sphalerite with associated pyrite and chalcopryrite, and the Comet is popularly credited with having yielded a gross output of \$13,000,000. **Ore reserves:** said to be 1,350,000 tons, averaging \$20 per ton.

In 1915 M. K. Rogers, of Los Angeles, Cal., took an option on 75% of the capital stock and began an active rehabilitation of the mine and mill. Soon afterwards the New York brokerage firm of Baruch & Co., since dissolved (bankrupt), acquired minority holdings and began advertising the venture; they succeeded in driving the stock up to nearly \$2 a

share, in the belief that Rogers stock was securely escrowed, when suddenly a large block of stock was thrown on the market and quotations dropped to negligible levels.

Canet mine was being unwatered, 1917, and company said to be prepared to spend \$100,000 in mine development. Crosscuts from the 976' shaft have never been driven far enough to reach the main vein on the lower levels. The mill, now remodeled, is working steadily on the tailings.

The vein is a large one and the property promising enough to warrant deep development. Clark, Dodge & Co. are said to be interested in the property, but have publicly disclaimed any interest whatsoever in the stock on the market.

The company's holdings were acquired and exploration undertaken in 1907 on the report of A. A. Blow, in which the hope was expressed that copper ores in paying quantity would be found in depth. The present activity is the result of the abnormal price of zinc, and work at the mine is subordinated to the retreatment of the 100,000 tons of tailings from the old mill, for extraction of their zinc content. The geology is described in Bull. 527, U. S. G. S., p. 114, 1913.

The property has a speculative value as a mine, but the minority stock cannot be recommended as either an investment or a hopeful speculation.

Property produced mill concentrates throughout 1916-17, working old dumps and tailings and parts of the mine above water level.

MONTANA STATES MINING CORPORATION MONTANA

Office: William Muth, sec.-treas., Bailey Blk., Helena, Mont. Mine office: Alhambra, Jefferson Co., Mont.

Officers: R. A. Bell, pres, and gen. mgr.; R. Horsky, v. p.

Inc. May, 1911, in Montana. Cap., \$5,000,000; shares \$5 par; issued, 120,000 shares.

Property: 38 claims, partly patented, 700 acres, in the Warm Springs district, 6 miles from a railroad. Country rock is a quartz monzonite of the Boulder batholith, cut by rhyolite dikes and showing quartz veins with mineralization along the walls.

Development: by numerous shallow shafts, and short tunnels, with about 2,300' of openings. Ores are mainly galena, sphalerite and tetrahedrite, with a chalcodonic quartz gangue reported by management to carry up to 22% copper, 10% lead, 8% zinc, 16 oz. silver and \$16 gold per ton.

Long crosscut tunnel being driven to cut veins at depth, late in 1917.

MT. THOMPSON GOLD MINING & MILLING CO. MONTANA

Address: 56 East Broadway, Butte, Mont., care Western Mining Supply Co.

Officers: Dr. E. S. Rinehart, pres.; John W. Franks, v. p.; C. L. Franks, sec.-treas., with W. H. Rager and Jos. Hunter, directors.

Inc. 1916, in Mont. Cap., \$1,000,000; \$1 par.

Property: 10 claims, in tract 6,000' long, situated on Cataract Creek, 4½ miles from Basin, on the Great Northern R. R., Jefferson Co., Mont.

Ore: carries silver-lead and copper, with some zinc in a complex mixture of galena, pyrite, a little chalcopyrite and much sphalerite. Ore occurs in small shoots in an E.-W. fissure vein in granite. The ledge is said to be 12' to 25' wide, almost vertical and is a typical quartz tourmaline vein.

Development: by 1,000' Copper Hill tunnel, with 35' crosscut 300' in, exposing main ledge.

Equipment: 14-h. p. gasoline engine, small compressor, etc.

Company claims 200,000 tons of ore blocked out that samples \$32 for 500'. Plans erection of mill 1917-18, run by water power. Not favorably regarded, as vein is lean, and orebodies small.

NEW YORK & MONTANA COPPER MINING CO. MONTANA

Address: c/o E. J. Mathews, 1007 Hoge Bldg., Seattle, Wash. Mine near Corbin, Jefferson Co., Mont.

Inc. 1903, in Delaware. Cap., \$1,000,000; shares \$1 par.

Lands: about 250 acres, including the Erickson, Scioto and Copper

Gulch groups, opened by 3 two-compartment shafts, said to make a good showing of medium-grade ore.

Reported in October, 1916, that a plant costing \$30,000 was to be erected to treat mine and custom ores.

NORTHERN VALLEY MINING CO.

MONTANA

Officers: S. F. Mallette, pres.; Godfrey, Ill.; Walter K. Mallette, v. p., Anaconda, Mont.; H. W. Wilson, sec.-treas., Twin Falls, Idaho.

Inc. 1912, in Arizona. Cap., \$1,000,000; shares \$1 par; 600,000 shares issued. Controlled by the American Metal Mining Ass'n of Arizona.

Property: consists of the holdings of the defunct Amazon-Montana Development Co. in Amazon district, Jefferson Co., Mont. Idle and no work contemplated in near future.

PRICKLY PEAR MINING CO.

MONTANA

Office: care J. C. Murray, pres., Helena, Mont. Mine P. O.: Jefferson City, Jefferson Co., Mont.

Officers: J. C. Murray, pres.; Lee Dever, v. p.; H. M. Brooks, sec.-treas.

Property: the Prickly Pear mine, 2 miles from Jefferson, opened by a 350' tunnel, showing gold and silver-bearing copper ore. Has no power equipment. Production not reported.

ROBERT EMMET COPPER CO.

MONTANA

Idle. Mine at Amazon, Jefferson Co., Mont. Wm. Q. Ranft, pres.; at last reports; John J. Schmitt, sec.-treas.

Cap., \$3,000,000; shares \$5 par.

Lands: 6 claims, patented, 90 acres, carrying veins in granite, not far from the andesite contact. The main vein has a generally N.-E. strike, developed by a 500' shaft, showing a shoot of ore on the 350' level. A 1,200' tunnel having about 1,000' of laterals shows a 10' vein carrying copper, silver and lead ore.

Equipment: includes 10-drill air compressor, electric plant, with transformers, for 60,000-volt current, taken from the Montana Power Co., the Robert Emmet Co. furnishing power to the Comet mine.

SHEILS & IRONSIDE MINING & MILLING CO.

MONTANA

Office: Dr. F. A. Ironside, 16 North Main St., Butte, Mont.

Officers: John Sheils, pres.; Stanley Ironside, v. p.; F. A. Ironside, sec.-treas.

Inc. 1913, in Montana. Cap., \$500,000; shares \$1 par; 446,000 issued.

Property: 6 claims, 2 patented, 120 acres, situated 13 miles N. E. of Butte, and an equal distance from Boulder, Jefferson Co., Montana. Claims show a fissure-vein with ore shoots 250' and 90' long occurring in granite. This granite is cut by an almost vertical dike, greatly altered and mineralized, having a maximum width of over 50'. The ore occurs entirely in the dike, not as a segregation, but in quartz veins running with the dike, within it or at its margin. Orebody is 3' to 5' wide and carries silver, lead, copper, zinc and some gold values.

Reported on by W. L. Creden, H. D. Morse, C. J. Stone; also by H. S. Morris, in Aug., 1917.

Development: by 3 tunnels, main one 1,850' long, with several stopes, and a 50' winze with 200' of drifting at the bottom.

Equipment: includes hoist, 3 drills, electric power, and a 100-ton concentrating mill.

Ore reserves: 5,000 tons of milling ore on dump.

Production: for 1915-16 amounted to 476 tons averaging 4.3% copper, 26.6 oz. silver, and \$4.40 gold.

Shipping about 40 tons of concentrates monthly, 1917.

WAR EAGLE GOLD & COPPER MINING CO.

MONTANA

Property: 3 claims, 7 miles from Alhambra, in Warm Springs gulch, Jefferson Co., Mont., shows strong fissure veins in granite. Mineralization is in paystreaks in soft altered granite, the ore consisting of pyrite and a little chalcopyrite, whose value is mainly in gold.

Development: by a 300' tunnel, planned to intersect the vein at about 1,500' and give a back of about 500'. Presumably idle.

WASHINGTON MINE**MONTANA**

See Angelica Mining Co.

WESTERN RESERVE MINING CO.**MONTANA**

Office: Youngstown, O. Mine office: Basin, Mont.

Officers: F. S. Merwin, pres.; C. Livingston, v. p.; H. F. Duesinc, sec.-treas.; the foregoing and C. J. Burns, J. E. Richardson, A. F. Schontz, E. C. Welch, J. W. Kuhns, directors. J. H. Hildebrand, supt.

Inc. in Ohio. Cap., \$100,000; shares \$1 par; non-assessable; no bonded indebtedness; annual meeting, February 1. Transfer office: Youngstown, O.

Property: 3 claims, at Basin, Jefferson County, being developed for gold, silver, lead and copper. The quartz veins in granite strike E. W. and dip N. Pay ore occurs in large and small bodies as shoots and streaks showing sulphides.

Development: by 2,700' tunnel, greatest depth being 660'.

Equipment: includes a steam compressor. Future work includes driving 100' tunnel and erection of concentration plant. Developing in 1916 and 1917.

WHITEHALL MINING, MILLING & DEV. CO.**MONTANA**

Idle. Address: Whitehall, Mont.

Officers: T. T. Gates, pres.; N. D. Root, v. p.; C. W. Hatch, sec.; with Edw. Ryan, Jesse Johnson, L. B. Knight, R. Edwards, J. M. Borden and Jas. Ryan directors.

Inc. June, 1914, at Whitehall, Mont. Cap., \$500,000; shares \$1 par; 200,000 shares in treasury; 250,000 shares were given for the mining property.

Property: 5 claims, about 3 miles N. E. of Whitehall, Jefferson County, is reported to have an orebody 36' wide from which shipments have averaged \$16 per ton.

WICKES-CORBIN COPPER MINING CO.**MONTANA**

Office: 21-25 Union Bank Bldg., Helena.

Officers: S. A. Balliet, pres.; A. Major, v. p.; L. C. Henry, sec.-treas.; foregoing with N. Salvail and T. A. Grimes, directors.

Inc. July 9, 1907, in Montana. Cap., 5,000,000 shares; 10c par; non-assessable; outstanding 3,633,900. Annual meeting, 3rd Tuesday in June.

Property: 7 claims, 3 patented, 140 acres, 20 miles S. of Helena, and a half mile S. of Wickes, Mont. The claims show N.-S. and E.-W. fissure veins cutting granite, aplite, andesite and dacite. Ores carry gold, silver, copper and zinc.

Development: by Bunkerhill tunnel, 1,030' long and Tulare tunnel, 700'; also 220' shaft. Total workings, about 2,500', greatest depth, 350'.

Production: test lot of 31 tons in 1917 returned 4.87% copper, 17.6 oz. silver, and 0.01 oz. gold, equal to \$24.94 per ton. The cost was \$4 per ton.

LEWIS & CLARK COUNTY**ARKANSAS COPPER CO.****MONTANA**

Mine, on Ten Mile creek, near Helena, Mont., and about 2 miles west of the summit of Mount Helena, is developed by a 200' shaft.

Property: shows a 30' vein in diorite, traceable 800', carrying some copper ore with small gold and silver values. Was in hands of lessees early 1915, but now inactive.

BARNES-KING DEVELOPMENT CO.**MONTANA**

Address: Butte, Mont. Mine office: Kendall, Fergus Co., and Marysville, Lewis & Clark Co., Mont.

Officers: C. W. Goodale, pres.; A. J. Davis, v. p.; J. E. Corette, sec.; C. C. Swinborne, treas.; preceding officers, C. R. Leonard, F. L. Melcher, I. A. Heilbronner, T. A. Marlow, directors. Geo. P. McGee, mgr.; Jerome Place, Helena, Mont.; I. H. McCormick, supt. Piegan-Gloster; W. R. Price, supt. Shannon mine.

Inc. 1907, in Montana. Cap., 400,000 shares, \$5 par; all issued. Security Transfer & Registrar Co., New York City, transfer agt. Annual meeting, 1st Wednesday in March. Stock listed on Butte Exchange.

Balance sheet Dec. 31, 1916, shows assets of \$2,464,292, which includes properties and options, \$2,299,707; buildings, supplies and bullion in process, \$54,802; bullion in transit, \$74,395; accounts receivable, \$663; cash, \$34,726; liabilities include a surplus of \$324,825.

Dividends: 7½ cts. a share was paid March, 1916, and June, 1916. A 10c dividend was declared payable November 15, 1917. Total to date is \$100,000.

Net profits have been as follows: in 1913, \$24,700; in 1914, \$150,419; in 1915, \$147,968; in 1916, \$96,338; \$337,488 for 9 months ended Sept. 30, 1917. Operating profits of the North Mocassin property were \$40,255 in 1916, and \$35,971 for 9 months of 1917; of the Shannon property, in 1916, \$96,071, and \$178,268 for 9 months of 1917; the Piegan-Gloster property operated at a loss of \$22,362 in 1916 and earned \$25,391 to Oct. 1, 1917.

Property: originally owned and operated by the company, consisted of the Barnes-King group of claims at Kendall, developed by the Barnes-King mine.

In 1912, after working spasmodically for several years and spending considerable time and money in an unsuccessful search for new orebodies, the mine was closed permanently, with about \$300,000 left in the treasury. The management now determined to acquire a good property for the company. In 1912 the North Mocassin property, covering about 2,000' in length along the ore-bearing formation adjoining the Barnes-King on the north and the Kendall on the south, was purchased for \$150,000; \$5,000 cash, and the remainder to be paid from net working profits in no prescribed time. In addition a working option was obtained on the Piegan-Gloster property, located near Marysville, Lewis & Clark Co., Mont. Title to this property was obtained in 1913; purchase price paid for it was \$100,000, with an additional cost of \$8,200 for 5 adjoining claims. The Gloster mine had been worked from 1880 to 1888, when the pumps were pulled. It is credited with a production of several million dollars of gold and silver bullion.

In 1915 the company bought all the property of the Kendall Gold Mng. Co., adjoining the North Mocassin on the south, for \$100,000, and an option was taken on the Shannon mine, 2½ miles southwest of Marysville; purchase price is \$228,574, payable from mine profits. Final payment was made during third quarter of 1917.

At the end of 1916 the company owned, or had under option, the following properties: At Kendall, the Barnes-King group, 23 claims, 286 acres; North Mocassin group, 6 claims, 67 acres; Kendall group, 21 claims, 266 acres; total, 50 claims, 619 acres; at Marysville, the Piegan-Gloster group, 34 claims, 391 acres, and the Shannon group, 6 claims, 92 acres, exclusive of 2 claims purchased late in 1915. In Jan., 1916, the company took an option and lease on 2 claims, known as the Parker-Brownlow group, in the Rimini district, 22 miles from Helena. After spending \$20,495 and exhausting the shipping ore, the option was relinquished in Sept., 1916. The orebodies at Kendall are irregular replacement deposits in limestone, dipping 25°. The ores are mostly soft and well oxidized.

Development: the North Mocassin group was first worked through the Barnes-King shaft; later the Santiago shaft was completed to the 500' level and it is now the main working shaft. Orebodies have been opened up on different levels to a depth of nearly 800'. In 1916 underground work totaled 6,600'. The Kendall mine was closed by former owners in 1913, after having exhausted all known orebodies to a depth of 560'.

The old Gloster mine had been opened by a vertical shaft to a depth of 500', and a winze sunk 300' below the 500' level. The Piegan claim had been developed by tunnels. The B. K. Co. has unwatered the Gloster mine to the 800' level and opened up the Piegan orebody above water level. The Norman tunnel, connecting the No. 4 Piegan tunnel and Gloster workings with the tramway to the mill, was driven 900'. All ore mined in 1916 from the Piegan-Gloster and Shannon ground averaged \$9.48 per ton.

The Shannon mine, previous to the time of its being taken over by the B. K. Co., was opened by a tunnel with 2,000' of underground workings,

chiefly on the vein which, in the tunnel, is 300' long, from 4 to 10' wide, and averages \$15 in gold per ton. The B. K. Co. has sunk a 215' winze on the vein, dip 70°, and opened up the 200' level for a distance of 400' to the W. and 122' to the E. The vein is in slate, and where crosscut on the 100' level is said to have a width of 15'. Ore taken out in drifting amounted to 800 tons of ore, assaying \$16 per ton. The Shannon mine is 13,400' from the Gloster mill, with which it is connected by an aerial tramway.

Equipment: at the North Moccasin there is a double drum electric hoist, compressor, and a 1,400' electric tramway from mine to mill, which is on the original B. K. group, and has a nominal daily capacity of 200 tons, allowing a 10-days leaching period. There is also a small oil fired roaster for treating the black unoxidized ore found in the eastern ore shoot. There is a 500-ton cyanide plant on the recently acquired Kendall property. The Piegan-Gloster equipment includes a double drum electric hoist, 100-h. p. motor and compressor at the Gloster shaft. The old Gloster 60-stamp mill has been equipped with a N. 5 Symons disc crusher, three 10' Chilean mills, 2 Wilfley tables and a cyanide plant. The mill is to be connected to an all-slime treatment plant with a daily capacity of 150 tons. The Shannon mine has a 75-h. p. electric driven compressor.

Power: the purchase of the Kendall property included a 400-h. p. hydro-electric plant on Warm Springs creek, 6 miles from the mine. This plant furnishes power for the Kendall properties, and also supplies the towns of Hilger and Kendall with lighting facilities. The Piegan-Gloster and Shannon properties obtain power from the Montana Power Co.

Production: North Moccasin—							Total	Net
	Tons	Assay	%	Lbs.	Cons. per Ton		Costs	Profits
	Milled	per Ton	Rec.	KCN.	Zn.	Lime	per Ton	per Ton
1916.....	33,715	\$8.65	86.5	0.46	0.38	7.5	\$4.08	\$2.80
1915.....	47,038	9.80	89.7	0.40	0.43	4.0	4.65	4.28
1914.....	51,471	8.92	93.8	0.27	0.46	3.2	4.40	3.84
1913.....	49,726	8.89	90.58	0.32	0.34	2.7	5.05	3.29
Piegan-Gloster—Shannon mines—								
1916.....	35,536	\$9.48	0.78	1.03	10.12	\$1.46
1915.....	14,956	7.34	85.2	6.94	\$1.07

Earnings in September, 1917, show a decrease from August of \$18,226, the September earnings from all properties being \$98,774 against \$117,000 in August. The original property of the company, known as the Barnes-King mine, is not being worked. An adjoining property, the North Moccasin, purchased by the company and paid for out of its own earnings, yielded \$22,204 from 2,476 tons of ore in September, while the Gloster and Shannon mines, near Helena, yielded a total of \$76,569 from 4,676 tons of ore. Both the Gloster and Shannon were also purchased and paid for out of their own earnings.

During third quarter of 1917, the North Moccasin yielded \$53,739 from 5,408 tons and \$18,838 profit; \$48,587 from 4,484 tons and \$6,726 profit at the Piegan-Gloster; and \$177,071 from 8,460 tons and \$129,243 profit at the Shannon.

\$100,933 was paid for the Kendall property in 1916 and \$15,920 net was spent on the Woodrow Wilson claim.

The results thus far in 1917 have been more favorable.

CARBON HILL MINING & MILLING CO.

MONTANA

F. S. Earnest, Spokane, chief owner.

Property: 9 claims, in the Grass Valley section, 1 mile north and west of Fort Harrison, Helena, shows a vein for 2,300'.

Development: by 250' incline shaft showing 5½' of carbonate ore and galena, said to assay \$48 per ton. Value is chiefly in the gold content. A 15' shaft with 20' drift, shows a 9' vein of carbonate ore said to assay from \$23 to \$111 per ton.

Two carload shipments yielded \$23 and \$11 per ton respectively. Employs 3 men. Has a 6-h. p. gasoline hoist.

CRUSE CONSOLIDATED MINING CO.**MONTANA**

Address: Marysville, Mont. R. A. Weisner, sec.; Jas. J. Cruse pres.; E. D. Phelan, v. p.

Cap., \$1,500,000; shares, \$1 par.

Property: several mines in the Marysville district, and in Grass Valley, near Helena, Mont., including the Looby and Rock Rose mines. Ores contain lead, silver, and copper. The Looby vein is parallel to the Rock Rose. The Rock Rose mine has 200' shaft showing 6'-8' vein with 2' paystreak running 35% lead, 31 oz. silver, the ore averaging \$32 per ton. The Looby incline shaft is 160' deep and shows lead-silver ore of unknown extent.

CUPRITE COPPER MINING CO.**MONTANA**

Mine near Marysville, Lewis & Clark Co., Mont.

Officers: P. L. Reece, pres. and mgr., Helena, Mont.; J. B. Waltz, v. p.; F. J. Rixon, sec.-treas.; preceding officers, P. B. Moss, Geo. M. Sipley, directors.

Cap., \$300,000; shares, \$1 par; non-assessable.

Property: 10 claims, about midway between Helena and Marysville. Two well-defined veins on property; one, a gold-silver-lead vein, 4' to 20' wide, the other, a gold vein of promise. The unpatented claims have been surveyed for patent.

Development: by 200' shaft, 100' of drifting on this level, and a winze 100' deep, with 340' of drifting on the 300' level, which will cut the quartz vein at depth of 340'.

Equipment: includes a steam hoist and air compressor.

EASTERN BELLE MINING CO.**MONTANA**

Address: Helena, Mont.

Officers: Geo. Huffaker, pres.; S. T. Hill, v. p.; Geo. H. Hill, sec.-treas.

Inc. 1916. Cap., \$100,000; shares \$1 par. Bought the Eastern Belle mine from Helena Bureau of Mines.

Property: 2 claims, 40 acres, in the Scratch Gravel camp, near Helena. Claims show quartz, carrying free gold.

Present management plans to sink incline shaft several hundred feet.

ECONOMY GOLD MINES CO.**MONTANA**

Address: East Helena, Mont.

Officers: J. L. Kessner, pres.; S. Rosenfield, v. p.; I. Rosenfield, sec.; E. J. Hyman, treas.; directors.

Inc. in Montana. Cap., \$1,500,000; shares \$1 par; 280,000 issued.

Property: 180 acres, patented, 6 miles from East Helena, shows 15 fissure veins in diorite, andesite and granite. Chief vein has an E.-W. strike, with 75° dip. Ore, containing gold, silver and copper, occurs in shoots said to average 3' in width and from 35' to 150' in length.

Development: by 2 shafts about 300' deep.

Equipment: includes boilers, 3 gasoline hoists, two 75-h. p. compressors and complete electric equipment installed, 1917, and an 8-stamp mill.

Ore: developed on 300' level is same shoot of high-grade ore stoped on the 100' but wider and varying from \$10 to \$235 per ton.

FRANKLIN MINING CO.**MONTANA**

Address: Helena, Mont.

Inc. 1915, in Montana. Cap., \$1,000,000; shares \$1 par. Owned by estate of Thos. Cruse.

Property: in the Scratch Gravel district near Helena, Lewis & Clark Co., Mont., adjoins the property of the Scratch Gravel Gold Mining Co., on the W. The mine is said to have made total profits from April, 1914, to June, 1916, of \$196,498.

Claims show 2 veins, crossing, one carrying high-grade gold ore, with free gold, the other silver ore. The gold vein is developed eastward and passes into the lands of the Scratch Gravel Co. Values are chiefly in gold. Employs 50 men.

FURNACE CREEK OXIDE COPPER CO.**MONTANA**

Office: c/o John E. Corrette, sec., Hennessy Blk., Butte, Mont. Alex. Burrell, mgr., Argo mine, Canyon Ferry, Lewis & Clark Co., Mont.

Officers: Chas. W. Goodale, pres.; John D. Haines, v. p., with A. H. Jones and R. C. Monahan, directors.

Inc. Oct. 23, 1906, in Arizona. **Cap.**, \$5,000,000; shares \$5 par; 170,325 in treasury, Jan. 1, 1917.

Company was organized to operate in the Death Valley district, Inyo Co., Cal., but abandoned original holdings after unsuccessful attempts to locate commercial orebodies. In 1916 acquired 51% of Argo mine in Hell Gate canyon, about 30 miles E. of Helena, Montana. Property was formerly owned by the Eclipse-Argo Co., producing 2,000,000 lbs. of copper, 1903-1916. In 1916 was bought by Castleton Copper Co.

Property: 5 claims, 2 patented, held on bond and lease for \$245,000. Mine has a well defined fissure vein, 13" thick, traversing shale and limestone, with dip of 75-80°. Ore occurs as massive chalcopryrite assaying 25% copper and is mineable and clean.

Ore reserves: estimated October, 1916, at 2,060 tons of 25% ore in sight. Mine fully equipped. Reported on in 1916 by F. A. Linforth.

Shipments by former owners to Washoe Reduction Works, up to July, 1916, said to have netted \$114,071.

Operations for 1916-17 are satisfactory and bond will be taken up. Shipments, 19 miles by wagon to Louisville on the N. P. R. R. to August 1, 1916, amount to 720 tons of ore that assayed 24.75% copper, or 356,400 lbs.

Property small, but excellent and management competent.

HELENA MINING BUREAU, INC.

MONTANA

Address: L. M. Rheem, sec.-treas. and mgr., Helena, Mont.

Officers: S. A. Balliet, pres.; M. H. Gerry, Jr., v. p.; preceding with E. N. Brandegee, F. M. Smith, J. P. Bahnsen, C. E. Dalton and T. O. Hammond, all of Helena, directors.

Inc. April, 1914, in Montana. **Cap.**, \$100,000; shares \$5 par; 8,000 shares outstanding. Annual meeting 2nd Monday in January.

Bureau was formed for the purpose of advertising and creating a renewed interest in mining industries in the Helena district. Each citizen, who wished to do so, subscribed \$5 a month, receiving a share of stock for each subscription for the term of three years or longer. This public enterprise has been most beneficial to the mining industry of the section. It has created great mining interest all over the country in the Helena district and many newcomers have taken advantage of the mining opportunities.

In January, 1917, the Helena Mining Bureau took over the operation of the Helena mine, located in Grass Valley district. This mine is fully equipped with a 300' shaft and is making regular shipments.

Ore: lead, silver and gold with a net smelter return around \$23 per ton.

Production: averages 3-4 cars monthly which it is expected will soon be increased.

MADDEN SCRATCH GRAVEL MINES CO.

MONTANA

Address: Helena, Mont.

Officers: Jas. Madden, pres.; Peter Scharenbroich, v. p.; Wm. Muth, sec.-treas.; above, with Theo. Sarter, L. P. Wells and E. Edwards, directors.

Inc. March 16, 1916, in Montana. **Cap.**, \$300,000; shares \$1 par; outstanding \$170,000. Annual meeting, 3rd Monday in June.

Property: 3 patented claims, 50 acres known as the Jacquemin group, in the Scratch Gravel Hills, 8 miles from Helena, said to show gold ore in fissure veins in granite. The claims are said to have been worked in a haphazard manner by Jacquemin.

Development: 160' incline shaft, and 340' tunnel. Present management intends to develop the property. Fair results were reported in 1916.

MARYSVILLE GOLD MINING CO.

MONTANA

Address: A. B. Wolvin, Duluth, Minn. **Mine office:** Marysville, Mont.

Officers: Geo. O. Freeman, pres.; Ted E. Collin, sec.-treas.; L. S. Ropes, supt.-cons. engr.

Inc. 1911, in Montana. **Cap.**, \$1,000,000; shares, \$1 par; 527,000 issued.

Property: 30 claims, 430 acres, in Marysville district, 20 miles from

Helena, Mont. This region was practically dead for years, but is reviving through the efforts of the Barnes-King, St. Louis, and other companies. Marysville Co.'s principal mine is the Blue Bird-Hickey.

Development: mainly by tunnels. About \$120,000 said to have been spent in recent exploration.

Ore reserves: estimated by company at 200,000 tons of \$10 ore. Because the 500' level of the Shannon mine of the Barnes-King Co., adjacent to the Marysville Co.'s mine, shows rich gold ore, the Marysville Co. claims indicated reserves of several millions, which is an unsafe assumption.

Milling expected to commence at end of 1917. Is considered a meritorious property.

MONTANA COPPER-SILVER CO.

MONTANA

Idle. **Address:** E. R. Purnell, supt., Helena, Mont.

Mine in Scratch Gravel hills, Lewis & Clark Co., Mont., 8 miles from Helena, shows quartz veins in quartz-monzonite, carrying ores with pyrite and chalcopryrite and gold-silver values.

Development: by shaft and drifts. Equipped with hoist. Is not favorably regarded.

NEW COPPER SILVER CO.

MONTANA

Address: Helena, Mont.

Officers: W. C. Bardon, pres.; Z. B. Melborn, v. p.; J. R. Wine, sec.-treas. Company acquired the holdings of the defunct Copper-Silver Montana Mining Company at receiver's sale in 1914.

Property: 7 claims, 130 acres, adjoining the Lexington and Sacajewea, in the Scratch Gravel district, 1 mile from Great Northern railway, and 5 miles north of Helena. Claims show granite and monzonite, reported to carry numerous fissure veins, dipping N. W. and S. E. All veins are reported mineralized at surface, carrying melaconite, azurite and malachite. Mine has a 500' shaft, cutting at 300', a vein estimated to average 4.5% copper, 12 to 100 oz. silver, and \$1 to \$55 gold per ton.

Equipment: includes a 30-h. p. steam hoist and a gasoline engine. Operations have not yet been resumed by this company.

NORTHWESTERN METALS CO.

MONTANA

Shared the fate of all Marcus L. Hewitt promotions. Bankrupt. Entire property reported sold by court for \$22,000, July, 1916. Fully described Vol. XI, Copper Handbook.

O. & M. MINES CO.

MONTANA

Office: W. W. Tolman, sec., Old Natl. Bank Bldg., Spokane, Wash.

Officers: M. C. Banfield, pres.; Frederick Keffer, v. p.; Rich. Martin, Jr., treas.; Henry Johns, mgr., Hutton Block, Spokane.

Inc. in Montana. Cap., \$1,000,000; shares \$1 par; 900,000 issued. 150,000 shares were offered the public, April, 1917, at 50c each. Final payment of \$100,000 on lease and bond, due Sept., 1917.

Reported Sept. 24, 1917, that the company had insufficient funds to make the payment due on the Mike Horse group and forfeited the property. Failure was result of inability to cut fuel owing to severity of winter weather, early in 1917, and consequent inability to earn the bond money.

Property: 9 claims held under bond and 14 claims located by company, unpatented, known as the Mike Horse Group, 40 miles north of Helena, in the Silverton camp, Lewis & Clark Co., Mont. Mine was worked 20 years ago for its high-grade silver lead ore, but the ore becoming base with depth it was abandoned.

Development: by tunnels aggregating 3,400', has proven up 5 veins, the main, or Mike Horse vein, estimated to contain 55,000 tons of positive ore with average assays of 15% lead, 10 oz. silver, 12.5% zinc, 1% copper and .03 gold per ton. A new tunnel, 130' lower, is being driven to cut the veins at depth.

Equipment: includes 100-ton concentrator.

Production: during 1916 totaled 325 tons of silver-lead concentrates, netting about \$12,700.

Haulage charges of \$14 per ton were paid, 1916.

PORPHYRY DYKE GOLD MINING CO.**MONTANA**

Address: James Breen, gen. mgr., Helena, Mont. Operating the Porphyry Dyke gold mine at Rimini, Lewis & Clark Co., Mont.

Mill being remodeled, Sept., 1917. S. R. Brown, mill supt.

ROCK ROSE MINING & MILLING CO.**MONTANA**

Officers: J. M. Nilan, pres., Helena, Mont.; H. C. Krug, v. p.-treas., Butler, Pa.; Andrew Weisner, sec., Helena, Mont.; R. A. Weisner, asst. sec.; L. S. Ropes, cons. engr.

Inc. in Montana.

Property: 6 claims, 3 patented, adjoining Fort Harrison on east, near Helena, Mont., and 3 claims under option. Dandy claim has 117' shaft with 300' drift and crosscut exposes 2 veins, one of silver-lead, the other of gold ore. Galena vein is 6" to 4½' wide, averaging 2½'.

Ore: silver lead carrying \$14.07 to \$57.79 per ton. A total of 196 tons of ore shipped in July, 1906, June, 1907, July, 1908, yielded \$4,234 smelter returns.

Development: by 300' shaft with a 125' drift, exposing ore for 75', in part lead and in part copper ore that carries 4½ to 10% copper. The gold vein is 2-3' wide and reported to average \$25 per ton, though none has been shipped. The vein is traceable by 6-7 pits for 378' across the claim.

Stated in Aug., 1917, that good ore was opened at 200'. The ground is traversed by many veins and porphyry dikes.

Equipment: 80-h. p. boiler, compressor, etc., complete. Buildings include engine house, ore sorting house, boarding and bunk houses. The freight rate is but \$1 per ton for team, R. R. and loading. Water is handled by 1-2 hours pumping each day.

Property adjoins and is east of Helena Mine & Christmas Gift. Although lessees only shipped 190 tons hand picked ore in 2 years, the mine is shallow and worthy of development.

District is an old one, but ore-shoots heretofore developed have faded out in depth.

SACAJEWEA GOLD & COPPER MINING CO.**MONTANA**

Office: 11 Broadway, New York. Mine near Helena, Mont. Col. Henry Altman, pres. and gen. mgr.; W. J. Anson, sec.

Cap., \$5,000,000; shares \$10 par.

Property: 47 claims in the Scratch Gravel district, adjoining the Copper-Silver Montana Mining Co. Idle some years, but work resumed 1916.

ST. LOUIS MINING & MILLING CO.**MONTANA**

Address: Marysville, Mont.

Property: the famous Drumlummon mine, now yielding 100 tons of silver ore daily with gold values.

Equipment: 25-stamp mill and cyanide plant.

SCRATCH GRAVEL GOLD MINING CO.**MONTANA**

Address: Helena, Mont.

Officers: W. E. Cullen, pres., Spokane, Wash.; H. I. Wilson, v. p.; John MacGinnis, treas.; T. B. Miller, sec.; above with E. M. Hall, directors. Walter Larson, supt.

Inc. Nov. 5, 1915, in Montana. **Cap.**, \$1,000,000; shares \$1 par; \$910,500 outstanding, Jan. 10, 1916; Security Transfer & Registrar Co., New York, transfer office and registrar. Listed on New York Curb.

Operating statement for period Oct. 1, 1915, to Aug. 31, 1916, shows: income from ore sales, \$119,947 net, from 2,847 tons.

Property: known as the Head property, 34.7 acres, lies 2 miles N. W. of Helena. Located on same fissure vein as the Franklin mine belonging to the Cruse estate.

Development: to 500' depth, by 3 incline shafts, 90', 50' and 500', with 800' of drifting. Only high-grade ore is being shipped, the low-grade being stored for the mill which was constructed from a plant erected by another company nearby.

Ore reserves: estimated in Jan., 1917, by C. E. Fryburger, E. M., as \$944,509 in ore blocked out and \$1,939,311 probable above 500' and down to 600' depth. In Aug., 1917, rich ore was being sent to the smelter.

UNITED SMELTING & REFINING CO.**MONTANA**

Is controlled by American Smelting & Refining Co.

Property: the East Helena, Mont., silver-lead smelting plant.

VALLEY FORGE MINING CO.**MONTANA**

Address: S. A. Mendenhall, mgr., Rimini, Mont.

Company operates gold, silver, lead, zinc property in Ten-Mile district, 14 miles W. of Helena, but at present only dumps are being treated by the New York Montana Engineering & Testing Co., at its plant at Helena. Shipments are 80 tons daily.

WHITLATCH MINE.**MONTANA**

Owned by C. W. Young, Chicago, Ill. Worked since 1912 under lease by Sherman Bros. (H. C., A. R. & Wm.), of Helena, Mont.

The mine, $3\frac{1}{2}$ miles south of Helena, Mont., located in 1864 and operated intermittently to date, has been a good and profitable gold producer. The veins carry silicious gold ore, containing small silver value, developed by a 500' shaft; recent work is mostly between the 400' and 500' levels.

Equipment: includes tramway, compressor, pump and hoist. Only 5 stamps of the 20-stamp mill and cyanide plant were at work in 1916, treating both Whitlatch and custom ores. In Sept., 1917, ore from the 400' level was being crushed.

LINCOLN COUNTY**BANNER & BANGLE MINING CO.****MONTANA**

Address: Leo Greenough, Old Natl. Bank Bldg., Spokane, Wash.

Property: Mine 5 miles from Troy, Lincoln Co., Montana, said to have an ore shoot 1,000' long, developed by 5 tunnels over a vertical height of 2,500', with commercial ore on each level. Ore contains lead and zinc.

Company owns a water right which will be utilized for developing electric power; dam now under construction. A railroad will be built from Troy to the mine and a 250-ton mill was erected 2 miles from Troy. Employs 300 men at present. Improvements estimated to cost \$500,000.

Under lease and bond to Snowstorm Mines Cons., which see.

BEAR CREEK PLACER CO.**MONTANA**

Address: E. G. Mellander, agent, Libby, Lincoln Co., Mont.

Property: Company paid \$150,000 for Libby Placer Mining Co. and \$40,000 for Comet Placer Co.'s properties. Now owns 10 miles of gravel flats along Libby Creek, beginning 18 miles above the town.

Installing a \$410,000 dredging plant, 1917, and will prospect ground thoroughly before beginning operations.

MONTANA MORNING MINING CO.**MONTANA**

Address: Troy, Mont.

Officers: W. Hogan, pres.; G. W. Stannard, v. p.; S. T. Wood, sec.-treas.; with G. B. Harrington, J. Rosslow, E. S. Williamson and D. T. Wood, directors.

Cap., \$300,000; shares 20c par.

Property: 12 claims at Troy, Lincoln Co., Mont., reported to show 3 well defined veins, partly developed by shafts. Ore opened assays high in lead, zinc, and silver. Present work consists of driving on the contact veins. Compressor installed.

MONTANA SILVER-LEAD MINING CO.**MONTANA**

Address: 605 Dekum Bldg., Portland, Oregon.

Officers: H. G. Lougee, pres. and treas.; R. Naylor, v. p.; O. E. Heintz, sec.; with J. Bingham and C. B. Roosa, directors.

Inc. Oct. 17, 1906, in Washington. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; 900,000 issued.

Property: 6 claims, 120 acres, in the Cabinet range, near Libby, Lincoln Co., Mont., 16 miles from railroad.

Geology: contact vein in quartzite and slate. Orebody said to be from 2' to 20' wide, and pay-shoot on surface 600' long. Ore is a sulphide, assaying upwards of 5% lead, 5 oz. silver, \$2 gold and 4% zinc.

Development: by 2 tunnels, 750' and 1,300' long, reaching depth of 1,100' with total workings of 2,050'. Lower tunnel being extended to cut ore opened above.

ROSE CONSOLIDATED MINING CO.

MONTANA

Address: Libby, Lincoln Co., Mont.

Officers: H. H. Phipps, pres.; Sidney Shonts, v. p.; with H. Childs, Oscar Nordquist and P. S. Rose, directors.

Property: a gold-tungsten mine near Libby, equipped with mill, was reopened Aug., 1916.

Production: over \$15,000 up to May, 1917.

SNOWSTORM MINES CONSOLIDATED.

MONTANA

Officers: Leo Greenough, pres. and gen. mgr., Old Natl. Bank Bldg., Spokane, Wash.; J. W. Greenough, v. p.; W. J. Beaton, sec.-treas.; with M. D. Hall, James Broad, H. E. Chaney and R. E. Walters, asst. gen. mgr., directors.

Inc. in 1916. Cap., 2,500,000 shares; 25c par.

Property: Company organized to take over the Snowstorm Mining Co. and to acquire under bond and lease the Banner and Bangle claims, at Troy, Lincoln Co., Mont., which see. Of the capital stock, 1,500,000 shares were issued to Snowstorm Mining Co. stockholders in full payment for the corporation's assets. Proceeds of sale of 1,000,000 shares stock not transferred to the former Snowstorm Co. stockholders, has been devoted to developing and equipping the Banner and Bangle property. Reports from the Banner and Bangle mine announced that 6 tunnels are all in ore and 300 men employed. The work blocks out 400,000 tons of ore, averaging 7.5% lead; 8.5% zinc, and 4 to 5 ounces silver per ton. It looks as if the Snowstorm stockholders had acquired an excellent property, which should soon put the stock on a dividend basis. New concentrator started work in May, 1917, and was treating 250 tons daily in August.

MADISON COUNTY

BEAR GULCH MINING CO.

MONTANA

Office: care of Alex. Johnston, Clark Brothers' Bank, Butte, Mont.
Mine: at Twin Bridges, Madison Co., Mont.

Property: the Montana View group, carrying auriferous and argentiferous copper ores, opened by tunnel about 3,000' long. Has steam power and air compressor. Property has little ore and is not on the contact zone; its chief value is for a tunnel site for the Moffat claims, which adjoin it, and are being worked, 1917, by Charles J. Stone, former manager of the Alex Scott Mine at Butte. The Moffat Mine has developed a granite lime contact with basic carrying magnetite that varies from 5' wide for 1,000' along the tunnel, to 100' wide near the face. This ore, averaging 2.1% copper, was shipped (1916) to the East Butte smelter. Tramming to R. R. costs \$2.00, railroad freight \$1.75 and smelting charge \$3.75 per ton.

B. & H. MINES & MILLING CO. (not inc.)

MONTANA

Owners: N. J. Bielenberg and W. I. Higgins, Deer Lodge, Mont. H. F. Widdicombe, engr. and supt.

Property: known as the Bielenberg-Higgins, consists of 20 claims, 10 patented, 360 acres, 3 patented millsites and 1 unpatented tunnel site, in Bear Gulch, 14 miles from Twin Bridges, Madison Co., Mont., on a branch line of the N. P. R. R.

Ore: complex sulphides, occurs in porphyry and altered granite. There are 9 known veins, said to be traceable for 4,000' and to contain gold, silver, lead, iron and copper values. Veins strike E. W. with dip of 38°, becoming flatter as work progresses; 4 veins have been extensively developed and proven to be from 7' to 105' wide and continuous at depth, containing ore of commercial value, said to average \$4 per ton. Ores are treated by wet concentration, making a recovery of 90%. Concentrates run \$54 to \$80 gold, 11 oz. silver, 25% lead, 2% zinc, and 0.5% copper. Ore reserves are estimated approximately at 200,000 tons of \$4 to \$10 ore.

Development: a 7'x7' crosscut tunnel, 900' long, drifts, raises and winzes, underground workings, totaling 2,000'.

Equipment: 100-ton mill, 2 air hoists, pumps, wet concentration plant and compressor, 640 cu. ft. capacity.

Property: has been in development stage for several years. Management now plans adding electric power, driving the tunnel to 3,000' and increasing daily capacity of the mill to 300 tons.

CALAMONT COPPER CO.

MONTANA

Idle. Office: 263 Twelfth St., Oakland, Cal. **Mine office:** Norris, Madison Co., Mont.

Officers: Walter V. Harrington, pres.; Wm. F. Davis, v. p.; Mark E. Davis, managing director; Hugh J. Leonard, sec.; Thos. F. Hogan, treas.; preceding officers, Jas. Keller and F. G. Crist, directors.

Inc. Nov., 1909, in Arizona. Cap., \$5,000,000; shares \$10 par; non-assessable. Apparently is connected in management with the Montana-Hecla Mining Co.

Property: 22 claims 380 acres, include the Old Colony group, adjoining the Montana-Hecla, 5 miles southeast of Norris, carrying auriferous and argentiferous copper ore.

Development: includes several shallow shafts, with an old 100' 2-compartment shaft on the Big Jack claim, and a 160' tunnel, with about 900' of workings. Not regarded favorably by late H. J. Stevens. A report on the property made by Reeves Davis, E. M., Sept., 1911, recommended development of 2 surface outcrops. Mark Davis, former manager, reported to be protecting the property with a view to refinancing the company.

CONREY PLACER MINING CO.

MONTANA

Address: Hennen Jennings, cons. engr., 2221 Massachusetts Ave., Washington, D. C. **Office:** Ruby, Mont.

Inc. in 1898.

Property: extensive placer claims in the Alder Gulch district, Madison Co., Mont.; about 80 miles by rail from Butte. Described in detail in Bull. 121 of U. S. Bureau of Mines, 1916.

Equipment: up to 1916 has cost \$1,200,000, advanced largely by the late Gordon MacKay and a few shareholders. There were 3 steam and 4 electric dredges, but the latter are now the only ones operated. A few details are as follows:

	No. 1	No. 2	No. 3	No. 4
Year built	1908	1908	1906	1911
Monthly capacity, cubic yards.....	96,270	62,709	82,415	300,000
Power consumed, h. p.....	380	380	460	1,235
Depth of digging below water, feet..	30	35	45	55
Capacity of buckets, cubic feet.....	7½	7½	9½	16 to 17
Gold-saving area, square feet.....	1,231	1,231	1,264	3,000
Cost of boat.....	\$108,000	\$128,000	\$198,999	\$296,000

No. 4 boat has dug as much as 411,000 yards in a month. It weighs 2,000 tons.

Power is supplied by the Madison River power plant, 26 miles away. Over \$50,000 has been spent on a machine drop, and over \$60,000 of spares are kept on hand. On the dredges 36 men are employed; while 49 are employed in other departments.

Production: from 1899 to 1916 a total of 37,000,000 yards had been dug, yielding 16c per yard, or \$5,920,000. From 1906 to July 31, 1915, the quantity moved was 31,379,890 yards, at a total cost of 6.96c per yard.

This is one of the most profitable dredging enterprises in America. Many dredge improvements, now generally in use, have been devised by the Conrey Company. By the will of Gordon MacKay, Harvard University benefits largely from the profits made at Alder Gulch.

GRAND VIEW MINING & DEVELOPING CO.

MONTANA

Address: Twin Bridges, Madison Co., Mont.

Property: molybdenum-bearing claims, 11 miles E. of Twin Bridges, said to show a vein of porous and well-crystallized cerussite heavily impregnated with iron oxide, containing $\frac{1}{2}$ to 1% crystallized wulfenite (molybdate of lead). Ore also carries gold and silver values.

Development: little work done to date and commercial value of deposit not known. Concentration may be complicated.

HIGHLAND COPPER CO., LTD.

MONTANA

Office: 20 Riverside Ave., Spokane, Wash.

Officers: R. C. McCaffery, pres.; J. A. Anderson, v. p.; Homer Wylde, sec.-treas.; with N. J. Thomas and J. H. Marks, directors.

Inc. 1909 in Washington. **Cap.**, \$1,500,000; shares \$1 par; issued, 415,-200.

Property: 5 claims, unpatented, 130 acres, in the Silver Star district of Madison Co., Mont., shows granite and limestone, carrying 5 contact deposits, with some work on each, there being 9 pits and shafts, of 45' and 80'. Main vein, estimated by company at 10' in width, shows copper carbonates at surface, with chalcocite and chalcopyrite at depth, ore having given average assays of 6% copper, 2 to 5 oz. silver, and \$19.78 gold, per ton.

Equipment: includes a 40-h. p. hoist, good for 1,000', and necessary mine buildings. Is a prospect.

Probably idle. No recent returns.

HIGGINS & BIELENBERG MINE (H. & B.)

MONTANA

See B. & H. Mines & Mill.

IOWA MONTANA DEVELOPMENT CO.

MONTANA

Address: Fraser, Iowa. **Mine address:** Jefferson Island, Madison Co., Mont.

Officers: T. J. McGinnis, pres.; F. H. Hoeffner, sec.; E. H. Daniels, treas.; all of Fraser, Iowa; and John Young, J. D. Morrison, F. Wood, directors. J. D. Morrison mgr., Butte, Mont.

Inc. June, 1915, in Iowa. **Cap.**, \$75,000; shares \$50 par. Is a leasing company. Company obtained a 3-year lease taking possession June 1, 1915, on the Bismark mine of the Montana-Illinois Copper Mining Co., which see for description.

LEVIATHAN GOLD MINING CO.

MONTANA

Address: Pony, Madison Co., Mont.

Property: carries copper ores, with values mainly in gold.

Equipment: includes a hydro-electric power plant, compressor, and 100-ton concentrator. No returns secured.

LITTLE GOLDIE MINE.

MONTANA

Address: M. R. Ostronick, Twin Bridges, Mont., owner and mgr.

Property: 3 claims, 54 acres, in Goodrich Gulch, Madison Co., Mont., said to show 2" to 18" fissure veins, running E.-W., and assaying as high as \$114 in gold, silver and lead. Ore occurs in gneiss and limestone formation.

Developed: by 200' tunnel, several drifts, and raises.

Equipped: with compressor.

Shipments: in 1915, reported to have averaged \$80 per ton, amounted to \$30,000. Owner estimated 6,000 tons of ore blocked out, March 19, 1916. No later returns.

MINES DEVELOPMENT CO.

MONTANA

Out of business. Had bond and lease 1915-16 on Moffit Group, which see. Fully described in Vol. XII, Mines Handbook.

MOFFIT GROUP.

MONTANA

Owner: J. W. Moffit.

Mine: 8 miles from Twin Bridges, Madison Co., Mont., was under bond and lease 1915-16 to Mines Development Co., now out of business.

Ore: said to average 2% copper. Over 600 tons have been shipped. Idle.

MONTANA-ILLINOIS COPPER MINING CO.**MONTANA**

Office: 450 Phoenix Blk., Butte, Mont. Mine address: Jefferson Island, Madison Co., Mont.

Officers: J. W. Brown, pres.; Benj. W. Wilson, v. p. and sec.; W. G. McCormack, treas.; preceding, with L. H. Stanhope, Wm. Meyer, H. Sultzer and A. D. Clark, directors.

Inc. 1907 in Montana. Cap., \$2,000,000; shares \$1 par; non-assessable; issued \$2,000,000.

Bonds: \$300,000 authorized, at 8%; issued, \$80,000. Annual meeting first Thursday in July.

Property: the Bismark mine, 20 miles south of Jefferson Island, in the Ruby mountains; 10 quartz claims, patented; three 5-acre millsites; a water right and 320 acres placer ground, contested by the Forest Reserve, total of 550 acres, including part of the former holdings of the Bismark Copper Mining Co. Claims show granite and gneiss carrying 3 fissure veins, under development, with N.-W. strike of about 4' average width. Veins carry chalcopryite and bornite estimated by management to average about 5% copper, 2 oz. silver, and \$1 gold per ton. Flotation concentrates average 22% copper.

Development: by tunnels of 400', 200', 500' and 1,900', with about 3,000' of workings.

Equipment: includes a 5' Pelton wheel and a 10x12" six-drill air compressor. There are 12 mine buildings. A concentrator, completed in 1914, has a Blake crusher and a modern oil flotation plant.

In June, 1915, a 3-year lease on the property was taken by the Iowa Mont. Dev. Co. This company re-equipped the mill, installing a 100-ton flotation plant and started operations, but was soon compelled to shut down on account of insufficient water supply. Electric power is being installed. Company is producing.

WHITE CHIEF COPPER CO.**MONTANA**

Mine: near Jefferson Island, Madison Co., Mont.

Incorporators: Lewis Schmuck, Mrs. Helen Schmuck and Ben. W. Wilson.

Inc. Sept. 1913. Cap., \$1,000,000; shares \$1 par.

Property: 7 claims, in the Whitehall district, developed by a 600' upper and 100' lower tunnel showing copper, silver, lead and gold ore. A drift at depth of 82' disclosed a 5' vein, assaying 13% lead and \$14 gold.

Development: has been hampered by lack of working capital.

WILLOW CREEK MINING CO.**MONTANA**

Address: P. H. McDermott, chief owner, Helena, Mont.

Property: Owns the Mountain Meadow Group, 4 miles from Pony, Madison Co., Mont., on Willow Creek. Mine shows a 12' fissure vein in granite carrying a free gold with pyrite and chalcopryite, both with gold values, in quartz gangue. Has a small mill. Regarded as promising.

A small shipment was made in July, 1917.

MEAGHER COUNTY**DURANT MINING & SMELTING CO.****MONTANA**

Address: Spring Gulch via Martinsdale, Meagher Co., Mont. C. M. Durant, supt.

Property: 14 miles from Martinsdale, shows fissure veins carrying copper sulphide ore with gold values.

Developed: by 200' 2-compartment shaft. No recent returns secured.

MINERAL-MISSOULA COUNTY**ALPENA COPPER MINING CO.****MONTANA**

Office: Wallace, Idaho. Mine office: Saltese, Mineral Co., Mont.

Officers: C. W. Beale, pres.; A. H. Featherstone, sec.-treas.; preceding officers, Alex. Muir and A. P. Cochrane, directors.

Mine: in the St. Joe district, near the Monitor, and 2 miles from the Adair on the Milwaukee railroad, is developed by 2 long tunnels and shaft, showing a 2' vein of quartz with chalcopryrite. At last account face was 400' from ore shoot exposed on surface, which is goal of present work.

Equipment: includes several buildings. No recent returns secured.

AMAZON DIXIE MINING CO.

MONTANA

Property: at Sildix, Missoula Co., Mont., is really in Coeur d'Alene district, Idaho, and is described thereunder.

BEN HUR MINING CO., LTD.

MONTANA

Address: Saltese Supply Co. Saltese, Mineral Co., Mont.

Officers: D. S. Dickson, pres.; Frank H. Bell, v. p. and purch. agt.; Chas. J. Luedke, sec.; C. A. Keating, treas.; preceding officers, Peter Peterson and A. J. Matthiessen, directors.

Cap., \$1,500,000; shares \$1 par. Annual meeting, last Saturday in April.

Lands: 5 claims, adjoining the Last Chance mine, 3 miles from a railroad, showing a fissure vein, in quartzite, of 10' to 60' width at surface.

Development: by 3 crosscut tunnels, the lower, of 1,100' cutting a vein carrying silver lead and gray copper ores. Property considered a promising prospect.

No recent returns secured.

BIG ELK MINING CO.

MONTANA

Office: Wallace, Idaho. **Mine office:** Saltese, Mineral Co., Mont.

Officers: Peter Peterson, pres. and gen. mgr.; Carlton Fox, v. p.; A. H. Featherstone, sec.-treas.; preceding officers, Geo. K. Garrett and W. S. Brown, directors. C. F. O. Merriam, mg. eng.

Inc. April, 1909, in Idaho. **Cap.,** \$2,000,000; shares \$1 par; assessable; fully issued. Last assessment 1 mill per share, July 22, 1914.

Property: 15 claims, 300 acres, unpatented, on Bald Mountain, in the St. Joe district, showing 3 fissure veins in St. Regis quartzite, various trenches exposing veins with 4' thickness carrying streaks of chalcopryrite and spathic iron, in spar and quartzite. A carload shipment, to Helena, from an 18' prospect shaft, returned 28.7% copper, 28.9% iron, 15% sulphur, and 2 oz. silver, per ton. A 125' upper tunnel and a 200' lower diagonal crosscut tunnel show chalcopryrite and bornite, carrying small gold values. The C., M. & St. P. R. R. crosses property. Management considered good and property promising. Four men employed continuously.

BLACK TRAVELER COPPER MINING CO.

MONTANA

Office: Mullan, Idaho. **Mine:** near Saltese, Mineral Co., Mont.

Officers: Oliver Roof, pres. and gen. mgr.; Chas. Bryant, v. p.; Dr. J. R. Beau, sec.-treas.; with R. E. Seysler and F. J. Luedke, directors.

Cap., \$1,500,000; shares \$1 par; 746,000 issued; assessable; 5c per share called Dec., 1913.

Lands: 6 claims, 3 miles N. E. of Saltese, near the Saltese Cons. Copper M. & M. Co., show 2 parallel veins, 1, of about 6' width, having a strong gossan.

Development: by 2 crosscut tunnels, the upper cutting a vein of 12' estimated width, carrying copper ore, mainly chalcopryrite, giving assays of about 3%, with richer streaks assaying up to 32.4% copper and 15.8 oz. silver, with traces of gold. The 1,200' lower tunnel planned to be driven 1,800' to reach the vein, cut a vein, 1913, showing 30" of ore assaying 7.7% copper.

BOSTON-COLBY COPPER MINING CO.

MONTANA

Mine P. O.: Saltese, Mineral Co., Mont.

Officers: Peter Peterson, pres.; Hon. Andrew Flaig, 610 E. 27th St., Minneapolis, Minn., sec., gen. mgr. and principal owner.

Inc. Sept. 16, 1903, in Montana. **Cap.,** \$1,500,000; shares \$1 par; with 1,500,000 treasury shares, 200,000 still in treasury.

Property: 9 claims, unpatented, 180 acres, and a 5-acre millsite, lying next east of the Butte-Coeur d'Alene Copper Mining Co., immediately west of Saltese, in the East Coeur d'Alene, formerly known as St. Regis district.

Lands have 2 copper-bearing veins, No. 1 of about 40' width, showing a great iron capping, and No. 2, to the south, of about 3' width, carrying mainly chalcopryrite, with some bornite, of good average grade.

Development: by 2 crosscut tunnels, upper of 400', lower of 900' length with about 500' of drifting in both tunnels, said to show chalcopryrite streaks in blue hematite ore. Property crossed by C., M. & St. Paul railroad. Wood and water are abundant. Assessment work only has been done for several years owing to lack of funds.

CAPE NOME COPPER MINING CO.

MONTANA

Office: 1 Dixon Bldg., Missoula, Mont. **Mine office:** Clinton, Mont.

Officers: Edw. Donlan, pres.; F. H. Woody, v. p.; H. T. Wilkinson, sec.-treas. and gen. mgr.; preceding officers and A. L. Coffey, directors.

Inc. Nov., 1906, in Montana. **Cap.**, \$1,000,000; shares \$1 par; issued, \$924,000. Annual meeting, first Monday in June.

Lands: 3 claims, patented, 40 acres, adjoining the Aladdin Mining Co., show 4 fissure veins in granite 1 of 8' average width, traceable 800', being opened by 500' double compartment, vertical shaft, and 4 crosscut and 5 drift tunnels, with 3,750' of workings.

Equipment: includes two 60-h. p. boilers, a 40-h. p. Lidgerwood hoist and a 12-drill Ingersoll air compressor. There are 6 buildings.

Property: considered promising, but has been idle for several years.

COEUR D'ALENE PACIFIC MINES CO.

MONTANA

Idle. Officers: Dr. Jas. Sutherland, pres., 212 Peyton Bldg., Spokane, Wash.; E. A. Patrick, v. p.; M. N. Stratton, sec.-treas.; preceding with J. A. Reinhardt and N. E. Jesseph, directors.

Inc. in Washington. **Cap.**, \$1,000,000; shares \$1 par; non-assessable.

Property: 2 claims, 40 acres, near the Silver Cable mine, Mineral Co., Mont., giving fair surface indications of lead and copper ore, with a short tunnel.

COPPER AGE & EDISON MINING CO.

MONTANA

Idle. Officers: Chas. J. Heidenreich, Spokane, Wash., pres.; Morton Webster, Wallace, Idaho, sec.-treas.; L. N. Hyde, supt.

Inc. 1906, in Washington. **Cap.**, \$250,000.

Property: 12 claims, 4 miles south of Saltese, is an eastern extension of the Richmond mines, carrying extension of copper-bearing outcrop of that mine, the vein paralleling the Monitor. The vein is exposed for some 700' in the tunnel just east of the divide; it averages 10' thick, is nearly vertical and carries a very little chalcopryrite and chalcocite in a siderite gangue.

Development: includes a main 1,160' crosscut tunnel, with back of 600' showing sulphide ore assaying up to 30% copper, and \$14 gold per ton.

COPPER HILL MINING CO., LTD.

MONTANA

Idle. Office: Wallace, Idaho. **Mine:** near Quartz, Missoula Co., Mont.

Officers: Morton Webster, pres.; A. T. Ryan, v. p.; P. L. Eberhardt, sec.-treas.; preceding, with Howard K. Welch and Jas. Howarth, directors.

Inc. March, 1908, in Montana. **Cap.**, \$250,000; shares 25c par; non-assessable.

Property: 7 claims, 125 acres, in the Sunrise district, on the Montana side of the Montana-Idaho divide, showing an altered zone of highly silicious rocks of 25' to 50' width, carrying fine disseminations of copper carbonates and sulphides. Mine has a 75' tunnel, showing ore said to be somewhat similar to that of the Snowstorm, and assaying about 4% copper.

COPPERSMITH MINING & MILLING CO.

MONTANA

Idle. Mine: near Lothrop, Mont.

Inc. Jan. 23, 1909, in Idaho. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; issued, \$2,200,000.

Property: 8 claims, unpatented 160 acres, the CopperSmith group of 6 claims and the Inverness group of 2 claims, also a water right and millsite, about 6 miles up Petty Creek from Lothrop. Property carries some good timber. The CopperSmith claim shows limestone and quartzite for an

estimated width of about 400', and length of about one-half mile, with outcrops yielding 3 to 20% copper ore.

Development: by prospect shaft and crosscut tunnel, said by management to cut merely 300' of silicified limestone averaging 1% copper. Property also has a number of open cuts and pits, and a 50' shaft, bottomed in ore estimated to average better than 6% copper, with small gold and silver values. The Coppersmith was formerly reported to show 3 main veins, one reported to be over 100' wide at surface, giving ore assaying 2 to 3% copper. The Exy vein, parallel with and 500' from the Coppersmith, is reported as 15' wide.

The Inverness group, 3 miles from Lothrop, has a vein of 3' to 4' width, in quartzite and slate, carrying malachite, chalcopryrite and chalcocite, giving assays of 15 to 17% copper and \$10 to \$12 per ton in combined gold and silver values. Property has 4 buildings. Idle except for annual assessment work, and property not considered encouraging.

DARBY MINING AND MILLING CO.

MONTANA

Address: S. C. Bean, mgr., Mullan, Ida.

Officers: S. C. Bean, pres. and mgr.; L. Fogel, v. p.; M. J. McHugh, sec.-treas.; above with J. A. Ghormley and W. W. Trumbull, directors.

Inc. March, 1907, in Idaho. Cap., \$1,000,000; shares \$1 par; 400,000 issued.

Property: 10 unpatented claims, 200 acres, near Keystone, Mineral Co., Mont., $4\frac{1}{2}$ miles from a railroad. Said to show a fissure vein in quartzite carrying lead and silver values.

Development: by 3 tunnels, longest 600'.

Is a prospect.

DENNEMORA GOLD & COPPER MINING CO., LTD.

MONTANA

Is a dormant corporation owning 6 lead and copper claims, one-half mile from N. P. R. R., near Taft, Mineral Co., Mont. Described Vol. X.

EAST COEUR D'ALENE MINING CO.

MONTANA

Address: care Harry Hogan, pres.; Mullan, Idaho; T. A. Westervelt, sec.

Property: a group of claims a few miles north of Haugan, Mineral Co., shows a 30' vein carrying a 2' pay streak with some copper ore reported to carry 8% copper and good gold values.

Development: by short tunnels and drifts.

GOLD CROWN MINING CO., LTD.

MONTANA

Probably dead. Described Vol. XII.

HAMILTON-MONTANA GOLD MINING CO.

MONTANA

Office: Richard Daxon, mgr., Hamilton, Mont.

Property: Company owns group of claims in Mineral Co., Mont.

Developed: by 400' crosscut, driven to intercept a vein of copper and lead ore.

Idle at last accounts.

HEMLOCK SILVER-LEAD & MINING CO.

MONTANA

Address: Saltese, Mineral Co., Mont. Walter J. Hughes, pres.

Inc. 1907, in Montana. Cap., \$150,000; shares 10c par.

Property: 3 claims, on Packer Creek, $1\frac{1}{2}$ miles from Saltese, is an old prospect, worked by tunnels. Present management sank a shaft 150', and in 1914 crosscut 220' to the lode, which is claimed to be 60' wide and to carry silver and lead ore.

Development: Friction in the company is said to have delayed operations. At last accounts, Feb., 1916, the mine was being worked and shipments were supposed to start when the roads became passable; another assessment was then in sight.

No later returns. Probably closed down.

HIDDEN TREASURE GROUP.

MONTANA

Sold, 1916. Peter Porter, mgr.

Property: near Clinton, Missoula Co., Mont., 9 patented claims in the Wallace district, said to show 5 veins with gray copper and bornite ores averaging 2 to 20% copper, \$2 to \$4 gold, and 2 to 20 oz. silver per ton, as sorted for shipments.

Development: mainly on Hidden Treasure and Cascade claims, includes 2 tunnels in a steep mountain side, uppermost 558' on vein claimed to be 50' wide. Ore cut 80' from portal and extends to face. Lower tunnel, 1,400' long, follows, the east vein, said to be 50' wide. Crosscuts develop 1 other vein of 13' width and drifts have opened up some rich spots and several hundred feet of concentrating ore. Total work 3,600'. Shipments began 1899 and ceased in 1907 and property has had but little development since.

HUGO GOLD & COPPER MINING CO.

MONTANA

Address: Saltese, Mineral Co., Mont.

Officers: Richard W. Seideman, pres.; A. G. Kearns, v. p.; A. G. Seideman, sec.-treas., with A. B. Atwater and Peter Weber, directors.

Inc. 1907, in Idaho. **Cap.**, \$1,000,000; shares 10c par; assessable; 770,000 issued.

Property: 3 claims, carrying the extensions of the Boston-Colby vein system, next E. of the New York & Brooklyn mine, and one-half mile E. of Saltese. Claims carry 2 parallel veins, 300' apart, 1 about 15' wide, said to show copper carbonates, bornite and chalcopryrite, giving assays, from selected specimens of 2 to 57% copper. The second vein, proven by trenching, is said to be about 12' wide, carrying a 3' paystreak of ore assaying 12% copper, 6 oz. silver, and \$8 gold per ton.

Developed: by 2 drift tunnels, 1,350' long, that follow the vein. An overshot water wheel, taking water, under a 12' head, from the St. Regis river runs a 4-drill air compressor. Only assessment work done in 1916. Is a prospect.

INTERMOUNTAIN COPPER MINING CO.

MONTANA

Address: Wallace, Idaho. **Mine office:** Iron Mountain, Mineral Co., Mont.

Officers: Edward Evans, pres.; W. J. Griffith, v. p.; H. H. Phipps, sec.; H. M. Childs, treas.; with Oscar Nordquist, directors.

Inc. 1915, in Montana, to take over the holdings of the Amador Copper and Gold Mining Co. **Cap.**, \$2,000,000; shares \$1 par.

Property: 6 patented and 6 unpatented claims on Cedar Creek, 10 miles S. of Iron Mountain, Mont., said to show a vein of copper and silver ore in quartzite, dipping 60° with E.-W. course. Shoots are from 2' to 11' wide. Average assay is 15% copper.

Development: 700' vertical, 3-compartment shaft, with levels at 200', 460' and 700', and long drifts on each level.

Ore reserves: estimated at 50,000 tons blocked out.

Equipment: includes a 2-mile flume and pipe line, delivering water under a 310' head, and steam power, with 2 hoists, compressor, pumps, saw-mill, and about 15 mine buildings. A 100-ton concentrator was constructed in 1915. Has a Callow flotation unit.

Future outlook is considered good, dividends being expected at an early date.

IRON MASK MINING CO.

MONTANA

Office: St. Maries, Idaho. **Mine:** near Carter, Missoula Co., Mont.

Officers: T. B. Huey, pres.; Leon Demers, v. p.; P. Martin, sec.-treas.; preceding, with F. Perrier, J. J. Bouchard, directors.

Inc. May, 1908. **Cap.**, \$1,000,000; shares \$1 par; \$500,000 outstanding. Assessment No. 3 of 2 mills per share, levied June, 1913.

Property: 6 claims, well timbered and watered, 3 miles from a railroad are said to show a 10' vein of concentrating ore, with an 18" vein of smelting ore.

Development: by tunnel 1,700' long, with back of about 700', and 2,400' of drifting on the vein in the various tunnels. The workings show silver and lead ore of good average grade, with a small percentage of copper.

Equipment: includes gasoline power and necessary mine buildings.

Letters returned from St. Maries, Idaho. Apparently property is idle.

IRON MOUNTAIN TUNNEL CO.**MONTANA**

Purchased in July, 1915, by Federal Mining and Smelting Co., which see.

LAST CHANCE COPPER MINING CO.**MONTANA**

Address: W. H. Nichols, sec., 50 Broad St., New York.

Officers: Geo. Champagne, pres.; Dr. T. C. Witherspoon, treas., Murray Hospital, Butte, Mont.

Cap., \$1,200,000; shares \$1 par.

Property: 2 claims, patented, adjoining the Ben Hur mine, 4 miles north of Saltese, Mineral Co., Mont.

Mine: is developed by shallow shafts and a 2,300' tunnel, the workings said to show a 30' vein, faulted in the tunnel, but a winze shows an 18" streak of ore said to carry about \$100 per ton in values. Company reports past shipments of about \$150,000, one carload shipped giving returns of 13.6% copper, 394 oz. silver and \$12 gold per ton. Tunnel was driven in 1915-16 to reach the rich oreshoots from which shipments were made.

No later returns.

LEROY GOLD & COPPER MINING CO.**MONTANA**

Office: Wallace, Idaho. Mine office: Saltese, Mineral Co., Mont.

Officers: Hon. Herman J. Rossi, pres.; G. F. Dann, v. p.; C. E. Clark, sec.-treas., with Wm. Fissenger and Chas. Bollinger, directors.

Property: adjoins the Monitor mine, and survey for the extension of the Monitor tunnel runs through this property. Assessment of 2 mills per share called Aug., 1915, and development work resumed after several years of idleness.

RICHMOND MINING, MILLING & REDUCTION CO.**MONTANA**

Office: 404 Sherwood Bldg., Spokane, Wash.

Officers: J. E. Codd, pres.; Chas. Heidenreich and W. S. Norman, v. p's.; T. W. McGowan and P. T. Sweeney, directors. B. C. Redhead, sec. B. N. Sharp, mgr.

Inc. in Washington. Cap., \$1,000,000; shares \$1 par; 800,000 issued.

Cash assets on Oct. 31, 1917, totaled \$32,288; and current liabilities, \$7,403. Net earnings in October were \$30,000.

Property: on Idaho-Montana line, 6 miles from Saltese, Mineral Co., Mont., and 1½ miles from Adair, Idaho, connected with C., M. & St. P. R. R. by 8,800' aerial tram. Company owns 6 claims, 2 patented, and millsite.

Dividends: 2c per month, equal to \$16,800. Total to Oct., 1917, \$84,000. Dividend payment suspended in October.

Development: 2,200' of tunnels, 500' of shafts, 2,000' of drifts, and 600' of raises. Lowest depth is 370'. Vein shows on surface for 2,200', of which 400' is being developed. Reserves are estimated as sufficient for 50 tons daily for a year.

Equipment: hoist, compressor, 8,800' aerial tram of 240 tons daily capacity, etc.

Production: to July, 1917, \$100,000; since then 50 tons of ore daily worth about \$1,000, according to price of copper.

Property seems to make fair profits on small output and pays regular dividends.

ROYAL MINING CO.**MONTANA**

Address: Mohawk Bldg., Spokane, Wash. Mine office: Potomac, Missoula Co., Mont.

Officers: John H. Wourms, pres.; J. M. Long, v. p.; J. H. Pettitur, sec.; Dennis Reardon, treas.; with L. K. Church, directors.

Inc. Nov. 10, 1916, in Washington. Cap., \$1,000,000; shares \$1 par; 600,000 issued.

Property: 17 claims, 3 patented, 320 acres, 6 miles N. of Clinton on N. P. R. R., and 4 miles S. of Potomac, Mont., on C., M. & St. P. R. R. Formerly known as the Charcoal, which shipped \$18,000 worth of ore some 20 years ago.

Geology: quartz vein in granite, 4' wide, dipping 50° with N. S. course. Ore assays 150 oz. silver, 6% copper, 20% lead, and \$5 gold per ton.

Development: by 2-compartment shaft to 200' depth, and 800' tunnel.

Equipment: includes 600' hoist, boiler, 225 cu. ft. compressor.

ST. JOE GOLD-COPPER M. & M. CO.

MONTANA

Office: Wallace, Idaho.

Property: 9 claims, well timbered, on Kelly Creek, near Saltese, 3 miles west of the Monitor mine, and one-half mile from a railroad, showing 2 strong ledges.

Idle some years.

ST. REGIS COPPER MINING & MILLING CO.

MONTANA

Office: Missoula, Mont. **Mine office:** St. Regis, Mineral Co., Mont.

Officers: S. J. Wilson, pres.; F. W. Wilson, sec.-treas.

Inc. May, 1901, in Montana. **Cap.**, \$300,000; shares \$1 par; in half preferred and half common stock.

Property: 5 claims; also a 15-acre millsite and miscellaneous lands, 180 acres, on the Northern Pacific railway, shows quartzite and shale, with 2 orebodies under development of 6' estimated average width, carrying chalcopryite ore said to give average assays of 8% copper, and \$1.50 gold, per ton.

Development: by tunnels of 60', 380' and 600'.

Presumably idle.

SALTESE MINING & MILLING CO.

MONTANA

Office: 22 Symons Blk., Spokane, Wash. **Mine:** near Saltese, Mineral Co., Mont.

Officers: J. C. Johnson, pres.; Wm. Dixon, v. p.; O. V. Manring, sec.-treas.; preceding, with J. B. Ward and G. A. Turner, directors.

Inc. March, 1911, as the successor of the Saltese Cons. Copper Mng. & Mlg. Co. **Cap.**, \$1,500,000; shares \$1 par; assessable. Levied an assessment of .02c per share, Jan. 12, 1914.

Property: 12 claims, 240 acres, east of Mullan, near the National mine in the St. Regis district, about 8 miles N. W. of Saltese.

Development: by 2 tunnels aggregating 1,400'. The lower one, 655' in length, opens a 13' vein, probably the Black Traveler vein, at 460' from the portal, which is said to show 5' of high-grade copper ore. The tunnel is being extended to cut the big iron-capped vein seen on the surface.

Developing: with a small force, 1915-16. Property considered promising.

SILVER CABLE MINING CO.

MONTANA

Address: Jas. Corbett, pres. and gen. mgr., Missoula, Mont.

Cap., \$1,250,000; shares \$1 par; assessable. Listed on Butte Exchange.

Property: 7 claims in east Coeur d'Alene district, just over the Montana line on the eastern slope of Bitter Root Mts., 5 miles from the Northern Pacific R. R., part of the land lies in Idaho. Said to have a large body of silver, lead and zinc ore; from 500' to 700' of stoping ground, proved for over 200' in length, and from 4' to 6' wide. Ore is said to average better than 15% zinc. Developed by tunnels.

Production: reported shipping in 1916.

TARBOX MINING CO.

MONTANA

Office: 426 High St., Wallace, Idaho. **Mine office:** Saltese, Mineral Co., Mont.

Officers: Richard Daxon, pres., mgr. and treas.; W. J. Smith, v. p.; R. E. Seysler, sec.; preceding, with Dennis Reardon and T. H. Cotton, directors.

Cap., 1,500,000 shares; \$1 par; assessable; 500,000 shares in treasury. Listed on Butte Exchange.

Property: 12 claims on Packer Creek, 3 miles N. of Saltese, Missoula Co., Mont. Ore carries silver and lead, mostly concentrating grade. Vein at surface is 10' to 30' wide and filling is quartz and siderite.

Development: Machinery has recently been added for deepening the

shaft to 800'. In April, 1917, 12% ore was opened on 600' level, the shoot being wide. In July a 150-ton flotation mill was ordered.

TRIANGLE MINING & DEVELOPMENT CO. MONTANA

Office: 8 Allen Blk., Missoula, Mont. **Mine office:** Clinton, Mont.

Officers: R. B. Hughes, pres. and gen. mgr.; Oliver Blood, v. p.; H. Y. Gephart, sec.-treas.; with David C. Smith, E. C. Mulroney, F. C. Robb and Geo. E. Sullinger, directors. Henry E. Kuphal, engr.

Inc. Aug. 25, 1906, in Montana. **Cap.**, \$500,000; increased later to \$1,200,000; shares \$1 par, non-assessable; issued \$665,000. Debentures, \$150,000 6%, \$38,000 issued. Annual meeting third Monday in February.

Property: 13 claims, 10 unpatented, 230 acres, well-watered and partly timbered in the Wallace district, 2½ miles from a railway, in 3 groups, known as the Triangle group of 8 claims, and the Hill Group of 5 claims, 2 miles N. E. of Clinton and 17 miles E. of Missoula. The company also owns land in the town of Clinton.

The claims contain fissure veins cutting granite and altered sedimentary rocks near the contact with a large batholith of granite. The veins show chalcopryite and bornite associated with hematite, siderite, and quartz in altered granite. The Triangle group shows a 16' vein, opened by a 540' tunnel with back of 450'. At the face the vein is 14' wide and assays 2% copper, ½ oz. silver and 40 cts. gold, while an 8" streak averages 15.04% copper, 3.20 oz. silver and 24 oz. gold, and a 4' footwall streak averages 4.65% copper, 1.2 oz. silver and 80 cts. gold.

Development: by a 140' crosscut and 540' drift tunnels and 40' shaft, estimated to block out 25,000 tons ore. The Grass Widow claim has 513' of crosscutting and 300', 75' and 100' drifts. The Hill group has a 300' drift tunnel.

Equipment: includes a 40 h. p. boiler and an Ingersoll-Rand air-compressor, besides several mine buildings. Idle.

WILSON MINING & SMELTING CO. MONTANA

Address: William Burke, pres. and mgr., Saltese, Mont.

Officers: A. Burke, v. p.; A. W. Dougherty, sec. and treas.; M. Hays and G. Early, directors.

Property: 2 groups of claims on Silver and Big Thunder Creeks, about 2 miles from Saltese, Mineral Co.; 6 claims on a lead and silver vein form one group, 8 claims showing a shoot of copper, the other group. Work in 1916 comprised a drift from Silver Creek on the copper vein. Commercial lead ore is reported in an upper tunnel.

WISCONSIN MONTANA MINING CO. MONTANA

Office: Downing, Wis. **Mine office:** Superior, Mont.

Officers: A. O. Nichols, pres. and gen. mgr.; D. McDonald, v. p.; D. C. Coolidge, sec.; Dr. P. A. Beebe, treas.; and R. A. Cleveland, directors.

Inc. Jan. 29, 1906, in Wisconsin. **Cap.**, \$50,000; shares 5c par. Annual meeting 1st Tuesday in February.

Property: 16 patented claims, 320 acres, and a 5-acre millsite in T. 15 N., R. 25 W., 1 mile from the Missoula river and about 10 miles east of Superior. Claims show fissure veins cutting through limestone, slate and quartz; one reported as 70' wide, with irregular shoots, assaying from 1 to 42% copper, with gold, silver, and lead values.

Development: by tunnels of 40', 80', 400' and 710' length, with laterals. A 3,000' tunnel is proposed. Mine was under lease in August, 1917.

PARK COUNTY

BUTTE-JARDINE METAL MINES CO. MONTANA

Offices: 50 Broad St., New York City, and 33 W. Granite St., Butte, Mont.

Officers: W. H. Nichols, pres.; M. W. Acklemire, v. p.; L. M. Harley, sec.; D. E. Nichols, treas.; with H. W. Barry, directors.

Inc. Jan. 10, 1917, in Montana. Cap., \$250,000; shares 25c par; 600,000 shares issued.

Property: 11 claims, at Jardine, Park Co., Mont., said to have over 1,600' of underground workings exposing gold-bearing veins that vary from 2' to 36' wide, which occur in pre-Cambrian schistose rocks. In October, 1917, company had cut 5 veins and opened the Big vein, 43' wide, showing 3' of \$28 ore. Six men are employed.

The company is being promoted and stock sold by W. H. Nichols & Co., New York.

COOKE MINING & REDUCTION CO.

MONTANA

Idle. Mine near Cooke, Park Co., Mont.

Developed: by tunnels, showing auriferous and argentiferous copper ores. Has a small steam plant. District is remote from transportation, being on N. E. border of the Yellowstone Park.

COPPER KING MINING CO.

MONTANA

Address: Cooke City, Park Co., Mont.

Property: the King and Queen group, developed by tunnels, showing an extensive orebody, with fair values in gold.

GREAT WESTERN MINING & MILLING CO.

MONTANA

Address: Chico, Mont. H. F. Lawrence, mgr.

Property: 6½ miles from Chico Hot Springs, Park Co., Mont., at 7,500' elevation. Nearest railroad is at Emigrant, 10 miles away.

Development: tunnel reveals a brecciated and somewhat altered, fine-grained, light-gray porphyry in which fine-grained molybdenite intimately associated with pyrite forms the matrix and permeates the individual fragments of brecciated material. Ore contains 5% molybdenite, and deposit is extensive.

A mill using flotation was erected, but no recent news is available.

JARDINE GOLD MINING & MILLING CO.

MONTANA

Idle. Address: 4 Silver Bow Block, Butte, Mont.

Officers: W. S. Hunnewell, pres. and treas.; H. C. Bacorn, v. p. and mgr.; S. D. Bacorn, sec.; above, with J. E. Healy, directors. T. J. Welcker, supt.

Inc. 1914 in Arizona. Cap., \$2,000,000; shares \$1 par; non-assessable.

Property: 26 claims, 21 patented, at Jardine, Park Co., Mont. From the 80's to 1907, the mine produced gold ore worth \$3,000,000; also 300 tons of tungsten (scheelite) ore and concentrate. Litigation tied up everything until Jan., 1917, when the present company was organized to take over the property. Management is cleaning-up and re-timbering, and will resume on a large scale. The plant will be increased to 400 tons daily capacity.

Geology: quartz vein in schist, dipping up to 45° W. and pitching N. and S. Ore is partly oxidized and partly arsenopyrite, and will average \$5 per ton.

Development: by tunnel with total workings of 3 miles to a depth of 500'.

Equipment: Ingersoll-Rand compressor, 125-ton mill and cyanide plant for gold ore and 20-ton concentrator for tungsten ore.

Production: 13½ tons of 62.35% tungsten ore was shipped in Jan., 1917. Employs 60 men.

Seems a meritorious property, and with care the treatment of low-grade ore should be profitable, plus the tungsten output.

MONTANA SCOTCH BONNET COP. & GOLD MG. CO.

MONTANA

Idle. Office: 603 Jamieson Blk., Spokane, Wash. Mine office: Cooke, Park Co., Mont.

Officers: S. A. Gibson, pres. and gen. mgr.; C. E. Mallette, sec.-treas.

Inc. March, 1902, in Washington. Cap., \$300,000; shares 10 cts. par; non-assessable; fully issued.

Property: 17 claims, partly fractional, 200 acres, in the New World district, 65 miles from a railway.

Development: by tunnel with about 1,500' of workings developing oxidized and sulphide ores of lead and copper, said to give small copper assays, an average of 3.7% lead, 4 to 5 oz. silver and \$3.10 gold per ton.

Under option early 1916 to John H. Wourms, Wallace, Idaho, chief counsel for the Day interests.

WESTERN SMELTING & POWER CO.**MONTANA**

Office: 610 Northern Bank Bldg., Seattle, Wash.

Officers: G. L. Tanzer, pres.; Alvin Hemrich, v. p.; J. J. Black, sec.-treas.; with G. B. Baker, C. J. Steeple, E. W. Gaylord, Joseph Schlenker, W. D. Good and C. A. Swartz, directors. H. C. Reagon, supt.

Inc. 1911, in Washington. Cap., \$5,000,000; shares \$1 par; non-assessable; 1,957,624 issued. Annual meeting 1st Saturday in March.

Expenses in 1916 were \$89,592.

In March, 1917, company was said to be erecting a 300-ton custom smelter at Cooke, Park Co., Mont. Ore reserves given as over 1,000,000 tons, containing copper, gold and silver. Cooke City has yearned for smelter since 1883 and ought to support this long deferred plant.

POWELL COUNTY**BUTTE & ELLISTON GOLD & COPPER MINING CO. MONTANA**

Office: 113 Hamilton Block, Butte, Mont. Mine near Elliston, Powell Co., Mont.

Officers: J. H. McOmney, pres.; D. G. Bertoglio, v. p.; F. H. Cooney, sec.-treas.; preceding officers, J. E. Homple and C. S. Jackman, directors. F. H. Cooney, mgr.

Inc. 1906, in Arizona. Cap., \$1,000,000; shares \$1 par; fully paid and non-assessable; issued, 575,000. Dividend of 1% paid 1907, since when company has been inactive.

Property: 1 claim, patented, 17 acres, in the Ontario, or Elliston mining district, known as the Big Ditch mine, 6 miles from Elliston on the side of Nigger mountain. Claim shows diorite having 6' fissure vein developed by 280' shaft and 1,000' of workings.

Ore: said to average 31 oz. gold, 15 oz. silver and 10% lead, with some zinc and copper. A new 1,230' tunnel now being driven will intersect vein 200' below bottom of the shaft.

Equipped with 25-h. p. hoist, compressor, pump and surface buildings.

Production: By lessees in 1914-15 netted the company \$1,246 in royalties, or a total to date of \$85,000.

Property now under lease and bond to a private company owning the adjoining claims, who are driving the tunnel to connect with the old workings.

ELK GOLD MINING CO.**MONTANA**

Address: R. Lee Kelley, sec. and mgr., Deer Lodge, Powell Co., Mont.

Officers: J. C. Conlin, pres.; Tobias Schurtz, treas.; with J. E. Neville, C. E. Asyling, S. P. Wilson, directors.

Inc. March, 1913, in Montana. Cap., \$800,000, \$1 par; assessable. 400,000 shares issued.

Property: 2 claims, 1 patented, 20 acres, 10 miles S. E. of Deer Lodge and 17 miles N. of Butte, Mont. Claims show small stringers of oxidized ore on surface which at depth of 40' are reported to assay from 4-7% copper, 1 oz. gold and 7-14 oz. silver per ton.

Development: by 100' shaft. Shipped 15 tons of ore in 1915 netting \$30 per ton.

Is a prospect, needing money for developing.

INDEPENDENCE GOLD & COPPER MINING CO.**MONTANA**

Deer Lodge, Powell Co., Mont.

Address: I. S. Eldred, pres. and gen. mgr.; C. H. Williams, v. p.; E. Scharnikow, sec.; C. E. Larabie, treas.

Inc. 1907, in Montana. Cap., \$900,000; shares \$1 par. Assessments to date 10 mills per share.

Lands: 120 acres in the Oro Fino district, 12 miles S. of Deer Lodge

and 5 miles S. of 2 railways, include the old Independence mine located 1870, which is a patented tract of 102'x2,200'.

Development: includes shafts and tunnels, one 425' long, 1915, showing a vein of 4' to 5' width, carrying copper ore said to have averaged as produced about \$12 per ton in combined values, and to be capable of concentration 4 into 1, giving concentrates with excess of iron.

On Aug. 13, 1915, property was leased for 3 years, with the proviso that 100' of development be done each year.

LADYSMITH COPPER MINING CO.

MONTANA

Company dissolved. Fully described Vol. XII. Formerly operated near Elliston, Powell Co., Mont.

MONTANA-CLINTON COPPER CO.

MONTANA

Office: Helena, Mont. **Mine office:** Elliston, Powell Co., Mont.

Officers: E. H. Brandegee, pres.; W. K. Armstrong, v. p.; C. L. Friederichs, sec.-treas. and gen. mgr.; above are directors; Goodall Bros., assayers.

Inc. April 16, 1909, in Montana. **Cap.**, \$1,500,000; shares \$5 par; assessable; issued, 142,874; 60,000 shares outstanding, \$1.55 paid, last call being 15 cts., Nov., 1912. First National Bank, Laurium, registrar and transfer agent.

Property: the Julia mine, 7 claims, unpatented, 140 acres, on Telegraph creek, 8 miles south of Elliston. Country rock is granite. There are numerous veins, 1 being 14' wide with a paystreak ranging from 6" to a maximum of 4', developed for 500'. Ores are mainly galena, sphalerite and tetrahedrite, with a high silver content. Surface ores carried considerable gold, decreasing with depth, while the silver content has increased.

Development: 330' shaft, 2,600' tunnel and drifts.

Property had \$35,000 mortgage on it, May, 1916, and needed a mill and new power plant to put it on a productive basis. It is still a prospect, since deeper development, to at least 600', is needed to prove whether or not the pay ore will play out at as moderate a depth as it has at the nearby Ontario and other mines of this region.

MONTANA UNITED MINING CO.

MONTANA

J. G. Kirby, pres., Willimantic, Conn.

Cap., 150,000 shares; \$1 par; all issued.

Property: 240 acres, patented, 9 miles east of Deer Lodge, adjoining the Emery mine, shows a fissure vein varying from a streak to 7', average width 3'-4'.

Ore: gold, silver, lead, zinc and much antimony. Said to have 20,000 tons ore blocked out that will average \$20 per ton, including zinc.

Equipment: includes 50-h. p. hoist, 300-cu. ft. compressor, and all necessary boilers, buildings, etc. The mine is idle, needing money for a mill and further development.

TWIN CITY MINING & MILLING CO.

MONTANA

Elliston, Powell Co., Mont.

Officers: W. M. O'Connell, pres.; F. B. Hubbard, v. p.; E. J. P. Dwelly, sec.-treas.; preceding, with P. H. McCauley, J. L. Hurd and John Churchill, directors; Allan McNaughton, gen. mgr.

Inc. in Montana. **Cap.**, \$500,000; shares \$1 par; issued, 300,000, fully paid and non-assessable. Annual meeting, April 4.

Property: 5 claims, 70 acres, patented, in Elliston district, 8 miles from Elliston, on east side of Telegraph creek. Ore occurs in granite and management reports 6 veins, of which one is developed by 2 shafts, 185' and 50' deep, and a 250' tunnel with 3 crosscuts. Total workings 525', said to prove vein 18' wide, traceable for 3,000' and proven to 170' depth, carrying 5% copper, 4% lead, 19 oz. silver and \$3 gold per ton. Values said to increase in depth and sulphide ores expected at about 300'.

Equipment: includes steam power, one 40-h. p. hoist and several buildings. Reported 1915, that development would be resumed; nothing reported since.

RAVALLI COUNTY

CURLEW MINE

MONTANA

Address: care A. M. Holter, owner, Helena, Mont. Mine office: Victor, Ravalli Co., Mont.

Mine: formerly a silver producer, also shows zinc ores, and a vein claimed to be 12' wide, is said to show ore carrying 10% copper, with some lead, silver and gold ores. A concentrating mill with flotation unit to treat 85,000 tons of tailings is being worked successfully, 1917. Financed by Los Angeles capitalists.

SANDERS COUNTY

ARLINGTON MINING CO.

MONTANA

Idle. Office: Wallace, Idaho. Mine near Thompson, Sanders Co., Mont. Chas. T. Fisher, pres.; M. J. Mahoney, sec.

Cap., \$1,500,000; shares \$1 par.

Land: 20 claims, well timbered in the Mountain House (unorganized) mining district, near the Idaho-Montana divide. Property shows a ledge said to be traced 6,000' by surface cuts, 30 to 100' in claimed width, carrying, at shallow depth, galena of concentrating grade, with some ore assaying up to 78% lead. The 175' upper tunnel is said to show 3' of good concentrating galena, and the 900' lower crosscut tunnel shows a 10" stringer assaying 8% copper, 15% lead and 15 oz. silver per ton. No recent returns secured.

COPPER MOUNTAIN MINING & DEVELOPMENT CO. MONTANA

Office: Mullan, Idaho. Mine near Thompson, Sanders Co., Mont.

Officers: John Hendricksen, pres.; A. B. Willard, v. p.; D. Flynn and John Foss, directors.

Inc. 1906, in Idaho. Cap., \$1,500,000; shares \$1 par. Annual meeting, 2nd Tuesday in December.

Property: 5 claims, one fractional, 95 acres, with 3 adjoining claims, at the head of Copper creek. Mine has 2 tunnels, the upper a crosscut, deflected for 56' along the vein, said to be 25' wide, carrying pockets and seams of copper carbonates, with gold and silver values. Idle.

PRINCEMONT MINING CO.

MONTANA

Property near Noxon, Sanders Co., Mont., is listed under Coeur d'Alene, Idaho.

REVIAS CREEK MINING & POWER CO.

MONTANA

Letter returned marked "defunct," 1916. Mine near Dixon, Sanders Co., Mont.; fully described in Vol. XI, Copper Handbook.

ROYAL COPPER MINING CO., LTD.

MONTANA

Office: Wallace, Idaho. Mine near Belknap, Sanders Co., Mont. John H. Nordquist, pres.

Property: 12 claims, patented, near Thompson Falls, shows a vein of about 18' surface width, traced 1,500' on company land, carrying copper and lead carbonates and sulphides, said to average 6% copper and 18% lead, with small silver values.

Development: by prospect tunnels of 50' and 600'. The property is a prospect on which assessment work only has been done for several years past.

SILVER BOW COUNTY

All the mines in and around Butte, Silver Bow County, are listed under Butte District.

GOLD HILL MINE

MONTANA

Frank Eichelberger, supt., Melrose, Mont.

Owned by J. J. Edson, Jr., 2206 First Natl. Bank Bldg., Pittsburgh, Pa.

Property: 10 claims, 3 patented, in "Highland," Moose Creek district, Mont., shows gold quartz vein averaging \$6.50 per ton, in payshoot 20' thick and 300' long in granite.

Development: by 500' incline shaft, at 10° dip with total of 1,400' of workings. 50,000 tons of ore developed. Has steam power and 50-ton mill.

NEVADA

The great mining centers of Nevada are Goldfield, Esmeralda county; Virginia City (Comstock lode), Storey county; Tonopah, Nye county; Ely, White Pine county; Yerington, Lyon county, and Rochester, Humboldt county. The mines of each of these districts, like those of other sections of the state, are arranged by counties.

CHURCHILL COUNTY

BOYER COPPER MINES CO.

NEVADA

Mine P. O.: Boyer, Churchill Co., Nev. Arthur Howe Carpenter, cons. engr., 210 Noble Ave., Crafton, Pa.

Property: 49 claims, 1,000 acres, also a 10-acre mill site and 160 acres of placer lands, at Boyer, about 30 miles from Wonder, Nev., and 75 miles south of the S. P. R. R. at Winnemucca, in the copper belt of the Piute mountains, formerly developed by Alva Boyer, now controlled by Crofton Umacke, of Reno, Nev.

Property: covers a mile of the western end of a contact between whitish andesite and an underlying greenstone, or andesite, which shows copper pyrite peppering the rock. The ore bed has a dip of but 20° and a thickness of 100' and is much altered, the footwall being a hard, silicious band. The lower 30' carries 5% copper, but the orebody developed was figured by Prof. Carpenter and A. H. Carpenter to assay 1.7% copper and about 70 cts. per ton in gold. High-grade ore occurs in small iron-capped veins which extend up through the porphyry and carry a breccia of rock fragments cemented by copper glance and bornite.

Development: by tunnels, now inaccessible. Present company has done about 500' of work on Treasury Box hill and exposed a faulted block of 200' length, 100' width and with 500' depth on the dip, assaying as above. Property promising when railroad facilities are provided. Only prospecting done.

CHURCHILL MILLING CO.

NEVADA

Subsidiary of Nevada Wonder Mining Co., which see.

FAIRVIEW RED ROCK CONSOLIDATED MINES

NEVADA

Office: J. A. Wright, financial agent, Exchange Bldg., Denver, Colo. H. A. Riedel, pres.

Inc. in Arizona. Cap., \$2,500,000; shares \$1 par; non-assessable. Stock being offered at 5c per share cash, or 5½c per share in 10 equal monthly payments, March, 1917.

Property: the Red Rock group, 15 claims, 230 acres, near Fairview P. O., in the Fairview mining district, about 42 miles E. of Fallon, the nearest railroad point. The mine shows 2 parallel contact veins, about 400' apart, between limestone footwall and porphyry hanging wall, said to be from 2-8' wide at surface for about 1,500' and to carry ore averaging \$30 per ton in gold-silver-copper. The veins have an E.-W. strike, dipping at about 65°.

There is no equipment and the property is merely a prospect as yet.

FORTUNA GRUBSTAKE MINING CO.

NEVADA

Inc. 1917, in Nevada. Cap., \$500,000; shares \$1 par; 125,000 shares issued; stock being offered at 25c, April, 1917.

Property: in Churchill county, Nevada, said to show 12" vein carrying lead-silver values. Developed by 350' tunnel.

MINNESOTA NEVADA INVESTMENT CO.

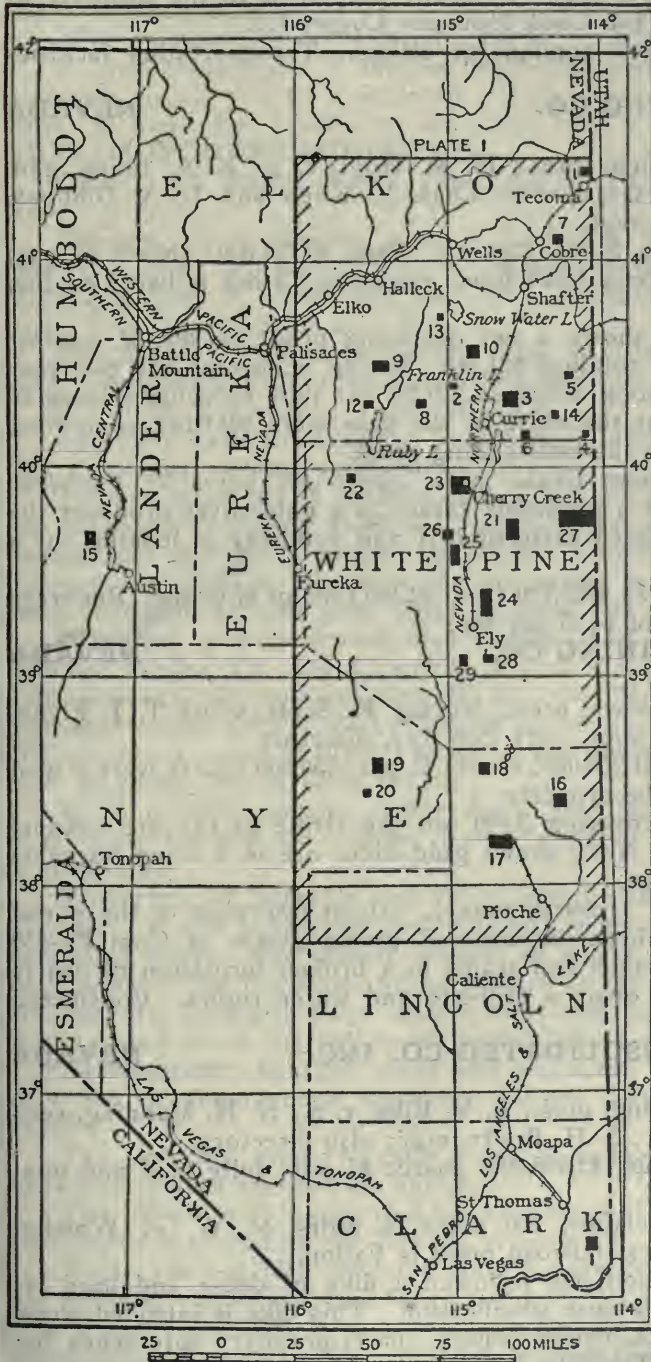

NEVADA

Office: 436 Endicott Bldg., St. Paul, Minn. Mine near Fairview, Churchill Co., Nev.

Officers: Alf. Patterson, pres.; O. S. Deringer, sec.; M. P. Ryan, treas.; A. A. Day, gen. mgr., Chas. A. Peet, mg. engr.

Inc. Aug. 6, 1906, in Oklahoma. **Cap.**, \$1,000,000; shares \$1 par; issued \$690,000. Annual meeting, Aug. 6.

Property: 28 claims, 160 acres placer ground, total about 750 acres, on

Mining district.
(Number refers to lines.)

Chalk mountain, $3\frac{1}{2}$ miles north of Fairview. Claims said to show several orebodies, of which 3, under development, are 6' average width and proven to depth of 126', showing 2% copper, 32% lead, 26 oz. silver and \$8 to \$20 gold per ton.

Development: by 3 shafts, deepest 126'. Management reports a shipment of 3 cars of 12% ore, 1915. Company succeeded to the property of the Corinthian Mining Co. and Chalk Mountain Copper Co.

Idle since 1915. Patent applied for claims. Transportation facilities lacking.

NEVADA HILLS MINING CO.

NEVADA

Reno, Nev.

Officers: Geo. Wingfield, pres.; H. M. Hoyt, v. p.; E. A. Julian, gen. mgr.; C. F. Burton, sec.-treas., with Chas. E. Knox and L. A. Gibbons, directors. A. H. Westall, supt.

Inc. April 19, 1906, in South Dakota. **Cap.**, \$6,250,000; shares \$5 par; 1,065,687 shares issued. Reno Nat'l Bank, registrar. Stock is listed on San Francisco Exchange.

The report for 1916 shows a net operating profit of \$99,462, against which there are charges totaling \$31,818, leaving a surplus for the year of \$67,644. There was a book deficit of \$10,437 for 1916, reducing surplus to \$147,825. Net resources at the close of the year were \$351,140, something less than 33c per share on the outstanding stock.

Property: the Fairview Eagle mine, about 107 acres at Fairview, Churchill Co., Nev. After a profitable career as a gold-silver producer the mine was permanently closed early in 1917 and company is looking for a new property.

Production: in 1916 was \$325,720 from 52,436 tons of \$7.68 ore. Recovery was 80.9% at a total cost of \$4.03 per ton.

NEVADA LINCOLN MINING CO.

NEVADA

Reno, Nev.

Officers: J. Parker Lewis, pres.; Murray K. Scott, v. p.; T. J. Flynn, sec.-treas.; Frank Wilson, supt., with Zeb Ray, directors.

Inc. Dec., 1915. **Cap.**, \$1,250,000; shares \$1 par; 750,000 shares were issued to Wilson and Scott for the property.

Property: 5 claims, covering 3,000' on the strike of the ore channel at Lincoln, Churchill Co., Nev., shows gold-silver ore in 3 veins traceable for over 400' on the surface.

Development: by 550' crosscut tunnel. About 600' west of the portal a 6' vein is said to have been encountered, giving assays of from \$24-\$59 per ton. Ore occurs in bands and seams in a broken formation of quartz and talc. Company also owns a mill-site and water rights. Considered a promising prospect.

NEVADA SILVER CONSOLIDATED CO., INC.

NEVADA

Office: Wonder, Nev.

Officers: G. H. Manning, pres.; R. V. Ellis, v. p.; N. H. Manning, sec.-treas.; E. S. Cox, asst. sec.; S. H. Brady, mgr., also directors.

Inc. in Delaware. **Cap.**, \$2,500,000; shares \$1 par; fully paid and non-assessable; 1,700,000 issued.

Property: 9 quartz claims, 166 acres, 4 miles N. W. of Wonder, Churchill Co., Nev. Nearest railroad point is Fallon.

Geology: ore deposition has followed a dike of dense and hard intrusive rhyolite, showing intense silicification. This dike is intruded along the dacite-rhyolite contact, except where quartz-porphyry intervenes between it and the dacite. The dike is itself classed as a vein, as it is silicified, and somewhat mineralized. The quartz of the hanging and foot walls

carries the best values. Forty-six samples taken from various exposures on the property returned from 0.3 to 13.6 oz. silver per ton.

Development: in 1907 extensive openings were made by lessees, who shipped ore, one lot of 500 tons averaging \$125 per ton. Little work has been done on the dike-vein at depth. A shaft was down 216' in July, 1917, and is to be sunk to 400 or 500'.

Mine examined by S. H. Brady and E. V. Schulze.

A prospectus gives 15 reasons why shares should be bought, several of which should not be considered. With silver at \$1 an ounce property ought to make fair profits on low-grade ore.

NEVADA WONDER MINING CO.

NEVADA

Office: 572 Bullitt Bldg., Philadelphia, Pa. **Mine office:** Wonder, Nev.

Officers: C. A. Higbee, pres.; J. S. Austin, v. p.-treas.; J. H. Whiteman, v. p.-gen. counsel, with C. A. Daniel, Barton Hoopes, Jr., Chas. R. Miller and Wm. M. Potts, directors. P. S. Bickmore, sec.; E. E. Carpenter, supt.; E. S. Cunningham, asst. supt.

Inc. Sept. 19, 1906, in Delaware. **Cap.,** \$1,500,000; shares \$1 par; all issued. **Dividends:** paid at the rate of 20% annually. Last dividend paid May 8, 1917, of 10c per share. Total, \$1,056,045.

Company owns the Wonder Extension, Hidden Treasure and Reorganized North Star Mining companies.

Balance sheet for 15 months ended Dec. 31, 1916, showed assets totaling \$2,065,049, including \$1,477,507 for property and plant, \$251,591 stocks owned, and \$335,294 accounts receivable. Current liabilities total \$54,333. Surplus was \$510,716. Revenue for the period was \$1,399,818 from bullion sales, including \$471,081 from silver on hand but sold.

Combined and condensed cash receipts and disbursements of Nevada Wonder Mining Co. and Churchill Milling Co. for year ending Dec. 31, 1916, showed: cash on hand, Sept. 30, 1915, \$10,274; receipts, \$1,475,105, which included: loans, \$40,000, Selby Sm. & Lead Co., mill products \$1,399,918. Disbursements totaled \$1,403,981, including two dividends of 25% in all, \$352,091; cash on hand, Dec. 31, 1916, \$71,124.

In June, 1916, company acquired a 25-year lease on the Jack Pot mine, from Atlas Leasing Co. Other claims acquired were the Occidental and Anna groups.

Property: 328 patented and 73 unpatented acres at Wonder, Churchill Co., Nev., shows gold-silver ore in fissure veins 5-6' wide in rhyolite with occasional dacite. The gangue consists of quartz, feldspar and kaolin. The rock is mined by the waste-filling system as the walls in the lower levels are insecure, caving in large masses, thus making the shrinkage system of stoping used above the 400' level, inadvisable in the lower workings.

Development: by 1,300' shaft and winze 600' deeper. There is a total of 46,650' of underground workings. Work done in last 15 months was 10,509'.

The Jack Pot mine, recently acquired, extends the company holdings to the northward on the vein system.

The 100-ton mill is operated by the Churchill Milling Co., whose entire stock issue is owned by the Nevada Wonder Co.

Exploration in 1916 indicated good possibilities at depth. In the original sulphide vein, above and below the 1,300' level, there is high grade ore. The winze below this level was in ore for 45' before the value broke to the north, and averaged \$30 to \$40 per ton for 4' in width. The 1,600' level is under this winze, enabling further exploration of the vein. Mining cost \$5.29 per ton. A 50 h. p. electric hoist was placed at the sub-shaft, to

enable sinking it to 1,900'. An electric tractor moves ore from stopes at 1,300'.

Production: in 1916, 72,241 tons of ore averaging 18.72 oz. silver, 0.159 oz. of gold and worth \$15.40 per ton. This yielded 1,243,753 oz. silver and 10,933 oz. gold, worth \$1,031,243. The recovery was 92.67% of total value at a cost of \$8.90 per ton for all departments. In 1915 the cost was \$7.26 per ton.

Churchill Milling Co.

Is a subsidiary of the Nevada Wonder Mining Co. with same directorate. Operates a 100-ton mill at Wonder, Churchill Co., Nev. Treated from Oct. 1, 1915, to Dec. 31, 1916, 72,241 tons of ore of \$1,112,835 gross value, showing a 95.35% recovery of the gold contents, 91.95% of the silver contents and 92.67% of the total value, or 11,466 oz. gold and 1,352,615 oz. silver. Total cost per ton was \$2.761, compared with \$2.268 in 1915.

Annual report for 15 months ending Dec. 31, 1916, showed: assets, \$237,122, which include property, \$80,889; accounts receivable \$78,032 and liabilities \$14,579, leaving a surplus of \$63,543. During same period \$352,091 was paid in dividends, making a total of \$915,205.

VULTURE-WONDER MINES CO.

NEVADA

Title changed to Nevada Silver Consolidated Co., which see.

WESTERN ORE PURCHASING CO.

NEVADA

Address: F. M. Manson, Hazen, Nev. Company operates a 900-ton sampler at Hazen and is well and favorably known.

CLARK COUNTY

AZALIA MINING CO.

NEVADA

Address: F. M. Berry, sec.-treas., Union Oil Bldg., Los Angeles, Calif.

Officers: F. W. Cole, pres.; S. E. Vermilyea, v. p.; preceding officers, John Woodson and S. L. Carpenter, directors; Dee W. Minier, supt.

Cap., \$1,000,000; shares issued, 700,000.

Property: 4 claims, 8 miles N. W. of Platina, Yellow Pine district, covering a vein in limestone, containing zinc-silver ore, for 3,000'. Developed by an 80' incline shaft which passed over the ore, said to be 6' thick and faulted at a depth of 30'. Operated under lease by C. E. Cree in 1917.

Company is developing a group of 9 claims about 1 mile below the Cerro Gordo mine, in the Cerro Gordo mining district, Inyo Co., Calif. A tunnel, 750' long., in June, 1917, is being driven to reach the contact.

AZURITE MINING CO.

NEVADA

J. W. McFatridge, ingr.-sec.-treas., 941 W. 35th St., Los Angeles, Cal. **Mine address:** Goodsprings, Clark Co., Nev. A. C. Black, pres. and purch. agt.; T. D. Knights, v. p.; preceding officers, M. P. Erwin, M. M. McFatridge and Samuel Yount, directors.

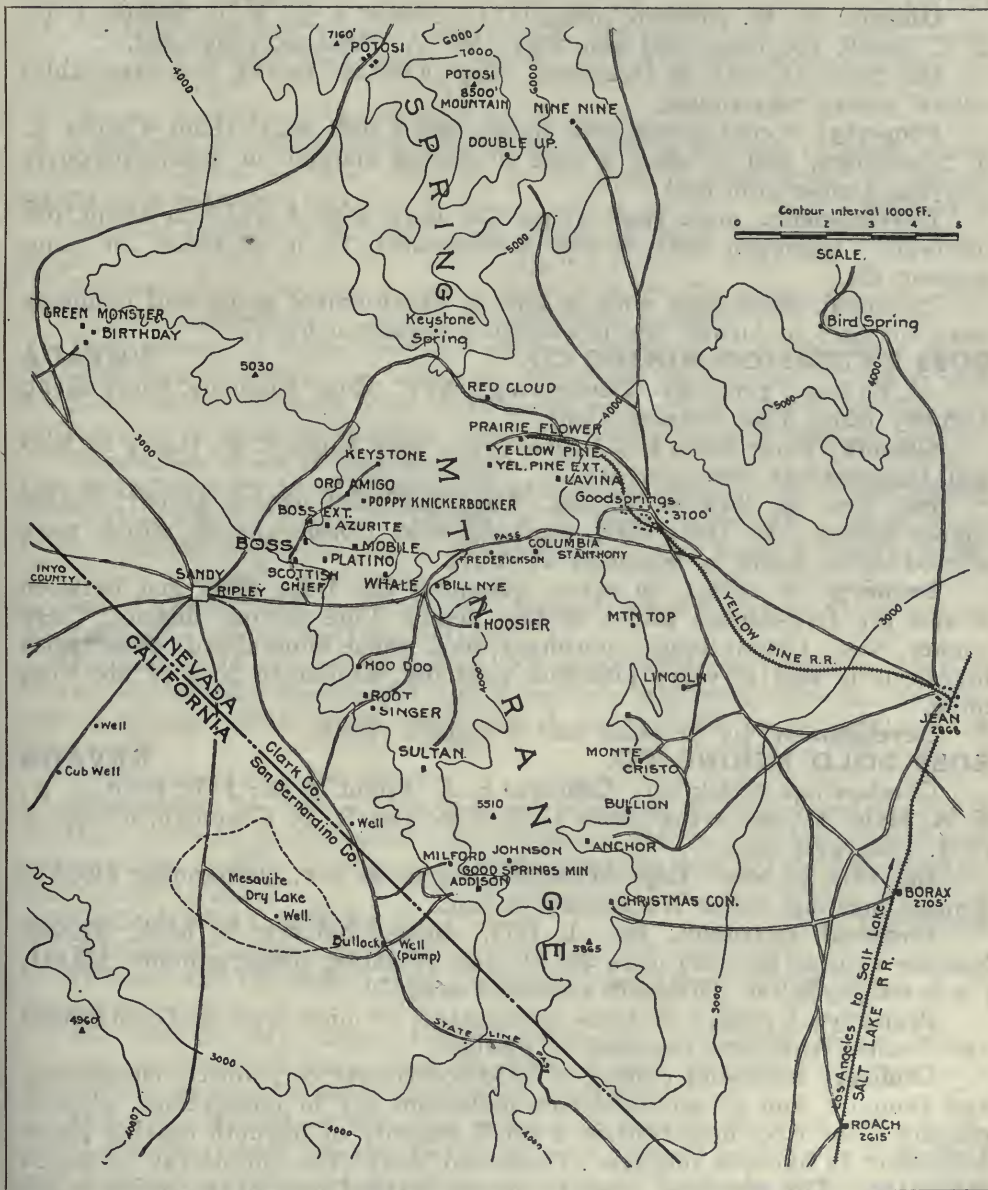

Inc. Feb. 7, 1911, in Nevada. **Cap.,** \$1,000,000; shares \$1 par; nonassessable; issued 440,879 shares.

Property: 9 claims, 174 acres and a 3-acre smelter site, in the Yellow Pine district, sections 26, 27, 34 in T. 24 S.; R. 57 E., 12 miles from Goodsprings and 20 from Jean on the Salt Lake railroad. The mines adjoin the Boss mine on the east.

Ore: carries plumbojarosite, a very rare mineral, carrying gold and platinum (see U. S. Geol. Survey Bull. 620). The Shenandoah, Jolly Boy and Copper Chief mines, all producers, adjoin the Azurite. A 150' tunnel, 80' below the incline shaft, at the Azurite mine, will give working ground for stopes. Claims show ores carrying gold, silver, copper, lead, zinc and

platinum, lowest assay at the copper mine said to be \$3.60 gold, \$4.50 silver, 27% copper, .03 oz. platinum. Ore occurs in replacement orebodies of irregular size and shape, the largest 35x40' and 8 to 10' thick. These replacements occur in thick bedded limestones cut by porphyry dikes.

Development: the Azurite copper mine has a 78' and a 20' shaft.

MAP OF SOUTH-EASTERN NEVADA, INCLUDING YELLOW PINE DISTRICT

Property has 1,626' of workings, including several tunnels, the longest being 450', estimated to block out 8,800 tons of 20% copper ore and 30% lead ore.

Company bought the Nevada Copper Realty property, Feb. 7, 1911. The proposed Parump Valley branch of the Salt Lake Route from Jean to

Goodsprings will open up this district and enable many of the mining companies to ship ore. The mine shipped four carloads of high-grade copper and lead ore in 1914, but has been idle since 1915.

BIG CASINO MINING CO.

NEVADA

Office: 775 Drexel Bldg., Philadelphia, Pa. **Mine office:** Searchlight, Nev.

Officers: M. W. Johnson, pres.; H. C. Gibson, v. p.; F. E. Sharps, v. p.; O. C. Small, sec.-treas. and gen. mgr.; W. W. Wishon, cons engr.

Inc. Sept. 14, 1914, in Delaware. **Cap.**, 1,000,000 shares, non-assessable; 880,000 shares outstanding.

Property: 9 contiguous lode claims and 2 mill sites, about 4 miles E. of Searchlight, said to show a zone of altered andesite in granite-porphry carrying copper-gold ore.

Development: main shaft about 550' deep with 4 levels at about 100' intervals. Equipped with 30-ton concentrator, 25 h. p. hoist, air compressor, etc.

President states that mine is still in development stage and company does not care to furnish the information requested by us.

BOSS EXTENSION MINING CO.

NEVADA

Al. E. Buys, gen. mgr., Goodsprings, Nev. Edw. Kennedy, fiscal agent, Security Bldg., Los Angeles, Calif.

Officers: Peter Buol, Las Vegas, pres.; Nick Kunz, v. p.; Harry K. Riddall, Goodsprings, Nev., sec.-tras.

Inc. Nov. 12, 1914, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; 558,500 shares issued. In Dec., 1916, company sold 100,000 shares, which were offered to the public by Kennedy at 11 cts.

Property: 3 claims, 60 acres, adjoining the Boss mine and between it and the Oro-Amigo mines in the Yellow Pine mining district, Clark county, Nev. Claims show a porphyry dike, whose mineralized contact with limestone is said to carry platinum gold ore, similar to that of the Boss mine.

Development: by 40' shaft and 2 tunnels (250').

BOSS GOLD MINING CO.

NEVADA

Goodsprings, Clark Co. **Officers:** S. E. Yount, pres.; J. F. Kent, v. p.; F. A. Hale, Jr., sec.-treas.; with O. J. Fisk and R. B. Chapman, directors. O. J. Fisk, gen. mgr.

Inc. 1914, in Nev. **Cap.**, \$1,000,000; shares \$1 par; outstanding \$408,500. Annual meeting, third Wednesday in Jan.

Financial statement, Jan. 1, 1917, shows: balance in bank, \$26,093. Smelter returns for 1916 were \$45,725 and operating disbursements, \$28,811; ore in transit, \$5,000. Dividends amounted to \$8,170.

Property: 5 claims, 85 acres, unpatented, 12 miles west of Goodsprings and 3 miles from new townsite of Platina.

Geology: orebodies consist of oxidized copper ore, mostly chrysocolla and limonite, and of gold-platinum-palladium ore in fine-grained silicious gangue. The later ores contain a small quantity of bismuth-bearing plumbojarosite (a hydrous sulphate of iron and lead). The shoots can be mined separately. The orebodies occupy a nearly vertical zone of fracturing in the horizontal strata of dolomite. The zone is 30' wide on surface, 100' long, with precious metal shoots confined to the 12' resting on the footwall. **Ore reserves:** blocked out and on dump, estimated Jan., 1916, as 14,200 tons valued at \$296,000. Assays said to be 2 to 15% copper, 0.2 to 100 oz. gold and 0.2 to 100 oz. platinum per ton.

Development: several tunnels, with a total of 5,635' underground work. Equipment includes an 800' tramway.

Production: ore shipments started in February, 1916, and a total of 746 tons were shipped during the year, 451 tons of copper ore, the remaining 295 tons being shipped East for recovery of platinum values.

In 1917, the Pacific Platinum Works of Los Angeles, Calif., contracted for the entire output of the mine, paying \$191 per ton net for a shipment made in July, including platinum at \$103 per oz. and palladium at \$110 per oz., besides gold and copper values. On November 1st, the new works of the Palau Metals Co. were started at Los Angeles, and will treat 200 tons per month.

Mining costs for 1916 averaged \$16.10 per ton.

Company has erected an experimental mill of 10 tons capacity which started operations in April, 1917. R. J. Goodwin is metallurgist in charge.

BULLION MINING CO. NEVADA

Mine at Goodsprings, Nev. Gen. office: 61 Main St., Salt Lake City, Utah.

Officers: J. J. Daynes, Jr., pres.-mgr.; J. B. Phelps, supt.; E. L. Talbot, C. E. Jenkins, directors. Company is privately owned.

Ore: occurs in ledges between white and blue lime on bedding plane, carrying lead and zinc, and about 10 oz. silver to the ton. Lead is dry concentrated and shipped. Zinc is shipped crude. Mill is now working two shifts. Part of property is under lease. Is 8 miles from a railroad.

Production about 15 cars monthly.

COLORADO-NEVADA MINING & MILLING CO. NEVADA

Nelson, Clark Co., Nev. **Officers:** F. C. Avery, pres.; Alex. Mead, v. p.; I. W. Bennett, sec.-treas.; G. A. Duncan, mgr.; with Geo. P. Avery, C. R. Welch, P. Anderson, directors.

Inc. Oct. 13, 1915, in Colorado. **Cap.**, \$1,000,000; shares \$1 par, none outstanding. Annual meeting Oct. 1st.

Property: 11 claims, patented, 163 acres, Eldorado mining district, Clark Co., Nevada, shows gold and silver ore in fissure veins in andesite, with a mining width of 15', and said to average \$10 to \$12 per ton, as fed to mill.

Development: by 600' shaft.

Equipment: includes a 25-h. p. hoist, Ingersoll-Rand compressor, and a 10-stamp mill and cyanide plant, daily capacity 75 tons, which is said to give an extraction of 92%. Company started operations late in 1915. No production figures to date.

COPPER METAL MINES CO. NEVADA

Address: Goodsprings, Nev.

Officers and directors: C. B. Stewart, pres.; Peter Clegg, v. p.; J. B. Jensen, sec.-treas.

Inc. Dec. 20, 1916. **Cap.**, \$1,000,000; shares \$1 par; 400,000 shares issued. Financial report dated Aug. 30, 1916, showed operating expenses for 1916, \$2,000; receipts \$4,000; cash in treasury \$6,000.

Property: 11 claims, 220 acres, in Ivanpah district, about 35 miles S. W. of Goodsprings, only slightly developed and claimed to show a 3' contact vein between granite and porphyry, assaying 6% copper and 6 oz. silver with a trace of gold.

COPPER PEAK MINING CO. NEVADA

Office: Goodsprings, Nev.

Officers: P. S. McClanahan, pres.; F. A. Hale, Jr., v. p.; R. W. Andruss, sec.-treas.; preceding, with W. E. McClanahan, directors, all of Goodsprings, Nev.

Inc. in 1916 in Nevada. **Cap.**, \$1,000,000; shares at \$1 par; outstanding 520,000 shares, non-assessable.

Gross earnings for 1916 were \$13,000 and operating expenses were about \$10,000. About 150 tons of ore were shipped.

Property: 6 claims, about 120 acres, on the south and east slopes of Olcot Peak, Yellow Pine mining district, ten miles north of Goodsprings, Clark Co., Nev.

Ore: is a high grade copper carbonate occurring in chambers and kidneys embedded in limestone. The highest assay of the 5 cars sorted ore shipped was 25% and the lowest was 14% copper.

Development: by 6 adits with total of 600', the longest being 150'. Property has been worked intermittently for a number of years and efforts are now being made to finance some consistent plan of development.

DUPLEX MINING CO.

NEVADA

Office: 501 P. E. Bldg., Los Angeles, Cal. **Mine office:** Searchlight, Clark Co., Nev.

Officers: Geo. L. Craig, Long Beach, Cal., pres.; C. W. Ennis, v. p.; Geo. R. Colton, sec.; G. F. Colton, pres.

Inc. May 7, 1915, in Nevada. **Cap.,** \$500,000; shares \$1 par. All stock issued is assessable.

Property: 7 patented claims, 101 acres, is a well-known gold mine, with veins in quartz monzonite, carrying gold-silver ores, changing to copper, lead and zinc at depth. Orebodies from 2.5' to 5' in width.

Development: by 600' vertical shaft, a 45° incline shaft 400' deep, and a 74° incline shaft 300' deep, with about 2,500' of underground workings. Assay results from carload lots are 0.9 oz. gold, 4.9 oz. silver, 8.6% lead, 2.3% copper, 1.3% zinc. Company claims that on the lowest levels the amount of lead is diminishing and copper increasing. The first copper ore mined in commercial quantities in the district was shipped from this mine in Aug., 1913. Gross earnings from ore sales in 1914-1915 were \$7,500, with operating expense of \$10,500. Property equipped with stamp mill, which will resume operations when property is opened up between 500' and 700' levels. Company planning to remodel mill and install an oil flotation plant.

Leasers reported to be shipping ore, 1917.

DUPONT COPPER MINES CO.

NEVADA

Office: N. H. Wheeler, 7 East 42d Street, New York. **Mine address:** Searchlight, Nev.

Officers: S. J. Kistler, pres.; Wm. D. Miller, v. p.; Chas. M. W. Keck, sec.-treas.; with Geo. S. Fenwick and A. M. Marshall, directors. G. B. Hartley, supt.

Inc. Feb., 1916, in Ariz. **Cap.,** \$2,500,000; shares \$1 par, non-assessable; 1,500,000 issued. Security, Transfer & Registrar Co., N. Y., transfer office. Metropolitan Trust Co., N. Y., registrar.

Property: the Sazarac group, formerly owned by the Gold Coin Mining Co., defunct 1907, and the Bornite group. These holdings comprise 23 claims, 8 patented, 410 acres, at Camp Dupont, 18 miles from Searchlight, Clark Co., Nev.

Geology: the mineralized dikes or veins at the property occurs in a batholith of granite porphyry (or quartz monzonite), which intrudes a pre-Cambrian granitoid complex, overlain by Tertiary volcanics. A contact between a white microcline aplite and a greenish basic granite is observable, the basic rock being invaded by great tongues of the former and by N. S. pegmatite dikes paralleling the vein system.

Ore: carries copper and gold in silicified quartz porphyry with specular iron and spathic iron and occurs in the N. S. Sazarac vein, 5' wide, with specular hematite in silicified quartz porphyry at contact with a dike. It is 15' wide on 200' level. The Bornite vein, 5' wide, runs E.-W. and shows

quartz porphyry gangue on surface. Four per cent Hill is a stockwerk of veinlets, making a possible disseminated or porphyry orebody.

Development: 216' shaft on the Sazarac, 92' and 141' shafts on the Bornite, and 100' shaft on the Copper Queen claims.

Reported on by Carl Anderson, E. M., and by W. W. Wishon, E. M., Los Angeles, in 1916.

Property regarded as promising.

EASTERN COPPER CO.

NEVADA

Office: 805 H. W. Hellman Bldg., Los Angeles, Calif. **Mine address:** St. Thomas, Nev.

Officers: L. H. Lathrap, pres.; J. K. Turner, v. p.; C. P. Campbell, sec.-treas.; C. R. Topping, supt.; above with W. F. Vidal, directors. J. K. Turner, cons. eng.

Inc. 1917 in Ariz. **Cap.**, \$1,500,000; shares \$1 par, non-assessable. Security Transfer & Registrar Co., N. Y., and Registration Surety Co., S. F., transfer and registry agents, respectively.

Property: 12 claims, 240 acres, in Gold Butte mining district, Clark Co., Nev., about 15 miles east of St. Thomas, the nearest railway point.

Ore: occurs in a fracture zone in limestone and carries copper in the form of chalcocite and malachite.

Report by L. J. Lathrop recommends sinking a shaft. Leasers have shipped surface ore only in past, some of it reported to have carried 29% copper.

Is a prospect which needs deep development.

ELDORADO ENTERPRISE GOLD MINING CO.

NEVADA

E. P. Jeanes, pres., Las Vegas, Nev. Company reported to have made a discovery of platinum ore on their property, 1916.

EL DORADO GOLD STAR MINING CO.

NEVADA

Operating claim in Nob Hill section of El Dorado mining district. Company offered 40,762 shares for sale, Aug., 1917, proceeds to pay off \$15,000 due on purchase, and to pay for development.

GOOD SPRINGS ANCHOR CO.

NEVADA

Office: 1202 Hollingsworth Bldg., Los Angeles, Calif. **Mine at** Jean, Clark Co., Nev.

Officers: Frank A. Keith, pres.; Philip Wiseman, v. p.; R. I. Rogers, treas.; I. Mattern, sec.; with Seeley W. Mudd, directors. Roy W. Moore, mgr.

Inc. Dec. 20, 1913, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; issued, \$550,000. Annual meeting, second Monday in May.

Gross earnings in 1916, \$111,359; in first 4 months of 1917, \$34,940. Total dividends to June 1, 1917, \$147,285.

Property: 7 patented and 1 unpatented claims at Jean, said to show lead-zinc ore occurring as replacement deposits in limestone, strike N.-S., dip 50°. Developed by 212' winze from a 110' tunnel; greatest depth of workings 400'; total underground workings, 1,600' of drifts.

Equipment: 15-h. p. oil hoist, 3-drill compressor, 2,000' gravity tram, 50-ton dry mill using Stebbins tables.

Production: in 1916, 872 tons crude zinc ore, 472 tons crude lead ore and 712 tons lead concentrate.

First 4 months of 1917 yielded 178 tons of 37% zinc ore, 136 tons of lead ore carrying 59.1% lead and 5.61 oz. silver, and 208 tons concentrate assaying 56.8% lead and 12.62 oz. silver.

GREEN MONSTER MINE.

NEVADA

Office: Phoebe A. Hearst Estate, 410 Hearst Bldg., San Francisco. C. B. Neel, mgr., Goodsprings, Nev.

Property: in Yellow Pine district, Clark county, 16 miles N. W. of Goodsprings, Nev. Ore is mainly zinc carbonate with a little lead, copper, and silver. Output to Sept., 1917, totals 3,000 tons, averaging 35% zinc.

Development: 250' single-compartment shaft with manway, 2 incline shafts, 100 and 255' deep, and 140' winze.

INGOMAR MINE.

NEVADA

Address: Samuel S. Arentz, 303 Dooly Bldg., Salt Lake City, Utah.

Property: 3 claims (patents pending), 10 miles S. of Goodsprings, Clark Co., Nev., said to show a chamber deposit in limestone, dipping 35° S. E. and pitching N. 20° E. Ore assays 42% zinc as carbonate and 65% lead.

Development: by incline shafts to 50' depth, and tunnels 200 and 300' long.

Gross yield in 1916 was \$36,000. To May, 1917, the output was 33 car-loads, and monthly returns are said to be \$10,000 gross. Twelve to 18 men are employed. A washout of 7 miles of Borax Smith's state line highway in August, 1917, cut the district off from Roach, forcing teams to haul 29 miles to another station.

A promising mine in a good district.

IRONSIDES MINING CO.

NEVADA

Goodsprings, Nevada.

Officers: W. H. Gable, pres.; J. C. McCreary, v. p.; both of Scotts Bluff, Neb.

Property: near Goodsprings, had 100' shaft with drifts and stopes on shipping ore.

IVANPAH COPPER CO.

NEVADA

Goodsprings, Nevada.

Company shipping 100 tons of copper ore daily. A new smelter at Valley Wells was nearly completed in September, and will handle mines output.

JUNE BUG DEVELOPMENT CO.

NEVADA

Office: Ogden, Utah. **Mine office:** Las Vegas, Clark Co., Nev.

Directors: Lester S. Scoville, pres.; Milton J. West, v. p.; Frank L. Scoville, sec.-treas.; above, with John Hochett and Walter B. Scoville. Milton J. West, mgr.; L. S. Scoville, supt.

Inc. Jan., 1916. **Cap.**, \$100,000; shares 10c par; 825,000 issued. Annual meeting, Jan. 4th.

Property: 9 claims, surveyed for patent, 18 miles N. W. of Las Vegas, in the Goodsprings district, Nev., said to show gold, silver and zinc ore. Pay ore occurs in shoots 30' long, from 6-10' wide and from 14" to 5' thick, reported to assay 40% zinc, \$1.50 gold and \$4 silver per ton. The ore is a zinc silicate. Veins are in limestone formation.

Development: by shallow shafts and about 1,200' of underground workings. Shipments of 650 tons for 4 months ending June, 1916, to the Utah Ore Sampling Co., returned \$35,000. Management reports that company marketed sufficient ores to take care of all extensions and new developments.

KANSAS NEVADA MINING CO.

NEVADA

Address: Goodsprings, Clark Co., Nev.

Officers: Frank Williams, pres.; Chas. Locknow, v. p.; J. T. Bristow, sec.-treas., with John Williams and Thos. Williams, directors.

Inc. July 16, 1907, in Nev. **Cap.**, \$1,000,000; shares \$1 par; 706,895 outstanding. Operating expenses for 1915 were \$2,128 and gross earnings from ore sales were \$1,560.

Property: 3 unpatented claims, about 53 acres, 9 miles W. of Goodsprings, show zinc, lead and silver ore in a 4' vein in limestone formation.

The vein runs E. W. and dips N. Developed by 500' tunnel to depth of 130'. An initial shipment of 53 tons of ore made in 1915 averaged \$30 per ton.

No recent information.

ORO AMIGO PLATINO MINING CO.

NEVADA

Goodsprings, Nev.

Officers: S. E. Yount, pres.; Geo. A. Fayle, v. p.; H. K. Riddell, sec.-treas. and mgr., with N. B. Hunter and Fred A. Hale, Jr., directors.

Inc. Nov., 1914, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; 515,100 shares issued. Annual meeting, Jan. 15th. Operating expenses for 1915 were \$8,500.

Property: 5 unpatented claims, 60 acres, in Yellow Pine mining district, Clark Co., Nevada, about 2 miles N. E. of the Boss mine.

Ore: quartz and plumbojarosite in fissure veins in limestone. Values are copper, gold, platinum and palladium, occurring in shoots 6"-4' wide.

Development: by 2 tunnels, 70' and 150' long, with 1,500' total underground workings. Not yet producing.

PLATINO MINES CORPORATION

NEVADA

R. Mausard, supt., Goodsprings, Clark Co., Nev. Mine about 30 miles from Las Vegas, in the Platino district, is said to carry a 2' vein of copper ore. A winze sunk on vein is also reported to have disclosed a body of manganese carrying platinum and gold values.

PRAIRIE FLOWER DEVELOPMENT CO.

NEVADA

Address: Jas. Ashbaugh, mgr.; Goodsprings, Nev.

Officers: G. A. Fayle, pres.; Jas. Ashbaugh, v. p.; F. A. Hales, Jr., sec.-treas., with N. B. Hunter and O. J. Fisk, directors.

Inc. Dec. 23, 1916, in Nevada. **Cap.**, \$100,000; shares 10c par; non-assessable; 300,000 issued. Annual meeting, first Tuesday in Jan.

Property: 4 patented claims, 60 acres, 4 miles W. of Goodsprings, Nev., adjoining the Yellow Pine mine on the N. Property is owned by the Prairie Flower Mining Co., but is being developed by this corporation.

Claims cover a replacement deposit in limestone with an orebody that is 6' wide, dips 40° W. and has a N.-S. course. The ore which contains carbonates of lead and zinc is said to assay 15% lead, 30% zinc and 10 oz. silver.

Development: by 200' and 300' incline shafts and 2,500' of workings. In Aug., 1917, 55% lead-zinc ore was cut at bottom of the 200' shaft, thought to be the Yellow Pine ore zone.

Equipment: 18 h. p. hoist, Ingersoll-Rand compressor, and distillate engine.

QUO VADIS GOLD MINING CO.

NEVADA

Las Vegas, Nev.

Officers: Peter Buol, pres.; C. C. Ronnow, v. p.; Ed. W. Clark, sec.-treas.; above, with F. A. Clark and J. B. Anderson, directors.

Inc. Dec., 1915, in Nevada.

Property: the Quo Vadis mine at Las Vegas, Clark Co., Nev., said to show rich stringers of free milling gold ore in latite and andesite formation. Developed by 300' tunnel and a shallow shaft, which will eventually be sunk to 500'.

SAINT ANTHONY MINING CO.

NEVADA

Goodsprings, Clark Co., Nev. Jos. Dederichs, gen. mgr. and chief owner.

Property: 7 claims, 140 acres, in the Yellow Pine mining district, 2½ miles W. of Goodsprings. Ore is said to assay 10% to 18% copper in

orebodies up to 15' in width. Developed by 2 incline shafts, 240' and 175' deep, located 500' apart.

Equipment: includes 2 gasoline hoists and an aerial tram 850' long.

Production: to June, 1915, reported as \$60,000. Reported shipping one car of ore every 6 weeks during 1916.

SULTAN MINE

NEVADA

Address: Henry Robbins, owner, Goodsprings, Nev.

Property: in Goodsprings district, Clark Co., Nev., is said to show a replacement orebody in limestone. Minerals are zinc and lead carbonates, averaging $\frac{1}{2}$ to 1 oz. silver to each 1% lead. Surface outcrops are said to be extensive.

Equipment: includes 50-ton dry concentrating plant, separating the lead, making a 50% lead and 25 oz. silver concentrate. Tailing carries 15% zinc, 4% lead and 4 oz. silver per ton. Only the lead is being saved. From 15 to 20 men employed.

TECHATTICUP MINE

NEVADA

Address: R. T. Walker, lessee, Nelson, Nev. Owned by Joseph Wharton Estate, Philadelphia, Pa.

Property: 9 claims, 8 patented, 1 mile E. of Nelson, Clark Co., Nev., said to show a quartz vein in monzonite, dipping 10 to 80° and pitching E. W. Ore is a sulphide.

Development: by 600' incline shaft, and 3,000' of workings.

Equipment: 25 h. p. gasoline hoist, 3 compressors and 50-ton cyanide mill.

Production: in 1916 was 7,676 oz. gold and 58,393 oz. silver.

WHALE MINE

NEVADA

Goodsprings, Nev.

Officers: T. A. Varden, mgr.; J. M. Hays, sec.; R. M. Salisbury, C. W. Whitley, L. Greene, trustees.

Property: the Whale mine, 6 unpatented claims, 120 acres, 8 miles W. of Goodsprings, Clark Co. The mine has deposits of zinc ore which occur in limestone and dip 45°, the pay ore being found in shoots 2' to 5' wide. Mine is worked by a 600' tunnel. Greatest depth of workings, 300'. The mine is still in development stage.

Equipment: includes 10"x10" compressor. A shipment of carbonate ore, said to have averaged 38% zinc.

YELLOW PINE EXTENSION CO.

NEVADA

Office: Goodsprings, Nev.

Officers: A. J. Robbins, pres.; E. B. Critchlow, v. p.; Reynolds Robbins, sec.-treas., with A. J. McDermott and G. A. Fayle, directors.

Inc. in Utah. Cap., \$100,000; shares 10c par; assessable; 575,000 issued.

Revenue in 1916 was \$22,000, of which \$16,000 was from ore production. Expenses totaled \$20,000.

Property: 12 claims, 190 acres, in Yellow Pine district, Clark Co., Nev., said to show a chamber deposit in limestone, dipping 45° W., with N.-S. course. Ore shoots are 2 to 8' wide and 10 to 40' long. Ore contains carbonates of zinc and lead, with some copper and silver; zinc content is 35%.

Development: by 800' incline shaft, 200' tunnel and total of 4,000' of workings. A new shaft has been sunk.

Production: to 1917 about \$100,000, average in 1916 being \$25 per ton.

YELLOW PINE MINING CO.

NEVADA

Offices: 431 Security Bldg., Los Angeles, Calif., and Goodsprings, Nev.

Officers: J. F. Kent, pres.; R. B. Chapman, v. p.; F. A. Hale, Jr., sec. and mgr.; G. W. Kent, treas.; with S. E. Yount, directors; J. C. Kemple, mine supt.

Inc. 1905, in Nev. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; all issued. No bonded indebtedness. Stock transferred and registered at company's Los Angeles office. Annual meeting, third Wednesday in Jan. Listed on Los Angeles Stock Exchange.

Gross earnings, year ending Jan. 10, 1917, \$1,017,613; receipts from sale of ore, \$1,011,730; operating expenses, \$219,857; cash, \$152,133; dividends paid, \$800,000. Total dividends to Sept., 1917, \$1,983,000.

Property: 13 patented claims, about 240 acres at Goodsprings, Yellow Pine district, Clark Co. Ore occurs as carbonate and oxide in limestone and average 30% zinc, 14% lead and 12 oz. silver. The main deposit dips about 30° and strikes N. S. The ore consists principally of lead and zinc carbonates and silicate. Sulphides are almost entirely absent as evidenced by the fact that the smelter returns on the lead concentrates show only 2 or 3% sulphur.

In Sept., 1916, the Charleston claims, 36 miles from Las Vegas, were taken under option. Three feet of 45% lead-zinc ore was opened.

Development: by an inclined shaft, 900' deep, greatest depth of workings being 950' and linear extent 25,000'. During 1916 new work amounted to 3,358', costing \$9.31 per foot. In July, 1917, an extensive shoot was opened at 700', several feet assaying 34.6% zinc and 18.3% lead. By Sept., it had been opened for 150'. A winze has been sunk to determine its limits. Ore is mined by square set stoping.

Equipment: includes 40 h. p. electric hoist, compressor, 12 miles of 36" gauge railway, with Shay locomotive; 75 h. p. semi-Diesel engine, etc.

Mill: the 100-ton mill is, strictly speaking, a separator rather than a concentrator. The ore is a high-grade lead-zinc material, and in the treatment at this plant no rejection is made, all products of the mill being shipped.

From the mill bin the ore is fed to a short conveyor, on which the larger pieces of waste are sorted out. This conveyor dumps over a 1" grizzly and the oversize goes to an 8" by 16" roll-jaw crusher. Grizzly and rock breaker both discharge to a chain elevator, which dumps to the fine-ore bin.

The fine ore is delivered to a set of 16" by 36" Cornish rolls set to ¼". These discharge to a wet elevator, which raises the ore to the top of the mill, where it passes successively over ¼" and ⅛" impact screens. The screen oversize is treated on two 2-compartment Harz jigs, which make lead concentrates from the bed and hutch of the first compartment and middlings through the second compartment and over the tailboard. The middlings from the coarse jig are returned to the first set of rolls and those from the finer jig to a second set, both of which discharge to the elevator and to the impact screens.

The undersize of the second screen goes to a 5-compartment Richard's classifier, which makes 6 products, each of which goes to an Overstrom table. The tables make only 2 products, lead and zinc concentrates. The lead goes to tubs and the zinc, with all slime to settling bins beneath the table floor. The lead is shoveled to small cars, the zinc is drawn off through gates and the slime overflows to ponds from which it is shipped when a sufficient amount accumulates.

Production:

	Ore				Cost P. T. Shipped			
	Milled Tons	Lead %	Zinc %	Silver oz.	Mining	Milling	Transp'n	General
1916.....	20,581	10.5	30.4	4.53	\$5.418	\$1.546	\$0.860	\$2.095
1915.....	16,136	10.2	31.8	5.40	1.530

Total costs, 1916, were \$9.919 per ton shipped and the ore averaged \$44.456 per ton, leaving \$34.537 net. This is a highly profitable property.

DOUGLAS COUNTY

ANTELOPE GROUP

NEVADA

Held by Louis W. Trankle, Yerington, Nev. Claims 23, unpatented, 430 acres; in the Buckskin Range, Douglas Co., 16 miles from Yerington.

The ore bearing formation is a monzonite belt 4,200' wide, extending N. 7° W., dip 47° to east, for 1½ miles, with diorite on the west and andesite on the east. This monzonite is highly altered, showing strong kaolinization and sericitization to depth of 150 feet, deepest working. Surface shows scanty copper carbonates throughout length and breadth, with small streaks of copper sulphide ore near footwall side. Water encountered in lower workings shows strong copper content.

The property is a promising prospect. Has been examined by L. A. Wright, V. A. Hart, E. R. Richards, Fred Alsdorf and W. H. Weed.

KENNEDY CONSOLIDATED MINING CO.

NEVADA

Office: Yerington, Nev. Mine at Buckskin, Douglas, Co., Nev.

Utah people, headed by J. F. Cowan, took over this property in June, 1917, from the previous owners, the Kennedy Cons. Gold M. & M. Co., of which W. C. Pitt was president.

Property: 7 claims, 110 acres, patented, in Buckskin district, Douglas Co., Nev., developed by 3 shafts, 90', 147' and 220' deep and by one 240' tunnel, said to expose some large bodies of ore, mostly sulphides with gold, silver and copper. Said to show 30' of 3½% copper ore, with high gold and silver-contents at 80' depth. Mine is 4 miles from Nevada Copper Belt railroad and has power line within 1 mile. A flotation plant is being planned.

ELKO COUNTY

ALASKA IMPROVEMENT CO.

NEVADA

Office: Room 302, No. 65 Second St., San Francisco, Cal.

Bonded Rip Van Winkle mine, at Lone Mountain, Elko Co., Nev., to Lone Mountain Mining Co., in March, 1916. Property produced, \$13,813 net to the Alaska Investment Co., making a total of \$42,000 to date.

Mine optioned to Stewart Mining Co., 1916, but bond forfeited.

ALPHA MINE

NEVADA

Owned by Horace Palmer, of Chicago. Chas. Nelson, mgr.

Property: at Jarbidge, Elko Co., Nev., contains veins of gold-silver ore in Tertiary volcanic rocks.

Development: crosscut tunnel, several hundred feet long.

Equipment: 5-stamp mill. Employs 20 men.

Production: \$10,000 bullion per month by amalgamation. Plan installing cyanide plant to treat tailings. See Bull. 497, U. S. Geol. Survey, 1912, by F. C. Schrader, for geology, etc.

BLUSTER CONSOLIDATED MINING CO.

NEVADA

Officers: T. B. Beadle, pres. and gen. mgr.; Frank Benan, v. p.; H. L. Rummel, sec.; J. D. Goodwin, treas.

Property: at Jarbidge, Elko Co., Nev., shows gold ore in 7' veins, said to assay \$10 to \$40 per ton.

Equipment: 10-stamp mill, sawmill, aerial tramway, electric power. Tailing being impounded for cyaniding at a later time.

Ore reserves: management estimated 100,000 tons of milling ore, valued at \$12 per ton, blocked out and on dumps, Jan., 1915.

Production: claimed to be \$12,000 in bullion per month. No 1916 returns received.

BROOKLYN MINING CO.

NEVADA

Idle. E. S. Shields, sec.-treas.; 19 W. Granite St., Butte, Mont. Mine near Contact, Elko Co., Nev. S. V. Kemper, pres.; T. M. Hodgens, v. p.

Inc. 1898, in Montana. **Cap.**, \$500,000; shares \$1 par; 213,000 shares issued. Has no debts.

Property: 7 claims, 75 acres in the Contact district, with ore deposits occurring on the contact between limestone and porphyry. This ore belt is about 18' wide, runs E.-W. for several thousand feet, dips at 75° and is said to contain 8% copper, with about 2 oz. of silver and \$1 gold per ton.

Development: by 196' shaft with 600' of workings, said to have developed 2,000 tons of ore. Property idle, waiting the advent of railway. Equipped with 25 h. p. boiler, 15 h. p. gasoline engine and hoist. Is 40 miles from railway.

CONTACT COPPER CO.

NEVADA

Hutchinson, Minn., and Contact, Elko Co., Nev.

Officers: S. G. Anderson, pres.; Wm. Schultz, v. p.; Sam G. Anderson, Jr., sec.-treas., with J. A. Lindenberg and J. A. Jorgenson, directors.

Cap., \$1,000,000; shares \$1 par.

Property: two groups, the Lucie, 11 patented claims, and the Blue Rock, 8 patented and 5 unpatented claims, at Contact, said to show copper carbonate ore in veins.

Development: the Lucie group has a 145' shaft, said to show ore all the way to the bottom. The Blue Rock has 2 shafts, 50' and 30' deep, both said to show ore. Management says it will sink the main shaft to the 500' level. No production to date.

COPPER SHIELD MINING CO.

NEVADA

Office: 45 W. Second St., Salt Lake City, Utah. **Mine office:** Contact, Elko Co., Nev.

Officers: Dr. C. I. Douglas, pres.; U. U. Hiskey, v. p.; C. R. Strock, sec.-treas.; H. M. Shields, mgr., and J. A. De Valley, directors.

Inc. 1907 in Nevada. **Cap.**, \$1,000,000; shares \$1 par; issued, 610,000. Annual meeting, second Tuesday in April.

Property: 11 claims, 200 acres, in the Salmon River district. **Development:** by 4 shallow shafts, deepest 73', and several tunnels, with a total of 646' of workings, showing 4 veins in monzonite porphyry dikes in grano-diorite, said to carry up to 40% copper and 2 to 6 oz. silver per ton. Oregon Short Line railroad is 37 miles distant.

CUNAPAH MINING CO.

NEVADA

Address: Montello, Nev. **Officers:** P. O. Perkins, pres.; S. C. Sherrill, v. p.; G. W. Lynch, sec.-treas.; J. M. Bowker, mgr.

Inc. 1916, in Utah. **Cap.**, \$50,000; shares, 10c par: 205,000 issued. Listed on Salt Lake Exchange.

Property: 5 unpatented claims in Lucin district, Elko Co., Nev., near Utah border.

Development: by 250' shaft and several tunnels, said to show a lead-silver vein in limestone. Several carloads of ore shipped to June, 1917, averaging 25% lead and 2 oz. silver per ton.

Company installing compressor, hoist and power plant, and will sink shaft, 1917-18.

Is in same hill as Salt Lake Copper & Tecoma Consol. mines and shows limestone intruded by porphyry and granite. Ore occurs in "breaks" in limestone near contact.

DARKEY MINE**NEVADA**

Owned by W. S. Holmquist and M. W. Johnson, Ely, Nevada. W. S. Elliott, mgr.; Walter Geddes, supt.

Property: 9 claims, 180 acres, in Elko county, about 9 miles E. of Decoy, developed by 65' shaft, shows a blanket deposit of manganese ore, in limestone formation. Owners shipped 562 tons of ore, averaging 45% from Oct. 1916 to March, 1917.

Property leased to W. S. Elliott and W. Geddes, for 2 years from March 1917. Installed a hoist and plans shipping 15 tons per day, 1917, from Decoy on the Nevada Northern R. R.

EASTERN STAR MINING CO.**NEVADA**

Office: Winnemucca, Humboldt Co., Nev. **Officers:** E. Reinhart, pres.; Chas. F. Spilman, v. p.; L. G. Campbell, sec.-treas.; above, with Daniel Craig and R. S. Bolam, directors.

Inc. 1911 in Nev. **Cap.**, \$1,500,000; shares \$1 par; outstanding, 1,340,000.

Property: 5 claims, 70 acres, in Gold Circle mining district, Elko Co. Nev., with a 4½' gold quartz vein, in andesite.

Development: 280' incline shaft with levels at 75', 160' and 240'.

Equipment: includes two 25 h. p. gasoline engines.

The secretary L. G. Campbell, attorney, Winnemucca, Nev., writes us in 1917 that the company is not responsible for statements made by the G. S. Johnson Co., of San Francisco and that company has had no connection whatever with the nauseous Thousand Member Gold Mining Association, so luridly advertised by the Johnson Co., in 1914.

Examination and report by a mining engineer estimates \$100,000 worth of ore in sight averaging \$20 a ton.

ELKO MINING CO.**NEVADA**

Property at Jarbidge, Nev., inactive.

H. L. Hollis, cons. engr., 1925 People's Gas Bldg., Chicago, Ill.

ELKO PRINCE LEASING CO.**NEVADA**

Out of business. Was operating property of the Elko Prince Mining Co. (which see), and when indebtedness to J. N. V. Dorr was paid off, the mine was taken over by the present company.

ELKO PRINCE MINING CO.**NEVADA**

Address: L. L. Savage, Golden Gate Mfg. Co., New York, pres.; Paul Ehlers, v. p.; L. S. Jackson, sec., with R. P. Jackson, directors.

Cap., \$1,150,000; shares \$1 par; 1,108,566 issued.

Dividends: 3½% paid Oct. 23, 1917; to be paid regularly at 2½% quarterly thereafter. Net earnings said to be at the rate of \$64,000 per quarter. On October 1, cash and bullion in transit were valued at \$70,000, and supplies at \$30,000.

Property: 9 patented claims at Midas, Gold Circle district, Elko county, Nevada, 50 miles N. E. of Golconda on the S. P. R. R., and 35 miles from Red House on the W. P. R. R. Examined by H. V. Winchell and F. F. Sharpless.

Geology: the Gold Circle formation consists chiefly of rhyolite, andesite and bostonite. Ore occurs in vertical fissures in the rhyolite. The hanging wall of the Elko Prince mine is bostonite, the foot wall is rhyolite. The ore carries gold and silver, as 65% and 35% respectively. Ore averages \$20.50 per ton.

Development: by tunnels, shafts and winzes to depth of 750'. On the 300' level the shoot is 15" wide and 630' long; on 600' level it is 810' long, and to Nov., 1917, 30" wide and 230' long at 750', with good indications for greater length than at 600'. All ore above 300' has been broken and 66% removed. Below 300' and above 600' most of the ore is broken, and 66%

drawn N. of the shaft, the S. end being intact. In the June Bell, a parallel vein to the Elko Prince, reserves are estimated as 5,000 tons of \$16.35 ore, with five times this quantity probable. The shoot is 30" wide and 200' long. All reserves are valued at \$700,000.

Equipment: includes complete mining plant and mill employing 4' Marcy mill, 5 by 14' tube mill, Dorr classifier and thickener, Oliver filter, 185 h. p. Allis-Chalmers oil engine, 10,000' water pipe line, etc., the whole valued at \$150,000.

Production: from Oct., 1916, to Sept., 1917, the mill extracted \$381,689, of which \$255,862 was profit. To Oct., 1917, the mill treated 31,954 tons of \$20 ore. In Sept., 1917, from a yield of \$27,300, \$17,605 was profit.

ELKORO MINES CO.

NEVADA

Subsidiary of Yukon Gold Co., which see.

Office: 120 Broadway, New York. **Mine office:** E. A. Austin, Jarbidge, Nev.

Officers: William Loeb, Jr., pres.; C. K. Lipman, v. p. and sec.; with O. B. Perry, Charles Earl, R. W. Straus, W. E. Bennett, E. L. Newhouse, F. R. Foraker and Louis Sloss, directors; Leopold Frederick, treas.; O. B. Perry, cons. engr. and gen. mgr.

Inc. Sept., 1916, in Delaware. **Cap.,** \$1,000,000; shares \$5 par; non-assessable; all issued. D. A. Crockett, 149 Broadway, New York, transfer agent; Guaranty Trust Co., of N. Y., registrar. Annual meeting third Tuesday of January.

Property: the Long Hike and O. K. groups of 52 claims in Jarbidge district, Elko county, Nev. In the Long Hike there is a strong fault fissure in porphyritic rhyolite. Alteration, leaching and replacement has taken place in the brecciated vein material and walls. Ore consists of sugary and solid quartz, adularia and silicious rhyolite, carrying free gold, with a little silver.

Development: by 1,500' tunnel to depth of 600' in the Long Hike, and 250' in the O. K. Ore blocked out was estimated early in 1917 at 214,000 tons, averaging \$15 per ton.

Equipment: electric hoist, 2 Ingersoll-Rand compressors, pumps, aerial tram being constructed, also 100-ton mill employing counter-current decantation system of cyanidation.

All costs are estimated at \$4.50 per ton.

ELY CONSOLIDATED COPPER CO.

NEVADA

Office: 414 Judge Bldg., Salt Lake City, Utah. **Mines:** Ruth, via Ely, Nev., and Elko, Nev.

Officers: S. M. Levy, pres.; D. B. Shields, v. p.; Gideon Snyder, sec.; John Pingree, treas.; with Grant Snyder, directors. C. W. Geddes, cons. engr. and mgr., Merchants Bank, Salt Lake City. R. M. Kellogg, supt.

Inc. Oct. 2, 1906 in Utah. **Cap.,** \$1,500,000; shares \$1 par; non-assessable; 1,000,000 issued; changed Jan., 1917, from \$1,000,000, shares \$10 par, assessable, of which 300,000 shares were donated to treasury by incorporators.

Stock listed on Salt Lake Stock Exchange and New York Curb. Registrar and transfer agent, United States Corporation Co., 34 Nassau St., New York.

Property: 3 groups, 20 claims, 370 acres, in the Ely district, also a lease and bond on the Copper Queen mine, Elko, Nev., and the Baltimore, an adjoining property.

The Ely property, 15 claims, about 300 acres is on the south side of the mineral belt, near the Ruth and Jupiter groups of the Nevada Consolidated. Developed by 3 vertical shafts. The 625' Brilliant shaft has

silver-lead ore on the 400' level, and near the bottom is said to show a 100' bed of disseminated copper ore, below commercial grade. The American shaft is 500' deep.

Development: in recent years has been at the 725' Zack shaft in the western end of the group. Orebody on 500' level reported to be 100' wide. From 500 to 700' levels, ore flattened, being 264' farther south on the 6th than on the 5th level. Ore consists of bunches of copper glance with some oxide and carbonate in white, clayey gouge and decomposed rock. Crosseut on 700' cuts monzonite, but too deep for pay ore. Carload shipment in 1913 netted \$21.65 per ton, averaging 3.3% copper, 15.2 oz. silver and 12.2% lead.

The Copper Queen group, 18 claims, in the Merrimac district, 22 miles N. W. of Elko, Nev., shows a gossan outcrop, 500x600', carrying 40 to 50% iron; also 2 veins, one of them traceable a mile, showing surface exposures of shipping ore. Work was begun on this property in March, 1913, and shipments in May and June averaged 100 tons per week, smelter returns showing 7.40% copper, 7.9 oz. silver per ton, 40 cts. gold, 28% iron and about 35% silica. The ore is hauled by automobile trucks.

The Baltimore group, 12 claims, 6 patented, includes, the Cuag and Morgan mines, taken under bond June, 1913, on 15% royalty, with no cash payment until 1914, appears to be a valuable acquisition. The Cuag workings contain ore blocked out and the shaft has been enlarged, re-timbered and is now reported to show high-grade bornite ore. The Morgan mine shows 4' of ore and shipments have carried 3% copper, a varying percentage of lead and 7.8 oz. silver. Developed by Morgan tunnel driven to open up Morgan vein on 200' level.

After an expensive campaign of development at the Ely-Nevada property, it was realized that the property could not be put on a paying basis under existing conditions and the policy of the company was changed and new properties sought. In March, 1913, the Copper Queen mine, near Elko, Nev., was purchased, for \$50,000. In May the Peterson group in Pine Valley was bonded and in June the property of the Pacific Consolidated Mining & Smelting Co., near the Copper Queen, was taken over on \$30,000 bond and lease.

The Peterson group, bonded in 1913, is located at Lone mountain, midway between Elko and Tuscarora, 8 miles from Hale Crossing, a station on the railroad with which it is connected by good wagon road. Property shows veins with ore shoot carrying high-grade copper ore and old workings carry 5% copper ore from which shipments were being made. The Pacific Consolidated Mining and Smelting Co. property, also held under lease and bond, consists of a 300-acre group of claims on which shipping ore was also found. About 350' from portal of Morgan tunnel a 4' copper vein was opened up with reported values of from \$12 to \$26 per ton. A copper-zinc vein was also being developed, 1915-16.

Company has a practical business man looking after its affairs and seems now to be operated on safe lines. For several years past, extravagant statements concerning the company were issued by brokers and misleading assays were published of the value of the ore developed in the Zack shaft. It is now known that the orebody is low-grade and cannot be profitably mined. The company has a large capitalization, but the new management and new properties appear likely to bring the property to a self-supporting, if not a profitable basis.

Shipments started in 1917 and in July, company was shipping 4 cars of concentrates weekly. Earnings in March are reported to have been \$70,000.

Company has installed a 500-ton flotation plant and plans to double the capacity, 1917-18.

GOLD CIRCLE QUEEN CO.**NEVADA**

Address: L. G. Campbell, Winnemucca, Nev.

Officers: J. E. Pelton, pres.; R. S. Belam, v. p.; L. G. Campbell, sec.-treas.; preceding with G. S. Pelton, directors.

Cap., 1,000,000 shares, \$1 par; 840,000 outstanding.

Property: 5 unpatented claims, in Gold Circle district, Elko, Nev., held under lease.

Geology: lodes and fractured zone in rhyolite, containing shoots up to 40' width. Ore carries gold, silver, and some manganese, averaging \$16.40 per ton.

Development: by 130' shaft, and 2 tunnels 180' and 210', with total workings of 1100'.

Ore reserves: estimated at 4,000 tons above 132', worth \$65,000.

Equipment: 15 h. p. Fairbanks-Morse gasoline hoist. Proposed to erect 30-ton mill and deepen shaft, 1917. **Production:** ore sales in 1916, \$8,006; to 1917, \$16,970. Recovery by amalgamation alone, 80%.

HOLDEN MINING & MILLING CO.**NEVADA**

Tuscarora, Nev. **Edw. R. Holden,** pres., 524 S. 4th St., Los Angeles, Cal. **Inc.** 1916 in Nev. to take over leases and bond on properties of Tuscarora Cons. M. Co. and in Nevada rights of the Holden patents for concentrating and reducing ores. **Cap.,** \$500,000; shares \$10 par.

JARBIDGE CENTRAL MINES CO.**NEVADA**

Address: Jarbidge, Elko Co., Nev.

Officers: J. P. Duncan, pres.; Angus McDonald, v. p.; W. W. Fisk, sec.; with John MacRae, Ira Brackitt and H. O. Milner, directors.

Inc. Oct. 5, 1911, in Nev. **Cap.,** \$1,500,000; shares, \$1 par; non-assessable; 1,250,000 issued.

Property: 9 unpatented claims in Jarbidge district, said to show a quartz vein in rhyolite, dipping 85° S. W. and pitching S. 32° E. Average gold assay is \$15 to \$20 per ton.

Development: by vertical shaft to 65' and by 2 tunnels 175' and 225' long. Work in 1916 cost \$5,000, done on an option. A prospect.

JERSEY CONS. COPPER & GOLD MINING CO.**NEVADA**

Office: 272 Grant St., Salem, N. J. **Mine office:** East Ely, Nevada.

Officers: R. T. Seagrave, pres.; H. M. Loveland, v. p.; F. Eldridge, sec.; W. L. Bassett, treas.

Inc. Jan. 15, 1917, in Delaware, **Cap.,** \$100,000; shares \$1 par; non-assessable; 4,950 issued. Annual meeting 1st Thursday of March.

Property: 15 claims, unpatented, 300 acres in the Mizpah Mining district, 5 miles east of Mizpah, on Nevada Northern railroad. Claims show several fissure veins in granite and contact deposits between granite and rhyolite, one of which is estimated by the management at 200' width, carrying mainly bornite and chalcopyrite ore.

Company relocated above property, formerly owned by Mizpah Cons. Copper & Gold Mining Co., when latter failed to do its annual assessment work for 1915.

Development: by 70' two-compartment shaft, showing a 3' orebody, said to give maximum assays of about 15% copper, 8 oz. silver and \$18 gold per ton, which are not to be considered as average ore values. At last reports company was driving a tunnel, 1,385' long, expected to cut ore at about 1,450'.

KINSLEY DEVELOPMENT CO.**NEVADA**

Currie, Elko Co., Nev. **Officers:** John D. Kendall, pres.; W. M. Brad-

ley, v. p.; Newton A. Dunyon, sec.-treas. and mgr.; R. J. Deighton, asst. sec.; preceding with B. F. Beaur and Wm. Pischell, directors.

Cap., \$1,000,000; shares \$1 par.

Property: 28 miles from Currie, on Nevada Northern railroad, shows limestone cut by parallel N.-S. fissures, which carry copper ore at the south end of the property and lead ore $1\frac{1}{2}$ miles north. Has been worked intermittently by lessees for past few years. Has steam plant, 3 hoists, compressor and a concentrating mill erected 1909. Presumably idle.

LONE MOUNTAIN MINING CO.

NEVADA

See Alaska Improvement Co., p. 1072.

MIZPAH CONS. COPPER & GOLD MINING CO.

NEVADA

Out of business: property operated by Jersey Cons. C. & G. M'ng Co.

NEVADA-BULLION MINES CO.

NEVADA

Mine near Bullion, Elko Co., Nev. Company often called the Bullion-Nevada Mines Co., owns a group of claims adjoining the Nevada-Bunker Hill Mining Co. holdings and a half interest in the Kerr & Peterson lease on that company's ground.

Development: by a 1,970' tunnel, which will be extended 200' further to cut the vein opened in old mine workings. Lessees were shipping ore, 1916, but property is now tied up in litigation.

NEVADA-BUNKER HILL MINING CO.

NEVADA

Address: Box 477, Elko, Nev.

Officers: J. A. McBride, pres.; W. W. Booker, v. p.; Frederick Davis, sec.; John Henderson, treas., with O. T. Williams, R. H. Mallet and G. S. Brown directors.

Inc. April 28, 1905, in Nevada. **Cap.**, \$2,000,000; shares \$1 par; fully paid and non-assessable; 600,000 shares reserved in treasury for sale for development. Annual meeting, first Wednesday in May.

Gross earnings in 1916 were \$24,404, of which \$18,860 was from lessees royalties. Expenses balanced revenue. Current assets, May, 1917, were \$1,236, and liabilities, \$15,409.

Property: 16 unpatented claims and 6 patented claims, in Railroad district, Elko Co., Nev., 28 miles S. W. of Elko. Claims said to show copper-silver ore in porphyry contacts, silicious copper ore in porphyry intrusions, and silver-lead ore in limestone.

Development: numerous tunnels and shafts and a deep tunnel 2,550' long, to tap veins at a depth of 500 to 800' below deepest workings, 350' further work will bring it to the Tripoli and 1,350' further to the Standing Elk fissure. Workings total about 2 miles.

Production: about \$3,000,000. In four years: 1912-1915, lessees shipped 4,570 tons yielding \$114,102; in the winter of 1915-1916, they produced 600 tons valued at \$32,000; and in year ended May 1, 1917, 3,767 tons worth \$110,751, royalty being \$18,860.

Ten sets of lessees are working at present above 800' level. Royalty derived is put into company's development work.

Property has been reported on by Chas. E. Van Barneveld, H. L. Huston and by Prof. Chas. H. White of Harvard University.

NEVADA-BUTTE MINING CO.

NEVADA

Martin Benson, pres.

Inc. 1913. **Cap.**, \$1,000,000; shares 25c par.

Property: 15 claims in Dolly Varden and Mizpah districts, Elko Co., Nev., 75 miles from Ely, said to be on the northern end of a great belt of mineralized porphyry and to carry fissure and contact deposits.

Development: by several shallow shafts, shows mineralization, but property still in prospect stage. Drilling on neighboring areas has shown commercially mineralized porphyry.

NEVADA COPPER MINING, MILLING & POWER CO. NEVADA

Office: Tacoma, Wash. Mine at Contact, Elko Co. Nev. **Officers:** E. F. Messinger, pres., Tacoma, Wash.; Henry Smith, v. p. and gen. mgr., Contact, Nev.; E. S. Price, sec.-treas.; M. K. Price and C. Smith, all of Tacoma, directors.

Inc. May 5, 1905, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; issued, \$1,500,000.

Property: 52 claims, patented, in Salmon River district, better known as Contact district, shows Paleozoic sediments cut by granite with ore-bodies along the contact. Several hundred tons of high-grade ore are at the Alice mine awaiting shipment by auto truck to Rogerson, Idaho, 40 miles away. In 1915 a 100-ton flotation plant was erected, following extensive diamond-drill explorations. Property and geology fully described Bull. 497, U. S. Geol. Survey.

NEVADA LEAD MINING CO.**NEVADA**

Address: H. L. Brooks, mgr., Cobre, Nev.

Officers: B. F. Woodward, pres.; H. C. Eldridge, sec.; with Jasper Hall, Mathew Mesler, E. E. Fisher, directors.

Property: 11 miles from Cobre, Nev., and 7 miles from Loray, on Southern Pacific R. R., said to show ore in limestone-quartzite contact. At depth of 80' is said to be 18" of ore assaying 40% lead, 20 oz. silver and \$3 gold per ton. Several carloads have been shipped.

NEVADA ZINC CO.**NEVADA**

G. L. Bemis, Tobar, Elko Co., Nev., gen. mgr.

Property: the Polar Star group near Tobar, has a zinc-lead deposit, 40' wide and opened for 600' on surface. Ore said to average from 30-35% zinc and from 4-5% lead. Developed by tunnel and shaft, down 500' in Sept., 1917. Producing at the rate of 200 tons per month in 1917. Total output is 4,000 tons since Utah people acquired mine.

NEW TUSCARORA MINING CO.**NEVADA**

Address: Tuscarora, via Elko, Nevada. **Officers:** W. J. Craig, pres.-mgr.; J. R. Austin, v. p.; W. J. Wolstenholme, sec.-treas., with E. L. Soule, H. S. Barnhart and P. D. Fenkell, directors.

Cap., \$50,000; shares 5c par; 500,000 issued.

Property: 4 claims in the old Tuscarora district, Elko Co., Nev.

Development: a tunnel (in 482', July, 1917,) is being driven to cut the vein. Shallow shafts said to show ore with high gold-silver values.

PALISADE COPPER CO.**NEVADA**

Address: T. W. Smith, supt., Bullion via Elko, Nevada. Owen Goldsmith & Co., Elko, Nev., are largely interested, but company is controlled in Boston, Mass.

Property: the old Heckla & Silver King mines, 2 claims, patented, at Bullion, Nev., held under bond and lease. In May a large body of high-grade copper ore was found in cleaning out an old tunnel; four 40-ton cars of \$50 copper ore were shipped, May 22, 1916. Property is an old silver-lead mine, idle for many years.

PANTHER CITY MINING CO.**NEVADA**

Office: c/o M. R. Sanguinet, sec.-treas., 1st National Bank Bldg., Fort Worth, Tex. Wm. Bryce, pres.

Property: 7 patented claims in 2 groups, the Panther City and Olinda, in Salmon River mining district, Elko Co., Nev. Ore said to carry copper, silver and a trace of gold. Planned to start development work in 1917.

SALMON RIVER MINING CO.**NEVADA**

Office: 19 West Granite St., Butte, Mont. Mine near Contact, Elko Co., Nev., carries gold and silver-bearing copper ore. Had gasoline power and a small smelter. Not operating, at last accounts.

SEATTLE CONTACT MINING CO.**NEVADA**

Address: J. V. Marshall, gen. mgr., Contact, Elko Co., Nev. T. A. Marshall, pres., L. B. Walters, sec., Seattle, Wash.

Property: the Delano mine, 8 claims, in 3 tiers at Contact, Nev., carries the Brooklyn contact vein, the Palo Alto and Blue Bird veins, 150' apart. The latter is a fissure vein, 1'-15' wide, in grano-diorite, with high-grade streak mined in 1916 for 2' to 10' wide, and yielding copper ore.

Geology: and development of this group are fully described by Schrader, Bull. 497, U. S. Geol. Survey, 1912, pp. 119 and 121.

Development: mainly by tunnels and to a depth of 175'; a new shaft being 170' deep in July, 1916.

Production: Feb.-July, 1916, 1,950 tons, averaging \$45 per ton, and carrying 18% to 23% copper, 6 oz. silver and 80 cts. gold per ton. Production costs are given at \$17.50 per ton.

SEATTLE MINING, MILLING & POWER CO.**NEVADA**

Contact, Nevada. Henry Smith, mgr. Company owns the Mammoth mine covering 12,000' along a contact deposit 20' to 125' wide, reported to show 55' of 5% ore in one face.

Production: began May 20, 1916, up to Aug., 1916, amounted to 165 tons containing 9.5% copper, 6 oz. silver and \$2 gold, averaging \$43 per ton. Transportation to the railway at Rogerson is reported at \$7 to \$11 per ton, railway freight \$3.75, smelting \$2 and sampling 50c, or a total of \$13.75. Twelve men are employed.

TUSCARORA-NEVADA MINES CO.**NEVADA**

Bankrupt. **Address:** J. E. Harrington, 1482 Broadway, New York. Henry Stanley Haskin, receiver; \$150,000 receiver's certificates authorized; 53,286 issued; \$600,000 claim against company allowed by Court.

Property leased Aug. 18, 1915, for ten years to Jas. E. Harrington and lease transferred to Stewart Mining Co. in 1917.

The mortgage held by the Dexter Tuscarora Cons. G. M. Co. on the Dexter group of this company has been foreclosed and the property purchased by the mortgage holders. This includes 17 claims and the Jack Creek power plant, all under bond and lease for \$175,000.

Stated in 1917 by Prof. Holden that a 150-ton mill was to be erected in July, followed by one of 1,000 tons. A process for recovering 95% of the silver and gold said to have been developed.

WESTERN MINES DEVELOPMENT CO.**NEVADA**

Office: 1605 Walker Bank Bldg., Salt Lake City, Utah.

Officers: F. A. Fisher, pres.; H. R. Smoot, v. p.; E. T. Jones, sec.-treas.; with Imer Pett, N. A. Dunyon, P. D. Richards and Duncan MacVichie directors.

Inc. Feb., 28, 1917, in Utah: **Cap.**, \$100,000; shares 10c par; non-assessable; 41,000 issued. Annual meeting third Monday in January.

Property: 7 patented claims, 153 acres, at Ferber, Elko Co., Nev., held under lease and bond-to purchase.

In Sept., 1917, a shaft was down 50' and from an open cut several hundred tons of high-grade lead-silver ore was reported as ready for shipment.

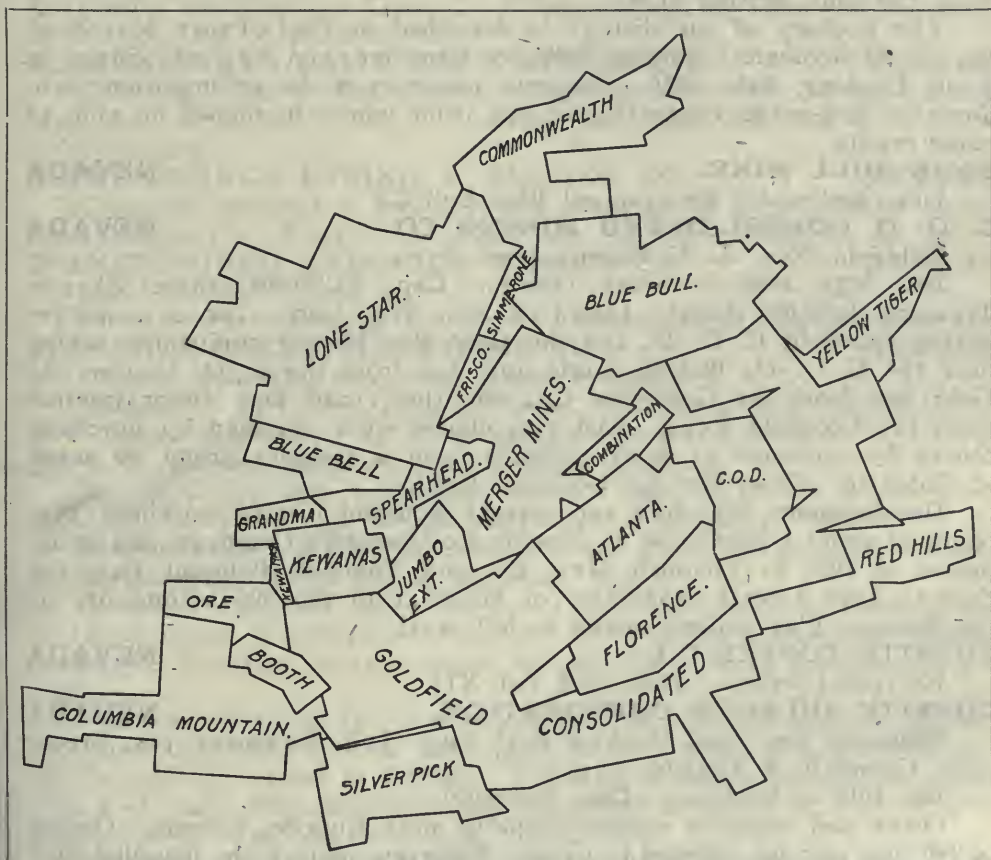

ESMERALDA COUNTY**ADAMS GOLDFIELD MINING CO.****NEVADA**

Property purchased, January, 1916, by the Reorganized Cracker Jack Mining Co., which see. Stockholders of the Adams Co., were permitted to exchange their stock for stock of the Reorganized Cracker Jack Co., remaining outstanding at that time.

ATLANTA MINES CO.**NEVADA**

Office: 406 Columbia St., Goldfield, Nev. **Officers:** Geo. Wingfield, pres.; A. H. Howe, sec.-treas.; Chas. E. Knox, v. p.; preceding officers, Benj. J. Henley, W. E. Zoebel, Frank C. Favier and Clyde A. Heller, directors; A. I. D'Arcy, mgr.

Inc. March 3, 1905, in Arizona. **Cap.**, \$5,000,000; shares \$1 par; non-assessable. In treasury, \$469,880. Stock listed on New York Curb. Annual meeting, April 6th. Receipts for year ending March 31, 1917, \$111,249. Disbursements for same period, \$109,265, of which \$13,483 was spent in exploration.

PROPERTY MAP OF GOLDFIELD, NEVADA

In 1912 the company was reorganized and refinanced for deep mine development, \$100,000 cash being raised by Geo. Wingfield and associates. Work was begun Dec., 1913.

Threatened apex litigation with the Florence was settled 1914, by a sideline agreement, the Florence to be opened from Atlanta workings. In 1915 the company secured a lease on the southern half of the Grizzly Bear claim of the Goldfield Cons. Co., to all ground below the 1,400' level.

Property: 74 acres, patented, at Goldfield, Nev., includes the Atlanta, Black Bear and Union Jack mines, adjoining the Florence on the east and the Goldfield Cons. on the north. Contains the extension of the Goldfield Cons. orebodies on the shale-latite contact. Exploratory work carried on through the St. Ives shaft of the Goldfield Cons. cut the Atlanta vein on

the 1,750' level. This vein is 40' to 100' wide, runs N. S. and dips at 45°. The ore is pyritic with tetrahedrite, and varies from gold ore, free from copper, to ore carrying 9% to 14% copper. The great ore shoot thus far shows bands of medium grade shipping ore, but is, as a whole, a low-grade concentrating ore that may average \$8 per ton, besides a shoot of shipping ore 6'-15' thick that averaged \$20 per ton. The orebody is proven for 110' upward and for 380' on the strike having been opened on the 1,660' level and by a winze below the 1,750' level. Early in 1917 a promising strike of 6' of \$50 ore was made on the 1,750' level.

Production: began April, 1915. Total shipments in 1916, from the 1,750' level, 239 tons, netting \$1,347.

The geology of the district is described in Prof. Paper No. 66 of the U. S. Geological Survey, 1909, by Ransome, and by J. E. Spurr, in Econ. Geology, Feb., 1916. Property promises to be an important producer of low-grade concentrating ore from which it should be able to make profits.

BLUE BULL MINE

NEVADA

Described under Reorganized Blue Bull Co.

C. O. D. CONSOLIDATED MINING CO.

NEVADA

Goldfield, Nev. L. K. Koontz, pres.

Inc. May, 1908, in South Dakota. **Cap.**, \$3,000,000; shares \$1 par. Treasury, 1,000,000 shares. Listed on New York Curb. Inc. as a merger of the Goldfield C. O. D. and the Gold Bar Mining companies, taking over the C. O. D., Golden Eagle and Zoe from the C. O. D. Co.; the Gold Bar from the Gold Bar Co., and the Victor and Victor fraction from the Goldfield Cons. Last two claims were obtained by purchase, others by exchange of stock. Claims form a compact group, 90 acres, at Goldfield. Controlled by Goldfield Cons.

Development: 350' shaft and several thousand feet of workings. Was operated under 5-year lease by Nevada Co-Operative Company, and under option in 1915 to Tonopah Mng. Co. and Tonopah Belmont Dev. Co. Said to have a total production of \$75,000 with \$250,000 milling ore on the dumps. Plan sinking shafts to 500' level.

CUPRITE COPPER CO.

NEVADA

No recent returns. Described Vol. XII.

CUPRITE SULPHUR CORPORATION.

NEVADA

Office: 50 East 42nd St., New York City. J. E. Bowman, pres., Greenwich, Conn.; F. S. Taggart, v. p.

Inc. 1917 in Delaware. **Cap.**, \$2,000,000.

Owens and operates sulphur property near Cuprite, Nevada. Output of 100 tons per day shipped to Coast. Retorting plant to be installed 1917.

DIAMONDFIELD BLACK BUTTE REORGANIZED MNG. CO.

NEVADA

Office: 406 No. Columbia St., Goldfield, Nev. **Officers:** L. L. Patrick, v. p.; Harry B. Ruhl, sec.-treas., P. O. Box 1515, Goldfield., with T. C. Damskey and M. Fenwick directors. Andrew J. Canavan, supt.

Inc. 1905, in Nevada, reinc. April, 1910. **Cap.**, \$2,000,000; shares \$1 par; 1,300,000 outstanding. Transfer office, U. S. Corp. Co., New York, and home office. Annual meeting, July. Listed on Salt Lake and San Francisco Stock Exchanges. Two assessments, 1/2c in April and 1c in August, 1914, have been called, to meet operating expenses.

Property: the Black Butte mine, 60 acres, in the Goldfield district, Esmeralda Co. **Ore:** gold, in numerous veins in fine grained andesite. Up to the present time the main producers have been the "Quartzite" and the "Flat" veins. The former is said to have produced \$500,000 under

early lease operations, but values ended within 150' from surface. The "Quartzite" orebody was cut off by a fault and its downward extension has not been found. The "Flat" vein apparently ends at the tunnel level.

Development: tunnels and shafts; the main shaft is 300' deep and the old Dortch shaft, 350' south of the main shaft, is 200' deep, but little work has been done below the 110' level.

Equipment: includes two 15 h. p. gasoline hoists and a 3-drill air compressor.

Prospecting by Calyx drill in 1917, to explore shale-latite contact, at depth of 1,000'. Lessees are taking out rich ore on 150' level. Property quite fully described by Chas. D. Wilkenson, E. M. See Geol. Survey Prof. Paper No. 66, by Ransome.

DIAMONDFIELD DAISY GOLD MINING CO.

NEVADA

Goldfield, Nevada. Inc. 1910, as reorganization of the Goldfield Daisy Mng. Co., of Goldfield, Nev. Property was under lease to the Justice Gold Mines Co.

DIAMONDFIELD MINING & MILLING CO.

NEVADA

Company operated a lease on the property of the Goldfield Great Bend Mining Co. Practically merged into the Great Bend Co. in 1915.

DIAMONDFIELD TRIANGLE MINING CO.

NEVADA

Idle. Goldfield, Nev.

Under reorganization as Reorganized Diamondfield Triangle Mng. Co.

FLORENCE GOLDFIELD MINING CO.

NEVADA

Offices: Goldfield, Nev., and Denver, Colo.

Officers: A. D. Parker, pres. and treas., P. O. Box 4561, Denver, Colo.; G. C. Cunningham, v. p.; S. G. Arscott, sec.; preceding, with S. W. Morris, and J. K. Turner, directors. H. B. Clapp, receiver.

Inc. April 28, 1905, in South Dakota. **Cap.**, \$1,250,000; outstanding, \$1,050,000; shares \$1 par. Stock transferred at company's office.

Dividends: 1908, 40%; 1909, 20%; 1910 and 1911, 10% each; none since. Annual meeting, March 1st, at Goldfield, Nev.

Company went into receivers' hands Feb. 1917 and was reported reorganized under Wingfield control, July, 1917. In Sept., the entire milling equipment, including flotation plant, was ordered sold to satisfy creditors' claims.

Financial statement for year ending Dec. 31, 1916, shows: cash \$66,451; ore returns, \$29,231; interest, \$580; misc. \$1,051; decrease in material and supplies, \$5,171, a total of \$102,485. Expenses amounted to \$75,146; taxes paid, \$754; misc. \$335; additions and deductions to property acc't. \$38,706; deficit \$13,543. Cash on hand Sept. 1917, \$7,927.

Property: 67.7 acres at Goldfield. The main shaft was sunk 1,200' several years ago; at this depth the vein was mineralized, but ore was not of commercial grade and the shaft was allowed to fill with water to the 600' level. Work since then has been above this level. The orebody which was furnishing the shipping ore played out in Sept., 1915; no shipments have been made since. Management claims there are 100,000 tons of low-grade sulphide ore, averaging \$4 to \$6 per ton in gold, silver and copper, opened up in the mine.

In Oct., 1915, a 2-year lease on the surface dumps was granted to F. A. Mead, who organized the Nevada Metals Extraction Co. to erect a 150-ton mill and treat the low-grade ore by flotation. Mill started operations in April, 1916, and reported an extraction of 92% gold and 99% copper. Operating costs were reported under \$2.25. Dumps have been estimated to contain 50,000 tons of \$5 ore. The Nevada Metals Ex. Co., has since passed away.

Production: for 1915, 3,194 tons ore, average value \$17.42 per ton; compared with 8,029 tons, average value \$26.39 in 1914.

Company inoperative, but 14 sets of lessees are working from surface to 660' level, and royalties amount to \$2,000 monthly, 1917.

GOLD MOUNTAIN MINING & MILLING CO.

NEVADA

Properties: about 13 miles from Bonnie Claire and 6 miles from Horn-silver, Nev., operated under lease by J. W. Crane. Veins are silver-gold deposits carrying copper. Developed by two 240' shafts and connected by a 200' drift. Estimated reserves, 2,000 tons of milling ore, valued at \$20 per ton, blocked out on the 200' level. An outcropping oreshoot 20" wide said to have yielded ore assaying from \$100 to \$500 per ton.

GOLD PRINCE MINING & LEASING CO.

NEVADA

E. L. Luker, sec.-treas., Grand Island, Neb. **Officers:** Dr. A. H. Farnsworth, pres.; Jos. Kotik, St. Paul, Neb., v. p.; Chas. O. Orr, Goldfield, Nev., gen. mgr.; with E. L. and E. S. Luker, directors.

Inc. in 1914. **Cap.**, \$500,000; shares \$1 par.

Has lease and bond on the Gold Crater mine, formerly owned by the Gold Crater Cons. Mng. Co., about 30 miles S. E. of Goldfield, Nev.

Ore: gold, milling grade, said to run about \$15 per ton.

Development: 265' shaft and crosscuts. Management claims large ore reserves in sight.

Equipment: includes a 12 h. p. hoist and small mill.

GOLDFIELD BLUE BELL MINING CO.

NEVADA

Address: Austin, Nev.

Officers: D. S. Johnson, pres.; B. W. Ward, treas.; J. M. Hiskey, sec.

Property: 3 fractional claims at Goldfield, under lease to Spearhead Gold Mining Co., reorganized; Cotter mines (10 unpatented claims) at Golden Arrow, 50 miles E. of Tonapah, Nev.; Berlin mine (16 patented claims), Berlin, Nev.; Richmond mine (3 patented claims), 1 mile S. of Berlin; Shamrock mine (10 patented claims), 6 miles N. of Berlin; Downeyville and Sullivan mines (6 patented claims), 5 miles S. of Lodi, Nev.

Development: Cotter 450' deep; Berlin (gold), 364'; Downeyville (silver-lead), 250'; Richmond (gold, silver, copper), 75'; Shamrock (gold, silver), 350'; Sullivan (gold), 100'. The Goldfield (950') is the only mine worked at present, but others are to be operated soon.

Equipment: Berlin has 2 steam hoists, 2 compressors, assay-office, store, machine-shop, complete 30-stamp mill, etc.

A group of mines like these ought to develop something.

GOLDFIELD CONSOLIDATED EXPLORATION CO.

NEVADA

Office: Crocker Bldg., San Francisco, Cal.; E. A. Julian, engr-in-charge.

Subsidiary of Goldfield Consolidated Mines Co. (which see), formed in 1916 to examine and develop properties submitted for sale.

Properties: 717 submitted, 111 examined, several optioned, none purchased, development on only one in Peru.

GOLDFIELD CONSOLIDATED MINES CO.

NEVADA

Office. Goldfield, Nev.

Officers: Geo. Wingfield, pres.; J. D. Hubbard, v. p.; A. M. Howe, sec.-treas.; J. W. Hutchinson, gen. mgr.; with J. H. Carstairs, F. M. Manson, and H. M. Hoyt, directors. J. B. Kendall, mine supt.; J. B. Lain, mill supt.; R. H. McLoughlin, chief engr.; B. B. Beckett, elec. engr.; E. M. Moore, purch. agt.; R. J. Davey, cashier.

Inc. Nov. 13, 1906, in Wyo. **Cap.**, \$50,000,000; shares \$10 par; issued, \$35,591,480. Stock listed on San Francisco and Salt Lake Exchanges and

New York and Boston Curbs. Stock was stricken from N. Y. Stock Exchange list, Dec. 26, 1914.

Dividends: to date, \$28,998,831. John S. Cook & Co., Goldfield, Nev., registrar. Company office, Goldfield, transfer agt. Annual meeting, third Monday in March.

Company is a merger of Goldfield-Mohawk, Red Top, Jumbo, Laguna Goldfield, Goldfield and Combination mining companies. In 1911, company acquired Vinegerone Fraction and the Bull Dog and Jumbo Fractions. Company owns entire stock of the Goldfield Cons. Milling and Transportation Co.; 25% stock interest in the C. O. D. Cons. Mining Co., and 87% stock interest in the Aurora Cons. Mines Co., of Aurora, Mineral Co., Nev., described under that title; also the Goldfield Consolidated Exploration Co. (which see). Reported to have bought the Sure-ease gold mine near Oroville, Calif., in Sept., 1917.

Annual report for 1916 shows gross value of ore treated, \$2,548,426, of which \$428,620 was profit, a big reduction compared with \$1,558,308 profit in 1915. Cash on hand, Dec. 31, 1916, was \$1,021,086, plus \$358,700 loaned to subsidiaries.

Dividends: 20c in 1907; 90c in 1909; \$2 in 1910; \$2 in 1911; \$1.60 in 1912; 70c in 1913; 30c in 1914; 45c in 1915, and earnings at rate of about 12c per share in 1916, but no distribution made.

Property: 26 patented lode claims, and 1 unpatented claim, 390 acres, at Goldfield, Nev., with 6 working shafts, Combination, Mohawk, Red Top, Jumbo-Clermont, Jumbo No. 2 and Laguna, 46% of the ore coming from the Mohawk shaft. Deepest shaft is 1,450'. Output is from several mines working fissure veins whose stoping width varies from a few feet to as much as 20 or even 30'. Veins show orebodies with variations in which the commercial limit is not dependent upon structural planes, the shoots swelling out and pitching with but slight relation to the vein walls.

Geological: development has shown that (1) most of the orebodies have first appeared as oxidized masses under silicified outcrops, invariably turning to sulphide ore; (2) silicification always accompanies mineralization, but many zones of breccia are barren; (3) whenever ore is known in latite, it has always been first exploited in the overlying dacite, and is a continuation downward of the one ore-shoot; there is marked falling-off in value as the latite is reached, and practically all ores thus far mined in the latite are sulphides; (4) the bonanzas have been confined to the dacite, with the exception of the Engineers' lease and a few isolated shoots in the similar Milltown andesite; and (5) no pockets have as yet been proved under the Siebert lake beds, all known orebodies being indicated by surface exposure.

Development: during 1916, 28,333' of work was done at an average cost of \$5.73 per foot. **Ore reserves:** estimated Jan. 1, 1917, at 85,000 tons of ore, but 300,000 tons should be extracted before the mine is depleted.

In 1916 there was no important work done in the low-grade copper-gold ore areas. A system of leasing outlying parts of the property on a royalty basis was decided upon. Several lessees mined good ore.

Equipment: is excellent and complete for daily output of over 1,000 tons of ore. The 100-stamp mill treated 928 tons per day, recovering 86.77%. Experiments resulted in a 500-ton flotation plant being installed. In May, 1917, when the yield was \$10,186 net from 23,300 tons, 500 tons was treated by flotation and 500 tons by cyanidation, daily. Flotation is saving 90% of the gold and more in copper values.

Production: from 6 shafts aggregated 338,680 tons in 1916, valued at \$2,548,426 gross and \$428,620 net.

Production, Costs, and Profits Since Completion of Mill:

	Ore, Tons	Rec. per Ton	Total Cost per Ton	Operating per Ton	Profit Total	Dividends
1916.....	338,680	\$7.52	\$5.18	\$2.34	\$792,511
1915.....	390,054	10.37(c)	5.16	1,558,308	\$1,601,617
1914.....	338,192	11.61	6.19	5.42	1,835,224	1,067,744
1913.....	349,465	14.14	6.32	7.82	2,731,945	2,491,403
1912(a).....	415,786	18.40	6.65	11.75	4,886,399	5,694,637
1911(b).....	330,549	30.74	7.97	22.77	7,526,846	7,118,296
1910(b).....	266,867	38.50	10.97	27.53	7,347,692	7,118,271
1909(b).....	194,479	34.72	8.88	25.84	5,026,620	3,201,239

(a) 14 months ending Dec. 31, 1912. (b) Year ending Oct. 31. (c) Average value per ton.

In 1917 production is averaging about 20,000 tons monthly.

As a stock investment the buyer is taking a chance on a rapidly liquidating proposition, for the irregularity of the gold in the orebodies makes it impossible to give an accurate estimate of ore reserves; the discoveries each year about balance extraction and the records show a well sustained yearly average tonnage treated, but the ore shows decreasing value ranging from \$38.50 per ton in 1910 to \$7.52 in 1916.

Company has ranked as one of the greatest mines in the world, producing \$49,437,847 in 8 years, disbursing \$28,998,831 to shareholders. A few more dividends may be paid. Shares sold under \$1, 1917.

GOLDFIELD GREAT BEND MINING CO.**NEVADA**

Office: 302 News Bldg., Goldfield, Nev.

Officers: C. S. Sprague, pres.; J. K. Turner, v. p.; S. A. McCandless, sec.-treas.; preceding, with H. G. Mayer, directors.

Inc. May 8, 1915, in Nevada. Cap., \$1,500,000; shares \$1 par; assessable, all issued.

Property: 7 patented claims in Diamondfield section of Goldfield, Esmeralda Co., Nev., said to show a quartz vein in andesite, dipping 28° with E.-W. course. Oxide and sulphide ores occur in shoots averaging 6'x40'x70' in size, and \$60 per ton.

Development: by vertical shafts to 400' depth. Total underground workings, 5,000'. Ore reserves estimated at 10,000 tons of \$20 ore. Operating expenses in 1916, \$28,720.

Equipment: 75-h.p. Fairbanks-Morse hoist, Ingersoll-Rand compressor, Cameron pump and an old mill which will probably be re-built.

Shipments: 5 carloads from 160 to 300' levels during 1917, averaging \$40 per ton; last lots \$26.

GOLDFIELD MERGER MINES CO.**NEVADA**

Address: Goldfield, Esmeralda Co., Nev. John Mocine, supt.

Inc. 1908 in Washington. Cap., \$6,000,000; shares \$1 par.

Property: St. Ives and Velvet claims, the latter causing considerable litigation with the Jumbo Extension during 1915, for which see Vol. XII.

Development: by shaft to 1,750', opening veins with shoots of copper-gold-silver ore. Recent work of 1,350' developed 2% copper ore, but no gold.

Judging by results at other mines in the district, depth holds little promise.

GOLDFIELD ORO MINING CO.**NEVADA**

Controlled by New York Oro Corporation.

Address: Goldfield, Esmeralda Co., Nev. T. F. Manning, mgr.; Ben Gill, sec.

Inc. 1912 in Arizona. **Cap.**, 3,000,000 shares; \$1 par; 2,500,000 outstanding. **Property:** 33 acres at Goldfield, Nev., developed to 800' depth, where \$40 assays were reported in 1916. Company also developing Vulture mine in Wonder district.

No late news from properties worth mention.

GOLDFIELD SHALE MINING CO.

NEVADA

Out of business. Property worked by Spearhead Gold Mining Co., which see.

GOLDFIELD SUNRISE GOLD MNG. CO.

NEVADA

Controlled by Grandma Cons. Mines Co., which see.

GOWGANDA COPPER CO.

NEVADA

Letters returned from Goldfield, Nev., address, C. A. Braconier, pres.; Herman Krieger, sec.; S. H. Thompson, Reese Wampler, W. H. Brock, directors.

Inc. July, 1913, in Nevada. **Cap.**, \$100,000; shares 10 cts. par.

Property: 9 claims, near Round mountain, 14 miles south of Goldfield, said to show a deposit of low-grade copper ore. Workings are as yet shallow. Probably idle.

GRANDMA CONSOLIDATED MINES CO.

NEVADA

Address: Goldfield, Nev.

Officers: C. S. Sprague, pres.; J. K. Turner, v. p.; Ben Gill, sec.-treas.; with P. T. Somers, Jr., and S. A. McCandless, directors.

Inc. 1905 in Arizona. **Cap.**, \$2,500,000; shares \$1 par; 1,262,493 outstanding. Assessment of 1c a share levied Feb., 1917.

Organized to acquire and develop the Grandma claim of the Grandma Mining Co. (which see).

In 1916 company acquired stock control of the adjoining Goldfield Sunrise Gold Mng. Co. and now owns 1,242,401 shares out of 1,500,000.

Statement of accounts for 6 months ending July, 1917, shows: receipts, \$18,810, including \$12,445 from assessment No. 1; \$3,000 bills payable and demand notes; treasury stock sales, \$1,368; store acct., \$1,826; misc., \$395.

Expenditures: mine development, \$5,692; purchase Goldfield Sunrise stock, \$6,000; misc., \$6,118; bills payable, \$1,000.

Property: at Goldfield shows a quartz lode in dacite with 60° dip and N. W.-S. E. course. Sulphide ore contains gold, silver, and copper values.

Development: by 400' vertical shaft, which cut shale during July, 1917. Sinking to be continued to shale-latite contact.

Ground acquired through the Goldfield Sunrise Gold Mng. Co. is said to be very promising and nearly doubles the acreage of the company. Future of the company depends on results in the contact area, of doubtful extent.

GRANDMA MINING CO.

NEVADA

Goldfield, Nev. **Officers:** Chas. S. Sprague, pres.; J. K. Turner, v. p.; Ben Gill, sec.-treas.; with P. J. Somers, Jr., and S. A. McCandless, directors.

Inc. Nov., 1904, in Ariz. **Cap.**, \$1,500,000; outstanding \$1,500,000; shares \$1 par.

Property: consists of the Paragon and Jumbo A claims in Gold Mountain district, Esmeralda Co., Nev., held by location.

In April, 1916, the Grandma claim in Goldfield district was deeded by the Grandma Mining Co. to the Grandma Consolidated Mines Co. (which see). Company has no assets excepting the 2 claims in the Gold Mountain district.

Shareholders may exchange their stocks for equal amount in the Grandma Cons. Mines Co.

INDIAN SPRINGS MINING CO.**NEVADA**

Address: 223 Mohawk Block, Spokane, Wash. Mine at Lida, Esmeralda Co., Nev.

Officers: A. B. Railton, pres.; H. T. DeMerritt, v. p.; Fred N. Davis, sec.; Thos. R. L. Harris, treas.; Ross C. Craddock, supt., at last accounts.

Inc. Feb., 1911, in Washington. **Cap.**, \$1,500,000; shares \$1 par; assessments, 3 mills to April, 1913. Company is a reorganization of the Indian Springs Copper Mining Co., with new directorate.

Company owns 8 claims, 100 acres mineral land in Lida valley, or Tule Canyon district, 30 miles S. W. of Goldfield, Nev. Ground shows veins and replacements in massive gray limestone. Vein runs E.-W., has vertical dip and is said to be 70' wide, traceable for 1,000'.

Development: by 100' shaft and 200' tunnel. Has steam power.

INTERSTATE CONSOLIDATED MINES CO.**NEVADA**

Address: Camp Harding, Esmeralda Co., Nev.

Officers: Franklin Harding, pres. and gen. mgr.; J. L. Simmons, v. p.; R. W. Force, sec.-treas.; preceding, with A. M. Shull and A. C. Frary, directors.

Inc. Sept. 4, 1909, in Arizona (to be changed to Nevada). **Cap.**, \$2,500,-000 shares, \$1 par; non-assessable.

Property: 23 claims being worked and 18 others held, 12 miles from railroad at Goldfield.

Geology: the Harding group shows copper-silver-gold ore in lime-shale for a considerable distance. The copper-content varies greatly, but hand sorting gives about 10% grade. A carload of ore from near the surface, sent to the Mason Valley smelter at Thompson, returned 7.1%. The veins dip 45° N. E. and have a strike of S. 68° W. Other claims said to show copper, lead, and silver ore.

Development: by 127' shaft and tunnels, two being 327' long each. Total workings approximate 5,100' Extensive exploration by core-drilling is contemplated.

Owners believe development work will open up shipping ore.

JUMBO EXTENSION MINING CO.**NEVADA**

Office: Goldfield, Nev.

Officers: Chas. S. Sprague, pres.; J. K. Turner, v. p.; Ben Gill, sec.-treas.; preceding, with C. D. Olney, and R. S. Goodrich, directors.

Inc. April, 1904, in Ariz., as successor of the Jumbo & Vernal Extension Mng. Co. **Cap.**, \$1,250,000, increased to \$1,550,000 in 1915; shares \$1 par; all issued. Security Transfer & Registrar Co., N. Y., and Registration Surety Co., San Francisco, transfer agents and registrars. Annual meeting, July 18th. Listed on New York Curb and San Francisco Stock Exchange.

Comparative Income Statement

Year Ending June 30

	Previous			Other	
	Cash Bal.	Receipts	Dividends	Expends	Cash
1917.....	\$103,274	\$193,522	\$194,792	\$90,268
1916.....	120,533	688,086	\$465,100	240,255	103,274
1915.....	29,100	473,335	125,317	256,585	120,533

Dividends: first dividends, 10c per share, was paid in July, 1911, out of proceeds of sale of Vinegorone fraction. Dividends since then have been as follows: Dec., 1914, 5c; March, 1915, 5c; Sept., 7½c; Dec., 10c; March, 1916, 7½c; June, 5c per share. Dividend for 3rd quarter passed; none since. The total paid is \$685,008, equal to 50c per share.

On Jan. 1, 1912, the company had cash on hand \$106,575, and on Jan. 1,

1914, only \$9,350, a cash loss of \$97,000 in 2 years and nothing to show for it. In Dec., 1913, control of the property passed to C. S. Sprague and associates of Goldfield, with H. Schwaikert, New York, as president. In first 5 months of new arrangement, net profits were \$53,342. In August, 1914, stock sold down to 12½ per share. In October a rich orebody was found that started the stock on a sensational career, making it a storm center on the New York Curb, that lasted for several months. A timeworn and familiar but, nevertheless, effective trick played on brokers carried the price to \$4 in December, after which record it immediately dropped to lower levels.

In February, 1915, an apex suit was filed by the Reorganized Booth Mining Co. against the Jumbo Extension to recover \$900,000 for ore claimed to have been mined from one of the veins of the Goldfield Booth Co. and the mine was closed. Within a short time an agreement was reached whereby operations were resumed, pending the hearing of the case in May. The litigation was settled by the Reorganized Booth Mining Co. deeding to the Jumbo Ext. Co all ore in the Velvet claim and in return the Booth Co. was given 300,000 shares of Jumbo Ext. stock, the cause of the increase in Jumbo Ext. Co. capitalization, and also \$15,000 in cash. The Jumbo Ext. Co. now has sideline agreements with the Booth, Goldfield Cons. and Goldfield Merger Mines Co., thus protecting itself from all future litigation.

Property: 9 patented claims, 97 acres, in Goldfield district, Esmeralda Co., Nev. **Ore:** gold, silver and copper in a quartz vein, occurring on the contact between shale and latite, locally called goldfieldite. Vein strikes N.-S.; dips 30° E. The pay ore occurs in shoots averaging 4' in width. For geology of the district, see U. S. G. S. Prof. Paper, No. 66.

Development: by two shafts, one on the Poloverda claim, 1,017' deep, and the Original Velvet, or No. 2 shaft, on the Velvet claim, 400' deep, until May, 1915, when work was started on enlarging it from a 2-compartment to a 3-compartment shaft and sinking to the 1,017' level.

In 1917 exploration was continued in the Poloverda and Velvet claims from Nos. 1 and 2 shafts. Several lenses of high-grade ore were exposed, but proved disappointing in tonnage. Drilling to a depth of 292' below the 1,017' level found nothing in the alaskite formation. The Goldfield Consolidated has leased from the Jumbo some ground containing \$8 ore, suitable for treatment in the lessee's flotation plant nearby.

Shaft is equipped with 100-h. p. double drum hoist and Cameron pump. Air is supplied from the 16-drill compressor at No. 1.

Development work, 1916, totaled 4,929'; 4,329' in the Velvet and 600' in the Poloverda, at a cost of \$11.84 per foot.

Production: for fiscal year ending June 30:

	Ore Tons	Gross Value	Loss in Treatment	—Value— Total	Per Ton
1915:					
To smelter.....	10,873	\$669,560	\$51,161	\$618,399	\$56.87
To Cons. Mill (3 mos.)	5,547	81,850	49,302	32,548	5.87
1916:					
To smelter.....	35,541	1,124,487	153,703	970,785	27.32
1917:					
To smelter.....	8,143	219,441	26,727	192,714	26.95
Dump ore.....	807	807

The output in 1917 was 8,950 tons, realizing \$193,521, less operating charges, which left a balance of \$20,976. To June 30, 1917, gross production was 81,330 tons of \$29.48 ore.

Costs amounted to \$23.92 per ton. The Goldfield Consolidated, adjoining, mines and treats ore for under \$5 per ton.

It is evident that the property has been forced to pay dividends for stock market effect. The Bonanza orebody, 150' long and 56' vertical, was greatly over-estimated. The boosting of the price to \$4 a share was a case of rank market rigging by brokers, the real value being believed to be less than \$1.00.

An exploration department was organized in Aug., 1916, and over 100 properties have been submitted, of which 35 were examined. Only one was considered worthy of serious development, the Copper Mountain of 340 acres, 15 miles from rail at Nolan, Mineral Co., Nev. Three shafts have opened good copper ore, 2 carloads being shipped in June, 1917. The mine is properly equipped and leases have been granted on several blocks. Possibilities of this property are considered good—\$22,726 was spent on it during the past fiscal year.

On Oct. 29, 1917, the company stated that developments indicated that the Copper Mountain would become a large producer and it was deemed advisable to organize a company to look after it. The Jumbo Copper Mountain Mining Co., which see, was incorporated for this purpose, Jumbo Extension holders receiving one new share of assessable stock for each share held, free of cost.

JUMBO JUNIOR MINING CO.

NEVADA

Address: Goldfield, Nev.

Officers: J. L. McCarthy, pres.; A. I. D'Arcy, v. p.; Floyd Cable, sec.-treas.; with Joseph Bruder and H. E. Clark, directors.

Cap., \$1,500,000; shares \$1 par, non-assessable. Stock listed on San Francisco Exchange.

Property: the Spearhead Fraction claim, 6 acres, located between the Jumbo, Kewanas and Spearhead properties at Goldfield, purchased of the Spearhead Fraction Mining Company.

In 1917 development was centered on ground below the 880' level. In June, 1917, ore was opened for a few inches to 36" in width and the first carload of gold-silver-copper ore was shipped in July.

Possibilities, though small, seem brighter than a year ago.

JUSTICE GOLD MINING CO.

NEVADA

Goldfield, Nev. **Officers:** O. M. Justice, pres.; John La Foe, v. p.; Mrs. A. B. Hays, sec.-treas.; C. W. Hays, gen. mgr., with J. R. West, directors.

Inc. 1914, in Nevada. **Cap.,** \$1,000,000; shares, \$1 par. Stock listed on San Francisco Stock Exchange.

Property: the Gold Coin Extension claim in the Diamondfield section of the Goldfield district and a lease on the adjoining property of the Diamondfield Daisy Gold Mining Co., which carries a 2½' vein of gold-copper ore running from \$18-\$39 per ton.

Development: by 265' Daisy shaft, which crosscuts, drifts and stopes. Several carload shipments in 1915 from stope above the 265' level reported to have yielded \$70 per ton.

KEWANAS EXTENSION MINING CO.

NEVADA

Inc. 1915, in Goldfield, Nev. **Cap.,** \$1,000,000. Is a small well located property, 18 acres, adjoining Kewanas on the north and in direct line with its ore zone, as developed on its north drift. It adjoins the Booth mine at Goldfield. Is controlled by the Sprague interests and other California men who have underwritten the stock at 5c a share. Gave the Booth

company 25,000 shares of stock for a sideline agreement, thus avoiding litigation.

Ore reserves in June, 1917, were reported to be of fair quantity.

KEWANAS MINING CO.

NEVADA

See Reorganized Kewanas Gold Mining Co.

KLONDYKE-PORTLAND MINES CO.

NEVADA

Goldfield, Nev. **Officers:** Benj. Rosenthal, pres.; M. F. Hill, v. p.; J. F. Henry, sec.-treas.; with J. B. Witt and Peter Felis, directors.

Inc. 1915 in Nev. **Cap.**, \$100,000.

Property: 9 claims in the Klondyke district, near Goldfield, Esmeralda Co., Nev., showing gold-silver-lead ore.

LONE STAR CONS. MNG. CO.

NEVADA

Office: 10 E. 43rd St., New York.

Officers: N. H. Wheeler, pres.-gen. mgr.; T. W. Kendall, v. p.-supt.; A. M. Marshall, sec.-treas., above with S. J. Kistler, directors.

Inc. April 17, 1912, in Nevada. **Cap.**, \$2,500,000; shares \$1 par; assessable; all issued. John S. Cook & Co., Goldfield, registrar. Stock listed on Salt Lake and San Francisco Exchanges. Two assessments, total 3c, called in 1915. Annual meeting last Wednesday in April.

Property: 16 patented claims in Goldfield mining district, Esmeralda Co., Nev., and 7 unpatented claims in Indian mining district, Mono Co., Calif.

Development: the Goldfield property is developed by two 200' vertical shafts and 500' of drifts and crosscuts on the 250' level of the Nelligan shaft. Operations suspended July, 1915. No commercial ore developed as yet, though some medium grade ore was found.

Reported on, June, 1916, by Emory J. Arnold.

LUNING GOLD MINES SYNDICATE.

NEVADA

See R. B. Todd Mines Co.

MILLTOWN EXTENSION GOLD MINING CO.

NEVADA

Cripple Creek, Colo. Inc. in Nevada. **Cap.**, \$1,500,000; shares \$1 par; in treasury, 800,000 shares. Company was organized in 1915 to secure title to the Louise Fraction and Milltown Extension claims at Goldfield; also owns 2 claims in Pioneer, Nev., has a lease on the Pioneer Extension property, and a half interest in the lease on the Jerry Johnson mine at Cripple Creek; this lease, owned by the Cripple Creek Deep Leasing Co., is from the 650' level down.

The 2 claims at Goldfield are being explored on the 700' level by a cross-cut being run from the Yellow Tiger Co.'s shaft to the property of the Red Lion Cons. Mng. Co., which lies on the opposite side of Milltown Ext.

Work at present in the Jerry Johnson mine is on the 850' level. Management states that since shipments started in 1915 to May, 1916, 22 carloads of ore have been shipped, ranging in value from \$6.30 to \$28 per ton.

Property holdings of the company do not look attractive.

NEVADA CO-OPERATIVE MINING CO.

NEVADA

Goldfield, Nev. **Officers:** Chas. S. Sprague, pres.; J. K. Turner, v. p. and cons. engr.; P. J. Somers, sec.

Inc., 1913. **Cap.**, \$2,000,000; shares \$1 par; assessable; 1,500,000 shares in treasury. Company is a reorganization of Goldfield Mines Operating Co.

Property: 11 claims, 150 acres, including the Nevada Empress, in Gold Mountain mining district, Esmeralda Co., 37 miles S. E. of Goldfield, shows 3 well-defined quartz veins, from 1-6' wide with numerous quartz stringers, running N. E. The formation is Cambrian sedimentary rocks, quartz-monzonite porphyry, granite, rhyolite and basalt.

Development: total work to June, 1915, was about 3,000', of which

2,000 is on the Central or Liberty vein. A crosscut tunnel, driven 800', exposed ore averaging \$8.17 across a width of 1½'. Drifts run from a raise on the hanging-wall from the 800' level, encountered a quartz vein, assaying \$26.40 gold and 54 cts. silver per ton. Management plans developing from surface.

Equipment: includes several buildings and an old 10-stamp mill, which is to be remodeled.

Reported in June, 1917, that considerable free-milling ore had been developed.

NEW EMPIRE GOLDFIELD MINES CO.

NEVADA

Goldfield, Nev. **Officers:** C. D. Terwilliger, pres.; Chas. Wittenberg, v. p.; Fred J. Amigo, sec.-mgr.; F. M. Manson, treas., with E. Marks, directors.

Inc. 1915, in Nevada. **Cap.**, \$1,500,000; shares \$1 par.

Property: 3 claims and a fraction, 50 acres, adjoining the Lone Star on the E. and Commonwealth property on the N. at Goldfield, formerly owned by the Empire Gold Mining Co.

Development: by an old 150' shaft and 150' crosscut said to have disclosed a 16" streak of \$20 ore. Shaft is being sunk to 500' to reach the latite-shale contact.

Equipment: includes electric power and 40-h. p. electric hoist.

NEW GOLDFIELD SIERRA MINING CO.

NEVADA

Office: 107 Boston Bldg., Denver.

Inc. 1915 in Nevada. **Cap.**, \$1,500,000; shares \$1 par; assessable. Is a reorganization of the Goldfield Sierra Mining Co.; 750,578 shares of the old company were exchanged for stock in the new company.

Property: 3 patented claims, about 42 acres, at Goldfield, Esmeralda Co., Nev. Active development planned by management.

NEW GOLDFIELD SIMMERONE MINING CO.

NEVADA

Harry C. Cutler, Reno, gen. mgr.; F. B. Knickerbocker, supt. **Inc.** 1915 in Nevada. Stock listed on San Francisco Exchange.

Property: the Simmerone Fraction at Goldfield, Esmeralda Co., and a 3-year lease and bond on the adjoining Blue Bell group, worked through the Simmerone workings. The Simmerone, acquired 1914 at sheriff's sale, is developed to 250'. A raise from the 100' level disclosed an 18" quartz vein in July, 1915, said to have assayed from \$42-\$117 gold per ton.

Letters returned from Reno in July, 1917.

NEW JERSEY MINES CO.

NEVADA

Offices: 628 Hudson St., Hoboken, N. J., and Goldfield, Nev. **Officers:** Henry V. Broeser, pres.; L. A. Opdyke, v. p.; J. H. Stegman, treas.; Geo. H. Snyder, sec., Jersey City; above, with 14 others form the directorate; Harry Ernest, mgr.

Inc. Jan. 15, 1912, in Nev. **Cap.**, \$1,250,000; shares \$1 par; outstanding, 1,010,850 shares; assessable 1c per share per year. Registrar & Transfer Co., New York, registrar. Listed on San Francisco Exchange and New York Curb as a prospect.

Treasurer's report for year ending March, 31, 1917, shows receipts of \$18,017, which includes assessments, \$6,912, sale of shares, \$1,000, renewal of note, etc., \$4,997. Disbursements amounted to \$17,672, leaving balance on hand, \$346. There is only \$1,500 now owing on the note.

Property: 5 claims, 3 patented, 53 acres, several miles N. E. of Goldfield, said to show gold-silver ore.

Development: 507' shaft, with work done in 1916 on the 330' and 400' levels. Conditions remain as in 1916, ore always showing, but not in commercial quantities.

ORIGINAL BULLFROG MINES SYNDICATE**NEVADA**

Reorganized, 1917, as the Reorganized Original Bullfrog Mines Syndicate, which see. Old Stockholders invited to exchange their certificates for shares of the reorganized company.

ORLEANS MINING & MILLING CO.**NEVADA**

Address: Hornsilver, Esmeralda Co., Nev.

Officers: J. W. Dunfee, pres.; C. A. Terwilliger, v. p.; E. C. Edwards, sec.; J. W. Dunfee, treas. and mgr.; above, with C. H. Ellsworth, directors.

Inc. Sept. 1916, in Nev., 1,000,000 shares issued. Latest earnings reported at \$14,448.

Property: 5 unpatented claims, 120 acres, at Hornsilver, 28 miles S. of Goldfield, carries gold-silver ore in 8' fissure vein in diorite-lime-shale contact. Average assays given as \$21 per ton. Claims reserves of 15,000 tons of mill ore.

Development: by 500' incline shaft.

Production: in 1915, 2,165 tons of \$26 ore; in 1916, 1,126 tons of \$21 ore. Shipping regularly, 1917.

PALMETTO CONSOLIDATED, INC.**NEVADA**

Office: Goldfield, Nev. **Officers:** Edw. Cebrian, pres.; John T. Murphy, v. p.; L. Allgeria, sec.-treas., 57 Post St., San Francisco, Calif.; Clyde P. Johnson, asst. sec.-treas. and John T. Murphy, mgr., Goldfield, Nev.

Inc. in Nevada. **Cap.**, \$1,500,000; shares \$1 par. Operated as a close corporation.

Property: 25 claims, 12 patented, about 500 acres, 42 miles S. E. of Goldfield in the Palmetto Mtns., credited with past production of \$6,500,000 in silver. Development by shafts, deepest 400'. The mine is said to contain large bodies of ore carrying good values in gold-silver-copper.

After an idleness of 20 years, the mine is to be reopened, extensively developed and modern machinery installed 1917-18.

QUALEY MINE.**NEVADA**

See Excelsior Mtn. Copper Co.

RED HILL FLORENCE MINING CO.**NEVADA**

Office: Goldfield, Nev. **Officers:** F. C. Favier, pres.; W. E. Zoebel, v. p.; A. H. Howe, sec.-treas., H. G. McMahon, mgr., with B. G. Henley, directors.

Inc. Nov. 20, 1916, in Nevada. **Cap.**, 2,500,000 shares; 10c par; all outstanding; assessable; 1½c levied, Dec., 1916. Company is a consolidation of the Red Hill Mining, Florence American Mining and Florence Extension Mining companies.

Property: 5 claims, 70 acres, owned outright, and 10 acres held under lease, at Goldfield, adjoining the Florence Goldfield on the S. and W. Ore contains gold, silver and copper values, occurring in a quartz vein in andesite. The property carries the extension of the Florence vein. Developed by 800' vertical shaft.

Equipment: includes double drum electric hoist, compressor and electric power.

Management plans extensive development from the 500-800' levels, with raises above the 500' level.

RED LION CONSOLIDATED MINES CO.**NEVADA**

Goldfield, Nev. A. P. Mackey, pres.

Inc. in Wyoming. **Cap.**, \$2,000,000; shares \$1 par. In treasury April, 1916, 700,000 shares. Listed on San Francisco Exchange. Control held by Yellow Tiger Mining Co.

Property: 6 claims, 97½ acres, patented, at Goldfield, adjoining the Milltown Extension and Yellow Tiger Mining Co.'s lands. Plans develop-

ment by running a crosscut from the shaft of the Yellow Tiger Mining Co. across the property of Milltown Extension and then into Red Lion territory; this crosscut to be on the 600 or 700' level; the nearest point to reach Red Lion territory from the Yellow Tiger workings is 1,400'. As additional footage is required for any prospecting done in Red Lion ground the scheme does not commend itself as being attractive and the property must be classed as a decided prospect. At last accounts the Yellow Tiger shaft had not been unwatered.

Mail returned and mine presumably idle, 1917.

REORGANIZED BLUE BULL MINING CO.

NEVADA

Office: P. O. Box 565, Goldfield, Nev.

Officers: Geo. Wingfield, pres.; F. A. Favier, v. p. and asst. sec.; A. H. Howe, sec.-treas.; preceding, with J. S. Henderson and K. M. Simpson, directors.

Inc. 1912, in Nevada. Cap., \$1,500,000; shares \$1 par; outstanding, 1,309,000 shares; assessments totaling 4c called to end of 1915. J. S. Cook & Co., Goldfield, Nev., registrar. Annual meeting, third Monday in Dec. Company was organized to acquire title to the property of the Blue Bull Mining Co., sold at sheriff's sale June 14, 1912. Latter company's stock was exchanged share for share for new stock on payment of 1c per share.

Property: 8 claims, 148 acres, in the Goldfield district, Esmeralda Co., Nev.

Development: by a 730' shaft with workings on the 500 and 700' levels opening up the Victor and Blue Bull veins. Crosscuts have been run into the C. O. D. Consolidated Mining Co. ground under a leasing agreement. Commercial ore was found on the 500' level, but not on the 700.

Property is a prospect.

REORGANIZED BOOTH MNG. CO. OF GOLDFIELD

NEVADA

Goldfield, Nevada.

Officers: Geo. Wingfield, v. p.; A. H. Howe, sec.-treas., with F. C. Favier, W. E. Zoebel and B. J. Henley, directors; A. I. D'Arcy, mgr.

Inc. 1912, in Nev., as a reorganization of the Booth Mng. Co. Stock was exchanged, share for share, on payment of 1c. Cap., \$1,000,000; shares \$1 par; assessable; 999,957 outstanding. Annual meeting, third Monday in December. Listed on San Francisco and Salt Lake City Exchanges; traded in on New York Curb. Stock transferred at company's office. John S. Cook & Co., Goldfield, registrar. Control is held by Geo. Wingfield. Five assessments, aggregating 7c, have been levied; the fifth, 2c per share, was in Jan., 1915.

Financial statement from Dec. 23, 1914, to Dec. 1, 1915, shows receipts of \$245,447, which includes: assessment No. 5, \$19,973; realized from mine rights, \$15,000; dividends on stock owned, \$19,275; sale of capital assets, \$187,316; balance Dec. 23, 1914, \$3,681; miscellaneous, \$202. Disbursements totaled \$47,988, leaving a cash balance Dec. 1, 1915, of \$197,458. Cash balance on hand April 27, 1916, after payment of dividend No. 3 was \$222,320.

Dividends: No. 1, 5c per share, paid March 6, 1916; No. 2, 15c, on April 6; No. 3, 10c, on April 26; No. 4, 5c, on June 6, making a total of \$349,984.95.

The company's treasury is built upon the apex suit filed Feb., 1915, against Jumbo Extension, which see; as a result of this suit it was proven that the Reorganized Booth Mining Co. was the owner of all the ores in the same vein throughout the entire sweep of the extralateral lines, which included the Laguna claims of the Goldfield Cons. Mines Co., a considerable part of the property of the Reorganized Kewanas Mining Co., a part

of the property of the Spearhead Gold Mining Co., a small part of one of the claims of the Lone Star Cons. Mining Co., a considerable part of the property of the Goldfield Merger Mines Co., and other miscellaneous claims and fractions.

As a result of this litigation an agreement was entered into with the Goldfield Cons. whereby subsequent litigation between them was obviated; the production from the Goldfield Cons. ground had been at a time so remote that recovery for the bulk of the proceeds was found to have been barred by the statute of limitations. From Jumbo Extension the Reorganized Booth Co. received \$15,000 cash and 300,000 shares stock; from the Reorganized Kewanas the company received 250,000 shares stock; from the Goldfield Merger 750,000 shares stock. With regard to the Lone Star Cons., the extended north end line of the Booth claim only touched one corner of the Lone Star, which happened to contain the working shaft of that company; a settlement was effected for a nominal consideration only. No settlement, as yet, has been effected with the Spearhead Gold Mng. Co.

By Dec. 1, 1915, the company had disposed of 135,400 shares of Jumbo Ext. stock in the market, for which it received \$187,316; up to the present time it is said to have disposed of at least 224,000 shares.

Property: formerly owned by the old Booth Mining Co., consists of one claim adjoining the Red Top and Laguna mines of the Goldfield Cons. In Sept., 1915, all development work was suspended and it was reported the management would endeavor to purchase another property.

The company is said to have the distinction of being the only non-producing mine that receives an income without incurring the slightest expense for operating.

REORGANIZED CRACKER JACK MINING CO.

NEVADA

Goldfield, Nev.

Officers: E. P. Junor, pres.; Geo. K. Cremer, v. p.; H. G. McMahon, sec.-treas. and mgr., with C. H. Shirts and J. A. Erickson, directors.

Inc. Dec. 18, 1915, in Nev. as a reorganization of the Cracker Jack Mining Co. **Cap.**, \$150,000; shares 10c par; assessable; all outstanding. Company being financed by assessments. Listed on San Francisco Exchange. On Dec. 21, 1915, a call of 1c per share was made, each stockholder in the old company being required to pay the assessment before receiving share for share of the new company.

Property: 5 claims, 2 patented, 140 acres, at Goldfield, adjoining the Sandstorm-Kendall on the east; said to have had \$50,000 expended on it for development. In Jan., 1916, the company purchased the adjoining 3 claims, 60 acres, formerly owned by the Adams Gold Mining Co., which had been sold for taxes. Adams group has a vertical shaft 320' deep with levels at 115' and 300' depth, said to show gold-silver ore in a 20' vein in rhyolite. Work on the 300' level has been carried to a point 500' from the shaft and is being still further advanced to determine value of the property.

Equipment: includes electric hoist, compressors and drills. Property is a prospect.

REORGANIZED DIAMONDFIELD TRIANGLE MNG. CO. NEVADA

Address: Ben Gill, treas., Goldfield, Nev.; J. K. Turner, cons. engr.

Inc. 1917, in Nev. **Cap.**, \$2,000,000; shares \$1 par. Is a reorganization of the Diamondfield Triangle Mng. Co.

Property: 7 claims in Diamondfield district, developed by vertical shaft said to show a promising quartz vein.

Idle, 1917, pending refinancing of company. Stockholders are invited to exchange their stock, share for share and payment of 1c assessment.

The indebtedness against the Diamondfield company to be liquidated is \$4,849.

REORGANIZED KEWANAS GOLD MINING CO.

NEVADA

Address: A. H. Howe, sec.-treas., Goldfield, Nev.; Geo. Wingfield, pres.; A. I. D'Arcy, mgr. -

Inc. July, 1913, in Nevada. **Cap.**, \$1,500,000; shares \$1 par; all outstanding; assessable. Assessment No. 2, 1c per share, delinquent, Aug., 1916. Listed in Salt Lake City; traded on New York Curb.

Company is a reorganization of the Goldfield Kewanas Mining Co., which became bankrupt in 1913. As a result of the apex suit filed in 1915 by Reorganized Booth Mining Co., which see, the latter company received 250,000 shares Kewanas stock.

Statement issued June 25, 1916, showed: receipts—assessment No. 1, \$14,508; misc., \$209. Disbursements: \$7,257, which includes mine development, \$6,195; bank overdraft, March 15, 1916, \$9,281; leaving overdraft, June 25, 1916, \$1,822.

Property: 2 claims and a fraction, about 40 acres, east of the Laguna group of the Goldfield Cons. at Goldfield.

Development: by means of the winze on the Kewanas ground below an east crosscut into it from the 700' level of the Laguna shaft of the Goldfield Cons. Work up to July, 1917, consisted of exploration of the vein exposed on the 840' level; 550' N. of the winze the vein split, one branch strikes N. W., the other N. E., with shale between. Both branches have been explored about 800' N. of the winze and work said to have disclosed a 3' vein, giving "good assay returns in gold, silver and copper." Assay results not reported. To date, no "large bodies of commercial ore have been exposed, but with the size of vein and values that have been obtained from portions of the vein, and the amount of unexplored ground still available along the strike of the vein on Kewanas claims, it would seem that the possibilities of encountering bodies of good ore are favorable." Development has been continuous and is to be extended to the southern part of the property to connect with the Jumbo Junior workings. Property is a prospect.

REORGANIZED ORIGINAL BULLFROG MINES SYNDICATE

NEVADA

Ben Gill, sec., Goldfield, Nev. Is a reorganization of the Original Bullfrog Mines Syn., the new company assuming an obligation of \$13,000, to be paid off with funds derived from assessments. Stockholders in the old company united to exchange their stock share for share in the new company upon payment of the assessments.

Cap., \$2,000,000; shares \$1 par; assessable; 1,500,000 shares reserved for conversion of stock of the Original Bullfrog company. The treasurer reports, May, 1917, 1,500 tons of \$12 ore on the ground, to be treated at the Sunset Mining & Development Co.'s mill at Rhyolite, 4 miles distant.

ROYAL CONSOLIDATED COPPER CO.

NEVADA

Letter returned, 1915, from St. Louis, Mo., address. **Mine office:** Hawthorne, Esmeralda Co., Nev.

Officers: L. L. Crisp, pres. and gen. mgr.; G. L. Werth, v. p.; R. E. Drake, sec.-treas.; B. H. Martens, supt.; preceding, with Robt. W. Alt and Albert Lawson, directors.

Inc. April 27, 1907, in Arizona. **Cap.**, \$2,500,000; shares \$1 par; non-assessable; issued, \$1,434,477, Dec. 31, 1910.

Bonds: \$300,000, authorized, at 7%; issued, \$2,300, Dec. 31, 1910. Annual meeting, first Monday in April.

There are two companies of this title; one an Arizona, the other a

Nevada corporation; the Arizona company apparently holding stock in the Nevada operating company.

Property: 10 claims, 1 fractional, 200 acres, 8 miles from Luning and 16 miles from Hawthorne and Mina. According to the company's former expert, the formation is "dyarite," porphyry and limestone, with large "burns" of iron gossan, the ore deposits consisting of copper, gold and silver, lying in a fissure "cutting" a contact of porphyry and lime, the orebody being claimed to be 250' wide.

The company's past literature contains some ridiculous and misleading statements. Fully described Vol. XI, Copper Handbook. Unfavorably regarded.

SANDSTORM-KENDALL CONSOLIDATED MINES CO. NEVADA
Goldfield, Esmeralda Co., Nev.

Officers: Geo. Wingfield, pres.; A. H. Howe, treas.; A. I. D'Arcy, mgr.
Inc. in Nev. Cap., 1,500,000 shares; \$1 par; assessable; outstanding 1,326,724. Listed in San Francisco.

Property: 70 acres at Goldfield, developed by shaft to 500' with a winze to the 700' level.

Ore: gold in contact deposit between andesite and rhyolite. In 1917 the company was doing development work on and above the 350' level, and in Sept. was prospecting at 260' to find ore that yielded well years ago.

The mine is a prospect undergoing development.

SILVERMINES CORPORATION, THE NEVADA

Office: 302 Nixon Bldg., Reno, Nev. **Mine office:** Hornsilver, Esmeralda Co., Nev.

Officers: S. H. Brady, pres. and gen. mgr.; G. B. Thatcher, v. p.; C. F. Stevens, sec.-treas.

Inc. in Nevada. Cap., \$1,500,000; shares \$1 par; non-assessable.

Property: owns 85% of capital stock of Southwestern Mines Co., which has 9 claims at Hornsilver, 28 miles S. W. of Goldfield. The company also owns 6 other claims, the townsite of Hornsilver, telephone line to Goldfield and a 150-ton cyanide plant, built, 1917, to treat Southwestern company's ore. Reserves are reported as ample for a considerable time.

Equipment: 45 h. p. hoist, 6 drill compressor, 200 h. p. Fairbanks-Morse semi-Diesel engine and 120 k. w. generator and modern cyanide mill. Company also owns a 5" pipe line from Lida to Hornsilver, 8½ miles long. See Southwestern Mines Co.

SILVER PICK CONSOLIDATED MINES CO. NEVADA

Office: Goldfield, Nev.

Officers: Herman Zadig, pres.; E. S. Van Dyck, v. p. and gen. mgr.; C. D. Olney, sec.-treas.; G. F. Dyer, supt.

Inc. Sept., 1911, in Nev. Cap., \$1,500,000; all outstanding. Shares traded in on San Francisco Exchange and New York and Philadelphia Curbs.

Property: 5 claims at Goldfield, Nev., being developed from 1,100' shaft on the Deserted claim and a 280' shaft on North End claim. At 1,100' a large body of low-grade sulphide ore is exposed in the Deserted. Some good assays were obtained, but there is no quantity of commercial ore yet. Work is under way at 300' in the old Von Polenz lease.

SOUTHWESTERN MINES CO. NEVADA

Office: 302 Nixon Bldg., Reno, Nev. **Mine office:** Hornsilver, Esmeralda Co., Nev.

Officers: G. B. Thatch, pres.; S. H. Brady, v. p. and gen. mgr.; C. F. Stevens, sec.-treas.

Inc. in Nev. Cap., \$1,250,000; shares \$1 par; non-assessable. Silvermines Corporation, a holding company, controls 85% of shares in the Southwestern, and built a 150-ton cyanide plant.

Property: 9 claims, 135 acres, at Hornsilver, 28 miles S. W. of Goldfield, formerly known as the Great Western mine. Claims said to show silver-gold ore with silver predominating, occurring as chlorides and bromides, the gold being free milling. The veins occur in limestone and shales intruded by diorite dikes, the largest vein said to vary from 5' to 20' in width and to traverse the property for 4,000'.

Development: by 400' shaft with winze to 445' depth, and 3,000' of lateral workings. New 150-ton mill operating, Oct., 1917.

SPEARHEAD GOLD MINING CO. (REORGANIZED) NEVADA
Goldfield, Nevada.

Officers: Geo. A. Kernick, pres.; H. Berg, v. p.; A. A. Codd, sec.-treas., Reno, Nev.; H. F. Bruce, supt., with C. M. Smith, directors.

Reorganized March 25, 1916, in Nevada. **Cap.**, \$1,500,000; increased from \$1,000,000; shares \$1 par; assessable; 1,000,000 issued. Listed in San Francisco and Salt Lake City.

Property: 2 claims, 27 acres, at Goldfield, adjoins the Kewanas, Jumbo Extension and Merger Mines Co. on the east. Several years ago lessees sank 4 shafts, 80' to 100' in depth. Mine was worked intermittently until Oct., 1915, with the idea of continuing the 240' shaft to the shale-latite contact. A report, dated March 20, 1917, states that this formation was cut at 880' and the shaft bottomed at 910'. In sinking, 3 wide quartz veins of no value were passed through. Exploration of a dacite dike at 450' is under way. At 910' depth stringers containing chalcocite and chalcopyrite were cut, some said to assay \$30 per ton. New openings to March, 1917, amounted to 1704'.

Company has a 3 years' lease on the Never Sweat claim of the Blue Bull Mining Co. adjoining. Spearhead 450 and 910' levels are headed toward this claim.

Equipment: 60 h. p. hoist, compressor, drills, etc.

SYNCLINE GOLD-SILVER-COPPER MINING CO. NEVADA
Lida, Esmeralda Co., Nev.

Officers: L. Kershaw, pres., Tacoma, Wash.; H. C. Peet, v. p.; L. E. Campbell, sec.-treas. and gen. mgr., with F. A. Campbell, B. A. Howes, E. P. O'Leary, E. B. Campbell and E. C. Peet, directors.

Inc. June 4, 1910, in Nevada, as successor of Washington-Nevada Mining & Milling Co. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; issued \$799,420. Annual meeting, first Monday in January.

Property: 11 claims, 3 patented, 57 acres, with 120 acres mill and smelter sites, 30 miles S. W. of Goldfield and 10 miles from a railway, in the Lida district. District shows Cambrian limestone and shale, cut by quartz monzonite, capped by volcanic rocks. The ores occur as impregnations and veins. The claims are reported by the management to carry 12 deposits, 4 under development of 4 to 20' average width, traceable 5,000', carrying a sulphide ore, said to give assays of 8.7% copper, 17 to 19% lead, 11% zinc, 11 oz. silver and \$1.90 gold per ton.

Development: by 9 shafts, of 31 to 120' depth, and by 6 tunnels, of 12 to 140' length; the tunnels are not being used. Owing to lack of rail transportation and complex nature of the ore, company is devoting attention mainly to the development of lead carbonate ores.

Equipment: includes a 15 h. p. gasoline hoist and 5 mine buildings. The management plans deepening the main shaft to 200'.

VERNAL MINING CO. NEVADA

Office: 351 Bullitt Bldg., Philadelphia, Pa. **Mine office:** Goldfield, Nev.

Officers: M. Schamberg, pres.; E. S. Van Dyke, treas.

Inc. in Arizona. **Cap.**, \$1,500,000; shares \$1 par; increased, 1915, from

\$1,000,000. Central Trust and Savings Co., Philadelphia, transfer office. Listed on San Francisco and Salt Lake City Exchanges.

Property: 2 claims, in Diamond district, Goldfield, is developed for a few hundred feet, partly by lessees. Has shipped in a small way.

VICTORIA COPPER MINES CO.

NEVADA

Address: F. A. Strehlke, sec., Goldfield, Nev.

Property: the Victoria mine, an old copper producer now reopened and equipped.

WEST TONOPAH MINING CO.

NEVADA

Office: H. L. Williams, supt., Tonopah, Nev.

Officers: M. R. Ward, pres.; R. E. Mulcahy, v. p.; J. A. Percy, sec.-treas., with A. Hamilton, F. S. Glover, C. W. Buttmann and E. C. B. Adams, directors; J. G. Kirchen, mgr., Reno, Nev.

Inc. in Nevada. Cap., \$1,000,000; shares \$1 par; all issued; assessable. Annual meeting, first Tuesday after first Monday in January.

Property: 7 patented claims, 123 acres, in Esmeralda Co., Nev. Idle from 1907 to March 18, 1916.

Geology: quartz vein in trachyte and rhyolite, dipping 65 to 70°, with E. W. course. Ore contains gold and silver.

Development: 1,050' shaft, to be deepened when water is overcome. On 950' level an 800' crosscut passed through the vein, which is to be developed at depth.

Equipment: 75 h. p. Hendrie and Bolthoff hoist, Imperial type 10 Ingersoll-Rand compressor, 75 h. p. Aldrich triplex pump, ventilating fan, etc.

YELLOW TIGER MINING CO.

NEVADA

Reorganized as Yellow Tiger Consolidated Mining Co., which see.

YELLOW TIGER CONSOLIDATED MINING CO.

NEVADA

Office: 107 Boston Bldg., Denver, Colo. **Mine office:** Goldfield, Nev.

Officers: H. A. Riedel, pres.; Douglas Kellis, supt.

Cap., \$450,000; shares 10c par; assessable; 500,000 shares in treasury. Assessments are limited to 2c per share per annum.

Stock is listed on San Francisco and Salt Lake City Exchanges and is traded on the New York Curb.

Property: 35 acres, next S. of the Goldfield Consolidated and E. of the Columbia mountain fault, shows a vein of 18" to 2' width worked to a depth of 750' by shaft with several hundred feet of openings. Ores are said to carry from 6 to 9% copper, and gross values reported as from \$25 to \$32 per ton, are apparently mainly in this metal. About \$120,000 has been spent in development work. In 1915 obtained control of the Red Lion group of claims, adjoining on the south, supposed to contain the continuation of veins found on Yellow Tiger company's land.

Only development work was done in 1914 and 1915, mainly on the 600' and 700' levels. In April, 1916, property was closed down, but the Red Lion and Yellow Tiger claims are now being developed by assessments.

EUREKA COUNTY

ALKALI MINES CO.

NEVADA

Mine address: Eureka, Eureka Co., Nev. W. E. Sanders, supt.

Property: the Windfall mine, developed by a 500' shaft.

Ore: contains gold, silver and lead.

Equipment: includes a crushing plant and 150-ton cyanide plant. About 25 men are employed. Returns not available.

BUCKHORN MINES CO.

NEVADA

Buckhorn, Nev. Property shut down permanently, Feb., 1916. Plant dismantled. **Address:** George Wingfield, owner, Reno, Nev.

CALIFORNIA MINE**NEVADA**

J. B. Rebealletti, mgr., Eureka, Nev. Mine adjoins the Connolly and is reported shipping in 1917. About 12 men employed.

CROESUS-EUREKA MINING CO.**NEVADA**

Mine address: Eureka, Nev.

Property: the Connolly mine, developed by 400' shaft and 127' drift, said to show a body of high-grade galena and carbonate ore.

Management planned equipping mine and developing to 600' in 1917. About 14 men employed.

EUREKA-HOLLY MINING CO.**NEVADA**

Address: W. A. Barnes, mgr., Eureka, Nev.; Thos. Robinson, pres.

Property: the Holly mine on Adams Hill, Eureka, contains deposits of silver-lead ore. Developed by 400' shaft. Working, 1917.

HOLLY MINING CO.

See Eureka-Holly Mng. Co.

LYNN BIG SIX MINING CO.**NEVADA**

W. W. Ruby, supt., Goldville, via Carlin, Nev. Henry Harker, pres., Taylorsville, Utah; J. H. Marshall, mgr., Cont. Nat'l Bank Bldg., Salt Lake City, Utah.

Property: a gold mine, with a 4' vein said to carry a 20" streak of ore averaging \$150 per ton smelter return. The rest of the vein is said to assay \$46 per ton. A second vein, the West, shows mill ore.

Development: 200' shaft with drifts at 100 and 200'. Mill erected, 1917, with 25-tons daily capacity.

Production: about \$15,000 worth of ore shipped to date.

MINERAL HILL CONSOLIDATED MINES CO.**NEVADA**

Address: Mineral Hill, Nev.

Officers: Frank Stollenwerck, pres.; S. F. Stollenwerck, v. p.; Daniel Pratt, sec.; J. S. Willcox, treas.

Inc. 1906, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; 713,000 issued; \$100,000 6% bonds authorized; issued, \$2,500.

Property: 11 claims, 3 patented, 135 acres, in Mineral Hill district, Eureka Co., Nev. Mine discovered 1869 was worked from 1871 to 1878, when it was closed because of the drop in silver; reopened in 1906.

Ore: occurs in dolomitic limestone and carbonaceous shale. Commercial orebodies, usually confined to the limestone, are found in fractured zones which correspond to strike faults. Principal ore is silver, which occurs as argentite with some gray copper, galena and gold. There is about 2,000' of underground development.

Samples of over 4,000 tons varied from 3.8 to 177 oz. silver and 0.5% to 0.7% lead, averaging 53.5 oz. silver and 0.04 oz. gold.

NEVADA CENTRAL COPPER CO.**NEVADA**

Went out of business, Jan., 1916. Property near Cedar, Eureka Co., Nev., deeded to Mrs. G. W. Leighton, who has leased it to local people. For description see Vol. XII.

RICHMOND-EUREKA MINING CO.**NEVADA**

Address: P. O. Box 385, Boston, Mass.

Officers: W. G. Sharp, pres.; C. G. Rice, v. p.; F. W. Batchelder, sec.-treas.; above, with Albert Fries, A. J. Seligman, C. A. Wimpfheimer, Frederick Lyon and C. A. Hight, directors.

Inc. Sept. 28, 1905, in Maine. **Cap.**, \$3,600,000; shares \$10 par. Annual meeting, fourth Wednesday in Sept.

Property: at Eureka, Nev., has been practically idle since 1910, when shipments of low-grade ore were stopped, owing to increased freight rates, which condition still obtains. Though the railway was reopened for traffic

during 1912, the new company put the freight rates at figures largely in excess of even the old rates, which were prohibitive.

In 1915 efforts were made to find higher grade ores, but as yet no considerable tonnage of such ore has been developed.

SAFFORD COPPER CO.

NEVADA

Office: 67 Milk St., Boston, Mass.

Officers: Jas. H. Kimball, pres.; Jas. S. Whitelock, v. p.; Owen Goldsmith, treas.; Frank W. Smith, supt.; preceding officers are the directors.

Inc. 1915. **Cap.**, \$300,000; shares \$1 par. Metropolitan Trust Co., Boston, transfer agents.

Property: 4 claims in Safford Mining district, Eureka Co., Nev., said to show copper-silver ore in quartz veins from 18"-30" wide, traversing porphyry and rhyolite formation.

Development: by 2 shafts, 30' and 100' deep, on the Evening Star claim. First shipment to Garfield, Utah, smelter, returned 8.28% copper and 128 oz. silver per ton, on Jan. 30, 1917. Active work resumed June first. Merely a prospect.

UNION MINES CO.

NEVADA

Office: Union, Nev.

Officers: W. P. Fairman, pres.; E. T. Comfort, sec.; L. R. Thatcher, mgr. A close corporation and prefers not to publish information.

Operates a silver-lead mine, 35 miles S. of Palisade, Eureka Co., Nev.

In Sept., 1917, the manager discovered rich lead-silver ore in a claim near the Union.

HUMBOLDT COUNTY

ADELAIDE STAR MINES, LTD.

NEVADA

Liquidated. Fully described in Vol. XI, Copper Handbook.

AMERICAN MINING & EXPLORATION CO.

NEVADA

Office: Boston Bldg., Salt Lake City, Utah.

Officers: Fred H. Vahrenkamp, pres. and gen. mgr.; Geo. W. Morgan, v. p., with B. F. Bayer and A. E. Vail, directors; W. C. Johnston, sec.-treas.

Inc. Aug., 1917, in Utah. **Cap.**, \$1,500,000; shares \$1 par.

Property: the Imlay mine, 29 claims and 2 mill sites; also the Rye Patch mine, near Imlay, Humboldt Co., Nev. The latter is an old time producer, formerly held by the Eccles interests of Ogden and credited with production of \$25,000,000 in silver. The dumps are reported to contain 300,000 tons of ore averaging 16-22 oz. silver, \$1.20 gold and 4% zinc.

Equipment: includes the old 100-ton Imlay mill and a 200-ton mill equipped with Koering cyanide plant at the Rye Patch.

ANTELOPE SPRING MINING CO.

NEVADA

Office: 625 Dooly Bldg., Salt Lake City, Utah. Property leased by Linke-O'Byrne, incorporated, 1916. **Mine office:** Jungo, Humboldt Co., Nev.

Officers: Wm. H. Fitch, pres.; Gust Holm, v. p.; John W. Geiger, sec. and mgr.; Allen C. Eakin, treas.; preceding officers, Edith M. Brounzel, Fred Hubbard and E. R. Reitsch, directors.

Inc. April 11, 1906, in Utah. **Cap.**, \$300,000; shares \$1 par; assessable; 200,000 issued; 8 assessments levied, amounting to 13c per share.

Property: 17 claims, partly patented, 15 miles from Humboldt House, developed by 3 crosscut tunnels, each reaching the 2 principal oreshoots.

Ore: carries lead, silver and copper. The oreshoots occur on a limestone-shale contact, one shoot carrying zinc sulphide, the other, 20% lead ore containing gold and copper values. High-grade silver-lead concentrate is produced in the mill.

ANTIMONY SYNDICATE**NEVADA**

Controlled by John Ross, Unionville, Nev. Gross earnings for 1916 amounted to \$9,200 and operating expenses were \$4,000.

Property: the Black Warrior and Bloody Canyon antimony mines, 2 claims, 40 acres, in Humboldt Co., Nev. The Black Warrior mine in the Buena Vista district is developed by several tunnels to depth of 150', with total workings amounting to 2,000'. Ore, partly oxide and partly sulphide, occurs in fissure veins in porphyry, with N. S. course and dip of about 80°. Equipment consists of 25-ton mill.

Output amounted to \$92,500 in 1915, and \$230,000 in 1916, the ore averaging 62½% in 1915, and 40% in 1916. Production for 1917 amounted to 161¼ tons.

The Bloody Canyon mine in the Star district is developed by 2,500' of tunneling to depth of 300'. Made one shipment of 54% ore in 1916. Management plans active development of both properties in 1917.

ASSOCIATED MINES DEVELOPMENT CO.**NEVADA**

Office: 617 Pacific Bldg., San Francisco, Cal. C. N. Miller, pres.; E. N. Bannon, sec.

Inc. in Nev. Cap., \$500,000; shares \$500 par.

Lands: at Rochester, Humboldt Co., Nev. Owns the Wild-Cat and Tiger patented claims, the Taylor Hill, Colorado and the Plainview-Plain-site group; also a stock interest in the Tohoqua mine, Gerlach, Nev. Claims to have \$200,000 worth of silver and gold ore in sight and no debts.

BLACK WARRIOR MINE**NEVADA**

Acquired 1915, by the Antimony Syndicate, which see.

BLOODY CANYON ANTIMONY MINE**NEVADA**

Acquired 1916, by the Antimony Syndicate, which see.

BONANZA MINING CO.**NEVADA**

Mine office: Winnemucca, Humboldt Co., Nev. Company controlled by Chas. Baagoe and D. F. Shiveley of Winnemucca.

Property: 5 claims, 5 miles from Winnemucca, shows a contact fissure vein 11'-22' wide and proven for length of 115', between diorite-porphyry hanging wall and lime shale footwall. Development includes 3 shafts, deepest 215' with crosscuts, a tunnel driven east from No. 2 shaft, 37' deep and a winze sunk all in ore. Mine has no equipment.

BUFFALO VALLEY MINES CO.**NEVADA**

Address: Lovelock, Nev. John T. Reid, mgr.; O. P. Richards, supt., Volney, Nev.

Inc. Jan. 7, 1916, in Ariz. Cap., \$500,000; shares \$1 par; 185,000 shares outstanding.

Property: 26 claims, 500 acres, about 18 miles S. of Volney. Ore occurs in a quartz vein in limestone; is 1'-25' wide with N. S. course and dip 35° W. Pay ore occurs in shoots, 100' long and said to average \$7.75 in gold. Development by 300' shaft, reported to prove ore reserves of 25,000 tons.

Idle owing to lack of funds.

CHICAGO-NEVADA TUNGSTEN CO.**NEVADA**

Lovelock, Nevada. **Address:** care H. M. Byllesby & Co., 208 La Salle St., Chicago, Ill.

Property: the Ragged Top and Besson group, 11 miles from Toulon, a station on the S. P. R. R., shows tungsten deposits. Ore will be treated in a mill planned to be put up at Toulon on the shore of Humboldt sink.

Production: 550 tons in May and June, 1916. The mill will handle custom ores.

CROWN MINES**NEVADA**

Jos. H. Playter, mgr., Golconda, Nev.

Property: 15 claims, about 200 acres, 12 miles S. of Golconda, said to carry a fissure vein in andesite, having a N. 15° E. course and dip of 60°. Ore occurs in shoots and is said to average \$6-\$10 in gold and silver.

Development: by about 2,000' of underground work, including a 600' tunnel. A prospect.

DELAWARE MINING CO.

NEVADA

H. H. Hunter, mgr., Lovelock, Humboldt Co., Nev.

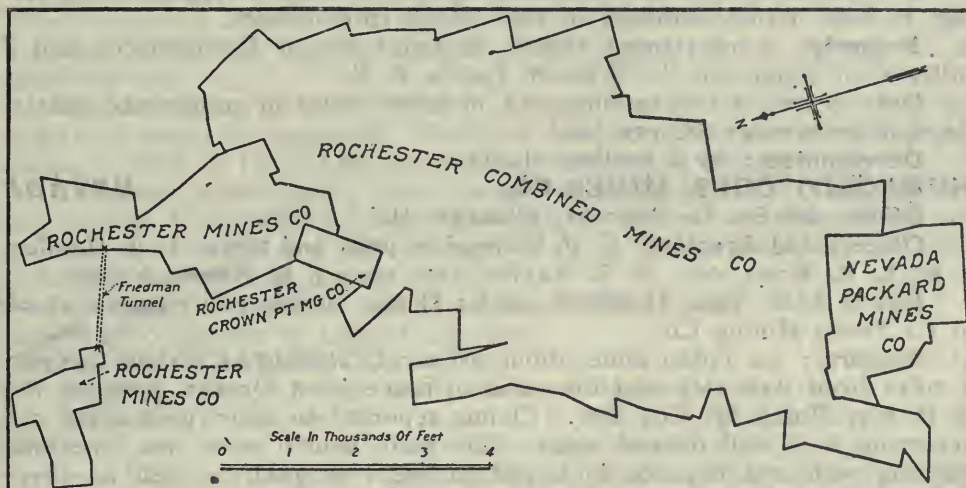

Property: 200 acres, in Seven Troughs district, near Vernon, Humboldt Co., Nev. Ore occurs in veins 5-7' wide, said to average \$18-\$20 per ton.

Equipment: includes the Darby mill 4½ miles from the mine, said to treating 50 tons of \$20 dump ore per day. Management is planning to explore the Delaware veins at depth.

56 (FIFTY-SIX) COPPER MINE

NEVADA

Is the first quartz mine located in Nevada, being staked out in 1856,

PROPERTY MAP OF ROCHESTER, NEVADA.

by L. D. Vary. The mine is in the southern end of the Eugene mountains, not far from the Humboldt river and S. W. of Mill City. Idle.

GLASGOW & WESTERN EXPLORATION CO., LTD. NEVADA

In liquidation; Joseph Ralph, attorney for the liquidator, 65 I St., Salt Lake City, Utah. See Vol. XI, Copper Handbook, for details of organization, capitalization, directors, property, etc.

Company went into voluntary liquidation April, 1913, and all operations ceased. In April, 1913, the company owned the Montreal mine, Beaver Co., Utah; Copper Canyon, and Copper Basin mines, Lander Co., Nev. The Star property, White Pine Co., and Adelaide mine, Humboldt Co., Nev., were operated as subsidiary interests and fully described in Vol. XII.

The Star, Adelaide and Copper Canyon mines have been sold outright to the Copper Canyon Mining Co., which see; for the Montreal and Copper Basin, half of purchase price has been paid under working options. By Oct., 1917, the last asset is expected to be realized upon.

GOLCONDA GOLD LEDGE MINING CO.

NEVADA

Address: 909 Sharp Bldg., Kansas City, Mo.

Officers: M. A. Fyke, pres.; W. H. Otto, v. p.; A. C. Sweet, sec.; C. V. Fyke, treas., with F. M. Planck, directors.

Cap., 1,000,000 shares; \$1 par.

Property: 8 claims, 2 miles S. of Golconda, Humboldt Co., Nev., known as Kramer Hill.

Three-year lease given Sept., 1915, to Golconda Nevada Mining Co. (J. B. Tomlinson).

GOLCONDA NEVADA MINING CO.

NEVADA

Address: Golconda, Humboldt Co., Nev. J. B. Tomlinson, mgr., has 3-year lease from Sept., 1915, on the Kramer Hill mine of Golconda Gold Ledge Mining Co.

Equipment: Lane mill replaced by 20 stamps in 1916, for sampling and testing on large scale. A 500-ton plant to be erected.

HAYSTACK MINES, INC.

NEVADA

Officers: F. L. Reber, v. p. and treas., Winnemucca, Nev.; C. T. Smith, pres. and supt., with W. J. Merryfield, directors; B. Smith, sec.

Inc. June, 1914. No outstanding stock. Annual meeting, first Tuesday in Jan. Gross earnings in 1915, \$7,500 from lessees.

Property: 5 unpatented claims, 35 miles W. of Winnemucca and 7 miles S. of Jungo, on the Western Pacific R. R.

ORE: occurs as free milling gold, in fissure veins in granite and quartzite, said to average \$22 per ton.

Development: by 3 shallow shafts.

HUMBOLDT CONS. MINES CO.

NEVADA

Office: 108 So. La Salle St., Chicago, Ill.

Officers and directors: C. F. Champion, pres. and treas.; C. J. Hayden, v. p.; L. R. Miser, sec. A. E. Taylor, asst. sec.; J. B. Newman, mgr.

Inc. in Ariz. **Cap.,** \$1,500,000; shares \$1 par. Owns entire capital stock of La Toska Mining Co.

Property: La Toska mine, about 360 acres., at head of Wright Canyon, 5 miles from Ryepatch and the same distance from Oreana, both on the S. P. R'y, Humboldt Co., Nev. Claims reported to show gold-silver ore occurring in 2 well defined veins. The main vein 6' wide has limestone hanging wall and rhyolite foot, and carries free gold, as well as silver minerals (bromide).

Development: by tunnel 2,640' long. The main vein was cut in 1917, at depth of 1,345' as a result of six years' work. Spent \$73,626 on mine, of which \$64,825 was for development work.

HUMBOLDT TRINITY GOLD MINING & MILLING CO.

NEVADA

Office: Lovelock, Humboldt Co., Nev. E. L. Connell, mgr. Not incorporated.

Property: 10 claims, 200 acres, 12 miles N. of Lovelock, said to show gold-silver ore in quartz vein, 18" to 2' wide. The ore above water level at 100' depth is said to assay \$18 to \$25 per ton, with higher values below.

Development: 108' Humboldt incline shaft with drifts on 90' and 55' levels, 80' and 90' long, respectively. Claims \$10,000 in ore is blocked out.

Equipment: includes an 11-ton Huntington mill, and a 15 h. p. gasoline engine. "Production varies on account of lack of water; if mill runs steady, about \$3,000 per month." Nevada is a dry state.

LINCOLN HILL MILLING & MINING CO.

NEVADA

Office: G. S. Johnson Co., Clay Peters Bldg., Reno, Nev. G. S. Johnson, pres. and mgr. Robt. Nye, supt.

Cap., \$1,000,000; shares \$1 par; non-assessable; 100,000 shares in treasury.

Property: the Lincoln Hill mine on Lincoln Hill, Rochester mining

district, Humboldt Co., Nev., is said to carry 35 well defined veins, averaging \$150 per ton.

Development: by 1,600' of tunnels, raises and winzes.

Equipment: includes electric power, compressor, power drills, hoist, 2-stamp mill, and surface buildings. Mine, reported to have produced \$50,000 worth of ore under former owners. Shipping, 1917.

MINES DEVELOPMENT CO. OF NEVADA

NEVADA

Lovelock, Humboldt Co., Nev.

Officers: John T. Reid, pres., treas. and gen. mgr.; Paul G. Reid, v. p., sec. and supt.; preceding, with R. C. Moore, J. Theis, Peter Anker and W. H. Rawlis, directors.

Inc. Sept. 1, 1904, in Arizona. **Cap.**, \$750,000; shares \$1 par; issued, \$454,000.

Property: 5 claims, 100 acres, in the Juniper Mountain district, said to show various fissure veins, alongside of quartz porphyry dikes, intrusive in monzonite. Veins run N. 20° W. and are nearly vertical. The vein developed averages 5' wide, is traceable for 2,000' and proven to 170' depth. Small seams of ore found at or near surface show chalcocite, bornite and tetrahedrite, giving average assays of 2% copper, 5 oz. silver and \$1 gold per ton.

Development: by a 500' tunnel. An 800' shaft to explore surface deposits at depth is proposed. Property has been idle for several years, owing to lack of funds and speculative character of claims.

Company is developing some claims under option in the Table Mountain district, Churchill Co., Nev. Two cars of sorted ore shipped are said to have returned 22 and 26% copper. Mine is remote from rail and only assessment work was done.

Company owns 60,000 shares of the Buffalo Valley Gold Mines Co., which is to operate in Lander Co., Nev.

NATIONAL LEASING CO.

NEVADA

Address: Elmer Fouts, supt., National, Humboldt Co., Nev.

Officers: G. Graham Rice, pres.; C. F. Belser, v. p. and treas.; R. W. Gnekow, sec.; G. E. Farish, mgr. and cons. engr.

Inc. 1917, in Delaware. **Cap.**, \$2,000,000; shares \$1 par; non-assessable.

Company has a 5-year lease on property of the Charleston Hill Gold Mining Co., at National, Nev. It is argued that the gold-bearing vein of the National Mines Co. continues through the National Leasing claims for at least 700', and that a 3,000' tunnel already driven is near the vein. George Graham Rice has underwritten 1,000,000 treasury shares and guaranteed to provide \$5,000 per month for development, accepting stock therefore at 15c per share, less 5%. This money is considered sufficient to do 10,000' of work in 2 years.

The National Mines Co. has produced over \$6,000,000 in gold, but there has been little output of late. In May, 1917, Rice's weekly house organ, Mining & Industrial Age, contained the news that a "new strike of \$100,000 per ton ore just reported" at the National mine, adjoining his leasing property; also that a new ore shoot was indicated by high-grade float near center of "your lease block."

National Leasing has arranged with National Mines to use the latter's equipment and extend its workings to prospect the Leasing ground. All the literature on this new company comes from Rice's office. Early in his share-selling campaign he gave the National Mines yield as \$7,000,000; in August it had increased to \$10,000,000. The Leasing company is a speculation that may have a chance to make good, but there has been as much talk as work about it thus far.

NATIONAL MINES CO.**NEVADA**

Office: 39 Board of Trade Bldg., Chicago. **Mine office:** National, Humboldt Co., Nev.

Officers: J. G. Snyder, pres.; L. G. Campbell, v. p.; C. V. Buckley, sec.; S. C. Scotten, treas.; Perry G. Harrison, supt.; H. L. Hollis, cons. engr.

Inc. in Wyoming. Cap., \$1,000,000; shares \$1 par; non-assessable; 817,427 shares outstanding.

Property: 6 patented claims and a fraction at National, Humboldt Co., shows gold-silver ore in quartz fissure veins, traversing a rhyolite-andesite formation. Orebody runs N.-S. and dips 45-70° W. Geology and vein system fully described in U. S. G. S. Bull. 601.

Development: by 10 adits from 150'-2,500' in length and 3 shafts, 450', 350' and 800' deep. Underground workings, April, 1916, total about 7 miles.

In April, 1917, it was reported that rich ores had been found in new shaft sunk 500' below No. 5 tunnel, but little authentic new is available.

Equipment: includes 2 electric hoists, aerial tram, 100-ton mill for amalgamation and concentration of ore. Mill treated 4,463.4 tons of ore in 1912; 47.3 tons in 1913; 2,763.5 tons in 1914; 18,662.2 tons in 1915; a total production to date of 36,000 tons, or \$6,000,000, mainly from the National gold shoot, intercepted at depth of 40' below the surface and which averaged \$20-\$30 to the pound.

In June, 1917, lease on company's plant was given the adjoining National Leasing Co. for exploration of their ground through the National Mines.

NENZEL CROWN POINT MINING CO.**NEVADA**

Office: 702 Mutual Bank Bldg., San Francisco, Cal. **Mine office:** Rochester, Humboldt Co., Nev.

Officers: Jos. F. Nenzel, pres.; Chas. E. Stevens, v. p. and treas.; O. G. Stevens, sec. and supt.; C. L. Mauritius, asst. sec., with F. W. Aitken and P. G. Fielder, directors.

Inc. Jan. 15, 1913, in Nev. Cap., \$1,250,000; shares \$1 par; increased in April, 1917, to \$2,000,000; shares \$1 par; 1,250,000 issued. Bond issue authorized for \$300,000, to pay for cyanide plant. Registration Surety Co., San Francisco, registrar and transfer agent. Stock is listed on San Francisco Exchange. Annual meeting, second Wednesday in February.

Property: 7 unpatented claims, 110 acres, in Rochester mining district, shows gold-silver ore as contact deposit and in fissures traversing rhyolite and felsite formation.

Development: in 1916, shaft was sunk 200' and 500' of raises and winzes, 1,000' of drifting and 3,000' of crosscutting was accomplished. Five well-defined veins are being opened by drift-tunnels. Ore has been opened to 750' vertically and over 1,000' on dip of veins. General average is \$15 per ton and total reserves are estimated at \$4,000,000.

Equipment: 40 h. p. hoist, 500 cu. ft. compressor, both motor-driven, and 200-ton cyanide mill.

Like several other mines at Rochester, this one seems to have a hopeful future.

NEVADA HUMBOLDT TUNGSTEN MINES CO.**NEVADA**

Address: Lovelock, Nev., or Mill City, Nev.

Officers: C. J. Jones, H. E. Loufek and P. J. Murrish, incorporators.

Cap., \$1,000,000; shares \$1 par.

Property: claims near Mill City, said to show a deposit 5' wide of ore carrying 4% tungstic oxide, for length of 120'.

NEVADA PACKARD MINES CO.**NEVADA****Office:** Reno, Nev. Mine at Rochester, Humboldt Co., Nev.**Officers:** Mark Walser, pres. and mgr.; R. L. Ray, v. p.; Frank Margrave, sec.; H. G. Thomson, supt.**Inc.** 1913, in Nev. **Cap.**, \$1,250,000; shares \$1 par; fully paid; non-assessable; 1,164,592 issued. Stock listed in San Francisco, and stand at 30c in Oct., 1917. First dividend paid Dec. 20, 1916, amounting to 5c per share, equal to \$58,234. Transfer office at 53 State St., Boston.**Property:** 4 claims, about 80 acres, in the Rochester mining district, said to show ore in silicified schist netted with quartz stringers. It is essentially a highly-altered sericitized rhyolite, varying from a soft and friable talcose or schistose product to an extremely tough silicified variety. Cerargyrite is the valuable constituent of the ore. Sulphides are not common. Ratio of gold to silver is about 1 to 300. Quartz veinlets are some times high in gold.**Development:** by 5 tunnels, longest over 600'. Two ore zones have been opened, and a third is considered probable. Power obtained from Nevada Valleys Power Co., at \$8 per h. p. month.**Equipment:** is complete. Has 100-ton mill, treatment being by rolls, tube-mills, agitation in cyanide, counter-current decantation, Oliver filters and Merrill precipitation system. Mill feed is about \$7 per ton. Plant is of excellent design and cost \$65,000. Recovery is 95%. Treatment costs \$1.26 per ton, and all charges at property, \$4 per ton.**Production:** reported to be over \$114,000 to 1916.

Several changes in management during past year, and rumors of dissension are unfortunate with such a promising property.

NEVADA SUPERIOR MINES CO.**NEVADA****Office:** 625 Dooly Bldg., Salt Lake City. **Mine office:** Jungo, Nev.**Officers:** Otto Grantz, pres.; E. R. Reitsch, v. p.; John W. Geiger, sec. and gen. mgr.; Dr. Allen C. Eakin, treas., with D. R. Peterson, directors.**Inc.** 1905, in Utah. **Cap.**, \$300,000; shares \$1 par; assessable; 155,000 shares outstanding. Income for 1915 was \$164 from royalties.**Property:** 21 claims, 420 acres in Humboldt Co., 23 miles from Jungo on the W. P. R. R., shows gold-silver-lead-zinc ore in fissure veins traversing schist and slate. The main orebody, from 2-20' wide, strikes N. W. and is said to give average assays of 8.6 oz. silver, 11.2% lead, 1% copper, 8% zinc. Shipments of crude ore made by lessees in 1915 ran \$15-\$24 per ton. Developed by 2 tunnels, 1,000' and 2,500' long, and 330' vertical shaft.**Equipment:** includes 75-ton concentrating mill, steam power, compressor, pump and hoist. Company has been inactive since 1913 owing to lack of funds.**NEVADA UNITED MINING CO.****NEVADA**

Oliver G. Jennings, pres. and treas., 49 Wall St., New York. An inactive corporation. Fully described Vol. XI, Copper Handbook.

PACKARD EXTENSION MINES CO.**NEVADA**

Lovelock, Nev.

Officers: B. F. Shepher, Jr., pres.; H. E. Woods, v. p.; Ray Stoddard; sec.-treas., Reno, with L. D. Richardson and L. A. Hilborn, directors.**Inc.** Jan. 6, 1916, in Nevada. **Cap.**, \$1,250,000; shares \$1 par; 750,000 shares issued.**Property:** 5 claims, unpatented, 90 acres, in Rochester mining district, Humboldt Co., adjoining the Nevada Packard ground, shows a shear zone of rhyolite with fissure veins, said to be 3-15' wide, with N. E. strike and dip of from 20-30°. Veins carry silver chloride and free gold. David H. Skea, consulting engineer for the Packard Extension, reports that the

claims owned by the company cover the actual extension of the Packard ore shoots on the downward rake in a course to the S. W., and that the great ore zone of the Packard mine should be found in Extension ground at a depth of about 250-300' beneath the surface.

Promoted by F. G. Cox & Co., Los Angeles.

PACKARD NORTH EXTENSION MINING CO.

NEVADA

Lovelock, Nev.

Officers: T. P. Ebert, pres.; Frank Margrave, v. p.; J. W. Kromer, sec. and gen. mgr.

Inc. 1916, in Nevada. **Cap.**, \$1,000,000; shares \$1 par.

Property: 4 claims, adjoins the Nevada Packard ground, at Lovelock. Management reports: "Our property is so closely associated with that owned by the Nevada Packard Mines Co., that a description of their vein system is practically a description of ours. Their veins run N. and S. and presumably all enter our ground, though but one outcrops. It is on this vein we are working and upon which our lessee is working. It is our intention to drive a tunnel which will cut all veins at considerable depth." The vein was cut in tunnel B, about 250' from the portal and drifts run N. and S. for 125', in March, 1916. In August, 1916, work on company account ceased and the superintendent, J. W. Kromer, was reported as operating the mine under lease. Property is still in the prospect class.

PROVIDENCE EXTENSION GOLD MINING CO.

NEVADA

Office: Morris, Ill.

Officers: I. F. Hatcher, pres.; W. F. Buck, v. p.; G. A. Leach, sec.-treas., with O. M. Barker, directors.

Inc. 1908, in Nev. **Cap.**, \$1,500,000; shares \$1 par; 1,100,000 shares outstanding.

Property: 3 patented claims and a fraction at Seven Troughs, Humboldt Co., Nev., reported by management to show high-grade free milling quartz ore in fissure veins, 4" to 2' wide and to carry from \$14 upwards in gold per ton.

Development: by 170' vertical shaft. Idle, pending refinancing of the company.

Examined by F. A. Wheeler.

RAGGED TOP MINE

NEVADA

Address: care H. M. Byllesby Co., 208 So. La Salle St., Chicago, Ill. Purchase price reported to have been \$250,000. Mine workings said to expose a 50' face of ore, from which 20,000 tons of tungsten ore were shipped to Utah Minerals Concentration Co., Eureka, Utah, yielding a 62% concentrate. A 75-ton concentrator was erected at Toulon in November, 1916.

ROCHESTER BUCK & CHARLEY MINES CO.

NEVADA

Lower Rochester, or Manhattan, Nev.

Officers: C. H. Moyer, pres.; Frank L. Reber, v. p., sec. and treas., with John Fant, C. E. Bugg and Wm. Lane, directors; F. L. Reber, mgr.

Inc. in Nevada. **Cap.**, \$1,000,000; outstanding, \$750,000; shares \$1 par. Annual meeting, first Wednesday in April.

Property: 8 claims, 150 acres, in Rochester mining district, shows contact deposits 6-16' wide between rhyolite and limestone, said to carry gold, silver and some lead ore. Was discovered in 1913.

Development: 220' tunnel, with 600' of underground working.

Equipment: includes electric hoist. Property worked by lessees in 1916. Production over \$41,000.

ROCHESTER COMBINED MINES CO.

Offices: L. A. Friedman, Lovelock, and J. W. Wilkey; Packard (Rochester), Nev.

Officers: L. A. Friedman, pres.; O. H. Hicks and H. F. Murrish, v. p.'s; J. O. Nenzel, sec.-treas., with W. J. Flynn, P. S. Vanderkloot, C. H. Jones, Wm. Adams and V. A. Twigg, directors.

Inc. Jan. 6, 1917, in Nevada. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; 2,500,000 issued.

Property: 86 claims, 1,000 acres, at Packard, near Rochester, Nev.

Geology: fault-contact between rhyolite and rhyolite-tuff.

Development: by tunnels to depth of 400'. Orebody is said to be 107' wide and reserves are estimated as worth \$2,000,000. Ore carries silver and gold. A geologic examination is being made.

Equipment: complete, with 300-ton mill, designed by K. Freitag, to be ready in November. Plant includes crushers, ball and tube mills, counter current decantation cyanidation and filters.

Mine reported closed, Dec., 1917, owing to lack of ore for mill.

ROCHESTER ELDA FINA MINING CO.

NEVADA

Offices: 702 Mutual Bank Bldg., San Francisco, Calif., and Rochester, Nev.

Officers: Jos. F. Nezel, pres.; Clay Peters, v. p.; with O. G. Stevens, sec., directors.

Inc. Feb. 8, 1915. **Cap.**, \$1,500,000; shares \$1 par. Annual meeting, last Wednesday in April. Management states operating expenses in 1915 were \$9,500.

Property: 2 claims, 30 acres, adjoining Rochester Mines Co., on the east, said to show contact deposit 4' to 5' in width between rhyolite and felsite, carrying gold-silver ore.

Development: 4 shafts, deepest 190', each on a separate vein and all in ore. Mine is also being developed to a depth of 500' by drifts through the Nenzel Crown Point company's workings.

Equipment: includes a hoist. Property is a prospect undergoing development.

ROCHESTER HOME TRAIL MINES CO.

NEVADA

Address: G. S. Johnson, Co. (Inc.) Reno, Nev.

Officers: G. S. Johnson, pres.; C. C. Higgins, v. p. and mgr.; A. J. Wright, sec.-treas., with E. W. Orr and W. F. Hentschel, directors. A. D. Cox, cons. eng.

Inc. 1916, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; 600,000 issued.

Property: in Rochester district, adjoining the Buck & Charley, a small producer. Home Trail is said to have all the "earmarks" and geologic characteristics of the district. Ore opened assays from \$15 to \$75 per ton in silver and gold. Other richer ore is reported to have been developed.

Is a G. S. Johnson promotion, honestly worked, but receives rather too much publicity.

ROCHESTER MERGER MINES CO.

NEVADA

Office: Rochester, Nev.

Officers: H. G. Humphrey, pres.; C. A. Heller and J. E. McCreary, v. p.'s; C. H. McIntosh, sec.-treas.; with B. R. Binnis, directors:

Inc. Oct. 20, 1915, in Nevada. **Cap.**, \$2,000,000; shares \$1 par; 178,471 issued; non-assessable. Listed on San Francisco Exchange. Annual meeting first Monday in November.

Property: 25 claims, 450 acres, in 4 groups; original Rochester, Rochester Belmont, Widow Florence and Crown Point Extension, 2 groups in the Rochester mining district, Humboldt Co. The original Rochester and Rochester Belmont groups are contiguous and adjoin Rochester Mines Co. on the west.

Examined by O. H. Hershey, H. V. Winchell, W. H. Wiley, A. C. Lawson, and Fred Searles, Jr.

Geology: quartz veins in rhyolite, dipping 35 to 50°, with N.-S. course. Ore is both oxide and sulphide, assaying 50c to \$5 gold, 1 to 70 oz. silver, 1 to 5% copper, 1 to 5% lead and 1 to 6% zinc.

Development: by two tunnels, the Friedman tunnel crosscutting Rochester Merger ground for 1,560' before entering Rochester Mines Co. property and the Pitt tunnel (900' long), 1,200' north of the Friedman, supposed to cut the Broughton vein at a vertical depth of 500' and horizontal distance of 1,200'. The Pitt tunnel is reported by the management to have cut 2 veins, one of which has been drifted on for 265', in ore for 130', width 50' and average assay \$15 per ton. The Friedman tunnel, over 1,500' long, will serve both the Rochester Merger Mines Co. and the Rochester Mines Co. It is said to have cut 10 veins, 12' to 15' in width and drifting is being done on a few of these veins. The four tunnels, on Sept., 20, 1917, were 1,500, 1,430, 550 and 200' long. To a depth of 1,000' workings totaled 7,500'. Surface exploration has been extensive.

Equipment: compressed air hoists, 12-drill Chicago Pneumatic compressor, and electric motors.

ROCHESTER MINES CO.

NEVADA

Lovelock and Rochester, Nev.

Officers: L. A. Friedman, pres. and gen. mgr.; H. J. Murrish, sec.-treas., with W. C. Pitt, J. P. O'Brien, B. H. Conkling and Richard Hartley, directors.

Inc. Dec. 17, 1912, in Nev. **Cap.**, 2,250,000 shares; \$1 par; outstanding May 15, 1916, 2,148,791 shares. Secretary, Lovelock, Nev., and Security Transfer & Registrar Co., New York, transfer agts. Stock listed on San Francisco and Salt Lake City Exchanges and on New York Curb.

Mortgage: 8%, trust deed to C. Uniacke and A. John for \$70,000, dated Nov. 9, 1914, to cover 14 notes for \$5,000 each.

General Balance Sheet (May 15)

Assets:					
	Prop.-Dev.	Equip.	Current	Miscel.	Total
1916.....	\$2,028,157	\$133,586	\$40,722	\$1,133	\$2,203,598
Liabilities:					
	Cap. Stock	Surplus	Current	Total	
1916.....	\$2,148,791	\$24,451	\$30,356	\$2,203,598	

Property: 14 claims, 3 patented, on Nenzel Hill, in the Rochester mining district, Humboldt Co., includes Weaver Mining Co. property bought 1915. Ore on Nenzel Hill was first discovered a decade ago, but little work was done at that time. In 1912 large bodies of \$50 to \$60 silver-gold ore were found and shipments started in a small way; in the Winter of 1913-1914 these shipments attracted attention and the town of Rochester came into existence.

Geology: ore deposits of Nenzel Hill occur as replacement veins along fissures and shear zones in sheeted rhyolite; veins vary from a few feet to 40' in width and range from 100' to 3,700' in length; strike N. to N. 30° E., dip 60° W. The west vein is the main ore carrier, showing an orebody 750' long, and shoot being 20' wide and averaging \$21 per ton, at a depth of 300'. The east vein shows 6-7' of \$25 ore, and the 250' level showed 2' of \$160 ore. For geology see U. S. G. S. Bull. 580, p. 342.

Development: 20,660' of work, mostly by tunnels. In Feb., 1916, work consisted of 950' of shafts, 2,800' of tunnels, 600' of winzes, and several

thousand feet of raises and drifts, with estimated ore reserves of 118,000 tons. The Friedman tunnel, crossing Rochester Merger ground on the west for 1,560' will be used jointly with that company by the Rochester Mines Co. This tunnel cut the veins at a depth of 1,200' several hundred feet below the present workings.

In April, 1917, high-grade ore was cut on 700' level. At 800', north of the Codd winze, 8 to 9' of \$158 ore was reported as opened. This widened to 14' in July. On the 900' level there was 25' of good ore in September. This is known as the Adams vein. A winze is to be sunk to 1,100'.

Equipment: in March, 1915, company completed an up-to-date 10-stamp and cyanide mill in Rochester Canyon, almost 3 miles from the mines, with which it is connected by the Nevada Short Line narrow-gauge road. Mill was designed to treat 100 tons ore daily, but has been treating 120 to 150 tons; stamps, weigh 1,550 lbs. each, drop 100 times per min., extraction reported as about 92.87%; continuous counter-current decantation is employed. This plant was enlarged to treat 200 tons per day, 1916. Ore is carried from mine to mill by a 12,000' aerial tram.

Production: 1913 and 1914 reported as 52,282 tons, yielding \$1,015,345, chiefly in silver; average value for entire production, \$19.52 per ton. In 1915, the mill operated 205 days, treated 23,090 tons ore, lessee and company account, yielding 3,131 oz. gold, and 545,959 oz. silver; ore averaged about \$15 per ton. In 1916, \$373,857.

Costs, per ton, 1916 (5 mos); mining, \$3,221; milling, \$2.288; indirect, \$0.827. **Power:** electric, obtained from the Nevada Valleys Power Co. In August, 1917, the yield was \$75,000, compared with \$58,400 in July. The mill is treating 180 tons of \$14 ore daily, with 93% recovery.

ROCHESTER RAVEN MINES CO.

NEVADA

Lower Rochester, Humboldt Co., Nevada.

Officers: J. J. Morely, pres.; Frank L. Reber, v. p.; T. J. D. Galter, sec-treas. and res. agt.; preceding, with E. S. Howard, Frank Towelly and C. F. Hardley, directors.

Cap., 1,000,000 shares, 25c par.

Property: 3 claims, in Lower Rochester district, operated by lessees who are reported as shipping ore with values of \$34 per ton in gold and silver. Said to have shipped \$10,000 gross worth of ore in first few months of 1916. Geologic conditions are similar to those of district in general. See U. S. G. S. Bull, 580, p. 325.

Plans included driving tunnel to prove orebodies to depth of 600'.

ROCHESTER TREASURE MINING CO.

NEVADA

Address: J. E. McGovern, sec-treas., Rochester, Nev.; J. C. Colligan, pres.; J. W. Kromer, v. p.; John Golden and Harry J. Murrish, directors.

Inc. April 14, 1913, in Nevada. **Cap.,** \$1,500,000; \$1 par; 500,750 issued; non-assessable.

Property: the Old Relief mine, 5 claims, 100 acres in Relief canyon in Rochester district.

Geology: a silver-bearing quartz vein 12 to 25' wide, cutting limestone and running S. E., dipping 55° west with a pay shoot 10 by 25'.

Development: by tunnels 75 to 450' long. Workings to depth of 300' total 1,000'.

A small mine, examined by J. C. Bray.

ROCHESTER UNITED MINES CO.

NEVADA

Office: Phelan Bldg., San Francisco, Calif. **Mine office:** Rochester, Nev.

Officers: Fred Linderman, pres.; W. W. Davis, v. p.; B. W. Linderman, treas.; K. Van Winkle, sec.; with A. D. Cox, mgr., directors.

Inc. in Nevada. **Cap.**, \$1,500,000; shares \$1 par; 1,114,878 issued. Listed on San Francisco Stock Exchange.

On May 3, 1917, a stockholders' committee, comprising above directorate, took over company's affairs, since when all debts have been paid.

Property: 21 claims, 240 acres, in Rochester district, Nev., adjoined on N. by Rochester, Rochester Merger and Rochester Mines; on E. by Rochester Mines and Rochester Combined; and on S. and W. by Rochester Combined.

Development: 200' tunnel and crosscuts 146' and 143' E. and W., June 1, 1917.

Management states that late work in S. drifts from the Friedman tunnel in the Merger and Mines gives strong indication of certain of the veins opened by these companies extending S. through United ground and exploration is aimed to open the probable S. course of these veins. In our conclusions last year we considered that a study of the map showed it very improbable that the Mine's veins cross any of the United claims.

ROCK HILL PLACER CO.

NEVADA

Address: Imlay, Nev. **Officers:** David May, pres.; Wm. I. Mead, v. p.; Jos. S. Jaffa, sec.-treas.

Inc. in Nevada. **Cap.**, \$1,000,000; shares \$1 par.

Property: 22 claims, 440 acres, in Rock Hill canyon, Humboldt Co., Nevada.

RYE PATCH MINING & LEASING CO.

NEVADA

Address: S. A. Greenwood, sec., 423 Douglas Ave., Salt Lake City, Utah. Mine at Rye Patch, Humboldt Co., Nev. C. A. Conklin, pres.; David W. Jeffs, gen. mgr.

Inc. 1910, in Utah, as a reorganization of the Rye Patch Consolidated Mines Co. **Cap.**, \$250,000; shares 25 cts. par, assessable.

Property: 6 claims, patented, held under a 7-year lease. Mine is 14 miles from a railway, and is said to have been worked extensively prior to 1873, with a reputed production of \$12,000,000 in silver.

Development: by a 1,200' tunnel, in which the present company started new work and developed a 14" vein of extremely rich silver ore carrying 4 to 9% copper.

Equipment. includes a 10-stamp mill with a concentrator.

Reported in Sept., 1917, that property had been sold to the American Mining & Exploration Co., F. H. Vahrenkamp, pres.

SAINT ANTHONY MINES CO. (Tungsten)

NEVADA

Operating a 75-ton mill at Toy, 21 miles S. W. Lovelock, on ore from an 8' vein of 3% scheelite. Producing 20 tons daily from another mine near Sodaville, Mineral Co., Nev., the latter ores being shipped to a concentration mill near Luning.

Both properties reported closed, early in 1917.

ST. ANTHONY TUNGSTEN MINES.

NEVADA

See Toy Tungsten.

SEVEN TROUGHS BUCKHORN MINING CO.

NEVADA

Vernon, Humboldt Co., Nev. Operates property showing a 6' vein of gold-silver ore.

SEVEN TROUGHS COALITION MINING CO.

NEVADA

Office: Lovelock, Nev.

Officers: L. A. Friedman, pres.; H. J. Murrish, sec.; with A. M. Adams, M. R. Vanderkloot, and J. T. Goodwin, directors; Frank Bird, supt.

Inc. Sept. 29, 1908, in Nevada, to take over the Seven Troughs Kindergarten Mining Co. and the Seven Troughs Therian Gold Mining Co., together with some other ground. **Cap.**, \$1,500,000; \$1 par; outstanding

August 27, 1915, 1,433,027 shares. Security Transfer & Registrar Co., New York, transfer agent and registrar. Listed in Salt Lake City and on New York Curb.

General balance sheet for fiscal year ending June 30, 1915, showed assets of \$1,516,613, which included: mining property, \$1,242,058; buildings and equipment, \$40,698; total current assets, \$142,931. Liabilities showed capital stock, \$1,443,027; accounts payable, \$655; taxes, \$628; surplus, \$71,629.

Report for year ending April 30, 1916, shows total income \$337,577; total expenses, \$241,136; leaving operating profits of \$96,441. Cash on hand Jan. 1, 1916, \$69,024; current assets, \$122,681.

Dividends: paid in 1915 totaled \$180,380, consisting of four quarterly and one extra dividend in December, all of 2½ cts. per share. Total dividends paid to 1916, \$216,493.

Property: 14 patented claims at Seven Troughs, has high-grade gold-silver ore in a narrow vein which varies in width from 4" up to 20 and 30". Developed to the 1,630' level which is 130' on the dip below the 1,500' level. Management claims 2½' of \$250 ore on the 1,600' north drift, this ore-shoot also showing on the 1,500' level, and the raise between. No ore reserves given. In 1915 the output totaled 4,509 tons of ore, yielding \$416,084; the ore handled by the mill averaged about \$93 per ton.

No engineer's report on the property has ever been made. Management has not replied to requests for information.

In Aug., 1916, the bottom level was flooded, suspending work for several weeks. Ore assaying \$200 per ton was being mined from the 1,700' level. Below this level a winze has been sunk 200'. On the 1,800' level over 200' of drifting has been done. Apparently the mill is still treating rich ore, but returns are not available. The shoot appears to persist at depth, but mine can never be of much profit save to a few shareholders. Later information states that on the 1,600' level the ore is disturbed and of low value.

SEVEN TROUGHS MINING CO.

NEVADA

Seven Troughs, Humboldt Co., Nev. **Officers:** L. A. Friedman, pres.; A. A. Williams, v. p.; R. Nenzel, sec.-treas.; with J. D. Hilger and R. J. Evans, directors. C. W. Poole, gen. mgr.

Inc. Nov. 26, 1906, in Utah. **Cap.**, \$1,000,000; shares \$1 par; outstanding, 897,700 shares. Annual meeting, second Monday in June. Listed in Salt Lake City.

General balance sheet, Jan. 1, 1916, shows assets of \$1,107,107, which includes: property and equipment, \$1,086,502; current assets, \$20,605. Liabilities show a surplus of \$16,691. Income for 1915, \$3,528, was mainly on lessee's production; total expenses were \$4,175, leaving a net loss for the year of \$647, compared with profits of \$1,205 in 1914.

The discord among the company's stockholders was apparently settled in May, 1916, when a new management was put in with the purpose of actively developing the property which during the past few years has been worked by lessees.

Property: 29 claims, 26 patented, including the Fairview mine, for several years one of the heaviest producers of the district, located in the Seven Troughs mining district. Developed by a 700' vertical shaft. Said to show gold-silver ore occurring in fissure veins in basalt.

Equipment: includes a 50 h. p. gasoline hoist. Output in 1915 consisted of 260 tons of ore with a gross yield of \$15,000.

The new management, according to report, intends to sink a winze from the 700' level with the hope of developing ore at depth. In a supplemental report to the annual report for 1915, C. W. Poole, gen. mgr., states

that the lessees operated in 1915 at a loss to themselves of over \$40,000; he claims there is nothing in the mine it will pay the company to work, and that it will not pay to sink deeper.

By Sept., 1917, stoping was being done on the 700 and 800' levels. Ore worth \$400 to \$450 per ton is shipped, while the Darby mill at Mazuma is to treat 2,500 tons of dump ore. Prospects at 800' depth said to be favorable, and a large shoot was found between 600 and 700' on Sept. 20.

SILVER BELL & ALPHA CONSOLIDATED MINES CO. NEVADA

Officers: Lorin Hall, pres., Salt Lake City; Clinton D. Ray, sec.; C. B. Smith, supt., Rye Patch, Nev.

Inc. 1915, in Utah. **Cap.**, \$1,000,000; shares \$1 par; 450,000 in treasury; 100,000 were to be sold June, 1916, to erect a mill.

Property: two noted silver-gold mines at Rye Patch, Nevada, with reported production of \$11,000,000. Mine is 3.6 miles from railway.

Development: by shaft sunk through old workings and tapped by 1,000' working tunnel, with reserves of 200,000 tons of ore in old workings, said to assay 5 to 30 oz. silver per ton with 40c to \$1.40 gold per ton. Company figures \$2 mine and transportation costs and was to erect a mill in 1917. A strike of ore was reported July, 1916, carrying 2,520 oz. silver per ton in brittle silver and black sulphurets.

SILVERFIELDS MINING CO., LTD.

NEVADA

Letters returned in 1917 from secretary's address: J. M. Hamilton, Suffolk House, London, E. C., Eng. Mine near Golconda, Humboldt Co., Nev.

Inc. Dec. 27, 1906, in Great Britain, as Golconda Consolidated Co., Ltd., and changed name to present title Feb., 1909. **Cap.**, £250,000; shares £1 par; issued, £143,353, fully paid.

Property: sundry claims, with a third interest in the Honolulu group, balance of which is owned by the Golconda-Nevada Copper Co., in the Kennedy and Battle Mountain districts, 8 miles west of Millers.

Development: by a 250' shaft showing a 3' vein in limestone said to assay, 8% copper, 26% lead, 390 oz. silver and \$4 gold.

Equipment: includes a 25 h. p. hoist and necessary mine buildings. Idle.

TOY TUNGSTEN MINE.

NEVADA

Mr. Beck, supt., Toy, Humboldt Co., Nev. **Property:** 6 claims known as St. Anthony mine, formerly owned by Peter and A. M. Anderson, said to show a 5' vein of 4% ore.

Development: 100' shaft, 100' winze and an adit. A 50-ton mill, 2 miles S. E. of Toy, erected 1915, has crushers, steel ball mills and concentrating tables.

WARMACK GOLD MINING CO.

NEVADA

Office: S. C. McIntyre, 110 S. Dearborn St., Chicago, Ill. H. Warren, Winnemucca; and G. R. Stevens, supt., Golconda, Nev.

Officers: J. T. Cawthorn, pres.; Harry Warren, v. p.; S. C. McIntyre, sec.; also directors.

Inc. March 31, 1916, in Arizona. **Cap.**, \$200,000; shares \$1 par; non-assessable; all issued. Annual meeting, April 15.

Property: 945 acres of placer ground, 12 miles S. of Golconda, Nev. Examined in May, 1912, by J. A. St. Clair, editor of "Inside Investments." Gravel available is estimated at 22,000,000 cu. yds., with a probable gold value of 61 cts. per yard. Sluicing is under way, but a clean-up of rich gravel is not expected until 1918. Gold in the disintegrated quartz formation is said to "triangular."

If even one quarter of the above value actually occurs it is good ground in California, and it is hoped the owners will find it true.

WILLARD MINES CO.

NEVADA

Lovelock, Nev.

Officers: F. H. Bird, pres.; J. T. Goodwin, v. p.; R. Nenzel, sec.; V. A. Twigg, treas., with L. A. Friedman, D. C. Wheeler, directors. H. H. Hunter, mgr. and supt.

Inc. in Nev. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; outstanding, 662,000. No bonded indebtedness. Annual meeting, third Wednesday in January.

Property: 3 unpatented claims, 8 miles E. of Lovelock, Humboldt Co., Nev., which show a vein carrying pay ore in shoots.

Development: by several shafts, deepest 50', and a 70' tunnel. Shipments averaged \$54 per ton in gold and silver.

Letters returned unanswered, 1917. Property in a district that was boomed in 1915, but the fever subsided in 1916.

WINNEMUCCA MOUNTAIN MINING CO.

NEVADA

Winnemucca, Nev.

Officers: H. A. Swanson, pres.; W. G. Adamson, sec.-treas.; John R. Turner, supt.; Roscoe F. Allen, asst.

Cap., \$2,000,000; shares \$1 par; outstanding, \$1,200,000; non-assessable; no bonded indebtedness.

Property: 25 claims, 2 patented, 7 miles from Winnemucca, Humboldt Co., including 9 claims owned by the Winnemucca and Bonanza companies now merged with the present organization. The claims show a N. E.-S. W. fissure vein, traceable through the property for 3,000'. This vein cuts shale intruded by dikes of diorite and andesite. The orebody varies from 3' to 30' in width, and ore carries gold and small silver values. Dumps contained 3,000 tons of \$15 ore.

In July, 1917, company purchased 6 potash bearing claims, in Coal Canyon, 8 miles from Lovelock, for \$100,000.

Development: by 5,000' of tunnel work. The working tunnel, 425' long, enters a fault zone at a point 29' below an ore-shoot 175' long and 30' wide. The work defines 15,000 tons of indicated ore said to average \$15 per ton.

In 1917 a shaft was sunk below 300' and good ore was reported as developed.

Equipment: includes electric hoist, compressor and a 50-ton cyanide mill. Property is a prospect.

WOLVERINE COPPER CO.

NEVADA

Address: E. S. Deardorf, mgr., Winnemucca, Nev.

Property: 15 claims, 300 acres in Harmony or Sonoma Mts., 5 miles S. E. of Winnemucca, shows 5 veins, carrying copper ore with silver and gold values.

Development: merely a 65' shaft showing gold ore in the bottom. Work on a new shaft was reported to have begun, June, 1916.

Equipment: includes gasoline hoist.

LANDER COUNTY**ANTIMONY KING MINE.**

NEVADA

Owned and operated by J. M. Pine.

Property: 8 miles S. of Austin, in Cottonwood canyon, Battle Mountain district, has been worked intermittently since 1871, and by present owner since 1912.

Ore: antimony, occurs in true fissure vein, filled with white and dark quartz, associated with stibnite and traceable for 900' on the surface. Country rock is a fine-grained silicious limestone, bluish-gray in color, with a little

disseminated pyrite. Geology fully described, U. S. G. S. Bull. 594, pp. 75-76.

Development: by 250' tunnel and 150' shaft, reported to have opened up a 6½' ledge of shipping ore, May, 1917. The commercial value of these antimony deposits has yet to be proved.

ANTIMONY & SILVER MINES CO.

NEVADA

Address: J. H. Stallings, gen. mgr., 2176 S. 7 E. St., Salt Lake City, Utah. **Directors:** Judge A. J. Weber, Dr. O. W. French and G. Y. Bullock.

Property: 3 groups, about 400 acres, in Galena Canyon, near Battle Mountain, Lander county, said to carry large deposits of milling ore averaging \$20 p. t. in gold-silver and high-grade antimony.

Development: consists of 1,500' of underground workings, main tunnel being 350' in length.

A 60-ton amalgamation and concentration mill started operations, Aug. 1917.

AUSTIN DAKOTA DEVELOPMENT CO.

NEVADA

Address: Valley City, N. Dak. **Mine office:** Austin, Nev.

Officers: Frank White, pres.; A. B. Cox, v. p., with C. A. Newman, H. R. Bruns, S. H. Nelson, Chas. E. Garvin and T. Carter Griffith, directors. J. E. Buttrey, sec.-treas.; C. F. Littrell, mgr. E. J. Babcock, cons. engr.

Cap., \$1,500,000; shares \$1 par; 1,200,000 shares issued. Total receipts from stock sales during fiscal year ending June 30, 1917, amounted to \$95,145, less promotion expense, \$7,849. Expenditures at the mine were \$87,296.

Property: 800 acres in the Reese River mining district, at Austin, Lander Co., Nev. **Ore:** gold-silver in chlorite zone, in 2 parallel ledges, each 20' thick and cut by several mineralized dikes in granite. Vein system exposed in workings for about 400'. Average assays said to show up to \$2.60 gold and \$300 silver per ton.

Development: by the X-Ray 2-compartment shaft, 330' deep with 2,000' of laterals; the O. K. incline shaft, 350' deep, said to show \$150,000 worth of milling ore; the 250' Dalton shaft, sunk on a 6' vein of milling ore and the 150' Tesora shaft, sunk about 800' from the Dalton.

Equipment: pump, 80-lb. p. hoist, ore bins, compressor, storehouse and stable. Company plans further development at depth.

AUSTIN GOLDFIELD MINING CO.

NEVADA

Owens the Watt mine, in New York Canyon, Lander Co., which see.

AUSTIN MANHATTAN CONS. MIN. CO

NEVADA

Idle. Wm. A. Marshall, res. agt., Austin, Nev. The company purchased the principal mining properties, first operated in the early 60's and credited with a production of \$19,000,000, in and adjacent to Austin, Nev., in 1908, and started development work, but on too large a scale commensurate with the limited money on hand. See Copper Handbook, Vol. XI, and Bulletin 208 and 408 U. S. Geol. Sur. Result was a receivership begun in 1911, culminating in a public sale of the property 3 years later. It was purchased by one of the largest creditors, the present owner, H. C. Fownes, German Nat'l Bank Bldg., Pittsburgh, Pa., who placed it on the market after expiration of the redemption period.

Property: 115 claims, 1,200 acres, 73 claims patented, in the Reese River mining district, at Austin, Lander county, shows in the Lander Hill section, a vein system of 5 fissure veins in granite, or quartz monzonite, N. W.-S. E. strike, dip 25° to 60° N. E. Maximum width of veins is 6'. Ore, sulphide of silver, occurs in lenticular shoots.

Development: 6,000' tunnel and shafts. The western portion of the property contains north-south veins yielding gold and silver, developed by the Jack Pot mine to the 400' level.

Mine shows but little ore in sight. Old workings largely caved and

inaccessible. Report on the property made by A. W. Daw, of the firm A. & Z. Daw, London, Eng., states there is a possibility of ore reserves in the principal veins below the main tunnel level; that suspension of operations in 1887 was due to failure to carry development ahead of stoping, to poor ventilation in the deeper workings and to falling price of silver, and that failure of subsequent operations has been due to lack of development work below the old work and to bad management. There is a 20-stamp mill on the property.

BATTLE MOUNTAIN MINES & DEVELOPMENT CO. NEVADA

Office: 617 Merritt Bldg., Los Angeles, Cal. **Mine office:** Battle Mountain, Nev., F. E. Perry, manager.

Officers: M. H. Whittier, pres.; F. B. Sutton, sec.; H. L. Westbrook, treas. **Directors:** M. H. Whittier, C. W. Brown and F. C. Ripley, all of Los Angeles. Is a close corporation and no details of organization are made public.

Operating expenses 1916, were \$85,121 for development work.

Property: 26 claims, 9 patented, in Lewis mining district, Lander Co., Nev., 16 miles south of Battle Mountain. Ore carries silver as stephanite, in shoots in quartz vein. Average value reported as 20 oz. silver and traces of gold and copper.

Development: by 5 tunnels, from 700' to 2600' long with a total of 15,376' of underground work, said to have blocked out 36,000 tons of ore.

Equipment: Includes 200 h. p. Diesel engine, compressor and 100 ton mill using 4 Callow flotation machines.

Management plans to do 6500' of development in 1917 and to remodel its mill.

COPPER CANYON MINING CO.

NEVADA

New York Office: 25 Broad Street, N. Y. **Mine Office:** Battle Mountain, Nev.

Officers and Directors: R. M. Atwater, Jr., mgr.; C. C. Burger, v. p.; L. E. Whicher, treas.; E. N. Skinner and F. Sommer Schmidt, gen. mgrs. H. Pelz, sec.

Inc. Nov. 4, 1916, in Delaware. **Cap.,** 1,000,000 shares at \$1 par value. 500,000 issued. **Transfer Office:** 25 Broad Street, New York; N. Y. Trust Co., 26 Broad Street, registrar. Annual meeting 3d Tuesday in November.

Property: 16 patented claims of about 300 acres in Copper Canyon, Battle Mountain, Nevada. Formerly owned by the Glasgow & Western Mining Co. Purchase price was paid out of first year's production. First worked 1882.

Claims said to show 3 veins, the Virgin, Superior and Estes, varying from 10' to 30' in width; the first two with a N. S. course and dip of 60° to 80°, carry ore shoots of about 150' in length. The Estes ore body found by present management is 100' long, and 20' wide of high grade ore. The ore is a mixed sulphide and oxide of enargite, chalcocite, chrysocolla, malachite and cuprite assaying from 5%-15% copper.

Development: by two old incline shafts, 200' and 600' and by a vertical shaft just started. The extent of underground workings is 3500' with a greatest depth of 570'. Mine is worked by the fill-stope method.

Equipment: 60 h. p. gasoline hoist; 100 cu. ft. compressor, centrifugal pump, 250 h. p. distillate engine.

Production: began in April, 1916, and produced to Jan. 1, 1917, about 2,000,000 lbs. copper. Shipments of about 50 tons daily of 10% copper are being teamed and trucked 9 miles to rail and sent to the Garfield smelter. Ore reserves are substantial enough to warrant construction of 100-ton mill which is soon to be started.

HIDER NEVADA MINING CO.**NEVADA**

Officers: Fred Redmond, pres.; J. J. Morris, sec.-treas.; above with Mrs. A. F. Pitt, C. W. Pitt and T. E. Fitzgerald, directors.

Cap., 1,000,000 shares; 347,980 issued.

Property: about 23 miles south of Battle Mountain, Lander Co., Nevada, said to show several veins carrying copper ore.

Development: includes 125' incline shaft and a tunnel.

Management expected to ship some ore from the dumps, 1917.

HILLTOP-MILLING & REDUCTION CO.**NEVADA**

Hilltop, Lander Co., Nev. **Officers:** Frank LeBar, pres.; Chas. E. Beach, v. p.; E. Ross Carver, sec.-treas. and mgr. Above are directors.

Inc. in Nevada. **Cap.,** \$50,000; shares \$10 par; all outstanding. Annual meeting in January. Company operates a 75-ton 10-stamp cyanide plant. Gross earnings, 1914, \$21,721; operating expenses, \$15,133.

KIMBERLY CONSOLIDATED MINES CO.**NEVADA**

Idle. **Office:** 1200 Liberty Bldg., Philadelphia, Pa. **Mine office:** Hilltop, Nev.

Officers: Frank LeBar pres.; Geo. A. Ford, v. p.; E. Ross Carver, sec.-treas.-mgr., with Chas. A. Beach, S. P. Curtis and John L. Cox, directors. H. Crouch, supt.

Inc. 1910, in South Dakota. **Cap.,** \$5,000,000; shares \$1 par; 4,297,916 shares issued. Stock listed on the San Francisco Exchange. Annual meeting in May. Gross earnings in 1915 amounted to \$9,780.

Property: 18 claims, all patented, 360 acres, at Hilltop, shows gold, silver, copper and lead ore in quartz veins. The vein runs N.-S., dips W., and is said to have been proven for 5,000' in length. A crosscut driven on the 350' level reported to have cut a 12' vein assaying \$9.48 per ton. Developed by 5,000' tunnel and several shafts.

Equipment: includes compressor, ½ mile tram and 25-h. p. gasoline engine, 50-ton mill and cyanide plant.

No 1916-'17 returns.

KIMBERLY SHIPPER MINING CO.**NEVADA**

Office: 714 Kearns Bldg., Salt Lake City, Utah. **Officers:** W. S. Gilsey, pres.; F. L. Sumpter, v. p.; C. W. Fleck, sec.; C. L. Shelley, treas.; with G. H. Gould, directors.

Inc. in Utah. **Cap.,** \$50,000; shares 5c par.

Property: 60 acres at Hilltop, Lander Co., Nev., 20 miles E. of Battle Mt., shows gold-silver ore in shoots. Developed by 800' tunnel and drifts. A shipment to the U. S. smelter in Dec., 1915, yielded \$75 per ton. Samples from a rich shoot opened in April, 1916, reported to have assayed 226.85 oz. gold and 317.2 oz. silver, or \$4,737 per ton.

MARICOPA MINES CO.**NEVADA**

Austin, Lander Co., Nev. Described under Arizona companies.

NEVADA-CALUMET COPPER CO.**NEVADA**

W. H. Bray, mgr., Battle Mountain, Nev. F. D. Nowell, pres.; J. A. Beck, v. p.-sec.

Inc. 1913. **Property:** the Boyd-Martin group, 30 claims, in heart of the monzonite-porphry belt of Battle mountain, shows copper-stained patches thought to represent the outcrop of a big disseminated glance deposit.

NEVADA GOLD MINES CO.**NEVADA**

No recent returns. J. S. Madden, Austin, Lander Co., Nev., mgr. **Inc.** 1915, in Nevada.

Property: 16 claims, including the Gold Park, La Crux, San Pedro, May-Do-So and Cottonwood groups, at Austin, said to show gold-silver-copper ores in well-defined veins. Systematic development work started Nov., 1915.

NICKLAS MINING CO.**NEVADA****Address:** 11 Pine Street, New York.**Officers:** E. N. Breitung, pres.; A. S. Mitchell, v. p.; W. A. Hamilton, sec.-treas., with Max Breitung and H. B. Barling, directors.**Inc.** Sept. 7, 1916, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; 1,300,000 issued. **Bonds:** \$300,000, 6% 1st mtge., sinking fund, serial gold bonds.**Property:** 4 claims, 82 acres, in Galena district, 13 miles S. W. of Battle Mountain, Nev., said to show a quartz vein in granodiorite. Ore contains 9 oz. silver and \$4.60 gold per ton.**Development:** by shaft to 200' below tunnels, lowest of which is 1,000' long. Workings total 3,000'. **Ore reserves:** are given as 30,000 tons of \$10 ore. In a report by H. B. Barling, the estimate is 98,450 tons and for the whole property 700,000 tons. Recent results are said to have been good. Costs are estimated at \$5.80 per ton and profits at \$3.75; a 100-ton mill is to be built.**RUBY SILVER MINING & DEVELOPMENT CO.** **NEVADA****Office:** 15 Broad Street, New York; George W. Abel, pres. **Cap.**, 1,000,000 shares, \$1 par; 600,000 outstanding.**Property:** 260 acres in the Lewis mining district, Lander Co., Nev., reported to have "opened a substantial ore-shoot" to a depth of 580', and to have found "excellent values" in the 4 tunnels which have been driven to intersect this orebody at various depths. Property is fully equipped. Management states a 50-ton flotation unit is being added to equipment. The mine has been operating for several years and in May, 1916, was brought out by one of the Broad Street (New York) brokers.

Letters returned in 1917.

TENABO MINING & SMELTING CO. **NEVADA****Office:** 105 Mercantile Bldg., Salt Lake City, Utah. **Mine office:** care A. E. Raleigh, supt., Tenabo, Lander Co., Nev.**Officers:** W. Mont Ferry, pres.; John Pingree, v. p.; John Janney, sec.; E. O. Howard, treas., and Benner X. Smith, directors; Duncan MacVichie, cons. engr.**Inc.** 1909, in Nevada. **Cap.**, \$3,000,000; shares \$2 par; issued, \$1,922,156. Annual meeting, second Monday in February. Union Trust Co., New York, registrar; Windsor Trust Co., New York, transfer agent; Walker Bros. Bank, Salt Lake City, depository. Stock is listed on the unqualified department of the Boston curb.

Company bought, 1909, the property of the Gem Cons. Mining Co., at Tenabo, which in turn had taken over the property of the Reliance M. & M. Co., the Tenabo Mng. & Sm. Co. giving 450,000 shares of stock to the Gem Consolidated for the lands. Company also bought the property of the Tenabo Cons. Mine Co., comprising the Copper Hill and Widows mines, for 300,000 shares of stock.

Property: 223 acres of mineral lands and an 80-acre mill and smelter site, in 4 groups, all with more or less development work. The principal group shows a deposit of low-grade copper ore, stated by company to average 300' in width, outcropping for nearly a mile. The management estimates the ore on this group to run about 3% copper, with small gold and silver values.

The Little Gem mine, about 1 mile from Tenabo, has a contact deposit between rhyolite and sedimentary rocks, carrying copper carbonates and chalcopyrite, quartz gangue, a 450' shaft, sunk at the very flat angle of 22°, showing an orebody ranging from 2' to 14' in width, reported to have 24,884 tons blocked out, that will average \$18 per ton.

The mine was acquired upon a report by Duncan MacVichie that it contained 7,783 tons of \$13.38 smelting ore and 17,257 tons of \$3.88 concen-

trating ore and that \$25,000 spent on the property would bring reserves up to 100,000 tons.

Another property has a 150' incline shaft, in a vein, apparently widening in depth with 5 parallel veins in a cross-section of about 600'. The property as a whole has about 3,000' of workings, and about \$100,000 has been expended in development and equipment. Twenty-three cars of ore, from the Little Gem mine, gave net smelter returns of \$17,640.

WATT MINE.

NEVADA

Owned by Austin Goldfield Mining Co., and operated by H. Lemaire, under lease, several shipments being made in 1915.

Property: the Cambria or Todd claims on N. side of New York canyon, Reese River district, Lander Co., Nev.

Developments: 300' inclined shaft with 3 levels. Vein in dark quartzite ranges from 4" to 12" wide and consists of white quartz containing tetrahedrite, pyrite, chalcopryrite, and some blende and galena; dip 25° to 45° N. E.; strike N. 45° W. Ore shipped is said to average about \$125 per ton, chiefly silver. To end of 1915, lessee had shipped ore worth over \$15,000.

Equipment: includes a 25-h. p. gasoline hoist.

LINCOLN. COUNTY

AMALGAMATED PIOCHE MINES & SMELTERS CORP. NEVADA

Office: 40 Cedar Street, New York. **Mine office:** Pioche, Nev.

Officers: H. R. Van Wagenen, pres.; Wm. B. Randall, v. p.; E. S. Snow, sec.-treas.; Wm. F. Roberts, asst. sec.-treas.; H. S. Van Wagenen, supt.

Inc. July 27, 1911, in Maine, to take over the properties of the Nevada-Utah, Prince Cons., Ohio-Kentucky, and Pioche Cons. companies. It is the operating company of the Cons. Nev.-Utah Corp.; property is described under that title.

Cap., \$1,000,000; shares \$1 par; in treasury Mar. 31, 1915, \$499,500. Annual meeting 1st Tuesday in June. Treasurer's report of Mar. 31, 1915, shows assets of \$1,153,534, which includes property \$499,575, cash \$9,636, mine development \$66,683, machinery and equipment \$35,125, accounts receivable \$3,508, excess liabilities, \$25,901; liabilities: accounts payable, \$16,948, Cons. Nev.-Utah Corp. \$18,118, Pioche Pacific R. R. Co., \$1,442, Pioche accounts payable \$10,520, notes payable (Cons. Nev.-Utah Corp.) \$106,504. Inventory does not include ore on hand or in transit, \$18,753. No 1916 returns.

ARCANE MINING CO.

NEVADA

Letters returned, 1917, from former office: 1605 Walker Bank Bldg., Salt Lake City, Utah. **Mine office:** Pioche, Nev.

Officers: H. W. Rand, pres.; A. M. Cheney, v. p.; S. P. Kinney, sec.-treas.; preceding officers, Frank Holman, Frank Manning, directors. H. E. Freudenthal, supt. **Cap.,** \$100,000, shares 10c par.

Property: five claims, adjoining the properties of the Ohio-Kentucky and Amal. Pioche at Pioche, through which the Susan Duster lode of the Ohio-Kentucky extends, with 45° dip to the south. The ore from the lode on the O. K. property is said to have had an average assay value per ton of 7% lead, 20% zinc, 20 oz. silver and \$2.50 in gold.

Development: 1,200' of underground work has been done. Company said to plan sinking a vertical double-compartment shaft to the 650' level, at which depth it expects to cut the Susan Duster lode, 200' distant from the Arcane-O. K. line. The O. K. company is said to have followed the lode to the property line.

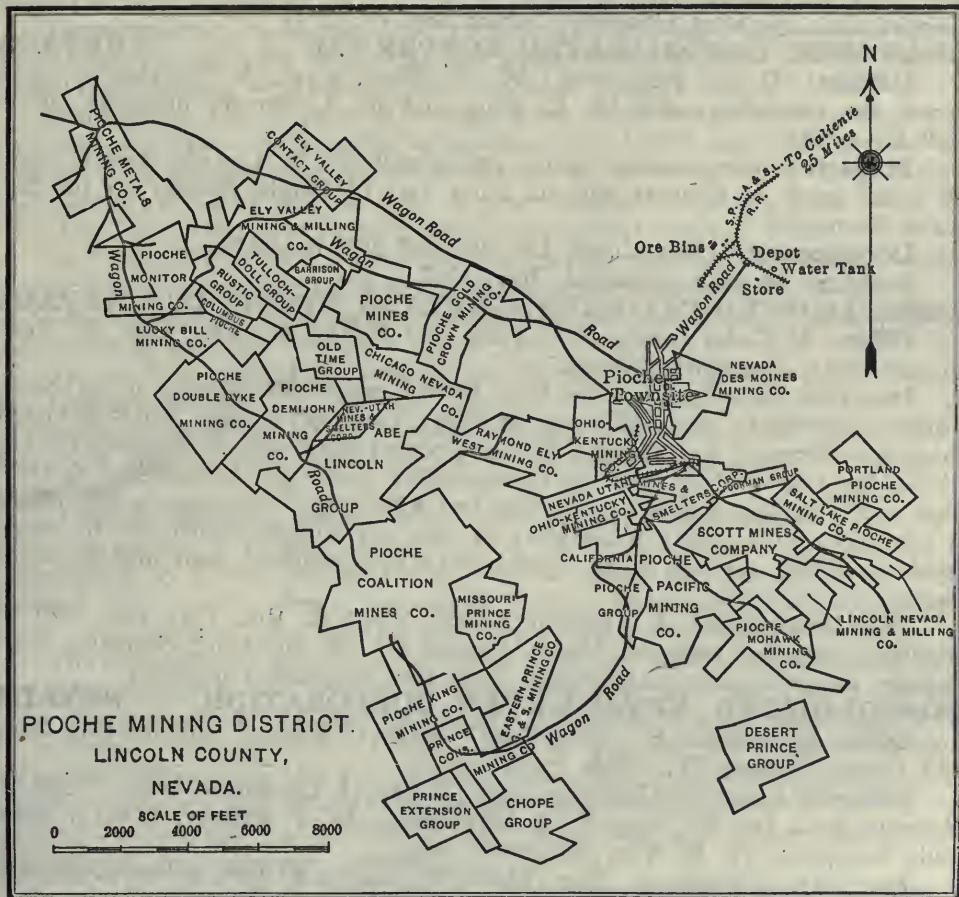

Equipment: power house, blacksmith shop, 40-h. p. gasoline engine and air compressor.

NEVADA

ATLANTA-HOME GOLD MNG. CO.

NEVADA

Officers: F. R. McNamee, pres.; E. B. Bronson, v. p.; M. Justice, sec.; E. M. Bray, treas.; preceding officers, R. W. H. Smith, and H. A. Geisendorfer, directors. J. J. Stumenbord, supt.

Property: 11 claims, patented, 180 acres, at Atlanta, Lincoln Co., 47 miles northeast of Pioche, show a contact deposit between porphyry and limestone, that is said to average from \$2 to \$4.50 per ton in gold, and is 50' to 80' wide, proven for a length of 300' and depth of 200'. Ore reserves claimed to be 320,000 tons.

Development: two shafts sunk 300' apart, with drifts and crosscuts totaling 1,600'.

Equipment: includes a steam hoist and compressor. Company plans

continuing shaft sinking to 500' level and also building a cyanide plant. Reports on property have been made by Paul W. Meyers, Geo. Kislingbury and Kirby Thomas.

BRISTOL CONSOLIDATED MINES & SMELTING CO. NEVADA

Frank Sullivan Smith, 60 Wall Street, New York, receiver.

Company originally owned 21 or more patented claims in the Bristol mining district, Pioche, Lincoln Co., Nev. In 1911 practically all this property was transferred to the Day Bristol Cons. Mines Co. In 1914 the latter company went into receivers' hands and the property finally passed to the Cons. California-Nevada Co., which company was recently merged with the Internat'l & Intercontinental Mng. & Ref. Co., holding company (Uvada Copper Co., operating company), which see.

CHEROKEE CONSOLIDATED COPPER CO. NEVADA

Officers: D. W. Jeffs, pres.; W. P. Silver, v. p.; R. T. Thurber, sec.-treas., the preceding with M. E. King and R. A. Brown, directors, all of Salt Lake City.

Property: four patented claims and a mill site in Lincoln county, Nev., 30 miles south of Caliente and six miles east of Leight Station on the Salt Lake Route.

Development: three shafts, 150', 90' and 250' in depth.

Company recently organized, July, 1917.

CONSOLIDATED CALIFORNIA-NEVADA MINING CO. NEVADA

Office: 40 Cedar Street, New York, and Pioche, Nevada. Geo. W. Bent, former supt. In receivers' hands.

Inc. 1915, to take over the Day Bristol properties, bought in by bondholders' committee at sheriff's sale in 1915. Company started work at Gypsy mine with 50 men, and shipped 800 tons copper-silver ore in November, 1915, deepening Gypsy shaft, and installing engine, hoist and compressor at Hill-side and Tempest shafts. Company had 8,300' rope tramway in operation.

In Feb., 1916, owing to inability to ship ore already mined and to secure funds from sale thereof, mines closed down and company went into receivers' hands.

The International & Intercontinental Mng. & Ref. Co., inc. 1916 as holding company, with the Uvada Copper Co. as operating company, were formed to operate the properties. (See two companies named.)

CONSOLIDATED NEVADA-UTAH CORPORATION. NEVADA

Office: 63 William St., New York. Mine at Pioche, Lincoln Co., Nev., and Frisco, Beaver Co., Utah.

Officers: Chas. H. Clarkson, pres.; Victor I. Cumnock, treas.; Wm. F. Roberts, sec.; Jos. W. Kay, F. A. Dillingham, W. J. Palmer, Wm. B. Randall, directors. H. R. Van Wagenen, mgr.

Inc. 1913, in Virginia. **Cap.**, \$6,000,000; shares \$3 par; issued \$3,936,396; in treasury, \$1,163,604; reserved for bond conversion, \$900,000; authorized bond issue \$90,000, 1st mtge., 6%; issued, \$499,867.

Company is a reorganization of the Nevada-Utah Mines & Smelters Corporation, which went into bankruptcy in 1912 and whose holdings were sold under judgment proceedings for \$100,000 to the new company. Stockholders in the old company who subscribed 50 cts. in cash for each share held and deposited their old stock, received bonds for the cash paid by them and 200 shares of stock in the new company for each \$100 subscribed.

Property: 3 groups of mines, owned through control of subsidiary companies; the Pioche group at Pioche, including several productive mines that are largely developed; the Imperial group at Frisco, including the Comet mine and the Last Chance at Bingham, Utah.

The Pioche property is operated by the Amalgamated Pioche Mines &

Sm. Corp'n, of which Mr. H. R. Van Wagenen, of Trippe & Co., is president; 60% of the stock is owned by the Consolidated-Nevada-Utah. The Amalgamated Pioche group comprises 38 claims, 33 patented, also 51 town lots and 1,528 acres miscellaneous lands. The mines at Pioche (formerly owned by the Pioche Con.) include silver-lead properties that were large producers, 1870 to 1876, and suspended operations 1893, being popularly credited with a past production of \$20,000,000 gross, which probably is a high estimate. The May Day mine of this group has a 1,100' shaft and there are 2 shafts on the Yuba mine adjoining. The Meadow Valley claim has a 400' three-compartment incline shaft. The old Independence shaft is said to show a 40' body of sulphide ore between the third and fourth levels.

Development: to March, 1915, consisted of 800' of crosscuts and drifts on the 1,400' level with stopes on the 1,200, 1,300 and 1,400' levels. About 20,000 tons milling ore blocked out between these levels.

Production: for 13 months ending June, 1915, was 4,199 tons zinc ore and 158 tons lead ore shipped to smelter and 13,200 tons milling ore on dumps. Ore shipped assayed 40% zinc, 25 oz. silver, with some gold and lead values averaging \$26 per ton. A new contract was made with the U. S. Zinc Co. for purchase of ore and concentrates after July 1, 1915.

In Oct., 1917, company was actively prospecting at N. 1 mine, a new station being cut on the 420' level to facilitate development N. and E.

The high-grade silver lead ore found by the Greenwood leasers makes this work advisable.

The mill is still idle, awaiting the actual blocking out of a substantial tonnage of ore.

Equipment: includes 700' Leschen aerial tramway, steam power and 4-drill air compressor. New mill put in commission April, 1916, treating 50 tons daily.

Other Property: company also owns several other groups. The Half Moon group of 6 claims, 42 acres, lies 1½ miles west of Pioche. It is understood to be the policy of the new company to lease the upper levels and develop the deeper workings itself. The Telephone claims and parts of Imperial Group are operated by lessees on a royalty basis.

The Jack Rabbit group is connected with the Pioche by a 20-mile narrow-gauge railway, and Pioche is connected with the San Pedro railroad by a 28-mile branch line known as the Caliente & Pioche, completed 1907.

Company owned 48% of the stock in the Day and Bristol mines, formerly operated by the Day-Bristol Cons. Mng. Co.; this property was sold at receiver's sale in 1914 for \$99,200 (see Uvada Copper Co.) and the Cons. Nevada-Utah Co. decided to lose their holdings rather than expend \$150,000 on an unproven property.

The Imperial group, near Frisco, Utah, is a copper property formerly owned by the Imperial Gold & Copper Mining Co. It was purchased at a judgment sale by the old Nevada-Utah to satisfy its claim of \$100,000 against the Imperial Co. Developed by tunnels showing carbonate ores. The Comet mine, belonging to the Nevada-Utah Mining Co., a single claim, adjoining the Cactus, is said to carry a continuation of the Cactus orebodies of the Newhouse Mines & Smelters Co. The mine has a single shaft of 300' depth, sunk on gossan carrying about 1% copper. The adjoining Cactus mine is opened by a 6,000-ft. tunnel and the development of the Comet would necessitate an even longer tunnel or an extensive aerial tram.

The Consolidated Co. also owns all the capital stock of the Pioche-Pacific Railroad Co., and all the capital stock of the Manhattan Copper &

Gold Mining Co., comprising the Manhattan group of 7 unpatented mining claims in the Highland mining district about 10 miles westerly from Pioche, and the Half Moon and Telephone claims, in the Ely mining district, Lincoln county, Nev.

Company controls, through ownership of 309,962 out of 600,000 shares, the Ohio Kentucky Cons. Mining Co., whose sole assets consist of 200,000 shares of Amalgamated Pioche Mines & Smelters Corp'n.

DAY BRISTOL CONSOLIDATED MINES CO.

NEVADA

Property sold Jan., 1915, and transferred to Consolidated California-Nevada Mining Co., which after a brief struggle, went into receivers' hands. The Day-Bristol mine then passed into the possession of the Uvada Copper Co. (operating company for the International & Intercontinental Mng. & Ref. Co., holding company), which see.

DEMIJOHN CONSOLIDATED MINING CO.

NEVADA

Offices: 410 Savings & Trust Co. Bldg., Salt Lake City, Utah. Mine at Pioche, Lincoln Co., Nev.

Officers: Fred W. Price, pres.; J. Thomas, v. p.; W. M. McCrea, sec.-treas.; with Owen A. Bailey, F. E. Parish, O. P. Soule, directors. Chas. H. Gitsch, supt.

Cap., 1,000,000 shares; 10c par; assessable; 16,470 shares in treasury, April, 1916. Listed in Salt Lake City.

Property: 9 claims, 7 patented, 2 miles W. of Pioche, said to show lead-silver-gold ore. The ore is making into the lime from the hanging wall of a fissure 40' wide and varies from 1'-2' in thickness. A selected sample assayed 52% lead, 80 oz. silver and 0.12 oz. gold. The main vein traversing the property has a N.-S. strike and dips to the E. Mineralization, though persistent, is not in commercial quantity, save in narrow streak noted.

Development: 300' shaft, drifts, crosscuts and winzes to the 500' level.

Equipment: hoist, air compressor and all necessary machinery. Small shipments made in 1915. Company plans diamond drilling from 500' level to test ore zone along Yuba dike, at greater depth.

EASTERN PRINCE GOLD & SILVER MINING CO.

NEVADA

Cap., \$100,000; shares 10c par. Listed on Salt Lake Exchange. Owns 8 claims adjoining Prince Consolidated in Ely mining district, Pioche, Lincoln Co., Nev. Believed to have extensions of the Prince Consolidated low-grade, iron-manganese deposits, carrying a little silver, lead, zinc and gold.

E. & F. MINING CO.

NEVADA

Idle. Address: care Walker Bros. Bank, Salt Lake City, Utah. Mine office: Pioche, Lincoln Co., Nev.

Officers: A. C. Ellis, Sr., pres.; A. Levy, sec.; Walker Bros. Bank, treas. Arthur Murphy, mgr.

Inc. March 17, 1902, in Utah. **Cap.,** \$100,000; shares 50 cts. par; assessable.

Lands: 12 claims, 11 patented, 240 acres, in the Bristol and Jackrabbit districts, 1½ miles from a railroad. Mine has a 450' incline shaft and 2 tunnels, one of 350', with several hundred feet of lateral workings.

Equipment: includes a 25-in. p. gasoline hoist and necessary mine buildings. Mine produced a little copper ore, with excess of iron, but was shut down 1907. Development work in lower tunnel resumed in 1914 and shipments of ore on dumps, said to run \$20 per ton, planned, 1916. No recent returns.

GROOM SOUTH END MINING CO.

NEVADA

Address: Groom, Nev.

Officers: W. Armstrong, pres.; C. Osborne, v. p.; T. J. Osborne, sec.-treas.

Property: 1 claim in Groom district, 100 miles S. W. of Pioche, Lincoln Co., Nev. In 1916 the output was 1,500,000 lbs. of lead and 25,000 oz. of silver ore, hauled 60 miles by tractor.

Prospects considered good.

HAMBURG MINES CO.

NEVADA

Office: 1118 Newhouse Bldg., Salt Lake City, Utah. Mine at Pioche, Lincoln Co., Nev.

Officers: M. C. Godbe, pres.-mgr.; J. R. Cook, v. p.; J. T. Osborne, sec.; John Pingree, treas.; above with A. H. Godbe, W. H. Pitts and Alex Lloyd, directors. M. M. Johnson, cons. engr.

Inc. June, 1916, in Nev. **Cap.**, 1,000,000 shares; 20c par; 800,000 issued.

Dividends: first dividend of 1c paid March 2, 1917; third paid May 21, 1917, making \$24,000 to date.

Property: 4 claims, 1 patented, 40 acres, in Pioche mining district, Lincoln Co., Nev. Claims show gold-silver-lead ore occurring in quartz filled fissures. Veins vary from several inches to 5' in width and are cut by several N. S. faults.

Development: by 650' tunnel with 100' raise.

Production: 10 carloads of ore shipped in 1916 netted \$8,475. Ten carloads shipped to April, 1917, netted \$14,058.

HILLSIDE COPPER CO.

NEVADA

See Bristol Cons. Mines & Sm. Co.

HOME RUN COPPER CO.

NEVADA

Office: 1118 Newhouse Bldg., Salt Lake City, Utah. Mine in Bristol mining district near Pioche, Nev.

Officers: M. C. Godbe, pres.; E. S. Woodward, v. p.; H. F. Earle, sec.-treas.; preceding, with A. H. Godbe and Henry Sadler, directors. W. H. Pitts, supt.

Inc. 1912. **Cap.**, \$100,000; shares 10c par. Listed on Salt Lake Exchange.

Property: 8 claims, 3 fractions, 180 acres, 9 miles from railroad, adjoins the Gypsy mine and is said to carry same fissures. Claims show fissures in limestone expanding into replacement deposits and caves carrying rich copper ores with gold and silver values. Development in 1916 on the 65' level said to have opened up a 5' vein of copper ore.

Company also owns Bristol mine.

Development: by 225' shaft with levels at 65', 90' and 150' opening up caves, showing 1,500 tons of ore containing 8.25% copper and 40 to 200 oz. silver.

Equipment: includes gasoline engine, hoist, compressor and necessary buildings.

No 1917 returns, as company's secretary does not answer letters.

INTERNATIONAL & INTERCONTINENTAL

MNG. & REF. CO.

NEVADA

No recent returns securable. **Office:** 60 Wall St., New York City.

Officers: Raoul Madero, pres.; Wm. W. Wilson, v. p.; D. T. Gately, sec.-treas.; with C. C. Graham, A. W. Middleton, Antonio G. Garializo and Wm. H. Hull, directors; Edward M. Brement, treas.

Inc. Feb. 26, 1916, in Del. **Cap.**, \$3,000,000; shares \$5 par; outstanding, 537,500 shares; 62,500 reserved for conversion of bonds. Stocks transferred at company's office. Metropolitan Trust Co., New York, registrar. Listed on New York Curb.

Bonds: \$125,000 ten-year, 8% convertible debenture coupon, dated March 1, 1915, due March 1, 1926. Int. payable quarterly, March, June,

Sept. and Dec. 1. Company is a holding company, the Uvada Copper Co. being the operating company.

Balance sheet of March 24, 1916, shows assets of \$3,124,671, which includes: accounts receivable, due from Cons. Calif.-Nev. Co. stockholders and claims against Cons. Calif.-Nev. Co., \$29,082; contract rights, \$1,617,835 (under contract International is entitled to receive 304,757 shares out of 600,000 shares outstanding of the Uvada Copper Co. stock); investment in capital stock of the Cons. Calif.-Nev. Co., \$1,476,215; cash, \$723; organization expense, \$816. Liabilities include: contract liability, \$84,545; notes payable, \$6,560; debenture bonds ctfsts., issued and reserved, \$33,566.

Reported in March, 1916, that "Negotiations are now pending with Francesco Madero for the purchase by this corporation of certain mining properties belonging to the former in Mexico."

F. C. Richmond, pres. of Uvada Copper Co., writing from Salt Lake City, Utah, 1916, says that he knows nothing of the I. & I. M. & R. Co.

MANHATTAN COPPER MINING & MILLING CO. NEVADA

Idle. Pioche, Lincoln Co., Nev. Company succeeded the Manhattan Gold & Copper Mining Co. and is owned by the Cons. Nevada-Utah Corporation, successor of the Nevada-Utah Mines & Smelters Corporation.

Property: 7 claims, one in the Ely mining district, developed by 120' shaft, showing manganese, iron, silver, lead ore. The other 6 claims are at Stampede Gap in the Highland district of Pioche and show small veins of silver-lead and copper ore. Developed by 130' shaft.

MENDHA-NEVADA MINING CO. NEVADA

Idle and probably dead. Former address: Commercial Bldg., Salt Lake City, Utah. Mine office: Pioche, Lincoln Co., Nev. T. J. Osborne, pres.; M. C. Godbe, sec.

Cap., \$1,000,000; shares \$1 par.

Property: is said to have produced \$500,000 under its former ownership. The mine is reported to have a vein 3 to 15' thick, averaging 6', practically vertical and showing silver and gold-bearing lead and copper ores on 700' level. Development is by a 900' incline shaft.

Letters returned, 1917.

NEVADA-UTAH MINES & SMELTERS CORP. NEVADA

See Consolidated Nevada-Utah Corporation.

PIOCHE-BRISTOL MINING CO. NEVADA

Address: Jos. J. Daynes, Jr., pres., 1542 S. Fifth St., E., Salt Lake City, Utah; John Stringham, sec.-treas.; Harry L. Parker, supt.

Inc. Feb. 19, 1916, in Utah. Cap., 1,000,000 shares; 5c par; 615,000 shares issued. Stock listed on Salt Lake Exchange.

Property: 6 claims, surveyed for patent, in the Jack Rabbit mining district, adjoining the Day Bristol, near Pioche, Lincoln Co., Nev. Claims said to show lead-silver-copper ore. Shipped 300 tons of ore 1915-16, reported to have netted \$15,000.

Idle, 1917. Reorganization of board of directors imminent and mine development to be started soon.

PIOCHE METALS CO. NEVADA

Address: F. B. Cooke, treas., 1009 Newhouse Bldg., Salt Lake City, Utah. Company levied an assessment of 1c a share in March, 1915.

Property: at Pioche, Nev., has been shut down save for annual representation work.

PRINCE CONS. MINING & SMELTING CO. NEVADA

Office: 1118 Newhouse Bldg., Salt Lake City, Utah. Mine office: Pioche, Lincoln Co., Nev.

Officers: A. H. Godbe, pres.; G. F. Wasson, v. p.; M. C. Godbe, sec.-gen. mgr.; John Pingree, treas.; with D. L. Wertheimer, directors. Jas. Quirk, supt.

Cap., \$2,000,000; shares \$2 par. Stock listed on Salt Lake Exchange.

Annual report for 1915 shows total receipts, \$311,234, which includes cash on hand, \$119,650; profit from operations, \$158,544; notes receivable, \$12,923; expenditures amounting to \$154,465, included development, \$69,379; notes payable \$54,070; dividends Nos. 1-4, \$124,924. Net operating profit for the year was \$158,554.

Dividends: to Sept. 1, 1917, total, \$550,000; paid since July 1, 1915.

Property: 14 claims S. W. of Pioche, in Ely mining district, contains large orebodies of iron manganese, outcropping on surface for 800', having an aggregate thickness of 120', width of 500' and proven for a length of 1,200'. The ore occurs as large deposits in bedded planes of lime and shale and is reported to average 3-4% lead, 34% iron, 13% manganese, 3 oz. silver and some gold, 3% lime, 11% insol. and 14% silica, valued at from \$7.50 to \$9.50 per ton. Owing to large percentage of iron, the ore is especially valuable as a flux to the lead smelters, the iron commanding a bonus over the cost of smelting, with silver, gold and lead values coming in as a profit. From this source alone the ore yields \$3-\$4 per ton.

Company also owns the Pioche King group of 9 claims, and about 1,000 acres of patented land at Dry Valley and Bullionville, 12 miles from Pioche, said to contain 120,000 tons of tailings on dumps, showing 5.34% lead, 10 oz. of silver, 0.11 oz. gold per ton and estimated to average \$5 per ton profit. A 200-ton oil flotation mill was erected to treat these tailings in 1916.

The Prince mine is developed by 550' main shaft with several miles of drifts. A body of high-grade lead-silver sulphide ore, said to be 16' wide, is being prospected by diamond drilling on the 550' level and a 3-compartment winze sunk from this level to the 800' level. **Ore reserves:** estimated at approximately 1,000,000 tons.

Diamond drilling was underway, and in July, 1917, a hole put down from the 600' level cut sulphide ore assaying \$19.32 per ton. This work is to be continued to 2,000' depth.

Equipment: includes oil power, hoist, compressor and 9-mile standard gauge railway connecting with the Salt Lake Route from Pioche. Freight rate is \$1.75 per ton.

Shipping 12,000 tons of ore per month in 1916. Employs 80 men. Present management deserves credit for putting the mine on a dividend paying basis, with large ore reserves and \$100,000 cash surplus in less than 3 years, although present high prices are largely responsible for augmented earnings of company.

Monthly production is over 600,000 lbs. of lead and 25,000 oz. of silver.
SILVER COMET MINING CO. NEVADA

Panaca, Lincoln Co., Nev.

Officers: E. D. Smiley, pres.-mgr.; F. W. Russell, v. p., 811 Center St., Boston, Mass.; M. J. Smiley, sec.; J. W. Baker, treas., with W. A. Burnett, directors, all of Boston, except E. D. Smiley.

Inc. Jan., 1913, in Nevada. **Cap.,** \$500,000; shares \$1 par. Annual meeting in July. Operating expenses for 1914-15 reported as \$30,000; no profits.

Property: 5 unpatented claims, 100 acres, in the Comet mining district, Lincoln Co. **Ore:** gold-lead-silver-tungsten, occurs in nearly vertical fissure veins in quartzite, said to assay \$30 per ton in gold, silver and lead. Developed by 145' vertical shaft, with 950' underground workings.

Equipment: includes a gasoline hoist and 50-ton mill completed in 1915;

the mill contains a crusher, rolls, Huntington mill and a Wetherill magnetic separator. Production was supposed to start in 1916.

UVADA COPPER CO.**NEVADA AND UTAH**

Address: M. M. Johnson, mgr., Pioche, Lincoln Co., Nev.

Inc. 1915 (by F. C. Richmond, pres., Richmond Machinery Co., 117 W. Second St., Salt Lake City, Utah) to take over property of the Day Bristol Cons. Mines Co. Company is the operating company of the International & Intercontinental Mng. & Ref. Co., which see.

Cap. \$600,000; shares, \$1 par; non-assessable.

Initial dividend of 1c a share paid, Sept., 1916, equal to \$6,000. Monthly dividends of 1c are now paid.

Property: 30 claims, 460 acres, 15 miles west of Pioche, includes the May Day, Hillside, Tempest, Gypsy, Vesuvius, National, Inman, Tempest, Oregon Short Line, Iron and Day mines. The Day mine comprises 5 claims on the opposite side of the mountain and was needed in order to drive a tunnel through the mountain, giving direct access to the railroad.

Ore is a mixed sulphide carrying silver, lead, copper, and some zinc, occurring in limestone cut by fissures.

Development: by 2 old shafts, the 700' Gypsy and 500' May Day, both out of commission in 1915. A shaft, being put in condition, July, 1916, will be the main working shaft and will be connected with the 500' level. Old workings exceed 10,000'. In 1916, new work included mining ore on the 300', 350' and 450' levels and sinking a winze from 500' to 630' level.

The future lies in the Bristol property, in which high grade ore persists to 500' depth.

Equipment: 4 hoists, 3 compressors, 5 oil-engines, 4 boilers (400 h. p. total), 2 mile aerial tram, machine shop, assay office, buildings, etc., complete.

Production: in 1916 was 11,000 tons of copper-lead-silver ore. Over 1,000 tons being shipped monthly in 1917, excepting during a period when the tramway was burned.

VIRGINIA-LOUISE MINING CO.**NEVADA**

Address: Pioche, Nev.

Property: a silver-lead and iron mine adjoining the Prince Consolidated. The Prince company, which has a large interest in the Davidson M. Co., had an option on control of the Virginia-Louise, but dropped the option after being convinced that the Davidson owned the orebodies of the Virginia-Louise by right of the apex law.

In July, 1917, the Davidson company was suing the Virginia-Louise, claiming the orebody in the latter property, while in September, the Virginia-Louise was suing the Prince Consolidated for trespass.

At last accounts, H. R. Van Wagenen, A. D. Knowlton, R. T. Walker, and E. H. Snyder were examining the ground for the Prince company. The quantity of ore at stake is considerable.

YUBA LEASING & DEVELOPMENT CO.**NEVADA**

Out of business. Formerly at Pioche, Lincoln Co.

LYON COUNTY*Yerington District***ALBANY COPPER CO.****NEVADA**

Idle. Mine: Morningstar, Lyon Co., Nev. John E. Lutz, pres., treas. and gen. mgr.; E. R. Tutt, v. p.; Wm. G. Williamson, sec.; Ulrich Keck, supt., at last accounts.

Inc. June 29, 1907, in Nevada. **Cap.** \$200,000, shares 10 cts. par, non-assessable. Annual meeting, last Tuesday in November.

Property: 700 acres, with 400 acres miscellaneous lands, giving total holdings of 1,100 acres, 3 miles from a railroad, in the Buckskin district, showing 3 orebodies, carrying mainly nickeliferous malachite and melaconite, estimated by management to average 3.5% copper, 2% nickel, 0.2 oz. silver and \$2 gold per ton.

Development: includes 5 shafts, of 30', 37', 54' and 253' and 8 tunnels of 30' to 188' length, with total underground workings of 1,400'.

Equipment: includes a 15- h. p. gasoline hoist, good for 800' depth. No recent returns secured.

BLACK DIAMOND COPPER MINING CO.

NEVADA

Idle. Address: care Wm. D. Thompson, pres., 524 Monument Sq., Racine, Wis. Mine near Yerington, Lyon Co., Nev. John W. Owen, v. p.; Louis W. Trankle, sec.; preceding officers, W. A. Kohmar and Adam I. Wood, directors.

Inc. April 9, 1907, in Nevada. **Cap.**, \$1,000,000, shares \$1 par; non-assessable; issued, \$621,700.

Property: 8 claims, patented, 4 miles east of Yerington, shows granodiorite carrying fissure veins of 4 to 9' width, one under development.

Development: several shallow shafts and 500' of tunnels. Principal work is on Diamond No. 2 claim, with a tunnel run to cut a considerable body of sulphide and carbonate ore shown on surface where average assays are about 3% copper.

BLACK ROCK MINE.

NEVADA

Office: 526 Main St., Racine, Wis. Mine 6 miles east of Yerington, Nev. Property privately owned by Wm. D. Thompson, of Racine, Wis.

Lands: 3 patented claims, 52 acres, in Mason district, show 3 parallel fissure veins in quartz-monzonite, of which 2 of 6 to 10' average width, traceable 2,600', have shafts of 80' and 120', showing chrysocolla and chalcopyrite, bottomed in ore, said to give returns averaging 6%-7% copper per ton.

The property is to be equipped and active work started in 1917.

BLUE JAY MINE.

NEVADA

Property: at Yerington, Lyon Co., Nev., consists of 3 patented claims showing prominent cropping zone of shattered granodiorite between two east-west faults. **Ore:** said to carry about 2% copper as chalcocite.

Development: by shaft with 465' drift on 100' level, cutting a body of 2% ore. Two cars of 15% ore from surface pockets have been shipped. New tunnel has not yet reached orebody.

Mine was under option, 1913, to Mason Valley Mines Co., and in 1916 to leasers, but both options were relinquished, "Refusal of Mason Valley smelter to accept ore is chief cause of property's idleness."

BLUESTONE MINING & SMELTING CO.

NEVADA

Office: 43 Exchange Place, New York. **Mine office:** Yerington, Lyon Co., Nev. **Capt. J. R. DeLamar**, owner; **W. O. Fletcher**, sec.; **Chas. A. Weck**, supt. Is not incorporated.

Property: The Bluestone mine and a group of 20 claims adjoining the Mason Valley mine. The Bluestone is the oldest property in the district, claims having been patented previous to 1890. Mine has been opened to a depth of 540' and has about 6,500' of workings, including a 1,300' main haulage tunnel, cutting an ore shoot about 300' wide and 500' long at a point 300' below the apex. This shoot is said to carry an 80' paystreak of high-grade ore, ranging up to 20% in tenor, with balance of ore carrying 2.5% copper. Management estimates 1,600,000 tons of ore in sight, averaging 2.6% copper.

Ore is mainly chalcopyrite, associated with considerable epidote, in

a garnet-limestone gangue, there being practically no oxidized ores, even at the outcrop. Ore is uniform in character, and after a light roast is well adapted to magnetic separation. Drill holes prove that ores extend to 750' depth.

Equipment: includes a 50 h. p. hoist and a 35-drill electric air-compressor. A 100-ton mill pulverizes the ore, in rolls, to pass an 8-mesh screen, after which ore is slightly calcined in a tower roaster, to magnetize the pyrite. Roasted ore is then passed through a Wetherill magnetic separator, which takes up the mineral, and discharges the waste, giving a concentrate of about 15% copper. Magnetic separation is claimed to have given a 95% extraction, though 85%, under working conditions, will be satisfactory.

Company built 2½ miles of railroad from Mason to the mine, 1916.

The magnetic concentrating plant ran in 1916 and the furnace was enlarged. Company spent \$250,000 in development and equipment of property. Management is able and property considered valuable.

Production: about 600 tons daily, early in 1916, increased to 1,000 tons, 1917, shipped to Mason Valley smelter.

BURLINGTON-NEVADA COPPER CO.

NEVADA

Address: Yerington, Lyon Co., Nev. Property at Mason Pass, a few miles from Yerington, is developed by a 100' shaft, from which ore was shipped to the Mason Valley smelter, 1913. Equipment includes a gasoline hoist.

BUTTE & YERINGTON COPPER CO.

NEVADA

Office: care W. E. Wright, sec.-treas., 410 Phoenix Bldg., Butte, Mont. Mine at Yerington, Lyn Co., Nev. W. C. Siderfin, pres.; D. C. Bard, v. p.; preceding officers, Dr. Thos. B. Moore, Dr. Donald Campbell, John D. Pope, and Wm. Mitchell, directors; L. W. Trankle, supt.

Inc. Jan. 29, 1907, in Montana. **Cap.**, \$1,000,000, shares \$1 par, fully paid; issued, \$351,520. Annual meeting, third Wednesday in January.

Property: 2 groups of patented claims, one of 14 claims, about 4 miles east of and across the valley from Yerington and south of the Copper Mountain mine. The land has very attractive surface showings, but is without deep development work.

The second group of 9 claims, is in the heart of the camp adjoining the big Mason Valley mine and the Yerington Malachite Co.'s ground. This property is well located and has attractive showings of ore in the tunnels and on the surface outcrops. It has been idle during the past two years.

DAYTON PLACER RECOVERY CORPORATION

NEVADA

Office: E. N. Greenleaf, 609 Kearns Bldg., Salt Lake City, Utah.

Officers: G. T. Hansen, pres.; B. Binnard, v. p. and treas.; E. B. Critchlow, sec.; above, with D. C. McIntyre, directors. G. W. Wood, cons. engr.

Inc. June, 1916, in Utah. **Cap.**, \$500,000; \$1 par; 435,000 issued.

Is treating mill tailings at Dayton, Nev., and making a 90% gold, 80% silver and 50% mercury extraction.

Management estimated 500,000 tons of tailings available with average assays of \$1.50 gold, 3¼ oz. silver and 3 lbs. mercury, or about \$7 per ton. Total cost per ton estimated at \$1.25.

Equipped with 150-ton all slime cyanide mill. Started operations in Aug., 1917.

EMPIRE-NEVADA COPPER MINING & SMELTING CO.

NEVADA

Mine near Yerington, Nev. Wm. Gelder, pres.; G. B. Garrison, sec.

Inc. in Arizona. Cap., \$5,000,000, shares \$5 par. General Development Co. is a small stockholder in this company.

Property: about 500 acres on Copper Flat in 2 groups: 1 about 1 mile W., the other 2½ miles N. W. of Yerington. **Ore:** occurs in bunches and disseminated throughout a body of monzonite-porphyry, said to be opened for 3,000' in length and 1,000' wide, carrying copper in the form of silicates, carbonates and oxides, a considerable part of it averaging 2.65% copper.

Development: by 5 shafts, from 80 to 160' in depth, several tunnels and open cuts and also by diamond drilling. Mine is said to have produced about \$150,000 from surface workings. Shipped 6,000 tons of 6% ore to Mason Valley smelter, 1912, and 2,900 tons in 1914. Now making monthly shipments to the Mason Valley smelter at Thompson, Nev. Six sets of lessees working in 1916. Property has small smelting plant, assay office, hoist, boarding house, etc.

No returns, 1917.

HONEST ENDEAVOR MINING CO.

NEVADA

Office: F. D. Goodale, sec.-treas., Central Savings Bank & Trust Co., Denver, Colo.

Officers: B. W. Wooding, pres.; Elmer Hoff, v. p.

Inc. 1907, in Ariz. Cap., \$2,500,000; shares \$1 par.

Property: is under a 5-year lease to Harry J. Newton, of "Dollars & Cents" fame, 323 Denham Bldg., Denver, Colo. Leasing company is reported to be capitalized for \$500,000, and has option to purchase property at \$50,000.

In Feb., 1917, shares were peddled at 5c each with positive assurance of a 50% advance by March, 1917, and another jump to 10c by April.

Property: 11 claims in Buckskin district, west of and across the valley from Ludwig, the railroad terminus, and 1½ miles from Buckskin, in the Yerington district.

Development: by 300' shaft and drifts said to open up 2 veins, showing 2' of sulphide ore with commercial values.

Equipment: includes hoist, compressor, etc.

In our opinion a mine that has not made good in ten years time is worth investigating thoroughly before investing in its stock. Literature sent out by the promoter moreover is most unfavorably regarded. Report by F. H. Colpitts, "E. M.," on the property would be a joke, if it were not intended to draw money from ignorant investors.

LUDWIG MINE.

NEVADA

Owned by Nevada Douglas Copper Co., at Yerington, Lyon Co., Nev.

MASON VALLEY-BLUESTONE EXTENSION MINES. NEVADA

Address: Salt Lake City, Utah. **Mine office:** Yerington, Nev.

Officers: C. W. Reese, pres.; A. G. Gutheil, v. p.; G. M. Sullivan, sec.; H. C. Jex, treas.; with O. P. Soule, W. E. Evans, and Henry Barney, directors.

Inc. in Utah. Cap., \$100,000; shares, 10c par; 500,000 shares held by Trustee. Is a reorganization of the Mason Valley Extension Mining Co.

Property: 48 acres, 200 patented, in Mason district, Lyon Co., Nev.

Geology: principal formations are limestone, porphyry, and granodiorite, the ore occurring in crushed limestone.

Development: by 350' shaft. Management hopes to find the same ore zone as in the Mason Valley and Bluestone mines, which are yielding 500 tons daily, 1917.

MASON VALLEY MINES CO.

NEVADA

Office: 14 Wall St., New York. **Mine office:** Thompson, Lyon Co., Nev.

Officers: W. H. Aldridge, pres.; Frank W. Holmes and E. O. Holter,

v. p's.; H. F. J. Knobloch, sec.; Henry E. Dodge, treas.; preceding with John F. Alvord, W. Mont Ferry, C. A. Corliss, and C. A. Ayer, directors.

Inc. Jan. 4, 1907, in Maine. **Cap.**, \$2,500,000; shares \$5 par; increased March 14, 1910, from \$1,000,000, shares \$1 par; issued \$2,500,000. Bonded debt is \$869,500 in authorized \$1,000,000 first mortgage 10-year 6% gold bonds, in \$500 bonds convertible previous to April, 1915, into stock on the basis of \$10 per share and redeemable on 31 days' notice at 102½ and accrued interest.

The mortgage contains a sinking fund provision, by which the company is required to pay to the trustee within 60 days after Jan. 1, each year, beginning 1912, 20c for each net dry ton of ore treated during the year preceding, with a provision whereby the sinking fund payments may be reduced proportionately, as outstanding bonds are retired. The directors were authorized by vote of shareholders, March 14, 1910, to issue any part of the unissued stock for acquisition of additional property.

Guaranty Trust Co., New York, and United States Trust Co., Boston, registrars. Bankers Trust Co., New York, and Boston Safe Deposit & Trust Co., transfer agts. Shares listed on Boston Stock Exchange.

Annual report of Dec. 31, 1916, gave cash on hand \$270,742, and total current assets \$387,726, with current liabilities \$50,620. The report shows a deficit of \$71,762 for 1916, which deducted from the surplus, leaves a net credit to that account of \$264,466.

Property: 7 claims, patented, 140 acres, and a fractional claim of 10 acres, known as the Spragg mine, lying south of the Bluestone and about 1½ miles west of Mason. Company also owns a smelter and 1,320-acre smelter site near the railway.

The Gray Eagle property, 14 patented claims, 256 acres, near Happy Camp, Siskiyou Co., Cal., was acquired in Sept., 1916, for 144,250 fully-paid Mason Valley shares, said to be worth \$721,250. The title to the property is in the name of the Gray Eagle Copper Co. (which see), all of which shares are held by Mason Valley. Options on claims nearby have been secured. In 1912, Henry Krumb estimated ore reserves as 450,000 tons, averaging 4.64% copper and \$1 gold per ton. In 1916, O. R. Whitaker estimated as follows:

	Tons	Copper, %	Gold, Oz.	Silver, Oz.
Chalcopryite	440,000	4.68	0.50	0.12
Semi-oxide	50,000	5.00	0.06	0.20
Mineralized walls	600,000	1.13	0.025	Trace

The mine is to be further developed. Transportation facilities are lacking, and means must be provided to get the ore to the smelter, presumably that of the company in Nevada. W. Koerner is superintendent of the Gray Eagle.

Nevada Property

Geology: strong outcrop of deposit between limestone and andesite, partly covered by rhyolitic tuffs. The latter rocks are comparatively soft and have been eroded into steep escarpments and sharp gulches. Ore is of contact metamorphic character, being in altered limestone of 30' average width. Surface ore shows malachite with a little cuprite, succeeded, at about 100' depth, by cupriferous pyrite, largely massive, with copper in the form of chalcopryite. The mine is said to have some ore averaging 10% copper, but the average tenor is about 3.5% copper. An average analysis shows 16 to 17% iron, 16 to 18% lime, 12% sulphur and 38% silica.

Development: has been done by means of crosscut tunnels driven from the surface to the ore bearing zone. Drifts have been run N. and S. follow-

ing the general course of the orebodies. Crosscuts have been extended E. and W. from the main drifts. The workings reach a depth of about 550'. The mine has been worked by the shrinkage stope system and good results have been obtained by this method.

The mine has developed a very considerable tonnage of low-grade carbonate and sulphide ores, with a smaller quantity of high-grade ores. Actual development work was begun March, 1907, and workings aggregated 23,107' on Dec. 31, 1914.

A 6,250' tramway, with drop of 600', of 100 tons hourly capacity, connects the mine with the Nevada Copper Belt railway, which line connects with the company's smelter 16 miles distant.

The smelter, built at a cost of approximately \$600,000, is about 2½ miles from Wabuska, on the Southern Pacific railway and about 16 miles from the mine. The plant consists of a sampling mill for custom ores, extensive storage bins, a blast-furnace building, with two furnaces of 1,800 tons daily capacity, a sintering plant, power house, machine shop, plate shop, smithy and carpenter shop. Two stands of 12' converters of the Great Falls type, were installed, 1913.

The smelter was blown in Jan. 16, 1912, and one furnace was in continuous operation to Oct. 20, 1914; during that period 290,586 tons of ore from the company's mine and 321,288 tons of custom ore were smelted from which there were produced 39,787,987 lbs. copper, 22,392 oz. gold and 392,304 oz. silver.

Custom smelting was almost entirely discontinued in August and September, 1914, and economic conditions making it inadvisable to operate upon Mason Valley ore alone, the plant was closed down in October, 1914. Smelting operations were resumed Feb. 13, 1917; and the second furnace put in operation in March.

Statement for 4½ months' operations to June 30, 1917, at the smelter in Nevada shows a gross profit of \$342,215, and \$244,601 net. Ore smelted was 50,645 tons of Mason Valley and 80,666 tons of custom ore, yielding 5,822,130 lbs. copper, 436 oz. gold, and 21,345 oz. silver.

If properly managed company should become a steady dividend payer, as it has a good plant, strategic location and owns a good mine.

MASON VALLEY EXTENSION MINING CO. NEVADA

Re-organized under name of Mason Valley-Bluestone Extension Mines, which see.

MASON-YERINGTON MINES CO. NEVADA

Re-organization of the Utah-Yerington Mines Co.

Office: 1014 Boston Bldg., Salt Lake City, Utah. **Mine office:** Mason, Nev.

Officers: C. W. Reese, pres.; A. G. Gutheil, v. p.; G. M. Sullivan, sec.; H. C. Jex, treas., with S. McCroskey, C. J. Guild and Ross Thompson, directors.

Inc. in Utah. Cap., \$1,000,000; 500,000 held by trustee.

Property: E. of the Mason Valley Mines Co., property in Mason district, Lyon Co., Nev., said to show 42" of silver, gold, lead, copper ore said to assay over \$55 per ton in June, 1917. Ore occurs in limestone.

McCONNELL MINES CO. NEVADA

Office: c/o O. H. Sonne, pres. Yerington, Nev. **Mine office:** Mason, Lyon Co., Nev.; S. B. Elbert, sec. and mng. engr.; preceding, Mrs. O. H. Sonne and Mrs. S. B. Elbert, directors.

Inc. Sept 14, 1912. Cap., \$500,000; shares \$5 par; issued, 40,002 shares.

Property: 10 claims, 160 acres, patented, adjoining the Yerington Malachite mine on the west. Claims show limestone, shale and granite

with argentiferous contact deposits in the contact zone near the grauo-diorite. Property has 4 orebodies, 2 under development averaging 25' in width and carrying about 3.5% copper.

Development: by 400' shaft and 3 tunnels. **Equipment:** includes a 25 h. p. hoist, 7-drill air compressor and 8 buildings.

Production: 1912, was 1,074,289 lbs. fine copper, secured from 16,284 tons of ore smelted and at a total cost of about 14 cts. per lb. No later information received. Property regarded as good.

MINNESOTA-NEVADA COPPER MINES CO.

NEVADA

Address: Otto Taubert, Yerington, Nev.

Formerly the Wabuska Copper Mines Co. Near Wabuska, Lyon Co. Nev.

Property: the Minnesota group, 13 claims, 16 miles from Yerington, said to show a contact deposit, between limestone and granite, of about 20' average width, carrying sulphide ore assaying 1 to 30% copper.

Development: by 2 shafts, 1 of about 500' depth, showing ore said to average better than 3% in copper tenor.

Reported in Aug., 1917, that company was developing a large iron-ore deposit, and proposed erecting blast furnaces for pig-iron production at either Reno or San Francisco.

MONTANA YERINGTON COPPER CO.

NEVADA

Yerington, Lyon Co., Nev. **Property:** a group of claims said to show orebodies in porphyry with 4-7% copper, unlike other Yerington deposits.

Development: 420' shaft. The 160' level east was run 500' to daylight, making a main working tunnel. Crosscut on 400' level said to encounter ledge 6-7' thick, showing shipping ore in face. Under option to Geo. Wingfield, Goldfield, Nev., 1913, and Mason Valley Mines Co., in 1914, but was relinquished. Is being worked by Messrs. Archer, Ehrman and Kremmel, who control the company.

Ore Reserves: estimated at 15,000 tons containing 3% copper. Shaft shows chalcopryite ore at bottom.

Output in 1916 was 2,050 tons of 6% ore.

NEVADA BONANZA COPPER CO.

NEVADA

Main office: 159 Main St., Salt Lake City, Utah. Mine at Morningstar City, Lyon co., Nev.

Officers: Freeman Morningstar, pres. and gen. mgr.; Sereno B. Tuttle, v. p.; Fred C. Dern, sec.-treas.; Walter C. Tuttle, asst. sec.-treas.; preceding, with Robt. J. Deighton, H. P. Clark, W. D. Mathis, Thos. J. N. Nippur, M. S. Woolley and P. L. Williams, directors.

Inc. 1906. **Cap.,** \$2,100,000; shares \$1 par; issued, 1,448,000 shares.

Property: 12 claims, 7 patented, 250 acres, adjoining the Nevada Douglas ground, about a third of a mile from Ludwig, on Nevada Copper Belt railroad, in the Yerington district. J. C. Dick, E. M., of Salt Lake City, reports 3 fissure veins crossing property; the Green Dutchman vein being about 5' wide and assaying well in gold and copper. The vein on the Copper King claim has been developed by a 3-compartment, 115' shaft, said to show copper ore its entire depth.

Property is still in the prospect stage, but further development is expected to make it a mine.

NEVADA-CALUMET COPPER MINING CO.

NEVADA

Out of business. Mine owned by John L. Washing, Box 13, Bridgeport, Conn.

NEVADA-CALUMET MINE

NEVADA

Address: John L. Washing, Box 13, Bridgeport, Conn.

Lands: 17 claims, patented, 340 acres, 4 miles N. E. of Buckskin and

8 miles N. W. of Yerington. Property shows diorite, porphyry and silicious limestone, and has 3 contact deposits, 3-4' wide, showing cuprite, malachite, azurite, chalcocite and chalcopyrite, giving assays of 2-4% copper.

Development: by 2 main shafts, 1,200' apart, No. 2 on the Yellow Metal claims, 60' deep, shows 9' of 2.75% ore. About 300' of work on 400' level, and 225' of laterals on the 500' level, show small bunches and stringers of ore, in a leached zone, with fair indications of workable values at greater depth.

Equipment: includes two 25 h. p. Witte gasoline hoists, and a 20-room boarding house. Property reported on by T. M. Hammond and Arthur Prill.

NEVADA-DOUGLAS CONSOLIDATED COPPER CO. NEVADA

A. J. Orem & Co., 79 Milk St., Boston, Mass. General office: 222 S. W. Temple St., Salt Lake City, Utah. **Mine office:** Ludwig, Lyon Co., Nev.

Officers: A. J. Orem, pres.; James G. Berryhill, L. H. Curtis, vice-presidents; F. M. Orem, sec.-treas.; W. C. Orem, gen. mgr.; preceding officers, J. J. Corum, H. I. Moore, F. J. Curtis and J. G. Berryhill, Jr., directors; Archie J. Orem, gen. supt.; L. L. Turner, mill supt.; N. B. Whitzel, purch. agt., Ludwig, Nev.

Inc. March 4, 1915, in Utah. **Cap.**, \$5,000,000; shares, \$5 par; assessable; \$102,810 unissued. Bonds, \$2,000,000; \$299,100 outstanding. Federal Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent. Stock listed on Boston Curb.

The company is a reorganization of the Nevada Douglas Copper Co. at the time of its consolidation with the Moore Mng. Co. The new company assumed liabilities of the old companies, \$525,000 of Nevada Douglas and \$57,000 of Moore Co. Nevada Douglas stockholders received share for share in stock of new company and the Moore Co. received 10,000 shares of stock. To date 7 assessments of 10c a share have been levied, the last one in June, 1916. The old Nevada Douglas Copper Co. paid a dividend of \$125,000 in 1913.

The report of the old Nevada Douglas Copper Co., Feb. 28, 1915, showed a property investment of \$4,670,152, exclusive of the Ludwig leaching plant, \$51,992; current assets, \$35,060; profit and loss, \$581,660; current liabilities, \$101,905; accrued liabilities, \$17,150; deferred credit items, \$367,548.

Report of Nevada Douglas Cons. C. Co., dated Dec. 31, 1916, shows receipts, \$451,438, of which \$438,883 was from ore sales. Expenses totaled \$158,294 for mining, \$40,443 for milling, \$47,062 for interest, depreciation, etc., \$66,895 for maintenance and general. Net income was \$139,931. Income for quarter ended, June 30, 1917, was \$41,122 net.

Balance sheet shows \$303,552 current working assets, less \$105,058 deferred debit items; and \$202,151 current liabilities, plus \$7,279 accrued (not due) less \$10,246 deferred credits.

Property: about 950 acres, with 2 mill-sites, 80 acres, and miscellaneous lands, including water-rights, giving total holdings of about 1,070 acres on the western slope of the Mason mountains. Lands include former holdings of the Ludwig Copper Mng. Co., the Douglas C. Mng. Co., which succeeded the Douglas M. & S. Co., the Nevada Douglas Copper Co. and the Moore Mng. Co. Holdings of the Nevada Douglas C. Co. consisted of 4 separate and distinct mines, the old Douglas mine, the Amalgamated group and the Casting Copper mine, being the original holdings of the company, and the Ludwig mine. Country rock consists of limestone

intruded by granodiorite with large contact orebodies and fissure veins. There is also one claim at Buckskin, 7 miles distant, which carries fluxing ore.

The Moore Mng. Co. owned the Moore group of claims, a prospect with about 450' of development work and "considerable oxidized ore blocked out in a way that it cannot be measured." Property of the old Western Nevada Copper Co., described in Vol. X, has been fully paid for by Nevada Douglas.

The Ludwig mine, about 1 mile N. W. of the Douglas, includes 2 claims, on which the mine is opened, and a 40-acre tract in Smith Valley, on which there is a well and pumping station. The Ludwig was opened 1865, and was a shipper for some years of small quantities of high-grade ore, production including some very handsome malachite and azurite, a portion of which was sold to lapidaries, and considerable bluestone was produced also for the mines of the Comstock Lode.

The ore occurs in a fissure vein with a white limestone footwall and a silicious limestone hanging wall, which changes to a garnetiferous limestone, heavily impregnated with sulphides in places. Where crushing has permitted surface waters to work downward, large bodies of carbonates and copper glance ores are found as replacements in the footwall limestone. The vein proper has an average width of about 30' and has been developed along its course for 1,300' and to a depth of 800' by levels, along hanging wall, every 100'. The orebody on the 700' level is 50' wide and 300' long and runs 6% copper. The shoots, or pipes, of high-grade secondary ore, running from 16 to 30% in copper, form chamber deposits in the limestone near the porphyry contact, proven down to 800' level. Ore reserves are estimated at 200,000 tons of 2% copper ore.

In addition to copper ore, the Ludwig has a very large deposit of gypsum, on the footwall, said to 3,000' long, 500' wide and 400' deep, which figures seem high. This deposit of gypsum is of commercial value, and some has been mined and shipped.

The Douglas mine is working a typical contact metamorphic deposit in which garnetized limestone carrying copper sulphides and their resultant oxidized ores occur in very irregular orebodies in limestone which have a tendency towards a horizontal rather than a vertical extension. The mineralized area is about 700' wide and 2,000' long with numerous parallel fissures which seem to control the mineralization. This mine has been developed by a main working tunnel and a deeper haulage tunnel with numerous crosscuts and drifts netting the property. The working tunnel, 4,290', has an average depth of 120' beneath the surface and the ore is in places continuous to the surface. Four 50' winzes show the downward extension of the ore. Claimed to have 75,000 tons of ore blocked out.

The Casting Copper mine shows a large area of garnet-epidote limestone constituting low-grade carbonate ore, which will be extensively mined. This mine has a vertical 350' shaft and a 500' tunnel. Claimed to have 100,000 tons blocked out. When shipments were being made to the smelter the ore averaged 5% copper as compared with 3% in the Douglas mine.

At the Amalgamated mine very little development work has been done, but the surface exposures indicate the existence of similar large contact metamorphic deposits.

Ore reserves: in all properties are estimated at 550,000 tons blocked out, and 2,000,000 tons partly blocked. A report says that "Engineers estimated probable ore several times the latter amount." Present ore carries 3% copper, with a fair quantity of high-grade material.

Property as a whole has about 8 miles of workings.

Equipment: includes four 100 h. p. hoists, good for 1,000' depth each, with a 52-drill Imperial air compressor. Electric current is taken from the Truckee River General Electric Co. Water is secured from artesian wells in Smith valley, brought to the mine by a 17,000' pipe line.

A 250-ton leaching plant, begun 1914, was in full operation September, 1917. The sulphide and oxidized ores are treated separately and by entirely different methods. The chief value in the process lies in the fact that not only the copper, but the iron and sulphur as well, are made use of as valuable marketable products, and that in the treatment of 50 tons of sulphide ore, enough sulphuric acid is obtained at an abnormally low cost to treat 200 tons of oxidized ores. This plant cost \$475,000, and is expected to treat ore at cost of \$1.25 to \$1.50 per ton.

A brief outline of the process is as follows: sulphide ores are submitted to an acid treatment under pressure in a closed receptacle, in which operation the sulphides of copper and iron are converted into the sulphates of the metals and taken into solution. This solution is then decanted off and passed through the electrolytic cells or over scrap iron, where the copper is removed. The remaining iron sulphate solution is then carried to an evaporating tower, where the water is evaporated off and the ferrous and ferric sulphuric crystals are allowed to crystallize out. These iron sulphate crystals are then introduced into a dryer and submitted to a temperature sufficiently high to drive off all the water of crystallization, after which the dried sulphates are submitted to a roast in the Wedge muffle furnaces; sufficient heat being applied to decompose the sulphates. The greater portion of the gases coming off in the form of sulphur trioxide, which is collected in the absorption towers and made into sulphuric acid to be used in the leaching of oxidized ores. The remaining residue of ferric oxide is then drawn off and prepared for market. The leaching of the oxidized ores is carried on in Pachuca tanks, where the ore is agitated with air and leached with the sulphuric acid obtained from the preceding sulphate roast. The solution is then decanted and passed through electrolytic cells, where the copper is taken out, after which the water is evaporated off and the sulphate crystals dried and roasted in the muffle furnace, as before outlined. The total cost per ton for mining and treating sulphide ores is \$5.18. As the general average of the ore to be treated is a little above 3% in copper, the ore will have a gross valuation of \$15 per ton in copper. The total cost of producing a ton of iron and sulphuric acid by this method should not exceed \$2, and with sulphuric acid at this price, oxidized ore running as low as 1% in copper can be treated at a profit.

Production: for 1916 was 11,135 tons of 7½% copper ore, sent to Utah smelters. Freight charges were \$8 per ton. Output in 1917 is 200 tons daily to the Thompson smelter, 250 tons to the leaching plant and 50 tons to Utah smelter, from which a total of nearly 17,000,000 lbs. copper per year is anticipated.

Employs 500 men.

If the leaching plant is a success it will prove the salvation of the company. The policy of handling the property has not met with favor in the East and as a result financing and development have been slow. Management is believed to be competent and making every effort to put property on a dividend basis. Estimated that \$1,000,000 has been spent on the property since 1912, of which \$475,000 went to the leaching plant, \$193,000 to offices, shops, buildings, etc., the remainder in development, new property, etc. The year 1918 should show the property's merits.

NEVADA PROGRESSIVE GOLD MINING CO.

NEVADA

Mine office: Wellington, Lyon Co., Nev.

Officers: C. M. Woodbridge, pres.; F. H. Woodbridge, sec.-treas.; J. G. Hudson, mgr.

Property: 400 acres mineral land and 600 acres miscellaneous land at Wellington, shows gold-silver-lead ore, said to assay from \$10-\$147 per ton. Developed by 2 shafts, 100' and 300' deep. At last accounts, June, 1917, mine was producing after being idle for some time. Property is 8 miles from Masonic, Lyon Co., Nev.

NEVADA QUEEN COPPER CO.

NEVADA

Idle. Office: 405 Mining Exchange Bldg., Colorado Springs, Colo. Mine near Yerington, Lyon Co., Nev.

Officers: Duncan Chisholm, pres.; John Matthew, v. p. and treas.; R. G. Riddett, sec.; preceding, with H. Hironemous and D. P. Randall, directors.

Inc. Oct. 5, 1906, in Colorado. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; issued, \$1,107,350. Is operated as a close corporation. Annual meeting second Monday in October.

Property: 28 claims, patented, 467 acres, lying immediately north of the Nevada Douglas and Yerington Central Copper companies. Developed by shafts of 186' and 210', showing copper ore said to assay 1.5 to 28%. Management plans operating if arrangements can be made with the Nevada Douglas Co. to treat the ore in its leaching plant.

NEVADA UNION COPPER MINES CO.

NEVADA

Office: F. D. Goodale, 407 Central Savings Bank, Denver, Colo. **Mine office:** E. E. Hoff, supt., Yerington, Nev.

Officers: F. D. Goodale, pres. and treas.; Paul Esch, v. p.; M. H. Muller, sec., with Robert Kettmor, J. B. Braidwood and A. M. Goodale, directors.

Inc. in Colorado. **Cap.**, \$600,000; shares 10c cash; non-assessable; 3,500,000 issued.

Property: 12 claims, 200 acres, in Yerington district, Nev.

Development: by several shafts, one 120' deep, and some lateral work. The Union Blue is the principal vein, being described as a porphyry intrusion between diorite walls. At 120' depth, a drift opened 3' of 2% ore. Further sinking is to be done. On surface between a streak of high-grade ore and one of white talc there is said to be 32' of mineralized diorite porphyry.

Prospectus says that this looks like a sure winner and soon should be in the class of the big dividend payers, which is not evident from the facts so far known.

NEW YERINGTON COPPER CO.

NEVADA

Office: 1511 Walker Bank Bldg., Salt Lake City, Utah. **Mine address:** Yerington, Lyon Co., Nev.

Officers: Chas. N. Strevell, pres.; Joseph E. Caine, v. p.; W. B. Outcalt, sec.; J. H. Paterson, treas., with W. B. Outcalt, H. P. Clark, H. C. Edwards and W. H. Caine, directors; T. L. Walden, supt.

Inc. Aug., 1911, in Utah. **Cap.**, \$1,000,000; shares \$1 par; assessable, at rate not to exceed 1c for each 90 days. Listed on Salt Lake Stock Exchange. Is a reorganization of the Yerington Copper Co., whose stockholders received 1 share of new for 2 shares of old stock.

Property: 12 claims, 4 miles due east of Yerington, shows porphyritic granite cut by diorite dikes. There are 3 distinct, nearly parallel veins, 50 to 300' apart, following the dike contacts. The oxidized ores extend downward about 100' and are underlaid by enriched glance changing in depth to shoots of chalcopyrite and pyrite.

Development: chiefly on the middle, or Yerington vein by a 450' in-

cline shaft. The 250' level exposes an ore shoot 1 to 3' thick from which shipments have been made intermittently. The east drift shows a soft vein carrying a narrow shoot 3 to 5' thick of chalcopyrite ore in an altered gangue. The west drift shows another shoot of 8% ore. The Marsal 520' tunnel on the same vein encounters another ore shoot at 340', that is 1½ to 3' wide and has 3% ore extending to top of 90' raise. In 1914 company did about 1,350' of development work on the main tunnel and on the 100-300' levels. Shipments thus far have not quite covered expenses. Shipments in 1914 averaged from 9-13% copper.

Equipment: includes a 40 h. p. gasoline hoist, 320 cu. ft. compressor run by a 60 h. p. gasoline engine and a pumping plant jointly owned with the Blue Jay Co. Property regarded as promising.

NORTHERN LIGHT COPPER CO.

NEVADA

Idle and probably dead. Yerington, Lyon Co., Nev.

Property: 6 claims, 20 miles east of Yerington, said to have produced some copper ore. No recent returns secured.

OAKLAND COPPER BELL MINE

NEVADA

Owens group of claims in the Pumpkin Hollow section of Yerington district, Lyon Co., Nev., developed by a 40' shaft showing 3' of ore, said to carry 7% copper with 5 oz. silver and \$2 gold. Closed down many years.

PEER GOLD MINING CO.

NEVADA

Clyde Garrett, Gurney Gordon and Harry Cutler, chief stockholders, Reno, Nev.

Property: in Pine Nut range at Como, 8 miles south of Dayton, shows wide vein in andesite. High-grade ore discovered Jan., 1916, showed values of \$73 to \$150.

Probably idle. Letters returned.

RENO-YERINGTON COPPER CO.

NEVADA

Officers: E. L. Brown, pres.-mgr., 944 West 6th Street, Reno, Nev.; Victor Cokefair, v. p.; M. C. Brown, sec.; Farmers & Merchants Natl. Bank, treas.; preceding with Walter Harris, O. H. Sonne, Will McDonough, directors.

Inc. Jan. 25, 1907. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; 750,000 shares outstanding.

Property: 5 unpatented claims, about 100 acres, north of the Bluestone mine, at Yerington, Lyon Co., Nev., said to show sulphide ore in granite with easterly dip, averaging 3% copper.

Development: by 700' tunnel and 100' incline shaft sunk on the contact.

Equipment: includes hoist and buildings.

Property was bonded, 1913, to Geo. Wingfield, but the bond was relinquished and property reverted to original company.

SMITH VALLEY MINES CO.

NEVADA

E. J. Cooper, Receiver, Yerington, Nev. H. L. Van Valen, representing the stockholders, 410 Advertising Bldg., Chicago, Ill.

Inc. 1912, in Nev. **Cap.**, \$2,000,000. Placed in receivers' hands Oct. 30, 1914; debts were about \$17,000. Reported Jan. 5, 1916, that obligations "are being rapidly paid off; it is expected that the Receiver will be discharged in about 60 to 90 days from present date."

Property: 23 claims, 467 acres at Yerington, said to show gold ore in a contact deposit between andesite and porphyry; width of ore, 6" to 3' with average assay reported of \$16.80 per ton. Claims 60,000 tons ore in sight.

Developments: 200' incline shaft, with 900' of workings. **Equipment:** includes 25-h. p. gasoline hoist and a 6-drill compressor.

Letters returned in May, 1917. Presumably receiver had cleared up debts.

UNION COPPER CO.

NEVADA

Yerington, Nev. Title changed to Standard Copper Co., in 1912.

UTAH-YERINGTON MINING CO.**NEVADA**

Reorganized as the Mason-Yerington Mines, which see.

WALKER RIVER COPPER CO.**NEVADA****Offices:** 45 Broadway, New York and Yerington, Nev.**Officers:** M. M. Upson, pres.; David Provost, v. p.; Wm. Gelder, sec.-treas., with W. H. Alexander, gen. mgr., W. T. Mayer and J. A. Martin, directors. J. E. Gelder, supt.; J. H. Banks, New York, cons. engr.**Inc.** June, 1915, in Nevada. **Cap.**, \$1,000,000; shares \$5 par; outstanding \$750,000 com. and \$22,000 pfd. In treasury \$228,000 pfd., 7% cumulative.**Transfer office:** 15 Exchange Place, Jersey City, N. J. Registrar & Transfer Co., New York, registrar. Annual meeting, first Monday in June.

Balance sheet as of June 21, 1917, showed cash assets totaling \$99,496, of which \$77,735 was from sale of 15,547 shares of pfd. stock. There was owing \$57,191, \$34,939 being for mill construction.

Property: 15 claims, 250 acres, including mill site, near Yerington, Lyon Co., being developed in conjunction with the Empire Nevada mine. Claims show a low-grade porphyry copper deposit said to cover an area 1,000x4,800' so far as drilled.**Ore:** is said to assay Cu, 3%; S, 0.5; SiO₂, 72%; Fe₂O₃, 5%; Al₂O₃, 11%; CaO, 2%; MgO, 1%.**Development:** 175' vertical shaft and a 900' tunnel through the orebody. drilling is said to have proved the orebody to extend to 500' depth. Present work is done by quarrying.**Ore reserves:** management claims 550,000 tons 2½% ore proven by drilling and surface and underground work. At the Pennington shaft in 1917 there was reported to be 10' of 6% ore and 40' of 4% ore.**Equipment:** includes a 40-ton leaching plant built to use the Midland wet chloride process.**Production:** in 1915 lessees shipped 5,000 tons of 3 to 5.9% copper ore. Total production to date, 10,000 tons.

Company planned drilling an additional 200 acres during 1917. Property has been examined by Louis A. Wright and John H. Banks.

YERINGTON BULLION MINING CO.**NEVADA**

Idle, and mail returned from former address, Ludwig, Nevada Co., Nev.

Officers: A. J. Schmidt, pres.; J. A. Knox, sec.-gen. mgr.; J. M. Moyle, treas.; with J. A. Sisk, E. W. Brush, F. S. Stanley and Henry Hertz, directors. W. F. Pfleger, supt., at last accounts.**Inc.** May 31, 1909, in Nev. **Cap.**, \$2,500,000; shares \$1 par; 1,000,000 shares preferred stock, fully paid and non-assessable; 300,000 shares issued; 1,500,000 shares common or promotion stock; assessable, 1,275,759 shares issued.**Property:** 56 mining locations, 1,120 acres, 2 miles N. of the Nevada Douglas property in Yerington district. Developed by 400' main working shaft and 2 tunnels 300' long, E. and W. of the shaft on the 300' level, showing a deposit of sulphide ore with gold and copper values.**Equipment:** includes a smelter, 2 hoists, compressor and tools.

Company is apparently without funds and its literature is of a suspicious character. Letters returned, 1916.

YERINGTON CONSOLIDATED COPPER CO.**NEVADA****Office:** 312 McCornick Bldg., Salt Lake City, Utah. **Mine:** Mason, Lyon Co., Nev. **Officers:** Frank J. Hagenbarth, pres.; John Dern, v. p.; M. B. Johnson, sec.**Inc.** Feb 11, 1917, in Utah. **Cap.**, \$100,000; shares 10c par; non-assessable; issued, 725,000 shares. Debentures, \$100,000 at 6%, authorized. Annual meeting second Monday in July.**Property:** 14 claims, patented, in 2 groups, known as the Copper King

and Copper Deposit, the former, lying between the Bluestone and Mason Valley mines, developed by a 70' shaft and 2 tunnels of 500' and 600', showing carbonate ores.

YERINGTON MALACHITE COPPER CO.

NEVADA

Office: 414 Judge Bldg., Salt Lake City, Utah. **Mine office:** Yerington, Lyon Co., Nev.

Officers: Grant Snyder, pres. and gen. mgr.; H. J. Mayer, v. p.; Gideon Snyder, sec.-treas.; with S. M. Levy and W. T. Snyder, directors.

Inc., Oct., 1906. **Cap.**, \$5,000,000; shares \$5 par; assessable; issued, 666,333 shares.

Property: 11 claims, patented, adjoining the Mason Valley mine, show 3 mineralized zones of 20 to 150' width, proven on surface for a distance of 2,000'. Orebodies are fissure veins in limestone, carrying oxidized ores to a depth of about 100' below which ore minerals are mainly chalcopryrite, associated with epidote and garnet.

Development: by numerous short tunnels, shafts, etc., totaling 3,800', on the vein with the Mason Valley workings. Ores as mined average about 6% copper. An examination, 1917, reported to have revealed 800,000 tons of 2% oxide ore to a depth of 100'; where the sulphide zone commences.

Equipment: includes a 125-h. p. General Electric motor, steam hoist good for 600' depth. Rand Imperial compressor, and Hendrie & Bolthoff hoist. Electric power is taken from the Truckee River Power Co. There are several mine buildings.

Production: was begun May, 1912, and company shipped ore, returning 174,407 lbs. copper to the Mason Valley smelter, in 1913. No later output reported.

YERINGTON MINES & EXPLORATION CO.

NEVADA

Office: Yerington, Lyon Co., Nev.

Officers: C. S. Durand, pres.; B. F. Kurz, v. p.; V. B. Durand, sec.; Geo. F. Willis, treas., with W. S. Weaver and Wm. Cramer, directors.

Inc. Feb. 27, 1909, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; issued \$735,000. Annual meeting, first Monday in March.

Property: 24 claims, unpatented, including the Effie May group of 2 gold claims, the Copper Flat group of 10 copper claims, and the Mohawk group of 12 gold-copper claims, latter being the principal property, located 1 mile N. W. of Yerington.

The **Mohawk** group is developed by a 125' incline and several shallow shafts of 20' to 80' depth, sunk in the copper-bearing formation. Development was under way at incline during 1917. A 15-h. p. gasoline hoist has been added and development work is now in progress. A carload in 1916 yielded 4.45%.

The **Copper Flat** group, 1 mile E. of Yerington is developed by about 20 pits and shallow shafts, deepest 60', showing malachite and cuprite of about 6% copper tenor. Shipments in 1917 averaged 6.46% copper.

The **Effie May** group is a gold prospect developed by a 135' shaft, with about 2,000 tons of ore blocked out. Property is on the Nevada Copper Belt railway.

YERINGTON MOUNTAIN COPPER CO.

NEVADA

Offices: J. G. Kirchen, mgr., Reno, and W. L. Taylor, supt., Golconda, Nev.

Officers: J. G. Kirchen, pres.-mgr.; E. M. Kirchen, v. p.; P. S. Booth, sec.-treas., with H. J. Toner, W. A. Krasselt, H. R. Cooke and E. J. Haug, directors.

Inc. Feb. 10, 1912, in Nevada. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; issued \$2,300,000. First Natl. Bank of Tonopah, Nev., and U. S. Corporation Co., New York, registrars and transfer agents. Listed on New York Curb.

Property: 46 claims, 920 acres, in the Mountain View district, 9 miles N. W. of Schurz and about 12 miles E. of Yerington, fissures in granodiorite, that run N. 40° E., and dip 65°. Ore minerals are mainly chalcocite, with chalcopyrite, chrysocolla, malachite, cuprite and occasional native copper. Ore assays 4½ to 8% copper, 2 to 4 oz silver and 80c to \$2 gold per ton.

In July, 1916, company purchased the Adelaide mine, near Golconda, Humboldt Co., Nev., from the Glasgow & Western Dev. Co.

At the Adelaide mine there is a contact deposit in limestone and granite, opened by a 300' shaft and 1,450' of tunnels, with a total of 6,500' of openings. In Aug., 1917, the orebody on the 200' level was 20' wide, and monthly shipments were 200 tons of 5% ore.

Development: at the Yerington by a vertical 300' main shaft, and 1,200' of tunnels, with about 8,000' of openings. A crosscut below the Levine tunnel in 1916 was developing a good body of ore. The Azurite tunnel was 1,000' long, June, 1916; it is being driven from the other side of the mountain to cut ore exposed in the Levine tunnel and at 400' greater depth. Tunnel discloses ore in bunches and streaks. The Beach tunnel yields a good grade of shipping ore of about 5.5% copper.

Equipment: includes Fairbanks-Morse and Ingersoll-Rand gasoline hoists, 2 Chicago Pneumatic compressors, pumps, etc.

Production: in 1916 was from 400 to 600 tons per month.

MINERAL COUNTY

ANDERSON GROUP.

NEVADA

Address: Luning, Nev.

Property: 5 claims, 4½ miles east of Luning and adjoining Nevada Champion Copper Co. ground. Development by tunnels and 120' shaft.

Was under lease and bond to Nevada Champion Copper Co. in 1916.

ARGENTUM MINING CO. OF NEVADA

NEVADA

Company inactive. Mines and mill leased to F. C. Beedle, Belleville, Nev., 1916-17, who is operating the mine and shipping 25 tons of silver ore daily. Mr. Beedle also has bond and lease on the holdings of the Mt. Diablo M. & M. Co. and the Esmeralda Water & Mfg. Co.

Property: Northern Belle and Holmes Mines, with mill and water rights and the Lucky Hill Mine (owned outright by Threlfall) in camp of Candelaria, Mineral Co., Nev., 9 miles from Redlich, on Tonopah & Goldfield R. R.

Ore: gold-silver. Country rock is lime with rhyolite intrusions; ore occurs as oxides in lenses as an alteration of lime and rhyolite, carrying chlorides and from 60c to \$1 in gold values. Vein system said to be 4,000' long and proven to cover entire ground.

Development: 60 miles of old workings, consisting of shafts, tunnels and crosscuts.

Ore reserves: estimated after a resurvey and sampling, 400,000 tons in mines and ore dumps, besides 2,000' of unprospected mineralized ground on the Lucky Hill.

Equipment: 40-stamp mill and cyanide plant. Company plans erection of new 60-ton mill and aerial tramway for ore haulage.

AURORA CONSOLIDATED MINES CO.

NEVADA

Is a subsidiary of the Goldfield Cons. Mines Co.

Office: Goldfield, Nev. **Mine office:** Aurora, Mineral Co., Nev.

Officers: Geo. Wingfield, pres.; J. H. Miller, v. p.; A. H. Howe, sec-treas.; J. W. Hutchinson, gen. mgr.; with H. M. Hoyt, Chas. E. Knox and F. M. Manson, directors. R. A. Hardy, supt.

Inc. in 1912, in Utah. **Cap.**, \$100,000; shares 10c par; 685,550 shares issued. June 30, 1914, 87% of the issued stock of the Aurora Cons. Mines Co. was sold to the Goldfield Cons. Mines Co. for \$763,000, by Jesse Knight and associates.

Property: at Aurora, Nev., shows gold-silver ore in fissures in andesite.

Development: 400' vertical shaft, connecting with main working tunnel, 4,500' long.

Mill and cyanide plant: 40-stamp with daily capacity of 500 tons, weight of stamps 1,580 lbs.

Operations for 1916 show a net profit of \$39,781 from the treatment of 173,270 tons of ore. Ore in sight Jan. 1, 1917, is stated to be 336,978 tons; the profit per ton is not given by the company. Neither tonnage nor value-checks the original estimates made of the mine, but there is promising ground yet unexplored.

AURORA MINES CO.

NEVADA

Address: 300 Severance Bldg., Los Angeles, Cal. **Mine office:** Aurora, Mineral Co., Nev.

Officers: Wm. R. H. Weldon, pres.; C. H. Chrisman, v. p.; F. C. Langdon, sec.; John H. F. Peck, treas.; preceding officers and J. Frank Mercereau, directors. Wm. B. Davis, supt.

Reorganized March, 1913, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; issued \$900,000. Annual meeting March 19th.

Property: 13 claims, patented, 150 acres, located in the Esmeralda mining district, Mineral County, comprise some of the mines worked in early days for high-grade gold-silver ore in fissure veins.

Development: several tunnels. The Monarch tunnel cut the veins at 300' depth, and 260' of drifting was done. Work was then started on a tunnel 350' lower, already 900' long. At present the tunnel has a length of 1,570' with 400' farther to go to cut the veins. There has been no production to date.

BI-METALLIC MINE

NEVADA

Owned by M. G. Bradshaw, Crown King, Yavapai Co., Ariz., and P. A. Simon, Mina, Mineral Co., Nev. Mine is located at Candelaria, Columbus district, Mineral Co., Nev. Management claims gross earnings from ore sales in 1914 were \$33,000, with operating expenses of \$17,000.

Property: 3 claims, 47 acres, unpatented, shows a vein in slate; course of vein is N. 5° W., dip 65°. Ore occurs in shoots and lenses, and is said to average 28 oz. silver.

Development: 2 incline shafts, 280' deep, equipped with gasoline hoist. Mine was closed down in 1914, owing to drop in silver, but owners plan resuming operations.

BLACK EAGLE MINING CO.

NEVADA

P. E. O'Brien, mgr., 2740 Telegraph Ave., Berkeley, Calif.

Property: Black Eagle mine and mill at Rawhide, Mineral Co., Nev., said to show gold ore. Employs 20 men. Treating 50 tons daily at the mill at last reports.

BLUE LIGHT COPPER CO.

NEVADA

Address: care C. W. Marsh, pres., Washington, D. C. **Mine office:** Mina, Mineral Co., Nev.

Officers: Henry L. Dollman, v. p.; F. M. Baker, Carson City, Nev., sec.; Wm. C. Osborne, treas.; preceding officers, Chas. N. Van Cleave, Chas. E. Test and Richard Stegemeier, directors.

Inc. Oct., 1907, in Nevada, as successor of Blue-Light Mining Co. **Cap.**, \$2,500,000; shares \$1 par; non-assessable.

Property: 14 miles from Mina, developed by 600' shaft from which several carloads of rich carbonate ore have been shipped. Shaft has reached sulphide zone, but workings have not yet passed through leached material. Mine is equipped with hoist, buildings, etc. Examined 1913 by R. W. Hadden. No 1917 returns secured.

CALAVADA COPPER CO.

NEVADA

Suite 3249, No. 120 Broadway, New York. Mine near Luning, Mineral Co., Nev.

Officers: E. B. Bronson, pres.; B. E. Page, Los Angeles, Calif., v. p.; F. C. Hart, sec.-treas.; H. A. Geisendorfer, Luning, Nev., mgr., with H. Richardson, Boston; C. T. Bender, Philadelphia; and W. D. Kent, directors.

Inc. 1913, in Delaware. **Cap.**, \$2,500,000; shares \$5 par; full paid, non-assessable. No bonds; 180,300 shares held in treasury. Security Transfer & Registrar Co., New York, transfer agent.

Financial statement of March 1, 1917, showed mine development, \$114,435; mine equipment, \$16,421; development fund, \$90,090; accounts receivable and cash, \$12,254; current mine accounts, \$7,000; profit and loss were given as \$16,234.

Development: 1,000' shaft, Copper Mtn., 100' Cyclone shaft and prospect tunnels. Underground workings total 4,000'. Since February, 1915, 3,483' were done, including 300' of shaft sinking from the 700' down. Cross-cutting and drifting on the 700' and 1,000' levels now being done, and a winze has been sunk on the 1,000' for 30' in red oxide, carbonate and native copper which is said to average 10%.

Property: Copper Mountain Group, known as the Luning Unit, 21 patented and 10 unpatented claims, 500 acres, in Sante Fe mining district, 8 miles E. of Luning, Mineral Co., Nev., on the So. P. R. R., and the Darwin Unit, 9 patented claims, 180 acres at Darwin, Inyo Co., Calif. This group is not being developed at present.

Ore: copper occurring as oxide and carbonate in vein, 40' to 150' wide, with sulphides at depth, in contact deposit between granite and limestone. Considerable oxidized ore has been developed between the 700' and 1,000' levels which is sufficiently high-grade to mine and ship at a profit under normal conditions. Ten carloads from development work were shipped to the Tooele smelter in Utah, which ran from 6 to 10½% copper with small amounts in gold and silver.

Equipment: 60 h. p. hoist, Ingersoll-Rand air compressor, mine and office buildings. Plans deepening the main shaft and shipping all visible ore in 1917, while copper prices are high.

DUNLAP COPPER MINE

NEVADA

Idle. Mina, Mineral Co., Nev. R. W. Hadden, cons. engr., 1807 Harvard Blvd., Los Angeles, Cal.

Property: 10 claims, 200 acres and mill site in Silver Star mining district, 10 miles east of Mina. Claims show quartzite and quartzite breccia with mineralized zone 700' wide and 2,000' long, carrying ore-bearing reefs with oxides, carbonates, and native copper, values ranging from 1½ to 20% copper.

Development: by several thousand feet of tunnel, open cuts and winzes, mostly in ore, but none showing sulphide, as water level is not reached. Concentration test on 10 tons yielded product with 44% copper, \$8 gold and 8½ oz. silver.

Equipment: includes compressor, blacksmith shop, etc.; 250,000 tons of ore said to be available, but not blocked out. No recent returns secured.

EXCELSIOR MOUNTAIN COPPER CO.**NEVADA**

Hawthorne, Mineral Co., Nev.

Officers: Frank D. Qualey, pres.-gen. mgr.; J. H. Suits, sec.-treas.; George Brodigan, W. R. Jackman, W. B. Tait, directors; Wm. Winkelman, supt.

Inc. June, 1905, in Arizona. **Cap.**, \$1,000,000; shares \$1 par. Annual meeting, June 7.

Property: 13 claims, 260 acres, in process of patenting, 16 miles S. E. of Hawthorne, in Whiskey Flat district, Mineral Co., Nev., said to have promising surface showings of copper for a distance of several thousand feet along a contact between granite and limestone. Has 4 shallow shafts and 2 tunnels, with one 1,500' tunnel showing ore averaging 4% copper and \$2 gold per ton. Total of underground workings about 3,000', said to prove ore to a depth of 600'.

Equipment: includes 50 h. p. gasoline engine and 6-drill compressor. Development in 1913 included a connection between No. 1 and No. 2 tunnels, claimed to be in ore of commercial character. Property closed down during past two years, but management planned resumption 1916. No later returns.

GOLDEN PEN CONSOLIDATED MINING CO.**NEVADA**

Address: Rand, Nev.; J. H. Miller, supt.

Company formed in 1915 by Jesse Knight of Provo, Utah, to purchase the Golden Pen mine at Rand, Mineral Co., Nev., for \$150,000.

A peculiar feature of the purchase permitted former owners to retain a pay-shoot 38' long in center of mine. Past record shows rich shipments. See Vol. XII.

IDEAL COPPER CO.**NEVADA**

Office: 634 Bridge St., Grand Rapids, Mich. **Mine office:** Luning, Nev.

Officers: S. J. Hufford, pres.; H. D. Keefer, v. p.; Henry Riechel, sec.-treas., with Henry Smith, J. I. Keller, directors.

Inc. Jan. 12, 1915, in Nevada. **Cap.**, \$600,000; shares \$1 par; 4,000 shares issued. Annual meeting, 2nd Tuesday in January.

Property: 16 claims, in 2 groups, unpatented, 360 acres, about 4 miles from Luning, formerly owned by the Wagner Azurite C. Co., and listed Vol. XI. The Atwood group, which is the principal property, shows a contact zone of about 600' width, traceable 2,000', between an altered granite footwall and limestone hanging, with N. W.-S. E. strike and dip of 50° N. The outcrop carries silver and gold-copper ores with a quartz gangue.

Development: 2 tunnels, 1,700' and 350' long, with a total of 2,185' of workings.

The Nevada-Wisconsin group shows several dikes of 50 to 100' width of which one is said to show 2 to 11% copper sulphide ore. Developed by shaft.

In 1916, 400' of shaft work was done (timbered and piped), also 350' of crosscutting with track and pipe, the work costing \$6,000.

Equipment: includes 40 h. p. steam plant with 15 h. p. hoist, 3-drill straight-line air compressor, 100-ton leaching plant and 10-stamp mill. Owing to excess of lime in the ore, the leaching plant proved a failure and was closed down. Property considered promising.

IRON DIKE MINE**NEVADA**

Address: care W. R. Smith, Mina, Nev.

Property: 10 claims in Gold Range mining district, Mineral County, about 5 miles from Mina, shows fissure veins in lime-porphry formation.

A tunnel, 1,016' long, Jan. 1, 1916, was expected to tap the vein at 417' vertical depth.

No later returns.

IROQUOIS COPPER CO.

NEVADA

Goldfield, Nev.

Officers: H. B. Lind, pres.-mgr.; J. M. Fenwich, sec.-treas., with M. A. Lind, directors.

Cap., \$12,000; shares \$1 par. All the stock is owned by the Nevada & Boston Copper Company, a Wyoming corporation.

Property: 10 unpatented claims, about 180 acres, in New York Canyon, Sante Fe mining district, Mineral County, 4½ miles E. of the S. P. R. R. and 7 miles S. E. of Luning.

Development: by crosscut tunnels, said to show an orebody averaging 4% copper and \$2 silver per ton. Shipments commenced in 1914 and to date amount to about 2,000 tons of ore carrying from 5-12% copper. Mine being worked by lessees in 1917.

JUMBO COPPER MOUNTAIN MINING CO.

NEVADA

Office: Ben Gill, sec., Goldfield, Nev. J. K. Turner, supt.

Inc. November, 1917, in Nevada. **Cap.**, \$2,500,000; shares \$1 par; assessable. Company is a subsidiary of the Jumbo Extension Mng. Co. (which see), holders in the latter receiving one new share for each Jumbo Extension share held, free of charge. Vendors of the Copper Mountain mine took \$25,000 worth of shares in the new company at 25c each.

Property: the Copper Mountain mine, 15 miles from railroad at Nolan, Mineral Co., Nev.

Development: by 80', 200' and 300' shafts. A crosscut from No. 1 has opened 3' of 7% and 5' of 4% ore and from No. 2, 3' of 8% and 4' of 4% ore. The higher grade is being extracted for shipment.

The Murphy tunnel has opened 4' of 4% ore. Other shallow workings have exposed 5% ore. Lessees on block 5 are shipping over 8% ore from a vein 4' wide. From No. 1 lease the company can ship 7% ore at once. Considerable concentrating ore is available and a mill with flotation is planned.

LAST HOPE MINE

NEVADA

Owned and operated by Chas. Koegel, Chas. Huber and C. Pike. Mine adjoins the Queen Regent Mines Co. on the W., at Rand, Mineral Co., Nev., and is reported to carry an extension of the Queen Regent vein.

Development: by 250' double-compartment shaft.

Shipments: in 1915, said to have averaged \$80 per ton, amounted to \$30,000. No recent returns.

LOUISIANA CONSOLIDATED MINING CO.

NEVADA

Offices: Room 2851, No. 120 Broadway, New York, and Mt. Montgomery, via Mina, Mineral Co., Nev.

Officers: Walter E. Trent, pres.; T. F. Bonneau, v. p.; L. A. Dessar, sec.-treas., with Capt. A. B. Wolvin and H. C. Cutler, directors. H. C. Cutler, cons. engr., Reno, Nev.

Inc. May 17, 1912, in Nevada. **Cap.**, 1,000,000 shares; 10c par; outstanding, 600,000; 200,000 shares set aside for bond conversion. Registrar & Transfer Co., New York, transfer agt. and registrar. Listed on New York Curb and San Francisco Exchange. Annual meeting, Dec. 10.

Bonds: authorized, not issued, \$40,000, 1st mortgage, 7%, dated May 1, 1916, due May 1, 1921; redeemable in 5 years or before at option of company at 115; convertible into stock at 20c per share. Balance sheet of May 1, 1916, shows assets, \$263,200, which includes: property, \$100,000; treasury stock, \$40,000; treasury bonds, \$40,000; improvements, \$80,000;

developments, \$5,000; cash, \$3,200. Liabilities show: capital stock, \$100,000; bonds, \$40,000; surplus, \$128,200.

Property: 3 claims and a fraction, 65 acres, including the Louisiana, or Tip Top mine, at Mt. Montgomery, Oneota district, 5 miles from the S. P. Narrow Gauge R. R., running from Mina, Nev., to Keeler, Cal. Also has an option on the Brownie mine, 5 claims, 100 acres, 1,500' W. of the Louisiana. Property formerly belonged to the old Thorndyke-Bley Mining Co., now dead.

In Jan., 1917, the old Tybo mine, 50 miles east of Tonopah, was leased for 20 years, 30% of the profits to be paid the owners. The Tybo is credited with a production of \$3,300,000 in silver-lead-gold ore from about 300' level.

Ore: gold-silver occurs in N.-S. veins, dipping 60° E., with andesite footwall and rhyolite hanging-wall. Company's claims cover 4,500' along strike of veins; two veins in each mine, the footwall vein, 6' wide, and hanging-wall vein, 2½' wide. In the Louisiana, veins are 5' apart, but at times come together, forming ore widths of 12' to 16'. Veins are 20' apart in the Brownie mine.

Development: tunnels, with 1,000' of underground workings. In the Louisiana mine most of ore above 120' level has been mined; a 100' winze and 60' drift below tunnel level said to show \$7 to \$9 ore. Management claims Louisiana mine should produce 10,000 to 20,000 tons of ore for each 100' in depth, with a profit of \$3 to \$4 per ton; and the Brownie mine 25,000 tons of ore for each 100' in depth. Brownie ore said to average \$7 to \$9 per ton.

Ore reserves: claims 5,000 tons blocked out and 10,000 tons partially developed ore.

Louisiana is said to have produced \$120,000, of which 75% was in gold; 25% in silver; all from above 120' level.

Equipment: includes 10-stamp mill, cyanide and bullion refinery plants. Capacity, 75 tons per day; steam plant using fuel oil; 75 k. w. generator and electric hoist. Water is obtained from 2 springs, 2 miles from the mill.

Company also purchased the Pearl and Zenda silver-gold mines in Kern Co., Cal., in 1917. Ore reserves estimated at 300,000 tons in sight averaging \$3 a ton. Mill capacity being enlarged to 250 tons daily.

Walter A. Trent, reporting on September operations at the Tybo lead-silver-gold-zinc property in Nevada, states that the mine was dewatered about August 19 and the workings cleared and ready for ore extraction by Sept. 1. During September, there was removed in the course of development work, without attempt at stoping, 1,000 tons, averaging \$40 a ton in lead-silver-gold (allowing nothing for about 11 per cent zinc), of which 1,475 tons was stored on the dump for milling, and 325 tons shipped to the smelters in Utah and having a gross value of \$20,000. The smelter receipts on the 325 tons shipped showed \$5,000 profits over and above all mining and development expense for the month, sorting, transportation, smelting charges and smelter deductions. The company installed a new machine shop, oil house, pipe lines, bunk houses, and other modern equipment, and purchased the 100-ton Atkins-Kroll concentrator which is now in course of removal from Sodaville, Nevada, to Tybo. Satisfactory progress is also reported from the Zenda-Pearl gold property in California.

LUCKY BOY CONSOLIDATED MINING CO.

NEVADA

Address: care J. H. Miller, Hawthorne, Nev.

Officers: Jesse Knight, pres.; John H. Miller, v. p. and gen. mgr.; W. Lester Mangum, sec. Company controlled by the Knight Investment Co. Total dividends paid to date, \$125,000.

Property: the Lucky Boy mine, under the town of Lucky Boy, about 5 miles from Hawthorne, shows silver-gold-lead-copper ore in a vein in limestone near granite. Ore contains galena and tetrahedrite with quartz and some calcite, in lenses and shoots, in a vein which runs N. 80°-85° E. and dips 65°-75° S. Geology fully described in U. S. G. S. Bull. 594, p. 153.

Development: by 1,000' Hubbard shaft with drifts E. and W. at 100' intervals and by a deeper drainage tunnel, 6,200' long.

The big oreshoot, which produced \$800,000 in 8 months and half as much more in the next year, has been mined out except where narrow. No stoping ore was cut in the lower channel, but there is much unworked ground in the mine and much virgin territory in the property. Lessees now working at 6 or 7 places are extracting 2 to 3 carloads of ore a month, which yields a substantial profit to the company.

Equipment: includes air compressor, electric motors, machine drills and useless 10-stamp mill.

LUNING-IDAHO MINING CO.

NEVADA

Office: 204 Nixon Bldg., Reno, Nev. **Mine office:** Luning, Mineral Co., Nev. **New York office:** Room 1641, 42 Broadway.

Officers: Robt. B. Todd, pres. and gen. mgr.; R. G. Withers, v. p.; G. M. Todd, sec.-treas., with A. D. Cox, director.

Inc. April 29, 1910, in Nevada. **Cap.**, \$1,500,000; shares \$1 par; 1,100,000 issued.

Operating expenses for 1916, \$20,000.

Property: 13 claims, 260 acres, in the Pilot range in the Santa Fe mining district, shows several fissure veins in granite and quartzite, said to carry 5½% copper, 2 oz. silver and about 60c gold per ton.

Development: by shafts, open cuts and tunnels, with about 1,500' of underground workings to depth of 200'. Longest tunnel driven about 682' across the mineralized zone is near the hanging wall granite.

Equipment: includes F. M. Co. hoists, Rix compressor and drills. Shaft will be sunk to 500' to reach the sulphide zone.

Shipments started in November, 1917. A flotation mill is planned. Property reported on by M. H. Jacobs, J. C. Skuse and S. B. Parish.

MOGUL MINING CO.

NEVADA

A. S. Proskey, mgr., Rawhide, Nev.

Owns the Regent mine, which has produced 3,000 tons of \$20 to \$200 ore from above the 150' level. See description of company in North Carolina.

MORRIS SYNDICATE MINES

NEVADA

Address: W. C. Losey, Spokane, Wash.

Property: 6 unpatented claims, 23 miles N. E. of Mina, Mineral County, Nev., and near the Olympic mine, a producer.

Geology: shoots 2 to 20' wide reported to occur in contact vein in rhyolite and andesite. Ore said to assay \$30 gold per ton. Developed by 60' shaft.

NEVADA CHAMPION COPPER CO.

NEVADA

Office: 617 Pacific Bldg., San Francisco, Cal. Wm. Miller, pres.; C. N. Miller, sec.-mgr.

Inc. 1907, in Arizona. **Cap.**, \$1,500,000; shares \$5 par.

Owns 130 acres patented land, 3 miles from Luning, Nev. Developed by a 3-compartment shaft, 400' deep. Claims to have large bodies of 3% copper ores and to be shipping 6% copper carbonate ore.

NEVADA CONSOLIDATED MINES & SELLING CO.

NEVADA

Idle. **Mine address:** Hawthorne, Mineral Co., Nev.

Officers: Alex. Brown, pres.; Chas. L. Newton, v. p.; C. C. Matthews, sec.; F. G. Carey, treas.

Lands: about 1,000 acres, including a gold property formerly owned by the Huntoon Valley Mining Co., 45 miles south of Hawthorne, and copper claims 10 to 20 miles S. W. of Hawthorne. The copper property, developed by 3 crosscut tunnels to 440' below the outcrop, is said by the company to have a vein carrying disseminated pyrite and chalcopryrite, averaging 2½% copper and \$4 gold. This vein has apparently been lost in the lowest tunnel. Country rock is granodiorite. The mine has 1,500' of workings. Officers are said to stand well, but the company's past advertising is not liked.

NEVADA COPPER CO.

NEVADA

Office: 572 Bullitt Bldg., Philadelphia, Pa. **Operating office:** Tonopah, Nev. **Mine office:** Mina, Mineral Co., Nev.

Officers: Jas. S. Austin, pres.; J. H. Whiteman, v. p.; C. A. Higbe, sec.-treas. Company is controlled by the owners of the Tonopah Mining Co. Owns the Dunlap mines, 12 miles east of Mina, which see.

Idle since 1910.

NEVADA COPPER HILLS MINING CO.

NEVADA

Idle, and possibly dead.

Office: 18 South Mulberry St., Mansfield, Ohio. **Mine office:** Luning, Mineral Co., Nev.

Officers: at last accounts, A. H. McCullough, pres.; F. W. Lenhart, v. p.; T. J. Foster, sec.; Chas. Ritter, treas.; Rowland Lea, gen. mgr.

Inc. Oct. 24, 1907, in Nevada. **Cap.,** \$1,500,000; shares \$1 par; non-assessable; issued, \$745,000. Farmers Savings & Trust Co., Mansfield, Ohio, registrars. Annual meeting, first Monday in December.

Lands: 10 claims, 200 acres, in the Fitting district, 9 miles north of Luning. The property is reported, by Mr. Lea, to have replacement ore-bodies in limestone over a width of about 600', with a N.-S. strike, and a dip of 6°.

Ore: oxidized, with occasional native copper and some bornite with chalcopryrite in the bottom workings. Ore-bodies average 2' thick and 28 of them are opened up for a length of 400' and a depth of 100' according to the company's secretary. Ore is stated to assay 1 to 70% copper, from a trace to 8 oz. silver and from a trace to \$3 gold per ton.

Development: by 225' shaft and a 330' tunnel.

Equipment: includes a 25 h. p. hoist, and 6 buildings. Presumably pursuing a "watchful waiting" course and ignores all requests for information.

NEVADA NEW MINES CO.

NEVADA

Office: 146 No. Virginia St., Reno. **Mine office:** Rawhide, Mineral Co., Nev.

Officers: E. W. King, pres.-gen. mgr.; Thos. J. Flynn, mine supt.; H. Davis, mill supt.

Company took over the property of George Graham Rice's old promotions, the Rawhide Coalition M. Co., Rawhide Queen M. Co. and the Black Eagle M. & M. Co., in Regent district, said to carry free gold and ruby silver, in a 4" vein, opened on the 500' and 600' levels. Developed by shafts and crosscuts.

Equipment: includes 10-stamp amalgamation and concentration mill, 35-ton cyanide plant, compressor, and gasoline power. Reported treating 60 tons of \$22 ore per day in 1914. Recent production figures not available as company has not replied to requests for information.

NEVADA ORE & COPPER CO.**NEVADA**

H. H. Hill, supt., Acme, via Mina, Mineral Co., Nev.

Property: a group of claims in the Fitting district, said to show copper ore in replacement deposits. Developed by shaft and extensive workings, opening up lead ores. Reported in April, 1916, that a mill would be built.

NEVADA PACIFIC MINES CO.**NEVADA**

L. P. Patrick, pres., Goldfield, Nev. **Mine office:** Mina, Mineral Co., Nev.

Property: the Mayflower group in New York canyon, N. E. of Mina, shows copper ore 150' wide, exposed by surface work, from which 15 tons daily were shipped to the Wabuska smelter in 1913. Reported under bond and lease to the U. S. Smelter Co.

NEVADA RAND MINES CO.**NEVADA**

Address: Box 152, Reno, Nev. **Mine office:** Rand, Nev.

Officers: Charles Huber, pres.; Charles Koegel, v. p.-supt.; W. V. Rudderow, sec.-treas., with J. J. Turney, directors.

Inc. July 8, 1916, in Nevada. **Cap.**, \$1,000,000; shares 10c par; non-assessable; 796,700 issued. Annual meeting, July 9.

Property: 5 unpatented claims, 70 acres, in Rand district, Mineral Co., Nev., said to show a fissure vein in andesite, with pay-shoot said to be 200' long and 40' wide. Ore contains silver chloride with \$5.25 gold and a total value of \$15 per ton.

Development: by shaft to 450' depth, with total workings of 1,800'. Ore reserves estimated at 30,000 tons, 1,200 tons of \$17 ore on the dump. In 1914 high-grade ore worth \$30,000 was shipped. Mine examined by S. E. Montgomery of Reno, in Aug., 1917, who advises erection of 25 to 50-ton cyanide mill. Total costs are estimated at between \$4 and \$5 per ton.

Company appears to have a promising mine in a district that has produced extremely rich ore.

Ten-stamp mill being erected late in 1917.

NEVADA REGENT MINES CO.**NEVADA**

Provo, Utah.

Officers: Jesse Knight, pres.; J. H. Miller, v. p.; W. Lester Mangum, sec.-treas.; P. H. O'Neil and A. S. Proskey, directors.

Inc. June, 1915, in Utah. **Cap.**, \$1,000,000; shares 10c par.

Property: in Regent district, Mineral Co., Nevada.

NEVADA STANDARD COPPER CO.**NEVADA**

Officers: Wilbert E. March, pres., P. O. Box 24, Mina, Nev.; C. E. Korth, v. p.; L. H. Marsh, sec.-treas., with B. H. Wyant and Matthew W. King, directors.

Inc. 1912, in Nevada. **Cap.**, \$100,000; shares \$1 par; non-assessable; 82,355 issued.

Property: 11½ claims and a mill-site, near Luning in Santa Fe district, Mineral Co., Nev., 8 miles N. E. of Mina, on the Goldfield branch of the S. P. R. R. Claims cover low rounded hills at about 6,000' elevation. The rocks are leached porphyries underlain at 20' depth by low-grade oxidized copper ores. Ore contains bornite, chalcocite and chalcopryrite. Assays reported from 1.1 to 25% copper, with small gold and silver values.

Development: by 192' shaft on the Green Mystery claim, which at 45' cut a fault plane fissure that widened to 20' on the 104' level. Crosscutting in 1915 on the 192 level to the North opened up 11' of low-grade copper ore. A level at 104' cut a 24' shear zone carrying low-grade ore. Management considers it a typical porphyry, or disseminated copper deposit. There is reported to be a bed of copper-bearing conglomerate between

porphyry and lime. An incline is being sunk to explore this conglomerate, and at 60' it is reported as "looking fine." Property examined by W. R. Brown, W. H. Wiley and C. W. Clark.

Equipment: includes a 4 h. p. gasoline hoist, pump, blacksmith shop and buildings for men. There are 3 springs, $2\frac{1}{2}$ to 5 miles distant. A 25 h. p. hoist is to be installed. \$2,915 spent on development in 1916.

NEVERSWEAR MINE

NEVADA

Owned and operated by E. C. Watson of Luning, Nev.

Property: 3 unpatented claims, about 50 acres in Santa Fe mining district, New York canyon section, Mineral Co., Nev., shows copper-silver ore in a contact deposit in limestone monzonite formation. The orebody from 2'-20' wide and from 50'-200' long, strikes N., dips W. and is said to give average assays of 9% copper and 1-7 oz. silver.

Development: includes main tunnel being driven to the contact. Production totals about 1,500 tons. Recent work has been almost entirely by lessees. Examined by F. B. Weeks for U. S. S. R. & M. Co. and by Walter Wiley for Sherwood Aldrich.

NOBLE TUNGSTEN MINE

NEVADA

See Silver Dike mine.

OLYMPIC MINES CO.

NEVADA

Address: Omco, Mineral Co., Nev.

Officers: E. G. McConnell, pres.; A. Corrigan, v. p.; G. J. Panario, sec.; 460 Montgomery St., San Francisco, Cal.; Italian-American Bank, S. F., Cal., treas.; above with Jas. P. Nelson, directors. F. J. Siebert, mgr.; J. O. Greenan, supt.

Inc. May, 1916, in Nevada. **Cap.**, \$200,000; shares 10c par; 1,200,000 issued.

Property: 9 claims, 160 acres, formerly known as the Royal George group, 25 miles N. E. of Mina, Mineral Co., Nev., in the Bell mining district.

Ore: gold-silver occurs in a fissure vein in rhyolite to 150' depth.

Development: by 225' incline shaft with total of 2,500' underground workings, estimated by manager to block out 28,000 tons of ore. Total ore reserves estimated at 40,000 tons of \$23 ore.

Equipment: includes 25 h. p. gas engine and compressor. 70-ton mill completed and operating in 1917.

PACK SADDLE GOLD MINES CO.

NEVADA

Address: Carson City, Nev.

Officers: E. H. Walker, pres.; H. R. Mighels, v. p., with F. M. Baker and Alex. McDonald, directors. Geo. L. Hedges, supt., Schurz, Nev.

Inc. April 11, 1916, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; 630,000 shares outstanding.

Property: 7 claims, about 120 acres, in Mineral County, four miles from Reservation Station, said to show a quartz vein in andesite, with N. E.-S. W. course and giving average assays of $2\frac{1}{2}\%$ copper and several dollars in gold.

Development: by 224' tunnel. Further development planned for 1917.

PILOT COPPER CO.

NEVADA

Office: 10 Wall St., New York City.

Officers: W. B. Andrew, sec.-treas.-gen. mgr.; Chas. P. McColm, v. p.; above with C. W. Lynch and L. C. Warner, directors. J. C. Skuse, cons. engr.

Inc. 1917 in Arizona. **Cap.**, \$7,500,000; \$1 par; 3,095,000 treasury shares; balance pooled. U. S. Corporation Co., N. Y., transfer office. Listed on

New York Curb. Is practically a reorganization of the Nevada Champion Copper Co.

Property: 8 claims, 130 acres, 3 miles from Luning, Mineral Co., Nev., said to show large bodies of 3% copper ore.

Development: by 450' 3-compartment shaft and 2 tunnels. Management estimates 225,000 tons of 2½% copper ore blocked out. In 5 months in 1916, mine produced \$45,000 gross. Is erecting a leaching plant to treat its own and custom ores.

PILOT RANGE MINE

NEVADA

Luning, Mineral Co., Nev. Mrs. Fermina Serrias, owner and mgr. Mine bonded 1913.

Property: known as the Spanish Woman's mine, 40 claims, unpatented, 800 acres, in the Santa Fe district, 8 miles from the Southern Pacific railroad, shows syenite, andesite and limestone. Ores are azurite, malachite, bornite and chalcopryrite, reported to average 6% copper, 2 oz. silver and \$2 gold per ton.

Development: by shafts and tunnels with total of over 750' of workings.

Equipment: includes steam plant and several mine buildings.

Shipments of about 50 tons daily made to the Thompson smelter in 1914, and intermittently to Hazen sampler, in 1916.

PITTSBURGH-DOLORES MINING CO.

NEVADA

Yerington, Nev.

Officers: H. S. McKee, pres., Pittsburgh, Pa.; A. Vignos, v. p.; R. J. Palmer, sec.; H. W. McIntosh, treas.; E. J. Schrader, gen. mgr.; J. B. Perry, mine supt.; C. R. Olson, mill supt.

Inc. 1912 in Arizona. **Cap.**, \$1,500,000; shares \$1 par; issued 1,000,000. Bonds: authorized and outstanding, \$175,000. Annual meeting in March.

Property: 16 unpatented claims at Rockland, Mineral Co., 27 miles S. of Yerington, comprises the claims of the old Rockland mine, discovered in 1868. Ore was at first hauled to Pinegrove for treatment, but a 10-stamp mill was installed in 1870. Fire destroyed the mill soon after and the property remained idle until it came into possession of Gov. Blasdell, who erected another 10-stamp mill, which was in turn destroyed by fire. In 1902 the Nevada Chief Mining Co. acquired the property and began cyaniding the ore with indifferent success until in 1912 the present company took over the mine.

Ore: quartz, containing 1% pyrite with gold and silver values, occurs in a fissure vein from 1½ to 9' wide, with rhyolite hanging-wall and granodiorite footwall. Vein strikes N. E., dips 40° E., and carries pay ore in shoots. Ore treated averages about 0.44 oz. gold and 3.4 oz. silver, value about \$10.50.

Development: by tunnels, greatest depth of workings being 1,300' and horizontal extension about 13,000'. Ore is extracted by the fill method, stulls being used in timbering. A Sullivan angle compressor furnishes air, and power for operating mine and mill is taken from the Truckee River General Electric Co.

New work, 1916, consisted of 2,900' of raising and 2,150' of drifting.

The remodeled mill, using continuous counter-current decantation, with capacity of 60-100 tons daily, went into operation June, 1915. Blake crusher and Humphrey rolls prepare ore for treatment, trommels aiding in separation and distribution of sizes, and a 5'x18' Allis-Chalmers tube mill, driven by a variable-speed motor and silent chain drive, delivers the slime, crushed in solution, to the treatment tanks. The tube mill has Belmont ribbed liners and uses mine rock for pebbles. Three Dorr agitators and

5 thickeners, operated continuously, give time and treatment for extraction. Solution, after clarifying through vacuum filter leaves, is precipitated in zinc boxes, and the precipitates melted directly in a tilting Case furnace to bullion having a fineness of 850 to 900 in silver and 5 to 6 in gold. Extraction is 90.4%. A ball mill has been recommended to replace rolls, screens, etc.

Owing to the distance of the property from the railroad, 27 miles, transportation of supplies is expensive, \$12 per ton.

Production: for 18 months to Dec., 1916, was 27,268 tons of ore, including some from dumps and tailings, yielding \$230,370. Mining costs were \$3.50 per ton, including development, and average milling cost was \$2.75. In 1916, \$18,749 was spent on construction work.

QUEEN REGENT MERGER MINES CO.

NEVADA

Office: 337 Monadnock Bldg., San Francisco, Cal.

Officers: J. D. Brown, pres.; H. B. Wade, sec.; J. E. Kerr, gen. mgr.; Wm. P. Miller, cons. engr.

Inc. 1911 in California. **Cap.**, \$2,000,000; shares \$1 par; 761,000 shares issued.

Property: 5 unpatented claims, bought June, 1915, for \$60,000, in Rand mining district, Mineral Co., Nev., 18 miles E. of Nolan, on the E. side of Walker Lake. Tract is said to cover 4,000' of the main fissure of the Rand district.

Développement: by 500' main working shaft with crosscuts at each 100' level and 2 prospect shafts, each 100' deep. Vein on 1st and 2nd levels is 30'-40' wide in places, between andesite footwall and rhyolite hanging wall. On the 2nd level a 4' vein cut at 406' carried sulphides, and an 8' cross-vein cut at 460' disclosed copper ore unlike the Rand, carrying sulphides with gold-silver-copper-lead, the copper content being 7% to 15%. On the 500' level dacite replaced the andesite.

Cost of sinking the 500' double compartment shaft was but \$12.41 per foot for all items, except overhead.

Property promising and management efficient.

RESERVATION HILL M. & M. CO.

NEVADA

Address: Carson City, Nev. **Mine office:** G. L. Hedges, supt., Schurz, Nev.

Officers: R. A. Trimble, pres.; W. E. Baldy, v. p.; R. A. MacKay, sec.-treas., with H. R. Burlington and J. E. Monahan, directors.

Inc. 1907 in Nevada. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; 788,000 issued.

Property: 2 claims, 30 acres, 1 mile from Reservation station, Nev., partly under lease to Californians.

Ore: carries silver and lead.

Development: by short tunnel and shallow shaft, the latter said to show 21" of ore that assayed high in silver, lead and gold.

A prospect.

SHIPPER COPPER MINING CO.

NEVADA

Luning, Mineral Co., Nev. Frank Everett, pres.; Jas. E. Quinlan, mgr.

Property: 2 claims, 4 miles S. E. of Luning, developed by a 400' shaft, shows a small vein of high-grade copper ore in dolomite. shipments from which are reported to have yielded 8% copper. Management plans early resumption of development work.

SILVER DIKE TUNGSTEN MINE

NEVADA

Owned and operated by Atkins, Kroll & Co., San Francisco, Calif. Is a tungsten property, 11 miles from Sodaville, Mineral Co., Nev. Operations suspended and equipment sold to Louisiana Cons. Co.

SPARTA MINING CO.**NEVADA**

Mina, Mineral Co., Nev. W. E. Bell, pres.

Cap., \$1,000,000; shares \$1 par. Listed in Salt Lake City.**Property:** 19 unpatented claims in Gold Range mining district, with about 300' of development work, said to show 3,000 tons silver-lead ore. Is a prospect.**TODD MINING CO., R. B.****NEVADA****Office:** 203 Nixon Bldg., Reno, Nev.**Officers:** Robt. B. Todd, Sr., pres.; W. M. Gardiner, v. p.; V. C. Baker, sec.; with L. E. Aubury, H. F. Norcross and C. W. Bradley, directors.**Inc.** Jan. 12, 1916, in Nev. **Cap.**, \$250,000; \$1 par; 120,000 issued. Is the successor of the Luning Gold Mines Syndicate.

Operating expenses in 1916 were \$6,000.

Property: 18 claims, 300 acres, adjoining Luning Idaho group, in Santa Fe district, 5 miles N. E. of Luning, Nev. Claims reported to show quartz diorite cut by a 4' fissure vein dipping 45° with N. W.-S. E. course. Ore is partly sulphide, and is said to assay \$25 per ton in gold and silver.**Development:** by 300' shaft with others 100 and 120' deep; also two 700' tunnels and other shorter ones. Workings total 5,000'. About 7,000 tons of ore blocked out and now being mined for shipment.**Equipment:** aerial tram and mill contemplated.**Production:** \$25,000 to 1913. Shipping ore in 1917.**WALL STREET COPPER CO.****NEVADA****Address:** W. S. Norris, Luning, Nev.

Controlled by A. H. Howe, W. Norris and C. Evans of Goldfield, Nev.

Property: said to be one of the best in the Luning district, having shipped \$600,000 worth of ore in 18 months to Sept., 1917. Present production is 600 tons per month. Development amounts to 8,000' and the vein in one stope is 4' wide.**WEDGE COPPER CO.****NEVADA**

Luning, Nev. H. H. Hunter, managing director, Lovelock, Nev. Mark Walser and H. O. Howard, directors. Knud Freitag, cons. engr.

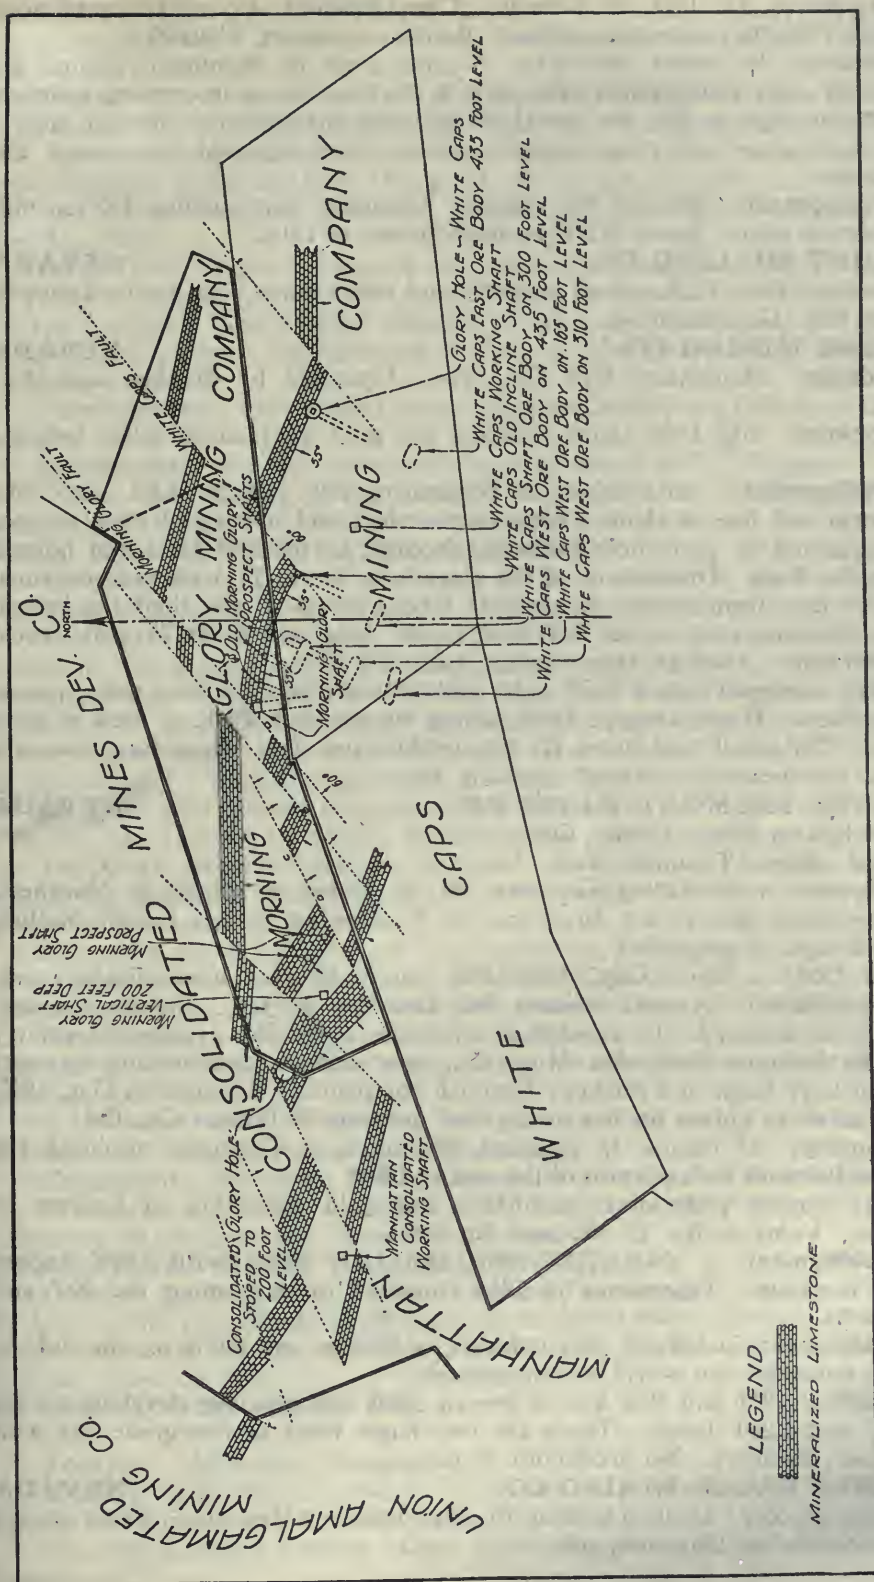

Inc. March, 1916, in Nevada. **Cap.**, \$1,000,000; \$1 par.**Property:** 6 claims, 8 miles from Luning, Mineral Co., is developed by crosscut tunnel cutting copper ore at 800' depth. Said to show 2' of 2% ore in a 6' vein.

In April, 1917, rich ore was reported as cut in No. 1 tunnel, and in September ore was to be sent to smelter.

*NYE COUNTY***AFTER ALL MINES CO.****NEVADA****Address:** Tonopah, Nev.**Officers** Chas. E. Knox, pres.; Herman Zadig, v. p.; M. E. Albert, sec.-treas., with J. H. Evans and E. A. Keenan, directors.**Inc.** March 27, 1917, in Nev. **Cap.**, \$1,000,000; shares \$1 par; 700,000 shares issued; assessable. Annual meeting, April 3rd.**Property:** 8 claims, about 72 acres, formerly owned by the Umatilla Tonopah Mng. Co. and the Montana Tonopah M. Co. in Tonopah mining district.

Arrangements have been made whereby the mine will be developed by the Tonopah Extension Co. from the 1,540' level of the Victor shaft to the sideline of the After All property, the latter company to share the expense.

BELMONT BIG FOUR MINING CO.**NEVADA****Address:** Belmont, Nye Co., Nev.**Officers:** F. W. Spear, pres.-mng.; L. W. Spangler, v. p.; Dr. Childs Morton, sec.-treas.

PROPERTY MAP OF MANHATTAN, NEVADA. BLOCK-FAULTING IS SHOWN; ORE IS BEING MINED ALONG THE FAULT-PLANES IN MOST OF THE MINES.

Inc. March 15, 1917, in Nevada. **Cap.**, \$125,000; shares 10c par; non-assessable; 700,000 shares outstanding. Bonds authorized, \$250,000.

Property: 16 claims, 300 acres, 8 miles west of Belmont. Claims are reported to carry molybdenite ores in a N. S. fissure vein in granite, which is 20' wide and dips at 30°, the molybdenite being disseminated through quartz which also carries silver and copper values. Ore reported to average 2% molybdenite.

Development: 150' and 400' tunnels. Company now building 100-ton mill with flotation plant. Spent \$5,000 in development in 1916.

BELMONT MILLING CO.

NEVADA

Dissolved Feb., 1917, and all property and assets taken over by the Tonopah Belmont Dev. Co., which see.

BIG PINE MINING CO.

NEVADA

Address: Manhattan, Nye Co., Nev. Operated by Mushett and Wittenberg.

Property: Big Pine claim covering the gold mineralized schist belt for 1,000'.

Development: the Mushett & Wittenberg 200' vertical shaft, sunk 350' from north end line of claim. Between the shaft and north end lines the ore found is mined by glory-hole methods, dropped to the 200' level and hoisted through the shaft. Dimensions of the glory-hole late in 1915 showed ore equal to 240,000 tons from surface to the 200' level. South of the shaft the known extent of the ore zone to the 200' level is 400' long and 60 to 75' wide, equal to 370,000 tons. Average daily tonnage hoisted is 375.

Mill: equipped with a 5x20' tube mill, which treats 125 tons daily, plates, classifiers, etc. Heads average \$5.60, tailing 40c per ton; 90 h. p. used in mine and mill. Tube mill consumes 170 lbs. pebbles per day. Operating costs are reported the cheapest in Nevada, totaling 45c.

BUCKEYE BELMONT MINES CO.

NEVADA

1055 Spitzer Bldg., Toledo, Ohio.

Mine office: Tonopah, Nev.

Officers: A. B. Tillinghast, pres.; W. B. Kober, v. p.; W. B. Voorhees, sec.; preceding officers are directors. E. F. Rowley, treas.; Letson Balliet, mgr. and supt. of properties.

Inc. 1908, in Nev. **Cap.**, \$2,000,000; shares \$1 par; nonassessable; outstanding \$700,000. Annual meeting 1st Thursday in Jan. Private corporation. Stock unlisted. Is a holding company, operating property formerly owned by Belmont Extension Mng. Co., now defunct, and holding interests in the Buckeye Eagle and Buckeye Tonopah companies. Reported in Oct., 1915, to have taken an option upon a drift gravel property in Plumas Co., Cal.

Property: 15 claims, 13 patented, 300 acres, at Tonopah, adjoining the Tonopah Belmont on a portion of the east end line.

Ore: quartz with silver sulphides and gold occurring in fissures in trachyte. Veins strike E. W. and dip 30°.

Development: 3 shafts, 125', 900', and 1,234' deep, with 5,000' underground workings. Operations in 1916 consisted of developing the 900' and 1,200' levels.

Equipment: includes 2 electric hoists, of 52-h. p. and 120-h. p., one 40-h. p. gasoline hoist and two 8-drill air compressors.

Plans for 1917 and 1918 are to deepen shaft and continue development on the 900' and 1,200' levels. There are two large veins of low-grade ore with several rich stringers. No production to date.

BUCKEYE EAGLE MINING CO.

NEVADA

Tonopah, Nev. Control held by Buckeye-Belmont Mines Co. Same officers and directorate as that company.

BUCKEYE TONOPAH MINING CO.

NEVADA

Tonopah, Nev. Control held by Buckeye-Belmont Mines Co.; same officers and directorate as that company.

CARRARA MINING, MILLING & LEASING SYNDICATE NEVADA

Jules V. Baird, supt., Carrara, Nye Co., Nev. Company owns the Shindel and Hampton-Sutton properties and Bull Moose mine, the latter said to have been acquired from the Bull Moose M. & M. Co. in 1915 for \$156,000, in Bullfrog district on Bare Mountain, 2 miles N. of Carrara and near Beatty, Nye Co., Nev.

In the Bull Moose mine, gold ore occurs in stringers of calcite in a belt of dolomitic-limestone about 100' wide. Values average \$9, with highest values on the footwall. The Shindel orebody, 3' wide, and uncovered for over 40' contains rich pockets and stringers of gold in calcite, claimed to run as high as \$100 per ton.

Development: 130' Shindel tunnel; 2 incline shafts and tunnel on the Bull Moose.

Equipment: includes compressor and 10-stamp mill. Shipments in 1914 to Western Ore Purchasing Co., netted \$60 per ton after deducting \$21.50 for freight and treatment charges. Employs about 5 men.

CASH BOY CONSOLIDATED MINING CO.

NEVADA

Tonopah, Nev. A. S. Ross, pres.; G. B. Thatcher, v. p.; E. H. Mead, sec.-treas.-mgr., with H. C. Price, L. A. Blakeslee, directors.

Inc. March 21, 1914, in Nev. **Cap.**, \$2,000,000; shares \$1 par, all outstanding, assessable; 6th assessment, 1c per share, called Aug. 16, 1914. Annual meeting November 21. Listed on New York Curb and San Francisco Exchange. Company is a reorganization of the Tonopah Cash Boy Cons. Mng. Co., which suspended operations in 1914 with debts of \$3,476 and 76,870 shares in the treasury. Financial statement of Cash Boy for period Nov. 21, 1914, to March 21, 1917, shows receipts of \$100,694, which includes: assessments, \$100,000; ore shipments, \$6,147; royalties, \$74. Cash on hand, \$9,870.

Property: several fractions, patented, 30 acres, at Tonopah, Nye Co., adjoin the Tonopah Merger on the west, Tonopah Victor on the south, and Tonopah Extension on the north.

Ore: gold-silver, occurs in a 3 to 10' ore shoot, E.-W. course and dip about 35° in rhyolite. Average assays said to be about \$25 per ton. About 250 tons were shipped up to April 8, 1917, and 6,000 tons of \$12 to \$15 ore blocked out.

Development: 1,480' vertical shaft, with most of the recent work on the 1,350' and 1,450' levels, where drifting and crosscutting is being done, but with unsatisfactory results.

A 180' winze was sunk from the 1450' level, striking ore 11' wide in bottom. Drifting both ways on ore shoot is progressing.

Equipment: includes a 75-h. p. electric hoist and a 3-drill air compressor.

Production: for 1915 amounted to 150 tons ore, said to assay \$15 per ton. There are no ore reserves. Property is a prospect.

COMMERCIAL MINES AND MILLING CO.

NEVADA

Operates the Stray Dog, Indian Camp and Jumping Jack Claims. From the 85' level of the Jumping Jack 100 tons are extracted daily. Treated in the War Eagle mill of 20 stamps and a pebble mill. H. M. Thompson, supt. Manhattan, Nye Co., Nev.

DEXTER-UNION MINES CO.

NEVADA

Idle.

Address: Manhattan, Nevada.

Officers: S. R. Moore, pres.; H. H. Brown, v. p.; Percival Nash, sec.-treas., with J. E. Monahan and R. Fred Brown, directors.

Inc. 1912 in South Dakota. **Cap.**, \$1,000,000; shares \$1 par; 800,000 shares issued.

Property: 16 patented claims, 270 acres, in Manhattan mining district. Ore contains gold and silver and is said to average \$15 per ton. Lessees reported to have produced \$40,000 worth of ore from the Union No. 4 claim.

GOLDEN CHARIOT MINING CO.

NEVADA

Address: Jamestown, Nye Co., Nev. Carl Feutsch, pres.

Property: 24 miles from Las Vegas & Tonopah R. R.

Ore: said to contain high values in copper, gold, and silver. Ore will be shipped to a point 6 miles south of Goldfield.

GREAT WESTERN CONSOLIDATED MINING CO.

NEVADA

In 1915, control of this company was acquired by the Greenwater Copper Mines & Smelter Co.

Property: 11 unpatented claims, about 300 acres, at Tonopah.

Development: by a 2-compartment shaft, 1,150' deep, which enters one of the ore-bearing formations at about 1,000'. Considerable exploration work was done on the 860' level, but it is said to have been all in cap rock and commercial ore was not found. The new management intends to explore the ground thoroughly by crosscutting. Water hindered exploration during the early part of 1917.

GREENWATER COPPER MINING & SMELTER CO.

NEVADA

Lloyd E. Marsden, sec.-treas., Room 515-E, 30 Church St., New York.

Chas. R. Miller, pres.; M. R. Ward, v. p.; preceding, with Max E. Bernheimer, Chas. Gold, W. G. Denham, Clyde Milne, Oscar A. Daube, F. I. Mallory, B. H. Campbell and W. H. Drayton, 3rd, directors. John McGee, supt., at Tonopah.

Inc. Dec. 12, 1906, in Delaware. **Cap.**, \$25,000,000; shares \$5 par. Was a securities holding company only, and owned stock in a number of Greenwater promotions, all dead, described Vol. VIII, Copper Handbook. Company, on Dec. 31, 1910, had \$144,727 invested in choice bonds, after losing about \$170,000 through the failure of Chas. Minzesheimer & Co., New York brokers, who failed Oct. 15, 1910.

Reorganized Oct., 1914, and capitalization reduced to \$500,000; shares 10c par; 3,000,000 issued. Stock listed on the N. Y. Curb. Annual report Dec. 31, 1916, showed cash assets of \$52,630, less expenses and loss on \$4,960, leaving \$47,670 net. Corporation Trust Co., Jersey City, N. J., transfer agents. Annual meeting 2nd Friday in February.

In August, 1911, company took over the O. K. and Supply groups, gold mines at Dale, Calif. Considerable work was done on the Supply mine. In 1915 a crosscut on the 700' level cut the Armenian and Jeane veins, showing practically no values. Two winzes were sunk and drifts extended on the 800-1,100' levels of the Supply vein with negative results. The values decreased with depth and on the 1,200' level no pay ore was found. All development and prospect work gave unsatisfactory results and the property was abandoned in Oct., 1915.

In November, 1915, the company acquired stock control of the Tonopah Bonanza Mining Co. and the Great Western Cons. Mining Co., at Tonopah, Nev.

The cost of shares and assessments in first-named company to end of 1916 was \$31,867, and of latter company \$14,910. For the Ruby claims, 125,000 treasury shares at par, 10c each, was paid.

Property: 25 claims, is extensively developed and located on the trend of known ore veins. Company now hopes to recoup losses sustained in California operations. Holdings described under their respective titles.

GYPSY QUEEN MINING CO.

NEVADA

Office: 265 Russ Bldg., San Francisco, Calif.

Officers: C. F. Wittenberg, pres.; F. A. Burnham, treas.

Inc. in Nevada. **Cap.**, 1,250,000 shares. Four assessments have been called. Listed on San Francisco and Salt Lake City exchanges.

Property: 53 acres in Tonopah mining district, Nye Co., Nev., said to show silver ore. Ledge is from 1 to 5' wide. Formation is rhyolite, quartz and trachyte.

Development: by 1,370' shaft. On the 1,350' level a crosscut was run S. E. for several hundred feet. At 247' from the shaft a 4' vein was cut with ore from 8" to 18" in width. A winze, being sunk on this vein, was down 80' in March, 1916.

HALIFAX TONOPAH MINING CO.

NEVADA

Offices: 1008 Kearns Bldg., Salt Lake City, and Tonopah, Nev.

Officers: F. M. Smith, pres.; Thos. Kearns, v. p.; F. J. Westcott, sec.; C. B. Zabriskie, treas.; preceding, with Clyde A. Heller, directors. B. F. Edwards, gen. mgr., Syndicate Bldg., Oakland, Cal. J. W. Sherwin, supt.

Inc. Sept. 27, 1902, in Utah. **Cap.**, \$2,000,000; outstanding, \$1,895,000; shares \$1 par. Stock transferred at company's office. Registrar & Transfer Co., 19 Nassau St., New York, registrar. Annual meeting, 2nd Tuesday in October. Listed on San Francisco Exchange.

Property: 4 patented claims, 81 acres, adjoining the central portion of the Belmont property on the east.

Ore: gold-silver, occurring in trachyte. For geology of Tonopah district, see U. S. G. S. Prof. Paper, 42, or Jim Butler company following.

Development: by vertical shaft, 1,734' deep, with the deeper levels at 1,000', 1,200', 1,400' and 1,700'. The 1,000' crosscut picked up the easterly extension of the Belmont vein and ore shipments were made. After considerable work the vein was lost through faulting.

In 1916 a vein reported to be about 20' wide was encountered on the 1,200' level. This vein has been stoped and drifted on and furnishes the bulk of the ore shipped.

Company drove a long crosscut for ventilation purposes on the 1,200' level to connect with the Buckeye-Belmont workings. Is raising and crosscutting from the 1,700' level, 1917.

Production: shipping about 200 tons weekly to the West End smelter.

The West End Consolidated Co. is reported to be in charge of development work, taking treasury stock in payment.

HASBROUCK MINE

NEVADA

Formerly owned by the Hasbrouck Mining Co., but abandoned after doing considerable work and bought at sheriff's sale by Geo. Kernick of Tonopah. Located 5 miles south of Tonopah. Shipments of gold ore were made during 1915.

Probably idle. No returns received.

HOTCREEK SYNDICATE TRUST

NEVADA

Idle. Property at Hotcreek, via Tonopah, Nye Co., Nev. Victor Barndt, trustee; John Lawton Butler, sec. Is not incorporated.

Property: 32 claims, unpatented, in Rattlesnake canyon, shows limestone and andesite, carrying replacements in limestone near porphyry contacts, and fault planes; orebodies reported by company to be 2 to 25' in width and traceable from 400' to more than 2,000'.

Development: by about 1,000' of workings, showing copper ores said to average 2 to 3% copper, 5 to 10 oz. silver and \$1 gold per ton. Ore at water level is disseminated chalcopyrite, of concentrating grade.

JIM BUTLER TONOPAH MINING CO.

NEVADA

Office: 501 Bullitt Bldg., Philadelphia, Pa.

Officers: Clyde A. Heller, pres.; Wm. M. Potts, v. p.; K. Kitto, sec-treas.; R. G. Wilson, asst. sec-treas.; C. B. Taylor, gen. counsel.

Directors: Clyde A. Heller, Wm. M. Potts, R. G. Park, H. W. Davis, S. D. Sinkler, T. W. Synnott, M. B. Cutter and J. C. Fraley; Fred'k Bradshaw, gen. supt.; L. R. Robins, mng. engr.; Clyde Jackson, supt.

Inc. Nov. 13, 1903, in Delaware. **Cap.**, \$2,000,000; shares \$1 par; all issued; 281,979 in hands of Trustee for company. Initial dividend 10% paid Aug. 2, 1915. Distributions in 1916 were two of \$171,802 each and similar amounts in 1917.

Treasurer's statement for 12 months ended Sept. 30, 1917, shows: receipts, \$1,216,077; \$889,914 from ore sales and silver; disbursements for operation, \$386,491; and dividends, \$343,604. Cash and loans at Sept. 30, 1917, totaled \$485,982.

Company continues to make good profits, those for May, 1917, being \$50,137 from 2,925 tons of ore. In October, \$28,242 from 3,500 tons.

Property: 16 patented, 2 unpatented claims, 241.7 acres, at Tonopah, Nev.; also Ophir King group, 91.69 acres, bought at sheriff's sale Nov., 1914, for \$1,750.

Geology: of Tonopah is complex; a series of volcanic rocks, partly lava flows, partly intrusive sheets and masses of quickly varying thickness overlie one another irregularly. The productive veins are in the Mizpah "trachyte," overlaid by the Midway andesite and intruded by the West End rhyolite. The veins are cut through by the Midway andesite and do not commonly outcrop, but terminate against the Midway andesite at depths up to 1,200'. They are fissure veins which for some distance lie on or in planes of contact between eruptive rocks. Values are in gold and silver. See U. S. G. S. Prof. Paper, No. 42. The company holdings are identical in character to those of its neighbors, the Tonopah Mining and Belmont companies.

Development: is through the Desert Queen and Wandering Boy shafts. Development for fiscal year 1917 was 5,012', costing \$8.59 per foot.

Ore reserves: Sept. 30, 1917, consisted of 18,320 tons positive ore, 5,000 tons possible ore, a total of 23,320 tons, compared with 19,158 tons in preceding year; 43,594 tons were mined in the fiscal year. Further exploration of the orebodies and of virgin territory is expected to add largely to this amount. These reserves do not include any ore in the ground in dispute with the West End. Recent geological development in various parts of the mine are not encouraging. Three holes were bored from surface 915', 740', and 840', with negative results.

Ore is milled for cost plus 5% (plus 50c p. t.) by the Belmont Milling Co., with 91.45% recovery in 1915.

Recent production and Costs per ton:

	Ore, Tons	Value per Ton	(A)	Mng. Dev.	Trans.	Trmt. Chge.	Gen. Exp.	Total Oper.	Oper. Profits
1917...	40,297	\$26.12	\$1.79	\$5.17	\$0.71	\$5.33	\$0.73	\$11.94	\$12.39
1916...	46,489	19.78	1.56	4.80	0.83	4.79	0.38	10.80	7.73
1915...	48,533	19.25	1.74	4.29	1.08	5.02	0.28	10.40	7.11
1914...	34,722	21.45	2.14	5.36	1.07	5.58	0.32	12.18	7.13

(A) Deductions by ore purchasers.

The \$3,000,000 apex suit of the Jim Butler against the West End Co. for trespass and ore extracted was decided July, 1916, in favor of the West End Co. by the State Supreme Court. The suit is pending, and the West End continues to mine ore, but the revenue is impounded, the total amount being \$339,530.

JOLLY JANE LEASING CO.

NEVADA

Has 3-year lease on the Jolly Jane claim, of Pioneer Extension Mines Co., which see.

KANSAS CITY-NEVADA CONS. MINES CO.

NEVADA

Office: 411 Commerce Bldg., Kansas City, Mo.

Mine office: Bruner, Nev.

Officers: E. C. Sooy, pres.; E. M. Ridenour, 1st v. p.; B. H. McGarvey, treas.; R. E. Bruner, sec.; H. W. Bruner, gen. mgr., with Jas. B. Welsh, Wm. J. Morse, H. G. Chambers, directors.

Inc. 1915 in Nev. **Cap.**, \$6,000,000; shares \$1 par; 1,500,000 shares in treasury, Feb., 1916. Company gave 100,000 shares for the property of the Big Henry Gold Mining Co.; 2,000,000 shares to redeem the outstanding stock of the Phonolite Paymaster Mng. Co.; 800,000 shares to redeem the outstanding stock of the Phonolite Silent Friend Mng. Co., and 1,600,000 shares for the Duluth Gold Mng. Co. holdings, in the Bruner district, Nye Co., Nev.

The Paymaster property has about $\frac{1}{2}$ mile of underground workings. In the main 1,000' tunnel and orebody, 110' long, has been opened up, reported to carry gold-silver ore averaging \$20 per ton. A. E. Swain, cons. engr., reports that one ore-shoot on the 125' level is over 340' long. The 2-compartment shaft is 375' deep and levels are being driven 125', 250', and 375' below the tunnel level, which goes through the hill for over 1,000' and has exposed considerable milling ore.

A 50-ton mill is to be erected. Water will come over Ione valley, a distance of 8 miles.

Control of this property is in good hands, same company operating the El Tigre silver-gold mine in Sonora, Mexico.

MacNAMARA MINING & MILLING CO.

NEVADA

Offices: 565 Mills Bldg., San Francisco, and Tonopah, Nev.

Officers: J. L. Joseph, pres.; Mark Wulfsohn, v. p.; E. W. Elliott, sec.-treas.; J. W. Sherwin, supt.

Inc. 1914 in Calif., as a reorganization of the MacNamara Mining Co. **Cap.**, \$1,500,000; shares \$1 par; assessable. Transfer office and registrar: 565 Mills Bldg. Listed on San Francisco Exchange.

The MacNamara Mining Co. completed a mill on its property, Dec, 1912, and in 1913 treated 28,000 tons of \$8.41 ore at a loss. The management got into bad repute with the stockholders because no statements of operations were given out and stockholders were at a loss to know what had become of the money in the treasury. To provide working capital the company was reorganized under its present title and the stock was put upon an assessable basis. Two assessments of 3c and one of 2c per share have been levied. The property of the MacNamara Mining Co. was sold to the new company for 1,340,076 shares of the latter's capital stock.

Property: 2 patented claims, 12 acres, at Tonopah, said to show gold-silver ore in quartz vein in andesite.

Development: 800' shaft.

In 1914 the property was operated for 8 months; the mill treated 15,776 tons of \$11.08 ore, with 93.3% recovery.

Production: was 10,544 tons of \$7.04 ore; cost for 7 months were \$10.34 per ton. The shutdown was attributed to lack of development; shortage of money, and low price of silver. Property was not operated in 1915.

In Feb., 1916, arrangements were made with the West End Cons. Mining Co. by which the MacNamara Company could develop on its side of the property line a body of ore which the West End has exposed in its stoping operations near the line; work to be done through West End workings to avoid the necessity of MacNamara driving a 500' crosscut. The joint exploration was continued during 1916 and 1917.

Equipment: includes 100-h. p. electric hoist, compressor, 10 stamps and cyanide plant.

There is said to be a considerable tonnage of low-grade ore remaining in the mine which can be worked at a profit at present high price of silver.

Late in 1917 the mine and mill were reopened. Good developments on the Ohio vein in the West End mine adjoining led to exploration for this shoot in November. The first month's run yielded silver worth \$23,400.

MANHATTAN BIG FOUR MINING CO. NEVADA

Harry B. Ruhl, sec., Goldfield, Nev. L. K. Koontz, pres.; J. H. Thatcher, v. p.; C. Wilson, treas., with W. G. Saunders, directors.

Inc. 1906, in Nevada. **Cap.**, \$1,000,000; outstanding, \$784,000; shares \$1 par. Listed on San Francisco Stock Exchange.

Property: 60 patented claims at Manhattan, Nye Co., Nev.

Development: to 500' level by shafts. High-grade ore was extracted by early lessees and the ore remaining is exceedingly low-grade. About the only way to treat it profitably would be to mine the entire Big Four hill by steam shovels and even this method is uncertain. At last accounts Mushett and Wittenberg were trying to find the extension of the high-grade orebody.

Owens 100-ton mill, closed down 1913, but active, 1917.

MANHATTAN CONS. MINES DEVELOPMENT CO. NEVADA

Address: Tonopah, Nev.

Mine office: Manhattan, Nev.

Officers: W. J. Douglass, pres.; A. J. Zwort, v. p.; C. C. Boak, sec.-treas.; with E. J. Erickson, J. H. Miller, and R. P. Stenson, directors. M. N. Page, supt.

Inc. 1913, in Nevada. **Cap.**, \$1,500,000; shares, \$1 par; assessable; 1,350,000 issued.

Property: 5 patented claims, 82 acres, in Manhattan district, Nye Co., Nev. Litigation with White Caps company was settled in 1917, after 5 years.

Geology: ore occurs as shoots up to 42' wide in contact and chamber deposits in lime-shale. Assays from \$18 to \$30 per ton.

Development: by 300' shaft and 2,000' of workings, said to have blocked out 10,000 to 15,000 tons of \$16 ore. Rich pockets of gold and manganese were found on No. 2 level. East orebody on No. 2 level said to be 28' wide of good value.

Equipment: 50-h. p. electric hoist, 6-drill compressor, and triplex pump.

MANHATTAN DEXTER MINING CO. NEVADA

Manhattan, Nev.

Officers: S. R. Moore, pres.; C. F. Wittenberg, v. p.; Percival Nash, sec.-treas.

Inc. in South Dakota. **Cap.**, \$1,500,000; shares \$1 par. Stock listed on San Francisco Exchange.

Property: 1 patented claim, at Manhattan, Nye Co., Nev., operated intermittently by lessees in 1915-17. Union No. 9 claim has 5 sets of lessees, who are mining gold ore. Dumps are also leased and ore is treated at the Big Pine mill.

MANHATTAN MUSTANG MINING CO. NEVADA

Manhattan, Nye Co., Nev. Property is mostly held by Tram-Chase lessees, who are mining rich ore.

MANHATTAN RED TOP MINING CO., REORGANIZED NEVADA

Office: 126 Russ Bldg., San Francisco, Cal.

Mine office: Manhattan, Nev.

Officers: H. Zadig, pres.; W. E. Colburn, v. p.; C. E. Hudson, sec.-treas.; also directors. J. E. Connors, supt.

Inc. Oct., 1912, in Nevada. **Cap.**, \$1,500,000; shares, \$1 par; 1,000,000 issued; assessable. Cash on hand, \$6,000.

Property: 60 acres in Manhattan district, Nye Co., Nev.

Development: by shaft, over 100' deep, sunk in blue limestone. Is exploring for gold-silver veins.

Equipment: 40-h. p. hoist, Ingersoll-Rand compressor, drills, etc., electric power.

A prospect whose shares have been largely traded in on the San Francisco Stock Exchange.

MERCURY MINING CO.

NEVADA

G. D. Abbott, sec., 1022 Crocker Bldg., San Francisco, Calif.

Mine office: Ione, Nye Co., Nev.

Officers: C. A. Norris, pres.; F. W. Bradley, v. p.; G. D. Abbott, sec.-treas.; W. E. Goldsworthy, supt.

Inc. May 7, 1910, in Nevada. **Cap.**, \$1,000,000, all outstanding; shares \$1 par. Annual meeting second Wednesday in January.

Balance sheet for 1916 shows assets: \$53,470, which include: property and plant, \$33,573; supplies, \$2,164; stock, \$3,150; cash, \$9,692; surplus, \$4,891. Liabilities include operating accounts, \$49,898; reserve account, \$3,572.

Comparative Operating Statement:

	Gross Earnings	Operating Expenses	Operating Profits
1916.....	\$31,099	\$33,042	\$1,943(d)
1915.....	44,127	26,299	17,828
1914.....	16,110	17,868	1,758(d)

(d) Deficit.

No dividends have been paid.

Property: 10 patented claims near Ione, said to show cinnabar ore. Company has one 25-ton Scott furnace.

Production: in 1911-12, 9,467 tons ore, 2,480 flasks mercury; in 1913, 7,715 tons ore, 1,013 flasks mercury; in 1914, 2,100 tons ore, 384 flasks mercury; in 1915, 5,375 tons ore, 417 flasks mercury; in 1916, 7,314 tons ore, 399 flasks mercury. Flasks contain 75 lbs.

MIZPAH EXTENSION CO. OF TONOPAH

NEVADA

Offices: Bullitt Bldg., Philadelphia, Pa., and Tonopah, Nev.

Officers: C. E. Knox, pres.; Lambert Ott, v. p.; C. F. Griffith, sec.; W. P. M. Braun, treas., with J. F. Braun, H. W. Davis, and M. B. Cutter, directors. W. H. Blackburn, supt.

Inc. in Del. **Cap.**, 2,000,000 shares; 1,702,092 issued. Listed on San Francisco and Salt Lake City Exchanges; traded in on New York Curb:

Property: 24 claims at Tonopah, adjoining the Tonopah Mining and Tonopah Belmont properties on the N. E. Mine being worked by Tonopah Mining Co.

Ore: silver. For geology see U. S. G. S. Prof. Paper 42, Geology of the Tonopah Mining District, by J. E. Spurr.

Development: 1,000' shaft, with a winze from the 1,000' to the 1,340' level. Work during 1916 was mainly on the 1,000' level with no startling developments.

MONARCH PITTSBURG MINING CO.

NEVADA

Tonopah, Nev.

Officers: H. C. Brougher, pres., 6150 Harwood St., Oakland, Calif. W. J. Douglass, v. p.; R. B. Govan, v. p.; E. J. Erickson, sec.-treas.; with O. A. Daube, directors. B. H. Smith, supt.

Inc. in Nevada. **Cap.**, \$1,500,000; shares \$1 par; fully paid; assessable; assessment No. 8, 1c per share, levied June 21, 1917. Stock transferred at company office. Listed on San Francisco Exchange.

Balance sheet for 1916 shows assets \$1,584,925, which includes: mine property, \$1,524,971; treasury stock, \$55,137; supplies, \$374; cash on hand, \$4,303. Liabilities include: assessments paid \$82,394; unpaid accounts, \$2,359. Receipts for 1916, \$31,118; of which assessments furnished \$28,090 and cash, Jan. 1, 1916, \$1,550. Disbursements were: labor, \$12,130; vouchers, \$14,684.

Property: 3 patented claims at Tonopah, adjoining Tonopah Extension on south and west. Claims show veins with silver ore.

Development: by vertical shaft, 1,100' deep. Work in 1916 was confined mainly to the 850' and 1,000' levels, amounting to 1,916' at a cost of \$10.59 per foot.

Geological conditions were studied early in 1916, and it was decided to prospect in the extreme western ground, also north of the shaft. Highly-silicified West End rhyolite was in the 1,003' drift, and soon a typical Extension breccia was cut. Work along the contact for 180' disclosed a vein 43' wide of low value. A 90' raise opened ore that will sort to \$27-\$37 per ton. In 1917 several small ore-shoots were opened and shipments made to the West End mill.

MONITOR-BELMONT MINING CO.

NEVADA

Address: Belmont, Nye Co., Nev.

Officers: G. A. Nelson, pres.; W. W. Hughes, mgr.

Property: 33 claims in Belmont district, 51 miles from Tonopah, Nev. District first opened in 1864 and yielded over \$15,000,000 of silver to 1885. Mines were then closed until 1906, but it took 8 years to secure title to the present holdings. A mill was erected in 1915 and started treating old dumps in 1916.

Geology: quartz veins and lenses in slate and limestone, at or near their contact with intrusive silicious granite. Intruded rocks have been altered to mica schists and jasperoid, the minerals occurring in the quartz as bunches. Ore is chiefly an argentiferous, antimonial copper ore, with lead and silver chloride, etc.

Development: by 500' shaft. At 300' the vein is said to be 3 to 20' wide of milling grade and of good length. Exploration is now under way.

Equipment: hoist, compressor and 120-ton mill, including ten 1,600 lb. stamps with flotation plant.

With modern plant and treatment facilities and with high silver prices, this company ought to be fairly profitable.

MONTANA-TONOPAH MINING CO.

NEVADA

Tonopah, Nev.

Officers: Chas. E. Knox, pres., 300 First Nat. Bank Bldg., San Francisco; Henry D. Moore, v. p.; M. E. McCrate, sec.-treas.; with Hugh H. Brown, Dudley Baldwin, E. B. Waples, J. M. Wynn, Thos. J. Lynch and A. H. Lawry, directors.

Inc. in Utah in 1902, re-incorporated Jan. 31, 1912, in Del. **Cap.**, \$1,000,000; shares \$1 par; outstanding, 998,942. Seven dividends paid to April, 1914, total \$530,000; none since. Company is one of the oldest of the Tonopah district, and has had a very checkered career.

Property: 15 claims, about 190 acres, traversed by the Mizpah fault and showing silver ore.

Development: 865' shaft and over 15 miles of workings. Mine was closed down and the 40-stamp mill ceased operating on Nov. 15, 1914, due to exhaustion of ore reserves and low price of silver. Since then a number of lessees have been working in the mine. Management controls the Commonwealth Mining & Milling Co. of Arizona, whose mine is closed permanently.

Late in 1916 company acquired the Lost Burro mine, 50 miles W. of Ubehebe district, on western edge of Death Valley, Calif. A mill was started in July, 1917, treating \$15.50 gold ore.

NEVADA SMELTING & MINES CORP.

NEVADA

Has no operating property.

Office: Room 515 E., 30 Church St., New York. Mines near Tybo, Nye Co., Nev.

Officers: Max E. Bernheimer, pres.; L. A. Dessar, v. p.; Werner Mueller, sec.; A. W. Joseph, treas.; preceding with M. Eisenberg, Chas. Lee, L. E. Marsden, N. P. Payne, H. Rawitzer, C. J. Roberts, directors.

Inc. May, 1906, in South Dakota. **Cap.**, \$5,000,000; shares \$5 par. Stock listed on the New York Curb. Empire Trust Co., New York, registrar. Balance on hand, March 31, 1914, was \$860.

Company realized \$4,090 on 80,000 shares of Greenwater Copper Mines & Smelter Co. stock in 1914, retaining 272,000 out of the 3,058,775 issued shares of the Greenwater Co.; also owns a controlling interest in the Tybo Cons. Mining Co., owning silver-lead properties at Tybo, Hot Creek district, Nev.

ORIGINAL MINING CO. OF MANHATTAN

NEVADA

Address: Tonopah, Nev.

Officers: W. J. Douglass, pres.; F. J. Conley, v. p.; C. C. Boak, sec.-treas.; above with C. H. McIntosh and Geo. W. Short, directors.

Inc. 1911 in Nev. **Cap.**, \$1,000,000; shares \$1 par; assessable; 450,000 issued.

Property: 4 claims, 2 patented, 80 acres in the Manhattan mining district, Nye Co., Nev.

Ore: low-grade gold occurs in vein in lime shale contact. Average assays given as \$1-\$6 gold per ton.

Development: by 200' vertical shaft with 1200' of underground workings. Idle.

ORIZABA MINING & DEVELOPING CO.

NEVADA

Offices: Goldfield and Orizaba, Nevada. Company is controlled by the Diamondfield Black Butte Reorganized Mng. Co.

Officers: L. K. Koontz, pres.; L. L. Patrick, v. p.; Harry B. Ruhl, sec.-treas.; with P. V. Rovnianek and A. V. Rovnianek, directors.

Inc. 1915. **Cap.**, \$1,000,000; shares \$1 par; 700,000 issued.

Property: 6 claims, in process of patent, 120 acres, at Orizaba, Nye county, shows gold-silver-copper-lead ore in veins 2-7' wide, occurring on a contact between limestone and granite. The main vein strikes S. 20° E., with dip 70° S. W.

C. D. Wilkinson reported on the property in Oct., 1915, and estimated 1,500 tons of \$20 ore exposed in the mine and 1,200 tons of \$12 ore on the dumps. Developed by 95' shaft with 140' east drift on that level. A prospect. Reported under option, May, 1917, to the General Mines Co.

PIONEER CONSOLIDATED MINES CO.

NEVADA

Pioneer, Nev.

Officers: Wm. J. Tobin, pres.-mgr.; A. E. Blakesley, v. p.; Richard F. Tobin, treas.; Chas. J. Clayton, sec.; with Roland G. Holt and J. K. Turner, directors; E. A. Danielson, supt.

Inc. May 5, 1909, in Wyo. **Cap.**, \$5,000,000; shares \$1 par; 3,881,562 shares outstanding, Jan. 1, 1916. Stock is listed on San Francisco Exchange. Central Sav. Bank & Trust Co., Denver, transfer agents. Annual meeting, Jan. 4th, at Cheyenne, Wyo. Statement for year ending Jan. 1, 1917, shows receipts from bullion shipments, \$11,240; stock sales, \$16,262; misc., \$2,408. Expenditures totaled \$30,349; bills payable, \$4,311; loss on year's operations, \$4,444.

Property: 12 claims, 8 patented, 180 acres, at Pioneer, Nye Co., shows decomposed rhyolite, porphyry and quartz.

Ore: occurs as a contact deposit between quartzite and limestone, of 30' average width, values being in gold with a little silver. The mine has been operated since organization of the company, but results have been retarded owing to lack of sufficient funds and failure to pick up the main Pioneer vein, believed to contain high-grade ore.

Development: by 430' vertical tunnel and over 15,000' of workings. In 1916 development work totaled 1,000' of drifting and crosscutting. New work is progressing on the 200-300' levels in 1917.

Equipment: includes electric power, 3-drill compressor, 40-h. p. hoist and 10-stamp 30-ton amalgamation and cyanide mill. The mill operated 10 months in 1916, on \$5 ore. The Nevada California Power Co. discontinued furnishing power to this part of Nevada in Dec., 1916, and company plans installation of its own power plant. Recovery by amalgamation is 60%, tailings being impounded for future treatment.

Total production to date reported at \$500,000.

Four lessees are operating on a 15 to 30% royalty basis.

PIONEER EXTENSION MINES CO.

NEVADA

Office: 107 Boston Bldg., Denver, Colo. **Mine Office:** Pioneer, Nye Co., Nevada.

Officers: H. A. Riedel, pres.; T. S. Ellis, sec.; Col. A. J. Trone, treas.-gen. mgr.; Edwin S. Giles, supt.

Inc. in Arizona. **Cap.**, \$1,500,000; shares \$1 par; 400,000 shares in treasury.

Property: the Jolly Jane claim, 20 patented acres, adjoining the Pioneer Cons., at Pioneer.

Development: by 200' shaft. A crosscut was driven from this level through rhyolite to prospect a contact 175' E. of the Jolly Jane shaft. Mine reported under 3-year lease to Jolly Jane Leasing Co., from 1916. A prospect.

RALSTON MINING CO.

NEVADA

Tonopah, Nev.

Officers: Chas. E. Perry, pres.; Wm. Foreman, v. p.; T. A. MacDuff, sec.-treas.; J. H. Evans, R. J. Highland, directors.

Inc. July, 1916, in Nevada. **Cap.**, \$1,000,000; shares \$1 par.

Property: the K. C., or Gori McBride group, east of the Halifax and adjoining the East End mine. The property was paid for with 601,000 shares at 3c.

RED TOP MINING CO.

NEVADA

Address: N. K. Franklin, supt., Manhattan, Nye Co., Nev. Sinking a double-compartment shaft in limestone and crosscutting on 110' level, 1917.

Equipment: includes pump and compressor.

RESCUE-EULA MINING CO.

NEVADA

Offices: 265 Russ Bldg., San Francisco, Cal., and Tonopah, Nev.

Officers: Chas. D. Laing, pres.; Herman Zadig, v. p.; with J. W. Dorsey, Joe Joseph and Wm. Edwards, directors. Chas. D. Olney, sec.; J. J. McQuillan, gen. mgr.; H. D. Moore, supt.

Inc. in Nev. **Cap.**, \$1,500,000; outstanding, \$1,300,000; shares \$1 par; assessable. Stock transferred at company's office. Registration Surety Co., San Francisco, registrar. Listed on San Francisco and Salt Lake City exchanges and traded in on New York Curb. Assessment No. 10 was levied in Jan., 1915; total assessments to that time, \$135,000.

Profit per year ended June 30, 1917, was \$56,133. A dividend of 2½c per share was paid on June 8, equal to \$35,539. The surplus was \$33,245.

Property: the Rescue, Eula, Last Thought and Maggie May claims, 80 acres, at Tonopah, said to show silver-bearing ore in veins. Developed by an 1,100' shaft. Early in 1916 a body of milling ore was opened on the 950' level, which in July had been drifted on for 170'; 4 raises, highest 130', are said to be in ore. The 800 level is not the limit of the ore-body above the 950' level; it has now been opened up below this level.
